It will not be found in the roar of the gun or the dropping of the bombs, for these soon to be outmoded methods of waging warfare must be met with superior might so powerful that the enemies of democracy will come to the realization that their aims, their desires, and their ambitions to rule the world are incapable of fulfillment.

This superior might could well arise from the 1955 determination of men everywhere to utilize the God-given tools of the engineer, the architect, the builder, and the sci-entist, to promote the abolition of war and to apply this wondrous intelligence and strength to the carrying out of the calling

Let us hope and pray this new year will bring all peoples to the footstool of genuine concord; then will we behold men and nations, living within their ability to pay for the things which make for permanent peace and prosperity, that all mankind might enjoy the fruits of the minds and the intellect of those into whose hands God has entrusted the wodners of His might and His power with more to come.

As I look into your faces, I believe some of

us will live to see that day.

Tariffs on Chemicals

EXTENSION OF REMARKS OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, February 3, 1955

Mr. OSMERS. Mr. Speaker, among the many communications received from business and industries in my district on the general subject of tariffs is a letter from Mr. Albert Bendelius, secretary and treasurer of the Pfister Chemical Works, of Ridgefield, N. J. His letter is of wide interest and he qualifies as an expert in his field. Under unanimous consent, Mr. Speaker, I include his letter in the Appendix of the RECORD:

PFISTER CHEMICAL WORKS, Ridgefield, N. J., January 13, 1955. Mr. FRANK C. OSMERS, Jr.,

House of Representatives,

Washington, D. C. DEAR MR. OSMERS: We would like to go on record with you as being opposed to any further reduction of tariffs in general, and favoring careful study of the existing rates by the United States Tariff Commission. It is our belief that some of the existing rates should be raised, if only to remove the stigma

of discrimination from them.

The rates directly affecting our business are, of course, our primary concern. The tariff on naphthols (our life blood) is, for example, 20 percent plus 3½ cents per pound. Prior to the Torquay Conference the tariff on these products was 40 percent plus 7 cents per pound. This higher tariff is still in effect on most other dyes. Naphthols can be classified either as dyes or intermediates, but the tariff on intermediates is 25 percent plus 31/2 cents per pound. The lower tariff on naphthols, therefore, can only be called discriminatory. This is just one case, there probably are many other instances where the tariff on brown shoes is lower than the tariff on black shoes of the same style, quality, and workmanship.

We respectfully request that you take a stand as recommended by the New Jersey tariff group as set forth in the following statement of their policy: "The United States Tariff Commission,

adequately staffed and supplied with sufficient funds, and functioning as a factfinding body responsible only to Congress, should immediately undertake a detailed analysis of all our tariff rates, industry by industry, and where necessary, product by product. Based on these studies, recommendations should be submitted by the Commission to Congress for whatever rate changes the facts warrant. The primary considerations should be the military security and the economic strength of the United States, and the maintenance of peak employment in this country, factors which are of basic importance not

only to us, but to the existence of the free world. Congress should then act upon these recommendations and promulgate whatever tariff policies and rates will achieve these objectives."

Sincerely yours,

PFISTER CHEMICAL WORKS, ALBERT BENDELIUS. Secretary and Treasurer.

Who Is Bluffing?

EXTENSION OF REMARKS OF

HON, FRANK M. KARSTEN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1955

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Boston Post of January 25, 1955:

WHO IS BLUFFING?

President Eisenhower's specific request for authorization of Congress to use American Armed Forces to fight, if necessary, wherever needed to defend Formosa, the Pescadores, and to assist Nationalist troops to redeploy is a very definite challenge to the Chinese Reds. It may mean a shooting war.

Until yesterday, when Chou En-lai, Chinese premier, warned that Red China would not permit outside interference with Red China's intention to liberate Formosa, the President's request to Congress merely traced a defensive line around Formosa and such islands off the Chinese mainland as may be evacuated by the Nationalist forces.

Chou En-lai's defiant statement that Red China intends to take Formosa at the very instant that President Eisenhower's message was being transmitted to Congress makes a shooting war a stronger possibility.

Clearly Chou En-lai either believes the United States is bluffing, or he is stark insane and hopes to become involved in a shooting war with the United States. If he believes the United States is bluffing, then he is about to lose "face," for this, after all the vacillation by the administration, cannot be bluff unless the President is ready for unvarnished appeasement.

Chou En-lai closed the door on United Nations as an intermediary as well as against the United States in his statement. And to backtrack now would make Chou look ridiculous to his own people.

If the 7th Fleet removes Nationalist troops from the islands within gunshot of Chinese Red positions, the Chinese Red leaders lose as much face (an all-important consideration in Asia) as if they had lost a

It is a sorry commentary on American national policy that the brave promises of 1952, when President Eisenhower was going to end the war in Korea and save lives, have now diminished to a plea to a Democratic Congress to put some backbone into America's position. President Eisenhower was going to expose and correct the national policies of a Democratic administration 2 years ago. Now he seeks something the Democratic administration didn't ask the right of unilateral entry into a war.

The almost fatal mistake was in ever seeking the end of the struggle in Korea on the terms given to the Chinese Reds. policy then might have saved Indochina and prevented all the sorrowful results of an illusory peace.

The Reawakening of the Civil Service Commission

EXTENSION OF REMARKS OF

HON. JOHN C. WATTS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Thursday, February 3, 1955

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I insert an excerpt from Jerry Kluttz's column, the Federal Diary, appearing in this morning's Washington Post and Times Herald.

The gist of the item relates to a reversal of position by the Civil Service Commission with respect to the right of a department or agency passing over an eligible veteran, a veteran who has taken the required civil-service examination and received certification of eligibility by the Civil Service Commission for appointment to the particular position.

Heretofore, if the appointing agency of the Government desired to pass over an eligible veteran, the civil service had ruled that all that was necessary was for the agency to submit in writing its reasons for such action; the Commission would then pass upon these reasons and if found to be insufficient would so notify the agency, the agency thereupon would advise the Commission that it had considered the Commission's views, and had reconsidered the veteran involved and then proceed to pass him over. The veteran had no recourse as the Civil Service Commission felt that this was full compliance with the intent and purpose of Congress.

The Civil Service Commission now feels that Congress was not performing an idle gesture when it adopted the 1953 amendment requiring the Commission to pass upon the sufficiency of the Department's reasons for passing over the veteran; but that Congress intended for this procedure to mean something toward establishing an independent forum of review of such actions for the protection of eligible veterans against the ruthless, arbitrary and overzealous acts of patronage-hungry politicians and misdirected departmental or agency heads.

Mr. Speaker, this voluntary action of the Commission in this instance is a source of gratification to me. While it may be termed "a slight opening of one eye," it nevertheless may be the prelude or forerunner of a complete reawakening to the fact by the Commission that Congress, when enacting a law does not indulge in idle gesturing. It is refreshing to know that at least one agency has again commenced to reestablish itself and assume the responsibilities vested in it by the Congress. And particularly is this true because it is the Civil Service Commission, the agency created by the Congress for the purpose of protecting the veteran and the careerservice employees of the Federal Government from those that would reestablish the old system of "To the victor belongs the spoils" in manning the personnel of our Government.

This action by the Commission is well taken. As a matter of fact, Mr. Speaker, for the past 10 days, pursuant to my request, experts have been conducting research on this very subject matter for the purpose of drafting whatever legislative proposal may have been necessary to obtain the very objective which the civil service has accomplished by its voluntary administrative action. My congratulations to the Civil Service Commission; may this slight awakening be a good omen. While on this subject matter, I may suggest to the Commission that they review section 14 of the Veterans' Preference Act of 1944, with the view of reassuring themselves of the intent and purpose that Congress may have had in mind in creating the right of appeal provided for thereunder. Should they do this, Mr. Speaker, I would suggest that they give consideration to the role of the Civil Service Commission in Federal employment as pronounced by the Commission in pamphlet No. 52, issued by it in January 1955. I am sure that if this is done, a new era will be developed which will tend to eliminate the wholesale dismissal of veterans and career-service employees upon inconsequential charges, or other charges unsupported by substantial and relevant evidence.

The excerpt follows:

VETERANS' PREFERENCE GIVEN GREATER FORCE UNDER CSC RULING

A new ruling gives the Veterans' Preference Act greater force and agency heads less in appointing eligibles from Civil Service's eligible lists.

After hearing a stout protest from groups of veterans, CSC ruled that an agency can't pass over an eligible veteran and appoint a nonveteran unless it agrees that its reasons are justifiable and sufficient.

A restudy of the 1953 amendments to the preference act, CSC explained, has conconvinced it that its more stringent inter-pretation of that law is proper and was so

intended by Congress.

Heretofore, an agency could pass over a veteran and give CSC its reasons for doing CSC could decide the reasons were insufficient but it didn't attempt to force the agency to appoint the veteran anyway. Now it will insist on the appointment.

There Is Growing Sentiment Among Members of the Legal Profession That Social Security Benefits Should Be Extended to Lawyers or at Least They Should Be Given the Option of Selecting Such Coverage

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 3, 1955

Mr. VAN ZANDT. Mr. Speaker, at the request of one of the leading bar associations in my congressional district I introduced H. R. 855, a bill designed to extend the Federal old-age and survivors insurance system to individuals engaged in the practice of law.

From discussions with lawyers in Pennsylvania I have learned that many of them are eager to have the option of securing coverage under the Social Security Act and that various State bar associations are taking opinion polls on the subject among their members.

Recently the New Jersey State Bar Association adopted the following resolution at its midvear meeting December 11, 1954, requesting Congress to include lawyers under the Social Security Act on an optional basis:

NEW JERSEY STATE BAR ASSOCIATION,

Trenton, N. J., January 20, 1955. To the Members of the Senate and the House of Representatives of the Congress of the United States:

Enclosed is a copy of a resolution which was recently passed by the New Jersey State Bar Association requesting the Congress act to include lawyers in the social security program on an optional basis.

We trust we shall have your wholehearted support in this connection.

Respectfully yours,

EMMA E. DILLON, Secretary.

"Whereas the younger members of the legal profession are desirous of obtaining for themselves and their dependents survivor and insurance benefits under the provisions of the social security program; and

Whereas a large number of members of the legal profession suffer a declining income in later years, and under the present high income-tax rate find it difficult to provide a means of retirement income for themselves and their dependents after the age of 65: Now, therefore, be it

"Resolved:

"1. That it be declared the sense of the membership of the New Jersey State Bar As-sociation that the benefits of the social security program be extended to include the members of the legal profession on an optional basis.

"2. A copy of this resolution shall be sent to all of the United States Senators and Congressmen."

This is to certify that the above resolution was adopted by the New Jersey State Bar Association at the midyear meeting on Saturday, December 11, 1954.

EMMA E. DILLON, Secretary.

Eisenhower and Truman

EXTENSION OF REMARKS OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, February 3, 1955

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include the remarks on Formosa by Gerald W. Johnson over station WAAM, Baltimore, on January 30, 1955, as follows:

The President scared me badly when he asked Congress for formal authorization to employ the Armed Forces of the United States to defend Formosa. I think he scared all Bolton Street, for on the face of it the thing looked like war.

However, we all know that the Presidentany President-always has a great deal of information that he can't afford to publish. He has thousands of people constantly bringing him reports, many of which are confi-

dential, and sometimes he has to act on information that he can't give to the public.

Without doubt that was Mr. Eisenhower's position last week. From the legal standpoint he didn't need any special permission from Congress. He already had all neces-sary authority to defend any territory subject to the jurisdiction of the United States, and Formosa has been technically in our possession ever since Japan surrendered but something came up that made him think it desirable to make a public show of his authority.

What that was I don't know, but I have sufficient confidence in any man who is head of the Nation to believe that it wasn't any triviality; and a President who has been a soldier certainly must know how foolish it is to throw your weight around unless there is good reason for doing so. I think we may rely on it that the President was trying to produce a very definite effect, and it wasn't the effect of startling either Congress or the country. Both were startled, but that was a byproduct; the main idea was to produce an effect outside this country-in China certainly, in Russia probably, and in India perhaps, but not in Bolton Street.

It was risky beyond a doubt, but it was a calculated risk, and if it helps to clear up the situation in Asia it will be worth some risk. The flat truth is that our position risk. there was rapidly becoming untenable, not from the military standpoint so much as from the standpoint of reason and good

For a long time it has been perfectly plain that Chiang Kai-shek cannot reconquer China by himself, and it is equally plain that we can't reconquer it for him without a war so terrific that the American people will not stand for it. Yet from behind the protec-tion of our 7th Fleet Chiang has been sending our gunboats and planes to harass Communist ships and occasionally to bomb Communist ports. The Communists would soon put a stop to that if the fleet were not in the way; so the Communists see us not as aiding a real ally, but of protecting a nest of pirates who have taken shelter in territory under our control.

That is not a tenable position for a civilized nation. We should either give Chiang an army of American soldiers, so that he can wage a real war, or we should compel him to keep the peace as long as he is behind our strategic frontier. We aren't going to give him an American army. That's flat. All that is left then is to keep him from disturbing the peace; for as long as we protect him we are to some extent responsible for what he does. If the President's move is a first step in that direction it may be a move toward peace, not war.

But there is one aspect of the situation in which I find a certain sour amusement. It is when I reflect on what a roar would have gone up from the press if it had been proposed to grant such extensive power to Harry S. Truman. The screams about oneman rule, dictatorship, and personal arrogance would have been deafening; but in the eyes of the one-party press Eisenhower can do no wrong.

Yet, it is perfectly obvious that it would have been safer to trust this power to Mr. Truman than to trust it to Mr. Eisenhower, because Mr. Eisenhower is much closer to the Douglas MacArthur-Senator Knowland group who think that rattling the atom bomb is the only effective form of diplomacy. If a howl would have been justified in 1952, it is twice justified in 1955.

The truth is that there was no sense in howling then and none in howling now. is not entirely safe to trust the warmaking power to anybody; but it is safer in the hands of the President than anywhere else, for he at least can be held to account by the whole Nation, while a Member of Congress can be held to account only by his CONGRESSIONAL RECORD — APPENDIX

own State or district. If the people of Maryland, for instance, should turn against Eisenhower they could vote against him at the next election; but they can't vote against Senator McCarthy, no matter how much they may dislike him. So in a delicate situation it is better for the President to be in control than to have authority scattered among 531 Members of the Senate and the House of Representatives, where no individual can be held responsible.

Nevertheless, Eisenhower gets nothing but butter from a press that would have given Truman poison for making the same demand-which is amusing, even though it may be a matter of little practical impor-

tance.

American-Jewish Tercentenary Message

EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I include herewith the American-Jewish tercentenary message of Rabbi Max Felshin, D. D., president, Beth Din of America, and Rabbi, Radio City Synagogue in New

AMERICAN-JEWISH TERCENTENARY MESSAGE (By Rabbi Max Fleshin, D. D., president, Beth Din of America, Rabbi, Radio City Synagogue)

America was founded by many peoples who came here to escape persecution, to seek freedom from tyranny, and to serve God unmolested in accordance with the dictates of their own conscience. Among these were people of the Jewish faith, who numbered amongst the earliest settlers of the New History records that the voyage of Columbus (himself of Jewish descent), was backed by Jews, and that six Jewish members of his crew were among the first to set foot on American soil. Others came with the passage of time from every part of Europe, Africa, Asla, and the farthest corners of the earth. So that today America may be said to be the truly representative national home of all the races, religions, and cultures of the world, all living together in prosperity and peace.

Here in America no racial stock, religious denomination, or organizational group can arrogate to itself any priority or superiority over one another. No one can claim that he or she is more American than any other fellow American. We all have an equal stake, share, and responsibility in America's past, present, and future. With the exception of perhaps the Indian aborigines (who, according to Mormon writ, are descendants from the 10 lost tribes of Israel) the entire population of America are either immigrants or the children of immigrants, who have all arrived to these shores or were born in this country within the past 300 years.

The Jews of America are now celebrating

their own happy participation in the up-building of our American Nation through the current American-Jewish tercentenary ju-bilee. The reason for our rejoicing is that America, of all the so-called enlightened nations of Western civilization, has never sullied the pages of its history with Jewish per-

lied the pages of its history with Jewish persecution, disabilities, or subversion.

The words of George Washington, contained in a letter to the Touro Synagogue of Newport, R. I., "Happily the Government of the United States—gives to bigotry no sanction, to persecution no assistance," have fortunately remained the basic doctrine, the

permanent policy of our beloved land of liberty; they are the bedrock of our American democracy and the sure guaranty of our lasting greatness as long as we do not depart from these principles.

It is significant that the Father of our Country in alluding in this very same letter to the American Jewish community referred to them as the children of the stock of Abraham. According to the biblical narrative in the book of Genesis (chapter 12: 1, 2, 3) God appeared unto Abraham and said to him:

"Get thee out of thy country, and from thy kindred, and from thy father's house, unto a land that I will show thee: And I will make of thee a great nation, and I will bless thee, and make thy name great and thou shalt be a blessing. And I will bless them that bless thee, and curse them that curse thee: And in thee shall all the families of the earth be blessed."

Now George Washington like so many of Pilgrim Fathers who were steeped in Old Testament lore understood the meaning of these words of God to Abraham; and he correlated them to America's destiny and future blessedness. He knew, and history has shown, that God has kept His word to Abraham unfailingly, throughout all generations. Those nations which were kind and generous to the Jewish people, giving full scope to their talents and industry, rose to greatness and flourished; but the moment they turned to persecute and plunder the children of Abraham they lost their standing, sunk into degraded disintegration and finally disappeared altogether from the stage of world history.

George Washington in his profound wisdom understood all this. He knew that God will bless America so long as America will continue its blessings to the children of the stock of Abraham, so long as the rights of all minorities will be respected within our borders. He realized that the two blessings are interwoven, inseparably bound up and interdependent upon one another as a condition a priori to certain, lasting American well-being and glory.

During this year of solemn, thankful observance and celebration of the American-Jewish Tercentenary we must not forget Jerusalem's 3,000th anniversary. The roots of historical Judaism go far beyond the beginning of America. It is now more than 4,000 years since God has first established His unique covenant and mystic bond with Abraham and his descendants, which symbolize the everlasting love and sacrificial loyalty manifest throughout the long eventful history of the Jewish people. The children of Israel, almost in defiance of the very instincts of physical self-preservation, have often chosen to endure persecution and martyrdom, rather than submit to assimilation or to forsake their traditional ideals of righteous living and their belief in the One God. They have kept their faith with the covenant under the most trying circumstances.

In the Biblical account of the selection of Abraham to the consecrated role of progenitor and patriarch of the Hebrew people and as the one spiritually fit to usher them forth signally upon the arduous road of world

history, God said:
"For I have known him, to the end that he may command his children and his household after him, that they may keep the way of the Lord, to do righteousness and justice; to the end that the Lord may bring upon Abraham that which He rath spoken of him" (Genesis, ch. 18, verse 19).

It is therefore folly for anyone to counsel American Jewry to disown their true identity and disclaim their heritage since Biblical days. Especially unrealistic have these assimilationist betrayals and misrepresentations of true Judaism become today in the face of a regenerated Israel and a restored Zion, which our generation was privileged to witness. True Judaism teaches love of country, loyalty to government, and ad-herence to the laws of the land. American Jewry is consecrated to these ideals and are ready to defend our American heritage with our honor, our fortune and our very lives whenever it becomes necessary.

We of the Radio City Synagogue are happy to participate in the current American-Jewish tercentenary and Jerusalem's 3,000th anniversary celebrations. We have also tied in our own institutional celebration, our 13th or "bar mitzvah" year of the founding of our synagogue, with the general demonstration of loyalty and love to a trust faithfully kept. The Radio City Synagogue is situated in the very heart of the great New York metropo-By virtue of this position it assumes both an intensive and far-reaching effectiveness, in that it serves as house of prayer not only for the people who live and work in the vicinity, but also attracts many visiting worshippers from distant parts of the country.

The synagogue is also grateful for its humble contribution toward the enrichment of Jewish life in America in that it has housed for the past 18 years the national headquarters of the Beth Din of America. This great institution of Toraic justice has served the cause of American Jewry in settling many private and communal disputes through the decisions handed by the learned rabbis in accordance with the letter and spirit of our holy Torah. It has also rendered famous authoritative decisions affecting difficult matters of Jewish jurisprudence as applied to new, modern developments.

The Radio City Synagogue is truly thankful for being a providential instrumentality in its 13 years of faithful service to the daily religious needs of both the local New community and the many frequent visitors from every Jewish congregation in the United States of America. Our high holy days services are attended by visiting fellow Jews from every part of the world, all praying together from the same Hebrew prayer book (Machzor) to the God of our eternal people.

May God Almighty answer our prayers mercifully and grant us and the entire American people the triple blessing of health, happiness, and peace, so that we and our children may live to celebrate together many similar manifestations of joyful brotherhood in our land of liberty and justice, our beloved and blessed America.

Gambling Capital of the United States Unmasked-III

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. ANFUSO. Mr. Speaker, the third in the series of articles by Bob Considine on Las Vegas, the gambling capital of the United States, which appeared in the Chicago American January 25, 1955, reads as follows:

LAS VEGAS UNMASKED-BUGSY'S DREAM HIS UNDOING

(By Bob Considine)

LAS VEGAS, January 25.—Bugsy Siegel was a millionaire and referred to in print as a "Hollywood sportsman" when his eyes first alighted upon the site of the Flamingo Hotel.

He was driving out of Las Vegas after looking over his race-wire interests when he noted that a casino was being built at a point between the town and the airport.

The contractor was the Del E. Webb Construction Co., of Phoenix, owned by a lanky ex-ballplayer and carpenter destined to become a wealthy power in big league baseball.

SIEGEL TAKES OVER

By means never adequately explained, Siegel took over the modest project.

He had had his dream. This would be no mere casino, a small version of a downtown Fremont Street place. Nor would it be a glorified motel and casino, like El Rancho Vegas and the Last Frontier were at that time.

This, he determined, would be the finest casino in the world and one that would keep people hovering about it—because of fine hotel arrangements, top nightclub acts, a spirited cabaret, good food, drink, and service.

WAR PRIORITIES DEFIED

He flew to New York with word to the elders in the underworld syndicate that they must go in with him on this vast venture. He himself pledged every penny he had and hocked his future. Encouraged by his zeal, the members of syndicate's board of governors dug into their own treasuries—acquired through illegal trades for the most part, though some of the money was from their postrepeal activities in legitimate callings. They promised to go along with Siegel—to a certain extent.

They promised him \$3 million. A war was going on in Europe and Asia and the word "priorities" meant something.

A DRIVEN MAN

He became a driven man. The black market was his shopping place. When Webb could not hope to produce steel, copper, piping and the like, Bugsy found the stuff and paid for it dearly. He flew to New York 14 times for more money and to give added assurances. The patience of the elders began to wear thin. Everything was going in. Nothing came out. Bugsy ordered Webb to fly in plasterers from Los Angeles, San Francisco, Denver, and Sait Lake City, and paid them \$50 a day, to get the place ready.

The syndicate cut him off eventually and Mayer Lansky come out to break the word to him. Bugsy sought money elsewhere. He opened the Flamingo owing millions, including so much money to Del Webb that every night for 6 months Webb waited in his office to be paid a portion of the day's receipts. They became good friends.

WEBER VIEW

The coowner of the New York Yankees to-day says of Siegel:

"I've never met a squarer businessman in my life. He was a remarkable character: tough, cold, and terrifying when he wanted to be—but at other times a very easy fellow to be around.

"He told me one night, when I was waiting for my money, that he had personally killed 12 men. But then he must have noted my face, or something, because he laughed and said that I had nothing to worry about.

"There's no chance that you'll get killed,' he said. 'We only kill each other.'"

Back in New York, the syndicate began considering whether to do just that. For one thing, Siegel had disturbed the elders by getting so much publicity—which, in turn bathed the elders in undesired publicity. Also, he had "blown his stack" on the Flamingo.

But, No. 1, he had committed the unpardonable crime—that of branching out on his own.

Shortly after James R. Ragan, Sr., past owner of Continental Press Service, largest race wire in the country, was killed, the mobs merged Continental and Trans-America wire services. But Siegel, who had the syndicate's old Trans-America on the coast, continued to maintain it independently.

HEADACHE HIS HOME

He stopped going East. His beloved headache, the Flamingo, became his home, even though Virginia Hill took a dim view of Las Vegas in general. He was comforted, however, by the fact that the place was netting \$315,000 a month—and some day he'd get even and straighten out everything and everybody.

The syndicate wouldn't wait. As was the custom, it delegated the messy work of slaughter to another group, after the Bug's doom was sealed in the meeting with Luciano—who had slipped over from Italy to Cuba via Venezuela.

Siegel's last days were unhappy ones. For one thing, there was trouble with Virginia Hill. She wanted to go to Parls and he suspected she had another man there. Briefly reconciled, they spent a few days at the Flamingo.

MORAL SUPPORT

But Virginia began drinking too much. A bout climaxed one night in the plush dining room when she stood up and clouted a female guest on the jaw with a long overhand right. Bugsy shouted at her, "You're no lady."

This is a remark still treasured by students of gangland understatement. Miss Hill flounced off to Paris. That was June 16, 1947.

But something worse had happened to Bugsy. When he took his stand against his New York colleagues and told them he was going to keep Trans-America wire service and to blazes with their wish to bend it with Continental, he was encouraged by the moral support of two plug-uglies who served him in Los Angeles.

The two were Jack Dragna (alias Jack Ignatius, Jack I., Jack Rizotto, and Jack Dania) and a lesser and more grasping punk named Mickey Cohen.

On either June 7 or 8 of that year Dragna and possibly Cohen were braced by what the California Crime Commission later called two visitors from Chicago. Dragna immediately bowed out of Trans-America.

UNEASY FEELING

About that same time, Siegel invited Webb to visit him at the Beverly Hills home he and Virginia shared. Webb had begged off so many times before—usually on the pretense that his mother was feeling bad—that he felt that this time he must accept.

"I had an uneasy feeling all during that evening there. Benny seemed to want to sit in a certain part of the living room. I had a feeling we were being watched, and that my own seat on the divan wasn't quite safe. Maybe my presence saved him."

(Siegel was called Benny by friends. No one dared call him Bugsy, a name he acquired as a youth because of his contempt for bullets.)

On the night of June 20, 1947, Siegel returned from Las Vegas to the Beverly Hills home to pick up some clothes. His departure from Las Vegas was duly noted by representatives of the syndicate—of which he was the only member of the board ever rubbed out.

He sat down in the very spot where he had seated Webb not long before. The heavy window curtains were drawn but missed coming together completely by about 6 inches.

QUICK DEATH

Next to him on the divan was his friend Aaron Smehoff, called Allan Smiley. The

Russian-born Smiley had a small piece of the Flamingo. Elsewhere in the house were Virginia Hill's brother, Charles, and a girl he has since married.

It was a quick death for Eugsy Siegel. He never knew what hit him—the shots came so thick and fast.

But he's still very much alive along the strip of Las Vegas today and his ultimatum, "No rough stuff in here if I have to kill a couple of you b—s," remains the way of life.

Gambling Capital of the United States Unmasked—IV

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. ANFUSO. Mr. Speaker, here is another chapter on Las Vega, the fourth in the series of article by Bob Considine, published in the Chicago American, January 26.1955:

LAS VEGAS UNMASKED—GOLD RUSH FOLLOWED DEATH OF "BUGSY" SIEGEL

(By Bob Considine)

LAS VEGAS, January 26.—In Las Vegas, after "Bugsy" Siegel was erased, came the gold rush. A deluge of Hollywood blackmarket and upper-crust tourists washed over his fabled spa, the Flamingo, leaving in the receding tide an estimated \$4 million a year net profit.

The word "estimated" is used because no one knows exactly how much the operators clear in Las Vegas. Nevada's 2-percent bite on the gross handle throughout the State comes to less than \$2 million a year.

It accepts the money gratefully, being unable to get along without it. The State can't afford to supervise the nightly count and must take the word of the operators—who, here and there, never won any awards for integrity.

Siegel had guessed right about Las Vegas and it didn't take long for the word to get around. It was natural that he should be followed into the city and its environs by a wave of his peers and inferiors in the racket world.

They had money to invest, and Las Vegas welcomed it in view of the fact that few top investment houses or insurance companies wished to take such a fiyer.

GOOD INVESTMENT

Many who followed Bugsy had taken the lead of Frank Costello and others and had transferred their bootlegging, bookmaking, and other illicit earnings to legitimate businesses. To these, Las Vegas looked like not only a sound investment, but one that offered some of the excitement of the bad old days.

And so the desert was made to bloom additionally by the coming of Wilbur Clark's Desert Inn, the Thunderbird, now accused of being secretly controlled by Meyer and Jake Lansky; the Sands, and the Sahara. It continues to bloom.

There was and remains in most of these and other Las Vegas establishments a lot of underworld money—just as is the case with all but a handful of New York's swankiest restaurants and night clubs, which are owned almost exclusively by retired rumrunners and speakeasy operators who long since have contracted religion and won a respected place in the social scene. In Las Vegas the delousing process continues.

KEFAUVER RECORD

Morris Rosen, whose record is spread over 31 pages in the Kefauver reports, moved into Las Vegas to settle the affairs of Siegel. Rosen's son married one of Siegel's daughters, so he appeared in the role of foremost friend of the murdered murderer's family.

The affairs were complicated, as is usually the case in Las Vegas. Siegel had a bit of several clubs going for him, in addition to

horse books and the Flamingo.
Rosen, also known as Doc Harris and Joe Stacci, found mysterious Joe Epstein, Virginia Hill's banker, on hand with the books, and also Bugsy's original front man in Las Vegas, much-arrested Moe Sedway.

Rosen began looking for buyers for the lamingo. He found Sanford Adler and Flamingo. Charlie Resnick, who owned the El Rancho Hotel at the time; and such others as Gus Greenbaum, overlord of the Capone-New York syndicate race wire in Phoenix, Israel Adlerman, also called "Little Auldie" by the FBI; Dave Berman, ex-convict who was one of Bugsy's trusted aids; and Jack Burke and Sam Diamond, California bookies.

TEN PERCENT FOR NOTHING

They bought the place for \$3,900,000 with a down payment of either \$500,000 or \$600,000. In appreciation of what Sedway later told Senator Kefauver was Rosen's deal-making genius, Rosen was given a 10-percent slice for nothing. Today it would be worth \$650,000.

Adler was put in as manager, and representative of the group that owned 51 percent. But the absence of Bugsy's strong hand was

soon evident.

Soon there were inflamed arguments among the partners, while fancy customers serenely kept pouring in the money. Adler took his case to Carson City and won it, then punched

Rosen in the face in a post-trial argument. Rosen announced that he would get Adler. Frightened, Adler drove all night to Beverly Hills, Calif., and told his story to Clinton H. Anderson, chief of police. Then he sold out his share.

THE PAYOFF

Among those who had to be paid off were members of the New York syndicate who had bankrolled Siegel after the latter spent his entire fortune estimated at \$1 million—on the hotel and casino.

These contributors were Meyer and Jake Lansky, Frank Costello, Frank Erickson, Lepke Buchalter (who sent Siegel West in first place and 1 or 2 others, probably Joe Adonis and possibly Lucky Luciano. There was some old Capone money in there, too.

The report persists that some of them retained their pieces and continue as silent partners. If so, they are indeed silent. Costello, for example, has never been seen in Las Vegas. And if the notorious Tony Accardo, Capone relic, had or has any tie-in through Greenbaum the Las Vegas police appeared to have no respect for a property owner.

On January 9, 1953, for instance, the Chicago Crime Commission informed the Nevada Tax Commission—which is the gambling licensing body of the State—that Accardo was headed for Las Vegas. The excellent Los Angeles police department also was notified.

TOLD TO MOVE

Accardo, whose name has been linked to every known racket, was given a frigid recepat International Airport, Los Angeles, and told to move on. Immediately after his arrival in Las Vegas, he was picked up by Chief of Police Al H. Kennedy and charged with vagrancy—though he had a \$6,700 roll in his pocket. Told to scram, he did.

The third crop of Flamingo owners has little apparent relationship to the first two groups. It is headed by T. E. Hull, owner of a string of motels through the West. He is sometimes known as the "man who made motels moral." He once tried to copyright the word "motel," and was among the first to dress up those roadside flops with swimming pools, bars, television, and the like.
He operated the Hollywood Roosevelt Hotel

and the El Rancho Hotel in Sacramento, both of which were sold recently and are leased back to him for 20 years.

NEW OWNERS

According to papers on file at Carson City, 29 others are among the Flamingo's new owners. These include Dr. Stanley Immerman, prominent Los Angeles surgeon; Albert Parvin, responsible for the costly decora-tions of the Flamingo and other "strip" spots; moving picture producer David W. (no relation) Siegel; and Ed Levinson, formerly part owner and casino manager of the Sands,

Among the lesser holders of "points in the corporation"—as single percentages are known in the trade—are George Raft, a close friend of the late Siegel; and Tony Martin, annually the star attraction of the Fla-

mingo's flashing floor shows.

The new crowd in control paid \$7 million for "Bugsy's" dream palace with, it is understood, less than \$1 million down. When the new owners took over they signed an agreement with Greenbaum-who seems retain at least a rooting interest—that they'd spend \$2 million more in improvementskeep apace or ahead of ambitious other "strip" attractions.

LOAN MATURING

The report from banking circles is that some of the new owners learned, with a shock, that an old \$2,500,000 Galveston bank loan matures in September 1955 at which time they must put it up or blow their investment

They would like to borrow \$4 million for years, and are said to be offering a \$1 million bonus to anyone who'll take the change and gamble on Las Vegas' future.

The comparative ease with which offcourse money flowed into Las Vegas after the Flamingo showed the way can be seen from a study of the financing of the Desert Inn, brought out when the Kefauver committee questioned Wilbur Clark and Moe

Dalitz at length.

Clark, voted the best hotel-and-casino manager along the strip, once ran the El Rancho Vegas before the postwar boom. He took his money and plunged into the building of the Desert Inn but soon ran out of cash and credit.

FINANCING NEED

He walked the streets of San Diego, where he once owned bars, and Los Angeles, where he numbered judges among his friends,

looking for financing.

Dalitz, former Cleveland rum czar and gambling house operator who now has extensive interests in steel, laundries, and other business, and his associates, advanced Clark about \$1,300,000 to complete the Desert Inn and gained control.

They have expanded their holdings considerably, including the building of a remarkable 18-hole golf course which has become the scene of one of the Nation's big-

gest annual tournaments.

With Dalitz in the operation are Morris Kleinman and Thomas Jefferson McGinty, two other gentlemen who grew rich by slak ing parched throats during prohibition, and former Cleveland gamblers Sam Tucker, Ruby Kolod, and Barney Rothkopf, alias Lou Rody, who refused to testify before the Kefauver committee.

LANSKY PAL

The handsome Sands Hotel was built by Max Kufferman, who described himself as a friend of Meyer Lansky for 25 years. Kufferman is head of a California loan company. Indications were also that part of the financing came from Joseph "Doc" Stacher, alias

Morris Rose, Joseph Rosen, "Doc" Ewiner, etc., described as one of the leaders of the old 3d Ward mob in New Jersey and associate of Longie Zwillman.

Neither Kufferman nor Stacher could get a license to operate. Jake Freedman, congenial little gambler from Houston, Tex., was brought in and passed muster. Among the current owners, with small shares, are Frank Sinatra and Jack Entratter, the latter a popular figure at New York's Stork Club and Copacabana for years.

LOTTERY FINE

The Sahara, built by Del Webb, the co-owner of the New York Yankees, who built the Flamingo for Siegel, offered such lush living comfort that gamblers with financial investments in other establishments took permanent residence. The money behind the Sahara has puzzled many a local.

Listed owners are Milton Prell, ex-Los Angeles jeweler who operated skillball machines in Butte, Mont., where he was fined for conducting a lottery; Al F. Wonter and Barney Morris, small-time Portland, Oreg., gamblers, and other unknowns.

But these are calm and collected operations compared to the storm that has cooked up behind the Thunderbird-one of whose principal stockholders is Cliff Jones, former Democratic national committeeman for Nevada and former lieutenant governor.

Stained-Glass Industry

EXTENSION OF REMARKS OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1955

Mr. OSMERS. Mr. Speaker, because of the great interest in the subject of tariff reductions at this time. I think it is important that the viewpoints of various industries become known to the Congress. One of my distinguished constituents, Karl Barre Lamb, of Tenafly, N. J., is president of the Stained Glass Association. The stained-glass industry would be vitally affected by any change in the present tariff situation. I include in the Appendix of the RECORD an article which Mr. Lamb recently wrote and which appeared in the official publication of the Stained Glass Association:

[From Stained Glass of January 1955] STAINED-GLASS INDUSTRY

We do not like to call our wonderful craft an industry. It is not. It is purely a craft. We use no machines. It is all handwork and based primarily on a religious conception of what is beautiful, what is true, and what will embellish our many thousands of churches of all sects throughout this great country. The membership of our association represents practically all the finest stained-glass firms in the United States, and even some in Canada and Mexico. It is therefore authoritative, one which can speak with a background of over 50 years as association, and with a membership which includes firms that are from 75 to 100 years old, which is quite a record in this country.

As president of the Stained Glass Association of America, I feel I have a very definite responsibility to call attention to the fact that our fine craft will be ruined, and ruined soon, by foreign competition unless we have some tariff protection.

At the present time, stained glass over \$15 a square foot is coming into the United

States duty free as a work of art. This of course is ridiculous, as stained glass is after all a currently manufactured product, whose cost depends, 90 percent, on the labor in-volved, since it is all handwork as mentioned above.

We cannot compete with low European wage scales, or with low European materials cost. And European governments are sponsoring their own stained-glass studios, are printing elaborate brochures, and are doing a tremendous amount of advertising in this

The foreign stained glass studios are being helped by their governments with, I am afraid, money which the United States Government is sending them. Even the foreign consulates here in the United States have had exhibitions of European stained glass. They are contacting every church, every American architect, and doing everything possible to promote the sale of foreign glass in our own United States.

Foreign imports are steadily increasing. 1949 imports were 495 percent over 1946; 1953 imports 700 percent over 1949. From March 1952 to March 1954, 60 percent of all stained glass installed within a radius of 50 miles of New York City was of foreign make. Similar conditions exist on the west coast of the United States, and are fast moving inland.

A combined committee made up of members of the Stained Glass Association of America and its craftsmen, most of whom are members of the A. F. of L. Painters and Decorators Union, is now attempting to get proper interpretation of paragraph 1810 of the Tariff Act of 1922, and have it enforced. We believe that paragraph 1810 says that if stained glass is worked with metal, a duty must be paid regardless of valuation. The present importations are nearly all worked with metal, but are still admitted duty free.

While a fine stained glass window may be beautiful, and in that sense a work of art, it is a manufactured product just as much as a fine watch is.

The \$15 per square foot limit goes back to the Dark Ages, and is the same as it was 30 years ago. Then we paid \$20-\$25 per week for a 51/2-day week to our skilled craftsmen. Now we pay \$90-\$110 for a 5-day week, and sometimes much more to specialists and ar-

We are not like General Motors, Ford, or United States Steel, where American genius for machines and the assembly line can overcome differences in wage rates between the United States and Europe. The selling price of our product is entirely dependent upon the price of labor. So how can we compete with the wage rates of Germany, France, Belgium, Holland, Ireland, and even England? We cannot.

We have a wonderful craft, employing thousands of the most skilled artisans who know no other trade, and a craft which is doing more to uplift the morals and religious thoughts of our people than almost any other one. This is through the esthetic appeal of story and color, which only a beautiful stained glass window can give.

We reach, in fact, through our art, the heart of our Nation in a way no spoken word can. And we combat the cheap comic books and other lowering influences, which all now admit are factors in juvenile delinquency.

Labor, and I am speaking of the unions, realizing the situation, is working in the very closest way with the Stained Glass Association. A joint committee of labor and management has been set up. Management is working to save our craft. Labor is working to save the jobs of thousands who face idleness, many of them older men who can turn to no other craft, nor find other jobs. But our government, the third member of the team, is not yet doing anything to save this craft.

Our situation is rapidly becoming desperate, which will be realized when I repeat that over 60 percent of the stained glass windows installed in what might be called the New York metropolitan area, during the past 12 months, came from Europe; a similar situation is found in many other parts of the United States, even on the Pacific coast

Our craft is a religious one, vital to all sects-Protestant, Catholic, Jewish-and all of us, as far as our work is concerned, are completely nonsectrian and open minded. We love our craft and our respected religious faiths. Otherwise we would not be doing what we are doing. What is the answer?

KARL BARRE LAMB.

Sidney Friedman Organization, Inc.

EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. KLEIN. Mr. Speaker, the occasion of the Presidential proclamation of the week of February 7 to 11 as Dental Health Week leads me to report on a dramatic and invaluable service, organized by some of the constituents of my district, that has a bearing on just that subject. Indeed, I feel that what they have done is an example of the finest work done by the many voluntary groups that make up the United States; and that it could be an example for other communities throughout the country.

About a year ago a group of young men and women, organized as the Sidney Friedman Organization, Inc., of 236 East Broadway, cast about for a community service that they could render. They found it in the need to provide dental care for the underprivileged children in the neighborhood. They went into this very carefully. They studied the needs. They studied the available resources, and they found that in my district alone there were several thousand indigent children who needed dental care and who could not obtain it from other sources.

Under the chairmanship of Leon W. Katz, this group interested Mr. Abraham Schlacht, publisher of the East Side News, a local newspaper in my district. Through its members and friends, they built a free dental clinic, which they report is the only one of its kind in the State of New York functioning on a completely volunteer basis. There are no administrative expenses in the operation of the clinic. Neither dentists nor dental aides associated with it receive any compensation. And the indigent children receive the best in dental care. The clinic is now in its fifth month of operation and has Prof. Oscar Ginder as its director and Dean Raymond Nagle, of the New York University College of Dentistry, as its adviser and consultant.

The free dental clinic has had over 700 monthly visits by children and it will examine over 300 youngsters during Dental Health Week. The free dental clinic, in addition to regular dental treatment, gives orthodontia and prosthetic work.

It should be noted that the indigent children are recommended by the public, parochial, and nursery schools. And the two requisites for accepting children by the free dental clinic are inability to pay and need for dental care.

I wish to extend to all my fellow Members of this Congress an invitation to see this clinic in operation and to judge for themselves its fine community spirit.

U. S. S. "Forrestal"

EXTENSION OF REMARKS OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. SHORT. Mr. Speaker, on Saturday, December 11, 1954, it was my privilege and pleasure, with thousands of my fellow Americans, to attend the launching of the U.S.S. Forrestal at Newport News, Va.

This will forever remain a significant date in our military history, for it signals a great milestone if not the beginning of a new era in the advance of naval and air warfare.

Under leave to extend my remarks, I submit the complete, interesting, informing, and impressive program at the launching of our first great supercarrier. the largest and mightiest ship ever built:

PROGRAM

Air salute: Carrier group 6 from United State Naval Air Station, Oceana, Va. National Anthem: United States Navy Band.

Introduction of William S. Blewett, Jr., president of the Newport News Shipbuilding & Dry Dock Co.

Address: William E. Blewett, Jr.

Introduction of Adm. Robert B. Carney, United States Navy, Chief of Naval Opera-

Address: Adm. Robert B. Carney, United

States Navy.
Introduction of the Honorable Charles E. Wilson, Secretary of Defense.

Address: The Honorable Charles E. Wilson, Introduction of the Honorable Charles S. Thomas, Secretary of the Navy.

Address: The Honorable Charles S. Thomas. Introduction of Rear Adm. Edward B. Harp, Jr., United States Navy, Chief of United States Navy Chaplains.

Invocation: Rear Adm. Edward B. Harp, Jr., United States Navy.

Introduction of sponsor: Mrs. James V. Forrestal.

Christening of the Forrestal: Mrs. James V. Forrestal.

Flight demonstration: Blue Angels, United States Navy Flight Team.

ADDRESS BY HON. WILLIAM E. BLEWETT, JR., PRESIDENT OF THE NEWPORT NEWS SHIP-BUILDING & DRYDOCK CO., AT THE LAUNCHING OF THE U. S. S. "FORRESTAL," NEWPORT NEWS, VA., DECEMBER 11, 1954

Mrs. Forrestal, Secretary Wilson, Secretary Thomas, distinguished guests, ladies and gentlemen, the Newport News Shipbuilding & Drydock Co. is delighted to have you with us today for the christening of the aircraft carrier U. S. S. Forrestal,

For the past 7 hours this vessel, the largest ever to be constructed, has been waterborne in the submerged shipway before us. This gigantic carrier is as trim and modern as technical know-how, looking into the future, can make her. The only conceivable bit of futurama that she lacks is to be driven by atomic power.

Her size and potency are matchless. She is a mobile base which can be located in any navigable portion of the oceans as the needs of defense or freedom of the seas may demand. From her flight deck, equipped with steam-driven catapulst, she can launch the heavier planes of longer range and higher speed which are capable of delivering the latest developments in explosive power

against possible enemy targets.

This mighty alreraft carrier which dwarfs any other engineering product is the greatest single instrument conceived to protect this hemisphere. Today one cannot speak in terms of countries because transportation and communication have made the world so small. While our physical world has contracted, our thinking must be expanded and translated into new and appropriate means for self-protection. The Forrestal is a striking example that Navy planners concern themselves with a realistic vision of the future.

The building of the Forrestal is a milestone for Newport News. Our workmen, many of them of a third generation, have been brought up in the creed that "we shall build good ships here * * *," and they are building into the Forrestal not only designed might but also their cumulative skills in shipbuilding and pride of workmanship.

The Newport News Shipbuilding & Drydock Co. is proud of its accomplishments and the privilege accorded us by the Navy in building this carrier.

Aircraft carriers have traditionally been named in honor of famous battles in our naval history or for former vessels with illustrious careers. Today, for only the second time that a ciptal ship has been named for an individual, this vessel will be named for the late Honorable James V. Forrestal, our first Secretary of Defense. This mighty ship will carry a mighty name which speaks to all the world of our desire for peace.

Address by Adm. Rorert B. Carney, United States Navy, Chief of Naval Operations

After VJ-day, the Navy looked at the future. Some of its aspects were visible and apparent; others were obscured behind time's horizon. The informed students of the strategic meaning of the oceans were convinced of one thing: Control of those oceans must never be relinquished to an enemy.

Amid the welter of new ideas and inventions, some notion of the required tools of the future began to come into focus. One of the necessary tools of United States sealir power continued to be the aircraft carrier. National thinking in those early postwar days was somewhat beclouded by a passionate desire to return to a peacetime economy, and this was reflected in drastic military cuts. The aircraft carrier was a sufferer from the economic complexities of those days.

Nevertheless, the Navy went patiently ahead with its studies and evoloved an aircraft carrier design which would fulfill an inevitable need in the scheme of our national security. The thinking which went into the carrier design effort kept abreast of the times with respect to development of all types of aircraft, weapons, and equipments. Difficulties were encountered throughout these development years, but the compelling logic was not to be denied; and gradually the American people came to understand the value and power of this unique weapons

system. During the intervening years, the Navy had modernized some of our carriers of World War II vintage, and they are performing a worthwhile service.

This ship, from the keel up, is built for the future, dedicated to the support of our national policies and the preservation for all time of the things that we hold dear. Today. she is afloat. When she joins the fleet, she will be the mightiest warship of oceans-versatile and durable. She, and her sisters to follow, will be our future ships of the line, and, as such, will possess ever-expanding usefulness. They will constitute a powerful diplomatic instrument during peaceful years both by reason of their own quiet but imposing strength and also as symbols of the great national strength which alone could give them birth. tain their predecessors' World War II capabilities, of course, but they will also have a vastly increased firepower deliverable at greater distances, together with defenses capable of dealing with modern threats.

Offensively, this ship will be able to play her vital role by smashing at the sources of any enemy's naval power and by assisting our sister services and allied forces in carrying the fight to the foe. Wherever attack must be launched from the sea, this mighty ship and her planes will have the capability of delivering crushing blows against her as signed targets. The versatility of her aircraft and weapons will permit her to engage targets on the sea, above it, and below it, and on land where threats to our control of the sea is to be found. By her mobility, she will be able to bring airpower to parts of the world where no comparable friendly force can be found or maintained. The carrier task force takes on new and formidable significance with the advent of this new class of

This carrier of the future will also have the inherent protection provided to naval vessels by the vastness of the ocean areas where their location cannot be predetermined and thus zeroed in for destruction. The aircraft carrier, by her very nature, becomes an obscure target for enemy detection and effective attack. Even if her whereabouts become known, she, with guided missile-carrying companions will offer a formidable defense against any weapons now on the drawing boards or even on the horizon. As she goes about her assault tasks, she will be protected by her own fighters, guided missiles, mighty depth bombs, and curtains of electronic energy pulsating both beneath the waves and above them to detect and herald the enemy's approach.

As awe-inspiring as are the dimensions of this leviathan, the ship, herself, is but a symbol of the vastly greater power from which she springs—the unstoppable power of a great free society, blessed with generous resources, spurred on by the incentives of freedom, ready to share with those struggling for freedom as we originally and flercely struggled, determined not to lose any part of the heritage we have won by struggle. That is the true sifinicance of this great ship and I give the Navy's pledge that the U. S. S. Forrestal will discharge her duty to her country in defense of those things for which her country in defense of those things for which her country is tands.

Address by Hon. Charles E. Wilson, Secretary of Defense

Nearly 2½ years ago a similar group gathered here to lay the keel of the aircraft carrier U.S.S. Forrestal. Today, as we launch this vessel, we mark another milestone in the progress we are making to modernize and improve the readiness of our armed services.

The building of this ship is a tribute to the men of the Navy who are dedicated to maintaining the freedom of the seas in the defense of our country. It is also a tribute to the skill of the loyal and capable workers of the shipbuilding industry of this country, and in particular to those of the Newport News Shipbuilding & Drydock Co. We are sure that they have planned well and have built well and that this ship, when commissioned, will fulfill our every expectation

During this period of 2½ years the Navy has proceeded with the other plans and work necessary to provide the aircraft which will fly from the Forrestal decks and with the training of the officers and men who will man her when she joins the fleet.

The same careful planning and integration of new weapons and new technology is proceeding in all of the armed services as we continue our efforts to provide this country with the best and most modern defenses in our history. In so doing we are providing what we believe to be a real deterrent to the outbreak of another world war.

I am particularly proud that this ship bears the name of the first Secretary of Defense who did so much to build our modern Navy and whose efforts contributed so much to our national defense.

I knew Jim Forrestal well and had many contacts with him when he was Under Secretary of the Navy with Frank Knox; when he guided the Navy through the difficult war years as its Secretary; and later when he was the first Secretary of Defense. I always admired and respected him for his self-sacrificing devotion to his country.

At the keel-laying ceremony, the then Deputy Secretary of Defense, Mr. William C. Foster, spoke these words:

"And now let us in our hearts echo the prayer that from these beginnings an historic ship may rise successfully;

"That she will render service to the Nation consonant with that rendered by the man whose name she bears;

"And that she will carry to the far ends of the earth our championship of peace."

I would like for all of us to reiterate that prayer here today.

Address by Hon. Charles S. Thomas, Secretary of the Navy

THE IMPORTANCE OF THE MOVING SEA BASE

Ladies and gentlemen, this is a historic moment for all Americans as we launch today the newest, most modern, and most powerful naval weapon in history.

It is a particularly proud moment for me personally, here in the presence of Mrs. For-restals. Mr. Forrestal's two sons, and his brother, to pay tribute to that wonderful and dedicated American and friend whom I had the privilege of knowing and working with during World War II and who did so much to alert us to the danger of communism. His imprint is still visible and his influence is still felt throughout the Navy and in Washington.

Today you are witnessing not merely the launching of a ship, but the launching of our country's most versatile and most dispersable weapon in our nuclear arsenal.

The aircraft carrier, such as the Forrestal, is not only a weapon of great potency and utility today, but for the future, it is one of a family of sea weapons with even greater possibilities and potential.

For the foreseeable future, nothing is in prospect which will diminish our need for continued control of the seas—the surface of the seas by ships, the underseas by submarines, the air over the seas by naval airpower. As a matter of fact, the advent of the atom, the jet, and the missile have increased, not decreased, the importance of sea power.

So in this atomic age, when the weapons and the nature of war are changing, the mission of our Navy has not changed. The occans continue to be our cushions of defense, the bonds uniting us with our friends and allies, and our lifelines to overseas sources of raw materials which are so vital to our defense and peacetime production.

Our continued dependence on overseas bases for many years to come, be they Navy, Army, or Air Force, will demand that we control the seas to operate and supply them. Even more important, if war should be

Even more important, if war should be forced upon us, the seas are and can become increasingly vital as the mobile platforms of swift and devastating retaliation.

If we are attacked, our Nation's survival will depend on how well our system of airbases survives the initial blitz. For it is from these airbases that our counterattack will be launched. Not all of our continental airbases are certain to be invulnerable to destruction. Not all of our airbases on foreign soil are certain either to be available or usable.

Therefore the security of our airbase system is of utmost concern in our defense planning. Today, dispersal has one of our Nation's top priorities—dispersal of industry, of communications, and particularly of our retaliation system. Our airbase system must therefore not only be strongly defended, but it must be widely dispersed and as secure as possible if it is to guarantee that our retaliatory attack is launched.

our retaliatory attack is launched.
Since the United States has rejected preventive war on moral grounds, our determent and our defense against a nuclear attack must be based on a well advertised ability and intention to counterattack with overwhelming force.

To be certain that we have the maximum defense against a surprise attack, a part of the United States counterattack has been decentralized and dispersed on unpredictable moving sea bases. These unpredictable moving sea bases complement our fixed base system and together, the two insure a balanced base system which an enemy cannot neutralize.

The Forrestal is one such mobile sea base—the missile carrying atomic submarine and seaplane are others. Each one of these can use the entire oceans as mobile platforms and 10,000-mile runways. The Forrestal's airplanes will be able to take off and land simultaneously from her deck. This mobile base has a top speed of about 40 miles an hour; it can move rapidly to any part of the world's oceans. It is an outstanding example of dispersion. An aggressor can never be sure of its location. To find it and attack it will force him to divert a proportion of his offensive air strength which might otherwise be used to attack our homeland. The moving sea base's mobility, speed and striking power will also require that the enemy scatter, dilute and expand his defensive air power, which might otherwise be devoted to offensive roles. The Forrestal's ability to haunt an enemy's shoreline carrying a lethal load is a threat he cannot ignore.

Any target can, of course, be hit under the right conditions. But a moving sea base, particularly one which can maneuver and travel at 40 miles an hour, is obviously very

difficult to locate or destroy.

The Forrestal with its speed, its greatly reinforced armament, its improved radar vision, its heavy antiaircraft defenses, its guided missiles, and its new jet interceptor aircraft will indeed be a phantom target for any enemy.

for any enemy.

And the modern, streamlined carrier task force surrounding the Forrestal will operate under a new tactical doctrine emphasizing dispersion making it impossible to damage or destroy more than a small part if any

or destroy more than a small part, if any.

Moving sea bases, such as the Forrestal, also have great versatility and usefulness. They can be used in conjunction with massive retailation. They can be used to maintain control of the seas. As we learned in Korea, they are ideal for localized wars re-

quiring the use of conventional weapons, or in places where our fixed airbases are limited.

Because of these abilities, and particularly because of their atomic striking power, the Forrestal and her sister ships will be a deterrent force against aggression, and an insurance policy for peace.

ance policy for peace.

The recognition of the importance of and the need for naval power is best exemplified by the Russians. The Russian Navy is the only service of any major military power that has increased in both personnel and equipment over what it was during World War II. Since that time, the Russian Navy has risen from the seventh largest navy in the world to second only to that of the United States. This growth is eloquent evidence of their fear of our transoceanic seapower, particularly of such a weapon as the Forrestal.

In this atomic age, if we did not have this type of mobile sea base we would be forced to invent one. Fortunately, we have it and in just a few moments you will see it launched. The Forrestal's ability to carry a powerful atomic punch, its ability to take the fight right into the enemy's front yard, its ability to sustain itself at sea for long periods of time, its ability to strike a naval target a thousand miles from her deck, gives our Nation a powerful weapon for preserving a peaceful world.

Our seapower, as represented by the Forrestal, is therefore a great deterrent to war. We are determined to keep that seapower

modern, alert, and adequate.

The launching of this great ship should elevate our confidence that peace can be achieved. We have a righteous cause, freedom and peace. We have strong friends. We have superior productive capacity. We have superior naval power to control the seas on the surface, below the surface, and in the air above.

With all of these, and above all, with God's help, we are confident of success.

Invocation by Rear Admiral Edward B. Harp, Jr., United States Navy, Chief of United States Navy Chaplains

Almighty and Eternal God, who art the fountain of all wisdom and power, we come to invoke Thy blessing upon this ship. We praise Thee for this memorable and climatic moment of human achievement. We rejoice that under the dispensation of Thy providence, in this particular moment of history, Thou hast made it possible for the ingenuity, skill and labor of free men to bring this ship into being. May there come now, to those who have wrought as good workmen in its planning and construction, the inner satisfaction of having done their tasks worthily and well.

As we christen the U. S. S. Forrestal, we commend her to Thy guidance and care. Grant that her services may be used in the preservation of peace, and for war only when the defense of freedom and honor shal so dictate.

To this petition we add also our supplications for the President of the United States and all others in authority. We ask Thy blessing, too, upon all who serve in the Armed Forces of our Nation, particularly those who are making the greater sacrifices in the troubled areas of the world. Be pleased to protect and uphold them with Thy love and care.

Finally, O God, unite us all in an eternal purpose, to preserve and bear aloft the torch of freedom and peace among nations who love Thee and keep Thy commandments. To Thy honor and glory we offer this prayer. Amen.

Cardinal Spellman, Apostle of Peace

EXTENSION OF REMARKS

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. MULTER. Mr. Speaker, this past Christmas, as in the 4 previous years, our soldiers in Korea were visited by a distinguished priest of peace, Francis Cardinal Spellman, archbishop of New York.

He has just recently returned from that trip and the following words, written by Harry H. Schlacht, which appeared in the East Side News of January 22, 1955, are indeed a "welcome home."

I am pleased to commend them to the attention of our colleagues:

CARDINAL SPELLMAN, APOSTLE OF PEACE

(By Harry H. Schlacht)

Welcome home, Francis Cardinal Spellman, archbishop of New York.

His eminence has recently returned to our shores, following his fifth consecutive Christmas in Korea with our Armed Forces.

He has gone there because of his innate love and devotion to our fighters for freedom.

Cardinal Spellman is the military vicar of the American troops.

He has traveled by helicopter and jeep, has climbed mountains in all sorts of weather, and has assumed peril upon peril to himself.

Notwithstanding all these dangers, he has brought spiritual consolation to our lads in the Far East.

His was indeed a familiar face.

His was a familiar voice to our boys who came from every hamlet and village, from every city and State, from every plain and mountainside of our glorious land.

And they listened to the soft, sweet tones of his eminence, as his voice rolled gently across the Korean fields.

"If vigilantly we do not built an invulnerable spiritual defense against the foes of peace, then we will bring upon ourselves and the innocents of future generations continuing, agonizing years of war."

These inspiring words of this prince of the church were echoed round the world.

"No man on earth wants peace more than I do," said Cardinal Spellman.

"For I am a priest of peace, my life consecrated to the service of God and man, dedicated to striving to bring peace to men on earth and everlasting peace in Heaven."

There is not a man of peace who has not been greatly moved by the hart-warming sentiments expressed by this simple man of God.

There is hardly a person across the sea who does not turn his face toward America, as he offers his evening prayers, and whose sleep is not visited by some dream of our free land.

Ours is God's country, in which liberty and peace are always cherished and coveted.

And God willing, they shall ever remain with us.

The stories told by our soldiers of the goodness and greatness of Cardinal Spellman are legion.

They tell of his compassion and understanding, and of his never-failing sense of humor. They tell of his great capacity to see, to hear, to feel the joys and sorrows of our

Indeed, the elements in his nature give him a kinship with the spiritual leaders of the ages.

The great honor him and forget their

Francis Cardinal Spellman is not only the great churchman we know him to be, but he also is a writer, scholar and humanitarian as well.

Let the Nation unfurl his banner high for all the world to see—his magnificent record in the cause of freedom and peace. He merits the Nation's highest award.

Let America make grateful acknowledgment of a task well done.

Result of Poll

EXTENSION OF REMARKS OF

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 3, 1955

Mr. CORBETT. Mr. Speaker, during my years of service in the Congress, I have regularly conducted polls of public thinking on vital national issues in my congressional district: These polls have been in the form of a printed questionnaire, requiring simple yes-and-no answers, mailed to registered voters in my district, regardless of political affiliation.

Responses to these questionnaires have always been excellent. The tabulated results, which virtually constitute a referendum of the district, have proved of enormous value to myself and I hope to my colleagues in the Congress.

My congressional district is probably as representative and contains as many varied interest groups as any in the Nation. It has the wealthy, the poor, and the middle class. It has a high concentration of labor, white-collar workers, small business, large industries and some of the finest farm areas found anywhere. It includes a thickly populated section of Pittsburgh, extends to the rural areas, and takes in many large and small towns in northern Allegheny County.

This latest poll covered 13 questions raised by President Dwight D. Eisenhower's state of the Union message. The percentage tabulation of answers is included here without comment.

I trust they will prove as interesting and informative to all who study them as they are to me.

POLL RESULTS

1. Do you approve of Eisenhower's program general? Yes, 90 percent; no, 10 percent.

in general? Yes, 90 percent; no, 10 percent.

2. Should the budget be balanced prior to important tax cuts? Yes, 83 percent,

no. 17 percent. 3. Do you believe that our expenditures for national defense are adequate? Yes, 76

percent; no. 24 percent.
4. Should the Federal Government encourage and guaranty private health insurance programs? Yes, 51 percent; no, 49 percent.

5. Should tariffs be selectively lowered through reciprocal trade agreements? Yes. 72 percent; no, 28 percent.

6. Should the draft law be renewed? Yes, 85 percent; no, 15 percent.

7. Should the minimum wage be raised to 90 cents per hour? Yes, 77 percent; no, 23 percent.

8. Eisenhower says a salary raise for Members of Congress "is long overdue." Do you agree? Yes, 64 percent; no, 36 percent.

9. Should the incentives for men to remain in the military services be increased and the incentives to be discharged be reduced? Yes, 82 percent; no, 18 percent.

10. Should the voting age be lowered from 21 to 8 years? Yes, 35 percent; no, 65 per-

11. Do you agree that the flexible pricesupport program is a marked improvement? Yes, 88 percent; no. 12 percent.
12. Eisenhower said: "The transition to a

peacetime economy is largely behind us. The economic outlook is good." Do you agree? Yes, 78 percent; no. 22 percent. Do you

13. Do you think the Eisenhower administration is making satisfactory progress in securing world peace? Yes, 81 percent; no, 19 percent.

The Vital Necessity of the Merchant Marine

EXTENSION OF REMARKS OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Thursday, February 3, 1955

Mrs. SULLIVAN. Mr. Speaker, the Mississippi Valley Association is holding its annual meeting in St. Louis beginning Sunday and continuing through Wednesday of next week. This organization is deeply interested in the merchant marine of our country and recently published the following editorial by the association's president, Wilbur A. Jones, about the vital necessity of the merchant marine-an editorial I hope the Members of the House will take the opportunity to read:

[From the Mississippi Valley Association Newsletter |

PRESIDENT'S PARAGRAPH

To landlubbers living far from any coast, seagoing ships often seem remote things scarcely touching our everyday experiences. their owners complain of financial When difficulties, it is easy to shrug our shoulders and say, "So what?" But it takes a little research to discover some most important connections. For example, foreign commerce is vastly important to agriculture and industry, often providing the added volume that means the difference between profit and loss. It was this very idea that led far-seeing businessmen of the midcontinent area to organize the valley association in 1919 to tie the industry, commerce, and agriculture of the great hinterland to the foreign trade of America at the port of New Orleans. The wisdom of that plan is becoming more apparent every day, with the tremendous growth of river traffic, a sizable part of which finds its way into foreign trade.

It is a sad fact that American-flag ships do not carry the bulk of these cargoes to foreign countries. Roughly 70 percent of the business goes to foreign ship owners in spite of the fact that the rates are competi-tive. To offset the much higher wage rate paid American seamen, our Government pays a subsidy to domestic lines who qualify under certain restrictions. While this comes to a tidy sum annually, it is still only a

minor part of the income of the American merchant marine, 90 percent of which comes from private enterprise. And this 90 per-cent goes right back into wages for American workmen, food, supplies of every kind.

Not only does our merchant marine add greatly to the total of American enterprise, but it is a defense factor of tremendous im-portance. In this day of global concern and tension it is vital that our merchant marine be kept at a high state of efficiency. After both world wars short-sighted policy led to indifference and neglect of this vital national asset, so valuable either in peace or war. A subsidy which merely makes up the difference in cost of living of our ships' crews is a small price to pay for what is one

of our first lines of defense.

I am sure it will be news to many of our members that in the last session of Congress, it was very difficult to obtain enough votes to pass two measures very essential to the continued operation of the American merchant marine. One was an amendment to the mutual security bill, providing that at least 50 percent of our give-away cargoes in the current year be carried in American bottoms. The other was a bill to make this provision a permanent factor in American policy. These measures were so close to failing of passage that an SOS was sent out to our association to muster every possible vote in the Mississippi Valley. It is a mat-ter of pride to your officers that the votes were forthcoming, and the bills were passed, and are now the law of the land.

While our membership is predominantly in the States of the great central plains and valleys, our association is strong for any-thing that helps make and keep America strong. The American merchant marine

strong. T

WILEUR A. JONES.

The Formosa Debate

EXTENSION OF REMARKS OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by the noted military expert of the New York Times, Hanson W. Baldwin. In this critical period his views as to the significance of Formosa to the United States, militarily and otherwise, is of great interest.

THE FORMOSA DEBATE-AN EVALUATION OF ISLANDS' MILITARY AND POLITICAL IMPOR-TANCE TO THE UNITED STATES

(By Hanson W. Baldwin)

Debate about the importance of Formosa and of its coastal outposts of Quemoy and Matsu can have no realistic settlement unless two questions are answered:

How important is Formosa to the United States in the current world conflict?

Are the Nationalist-held islands of Quemoy and Matsu essential to the defense of

The first question must be answered in political and psychological as well as military terms.

In a military sense the island is important but not vital to the United States and to our position in the western Pacific and eastern Asia.

FORMOSA A FLANK THREAT

Chiang Kai-shek's Nationalist forces have a defensive importance and a small offensive capability, limited chiefly to harassing and radding operations. In case of general war, but only as part of a United States operation, the Nationalist land forces could become the backbone of an invasion of the China mainland. Without United States support there would be no possibility of a successful invasion. As the years go on the Nationalist Army, now averaging more than 27 years of age, will tend to become less and less useful.

In Nationalist hands Formosa does, however, offer a slight flank threat to Communist China. As long as the island is in Nationalist hands Peiping must earmark some of its armed forces to the so-called invasion coast from Shanghai to Canton.

In Communist hands, Formosa would dominate the normal north-south shipping routes along the coast of eastern Asia. It would secure the coastal flank of Red China and would provide air bases within easy jet range of the Philippines and Okinawa. In a military sense it is more important to us negatively than positively; we do not need it for an offensive base or strategic point d'appui from which to exert power against the Asiatic mainland, but it would complicate our military problem in the Western Pacific if the island were in Communist hands.

Formosa's real importance is political and psychological. Its loss to communism would be felt all over Asia: among the overseas Chinese residing abroad, many of whom now look to Taipei rather than to Peiping; in Indonesia and South Vietnam, Burma, and elsewhere—already impressed by past Communist victories. Communist propaganda has exploited the stalemate in Korea and the West's defeat in Indochina. The United States, to many Orientals, is a paper tiger, big on words but short on strength. It is certain that the communization of Formosa would mean to many Asiatics that they had better jump on the bandwagon of Peiping.

It seems certain, therefore, that Formosa, while far from vital to the military defense of the United States, is highly important and, in a political sense, well-nigh vital to the position of the United States in the Western Pacific and to the struggle against communism in Asia.

QUEMOY AND MATSU

But if this is so, are Quemoy and Matsu essential to Formosa's defense?

The Quemoy Islands, held by the Nationalists, command the approaches to the harbor of Amoy, opposite southern Formosa. The main island is about 10 miles long and rises to a height of 176 feet. Little Quemoy Island, 357 feet high, is about a mile at the nearest point from Quemoy. The area between the Islands offers good shelter from typhoons and forms Quemoy Harbor. These 2 islands are garrisoned by about 50,000 Nationalist troops, well dug in behind barbed wire and minefields. The garrison has some 105-millimeter guns, 37-millimeter-gunned tanks, and Sherman tanks. There are two small airstrips, one of which can handle two-engined cargo planes.

Matsu Island, which lies well off the harbor of Foochow, is about 3 miles long and 2¼ miles wide at its broadest. It, too, is rocky and rises to a height of 104 feet. Matsu is garrisoned by about 5,000 Nationalists regulars and 1,000 guerrillas.

The coastal guns on these islands are not big enough to deny Amoy and Foochow Harbors to all Communist shipping. But in the hands of the Nationalists the islands, Quemoy in particular, do tend to neutralize the importance of these ports. Quemoy, and Matsu, therefore, have an inhibitory effect upon Communist invasion preparations. It seems probable that no invasion of Formosa could be attempted until these islands were reduced.

On the other hand, these islands would be difficult to hold against determined assault.

It is, therefore, true, as Adm. Felix B. Stump, commanding the Pacific Fleet, put it, that Quemoy and Matsu "certainly are important" but not "absolutely vital" in a military sense to the defense of Formosa itself. Like Formosa, their greater importance is political and psychological. Would the communization of Quemoy and Matsu weaken materially the morale of the Nationalists in Formosa itself and of non-Communists all over Asia?

Scientist Shortage Major Peril to United States

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an article written by Donald A. Quarles, Assistant Secretary of Defense, which appeared in the January 1955 issue of Planes. The article entitled "Graduations Drop as Demand

SCIENTIST SHORTAGE MAJOR PERIL TO UNITED STATES—GRADUATIONS DROP AS DEMAND GROWS FOR TECHNICIANS

Grows for Technicians," follows:

(By Donald A. Quarles, Assistant Secretary of Defense)

The critical shortage of engineers and scientists in America is potentially a greater threat to our national security than are any weapons known to be in the arsenals of aggressor nations.

Since 1950 there has been a steady decrease in the number of technical graduates from United States schools which has now leveled off at less than half the 1950 figure. This alarming decline has occurred at a time when advances in technology have imposed mounting requirements for technical personnel in industry and national defense.

AVIATION REQUIREMENTS INCREASE

The need for engineers, scientists, and technicians has been particularly serious in aviation, where research and development demands have multiplied at an almost unbelievable rate, and where design and production have become infinitely complex operations.

Because the aircraft industry is the backbone of our air power, the present and prospective future shortages of skilled personnel in this industry constitute a grave threat to our continuing air leadership.

As a matter of national policy, the United States has embarked upon an air power program designed to assure qualitative superiority over an indefinite period of years. Reliance will be placed upon our possession of better air power, more effective air power, rather than upon vast numbers of aircraft.

FACE MAJOR PROBLEMS

It is obvious that this effort to maintain our qualitative superiority in the air will require the efforts of tremendous numbers of scientists and engineers. We face many problems involved in the design and production of aircraft which will, in the not-too-distant future, fly and fight at multiples of the speed of sound. There are problems of heat, of control, of materials, of electronics, and many others. As yet, we have barely

started the exploration of the aeronautical sciences.

The only way we can find the answers to these knotty problems is to assure that America has adequate numbers of scientific and engineering personnel, and that their energies are devoted to this end.

Today we have little justification for complacency regarding our relative capabilities as compared with those of Russia. We must face the fact that technological advantages which we have so long enjoyed could be lost through apathy or through lack of longrange planning designed to meet our sclentific needs. The element of time, which favored us in past emergencies by giving us many months to mobilize our resources and train our personnel, already has been nullified by the ability of enemy nations to launch all-out attacks against our homeland without warning.

REDS EMPHASIZE SCIENCE

Reports on the Soviet Union indicate that the Reds are exerting intensive efforts to channel the interests of Communist youth toward science and engineering. Elementary and secondary schools stress science and mathematics. Incentives are provided for advanced students in engineering and science; and liberal rewards are given to their working scientists and engineers.

It has been estimated that this year the Russians will graduate approximately 50,000 engineers—more than double the number who will receive degrees from United States colleges and universities. An estimated additional 50,000 Russians will be graduated as subprofessional engineers, and trained and highly qualified technicians.

Upon this great and growing reservoir of engineering personnel the Soviet Union will depend for future progress in the global competition for technological and scientific supremacy.

Only by matching them in ideas and skills can we expect to achieve a reasonable degree of national security in future years.

ENCOURAGEMENT TO YOUTH

Certainly there is no desire in America to regiment or to mold the minds of youth as do the Russians, but there is a grave responsibility on the leaders of Government, of education, and of industry to provide new motivation and incentive for our youth to enter engineering, scientific, and related fields.

Talented young Americans have been called this country's greatest natural resource. It is vital to our security and welfare that those who have been endowed with the talents meet the challenge and build careers for themselves and leadership for their country in science and technology.

Chairmen and Minority Leaders of Standing Committees of the House of Representatives

EXTENSION OF REMARKS

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1955

Mr. CORBETT. Mr. Speaker, I have today introduced a bill to provide for the election of the chairman and the minority leader of each standing committee of the House of Representatives by the duly elected members of each committee. This proposed change in the rules of the House of Representa-

tives would have very wholesome and significant results and has long been overdue.

The rules of the House of Representatives provide amazingly well to let the majority eventually work its will while protecting all the proper rights of any minority. However, in actual practice the power of the Rules Committee to deep-freeze legislation is seldom successfully challenged, and the dictatorial control, where it exists, of the chairman of any standing committee over procedure and action in his committee is less seldom hurdled. I have earlier introduced legislation to partially dilute the power of the Rules Committee.

Why is there a need for a change in the manner of selecting committee chairmen? Every Member of the House knows and every student of committee procedures knows that the chairmen of the committees schedule pending bills for action in the order that they see fit. He may never schedule some bills at all; he may not assign them to a subcommittee; he may assign them to a special subcommittee of handpicked members; he may select or reject any witnesses for or against a given proposal. The chairman can limit the time of witnesses; he can select who does the questioning in hearings; he can determine in part who shall speak in the House and for how long. He may even delay to death reporting a bill favorably acted on to the Rules Committee or the House. Likewise, in the selection of conferees the chairman may often control the shape and design of House-passed legislation, and he can dominate, terminate, or prevent investigations and studies by his committee. Further, the selection and direction of the committee staff members can and generally is at the will of the chairman. Finally, the chairman can be most effective negatively by simply not calling meetings of the committee or stall a bill to death by hearings, protracted discussion, and intervening matters. All of these powers and more reside in the hands of the chairman of a standing committee and all of them have been abused too often.

How would the election of the chairman by the members of the majority party improve the situation? Most obviously by making the chairman of a committee responsible to the committee members instead of the seniority system, his power to behave in an arbitrary manner would be diluted if not eliminated. Certainly no chairman could long remain such or hope to be reelected if he did not treat his colleagues with the consideration they deserve as elected Members of Congress. Certainly any action on his part which was contrary to the will of the majority would place his chairmanship in jeopardy and he would know it.

It is also evident that in many cases; election of the chairman by the committee members would result in better-qualified chairmen. It is assumed that the senior member of any committee on the majority side, all things being equal, would normally be elected chairman under this proposal. But where it happens that the impairments of advanced

age; lack of energy; lack of ability to properly explain or persuade; lack of consideration, fair play, and open-mindedness, and lack of proper qualifications generally makes a person unfit to be a chairman, someone else would probably be elected in his stead.

The election of the chairman of the standing committees would, therefore, end the dictatorial powers of the chairman and would frequently result in a more capable chairman filling that vital post.

All that has been said about the importance of electing committee chairmen applies with greatly decreased force, but nonetheless does apply to the office of minority leader of the committee. If we regard the committee system as making the House of Representatives a collection of little Congresses subject finally to the will of the whole House we have the picture quite accurately and consequently the election of a minority leader for the committee comes in regular order.

I commend this measure to the consideration of my colleagues many of whom know its necessity and desirability without any prompting by me.

Need for Expansion of Italy's Agricultural Exports

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1955

Mr. CELLER. Mr. Speaker, I inserted in the Congressional Record my views on and my objection to the United States export program of granting heavy subsidies on citrus fruits which, because of these subsidies, is crowding Italy, Israeli, north African citrus products out of their traditional European markets, to the economic detriment of those warravaged and needy countries.

With the termination of direct United States economic aid, countries like Italy more than ever need their traditional foreign markets in order to maintain and raise their economic levels. Italy has a chronic unemployment situation in the southern part of the country which is, predominantly, an agricultural area. Unless it can expand its citrus and other agricultural exports it will be unable to overcome this situation. In addition, Italy is under constant pressure from the Soviet bloc to sell, at attractive market prices, to countries behind the Iron Curtain. Unless unfair competitive methods like United States subsidies are suspended, we will drive Italy and other countries similarly situated from their traditional markets and force them to sell to Communists and Communistdominated countries.

I submit for insertion in the Record the following editorial from the Washington Evening Star of January 24, 1955, which relates to Italy's biggest and most pressing problem—unemployment. The editorial calls attention to Italy's proposed 10-year governmental program which, among other things, points up the need for the expansion of the country's export trade and the lifting of the economic level of its southern agricultural areas.

HOPE FOR ITALY'S JOBLESS

Although it may have a number of serious bugs in it, the proposed plan to create full employment in Italy has the virtue at least of seeking to do something concrete, and on a large scale, about that country's biggest and most pressing problem—a problem that the Communists continue to exploit with great and omnious success.

The root of this problem rests in the fact that Italy, whose emigration outlets are very limited, is an overpopulated land that is poor in both food resources and the raw materials needed for a thriving industrial economy. As a result, about 2 million of its adult citizens are wholly unemployed and another 2 million just barely manage to subsist on incomes derived from low-paying, part-time jobs.

Clearly enough, even though Italy's living standards today are much better than at any time in the past two decades or more, such an unemployment situation is bound to be a breeder of widespread discontent, particularly because it tends to worsen as the country's population of 48 million keeps on growing. And the Communists, together with the fellow-traveling, leftwing Socialists, unquestionably are as strong as they are over there—the strongest Red party in free Europe—primarily because they have skillfully capitalized on the fact that Rome's postwar governments have thus far achieved little in coping with the problem.

Accordingly, the new full-employment proposal, whatever its shortcomings, deserves the most serious attention. As drafted by Senator Ezio Vanoni, Italy's Budget Minister, it contemplates a total outlay of \$8 billion on a 10-year program of governmental and private investment designed to expand or bring into being productive enterprises on a scale that would create and sustain 4 million additional jobs. The program would be concerned, among other things, with increasing the country's exports and lifting the predominantly agricultural south to a level of economic activity comparable to that of the industrial north.

As for financing, the Vanoni plan envisions not only a big outlay of public and private Italian capital, but also a number of substantial foreign loans and a market increase in overseas free-enterprise investments (especially American) in Italy's industries. But this aspect of the project is rather vague, and what remains to be seen is whether incentives and guaranties can be made attractive enough for either individual investors or for governmental lenders.

Despite such reservations, however, Italy obviously needs to do far more than it has done up to now if it is to solve its deadly serious unemployment problem.

Sgt. Prudencio Uranga

EXTENSION OF REMARKS

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. MILLER of California. Mr. Speaker, under the stimulus of battle men of great patriotism have willingly risked death and destruction.

Men have gone forth under the most hazardous conditions to rescue fellow men from death. It takes great courage to do these things.

We honor those who have performed them. They become an inspiration to all

of us.

Let me tell you of a man of great courage. A man who with great deliberation, fully recognizing the consequences of his decision, risked the most horrible of deaths to save his comrades and companions.

I can best tell the story by quoting from paragraph 2, general orders No. 34, Department of the Air Force, dated Sep-

tember 16, 1954:

2. By direction of the President, under the provisions of the act of Congress approved July 2, 1926, and transfer order 30, 1948, the Soldier's Medal for heroism not involving actual conflict with an enemy is awarded to

the following named airmen:

T. Sgt. Prudencio Uranga, AF18199466, distinguished himself by an act of heroism involving voluntary risk of life at Hayward Air National Guard Base, Hayward, Calif., on December 7, 1953, while serving as a civilian air technician with the California Air National Guard. An explosion in the pumping compartment of an F-2 refueling unit set the unit afire and threw burning aircraft fuel upon Sgt. Uranga. After extinguishing the flames on his clothing, Sergeant Uranga displayed outstanding courage and selfless disregard for his own safety by entering the tractor of the furiously burning fuel trailer and driving it from the aircraft parking area. Sergeant Uranga with-out benefit of protective clothing, and al-though he had sustained first- and seconddegree burns of his hands, arms, and face, then assisted in subduing the fire in the fuel trailer. The courage and devotion to duty displayed by Sergeant Uranga in this emergency reflect great credit upon himself, the Air National Guard and the United States Air Force.

By order of the Secretary of the Air Force: N. F. TWINING,

Chief of Staff, United States Air Force. Official:

K. E. THIEBAUD, Colonel, USAF, Air Adjutant General.

Prudencio Uranga is a member of the California Air National Guard.

He has lived up to the proved tradition of the National Guard.

He risked his life to save those of his comrades. He saved his country a great sum of money by reducing the hazard of a bad conflagration.

I hail Sgt. Prudencio Uranga as a hero.

Harriman, a Good Administrator

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1955

Mr. ANFUSO. Mr. Speaker, during the many years when he was associated with the Federal Government in Washington, the Honorable Averell Harriman held high and responsible posts and proved himself an able administrator. Now, in his capacity as Governor of New York, he is again proving his capability

as leader and administrator of the greatest and most populous State in the country.

Governor Harriman has made an excellent beginning in the short time since assuming office. The people of New York had shown their confidence by electing him as Governor of the State, and now their confidence in him is being justified.

Mr. Speaker, I desire to place into the RECORD an article by the noted columnist, Marquis Childs, entitled "Harriman's Stock Rises," which was published in the Washington Post and Times Herald on February 2, 1955. It reads as follows:

WASHINGTON CALLING

HARRIMAN'S STOCK RISES

(By Marquis Childs)

ALBANY, N. Y.—Something distinctly new has been added to the staid atmosphere of this capital of the richest and most populous State in the country. For the first time in 12 years, a Democratic governor and a Democratic administration are making the news.

While Gov. Averell Harriman is discovering the headaches that beset most of the 48 governors, he is also beginning to get the feel of the big new job he has taken on. He is preparing to push a variety of plans for improving one aspect or another of the State government; plans that are certain to come up against the stubborn resistance of the Republican legislature that has already set out to trip him up.

But conflict also makes headlines. Because the affairs of New York State are reported extensively in newspapers of national circulation, the governor of New York has at his disposal a formidable publicity engine. Harriman and his staff have given every sign that they mean to use that engine.

If only for this one factor of national attention, you could feel sprouting in the heady political atmosphere, a hothouse atmosphere anticipating the political spring, a potential candidate for the Democratic presidential nomination. But there are other factors. One of them is the presence at Harriman's elbow of his newly appointed Secretary of State Carmine De Sapio, who is also the leader of Tammany Hall and Democratic national committeeman.

If De Sapio, who has already proved himself a shrewd and resourceful political manager, has his way, Harriman will be the Democratic standard-bearer in 1956. The late Ed Flynn, boss of the Bronx, who had a great deal to do with making Franklin D. Roosevelt President, was secretary of state when F. D. R. was Governor and the parallel has not escaped the friends of either Harriman or De Sapio.

The new governor will not talk about what may or may not happen in 1956. But he is aware of a kind of vacuum in Democratic politics at the present moment and he means to take advantage of it.

The Democratic leadership in Congress is on the conservative side and has thus far shown a great reluctance to challenge President Eisenhower on either domestic or foreign policy. This "me, too" attitude, as it is considered here, will serve only to prepare the way for President Eisenhower to walk into a second term with scarcely more than token opposition. Harriman says frankly that he favors the political philosophy of former President Truman, who insisted that the Democratic Party had of necessity to be the dynamic party, championing measures of reform and social change.

Adlai E. Stevenson, generally considered the Democratic front-runner up to now, is refusing all requests to speak as he pursues the private practice of law. Moreover, Stevenson has no public base of operation such

as he had when he was Governor of Illinois in the months leading up to his "draft" for the Democratic nomination in 1952.

For many who have known Harriman through the past 20 years as he has held important appointive offices in Washington, Paris, London, and Moscow, it is simply impossible to take him seriously as a Presidential candidate. To begin with, he has a fortune inherited from his father. Great wealth, and particularly inherited wealth, has long been considered an almost irremediable handicap to aspiration to high elective office.

The Governor's shy, diffident manner has made him an indifferent practitioner of the art of speechifying, which is so important to the politician's career. Until he was a candidate in the District of Columbia's preferential primary in the spring of 1952—really a sort of popularity contest since the District is voteless—he had never run for any office. Harriman is 63 years old, I year younger than President Eisenhower and 9 years older than Stevenson.

Harriman's ardent backers, many of them now in his administration, believe that his election as Governor puts him in a new light. They see a parallel with Roosevelt, who was considered even up to the Presidency as an amiable aristocrat without very much force

of character.

Certainly as Governor, Harriman has a new perspective. His hope is to play a leadership role with the Democratic governors. He hopes they will supply the kind of dynamic leadership not evident in Washington.

This overlooks the fact, of course, that some of these governors are also known to harbor high political ambitions. Gov. G. Mennen Williams is a fourth-term Governor in Michigan and Frank Lausche, of Ohio, is serving his fifth term. Compared to these veterans, Harriman is a brash upstart. But the weight of New York State can be counted on to make up for part of his newness, or so his followers believe.

Belated thought it may be, he is entering into a new political phase of his life with an almost lighthearted enthusiasm.

Paying for Fraud

EXTENSION OF REMARKS

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. MULTER. Mr. Speaker, the following article, written by Joseph Alsop, appeared in his column, Matter of Fact, in the New York Herald Tribune of January 30, 1955. I direct it to the attention of our colleagues:

MATTER OF FACT (By Joseph Alsop) PAYING FOR FRAUD

Rangoon, Burma.—Here in Burma, which boasts the ablest and most realistic government of postwar Asia, the price we are paying for the fraudulence of our Asian policy is alarmingly evident.

alarmingly evident.

The news from home indicates a great, sudden stir about the Chinese Communist threat to the offshore islands of Formosa. But why is this?

In view of the record of the last 2 years, why on earth is anyone ruffled by the Communist seizure of Yikiangshan?

There was a first Munich in the form of the Korean truce. There was a second Munich in the form of the surrender in Indochina. There was a transparent fake in the form of the toothless Manila Treaty. And in the treaty with Chiang Kai-shek, specifically excluding the offshore islands from American protection, there was the equivalent of an engraved invitation to the Communists to seize those islands.

In the face of this record of retreat and appeasement, people at home are surprised by the natural—the downright inevitable results.

They are surprised because the retreat has been masked by a loud, hucksterish drumfre about "unleashing Chiang Kai-shek," "recaptured initiatives," "massive retaliation," "strengthened outposts," and the like.

The bad joke is that the Burmese and the Indians, who desperately desire to avoid an unnecessary war, have been just as much deceived by the loud talk as our own people. The loud talk in Washington has made these Asians think American policy warlike, when it has really been the precise reverse.

In Burma, we are blamed not for appeasement, which can be justly charged against us, but for aggressiveness, of which we are consulting suittless.

spicuously guiltless.

If appeasement was needful, we ought at least to have tried to reap its natural benefits and reinsure it as best we could. In particular, we ought to have told the Burmese and the Indians, "Well, we are going to follow your ideas about the right conduct of affairs in Asia, so let's get together to cope with the resulting situation."

with the resulting situation."

We even virtually ceased communication with Rangoon and New Delhi. The mounting concern caused by the loud talk in Washington was one cause of this development. But there have been other causes.

There has been no American Ambassador in Delhi for many months. There has been none here in Rangoon since last July.

The junior diplomats who are holding the fort here are good, hard working men, who show all the worst effects of the treatment given to the foreign service in the last 2 years. The American representation in Rangoon today has the approximative effectiveness of an old, wet washrag. And this is true despite a danger and an opportunity that should intensely preoccupy the American policymakers.

The danger can be simply defined. With no one to speak up for our side, Burma has slipped since last year. The big power—China—has begun to convince the little power—Burma—that her sweet words can be relied on. Men like Premier U Nu, and his two remarkable chief collaborators, U Ba Swe and U Kyaw Nein, are not really deceived; but they are beginning to be immobilized.

The opportunity can be equally simply defined. It is the opportunity to mobilize Burma.

The appeasements of the last 2 years have produced a new situation in Asia. American power is no longer sufficient to hold the balance true. The political and moral authority of the free Asian nations, and in particular Burma and India, are desperately needed to prevent a general collapse. That is another result of our recent policy which it is high time to face squarely. The opportunity is in Burma, because here in Burma, the leadership sees the position in Asia more clearly than in Delhi.

The danger to Burma of a Communist triumph in Thailand can never be forgotten by the government in Rangoon. Therefore, it is here, if anywhere, that the needed effort can be organized to hold Cambodia and Laos, the approaches to Thailand, which now have, for the long run, at least as much importance as the Formosa approaches, or indeed, of Formosa itself.

The last 2 years' policy of retreat may well have been desirable. Yet the wise commander, when he retreats, is careful to organize a new defense line for the new position he has occupied. Our policymakers have instead been too busy protesting that we really were not retreating; so no shadow of a new defense line has been organized, and the task of organizing one is getting harder by the month.

Newsletter to the East Side News

EXTENSION OF REMARKS

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I include herewith an article which I have prepared for the East Side News, a weekly newspaper circulated in my district on the East Side of New York:

FROM INSIDE CONGRESS

Washington is a serious city these days. The changeover from Republican to Democratic control of the House has brought with it a sober awareness that our international policy, and in many respects our internal legislation, must be bipartisan in character. Democratic leadership in Congress is demonstrating that it puts concern for the Nation highest in its thinking. I hope that the President will be big enough to express publicly his regrets at the warning he gave before elections of a cold war in our Government in the event of a Domocratic victory. The plain fact is that the Democratic Party, which is now in control of both Houses, is showing no rancor, no opposition for opposition's sake, and a genuine spirit of cooperation that deserve the President's and the country's thanks. I hope that will be forthcoming.

I voted for the resolution on Formosa. It was not an easy decision to make. I share the deep feelings of my constituents and, I believe, of the American people generally that we must not fail to pursue any honorable course that will maintain peace and secure our national defense.

With this in mind I joined the overwhelming majority in the House and in the Senate who voted for the resolution. There have been many experiences of history where wars were not begun, but were blundered into. Often the blunder was based on ignorance or miscalculation or misunderstanding. In an atomic age we cannot run the risk of being misunderstood. It seemed to me, and I gave this deep and careful consideration, that we owed it to ourselves and to the world to state just how we felt about our essential defense outposts.

This, together with the assurance that we have been given that the United Nations will be called upon to arrange a cease-fire off the coast of China, seems to me to be a step toward peace and not toward war.

There is another kind of defense the we need, in fact that we cannot do without; and that is the defense of our own morale and of our own historic traditions. That's why I introduced a resolution into the House last week, calling for the outright repeal of the present Immigration and Nationality Act, better known as the McCarran Act. I am not kidding myself. I can't speak with any certainty about how that resolution will be acted upon in committee, but I felt that it was the moral and the American way to stand up clearly and to say, as this resolution indicates: This is a blot upon our statute books, an affront to millions of Americans, unworthy of our tradition and inconsistent with our claim to speak up for the democratic

forces and institutions and peoples of the world.

I don't think that Congress would be indifferent to the voice of these millions of Americans if only they would speak up. That's a job for Mr. John Citizen. I hope he will do it in such volume and with such persistency that my resolution will be passed and that we can then tackle the reorganization of our immigration and nationality laws, with a new liberal spirit.

Last week I had occasion to speak on a radio program on the subject of wiretapping. Several weeks earlier Judge Hofstadter handed down a very significant decision, refusing a New York Police Department's request for the right to wiretap and expressing himself forcibly on this practice as a steady erosion of our individual liberties. He also pointed out that the number of convictions obtained by wiretapping was not consequential.

I have steadily maintained that wiretapping is a dirty business and that, tolerated, is sure to injure our dignity as a nation and our heritage as Americans. In a debate on the subject in Congress last year I said very clearly:

"Wiretapping is dirty business. Nothing that we can do or say here will change that. And while I think that every legal means should be used to convict traitors and saboteurs, we must not overlook the fact that this country is based on law and order and justice. If we deviate one lota from those principles, we are forgetting our great heritage of freedom and joining those who believe in totalitarian methods.

"It is doubtful whether such random, haphazard searches of the population at large are very efficient police methods, but efficient or not, the undesirability of most of them was decided a long time ago by the adoption of the Bill of Rights."

My stand is with our Founding Fathers who insisted on the Bill of Rights as a condition for the adoption of the Constitution.

H. R. 1, Extending Reciprocal Trade Agreements, Will Continue the Disastrous Effects on Our Economy That Have Resulted From the Reckless Importation of Foreign Goods Manufactured at a Fraction of the Wages Paid American Workmen

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1955

Mr. VAN ZANDT. Mr. Speaker, on February 1, 1955, I appeared before the House Committee on Ways and Means in opposition to H. R. 1 providing for an extension of reciprocal trade agreements,

My statement follows:

I appreciate the privilege of appearing before this committee.

When I first came to Congress in 1939 I opposed Reciprocal Trade Agreements on the grounds that they were destroying the jobs of coal miners in my Congressional District in Pennsylvania. At that time, imported Russian coal had captured some of the eastern seaboard coal markets from coal producers in my Congressional District.

During the early part of World War II and before resigning my seat in Congress to return to military service, I supported the

extension of Reciprocal Trade Agreements in the 78th Congress because we were at war and the demand for coal revived our coal

industry.

When I was elected to the 80th Congress I voted in favor of extending Reciprocal Trade Agreements with the understanding that American industries would be protected from unfair competition resulting from a flood of cheaply manufactured foreign goods.

For example, in Pennsylvania residual oil from Venezuela was beginning to flood the eastern seaboard, thus destroying the market

for Pennsylvania-mined coal.

During the 82d Congress I voted to extend reciprocal trade agreements because there was contained therein the so-called perilpoint amendment which was designed to provide a checkrein on imports that could destroy the jobs of American wage earners.

During the 83d Congress I joined many of my colleagues in an effort to stop the uncontrolled flow of foreign goods. Many of you will recall that we were supporting the Simpson bill. My special interest was in regulating the flood of foreign residual oil by placing a quota limitation on the importation of such oil. As many of you will recall, the Simpson bill was returned to the committee.

During the early part of 1954 the so-called Randall committee was created and took testimony from spokesmen for industries adversely affected by the importation cheaply manufactured foreign goods. I regret to state that the coal industry was denied the opportunity to present its side of the case. Consequently the Randall report ignored the increasingly serious situation existing in the coal-producing States of our Nation

Mr. Chairman, by my votes as a Member of Congress there is ample proof that I believe in the principles of reciprocal trade agreements and that I supported them until I found a wholesale disregard for protecting the jobs of American workmen.

It became evident that the so-called perilpoint amendment was meaningless and that the Randall committee merely performed a window-dressing job and actually by their recommendations threw American wage earners to the wolves.

Mr. Chairman, I voted against the extension of reciprocal trade agreements last year and I intend to continue to do so until the interest of the American working man is protected.

As a means of attaining the objective of protecting the jobs of American workmen, I have three bills pending before this com-mittee, namely: H. R. 345, H. R. 864 and H. R.

H. R. 345 is designed to provide a 5 percent quota limitation on imports of foreign residual oil; while H. R. 3019 would increase

the limitation to 10 percent.

H. R. 864 provides a permanent procedure for the adjustment of tariff rates on a selective basis and regulates the flow of imported articles on a basis of fair competition with domestic articles. H. R. 864 also contains a 5 percent quota limitation on imports of foreign residual oil.

If hearings are scheduled on these three bills now pending before this committee, I am prepared to testify in support of their

objectives.

Mr. Chairman, I am opposed to H. R. 1 because it will continue the disastrous effects on our economy by the reckless importation of foreign goods manufactured at a fraction of the wages paid American workmen.

For the past several days this committee has heard expert testimony from spokesmen for various industries regarding the adverse effects reciprocal trade agreements are having on our industrial economy. These ex-perts produced facts showing that the employees of the industry affected not only lost their jobs but many of the manufacturing plants have been driven to financial distress, and in some instances were forced to close their doors.

You have heard from spokesmen for the coal industry and how the flood of foreign residual oil from Venezuela has destroyed the domestic coal markets of the miners in Pennsylvania, Maryland, and West Virginia.

Back in 1939 when I first voiced my opposition to the importation of slave-mined Russian coal and other cheaply manufac-tured foreign products, I predicted that such a reckless policy would create ghost towns out of many communities in my congressional district and throughout the Nation.

Mr. Chairman, my prediction in 1939 has become a reality. Practically all of our deep mines in central Pennsylvania are closed and thousands of miners have been out of work for several years. In fact, many mining towns have been abandoned and their empty and dilapidated rows of houses stand as a monument to the destructive effects of the importation of foreign residual oil. Because they have nowhere to go there are only a few of the unemployed in the coal fields of central Pennsylvania that have left the area. The result is that today, according to the United States Department of Labor, my congressional district is classified as a critical area because of the fact that nearly 18 percent of the civilian labor force is unemployed.

This unemployment is not confined to coal miners but includes those employed in affected related industries such as the rail-

Mr. Chairman, in my home city of Altoona, Pa., nearly 10,000 people are unemployed, 6.000 of whom are railroad employees with 4.100 of this number having exhausted their rights on January 10, 1955, to railroad unemployment insurance benefits. A similar condition exists among coal miners and others who have lost their right to unemployment compensation benefits from the State of Pennsylvania.

Mr. Chairman, every community in my congressional district has an active committee engaged in trying to attract new industries and millions of dollars have been raised by voluntary subscription to finance this long-range program of rehabilitating the industrial economy of the area.

While this united community effort goes on, thousands of my constituents-all good Americans and victims of this reckless foreign trade policy-are today dependent for their existence upon public assistance and surplus food commodities.

I regret that every member of this committee is unable to talk to these unemployed Americans as they stand in line to pick up their food coupons. If it were possible for you to talk to them, you would hear the pitiful story of their plight as citizens of a Nation that boasts of its high standard of

As I mentioned a moment ago, communities affected by unemployment in cooperation with the State and Federal Government are endeavoring to rehabilitate their economy by attracting new industries. The unemployment situation, however, is getting worse as mines continue to close and more miners and railroaders are losing their jobs.

While this unfortunate situation prevails in the United States, residents of Venezuela which is the chief exporter of residual oil, are enjoying unbridled prosperity.

Let me read you Hal Boyle's syndicated column of January 24, 1955, titled "Venezuela Seen as the Texas of South America": "VENEZUELA SEEN AS TEXAS OF SOUTH AMERICA

"(By Hal Boyle)

VENEZUELA.—Leaves from "CARACAS. cruising notebook: Venezuela today is the Texas of South America.

"So much money is being made here that visiting Texans actually get an inferiority complex, and the United States dollar feels like 50 cents.

"Just to be sure he wouldn't be mistaken for an ordinary bum, one new millionaire from the interior of the country came to town with calling cards that bore this message printed after his name: 'Capital; 6,000,-000 bolivars.' That's nearly \$2 million.

There is so much wealth flowing around that even tourists get a break. If you kick a diamond out of a rock here, the ment lets you keep it tax free unless it is worth more than \$1,700. You can also go pearl diving and keep any pearls you find.

The visitor has a dazed sensation he is caught in a mid-century Klondike gold rush. The atmosphere of quick money is overwhelming, and tales of riches made over-

night are a bolivar a dozen.

Venezuela is bigger than Texas and Oklahoma combined and larger than any European country except Germany. Its chief income is from oil-no land except the United States produces more—but it also has iron ore deposits rivaling the famed Minnesota Mesabi Range. It also has cowboys and Indians, 16,000-foot tall mountains, jungles, beach resorts, and the world's highest water-

"Although the nation has a population of only 51/2 million, the Government spent half a billion dollars in 1954 on vast public works projects and still ended up with \$80 million left in the till. Its huge modernization program calls for the future expenditure of \$800 million alone for a new 2,640-mile railway network to open inland mineral and agricultural areas for further development.

'Foreign investors from the United States and Europe are pouring untold more mil-lions into the industrialization of the country. It has taken in more than 100,000 immigrants from Europe the last 10 years.

'Caracas, the 388-year-old capital, is now one of the world's greatest boom cities. Fifty years ago milkmen herded cows through its ancient streets. Today they are jammed by thousands of new high-priced motor cars.

"You reach the city from the nearby port along recently completed 11-mile highway that cost \$71 million, which Caraquenos proudly boast is, mile for mile, the most expensive ever bufft.

"Nearly a million people live in the metropolitan area, and so many new buildings are going up construction workers have no time even to take Sundays off to go to the bull fights.

Dominating the heart of the city is Centro Bolivar, Venezuela's "Rockefeller Center, which will cost \$300 million. Its twin 300foot towers, housing Government offices, have 4 traffic levels beneath them.

"Caracas also has a baseball park the size of Yankee Stadium, the new \$8 million Hotel Tamanaco, a technicolored \$30 million polyclinic hospital, and a university as

modern as any in the world.

"But the city has abysmal poverty as well as tremendous wealth. The shantles of the poor still crowd many of the raw red hills that stud Caracas. The Government has torn down thousands of these eyesores and replaces them with forty 15-story apartment buildings at a cost of \$24 million. Workmen can rent the apartments for \$6 to \$30 a month, own them after a period of 20 years.

"In 1955 the Government plans to tear down 6,500 more shacks, spend \$2 million more on apartment projects for low-income

workers.

"Oddly, many uprooted workmen's families are unhappy in their fine new apartments. " 'The old shacks had a small yard in which the families could raise a pig and a few chickens,' explained our guide. 'It is all but impossible, of course, to raise a pig in an

apartment, and many of the old people in

particular get lonesome for their old way of life. They don't feel as free as they did.'

"Progress always has its price, and to some

the price doesn't seem worth it."

Mr. Chairman, what a contrast it is to compare living conditions in Venezuela with the coalfields of Pennsylvania.

May I add that the prosperity enjoyed in Venezuela is to a great extent at the expense of the misery and suffering of residents of the coal-producing States of our Nation and especially of my congressional district.

At this very minute a quarter of a million ton tanker ship is tied up at an east coast dock carrying disaster to the coal, railroad, and related industries of this Nation, in much the same manner as rat-infested vessels brought disease into our port cities in

years gone by.

This foreign tanker with its bunker space filled with residual oil is dumping it in violation of every American concept of fair competition. As a matter of fact, even if the miners of our Nation would work for nothing and the railroads transported the coal for practically nothing, the coal industry could not compete with this unfair competition from foreign residual oil because its price is continually manipulated downward to capture the eastern seaboard coal market.

Mr. Chairman, it is being said in defense of residual oil that the oil companies have been requested to restrict voluntarily the amount of residual oil imported quarterly.

It has also been said that if any restrictions are placed on the importation of foreign residual oil that we will offend Venezuela.

Let me state, Mr. Chairman, that every time a coal miner loses his job because of unfair competition from foreign residual oil a railroader has also been added to the list of the unemployed.

As far as I am concerned, it is about time we start adopting some of the policies for-eign nations apply against us in protecting the jobs of their industrial workers.

Mr. Chairman, H. R. 1 will not correct the unemployment situation by affording the necessary relief to distressed industries and therefore I cannot conscientlously vote for it.

No doubt H. R. 1 will be sent to the floor under a closed rule prohibiting any amendments, thereby denying us as representitives of the American people the oppor-tunity to translate their wishes into law.

Mr. Chairman, those of us who represent coal-producing States recognize foreign residual oil as the archenemy of our industrial economy. I hold in my hand a bottle of this toxic economic poison. Therefore, I plead with you that during your consideration of H. R. 1 you will amend its language to include a 10-percent quota limitation on quarterly imports of foreign residual oil.

If this committee will adopt such an amendment, you will be granting a large measure of relief to the unemployed coal miners and railroaders in my congressional

district and the Nation at large.

Forstmann for Tariff Review

EXTENSION OF REMARKS OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1955

Mr. OSMERS. Mr. Speaker, the textile industry has much at stake in any change in the tariffs affecting it.

Julius G. Forstmann, president of Forstmann Woolen Co., has made an interesting proposal for a tariff review. Because of the general interest in the subject, I include in the Appendix of the RECORD an article concerning Mr. Forstmann's proposal, which appeared in the Passaic (N. J.) Herald-News of January 12, 1955:

FORSTMANN FOR TARIFF REVIEW

Julius G. Forstmann, president of Forstmann Woolen Co., today called for a syste-matic review of United States tariffs industry by industry, and, where necessary, product by product. Based on these studies, he said, recommendations should be sub-mitted to Congress by the Tariff Commission for whatever rate changes the facts warrant.

Mr. Forstmann said the "experiment" of the last 20-years in making tariffs a tool of the executive branch of our Government in forming foreign policy has availed us nothing.

The statement was a reply to President Eisenhower's special tariff message to Congress calling for extension of the reciprocal trade agreements.

During the past year, Mr. Forstmann said, prosperity in the United States has not been evenly distributed, as anyone familiar with the layoffs and losses in the textile industry is well aware.

"Other industries, too, have felt the bite of

cheap foreign labor," he said.

Mr. Forstmann warned that the proposed customs simplification legislation contains a new method for the evaluation of imports which "in itself constitutes a further tariff cut."

He added that tariff agreements "never yet brought before Congress" are currently undergoing revision at an international conference in Geneva.

"Under this setup, matters which affect both our internal and external trade and economy are ruled upon by a group of over 30 nations," he said. "This is, in my opinion, the most far-reaching and unwarranted abdication of the power which our Constitution rightly placed with Congress.'

Mr. Forstmann pointed out that there is still no indication of what further tariff cuts will be granted to Japan at conferences scheduled for February, or of what the Tariff Commission will recommend in connection with studies requested by Congress last year.

"The very least which these facts indicate is that there should be no undue haste to enact part of the President's program before all of its components can be property studied and evaluated," he said.

SEES MORE DAMAGE

Mr. Forstmann said that foreign producers are enjoying unexampled prosperity, and that present tariff levels here have not been a burden to them.

"Why consider a bill which, as far as many American producers are concerned, will add to the damage which has already been done, while others in our economy have escaped the effect of continuing tariff reductions," he said.

"First importance should be given to the economic strength of America, without which the whole free world will be imperiled. And economic strength means peak employment, adequately protected where necessary against the lower costs of cheap foreign labor. Even those companies that engage to some extent in the export business must remember that the best customer in all the world is an American workman at work," Mr. Forstmann concluded. "A man out of work can buy little or nothing."

To undertake the necessary study, Forstmann said, the Tariff Commission should be "adequately staffed and supplied with sufficient funds, and responsible only to Congress."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkceper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies: to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Address by Hon. Joseph C. O'Mahoney, of Wyoming, at Roosevelt Day Dinner

EXTENSION OF REMARKS

HON, JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. O'MAHONEY. Mr. President, it was my privilege on Wednesday night to address the Roosevelt Day dinner in the city of New York. I ask unanimous consent that the text of my remarks may be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the REC-ORD, as follows:

THE UNFINISHED TASK OF FRANKLIN D. ROOSEVELT

(Address by Senator O'Mahoney, of Wyoming, at the seventh annual Roosevelt Day dinner, at the Hotel Commodore, February 2, 1955)

I speak tonight of Franklin D. Roosevelt, the conservative, and his unfinished task. Roosevelt was a conservative, not in the sense that he wanted to preserve things as he found them, but in the sense that he knew that new conditions impose new duties, and that eternal vigilance is the price of liberty. He was a leader of vision who understood that the foundations of freedom were under attack in the modern world.

He knew that economic reform was essential to the preservation of the basic objectives of the American system of government. From the day he took office as President of the United States until the Nation became involved in the Second World War, the purpose of his policy was to restore economic opportunity to the masses of the people, to safeguard the concept of private property, and to eliminate abuses arising from the con-

centration of economic power.

Throughout his career Roosevelt was misunderstood by those who deemed him to be a radical reformer, whose efforts could result only in tearing down the edifice of popular government. They were blind leaders who not only did not realize that once again mankind needed a new birth of freedom, but who mistakenly believed that the remedy for the obvious economic ills, which brought the crash of 1929, was nothing more than a restoration of the conditions which existed before the collapse. They did not understand that a system of collectivist capitalism had developed which promoted monopoly, impaired production and distribution, caused widespread unemployment, and threatened the very existence of economic freedom.

Far from being a Socialist whose aim was to undermine the constitutional system and make the government superior to the citizen, Roosevelt was dedicated to the preservation of the right of private property. He knew that it could not be preserved except by honest and far-reaching reform, and he had the courage to devise and defend a program of reform that even those who most harshly criticized him have now been obliged, reluctantly it is true, to accept.

DEDICATED TO THE CONSTITUTION

He was dedicated to the American Constitution. He knew that the framers of that document gave to the Congress complete control over commerce, and he was aware that conditions, developing as long ago as the administration of President Grant, had been gradually imposing upon the people a new national but unregulated economic government, affecting the whole people and over which the Federal Government was exercising no effective influence to protect competition. It was a system by which a few industrial and commercial leaders were slowly gaining control of all the instruments of trade, commerce and industry without respect to the authority of either State or national government.

Mr. Roosevelt was a devoted supporter of Woodrow Wilson who had perceived the need for more effective public regulation of the new national economic system and who, in his first term in the Presidency, successfully secured the enactment into law of essential reforms over the stubborn resistance of Republican leadership which had arrayed itself on the side of those whom Theodore Roosevelt had called malefactors of great wealth. He had seen the program of Wilson and of Republican progressives brought to a sudden halt by World War I when the exigencies of international conflict claimed the undivided attention of both the Government and the people. Victory in the war was followed by confusion and uncertainty. In the wake came the Harding campaign for the return to normalcy, and there followed 12 years of reactionary policy under a government which saw no need for economic reform or social justice. Its leaders wanted merely a return to the conditions which in 1912 had ruptured the Republican Party and

These were 12 years which proved the need of a progressive and vigorous policy, designed to restore economic opportunity and social justice to all the people by putting an end to economic domination by private operators whose major concern was their own personal aggrandizement. They earned the name "reactionary" because they really wanted to turn the hands of the economic clock back, an objective so impossible to achieve that the attempt resulted only in the collapse of 1929. Into this crisis stepped Franklin D. Roosevelt when, in 1929, he succeeded Alfred E. Smith as Governor of New York. He continued the battle for social reform, and he came face to face with the subtle methods by which the managers of national business were successfully resisting regulation in the public interest by both State and Federal Governments. Again he learned the imperative need of economic reform, and he began the campaign of 1932 with a masterful mobilization of public opinion to demand the removal of the economic capital of the United States from Wall Street to Washington. He saw that business and industry had become continental in their operations and that the public interest could be protected only by a constitutional American Government in the Nation's Capital through the authority of elected representatives of the people instead of through the private manipulators of concentrated economic power.

LAUNCHES DRIVE FOR ECONOMIC REFORM

I was there when this campaign began. I was a Democratic national committeeman from the State of Wyoming. I was one of those who raised the cry in the Far West for the nomination of Franklin Roosevelt for the Presidency. Like my associates, I was moved by the conviction that it was absolutely necessary to resume the struggles of Theodore Roosevelt and Woodrow Wilson for national economic reform if the living generation and the generations to come were not to be deprived of their heritage of freedom and opportunity under the Constitution.

I had in mind Mr. Roosevelt's record as Governor. He stood for the conservation of natural resources and for reforestation; he stood for the protection of bank deposits, and he sought in various other ways through the State government to advance the cause of government, of, for, and by the people. It was apparent to him already, however, that victory for economic freedom could not be won through State governments, because economic concentration in private hands was being managed on a national scale.

Beginning early in 1932 with his speech on The Forgotten Man, the new presidential candidate, in meeting after meeting throughout the country, both before and after his nomination at Chicago, convinced the people that a new leader had arisen in the spirit of Lincoin, Theodore Rooseveit, and Woodrow Wilson. Finally, late in September before the Commonwealth Club in California, he traced the development of the crisis the Nation faced and clearly demonstrated that he was indeed a conservator of the underlying free principles of this Govment.

"The issue of Government," he said, "has always been whether individual men and women will have to serve some system of government or economics, or whether a system of government and economics exists to serve individual men and women. This question has persistently dominated the discussion of government for many generations."

Who does not know now that this is the very issue that rocks the world in our time? It will be for this generation to determine, and that most speedily, whether the people are to become the pawns of totalitarian governments or whether they are going to preserve for themselves and their children a system of government and economics which is designed, in Roosevelt's words, "to serve individual men and women." This paragraph from the Commonwealth Club speech, delivered 23 years ago, is proof that Mr. Roosevelt had both the vision to see the developing threat to free government, and the will to battle for freedom.

DEFENDER OF PRIVATE PROPERTY

Paragraph by paragraph in the San Francisco speech Roosevelt outlined the philososphy of popular government and private property, and showed that he cherished no thought of economic revolution but sought only economic reform and the reestablishment of the basic concepts of free government. The task ahead, he said, was that of "meeting the problem of underconsumption, of adjusting production to consumption, of distributing wealth and products more equitably, of adapting existing economic organizations to the service of the people." Note the words "existing economic organizations."

A629

This is the language, not of a man who sought the abolition of private property, but of a man who realized that the development of government in the western world, coming to a climax in the establishment of the American Union, was marked by "the rise of the ethical conception that a ruler bears a responsibility for the welfare of his subjects."

It is not only the political ruler who bears this responsibility for the welfare of the people, but it is likewise the responsibility of the industrial and commercial manager.

Here was a program cast in the best mold of Americanism. It was understood by the people and, because it was so understood, they kept Roosevelt at the helm of government for a longer period than any man in history. He was kept there because, as in the case of Woodrow Wilson, his program of economic reform in the American tradition was interrupted by another international war.

Those who would now follow in the footsteps of the founders of this Government must realize that once again we face the task of enacting those economic reforms which are necessary to protect the system of private property from collectivism of the right as well as collectivism of the left. This is the unfinished task of Franklin D. Roosevelt. His first term was devoted to rebuilding the ruins which reaction wrought. He had to reopen the banks, he had to create jobs, he had to make opportunities for business, he had to restore the confidence of the economic leaders as well as that of the people. This confidence was evidenced in the overwhelming reelection the people gave him in the campaign of 1936, though in that campaign the opposition of reactionary leaders impelled him, in a famous speech at Chicago, to make the wellremembered remark that already recovery had so far advanced that some of the pa tients were "throwing their crutches at the doctor." Now these patients, or their suc-Now these patients, or their successors, seem to be striving with might and main to remove the economic capital from Washington, where Roosevelt restored it, and move it back to the countinghouses of Wall

It was on April 29, 1938, that President Roosevelt sent a notable message to the Congress asking for a study of the concentration of economic power. He was urging no attack upon business. He was seeking only to find a stable formula by which idle men, idle machines, and idle money could be put to work profitably for the benefit of all. It posed no threat to the honest managers of the existing economic organization, of which he had spoken in the Commonwealth address, but called only for the adoption of the ethical concepts of the responsibilities that economic leaders, as well as political leaders, should bear for the welfare of the people.

ROOSEVELT'S FAITH IN AMERICA

Mr. Roosevelt preached the doctrine of faith in America, its heritage, and its future. He believed in the people and in American institutions. He sought only, to use his own words, to "recognize the new terms of the old social contract."

This message, therefore, was in complete harmony with his vision of a people's government, united in tolerance and freedom, which he expressed in his first inaugural when he declared that the course of action he proposed was "feasible under the form of government which we have inherited from our ancestors." He respected the Constitution, he admired the Constitution. He felt that it was the best instrument of government yet devised by men. This faith he expressed in the following eloquent words:

"Our Constitution is so simple and practical that it is possible always to meet extraordinary needs by changes in emphasis

and arrangement without loss of essential form. That is why our constitutional system has proved itself the most superbly enduring mechanism the modern world has produced. It has met every stress of vast expansion of territory, of foreign wars, of bitter internal strife, of world relations."

Great as was the stress of the period in which the people placed Roosevelt in the seat of power, it is not to be compared with the stress under which the whole world now trembles. Just as the reactionaries of 1920 called for an easy return to normalcy, and abandoned all effort to achieve the reforms made necessary by the changing times, so now there are leaders in Washington who seem not to have understood the deep necessity of stable economic reform if the door of opportunity is not to be closed again to the masses of the people.

Once more a Republican administration. like those which followed the administration of Woodrow Wilson, finds it impossible to the enlightened laws enacted under Franklin D. Roosevelt and his successor, Harry Truman. They descended upon Washington convinced no doubt that the Harry New Deal was an illusion that ought to be completely eliminated, as if it were an adventure in socialism which never should have been undertaken. The welfare state, as the 20-year Democratic regime was derisively called, has taken such deep roots that it has borne fruit in this administration in the appearance of a new Department of Health, Education, and Welfare. Uncertain of step and slow of pace, the new administration yields reluctantly to the inevitable. On the international front it has not surrendered to the isolationists. It still painfully follows path laid down by its predecessors who sought the union of the free world to maintain the objectives of liberty for all mankind. but it seems still determined to go back to the economic era in which neither the Federal nor the State Government was able to enforce a formula of social responsibility in the field of economics.

A NEW CYCLE OF REACTION

It seems not to be understod that the capitalistic system is in mortal danger unless the Federal Government resumes the drive for economic reform. Scarcely a day passes that the journals of finance in New York and Chicago do not announce another industrial or financial merger. Boards and commissions. created by Congress to enlarge opportunities for the people as a whole, seem to have altered their policies and to regard themselves as champions of big rather than of little business. A member of the President's Cabinet, at the head of the Department of Commerce, would amend the antitrust laws so as to make human labor a commodity of trade and commerce like a bag of meal or a ton of brick. It is true another Cabinet member, the Secretary of Labor, seems to resist the reactionary demand for what is falsely claimed to be "the right to work but which is intended rather to put human labor at a disadvantage before collectivist capital. The Hoover Commission is work reorganizing the Government under a grant of power never issued by any previous administration, authorizing it to recommend the alteration of the functions of government. The legislative powers of Congress, outlined in the very first article of the Constitution, are the bedrock of popular government, yet they are now being absorbed by the White House which, to a degree never before undertaken, even in World War II, is becoming a lawmaking as well as a lawenforcing arm of Government. Every lobbyist in Washington knows that the lines of control, even of the quasi-judicial commissions, are in the hands of anonymous assistants in the White House. Thus, the legislative powers delegated to commissions are being, as it were, redelegated to the White House staff.

The pattern of this new change is well the Dixon-Yates illustrated by contract. Here two holding companies are authorized by executive authority to conclude an agreement with the Atomic Energy Commission whereby they create a subsidiary corporation under the laws of one State to transmit electric energy to atomic plants in another State. This subsidiary is capitalized at \$51/2 million to construct and operate a \$165 million generating plant. All the rest of the capital cost of this plant is secured by debt financing. The equity of the owning company is so small that it would not be tolerated in any ordinary private enterprise contract. This the attorneys for the Securities and Exchange Commission admit by saying in their opinion approving the finan-cial arrangement that "in the case of the usual public utility company, the Commission would not approve a capital structure with so high a proportion of debt to equity because * * * both the debt and equity would be of too speculative a character."

What possible justification can there be for the approval of a contract of a Government agency and the subsidiary of two holding companies which the attorneys of the Securities and Exchange Commission say to be too speculative to be tolerated in private enterprise? This question the SEC legal staff answers with the amazing words that so long as the contract between the subsidiary of the holding company and the Government agency, the Atomic Energy Commission, is in force, "the annual debt service requirements (including amounts needed for annual debt retirement) will be adequately met by the payments from the Government." The disproportion of debt to equity, thus condemned, is justified by the SEC counsel only because the Government is paying, is another illustration of how the national debt is being increased clandestinely.

THE ECONOMIC WAR WITH RUSSIA

Thus at a time when the whole Government knows, when all private business knows, that we are engaged in an economic war with Communist Russia, the administration in Washington perpetrates a trans-action of high finance of a kind we have not seen since the American public was exploited by the utility magnates of the Insull-Hopson era. This is not an escape from creeping socialism. It is a plunge into creeping conservatism, to borrow a phrase of the president of the General Electric Co., used by him in another connection only a few weeks ago. It is even more than creeping conservatism. It is reckless reaction to methods and deals which will do more to destroy the system of private property than anything the Soviets can accomplish.

Two other instances of reactionary economic policy recently were revealed in the Presidential budget. Out in Wyoming, Colorado, and Utah there are deposits of oil shale of such magnitude that geologists tell us they contain an oil reserve far greater than that of Saudi-Arabia and perhaps the whole Middle East. Under the Synthetic Fuels Act. enacted in 1946, the Bureau of Mines was authorized to operate demonstration plants to test the scientific possibility of refining these shale deposits at a cost comparable to that of refining oil. The law also authorized similar tests with respect to coal. A year ago the coal plant was closed at Louisiana, Mo., and the experiments abandoned just at the time that unemployment in the coal field was becoming distressful. year the petroleum industry, acting through its advisory council to the Secretary of the Interior, has recommended the elimination of experimentation in oil shale, and the Bureau of the Budget sent no estimate to Congress for the continuation of the work.

Many other illustrations could be cited to show how important it is to take up the task which President Roosevelt had to lay down when World War II began.

Surely everyone must understand now that the cold war with Soviet Russia in which we are engaged is an economic war. Stalin, long before his death, outlined the Soviet plan in the plainest of plain words in his 'History the All-Union Communist Party." wrote that in the conflicts between the Soviet regime and the bourgeois states the Red army would not be committed to action until absolutely necessary. To him a conflict with the capitalistic states was inevitable. He once wrote that "the struggle between these two systems (by which meant communism and capitalism) will fill up the history of the development of the world revolution." This epoch, he wrote at the same time, "is an all strategic period embracing a whole series of years, and I dare say, even a number of decades."

Hitler, before World War II, wrote his book which all the world ignored until it was too late. Already the Western World has too long ignored Stalin's books, and seems to continue to drift into the cauldron of a third world war more terrible than all of its predecessors combined unless we here in America open our eyes to the absolute necessity of economic reform which will abolish the possibility of the exploitation of the masses of the people by economic rulers who have no sense of social responsibility.

THERE IS AN ALTERNATIVE TO WAR

The Formosan resolution was passed last week by the Congress, many Members of which felt that it was just a step to only another little war around the periphery of the Soviet Empire. Big or little, it will place additional drains upon our economic strength. The resolution was passed because there appeared to be no ready alternative to preserve the peace.

Yet there is an alternative. It is a recognition of the fact that Soviet Russia is certain that the capitalistic system will collapse of its own weight. The dictators of the Kremlin are confident that we are unable or unwilling to cure the defects and abuses of the system of private property. The alternative of which I speak depends also upon a recognition of the fact that the economic power of America is our greatest weapon of defense if it is used for constructive and not destructive purposes by leaders of both Government and business. constructive purposes concern the efficient production and distribution of the goods and commodities the people want. The masses of mankind, it is safe to say, have never actually wanted war. They are driven to war by fear and by oppression, and even in our time war comes because we lack the wisdom and the foresight to adopt effective policies of peace before it is too late.

Everywhere, as we sit here tonight, confusion and uncertainty is mounting throughout the world. We are represented to the peoples of Asia as warmongers, bent upon stepping into the imperialistic shoes of the colonial powers which for centuries had exploited the Asiatic peoples. We know what we are and what we want. We know that we are not imperialists, that we are not exploiters and that after the victories in two world wars, we have taken no spoils. We seem to be on the threshold of another conflict. I have no hesitation in saying that if we desire to avoid a third world war and to win freedom for ourselves and for the people of the world, we must begin struggle here on the homefront in the United States by strengthening the capitalistic system. We must eliminate its abuses. must promote its expansion by stopping its concentration. We must show Soviet Russia and Communist China by our example that the free system of private property is better by far than any type of authoritarian state.

Let us turn again to the economic message of Franklin D. Roosevelt of April 1938:

Unhappy events abroad have retaught us two simple truths about the liberty of a

democratic people.

"The first truth is that the liberty of a democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than their democratic state itself. That, in its essence, is fascism—ownership of government by an individual, by a group, or by any other controling private power.

"The second truth is that the liberty of a democracy is not safe, if its business system does not provide employment and produce and distribute goods in such a way as to sustain an acceptable standard of liv-

"Both lessons hit home.

"Among us today a concentration of private power without equal in history is

growing.

"This concentration is seriously impairing the economic effectiveness of private enterprise as a way of providing employment for labor and capital and as a way of assuring a more equitable distribution of income and earnings among the people of the Nation as a whole."

These words are just as applicable today as they were 17 years ago when they were first sent to Congress. If we would gain the goal that all desire, we must take the beam out of our own eyes and turn with vigor and devotion to the unfinished task of one of the great leaders of democracy. The road to economic reform and coexistence among ourselves is the road to peace.

Stephen S. Scopas

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. LEHMAN, Mr. President, on Sunday evening, January 30, I was proud and pleased to be present and to speak at a fine testimonial dinner in honor of Mr. Stephen S. Scopas, supreme president of the order of AHEPA-the American Hellenic Educational and Progressive Association.

It was a remarkable occasion. Scores of leading figures in public and communal life and in the diplomatic world paid tribute to Steve Scopas. Among them were Gov. G. Mennen Williams. of Michigan; Mayor Wagner, of New York; the secretary of state of New York State, Carmine DeSapio; the Ambassador of Greece to the United States; the president of the Borough of Queens; and many past and present officials of the order of AHEPA and the other great Greek-American organizations in the United States. It was an impressive evening and an impressive tribute to my good friend, Stephen S. Scopas, who is an outstanding citizen of my State, truly dedicated to the communal, civic, and national interests of his fellow men.

Mr. President, I ask unanimous consent that the remarks I made on that occasion and the remarks made by my distinguished colleague the Senator from Rhode Island [Mr. Green] be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR LEHMAN

I am glad to be here, very glad, to join in the well-deserved tribute of this testimonial dinner to my friend, and to the friend of so many of us here, Stephen S. Scopas.

Steve is typical of that kind of American who has helped to make America great, and who has also helped to build in our country the noble traditions of humanitarianism and

brotherhood.

The organization of which Steve Scopas is national president and which is sponsoring this testimonial dinner, can bear witness to the tireless industry and devotion to good causes which has characterized this man all

He is a young man, but mature in his experience in those great organizational activities which are a hallmark of America. He has given unselfishly of his efforts to assist and counsel his fellow men and women, those of Greek birth and descent, and those of every other race and descent, and without regard to race and descent, who make up the American people.

He has worked hard as a long-time officer of AHEPA, and in its ranks, because he is part of that great American tradition and custom of "belonging"-of belonging to and helping to build unofficial, voluntary organizations and association of people to advance the interests of the membership of those associations and of the interests of our country.

But Steve has done much more than merely devote himself to AHEPA and other organizations. He has given similarly of his time and efforts to the political life and activity of his city, State, and Nation. He has been a partisan, a Democrat, and active in the Democratic Party, but as long as I have known him, he has been the kind of Democrat who has placed the interests of city, State, and country above the interests of party. He has been a Democrat with a small "d" as well as with a capital "D." He has been a good, a useful, a constructive, and responsible citizen leader. Steve Scopas is a Greek-American; that is,

he is an American of Greek descent, who is as proud of his descent as are the descendents of those immigrants who arrived here, either steerage or first class, on the Mayflower.

He has always had a special interest in the land of his fathers. He has always had a special interest and concern for those who have just come, or still desire to come, from the old country, in search of freedom and opportunity.

And I think I can say for Steve that his interest has not been confined to Greeks. He has also had a special concern for those from other lands who desire to come to the United States as immigrants, to make their future here, to become citizens here, and to contribute to that great land which is our

And looking at Steve Scopas, and at the other eminent Americans of foreign birth and descent sitting here on this resplendent dais, I am reminded, with special indignation, of that incredible aspect of our immigration law which asserts that individuals of Anglo-Saxon birth and descent are far preferable, by virtue of their birth and descent, as American citizenship material to those of Greek, Italian, Polish, Swiss, Scandinavian, French, Czech, and Baltic birth and descent, to name but a few.

I refer, of course, to the national origins quota system which is imbedded in our immigration and citizenship laws, in the Mc-Carran Act.

Just think of it, a Greek, an individual born in Greece, is judged under our law to be only one-hundredth as good citizenship material for America as a person born in England. The law is based on the utterly false and ridiculous theory that for every person entering this country from Greece, 200 must enter from Great Britain in order to keep the population of the United States in balance.

That notion is, of course, preposterous, unrealistic, insulting, and degrading. Yet it is there, written into our immigration laws—the heart and soul of our immigration laws—and it constitutes a challenge to all of us to eradicate it, and to expunge it from our statute books.

I hope no one here will rest and be satisfied until the iniquitous and discriminatory national origins quota system is wiped out and repealed completely and totally. There can be no compromise with this evil, racist and ridiculous theory which stands as a constant reproach to each of us, and holds us up to contempt in the eyes of the world.

Where is our belief in brotherhood, and in

Where is our belief in brotherhood, and in the equality and dignity of each human soul, when we have on our statute books a law which says that no matter what the conditions or need abroad, 65,000 may enter annually from Great Britain—born in Great Britain, that is,—and only 308 from Greece.

And even that paltry number, 308, has been cut in half for years to come, by mortgaging provisions of the Displaced Persons Act. 150 immigrants a year from Greece—no more—under the terms of the McCarran Act.

I know that many of you here have indicated a concern for the status of the island of Cyprus. I, myself, have reached no conclusions on that subject, although I am continuing to study the question with sympathetic attention to the arguments which are being made by your organization and others.

Let me say, however, that there is one aspect of the Cyprus question on which I have a strong opinion; there is one injustice which has recently been done to Cyprus which was done not by Great Britain but by a law passed by the Congress of the United States. And those of you who are concerned for the welfare of Cyprus and of the Cypriots might well consider what ought to be done about that. I am referring to another provision of the McCarran Act.

Before the McCarran Act—before December 1952, in other words—Cypriots could enter the United States under the British quota and, in fact, there was a steady emigration of about 500 Cypriots per year, sometimes more, sometimes a little less. Then in 1952 the McCarran Act said that colonies of Britain could no longer use the quota of the motherland, and that immigration from Cyprus, among other colonies, would be limited to 100 per year. And so the emigration from Cyprus, a wholesome and healthy immigration, both for Cyprus and the United States was cut by 80 percent

the United States, was cut by 80 percent.

Today only 100 Cypriots can enter the United States per year. And if Cyprus should become a part of Greece, even that immigration would be cut off, or rather, the total immigration from both Greece and Cyprus would be 150 per year.

So, my friends, one thing that can be done for Cyprus, right here in the United States, and in the Congress of the United States, is to revise the McCarran Act, repeal the national origins quota system, and make immigration a matter of individual worth and usefulness, and need, rather than a matter of national origin and birth.

When I think of the heritage which western civilization has from Greece, of the vast contribution which Greece has made to the culture and values of the western world, I blush to think how we discriminate against Greece in our immigration laws—and against many other great countries which have likewise made great contributions to the world and to the United States.

Scores of our cities are named after the great centers of Greek civilization-Troy,

Athens, Sparta, Corinth, Olympia—and there is no American child who does not learn the glories of ancient Greece, her philosophers, her poets, her dramatists, her statesmen, her heroes—Demosthenes, Aristotle, Plato, Socrates, Euripides, Hippocrates, Pericles—and yet we say that only 150 Greeks and 100 Cypriots can enter the United States annually, at the risk of perverting American culture and traditions and our way of life.

What country has greater democratic traditions that Greece? The very word, democracy, is of Greek origin. The concept of a republic is Greek. The concept of the rights of citizens is Greek.

Of course, I have emphasized the Greek contribution and the discrimination against Greece in our irrigration laws because this occasion is in honor of Steve Scopas, and under the auspices of AHEPA. The same incredible discrimination is practiced against scores of other great countries which have made great contributions to our culture and our way of life.

I am against discrimination of any kind, in any form, against any country, in our immigration laws. Immigration is a matter of people and of individuals, and should be regulated accordingly—not on the basis of national origin, but on the basis of individual qualification, in accordance with need, national and individual.

Yes; we have a Refugee Relief Act on our statute books, which was supposed to get around the McCarran Act and to relieve its inflexibility. That act has been a fraud, a sham, and a delusion. Up to now it just hasn't worked. I hope that in the remaining time of its effectiveness it may be made to work to the extent possible, to admit into this country some of the escapees from behind the Iron Curtain, some of the refugees from Communist war, aggression, and terror. I pledge myself to support and fight for

I pledge myself to support and fight for necessary amendments to the Refugee Relief Act in this session of Congress. I pledge myself to fight for a more equitable and humane administration of that law. I shall insist that the red-tape curtain which has been erected here to prevent the admission of refugees under the Refugee Relief Act be drawn to the maximum possible extent.

There are many other things which must occupy my time and attention in Washington. I shall continue to work for peace with honor, security, and justice.

I said in the course of a debate on the Senate floor the other day that, while I did not favor peace at any price, I did and do think that there is a price which we must be willing to pay for peace. That price is prudence and patience, reasonableness, and restraint.

If we show courage and determination, firmness and strength, wisdom and understanding—if we seek persistently to hold together the union of the free nations and the alliance of free mankind, if we exhibit responsibility in our leadership of the free world, we can and will prevail against the forces of darkness, against the evils of Communist aggression.

Bravado is no substitute for bravery and recklessness is no substitute for patient courage.

With a belief in the worthiness of peace and a faith that in ways of peace the forces of freedom will triumph in the end, let us go forward together under God to serve our country's welfare.

ADDRESS BY SENATOR GREEN

Mr. Chairman, officers of the Order of Ahepa, our honored guest, your supreme president, Mr. Scopas, and friends, it is indeed both a privilege and a pleasure for me to be with you here tonight as you honor your supreme president, and my good friend, Stephen Scopas.

The Order of Ahepa has selected for its highest office one who is respected for his patriotism, who is active in civic affairs and one whose term of office, I know, will be successful.

I am especially happy to have this opportunity to talk with you, my fellow Americans of Greek heritage, about our common friend, Stephen Scopas. Throughout the years, in fact ever since my boyhood, I have been a great admirer of Greece. My father had lived in Greece in his youth and taught me its language. I read stories from its mythology and its history. Its heroes became my heroes and it has been my good fortune to visit the Greek homeland several times. I have climbed the Acropolis; admired the restoration of Peiraleus and seized the opportunity to relax and swim in the Aegean Sea. In 1947, as a member of the Senate Committee on Foreign Relations, I actively participated in the formulation of the Marshall plan of aid to Greece and Turkev.

In the formulation of this plan to roll back Communist aggression, I could not help but think of that time, 750 years ago, when the godless and destructive forces of Jenghiz Khan were pouring, apparently without limit, from the center of the European-Asiatic heartland. Those destroyers controlled almost the same vast area then, as the Communist forces do now; west nearly to the Rhine, east to the China Sea, north to the great Arctic tundras, and south to the Indian subcontinent. And, sad to relate, there they remained for 200 years until they finally broke asunder as a result of their own internal distrust and weaknesses and the compelling influence of Christianity.

However, there is this difference between the lot of that territory today as compared with three-quarters of a millennium ago. To my mind, conditions now are better than then, and hence, victory should come to the present free world sooner.

Why are conditions better? On the positive side, the forces of Christianity are stronger than ever and cover a far greater portion of the globe. Then, on the negative side, the last 35 years of Soviet history, with their interminable plots and counterplots, accusation and hasty trials assassinations and executions, show us that suspicion and disunity are today as rampant in the Soviet Union as they once were among the Mongol hordes.

But the main difference is the unity of the free world. This unity is our salvation. Remember how 2,500 years ago the forces of the Persians, the then invaders from the east, were hurled back by the less numerous but better unified and equipped alliance of the Greek free cities? So, today, the speed of our salvation depends upon the firmness and closeness of our unity. This unity is the main factor which will reduce the length of stay in the free world of the Kremlin

It was only 8 years ago that Greece and Turkey were given the aid whereby they became the bastions of the free world which they are now. Steadily, since that time, the United States has taken the lead in attempting to forge the links of the free world into an unbreakable chain. Always, in its forging, we have had to remember that no chain is stronger than its weakest link.

Accordingly, it is my belief that in forging this chain we must carefully scrutinize each and every link. Many of us are thinking of our treaty with the Nationalist Government of China. This is, indeed, a fareaching commitment on the part of the United States, binding us for many years to a government which is weak and apparently not growing stronger. As a member of the Senate Committee on Foreign Relations, I was in attendance when the hearings were held on this important treaty. All of us are concerned with it and we hope that it is a step in the right direction. We also hope that the plan relating to Formosa recently sent by President Elsenhower to the Con-

gress for approval, and approved by it, will

accomplish all that is expected of it.

In these matters it is important that the United States of America act as a unit; otherwise our country will lose not only in prestige and influence but actually in power.

same result will, in my opinion, occur if, at this time when power and force may be called upon to settle controversial international issues, any reduction in our Armed Forces is effected, or even seriously proposed, by either the President or by the Congress. We should have learned by now that we cannot trust the promises alone of aggressor nations which disregard international law, treaties, and agreements. Armed Forces should be kept at maximum strength until we have definite conviction that peace in a free world is established.

To you, Steve, I wish to extend my heartiest congratulations on your election to this, the highest office of the Order of Ahepa in this country, and I congratulate also the mem-bers of the order, since I feel sure they will all benefit by your administration; and, in conclusion, I offer my sincere good wishes for the future welfare of the Order of the Ahepa Itself.

Excerpts From Address by Hon. Richard L. Neuberger, of Oregon, at Seventh Annual Roosevelt Day Dinner

> EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a speech I delivered at the annual Roosevelt Day dinner of the Americans for Democratic Action, held at the Hotel Commodore, New York City, on Febru-

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

NEUBERGER TELLS ADA DINNER ADMINISTRA-TION "TURNING BACK THE CLOCK" CONSERVATION

The following are excerpts from a speech by Senator RICHIED L. NEUBERGER, of Oregon, delivered at the seventh annual Roosevelt Day dinner sponsored by the Americans for Democratic Action, at Hotel Commodore, New York City, February 2, 1955:

"The policies of the present administra tion relating to natural resource conservation are turning back the clock to conditions prevailing before the days of Theodore Roose-The end of the public-power program by this administration can only mean economic stagnation in many key regions of the United States.

The stalemate in electric power development which has resulted from administration insistence on a so-called partnership program has already been felt in the Pacific Northwest States. No new multipurpose water projects have been started there by this administration and the effect has been to put the brakes on the dynamic industrial expansion which followed construction of Federal dams like Bonneville and Grand Coulee.

"If there is any one thing which I hope the new Democratic Congress will accom-plish, it is a return to the tried and tested program of conservation and resource development which was nearly half a century

old. People of the Eastern States may not fully realize the damage done to these great programs by politicians of the present regime in the executive branch of the Government. But the harmful effects of policies which are turning back the clock in regard to resources are of great significance to both East and West. Integrated economically as we are, policies which adversely affect growth and prosperity of one region also threaten other sections of the Nation."

PRESENT POLICIES HIT RESOURCES

"The administration's most serious onslaughts against established resource policies strike at forest, grazing, and electricpower matters. The former policies had been developing for nearly 50 years—since Theodore Roosevelt and Gifford Pinchot fought a monumental political battle to set aside in forest reservations vast timbered areas in the uplands beyond the Conti-nental Divide. That administration was also largely responsible for initiating the con-cepts of multipurpose development of our waterways which shaped Federal programs until the former Republican Governor of Oregon became Secretary of the Interior 2 years ago.

"After that fight was won, the American people took more or less for granted the protection of these wilderness sanctuaries in the interest of everyone. Development of these resources proceeded in an orderly manner, under what Teddy Roosevelt called equal opportunity for all, special privilege for none.

This administration has tried to change that. An administration-endorsed bill was sent to Congress which would have enabled the largest timber companies to take over choise land inside the national forest areas in return for their own land that would be taken by the Government for any purpose. This was special-interest legislation in the sense that it applied only to the big operators and not their smaller competitors; but it also placed timber on a level of possession than any other property-including churches, schools, farms, and homes—and removed from United States Forest Service authority the timber acreage committed to its protection for the last 50 years.

"Fortunately, that bill was rejected by the House of Representatives, and it is my hope that enactment of such bills will be even more unlikely under Democratic control of the new Congress.'

ADMINISTRATION TURNS BACK CLOCK

"The 50-year-old Federal public-power program went out the window when the new administration came in the door. Termination of this program, which not only paid for itself in dollars-and-cents returns to the Federal treasury but also in great social and economic advancements, was signaled by the new Secretary's abandonment to a private power company of the finest natural hydroelectric power site on the North American continent to the Idaho Power Co.

"In an attempt to gloss over the reversal of national policy, administration spokes-men said the Hells Canyon site was being given over to the company so it could be developed by local interests. In this case the local interests were an absentee-dominated corporation which holds its annual meeting 2,500 miles from Idaho. To the Pacific Northwest and to the Nation, this clecision meant that full conservation and development of a primary national asset was being liquidated in favor of piecemeal exploitation of the Snake River at high rates, precluding the extension of rural electrification and, particularly, industrial development in the Northwest. It meant asking the American people to accept less than full de velopment of their resources, to abandon conservation in favor of corporate profits.

"An index to the kind of thinking behind the scuttling action was adoption by administration spokesmen of two of the more odious slogans which utility propagandists have used for years in an attempt to discredit the public power program-creeping socialism and subsidized power. Although the Secretary of the Interior uses the phrase 'subsidized power' in his press statements, it is a matter of record that the Federal power investment in the Bonneville Dam project has already been 38 percent paid for through power revenues collected by the Government-and the project has been in full operation only 11 years. What other undertaking of the Government can boast of such a favorable financial record, providing great impetus for industrial growth and a higher standard of living?"

POWER PROJECTS REPAY TREASURY

"The Secretary and other administration spokesmen have sought public endorsement of their abandonment of the river-development program on the grounds that it is a drain on the National Treasury. But they fail to mention that power projects of the Columbia River system alone have returned to the Treasury, with interest, a total sum of \$170,409,916 as of June 30, 1954.

"Figures by themselves fail to disclose the great national benefits derived from the public power program. They do not reveal the amount of back-breaking labor from which it has freed thousands of American farm women, nor the strengthening of our industrial potential, and opening the way for production of atomic energy and 50,000 planes a year for our national defense.

When Franklin Delano Roosevelt gave the go-ahead signal to build great Federal projects in 1933, only 27 percent of farms in my own Pacific Northwest enjoyed the blessings of electricity. By the time those under-takings were in full operation, 98 percent of the region's farms were electrified. I have heard my wife's mother, who owns a dairy farm, describe how this has lightened women's work, removing drudgery and making life more worthwhile. These are values on which no dollars-and-cents price tag can be placed—a kind of residual benefit which makes abandonment of the program even less acceptable to a people bent on the pursuit of happiness. Under the Roosevelt administration, many housewives learned for the first time what it was like to press a button and have a room illuminated brightly."

BONNEVILLE POWER BOOSTS OREGON

"During the first 10 years that Bonneville power was available, the Northwest enjoyed its greatest industrial expansion since Lewis and Clark sailed down the Columbia. From 1939 to 1948, the growth of manufacturing employment in the Northwest outstripped the national average for the first time in history. Navigation features of these river projects increased cargo tonnage on the upper Colorado from 85.000 tons annually to 1,375,000 tons, and water pumped by Grand Coulee power provided irrigation for 15,000 new homesteads, many settled by former

"When we view these widespread advancements and benefits to the national welfare it raises the question: 'Why did the Eisenhower administration, through the Secretary of Interior, abolish it in favor of a program called partnership? Under partnership, the Gov-ernment will put up half the cost of dams partnership? and private utilities approximately the other When the dam is built, the Government gets whatever revenues can be derived from the fish ladders, locks and floodgates, and the utility gets the kilowatts from the powerhouse for a period of at least 50 years.

"I think it is significant that the administration is proposing partnership for development of the power-rich Columbia, but recommends full Federal construction in the

Colorado River Basin where power output is more costly and less profitable. It appears that the administration program is designed to let the private power companies skim the cream while Uncle Sam gets the dregs."

PRESENT PROGRAM ERODES CONSERVATION

"I mention all of these things to show how, bit by bit, administration policy has been eroding the tried and true public protections which Americans had come to accept as necessary to conservation and full use of our resources. It is my opinion and my hope that the new Democratic Congress will go forward with the public power program with which we associate the names of Teddy Roosevelt, George Norris, Gifford Pinchot, and Franklin Delano Roosevelt. In that direction lies the best national interests and the greater welfare of our Nation. Our American heritage, for this generation and generations to come, rests with return to sound conservation policies."

Progress in Soil and Water Conservation

EXTENSION OF REMARKS

HON, EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. REES of Kansas. Mr. Speaker, on November 4 a distinguished Member of the House, my colleague from Kansas, the Honorable Clifford R. Hope, delivered an interesting and informative address at Sioux City, Iowa, on the subject of progress in soil and water conservation. This address was delivered at the annual soil-conservation banquet of the Sioux City Chamber of Commerce.

Mr. Hope has given soil and water conservation a great deal of study and is regarded as an authority on this subject matter. I am pleased to include his statement at this point in the Record. I am sure Members of Congress, as well as others who read the Congressional Record, will be interested in Mr. Hope's views on this subject matter.

It is indeed an honor to be invited to speak at the annual soil conservation banquet of the Sioux City Chamber of Commerce.

This is not my first visit to your thriving city, which is the center of one of the greatest agricultural regions in the world. My previous visits have been so pleasant and your hospitality so generous that I am always delighted to return.

I am pleased also to have the opportunity to speak again in the home district of my distinguished friend, Charles B. HOEVEN, who not only ably represents all of the people of this district in the House of Representatives but who is known throughout the length and breadth of the land as an authority on agriculture and a sincere friend of the farmers of this country.

I want to congratulate the Sioux City Chamber of Commerce and that fine newspaper, the Sioux City Journal, for their interest in agriculture and in the conservation of our soil and water resources which has led them to collaborate in this fine program to encourage soil and water conservation within the trade area.

And may I extend my heartlest congratulations to the winners of the contests sponsored by the chamber of commerce in 52 counties in this 4-State area.

To my way of thinking, the greatest and most constructive thing which men and women living on the land can do is to leave that land better than they found it.

And I know that is the ambition of every good farmer, because good farmers love the land and get real satisfaction and pleasure in enriching and improving it. You are good farmers and good neighbors and good citizens, or you would not be here.

good larmers and good neighbors and good citizens, or you would not be here.

I want to talk to you tonight about the land, about soil and water, about what we are doing and what we need to do if we are going to conserve these great natural resources.

In recent years all of us in America have been giving much attention to the conservation of our soil and water resources. We have been taking stock, we have stopped to think deeply of the relationship between the people and the resources of the earth.

And in spite of the fact that Thomas Jefferson and others of our Founding Fathers expressed concern over the loss of the soil and its fertility in their day and that Patrick Henry is reputed to have said "He is the greatest patriot who stops the most gulleys," it is only comparatively recently that we have adopted national policies to save our soil and water.

For many years, we as a nation acted as if we had a virtually limitless and inexhaustible supply of soil, more than we could ever really need. So we treated this land with its timber, pasture, and water resources with careless abandon. We gave it away to encourage settlement. We stripped the forests from the earth and when they were gone, moved our sawmills to stands of virgin timber.

We sapped the land of its goodness by continual cropping or grazing and then turned our plows to what appeared to be a limitless expanse of new and fertile lands, moving always steadily to the westward.

Then suddenly about 1920 we realized that this vast expanse of land was not limitless, that we had in fact crossed our last frontier and that even much of the land which lay behind that frontier was worthless for agricultural purposes. We began to realize, too, that in our profligate and careless use of the soil and the timber and the water we had not only permitted, but sometimes even encouraged, the deterioration and destruction of those resources which are basic to survival.

It was not easy for the Nation to change its thinking and its policies from resource exploitation to resource conservation, and the process is still going on. There is still more to be done than we have yet accomplished. But the record is clear that once the American people see the need for conservation action, they are quick to respond.

The words soils conservation and the practices and programs which make up soil conservation are so familiar to us today that it is difficult for us to remember that it was not until 1928 that the country was sufficiently aware of the need for soil conservation to sponsor Federal legislation on the subject. The first recognition of national responsibility in this matter was a small item in the 1928 appropriation bill for research into soil erosion.

Everything that we as a Nation have accomplished in this field has occurred since that time. In other words, nationally organized, promoted, and encouraged soil conservation in the United States has all taken place during the last 25 years. Much has been done during that time, but much still remains to be done.

The continuing losses of productive soil on lands not yet protected by conservation practices are shown in studies made by the Soil Conservation Service. The latest study in 1953 showed that of 478 million acres used for crops in the United States, 121 million acres was deteriorating at a critical rate and an additional 128 million was deteriorating at a serious rate.

Although use of conservation measures on farmlands has brought a proportionate reduction in the amount of soil loss, it is estimated that this loss is still running in the neighborhood of 500,000 acres a year. In addition, up to 100 million acres once cultivated but never entirely suitable for cultivation have been so severely affected that they are no longer in cultivation.

So we find ourselves today not with a limitless expanse of land which can be brought into cultivation as our old farmland falls us, but with a definitely limited land area—some of it excellent, some of it worthless for agricultural purposes—and with very little additional land that can be brought into agricultural production.

Furthermore the normal expansion of our cities, the widening of highways, building of airports, and other nonfarm uses are every year taking out of cultivation thousands of serves of really good formland.

acres of really good farmland.

However it is encouraging to know that the Nation is now making healthy progress in its fight against soil erosion and depletion. This is reflected in the increased public concern over the matter and in the actual conservation accomplishments which we can see going on. More than four-fifths of the country's farmland (82 percent) and approximately 90 percent of our farms and ranches now are within the boundaries of 2.618 farmer-organized, farmer-managed soil conservation districts. Seventy-one new districts were organized during the last fiscal year with a net increase in district acreage of nearly 37 million acres, including expansion of existing districts.

Conservation practices have been applied or are being applied to some 34 percent of the country's privately owned agricultural land and the rate of farm conservation treatment continues at an accelerated pace year after year.

But the big end of the job still remains to be completed, on individual farms and in the watersheds of this country.

The challenge is great. It must be met. It will be met.

The brightest promise for the future of America is in the great and growing dedication of our people—farmers and city dwellers alike—to the conservation and improvement of the Nation's greatest and indispensable resources—soil and water.

Our basic national soil-conservation policies are embraced in the Soil Conservation Act of 1935. It is under that great piece of legislation, and the laws enacted in our States to complement and supplement it, that our national soil-conservation program has been carried out.

Along about the same time Congress passed the Flood Control Act of 1936 and later the Flood Control Act of 1944. These acts dealt in the main with flood-control work on our larger streams and the flood plains thereof.

Thus, we have had two national programs in operation for almost 20 years—one dealing with the control of water after it gets in the channels of our main streams; the other dealing with work on the land itself to hold the water where it falls.

But I think all who have followed these programs agree that there has been a missing link between them. That missing link is work on the small watersheds, the creeks, and the smaller tributaries of our major streams. This field has not been neglected entirely through oversight, because the authority to deal with small watersheds is contained in the Soll Conservation Act itself, and the Flood Control Act of 1936 authorized the Secretary of Agriculture to carry out water-conservation programs on the tributaries of our larger streams after the specific projects had been approved by the Congress.

Under the authority contained in these two acts, the Department of Agriculture has made numerous examinations, surveys, and reports. In addition, the 1944 Flood Control Act authorized 11 watershed projects. One of these is the Little Sioux project in this area and known to all of you.

However, no other projects have been authorized by Congress under the authority of the 1936 act, and the annual appropriations for these 11 projects have been so small in comparison with the work to be done that at the present rate it will be 30 or 40 years before some of the projects will be entirely completed.

Aside from these 11 projects, nothing further was done toward actually carrying out watershed projects until action was taken by the 83d Congress, to which I shall refer

In the meantime, this Nation has become water conscious as it has never been before. This year and last the specter of drought has been stalking the land. In large areas of our country rainfall has been more deficient than even during the drought period of the early 1930's. The Weather Bureau, while admitting its inability to make accurate predictions, doesn't hold out much hope that this year will see the end of this drought period, since such weather phenomena usually run in cycles.

But aside from the drought itself, it is being brought to our attention more and more that water is the primary limiting factor in the development of cities, industry, and agriculture, not only throughout the West but in all parts of the country. The difficulties now faced by many cities which depend upon surface runoff for their water supplies are well known. Even cities and industrial establishments which get most or all of their water from underground sources

are having their difficulties.

This is not only because of the rapid increase in water consumption by municipalities and industries as well as irrigation, but because of waste, not only in conserving our water supplies in the first place but in the use of them as well.

Thus, it is becoming more evident every day that our future progress as a Nation will, to a considerable extent, lie in the way we develop, handle, conserve, utilize, and

control our water supplies.

And although drought and short water supplies are the problems today, it has not been very long ago that the Nation was suffering terrific losses from flood damage, much of which could have been prevented by sound conservation programs on the land itself and on the small watersheds which feed our main streams.

We must remember that the essential difference between the pure, clear water which flows from our springs and wells and the brown, yellow or red torrent of silt and debris that periodically lays waste to our river valleys is that the clear and useable water stayed for a time where it fell. The other did not.

Thus the watershed programs which are receiving so much consideration in all parts of our country today are based upon a realization that the way we can get good and adequate water supplies and at the same time reduce flood destruction and damage is to get the rain and melting snow into the ground near where it falls. The earth is our greatest and most wonderful reservoir.

I do not mean to say that it will be possible under all conditions to hold all of our water near the place where it falls. That

What I do want to say and to emphasize in the strongest possible terms is that every drop of water which can be retained in the area in which it falls, either in the earth or in small retarding structures, is one drop subtracted from a potential flood and one

drop added to our useful water supply. This is the basic philosophy behind the watershed legislation which has aroused so much interest and which has been given so much consideration throughout the country

in recent years.

would not be possible or even desirable un-der all conditions.

I think as a matter of fact that the people of this country have been head of the Congress on the question of watershed legislation. However the House Committee on Agriculture has been giving the question consideration for some time past, and as a matter of fact in the 82d Congress it reported a bill which contains many of the salient features of the legislation passed in the last Congress. However that legisla-tion was blocked in the Rules Committee, due in the main to opposition from other Government agencies.

In the interval between the 1st and 2d sessions of the 82d Congress, a subcommittee of the Committee on Agriculture held hearings on watershed programs in several States.

I think it can be said, however, that the 83d Congress has pretty well caught up with the public on the question of soil and water conservation. Certainly it can be said fairly that this Congress has enacted more important legislation relating to soil and water conservation than any other Congress except the 74th which enacted the Soil Conservation Act itself under the inspiration and leadership of that great conservationist and great American, Hugh H. Bennett.

The Small Watershed and Flood Prevention Act is only one of several important conservation enactments by the 83d Congress. Before discussing this measure, I want to refer briefly to three other proposals, all of which tie in directly with the Small

Watershed Act.

First, there was the item in the Department of Agriculture appropriation bill for the fiscal year 1954, which set up the pilot plant projects. This occurred during the 1st session of the 83d Congress and enabled us to get a small watershed program under way a year ahead of time. These projects, 62 in number, are widely scattered. They deal with all sorts of conditions and will serie as demonstration projects, the progress of which will be closely sutdied by geologists, experts in hydrology and all students of watershed programs.

The second matter I want to mention is the extension of the Water Facilities Act. This not only extends the provisions of the Water Facilities Act to every State in the Union, but it is of interest from the standpoint of conservation in that it provides for both direct and insured loans for conservapurposes through the Farmers Home

Administration.

The language of the law provides that these loans may be made "for the purpose of financing the improvement of farmland by soil or water conserving or drainage facilities, structures or practices, improvement of soil fertility, establishment of improved permament pasture, sustained yield afforestation or reforestation, or other erosion preventatives, and such other related measures as may be determined from time to time by the Secretary.'

The fact that this loan provides for the insuring of loans advanced by private lenders is one of its outstanding features. Not only will this make it easier for private capital to assist farmers, but it also lesses the demands upon the Federal Treasury.

This legislation will, in my opinion, prove very effective in supplementing operations under the Watershed Act in that the loan provision will make it more likely that all armers in a watershed area will be able to finance the work which they must do upon the land itself in connection with any area watershed program.

A third important conservation enactment is the provision in the tax bill which permits farmers to treat expenditures for a number of soil-conserving practices as cur-rent annual expenses which may be deducted from farm income in computing income taxes, thus giving real financial encouragement to the use of conservation practices. This is a provision which many leaders in

the field of conservation have been urging for years.

Now let me take a little time to outline some of the provisions of the Watershed Protection and Flood Control Act. Before doing so, let me point out that the purpose of the legislation is to fill in the gap which I mentioned earlier as existing between programs for conservation practices on the land and flood control on our main streams

The legislation was developed after it became apparent that the provisions of existing law were not meeting the constantly increasing need for watershed protection.

What the new act does is to set up the machinery and procedure whereby local watershed districts or soil-conservation districts or similar organizations may cooperate with the Federal Government in working out the engineering and financial problems connected with such enterprises. Both the work and the costs are to be shared in an equitable way between individuals, local districts, States, and the Federal Govern-

In general it is expected that the cost borne by the Federal Government will average around 50 percent, depending upon the nature of the project and the extent of the national interest involved.

The initiative for the work must come from the local people. Applications to come under the program must be submitted for consideration by the Governor of the State or a State agency set up for that purpose. is to prevent conflict with other State development plans.

If the application is not disapproved by the State, the Soil Conservation Service will assign technicians and other personnel to work with the local organization in conducting investigations and surveys, makig such other studies as may be necessary, and working out detailed plans for the project. At the same time it is assumed that work will be going forward in the locality on the other requirements which are conditions of Federal assistance.

These requirements are set out in section 4 of the act. They include the following: (1) Acquisition by the local organization of all land, easements, or rights-of-way necessary for the project; (2) evidence that the local organization is willing and able to assume its proportionate share of the cost and to maintain and operate the improvements after they have been installed; (3) provide assurances that landowners have acquired necessary water rights; and (4) obtain agree-ments from owners of at least 50 percent of the land above each retention reservoir to carry out recommended soil-conservation measures and proper farm plans on their

Unless the project is one of the relatively few in which there will be a dam providing more than 2,500 acre-feet of detention capacity, no formal approval by Congress is necessary before the project can be started. If the plan includes a structure impounding more than 2,500 acre-feet of water, money cannot be appropriated for it until the Committee on Agriculture in the House and the Committee on Agriculture and Forestry of the Senate have adopted resolutions authorizing the project.

No dam can be constructed under the authority of the act which provides for more than 5,000 acre-feet of detention capacity. no watershed embracing more than 250,000 acres may be included in a project, but several projects of 250,000 acres or less might be carried out jointly and as a part of an over-all plan.

I have not attempted to set out all the provisions and requirements which must be met in connection with projects of this kind, but the Committee on Agriculture has published a public document covering this matter in detail, which will be sent to anyone who will write to the Committee on Agriculture. House of Representatives, Washington,

I wish I could at this time give public credit to all those whose help and support made possible the enactment of this legisla-This is impossible, however, because I suppose there is no important piece of legislation in recent years which has had such wide support. First and foremost must come the conservation organizations. All of them did so much that it would be unfair to single out anyone more than the other.

Strong support came from the farm organ-

izations

The National Association of Soil Conservation District Supervisors helped tremen-

The list of Members in both Houses who worked hard for the legislation is too long to be repeated here. The bill was reported unanimously by the House Committee on Agriculture and passed the House unanimously. It passed the Senate unanimously, although the opposition there succeeded in including a number of crippling amendments which had to be taken out in conference.

The special message of President Eisenhower endorsing the bill and making it an administration measure was of the utmost importance in that it stopped the open oppo-sition from other Government agencies, which was the most serious threat to the passage of the bill.

The Bureau of the Budget exercised much skill and patience in ironing out difficulties

with other Government agencies.

The unanimity of support for this bill coming from the country is shown by the fact that it was backed by both the National Chamber of Commerce and the CIO-one of the few measures, and perhaps the only one, on which these two organizations ever got together.

Well, the law is now on the books. How important it becomes depends upon the people who live in the watersheds. Upon them rests the responsibility of setting up local organizations, of initiating the projects, of raising funds, securing the land and easements, and assuming the responsibility for operation and maintenance.

To a lesser extent it depends upon the willingness of Congress to appropriate funds, but in this Congress will undoubtedly follow the sentiment of the country, keeping in mind the availability of funds and economic

Only through continued popular interest and support can this program realize its full potentialities. It costs money, yes; but to me every dollar we spend for purposes of this kind is an investment in the future of America-an investment which will be returned many times.

Dedicatory Prayer Breakfast

EXTENSION OF REMARKS OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. CARLSON. Mr. President, yesterday morning more than 900 persons, including the Vice President, the Chief Justice, members of the Cabinet, members of the Supreme Court, Members of Congress, and other citizens attended the dedicatory prayer breakfast at the Mayflower Hotel in Washington, D. C.

I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the program and transcript of the proceedings of this service. Conrad Hilton was host on the occasion.

In my opinion, this prayer breakfast, with the outstanding leaders in every field, will add much to the religious life of our Nation

There being no objection, the program and transcript were ordered to be printed in the RECORD, as follows:

PROGRAM FOR PRESIDENTIAL BREAKFAST, THURS-DAY, FEBRUARY 3, 1955, 8 A. M., MAYFLOWER

Presiding: Hon. Frank Carlson, United States Senate, president, International Council for Christian Leadership.

Greetings: By Senator Frank Carlson.

Message from the President.

Good-morning greeting by the host, Mr. Conrad Hilton. The Meaning of ICL: By Lt. Gen. W. S.

Paul, president of ICL. Scripture from Old Testament: Hon. ALEX-

ANDER WILEY.
Scripture from New Testament: Hon.

RICHARD NIXON, Vice President of the United

Silent prayer for the President, concluded by audible prayer: By Senator A. WILLIS ROBERTSON.

Message: By Billy Graham.

Prayer of dedication: By Abraham Vereide,

secretary general.

(The third annual prayer breakfast was opened by Senator Frank Carlson, president, International Council for Christian Leader-

Senator Carlson. We will have the opening prayer this morning by Congressman Wainwright, chairman of the House prayer breakfast group. Congressman WAINWRIGHT.

STUYVESANT WAINWRIGHT Lord, in these troubled times Thy guidance is asked, not only upon our leaders but upon the whole world for upon our faith rests our only hope of peace.

We ask Thee to bless this gathering and the food we are about to receive in Thy

name. Amen.

(The breakfast period.)
Senator Carlson. First, I want to express
my appreciation for the fine response we have had to the invitation of our host, from whom we will hear later.

We meet this morning at a prayer breakfast. In fact, it is the first session of the International Council for Christian Leader-

We have three or more people at the table who will not participate in the program, but I want to present them.

First, we have the Chief Justice of the United States who last year, as those of you who were privileged to be here will remember, gave us a very fine address.
We have also at the head table the assist-

ant to the President of the United States,

Gov. Sherman Adams.

We have at the head table Dr. Carlos Davila, head of the American States of the Pan American Union. We have the Vice President of the International Council for Christian Leadership, Congressman Brooks HAYS, of Arkansas.

The theme of the meeting will be A Worldwide Spiritual Offensive. In these troublous and uncertain times we need and must rely on divine guidance. In other words, need consecration and prayer. St. Paul wrote, "The effectual, fervent prayer of a righteous man availeth much."

President Eisenhower, in his recent mesage on the state of the Union to the United States Congress, presented a basis for such an offensive when he said: "It is of the utmost importance that each of us understand the true nature of the struggle now taking place in the world.

"It is not a struggle merely of economic theories, or of forms of government, or of military power. At issue is the true nature Either man is the creature whom of man. the psalmist described as 'a little lower than angels,' crowned with glory and honor, holding 'dominion over the works' of his Creator; or man is a soulless, animated machine to be enslaved, used, and consumed by the state for its own glorification."

I am pleased this morning to read to you a message that I have just received from the President of the United States: The White House,

Washington, February 1, 1955.

DEAR FRANK: To all attending the prayer breakfast on February 3, please convey my warm good wishes and my regret that I am unable to be present on this occasion.

Such a meeting is inspiring evidence of the

conviction of each of you that religious principles must not be kept in a realm apart from everyday life, that they must more and more be put into practice in business, law, government, diplomacy-in every area of practical pursuit.

Your meeting shows also your realization that the need for such practice is worldwide, that the task of spearheading a global spiritual offensive demands not only the efforts of the clergy but also of laymen of dedication and courage and foresight.

On the significance of your meeting, I congratulate all of you. And I am glad to share your hope and your determination that our world may yet see time-honored religious and ethical principles become, in reality, the standard of conduct for all its peoples.

Sincerely.

DWIGHT D. EISENHOWER.

As citizens of this great Nation, we are again rediscovering that God who was in Christ, reconciling the world unto Himself,

has come to live in us by His Spirit.
We are convinced that the answer to all our problems finds a basic solution through a spiritual rebirth and the revival of genuine religion. This morning we are here to renew our faith and our commitment to God.

We are privileged to be the guests of a great American who has made an outstanding success in the business world. plaud him for this great success, but I want to commend him for his active interest and participation in national and world affairs.

Those who were privileged to be present at the prayer breakfast in 1953 well remember how we had in the background an enlarged picture of America on its Knees.

That picture and that prayer, which was written by our host, has, through his generosity, been distributed in practically every country on the globe. I am advised that he has personally printed and distributed over 400,000 copies.

Many speakers and writers have quoted the prayer and the illustrated text has been reprinted in many publications. America on its Knees won for Conrad Hilton the 1953 Freedom Foundation award.

America has a great heritage and we of this generation owe much to those who have gone before, but we do have an obligation to preserve for future generations—our children and their children—the funda-mental principles advocated by the Man that the shores of Galilee 2,000 years ago.

Mr. Hilton, Mr. Chairman, distinguished guests, ladies and gentlemen. It is an honor to be host to a group such as you, leaders of America, and I appreciate that honor. It is

good to be with you.

Right here let me say congratulations also. congratulations to ourselves, to all of us this morning on the third anniversary of our prayer breakfasts at the Mayflower.

This is only one of thousands of meetings at which people pray together, but since so many of you are leaders of a great government this gathering has a special significance. Because of your positions in public life you have greater responsibilities and therefore greater opportunities for good than are given to other citizens. By your example you are in a position to exert great influence on many people. By your presence here and by joining in prayer you are placing our Nation on God's side.

The world has come to look to the United States for material aid, but we must not overlook the opportunity our strength gives us to assume leadership in things of the spirit. We have been shocked at times by the coolness that has met our assistance of money and material to less fortunate nations. It is apparent that their needs cannot be fully met by bread alone.

There is a worldwide shortage of prayer and the grace of God, and we can help to supply these precious ingredients. We must lead the peoples of the world to a warm living faith in God's love, the practical kind of faith displayed by our Founding Fathers.

As we meet here year after year we are doing that by our prayers and by our ex-

It struck me in thinking out my comments to you that the purpose which brings us together must be a continuing thing. We must not be limited to what we can accomplish during the hour we meet here once a year. Religion is not to be taken by the spoonful.

What I mean is this: Some of you will remember when the last great cholera epidemic struck the Orient just after World War I. Periodically it swept through India, the Malay Peninsula, Burma, practically all of Asia except China. The cholera germ cannot surboiling water, and because the Chinese drink tea almost exclusively they were not subject to the disease. Consequently, when the epidemic threatened to run wild through the Philippines the American doctors ordered the people to boil their water. the cholera continued. When the health inspectors investigated they found that the people were taking 3 or 4 teaspoons of boiled water a day as if it were medicine. The water they drank was water they had not boiled.

Now, I think we make exactly the same mistake when we take religion as a medicine instead of a food. Like food, religion should be within us constantly as a kind of fuel for our whole being, body, and soul. Taking religion as a medicine, as a kind of annual tonic instead of food, is just wrong.

Let me say this, that the enemy, the counterfeit religion of communism which is moving over the world, is not being taken by the spoonful. Almost a billion people are being fed it constantly, being bathed in it, their bodies and souls washed in it. And if we are to survive we must do the same thing. We must feed ourselves in the grace of God, bathe-in it, live in it, live by it. We must be religious men and women, not just at an annual prayer breakfast or once a week on Saturday or Sunday but 24 hours a day every day in the year. We must meet this dedicated enemy with dedication of our own. We must live our faith and live by our fath.

Communism can be effectively opposed only by religious men, men of faith and spiritual stature.

As we undertake a task of this importance, I think you will be the first to admit our need for more divine wisdom, the first to distinguish the difference between wisdom and knowledge, science and know-how. To be smart is not to be wise. Wisdom implies the highest exercise of all the faculties, of the will as well as the intellect, and it strikes me as an operation dedicated to the grace of God and steered by divine wisdom.

The way to get that wisdom into ourselves and into our Government is by prayer—ours and the prayers of the Nation. To have that wisdom is to have happiness and peace, the peace of Christ—that kind of peace that has nothing to do with the surface of the nations today. Thanks to our President, to you, leaders of American life, and to millions more across the Nation and

over the world, we are slowly praying our way toward peace.

Again I think you are to be congratulated on this, our third prayer breakfast. Indeed, it is little we do, little we have to offer, but to me we have here a facade, a showcase illustrating what millions of Americans have discovered, that prayer is the beginning of wisdom, that religion is not to be taken by the spoonful.

Senator Carlson. Thank you, Mr. Hilton. We are going to have the Meaning of ICL. by Lt. Gen. Willard S. Paul, president of the ICL. General Paul.

General Paul. Mr. Chairman, distinguished guests, members of ICL, and friends, 20 years ago a small group of men who were disquested with the conditions in their city at that time decided to do something about it. Their decision was to bring into every-day living and every-day working the Sermon on the Mount, the principles of Christianity. They cleaned up the city and went on to other things. One of those men is now the governor of that State. Another of those men, Mr. Vereide, sitting at this table, is now the spiritual leader and executive director of an organization which covers the United States and is spread around the world. That organization is the ICL.

A few weeks ago the governor of another great State at his inaugural ceremonies formally committed his gubernatorial stewardship to God, with a pledge of righteousness as a rule of his administration.

There is a story back of that. Months before his election that governor was carrying personal burdens which he felt were beyond his power to bear. In this crisis he sought the counsel and advice of a friend. This friend was the director of an ICL group. Their visit ended in prayer. There on his knees this governor found a new-born faith, a new calm and courage, as he yielded his will to God's. In the weeks following he discovered the comfort and power of prayer. He found in the Bible both inspiration and guidance. He came to a commitment of life in the service of God.

I have been asked to explain the meaning of ICL. These two examples, I think, tell graphically more than I could by listing them in 3 parts. But they are only 2 of the actual case histories in the files of ICL.

What do we have? First a man was reconciled to God. ICL means that we have a concern for the lives of men. It is with great gratitude and a sense of responsibility that we find men and women in positions of executive leadership in government and in civic responsibility throughout the Nation who have embraced this sort of thing.

ICL means a man-to-man evangelism, quiet, unostentatious, but effective.

It means, secondly, a commitment transferring the resources and talents which are available to individuals, in the service of God. ICL means that we are inspiring Christians to Christian living, Christian working, and Christian associations.

Third, a partnership was formed with God to make a better world. ICL is dedicated to mustering Christian citizenship in the fight for civic righteousness, as indicated in the first example I gave you.

I believe that when a significant fraction—and I say fraction—of the conventional Christians apply the dynamics of their faith to working hours, as Conrad Hilton has indicated, the world will see a transforming miracle. We in ICL are proud to help in bringing about that miracle. Thank you.

bringing about that miracle. Thank you.

Senator Carlson. Thank you, General
Paul.

We are going to have scripture reading from both the Old and the New Testament. The scripture reading will be by the senior Senator from Wisconsin, Senator ALEXANDER WILEY, and the Vice President of the United States. Following this scripture reading, prayer will be offered by the senior Senator from Virginia, Senator WILLIS ROBERTSON.

Senator Wiley read from the 20th chapter of Exodus.

Vice President Nixon read from the 7th chapter of Matthew.

Senator Robertson. Each one exercising the God-given right to directly petition the giver of all good gifts, may we bow for a moment in silent prayer.

Our Father, we give thanks for endowing us with a conscience and this beautiful proof that we were made in Thy image. Help us to keep that God-given means of testing truth and honor, from being crystallized into the habitual moral form of a Pharisee inquisitor obligate. With the growing revelation to us of Thy true nature, help us to give a living response to fresh truth.

Teach us to see our obligations both to Thee and to the state. Help us to realize that the gift of self and the discipline of self involves service to God and to government. Guide us as we strive to fulfill our Christian duty in all things and in behalf of men everywhere. In His name, Amen. Senator Carlson. We are fortunate to have

Senator Carlson. We are fortunate to have with us this morning a very personal friend of mine, a great American, a great Christian, leader, a great preacher, one of God's chosen people, who has moved hundreds of thousands of people to a closer life with their God and whose message has been carried to every country of the globe—Rev. Billy Graham.

Reverend Graham. Mr. Chairman, distinguished guests, 4,000 years ago a man with a long white beard and flowing white hair stood on top of a mountain and probably one of the greatest prayer meetings of all-time took place. Moses said to Almighty God that he was not worthy to be there; neither are we worthy to come into the presence of the Almighty.

But Moses went into the presence of God

But Moses went into the presence of God and in those moments God hewed out of the mountain some stones and put on those stones the Ten Commandments. Those Ten Commandments have been read to us this morning. They form the basis of all moral law. Within those Ten Commandmants we find an expression of the character of Almighty God.

Do you want to know what God is like? Read the Ten Commandments. Do you want to know God's requirements of man? Read the Ten Commandments. Do you want to have those commandments interpreted and amplified so that we common people might understand? Read the Sermon on the Mount from which our scripture text was taken this morning.

From Him, Moses had received those stones with the Ten Commandments written on them. He came down the mountain and there he saw Israel in one of the most critical periods of her entire history. Israel had for a moment forgotten the God that brought them out of Egypt; Israel for a moment had forgotten the God that took them across the Jordan; Israel for a moment had forgotten the God that had been with them at the Red Sea and had fed them manna in the wilderness; and Israel had made a golden calf and was now worshiping strange gods.

Fire came to Moses' eyes. His eyes blazed, his jaw was set, his shoulders squared, and he stood in the midst of the camp of Israel and said, "Who is on the Lord's side? All of you that are on the Lord's side come unto me. Take your stand. Be counted."

me. Take your stand. Be counted."

I wonder at this present critical time in the history of the world if God isn't saying to us this morning, the leaders who are gathered in this room, "Who is on the Lord's side? All of you who are on the Lord's side let them take their stand this day and be counted as on God's side."

We are living in a critical period and the world is looking to the United States for leadership. We are very much like a fishbowl. The whole world is peering in to see how we live, how we act, the way we dress, the way we talk, the statements that we

make, and there are many people around the world that I have found in my travels who doubt that we have the moral and spiritual qualities of leadership. Unfortunately, we have been sold in some parts of the world by propaganda as a nation of drunkards, gangsters, and immature politicians. We have presented to the world a wrong type of picture of the United States and much of the world does not know or does not seem to realize the moral and spiritual qualities and the moral and spiritual heritage that we have as a nation.

I think all of us agree this morning that we do have the potentialities and qualities of leadership. Our roots are deep in Christianity and America has been one of the most Christian nations of all history. But in the last 25 years, as in Israel of old, we have had a spiritual drought. We decided we did not need God. We did not need religion. So we departed from the supernaturalistic concept. We departed from God and we departed from this book called the Holy Bible. As a result, we became an age filled with frustration, nervous tension, selfishness, fear, lawlessness, immorality, and in spite of our high standards of living we became a nation of insecurity.

But during the past 5 years something has happened. This has been an era of unprecedented religious renaissance and resurgence in the United States. Evidences of spiritual awakening are on every hand. For example, last April 10, 75 million Americans attended church. That was 14 million more than voted in the last presidential campaign, 13 million more than the largest radio audience in history, five times the total attendance of all major league ball games last year. The membership in United States churches today exceeds 100 million. The distribution of bibles doubled in the last 6 years, and last year alone 10 million bibles were distributed in the United States. The sale of religious books is three times that of all of the other books put together. Films with religious themes are doing a land office business. Religious songs are now in jukeboxes everywhere. We have changed the pledge of allegiance recently and inserted the words "This Nation under God." For the first time in history we had a postage stamp that had on it "In God we trust."

Rabbi Wise recently said, "The evidence of religious resurgence goes far beyond statistics of church membership and giving," and indeed it does. This year, 1955, the Methodist Church has designated 900 churches in the United States to have an unbroken chain of prayer from January to December. One thousand people of the Roman Catholic faith meet here in Washington every month for all night prayer meetings.

We read about juvenile delinquency, so much so that even the President in his state of the Union message had to refer to it, and it is one of our great social problems. we don't stop to realize that thousands of our university and college young people today are turning to Christ, and there were 2 million more in Sunday school last year than in any year before in history. Seminaries and christian colleges are overflowing with thousands of young people giving themselves in dedication to christian service, Mass evangelism is the largest and greatest in history. In the city of Nashville, Tenn., recently they had an evangelistic campaign. They averaged 25,000 every night for 1 month-unprecedented in our history.

The same is true in Great Britain. There are today evidences in Great Britain of religious resurgences, perhaps a little behind the United States but definitely on its way. All over western Europe there are reports of tremendous religious interest unprecedented in the history of recent times, and there are evidences at this moment that behind the Iron Curtain God is beginning to move. Something is beginning to take place, so

much so that a few weeks ago Pravda admitted that so many young people are turning to religion in Soviet Russia that atheistic propaganda must be increased. Everywhere we went last summer around the Iron Curtain I heard thrilling stories of what God is doing in Russia today.

doing in Russia today.

Is this a genuine religious awakening, many people are asking. Some people say it is just a fear psychosis that we have. Some people are saying that people are afraid today because of the hydrogen bomb and afraid of a third world war and therefore they are using religion as escapism. I do not know. Many think it is a fad. Many think it is a vogue and a passing phase. Only history can provide the answer.

can provide the answer.

But I do know this, that it is easier to discuss religion and talk religion than ever before in the history of the United States. I think that people are beginning to realize that we are more than just materialistic bodies to be fed by the appetites that we have. We are beginning to realize that we are more than a body with eyes and ears and nose and hands and feet and stomachs to be fed, and a body to be dressed and made up. We have everlasting and eternal souls.

We were created in the image of Almighty God. It is a strange thing that we spend most of our time dressing the body which soon dies and goes to the grave. The Bible says that our bodies are very much like the grass that withers and the flowers that fades. We soon die and we waste away and go to the grave. Yet our souls live on forever and ever. The Bible teaches that our souls are eternal. Yet we exercise the body, feed the body, give the body its demands, try to satisfy its appetites, though it is only temporary.

Your soul also has appetites. Your soul has hungers and thirst and desires and longings and yearnings, and if they are not satisfied it ends in frustration, confusion, be-wilderment. There are many people here today who are bewildered, confused, mixed up. You have everything in life to make you happy but you are not happy. You have everything in life to make you peaceful, but you are not peaceful inside. There is turmoil and fighting and striving and difficulty inside that seem to have no answer. Why? Because your soul has never been satisfied. You have never exercised it.

What is the exercise of the soul? We have heard this morning: prayer. How long has it been since we spent an hour in prayer? Half an hour in prayer? Ten minutes in prayer? Bible reading is another. There is the true word that ye may grow thereby. How long has it been since we really read the Bible?

I have talked to a lot of Communists in Europe and in the Far East. Did you know that they know the writings of Lenin and Stalin and Marx almost by heart? How many of us in the Western World know our Bibles and have the dedication that Mr. Hilton spoke of a moment ago?

We talk about the Bible. We have a Bible in the courtrooms and in our home rooms, but how many of us really open the Bible and study it? The ignorance of the Bible in America is appalling at the moment. Yet there is where we have our roots as a Nation. We need to know it and we need to study it. It becomes a spiritual exercise. Going to church and worshipping God is a spiritual exercise. Then living His life.

The Gallup poll said the other day that 95 percent of the American people now believe in God. But that is not enough. God requires more than just an intellectual acceptance and an intellectual belief. He requires more than our name on some church roll. He requires more than being confirmed or baptized. He requires that we go out into our homes and shops and into our offices and put into practice the teachings of Christianity.

In the days of Jesus they saw the miracles that He performed. They said, "This is a great man. We are going to follow Him. We believe in Him. He is a miracle worker." So they followed Him. In the last part of the second chapter of John, Jesus said, "Nothing doing; I am not committing myself to you." They were religious minded. They were ready to follow Him, but He said, "You are not willing to pay the price and you cannot follow me." One of those men slipped aside and said, "Master, I would like to say a word to you." The Master came aside and this great leader of Israel said something concerning spiritual things and Jesus turned to him and said, "Ye must be born again."

The problem of the world today is not the hydrogen bomb. The problem of the world today is not poisonous gas. The problem of the world today is not the germ warfare that is being devised and built all over the world. The problem of the world today is human nature, and until we solve human nature we have not solved the problems of the world. As our good friend Senator Wiley said in the little room before we came in-something that I will never forget-"We are never going to end war until the mind of Christ is in us." And we never will. You have got to do something about hating and cheating and lying and stealing. You have got to do something about the things that bring wars and fights

The only one that has the answer is the Master, Jesus Christ. He said that if we have a spiritual rebirth as individuals we can change the world, and the starting place is the spiritual rebirth.

From that starting place we can go out to pray, to read his word, to go to church and to live and put into practice in our several fields the teachings of Jesus Christ. We don't go out to live this life alone. There is not a man in this room that can live this life alone. It is too hard for you. You can only live it by the presence of Christ in your life, who gives you supernatural power to live it.

I want to tell you this morning that there is not a man or woman in this place who cannot come to a knowledge of God this day and go from this place with the help of God, determined to live a life for Jesus Christ. There is enough potential power in this room to change the entire world. want also to tell you this: Unless we have the dedication that Mr. Hilton spoke about and unless we put into practice the teachings of Christ as individuals and unless we go out as a nation collectively to live for Christ and God and have the dedication, we cannot possibly survive the dedication of atheists that are today hammering at our gates and the moral termites that are eating within. We as a nation will fall as surely as Rome fell unless we have this dedication of purpose and life.

You say, "That is all very good but what can I do? I am only I man, only I person." Today you can go to your room, tonight you can go to your bed, and for the first time perhaps in a long time you can get out your Bible and open its pages and read it. For the first time in a long time you can offer a prayer to God and give your life to God.

The Bible says that "If My people, which are called by My name, shall humble themselves and pray and see My face, then will I hear them from heaven. I will hear their cries and I will forgive their sins."

Thank you.

Senator Carlson. I have just been handed a cablegram from the Netherlands;

"May God's blessing and inspiration be with you all in your endeavor to put into practice living Christianity on a worldwide scale.

"WILHELMINA,
"Princess of the Netherlands."

This has been a splendid morning. We are going to rise and be dismissed with a benediction by Abraham Vereide, secretary-general of the international council.

Mr. Vereide. Eternal God our Father, for this hour we thank Thee; for this evidence of Thy working in our hearts and in our midst, for intelligence, for trained minds and lives in tolerance and experience, dedicated to the doing of God's will.

Here, O God, we dedicate ourselves to Christ. We want as a nation and as representatives from many nations to become one great team, working in the rhythm of defined purpose and in the warmth of God's love and with the firmness and the fitness of disciplined minds. We want to go forward in this spiritual quest and the spiritual advance to proclaim the unmatchable riches of Christ and live out the Christian plan and Christian will and Christian spirit and principles day by day.

To this end, O God, take us now as leaders in various fields of endeavor. Endow us with Thy spirit and with Thy power and grant us the grace to affirm day by day, "I can do all things through Christ whose strength is with me, and to Thee, O God, the glory, world without end." Amen.

Electoral College Reform

EXTENSION OF REMARKS

HON, KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Friday, February 4, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by a former Senator, Hon. Edward R. Burke, president of the American Good Government Society, on the subject of Electoral College Reform.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ELECTORAL COLLEGE REFORM—ROUND TABLE DISCUSSION PAPER ON QUESTION, CONSTI-TUTIONAL REFORM OF THE PROCEDURE FOR ELECTING PRESIDENT AND VICE PRESIDENT

(By Edward R. Burke, president, American Good Government Society)

We are met at this time to discuss the provisions of the Constitution which govern the election of the President and Vice President of the United States and the several proposals to change those provisions by amending the Constitution.

The charges brought against the electoral system vary widely. From nullifying and misappropriating votes and disfranchising voters, they range to gross inequality in voting power as between the voters of the large and small States. In between the charge of imbalance in the political structure is said to give the executive power of the Nation a narrow base in the electorate while the legislative power has a very broad base. Nor is the effect of the electoral system on nominating conventions overlooked.

This variety of charges against the way we elect the President has produced equally varied remedies in the form of proposed constitutional amendments. These range from a direct popular election of the President without regard for State boundaries, to a mere change in the manner of electing members of the electoral college. In between is a plan of abolishing the electoral college, but keeping intact the present electoral weights of the States and dividing them in proportion to the popular vote within the

States. All of the proposed plans for electing the President are based on 1 of these 3 approaches.

All of the amendments proposed have one thing in common. They would bring about a division of the electoral weights of the States. And, in the last analysis, it is this present lack of division of the electoral weights that is the source of dissatisfaction and the basis of demands for a change.

In most respects our electoral system has stood the test of time, through 42 elections, from General Washington to General Eisenhowever. Only the minor changes of the 12th amendment, in 1804, distinguish the constitutional manner of the election of Washington from that of Eisenhower.

Prior to the 12th amendment members of the electoral college voted for 2 men as President, with 1 from another State than themselves. The leading man became President if he had the votes of a majority of electors appointed. If none had a majority or if 2 such were tied, the House of Representatives, voting by States, chose the President "from the 5 highest on the list." After the President was chosen the man with the most electoral votes became Vice President, unless two or more were tied, and then the Senate chose between them.

The two-party system was implicit in the requirement of a majority of the electoral college in the election of the President. This requirement left room for only two major contenders. As we have seen, men will subordinate strong convictions in order to be a part of the majority. This became clear in the election of 1796, the first contest for the Presidency, which came between John Adams, who had been Vice President under Washington for 8 years, and Thomas Jefferson, the leader of the opposition which was fast becoming an organized party. Adams nosed out Jefferson by 3 votes—71 to 68. This outcome gave us a President from one party and a Vice President from the other party. I say the other party because the candidates for President and Vice President of the Federalists and those of the Anti-Federalists received 228 of the 276 electoral votes cast, or more than 80 percent of the total. The remaining 48 votes were divided among 9 other candidates. The two-party system was beginning to take

But the provision requiring the electors to vote for two men as President wrought havoc among the elements beginning to coalesce into two parties. The feud between Alex-ander Hamilton and John Adams, which destroyed the Federalist Party, began in the first presidential election in 1788. All the leaders were agreed on Washington for President and Adams for Vice President, as was Adams himself. But under the Constitution Adams had to be voted for as President and he wanted to run equally with Washington in the electoral college, and leave Washington's choice over him to the House of Rep-Hamilton, on the other hand, resentatives. Hamilton, on the other hand, wanted for Washington the prestige of a unanimous choice in the electoral college unquestioned by a close contender. Hamilton's efforts brough to Washington the votes of all 69 electors voting, of the 73 appointed. More important, though, was that Hamilton had so arranged matters that Adams was short of a majority although he had four times as many votes as his nearest oppo-nent. Despite the effect of this on Adams' friends, especially in New England, Hamilton imposed the same pattern on the 1792 elec-

The chickens came home to roost in 1796 when Jefferson ran ahead of Pinckney, the Federalist candidate for Vice President, by 9 votes, 12 New England electors having failed to support the ticket.

By 1800 the two-party system was solidly grounded. The Federalist's 65 electors voted for Adams and 64 voted for Pinckney, the candidate for Vice President. One vote went to John Jay to prevent a tie in the electoral college between Adams and Pinckney. But the Federalists were never again a factor in presidential elections.

Things were not so well managed for the Jefferson-Burr ticket in 1800. All of their electors were to vote for Jefferson and 1 Virginia elector was to vote for someone other than Burr so as to give Jefferson a 1-vote lead in the electoral college. When the votes were counted it was found that each had 73 votes, Colonel Burr having written to the Virginia elector that he need not throw away his vote since a Rhode Island elector was going to do that. The election was thrown into the House of Representatives where, on the 36th ballot, as a result of Hamilton's intervention, Jefferson was chosen President.

At this point, after both parties were split by feuds between their top leaders, the 12th amendment was adopted. It required members of the electoral college to vote separately for President and Vice President. This development eliminated the earlier source of intraparty friction and established a basis for more cohesive tendencies within the parties. Therefore, the 12th amendment corrected one unforeseen fault in the electoral system that had been uncovered by the development of parties, an event which also was unforeseen by the Founding Fathers.

But the central provision for the electoral college was untouched by the 12th amendment. It reads:

"Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress: but no Senator or Representative, or person holding an office of trust or profit under the United States, shall be appointed an elector."

When discussing plans to change this central feature of the electoral system, we are facing all of the problems faced by members of the Constitutional Convention. I think it wise, then, to set forth the difficult problems they solved successfully before we take up the changes now proposed to be made. For surely, we do not want to undo what they did well. We do not want to create constitutional problems where none exist by any failure on our part to understand why the electoral college was necessary and why its membership was established as it was.

The Convention undertook an enormous task. As Hamilton put it in the Federalist No. 1: "It seems to have been reserved to the people of this country * * * to decide the important question, whether societies of men are really capable or not of establishing good government from reflection and choice, or whether they are forever destined to depend for their political constitutions on accident and force."

The Convention undertook to create a government for the United States which incorporated certain new principles not previously tested by experience.

First was the Federal principle of limited dual-sovereignty of the State and the Nation, sovereignty being the power to declare the law. Next was the new principle of separation of powers of the three great branches of government. And lastly was the combination of the Federal and national principles of representation in the Central Government.

The Convention proposed that "the People of the United States" delegate to the Central Government only a part of the sovereign powers ceded to them in their respective States by George III in the Treaty of Paris. It left to them the measure of sovereignty they might, in turn, delegate to their respective State governments. We speak of dual sovereignty more familiarly as dual citizenship of State and Nation.

During more than a hundred days in 1787, as the Constitution took shape, the Conven-

tion debated, off and on, the manner of choosing the Executive. Actions were taken only to be reversed upon later reconsidera-The first idea was that the President be elected by joint ballot of the two Houses of the legislature, so that neither could have a negative over the other. This combined into one body for a single act the Federal basis of the Senate and the national basis of the House. The next idea was that the President should be elected by an electoral college, meeting at the seat of government, an electoral college that should be the exact counterpart of the legislature in joint session, thereby continuing in this special body for only one action the combination of the Federal with the national principle of representation. Then, doubting that so many would come so far just to elect a President, the convention went back to election by the two Houses in joint session. But this action was again reversed and the electoral college restored in the report of the Committee of Eleven on September 4. Speaking for himself and the committee, Governor Morris pointed out that the plan satisfied "the indispensable necessity for making the Executive independent of the legislaturethe electors would vote at the same time throughout the United States, and at so great a distance from each other, the great evil of cabal was avoided." This report provided that the electors meet in their respective States and transmit certificates of their votes to the seat of government. With some modifications the plan was adopted 2 days later, on the 6th, just 11 days before the Convention adjourned.

Thus, in the end, after 15 weeks of debate and action, reconsideration and reversals, the convention had hammered out a plan of election of the President by an electoral college which:

1. Gave full effect to the doctrine of sepa-

ration of powers;
2. Established in combination the Federal and national principles in the election of the President:

3. Gave each State the same representation in electing the President that it had in the whole Congress:

4. Left to the States the manner of ap-

pointing electors:

5. Left to each State, as a means of selfprotection, the determination or the qualifications of its voters;

6. Established the requirement of an electoral majority which is the foundation of

the two-party system.

Had the convention neglected any one of these crucial considerations the Constitution might have failed of adoption, or, if adopted, would have contained within itself elements of imbalance great enough, in the course of time, to distort the balance of the whole structure. These, then, are the principles against which any proposed amendment must be tested if it is to fit comfortably in the Constitution and not require additional adjustments to other parts of the system.

We have seen that an unforeseen fault in the manner of electing the President split the parties and required amendment of the Constitution. Now, when our parties are again split, changes in the manner of electing the President are offered as the proper solution. But now the nub of the matter is

different.

In the beginning presidential electors were elected in a variety of ways: (1) by State legislatures; (2) by statewide en bloc methods; (3) by congressional districts; and (4) by combinations of districts and statewide methods. Slowly, as the parties developed, the majority in each State tended to arrogate to itself the full electoral power of the States. This was accomplished by electing the electors in a group on a statewide ticket. Both parties supported this movement in the States where they were the strong and op-posed it in States where they were weak.

But, in the end, the movement toward consolidation of each State's electoral power produced a uniform method of election of members of the electoral college. For all practical purposes, this development was the foundation of sectionalism in our politics and, to some degree at least, was the basis of the Civil War. Its continuation after reconstruction established the solid South, unknown before the war. The rise of the big city vote in the North under this system has shifted the balance of political power, as between the parties.

In essential principle there are but three proposed methods of change in the manner of electing the President. After listing them,

we will discuss them.

1. Abolition of the electoral college and direct election of the President by popular vote of all the people, considering the entire Nation as one gigantic election district and disregarding all State boundaries;

2. Abolition of the electoral college with a proportional division of electoral votes in each State according to the popular vote

therein: and

3. Maintenance of the electoral college and election of members thereof in the same manner as Senators and Representatives are elected

With minor variations, according to the differences in the several proposals grouped under numbers 1 and 2, election would be by a mere plurality, whatever its proportion,

by a plurality of 40 percent.

Abolition of the electoral college is the indispensable condition of any plan for the direct election of the President by popular vote and, also, any plan for keeping the electoral vote but dividing it proportionally among the candidates for President in a Under all plans based on these three principles the individual voter would vote directly for President and Vice President. This would create interstate candidacies as opposed to the present intra-state candidacies of party men seeking election as members of the electoral college. Interstate candidacies are legally unknown and unprecedented under the present system. Now, party nominees for President and Vice President are extra-legal, outside the law. They achieve constitutional status only when votes are cast for them in the electoral col-

lege.

It is the office and person of elector, and nothing else, that can maintain the intrastate character of presidential elections. If we abandon the office and person of elector we will necessarily establish interstate candidacies which, in turn, will open the door for ultimate Federal control of elections, including the qualifications of voters. For this reason, proponents of States' rights will hardly support abolition of the electoral

Other important points to be considered with respect to direct popular election of

the President are these:

1. It will so shift the weight of the States in electing the President that the smaller States will lose the small advantage they now have by virtue of their equal representation in the Senate-under the Federal principle; and

2. Since 33 States have fewer than the average weight in the electoral college-11.06 votes-and 17 have 6 electoral votes or less. any constitutional amendment incororating this principle will have rough going in the campaign for ratification. Rejection or fail-ure to act on the part of 13 States would

kill the proposal.

This weakness caused former Senator Lodge to abandon the direct popular election principle for the so-called Lodge-Gossett plan, which he persuaded the Senate to pass 64 to 27 on February 1, 1950. The House rejected it when it came up on the floor without benefit of a rule from the Rules Committee.

The Lodge-Gossett plan, long sponsored by former Representative Clarence F. Lea, of California, would abolish the electoral college and divide each State's electoral vote proportionately among the candidates in the respective States according to their respective shares of the popular vote, carrying the division to the third decimal place, farther is necessary to break a tie. As reported by the Senate Judiciary Committee, election would be by a simple plurality of the total electoral vote of all the States. Before passage the Senate added the Lucas amendment to require a plurality of 40 percent for election, otherwise the final choice was to be made by a joint session of Con-gresss voting, per capita, from, I believe, top 3 candidates. among the Senate version and the original Lodge-Gossett version were before the last Congress.

Advantages claimed for this proportional plan are that the popular vote in each State would be accurately reflected in its electoral vote and that the nationwide total of each candidate's electoral vote would accurately reflect his popular support; that conventions could and would name men for President from the small as well as the large States; and that the proportional feature would force the Republican Party to campaign actively for votes in the South, thus laying a basis for a strong two-party system in that section.

Disadvantages charged against Lodge-Gossett, besides the intrastate candidacy, are that it would:

1. Introduce into the Constitution the new and novel principle of proportional repre-sentation, the basis of the multiparty systems of continental Europe which, once accepted as a valid principle of representation in electing the President, would be strongly urged as the proper basis for electing Members of the House of Representatives.

2. Give Republicans electoral strength in the South without any commensurate strength in the Houses of Congress, merely shifting the present imbalance of party strength from one section of the country to another, but without reducing it.

Finally, there is the plan for maintaining the electoral college as it is but changing the manner of election of its 435 members who correspond to the 435 Members of the House of Representatives. Under this plan electors would be elected in each State the same manner in which it elects its Senator and Representatives." This means that the two of each State's electors who correspond to its United States Senators would continue to be elected statewide, or at-large, and its remaining electors, corresponding to its Members of the House of Representatives, would be elected in congressional districts.

The advantages claimed for this State-

district plan are that it would:

1. Give each party in each State a weight in electing the President commensurate with its strength in the Congress, and permit the election of any candidate who could carry one-half of the States and one more than half of the congressional districts, or win more districts and fewer States, or vice versa;

2. Match all of the advantages of other plans that might be gained from division of a State electoral weight without any of their

disadvantages:

3. Require no adjustment, explicit or implicit, in any other part of the Constitution, thus gaining all that needs to be gained with the least change in the Constitution and without any constitutional risks whatsoever.

The disadvantages charged against this plan is that the practice of gerrymandering congressional districts in favor of the majority party in each State would make for unfair and unjust representation in the election of the President. But so-called gerrymandering can be controlled by the Congress without any additional grant of power in the Constitution. The Congress has original and

concurrent jurisdiction with the State legislatures as to "the times, places, and manner of holding elections for Senators and Repre-

sentatives" (art. I. sec. 4).

The only other complaints lodged against this plan are that it does not provide for direct voting for the President and Vice President and that it leaves the elector a free agent, as now, to vote for whomsoever he will

All of these proposed plans of election which require more than a simple plurality for election make provision for ultimate election by the Congress, either the present provisions or by a joint session of the two Houses, voting by the head.

The Dixon-Yates Contract Controversy

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a broadcast in Washington, D. C., by Cedric Foster on January 4, 1955, over the Mutual Network.

Inasmuch as this broadcast contains a penetrating analysis of the Dixon-Yates controversy, I feel sure that it will be of

general interest.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

This is Cedric Foster reporting to you from Washington. I'll have my commentary on today's news for you in just a moment

As I reported to you yesterday one of the controversial issues which is certain to come before the 84th Congress is the contract awarded by the Federal Government to the Dixon-Yates company for the production of electrical power. Edgar Dixon and Eugene Yates are the heads of a corporation which expects to erect a \$107 million steam powerplant at West Memphis in the State of This plant is to sell 600,000 kilowatts of electricity to the Tennessee Valley Authority. This electricity will take the place of the TVA power which has been diverted of necessity to the atomic-energy plants operated by the Federal Government at Paducah, Ky.

A bitter fight is going to be precipitated

Over this Dixon-Yates contract, as, indeed, one has already been started. The main issue, of course, is a political philosophy, a way of life, a manner of living which could be described as socialism if the contract is voided and private enterprise if the Eisenhower administration emerges the winner.

The main issue of this political philosophy in this instance, is centered in public power. It is public power against private power. The Democrats support public power and Republicans have pledged themselves to a policy of getting the Government out of business and back into the work of

governing.

In their assault against the advocates of in their assault against the advocates of the same of the sa private power the Democrats plan to attack the fact that there was no bidding on the contract which was awarded to Dixon-Yates. They also will probably charge that the subsidiary of the Electric Bond & Share Co., is EBASCO, did not live up to the terms of its contract and was forced to abandon a construction job at Joppa, Ill. It was at Joppa, Ill., that EBASCO was constructing

an electric powerplant for the Atomic Energy Commission. The ability of EBASCO, one of the world's leading engineering firms, to build that powerplant in West Memphis, Ark., for Dixon-Yates, has been brought up in the current hearings on the financing of the Dixon-Yates project before the Securities Exchange Commission. These hearings continue this week here in Washington.

The Democratic charge concerning the alleged failure of Dixon-Yates at Joppa, Ill., has been blown right out of the window when Federal Judge Fred L. Wham sentenced a labor racketeer to 15 years in prison. This labor gangster was Evan R. Dale and it apthat he tried to shake down the EBASCO organization in the sum of \$1,030,-000, a 1-percent shakedown on the total cost of the project. But the EBASCO executives refused to pay the bribe. Mr. Dale was president of the Hod Carriers, Building and Common Laborers Union, American Federation of Labor, for southern Illinois. attempted shakedown by Evan Dale was characterized by Attorney General Herbert Brownell as the largest one that has been attempted since Brown-Bioff syndicate sank its claws into the movie industry about 2 decades ago.

It seems that labor gangster Dale wanted this \$1,030,000 as the price of labor peace in Joppa. Ill. Mr. Dale controlled—that is before he went to the Federal penitentiary he controlled them-some 38,000 workers who were being used in the construction of the AEC plant at Joppa. "If EBASCO knew what was good for it," Mr. Dale said: "it would pay out that money or else." What happened was "or else." EBASCO, through the person Turner White, Jr., a vice president, refused to make the payment. Then the screws were put on EBASCO and if ever the people of the United States wanted an example of what a crooked, thieving labor leader can do to management it could find it in the record of Labor versus EBASCO in Joppa, III.

Government and EBASCO witnesses testified at the trial of Evan Dale that when the company refused to be blackmailed it had 35 strikes and instances of sabotage, bringing the Federal Bureau of Investigation to the picture. It was the combination of these strikes and sabotage that forced EBASCO off the Joppa project. Thus, one of the charges which the Democrats have leveled against Dixon-Yates has been answered effectively.

It was some time ago that the New York Daily News summed up briefly and with telling strokes, the issues involved in the Dixon-Yates controversy. This paper declared that the "fight against the contract is being stirred up by Democrats for political reasons and by people who believe fanatically in publicly produced Socialist power such as generated by TVA. These Socialist-minded people think that TVA should build the West Memphis plant and that the cost of the plant should be paid by the taxpayers of the United States. President Eisenhower's administration is pledged to halt and reverse this American trend toward socialism. It has decided that the socialistic TVA's expansion has got to stop. It has chosen the steam plant in West Memphis as the place to stop 1t.

That is the nub of the whole dispute. It is a showdown between socialism and the free-enterprise philosophy. Complicating the fight are numerous charges that the Dixon-Yates contract was steamrolled to signature without competitive bidding and that it does not contain proper safeguards against profiteering by the power syndicate."

It would appear that all of these charges are going to be fully aired at the coming session of the Congress. But no matter what the smokescreens are, no matter how long and how hard and how loud come forth the yells here in Washington, the public should not permit itself to become confused as to the real issue. The basic issue involved is whether a creeping socialism will creep further up the torso of the body politic, eventually to throttle it in the grip of bureaucratic strangulation, or whether the body will swing free, unfettered and unbound, free to stride forward as it has done in the past, to make of these United States the Nation of people that we are. That's the issue involved in Dixon-Yates and no amount of doubletalk can change it.

Here in Washington today the Democrats and the Republicans met to name their leaders for the session of Congress which gets underway tomorrow. There were no surprises when the selections were announced as they had been pretty much discounted in advance. Congressman Sam RAYBURN, Democrat, from Bonham, Tex., will be the new Speaker of the House, succeeding Congress-man Joe Martin, of Attleboro, Mass. Congressman John McCormack will be the new Democratic leader in the House, succeeding Congressman Charley Halleck, Indiana Republican; JOHN McCORMACK is from Boston. The Republican minority leader will be Mr.

MARTIN.

The Democratic leader of the Senate, that is the majority leader now that the Republicans have lost control of the upper Chamber, is Senator Lyndon Johnson, from the State Texas. Republican Senator STYLES BRIDGES, from the State of New Hampshire, was selected unanimously as head of the GOP policy committee in the Senate, succeeding Homer Ferguson, of Michigan, who failed to be reelected. The floor leader for the Republicans will be the former majority leader, BILL KNOWLAND, from the State of California, while EVERETT SALTONSTALL, from Massachusetts, will be the Republican whip. the assistant floor leader. Senator Eugene MILLIKIN, from the State of Colorado, will be the chairman of the Republican senatorial conference and Senator Mur Young, from the State of North Dakota, is the secretary.

When the Senate meets tomorrow the new President pro tempore will be the distinguished Senator from the State of Georgia, WALTER GEORGE, a man who rendered outstanding service to his State and country. He succeeds Senator STYLES BRIDGES and will become the third ranking man for the Presidency of the United States, third in line.

The senatorial whip for the Democrats is Senator EARLE CLEMENTS, of the State of Kentucky. Senator Tom Jennings, Jr., from the State of Missouri, is the secretary of the Democratic Senate conference. The Democrats have not yet decided who will be named Clerk of the House and Sergeant Arms. Joseph Duke appears all certain to win that post in the Senate, succeeding Republican Forrest Harness who is a former Congressman from Indiana.

I should also mention that Congressman CHARLEY HALLECK will be JOE MARTIN'S assistant, without any formal title, on the floor of the House as minority leader. Congressman Leslie Arends was in line to keep his post as party whip. He is from Illinois.

On the international front today U. N. Secretary General Dag Hammarskjold arrived in Hankow, China, en route to Peiping. Per Lind, who is Hammarskjold's executive secretary, is going to file periodic messages to U. N. headquarters in New York for distribution to newsmen, but there are no journalists, as such, with the U. N. party which is trying to effect the release of 11 American United Nations fliers. Other newsmen who are already in Peiping, or those who were sent there on special assignment from countries which have diplomatic relations with Red China, the world will have to reply upon the Chinese Red radio for its news, which would not be termed exactly satisfactory. When Dag Hammarskjold arrived in Can-

ton, his first stop in Red China, his party

was met by a Communist official who might be described in American vernacular as the third assistant to the third assistant secretary. Sufficient to say that he was a very minor Communist official. This is an indication of the present temper of the Red Chinese. They are not rolling out any velvet carpet for the United Nations delegation. They did this for Nehru, of India; U Nu, of Burma; and Clement Attlee, of Great Britain. Flags were waved, bands played, and people cheered. But for the Secretary General of the United Nations the Red Chinese handed out the treatment of silence, cold reserve, and a welcome from a Red provincial official.

The President's Economic Report

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. LEHMAN. Mr. President, in the course of the current hearings of the Joint Congressional Committee on the Economic Report, there appeared as a witness to comment on the year-end economic report of the President, Dr. Walter Adams, associate professor of economics at Michigan State College, who is a member of the national committee to study the antitrust laws set up by the Justice Department. While Dr. Adams is no longer a constituent of mine, he is a former New Yorker; and his father, Mr. Edward Adams, is a respected citizen of my State, living in Brooklyn. Dr. Adams has achieved widespread recognition as one of the most outspoken defenders of the role of small business in our economy, and as a critic of monopoly.

I ask unanimous consent that Dr. Adams' very fine and interesting testimony before the Joint Congressional Committee on the Economic Report be printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF DR. WALTER ADAMS, ASSOCIATE PROFESSOR OF ECONOMICS, MICHIGAN STATE COLLEGE, BEFORE THE JOINT CONGRESSIONAL COMMITTEE ON THE ECONOMIC REPORT, WASHINGTON, D. C., FEBRUARY 1, 1955

My name is Walter Adams. I am an associate professor of economics at Michigan State College and a member of Attorney General Brownell's National Committee To Study the Antitrust Laws. However, I appear here as a private citizen and do not purport to represent any institution or organization.

The prevention of monopoly and the promotion of competition receive only incidental treatment in the President's Economic Report. While the report recognizes the Government's "responsibility to maintain easy entry into trade and industry, to check monopoly, and to preserve a competitive environment" (p. 50), it scarcely suggests how these generally accepted goals are to be implemented. Fundamentally, it falls to face up to the crucial issues. Thus, the report states that Congress has established a policy of assuring small business of a fair share in the procurement program, but it does not indicate to what extent the executive agencies have carried out the will of Congress.

It does not indicate the extent to which legislative wisdom is being vitlated by administrative shortsightedness and incompetence. The report recommends increased Federal expenditures on research and development, but it does not recommend that the fruits of such research be made freely available to all bona fide business enterprise. The report suggests an increase in antitrust fines as a deterrent to future violations, but it does not say that at a time of virulent merger activity the inadequate fine is hardly the most important obstacle to effective antitrust enforcement. Finally, the report proposes that the line between public and private enterprise be redrawn, but it does not insist on redrawing this line with a view toward promoting competition and attenuating monopoly.

Deficient on these specific counts, the President's report is subject to a more general, and probably more crucial, criticism, viz., its total disregard of one of the most important monopoly forces in America today—the United States Government. Thus, the report fails to show how the exercise of particular powers of Government may create the very monopoly which the antitrust authorities are later called upon to destroy. A few illustrations should make my point clear.

1. Spending power: In a period when Federal budgets run in excess of \$60 billion, Government procurement, especially defense contracts, have a significant impact on the economy. Yet the executive departments are not always aware of the antitrust implications of their decisions. In 1952, for ex ample, there were four producers of M-48 tanks, but the Defense Department suddenly decided to concentrate production in a single supply source. By administrative flat. therefore, we moved from an oligopoly to a monopoly situation. Similarly, between January 1953 and June 1954, while independents in the auto industry were withering on the vine, the net new defense contracts going to General Motors increased by \$1.7 billion while the net new contracts going to all other auto companies combined. declined by \$395 million. Such actions by the Defense Department are hardly conducive to greater competition in highly concentrated industries,

2. Taxing power: In every emergency, from World War I to the Korean war, the tax code was amended to authorize accelerated amortization as an incentive for industrial plant expansion. The companies receiving such amortization privileges got a valuable tax rebate or, at the very least, an interest-free loan. They received what one congressional committee has called the biggest bonanza ever to come down the Government pike. Unfortunately this bonanza was unequally shared. To the extent that it accrued primarily to the dominant firms in highly concentrated industries, the Government was underwriting the growth and expansion of industrial giantism.

3. Proprietary power: During World War

II, the Government spent about \$11.6 billion on industrial facilities which were usable in the postwar period and were sold to private industry. Here, too, however, the record in-dicates that, with the notable exception of aluminum, the disposal program did not effectuate an appreciable increase in competition. In the steel industry, for example, almost all the major facilities directly financed with Government funds were sold to the largest firms at bargain counter prices. The Geneva steel plant in Utah, built at a cost of more than \$200 million, was sold to United States Steel for a mere \$47.5 million, a sale which increased United States Steel's control over the rapidly expanding west-coast market from 17 to 39 percent, and raised its percentage of ingot capacity in the area to 51 percent. Ironically enough, the Attorney General, after approving this sale, filed an

antitrust suit against United States Steel

for merging with a firm which accounted for 3 percent of fabricated steel production in the same market.

4. Legislative power: As in the case of atomic energy, this involves establishment by Congress of ground rules for industries being transferred from the public to the private domain. While I regret to do so, candor compels me to say that last year's atomic-energy law is likely to preclude the development of competition in this vital industry. At a time when only a handful of large corporations had been allowed to participate in the atomic-energy program, Congress suddenly decided to fling the doors open. But an open door does not afford equality of opportunity when some contestants are on the doorstep while others are miles away. This is not the way to assure effective competition in a new industry.

5. Regulatory power: Here we see in boldest relief the creeping paralysis of monopoly. Here we see the marasmus of the regulatory process, its injurious effects on the consumer and its debilitating influence on the industry concerned. Here we see the subversion of competition via regulation. Let me cite some recent examples:

(a) In 1948, the Supreme Court ordered vertical divorcement of the Big Five in the movie industry. Each of the Big Five was required to separate the production of movies from exhibition, so as to prevent foreclosure of the market by vertical inte-Then, in 1953, the Federal Comgration. munications Commission authorized the merger between American Broadcasting Co. United Paramount Theatres, and acquiesced in the control of Paramount Pictures by DuMont TV. This meant not only a sizable horizontal combination between a movie exhibition chain and a TV network. but also the vertical integration between a movie producer and a TV exhibitor. It vitiated potential interindustry competition between two basic communication media, and brought about the very vertical integration which the Supreme Court had earlier

sought to eliminate.

(b) In another action, the Federal Communications Commission decided on an allocation pattern for TV channels which may doom competition in this young and dy namic industry. According to Allen B. Du-Mont-who is no academician and who has met a payroll-the Commission's allocation pattern will result in a two-network monopoly in the television industry. Other witnesses before the Senate Interstate and Foreign Commerce Committee agreed with this contention. They pointed to the fact that competition hinges on the survival of UHF, and that UHF cannot survive unless the Commission equalizes the terms on which UHF competes with VHF. Thus it is clear that the FCC ground rules will determine whether newcomers in this concentrated industry are to have a climate in which competition can thrive and prosper, and whether the TV audience is to enjoy the variety of competition or accept the impositions of monopoly.

(c) In the transportation field, there are especially strong indications that the type of regulation may be unwise and the amount of regulation excessive. There is more than a germ of truth in the observation that the regulatees have wound up doing the regulating.

When the ICC Act was passed in 1887, the railroads possessed considerable monopoly power. But today the situation is different. In the passenger field, the airplane, the bus, and the private conveyance protect the consumer against potential exploitation. In freight, the common carrier, contract, and private trucks seem to give the railroads quite a run for their money.

Yet competition in the trucking business is artificially restricted. No common carrier truck can operate in interstate commerce

without first obtaining a certificate of convenience and necessity and without submit-ting to rate regulation and route determination by the ICC. Why? What is there about trucking to justify this kind of public utility regulation? Very little, in my opinion. Here is an industry which closely approximates the pattern of perfect competition. There are many firms in the industry and, in the absence of regulation, there would be more. The product is fairly homogeneous and standardized. Entry would be easy, because of relatively low capital costs and because the roadbed is provided at public expense. Moderate fixed costs make price discrimination and cut-throat competition an unlikely eventuality. Nevertheless, we refuse to rely on competition as a means of protecting the consumer interest. Instead we depend on a regulatory agency which shows an inordinate concern for sagging railroad properties and for the vested interests of established trucking companies. In my view, this is ill advised. There seems no economic justification for limiting entry into this industry as long as the public is assured that common carrier trucks are financially responsible, follow the necessary safety regulations, and possess the proper surety qualifications. Here is an industry which is no more a public utility than restaurants, laundries, or filling stations. Here is an industry where gradual, but substantial, deregulation seems feasible, practicable, and desirable.

Finally, we have the case of the airlines. When the Civil Aeronautics Act was passed in 1938, domestic trunklines flew 479.8 million revenue passenger miles. By 1952 this total had increased to 12,188.7 million—a 2,500 percent growth. Despite this tremendous expansion, however, not a single new carrier has been certificated. Established carriers have thus been given what amounts to a perpetual monopoly over a new and growing industry. Here again there is no economic justification for what seems to be a complete and permanent bar against the entry of newcomers. The skyways are free, and airport facilities are provided with public funds. Capital costs are moderate, and new facilities can be added in relatively small doses. Given the tremendous increase in the demand for air travel, there seem to be no compelling technological or economic factors militating against the entry of at least 1 or 2 new carriers. Moreover, the experience with the nonskeds shows how necessary the energizing and invigorating stimulus of competition is. It was the non skeds who had enough faith in the future of air travel to introduce coach service-at a time when the Big Four thought that such service would entail substantial losses and would fail to promote an increase in demand. It was the nonskeds who rejected the caution, conservatism, and restraint of the big companies and who refused to bow before the apparition haunting every monopolist—the assumed inelasticity of de-mand. It was the nonskeds whose initiative, enterprise, and daring proved that competitive rate reduction is more effective than a belief in the myths of inelasticity. If for no other reason than past performance, the certification of new competitors is urgently needed-competitors who do not demand subsidies from the Government, competitors who are dynamic enough to assure a phenomenal growth in a phenomenal industry. Such growth will not only benefit the consumer; it will not only enable Michigan residents to escape harsh winters with an airline trip to beautiful Arizona; it will also contribute to our national defense which depends on a strong and vigorous airline industry.

In conclusion let me say that contrary to the prediction of Karl Marx and the belief of his unknowing and unwitting disciples, monopoly in America is neither natural nor inevitable. Rarely is it a response to tech-

nological imperatives or economic necessities. Never is it the result of spontaneous generation or natural selection. More often than not, monopoly is the result of unwise, manmade, privilege creating legislation which throttles competition and restricts opportunity. I think it is idle to expect enforcement of the antitrust laws alone to assure us of a competitive economy in years to come. We cannot have competition if the Government creates what the antitrust laws are designed to prevent, if the Government itself helps fashion the economy in the image of the cartels.

Senator and Mrs. Neuberger

EXTENSION OF REMARKS

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES
Friday, February 4, 1955

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very interesting article entitled "Senator N. and Mrs. N"., written by Mr. Roland Sawyer, and published in the Christian Science Monitor of January 27, 1955. The article refers to the junior Senator from Oregon [Mr. Neuberger] and Mrs. Neuberger, his wife.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

SENATOR N. AND MRS. N. (By Roland Sawyer)

Washington.—About this fellow Neu-BERGER, the new Senator from Oregon; Washington isn't quite sure. Here's a man who

says what he thinks. Literally.

Don't Senators say what they think? Well, let's not be too literal. Sometimes a Senator or a Congressman says what somebody else wrote. A New England Senator is reported to have remarked in a moment of candid exasperation at the height of a recent campaign, "The things they put in my mouth for me to say." But nobody puts things in DICK NEUBERGER'S mouth—nobody, that is, except Mrs. Neuberger.

Take this Formosa affair and the President's message to Congress. What do Dick

Take this Formosa affair and the President's message to Congress. What did Drck Neuberger think about that? The Senator was sitting before an open fire in a Washington living room. His hands were wrapped around his knees, and his head was bent down. He rocked back and forth a moment. Well, he said, the newspaper boys knew a lot more about that than he did. They'd been around Washington; he'd just arrived. The Senator just didn't know what to say except that he wanted to think about it a while.

Some people in Washington say the junior Senator from Oregon has said quite enough already for his freshman year. When at the congressional dinner of the Woman's National Press Club he said that he thought politicians should practice the Sermon on the Mount and the Ten Commandments in their campaign speeches, Washington was surprised. Congressmen and Senators usually don't say things like that, except on the floor of the House or Senate, where it is recorded for publication in the Congressional

Mr. Neuberger, before he had hardly unpacked, had the courage—or the temerity, depending upon one's viewpoint—to make a long speech on campaign morals before many high Government figures. He used plain words, like Mr. Peepers, of the TV, whom at odd moments he slightly resembles. He sald

he thought it was time to end "campaigns of character assassination" and that this was the way to do it.

The circumstances created quite a furor. Some of Mr. Neuberger's anecdotes exposed him to criticism on the grounds of taste, which added to Washington's uncertainty about the new Senator.

Had the "Mr. Smith" of the movies ("Mr. Smith Goes to Washington") arrived and was he telling folks what was wrong? Or was it an inappropriate time and place for Mr. Neuberger to attack in only slightly velled language the campaign conduct of the Vice President of the United States who was sitting beside him as another head-table guest? Whatever the verdict, Washington is likely to see quite a lot more of this shrewd, appealingly homespun "Mr. Smith."

The junior Senator from Oregon believes other things around Washington should be

The junior Senator from Oregon believes other things around Washington should be changed. He's discovered that quite a few Members of Congress, and administration officials, don't write their own public state-

ments.

What, the Senator was asked, was so surprising about that? Mr. Neuberger, rising from his sofa, turned the tables on the questioner. Did correspondents allow dispatches which they did not write to go out under their names? Well, no; hardly. Then why should a Senator say something he didn't write. Well, a United States Senator is a busy man. The freshman Senator from Oregon shook his head; it all seemed very strange. Mr. Neuberger is, of course, an eminent journalist in his own right and penning a speech may not be difficult for him.

Obviously the impact of this Senator on the gray, somewhat cynical community of Washington is going to be interesting. There's likely to be a test of strength between this able publicist of the tall timber and the customs which seem indelibly established in the veneer-paneled drawing rooms of the Capital.

Just now the Senator lives alone at the Congressional Hotel. Mrs. Neuberger has returned to Oregon for the winter where she has her own political job to fulfill as a member of the State legislature. There are 3,000 miles between this exceptional husband and wife team. To hear DICK NEUBERGER talk of his wife on a quiet Washington evening, gently, with restraint, and yet with meaning, is to know that she is his mainstay and prime support.

It's a good bet that Oregon's "Mr. Smith," this man of deceptive talent, will be a prod for good works and new concepts in Washington for some time to come. If he should not be underestimated, the thanks, he would tell you, must go to Mrs. N.

The Proposed Dixon-Yates Power Contract

EXTENSION OF REMARKS

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Power Contract Can Wait," published in the Pittsburgh (Pa.) Post-Gazette of October 1, 1954.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POWER CONTRACT CAN WAIT

After receiving no reply to its original request, a Senate subcommittee which has been investigating the controversial Dixon-Yates power contract has again asked the administration to hold up final action on the agreement until it can complete its

inquiry.

The disputed proposal calls for a combine formed by Middle South Utilities, Inc. (headed by Edgar H. Dixon), and the Southern Co. (headed by E. A. Yates) to build a 650,000-kilowatt steam powerplant in West Memphis, Ark., and sell power to the Atomic Energy Commission. The AEC would resell the power to the Tennessee Valley Authority to supply the growing demands of its customers in the Memphis area. With the AEC thus enabling the TVA to meet additional demands in Memphis, the TVA would be in a position to deliver power where the AEC needs it at Paducah, Ky.

But the contract which President Eisenhower ordered the AEC to sign with the Dixon-Yates syndicate has been questioned on several grounds. It has been charged that there was no competitive bidding on the contract and that another syndicate offered to provide power at \$4 million to \$5 million a year less than Dixon-Yates, TVA supporters contend that the Authority could produce the needed power at less cost to the taxpayers itself. Senator KEFAUVER, as a member of the investigating subcommittee, has declared that there are errors in the AEC-Budget Bureau joint report on the contract.

While there are so many aspects of the proposed contract still being questioned, the administration should not conclude arrangements on it. It will be in the interest of the taxpayers and public policy to have the agreement fully discussed and understood by the public before it is signed.

Problems in Indian Affairs

EXTENSION OF REMARKS OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. ANDERSON. Mr. President, on January 28, 1955, the Governor of the State of New Mexico, Hon. John F. Simms, Jr., addressed the annual winter conference on problems connected with Indian affairs at Santa Fe, N. Mex.

I believe that the Governor's observations on the relationship between the Federal Government and the Indians, on the one hand, and the State of New Mexico and the Indians, on the other, are of importance. I am sure that the Members of the Congress and others will find significant suggestions in the Governor's recommendations on the question of terminating Federal services to Indians.

I ask unanimous consent that Governor Simms' speech may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GOV. JOHN F. SIMMS, JR., AT THE ANNUAL WINTER CONFERENCE ON PROBLEMS. IN INDIAN AFFAIRS, ST. FRANCIS AUDITORIUM, SANTA FE., N. MEX.

Madam President, delegates to the conference, ladies, and gentlemen, the first fact I wish to make very clear is that Indian prob-

lems are not the exclusive concern of our Indian citizens. Anyone who believes that they are has completely failed to grasp the importance of the economic and social factors involved. Problems affecting the Indian people are of grave concern to all the people of this State, and a moment's reflection will make this apparent.

The Indian population of New Mexico is 47,000, approximately, and I do not need to that these are just as industrious, law abiding, and worthy as any other seg-ment of our population. Their ancient culture is one of the finest in spiritual values

that we know about.

In the past century, it was decided by our National Government that Indian tribes should be concentrated in the sparsely settled West. But America surged westward, and the Indians were in the way. were objections to the plan to concentrate the tribes north of Nebraska and south of Kansas, so the reservation system was adopted and the Indians placed within fixed boundaries. All this time the Pueblos remained where they were, except that they lost a great deal of land through encroachment by non-Indian settlers, as the land became valuable to the newcomers. Navahos signed a treaty in 1868 which settled them on the land they now occupyand I might add that although the United States failed in various particulars to adhere to its treaty promises, the Navahos respected it and abided by it.

The reservations were established, except for the Apaches, by 1870. But in 1887, the Allotment Act was passed, heads of families received 160 acres regardless of how poor the land was, and by this device 86 million acres

were taken from the Indians.

The Indian Reorganization Act put a stop to this. Tribal groups were organized in a way similar to a corporation, and the tribes became the owners of their tribal property. This law has been on the statute books for 20 years and it has proved of great value.

I mention all this because there is increasing pressure on Congress to terminate Federal services to Indians. A bill which would liquidate all tribal organizations in 3 years' time has again been introduced. The Malone bill would repeal the Indian Reorganization Act of 1934, destroy what has been in existence for many years, and allow only 3 years for Indian groups to prepare for assimilation into the highly competitive economy of our modern system.

This is not the place to dwell on the feeling the Indians have about their land, made sacred, as they say, "by the ageless sleep of our ancestors." That belongs in another statement. This morning, I am discussing the impact on our State's economy of termination of Federal services to Indians, and I want to show why this must not be allowed for many years, not until the various tribes are ready.

Some might ask, "Why aren't the Indian people ready to go it on their own?" In the first place, although the Bureau of Indian Affairs has been in existence for 130 years. the tribes simply have not been made ready for withdrawal of Federal services.

We have seen that Indian tribes were settled on the least desirable land, soil from which it was thought no one could make a living and which the Indians did not want. Abject poverty, disease, and all the ills they suffered made a wretched situation for almost all of them. The sheep-reduction program on the Navaho Reservation, which was enforced some 20 years ago, resulted in so great a loss that subsistence was below the level of necessity. Lack of water and good grass in that dry land created unspeakable conditions. Drought affected farm and livestock production on other reservations, as well as in the pueblos. During the depression years there was no off-reservation work, wages from private industry. During World War II, Indians in the Armed Forces sent money home, and that helped-and I

might add that not only did the Indian troops have a very fine war record, but many employers will tell you today that they prefer Indian workmen for certain types of

But hardship and misery do not make a people venturesome and eager to go out and try their hands at unfamiliar tasks under strange and bewildering conditions. tribes became more withdrawn, less and less eager to become a part of an unknown world for which they had no preparation. And while more do enter that outside world today, they are young people, more readily adaptable to new customs and new ways. Their elders cling tenaciously to the familiar ways they grew up with. And this is why these tribal groups are not ready and will not be ready "in the foreseeable future." as Commissioner Emmons said, "to go it on their own; it will be a long time, and any drastic legislation that would terminate Federal services too abruptly would be a tragic mistake, in my opinion."

From our childhood, we have been led to think of Indians as romantic figures in a national drama. Movies have done their part in fastening this concept on the minds of our general population. But we in New Mexico certainly know that Indians are not museum pieces, but fine human beings, and being human resources, are more valuable than our so-called natural resources even and, therefore, deserve prior consideration.

We have seen that services to Indians were provided because the Indians' loss of land rendered him incapable of supplying them himself; and I might add that solemn promises to furnish these services, some guaranteed by treaty, constitute an obligation of the Federal Government and must not be disregarded or callously violated by unwise

termination legislation.

Anyone who knows the difficulties we face in our State government in trying to obtain a sufficient amount for health, welfare, law and order, and other necessary services, can easily imagine what would happen to the economy of this State if Federal services to our Indian population were terminated and this enormous burden laid on our State's economy. Add to this total the sums needed for the Navahos and you begin to realize what I said at the outset, that Indian problems are not the sole concern of our Indian citizens. These problems are very much the concern of all of us, and I cannot emphasize this too strongly.

In my message to the legislature on January 11, I issued the warning that in the not-too-distant future the Federal Government plans to relinquish its guardianship over the Indian population and pointed out that this State is totally unprepared to assume even a measure of the responsibility which the Federal Government would relinquish.

It is vitally important that we recognize the seriousness of this situation and that we all work together to prevent the Federal Government prematurely shifting its responsibility to the States. It is likewise portant that we work together for passage of the upper Colorado water project. The Navaho Dam will supply water, much of it now wasted, that will rehabilitate 15,000 people, one-fifth of the Navaho population. Our congressional delegation stands ready to push the fight for the upper Colorado water project with all their might, but they need our help, and I hope each of you will do his share.

I think these facts have been demonstrated: That the Indian problem affects all of us; that we need to recognize the splendid human resources embodied in the Indian people and to safeguard their rights; that New Mexico is totally unprepared to assume the cost of Federal services to Indians and that these are the plain responsibility of the Federal Government; that there is needed. as I suggested to the State legislature, a State commission on Indian affairs that will study these problems and interpret the facts

to all sections of our population; that we should support to the hilt the efforts of our congressional delegation to enact into law the upper Colorado water project.

And I shall repeat what I have said at various times: The more Indians who are registered and voting, the more strength we shall have in defeating bad legislation and in passing good legislation. I therefore urge you to register and vote, all who are of age, to take a deep and real interest in these problems, to encourage your women and young people to greater participation with you, to the end that with all of us working together we shall, with God's help, find the solution.

Restoration of the Old North Church Steeple, Boston, Mass.

EXTENSION OF REMARKS

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. SALTONSTALL. Mr. President, as most of us know, the steeple of our famous Old North Church in Boston, in which were hung the famous lanterns which guided Paul Revere, was blown down from the church structure during Hurricane Carol which did so much damage along the eastern seaboard last fall.

Since that time, led by the Reverend Charles Russell Peck, there has been a vigorous effort made to raise funds in an amount sufficient to restore the steeple to its original position and strength.

Mr. President, I request unanimous consent to have placed in the Appendix of the Congressional Record a report of the contribution made by the Prince Hall Masons of America, Canada, and Liberia to that fund. It is a generous contribution and one that I know is deeply appreciated.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PRINCE HALL MASONS PRESENT GIPT TO OLD NORTH CHURCH STEEPLE FUND, BOSTON, JANUARY 22, 1955

A delegation of grand masters from the Grand Masters Conference of Prince Hall Masons of America, Canada, and Liberia, today made a presentation of \$1,250 to Rev. Charles Russell Peck, vicar of the historic Old North Church of Boston for the steeple fund.

Presentation was made by Grand Master John Weeley Dobbs, of Atlanta, Ga., in behalf of the organization. Grand Master James R. Lesueur, M. D., of the Prince Hall Masons, Jurisdiction of Massachusetts, presided.

The grand lodge of Massachusetts celebrated its St. John's Day services at this church in June 1954.

The original African Lodge, F. & A. M., was founded in 1775 by Prince Hall, and 14 men of color, and chartered African Lodge, No. 459, by grand lodge of England, in 1784, with Prince Hall as worshipful master.

Thereby and thereafter the African Grand Lodge was founded in 1791, with Prince Hall as grand master.

Thereafter the African Grand Lodge was changed, in 1808, to Most Worshipful Prince Hall Grand Lodge, in honor of its founder, whose final resting place is located in Copps

Hill burying ground a short distance from the Old North Church in Boston.

History records that Prince Hall, together with members of this organization, walked on St. John's Day to this church for the celebration of this feast day, in the year 1808, the same year that the name of this particular lodge was changed.

American-Flag Shipping Law

EXTENSION OF REMARKS

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the text of a letter from Mr. Robert E. Mayer, president of the West Coast Shipping Group, to Secretary of State Dulles, regarding Pacific coast shipping by American-flag steamship lines.

There being no objection the letter was ordered to be printed in the RECORD,

as follows:

We feel that it is advisable to address your office on this subject at this time because of what appears to be criticism and objections in Britain and the Continent of legislation adopted by our Congress in its last session, evenly dividing the United States aid cargoes among American-fiag vessels on the one hand, and vessels of other flags, on the other hand.

On behalf of American-flag steamship lines on the Pacific coast, I would like to call to the attention of your office that this legislation evolved in the 83d Congress after a long history dating back to June 5, 1947, when Gen. George C. Marshall on the campus of Harvard University launched the great humanitarian plan destined to bear his name. Almost immediately thereafter—and somewhat prematurely, due to an alert United States press—it was revealed that the plan on the part of the 16 Marshall plan recipient nations was for the transfer by the United States of 500 United States war-built vessels to those recipient nations for use by them in transporting the United States aid cargoes to their ports

cargoes to their ports.

We know that many of the Members of Congress were shocked at the implications of such a proposal since it was obviously designed to rebuild the fleets of the recipient nations and at the same time shut Americanflag vessels in the Atlantic completely out of aid cargoes, which as the past years have proven, were the transition between war and peaceful commerce for the American merchant marine. The proposal was deemed by our leaders in both the administration and Congress to be so patently self-serving of its proponents as to not even be worthy of discussion in the halls of Congress. Instead. year after year, in aid act after aid act, with but a single exception, the Congress of the United States has adopted the 50-50 shipping provision, virtually ensuring an even division of these cargoes between American vessels and those of other flags.

During these considerations in Congress, you will recall extremist views were expressed within our own country. There were those voices—and very strong voices—who demanded that American-flag vessels and American seafaring men carry, not 50 percent, but 100 percent, of aid cargoes to other lands. Those views did not prevail, and Congress instead sought a fair division of the cargoes.

The 50-50 division springs from what has been termed the "golden rule of world trade"; that is, that world trade is a two-way street and that a nation must import if it is to export. The 50-50 provision applies the golden rule to shipping space in such a manner as to seek accomplishment of the utopian with respect thereto. Under the 50-50 rule, we import or purchase, shipping space of other nations in an amount approximately equal to that which we export, or sell, in the aid programs.

Congress seems to have clearly established a public policy for the United States on this point, since, as your office knows, 50-50 shipping provisions have been included in the

following:

Public Law No.	Con- gress	Title	
47	81st	Economic Cooperation Act of 1948:	
329	81st	Mutual Defense Assistance Act of 1949.	
447	81st	Far East Economic Assistance Act of 1950.	
897	81st	Yugoslav Emergency Relief Act of 1950.	
48	82d	India Emergency Food Aid Act of 1951.	
165	82d	Mutual Security Act of 1951,	
77	83d	Pakistan: Transfer of price-support wheat to.	
665	834	Mutual Security Act of 1954.	
778	83d	Mutual Security Appropriation Act, 1955.	

Because of this firm establishment of public policy in the United States, because it strikes clearly down the middle between the extremist views in both directions, and because the complete fairness of the policy has never been challenged, we are amazed and astounded and disappointed to find after such a history as this that there are complaints originating among recipient nations.

We have reference to a news dispatch from London, dated January 9, to the effect that British shipowners protested to their Government "against its acceptance of the 50-50 rule for shipping American coal to Britain." The press dispatch quoted the British General Council of Shipping as saying that those protests recorded "growing anxiety in the extension of discriminatory practices." We refer also to a report in the New York Herald Tribune of January 1 to the effect that the marine transport committee of the Organization of European Economic Cooperation, consisting of 17 representative nations, condemned discriminatory practices and reportedly made particular reference to the 50-50 law adopted in the 83d Congress.

We believe that our Government should correct the record made by these two actions, not only by stoutly defending this now fully established United States public policy but by condemning strongly the description by these interests of the 50-50 provisions as an act of discrimination. The application of such a label can only be assumed to have been applied out of a lack of understanding, or as an intentional use of a propaganda technique. Use of the word "discrimina-tion" insures its authors of an inference by their audience that he is talking about some thing evil. The automatic linking of the term "discrimination" with the humanitarian 50-50 shipping policy is—we hope not intentionally—an act of deceit. The 50-50 policy is precisely the opposite of discrimination. It is insurance against discrimination. It insures a fair participation in these cargoes by vessels of other flags. We know of no place in the world, in any nation of the world, where another legislature has adopted such a provision resulting in a fair distribution of its products to citizens of other lands.

In view of the fully established nature of the 50-50 shipping provision as public policy and in view of the shocking nature

of these attacks upon it, we believe it not improper to inquire of our State Department as to whether it intends to offer a defense of the provision in an effort to prevent any public impression that this humanitarian policy can possibly be considered discrimination, and to inform the public that it is a measure designed to protect against it and set an example for other nations. We feel it proper also to inquire of your office whether embassies and consulates of the United States in other countries have been properly informed on the 50-50 provision, its origin, its history, and its operation, so that they can adequately answer inquiries of shipping representatives of other nations as to the real nature and effect of this law.

At your convenience, we would appreciate a reply to these two inquiries.

The Proposed Dixon-Yates Power Contract

EXTENSION OF REMARKS

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record two editorials dealing with the proposed Dixon-Yates power contract. The first is entitled "Partisan Atoms," and was published in the Washington Post and Times Herald of February 3, 1955. The second is an editorial entitled "Cancel It," published in the Washington Daily News of February 1, 1955.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of February 3, 1955]

PARTISAN ATOMS

President Eisenhower's sharp comment yesterday on the Dixon-Yates contract will only embitter the political controversy that has enveloped the Atomic Energy Commission. Mr. Eisenhower was correct in saying that the resolution by the Joint Committee on Atomic Energy disapproving the contract was drawn strictly on party lines-meaning that it was put through by the Democratic majority. But this charge cuts two ways. The decision of the joint committee last November to waive further review of the contract also was drawn strictly on party lines, with the then Republican majority voting for the waiver and the Democrats voting against it. Is the action by a com-mittee now under Democratic control, an action about which there was plenty of warning last fall, somehow more partisan than the same sort of action by a committee under Republican control?

The whole Dixon-Yates affair now has become a legal nightmare. Even if the President is determined not to withdraw the contract, it is obvious that the Democrats can keep the issue boiling for many months. No doubt there is a partisan motive in some of the opposition; but the criticism is by no means wholly political. There are some serious doubts, shared by this newspaper, about the manner in which the contract was imposed and the mixing of agency functions it would entail. Some important Republican Members of Congress, although anxious not to oppose the President, are worried by the contract and would like to get out of the tangle gracefully.

The practical effect of the administration's dogged determination to stick by a mistake is equally obvious. It keeps the Atomic Energy Commission-which is now reduced to 3 confirmed members, only 2 of whom vote in the power dispute-up to its ears in controversy. Chairman Strauss' roseate assurance that the dispute has not interfered with the Commission's work is contested by Commissioner Murray and by AEC employees speaking privately; one indication is the amount of time Messrs. Strauss and Murray have had to spend testifying on the affair. Meanwhile, the administration is forced to rely on Democrats in Congress to pull its chestnuts out of the fire on appointments. If the administration wants less partisanship in atomic-energy matters, it ought to recognize its own responsibility to go halfway.

[From the Washington Daily News of February 1, 1955]

CANCEL IT

Now the clear and unmistakable duty of the United State Atomic Energy Commission is to cancel the Dixon-Yates contract.

If Adm. Lewis Strauss, Chairman of the AEC, continues to be stubborn and fights for the contract, the responsibility will be entirely his. The responsibility is twofold: For putting his agency into the awkward role of power broker for TVA, and for making the Government, at a later date, pay possible penalties it can now escape.

He now has the chance to get his agency and the Eisenhower administration he supports so completely, off a hook on which they should never have been hung. He can erase a damaging political issue which will embroil the administration, to its great disadvantage, for a long time.

Admiral Strauss' opportunity came by reason of the majority vote of the Joint Congressional Atomic Energy Committee recommending cancellation of the contract.

The committee, by a 10-to-8 strict party vote, pointed out that the contract is not yet effective. And since it is not, a Government decision to cancel it will not now entail any penalties. Later, these might be great.

The Atomic Committee's majority vote was

not a reckless, publicity-seeking move. It was the result of a studied and solemn decision by responsible, stable, and patriotic legislators.

Cancellation now of the Dixon-Yates contract will not, as some proponents claim, deprive the growing city of Memphis, Tenn., of power it will need badly in a few years, which is no business of the AEC anyway; its primary job is to make and keep us strong militarily.

If, after cancellation, the Congress—as it probably will—again refuses to appropriate money to TVA to construct a new power generating plant, then Memphis can go ahead with its own plans to build such a plant. And Memphis plans are well along

plant. And Memphis' plans are well along. Another alternative would be for Congress to set TVA up on its own bottom, provide it with authority to issue revenue bonds, to be liquidated by power revenues, and permit it to decide on this basis whether to build more generating facilities to serve west Tennessee. Or, Congress can direct TVA to supplement its present power supply by buying more electricity directly from private companies around the periphery of the watershed it serves.

Finally, cancellation of Dixon-Yates will in nowise affect the power supply to AEC's great plants in Tennessee, in Ohio, or in Kentucky. It has an undoubted first priority under law for TVA power for defense purposes. And it has available growing sources of power from private companies with which it has immense contracts in Ohio and Kentucky.

The Dixon-Yates contract is bad.

AEC has just been given the opportunity
to cancel it.

This it should do-and now.

"Time of Their Lives" in Old Age

EXTENSION OF REMARKS

HON, PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article that appeared on Sunday, January 30, 1955, in the Washington Post and Times Herald.

This article, written by Mr. Robert Perrin of the staff of the Detroit Free Press, tells how one of the great labor unions of this country is helping to meet the needs of the 15,000 older "senior citizens" who have retired from their jobs in the automobile plants of Detroit.

The administration has declared itself as being very much interested in the problems of older people. Here is an example of how in one city the problems are being dealt with, not with talk, but with specific, well-thought-out, and highly successful action.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"TIME OF THEIR LIVES" IN OLD AGE

(By Robert Perrin)

DETROIT.—Henry Fark, who is 78, asked his wife one morning recently whether she wanted him to stay home that day.

"No," she replied. "Here's your lunch.
You get out of the house. You just make
more work for me when you stay home."
So Henry Fark shrugged into his coat, and

So Henry Fark shrugged into his coat, and walked several blocks to a local union hall of the CIO United Auto Workers on the East Side of Detroit.

There, in a large, airy room in the basement, Henry joined about 25 of his contemporaries who already had gathered to play pinochle dominoes and checkers and to shoot pool as well as the breeze.

Henry Fark is one of 15,000 former auto workers in the Detroit area who have retired in recent years on pensions negotiated by the UAW with the auto industry. Throughout the country there are about 42,000 Henry Farks and their ranks are expected to increase to 65,000 by 1958.

SENSE OF BELONGING

Says Walter Reuther, CIO president and leader of the auto workers: "The oldtimers are having the time of their lives."

He said the UAW-CIO is feeling its way as a pioneer in giving pensioners "a sense of belonging." He added that the movement "will involve every community in the Nation as it evolves into a pattern."

Reuther pointed out that not only are the pensioners growing rapidly in number; they are living much longer. "It certainly creates a problem," he said, but quickly added, "but this is the beginning of a wonderful human experience."

Not many years ago, what happened to the elderly former worker was of no particular concern to anyone but himself, his family and the social workers. No longer a contributor to the economy, he was generally considered a liability as he tried to get by on skimpy social-security benefits.

Today the picture has changed.

A SENIOR CITIZEN

Now, when he packs up his battered lunchbox for the last time and walks through the plant gate to retirement, the auto worker joins the ranks of the "senior citizens" instead of the castoffs.

Eligible for a maximum of \$52.50 a month from his company and nearly \$100 from social security, if he meets requirements, he can look forward to many years of adequate, if not luxurious, living. And he knows he will not be forgotten, because his union won't let it happen.

In addition to plugging continually for higher pensions and more benefits for the retired workers, the UAW also has taken a paternal interest in their morale and well-

being.

What began as a simple program to keep in touch with the retired members, however, has snowballed into a major, and expensive, function of the union. Olga M. Madar, director of the UAW's recreation department, finds that the program is taking up more and more of her time.

"What we are trying to do," says Miss Madar, "is to help fill the retirees' leisure time needs, assist them with their problems and point up their needs to the community.'

SEEKS COMMUNITY AID

At present, the UAW is carrying the ball alone, but it is seeking financial aid from community agencies. Miss Madar estimates that the union is spending about \$50,000 a year on the program in this area alone.

The money goes for parties, meetings, counseling and three drop-in centers opera-

ting 5 days a week.

There is no formal organization of retired autoworkers, either for political or recreation purposes. Nor does the union want its pro-

gram to develop into one.

In fact, the union was considerably startled not long ago when it heard that a group of oldtimers was forming a "political action committee." The UAW war relieved when the group adopted the title, "Retired Workers Service Committee," and set itself to studying legislative and community matters pertaining to retirees.

Serving on committees, incidentally, is a favorite pastime of the pensioners. drop-in center has a house committee; there is a citywide steering committee to de-velop topics for monthly meetings, and there are visiting committees to pay calls on sick

colleagues.

Although the first auto workers began retiring in March 1950, under the then-new pension plans, the UAW did not launch its program until October 1951. The delay was no oversight. As Miss Madar explains: "We wanted first to determine the needs

and interests of the retired workers rather

than jump in blindly."

Even today, when some new area of the country wants advice on establishing a dropin center, Miss Madar urges caution and suggests monthly meetings first to see if there is any real interest.

The drop-in centers are perhaps the most famous part of the union's program. The three in Detroit are located in space donated by local union halls. The first opened in February 1953, and last year had an attendance of more than 12,000.

They are not restricted to retired UAW members. The union invites all senior citizens to stop in. However, Miss Madar esti-mates that less than 10 percent of the visitors are nonunion members.

Each center is equipped with comfortable chairs, card tables, a television set, a pool table, and books furnished by the public

Open from 10 or 11 a. m. until 4 p. m., the centers have full-time directors. The UAW is trying to interest the United Community Services in paying their salaries, now totaling about \$13,000 a year.

Many pensioners, like Henry Fark, come at the opening hour and stay until closing. Some cronies have running pinochle and dominoes contests which break up only when the center closes.

One 71-year-old retiree, however, said he divides his time between the center and a Junior League clubroom,

"There are not enough women at the center and too many at the Junior League," he said. "It about balances out."

Women are not discriminated against in the UAW's program. Wives are invited to many of the parties held, such as the monthly birthday affairs for all retirees celebrating another year during the month. Special programs also are arranged for the women.

But casual relaxation is only part of the union's overall program. It sponsors or-ganized affairs such as travel films, discussions of current events, and counseling classes. The classes inform the pensioner how to get such things as wheelchairs, hearing aids, and glasses.

Also, five area meetings are held each month. This month's meetings featured an expert's opinion on heart conditions. Social security and health insurance experts also are on hand to answer questions.

Each summer there is a retired workers' picnic and around Christmas time a holiday party is held. The last such party drew 7,200 persons for baked chicken and entertainment, which may mean that the affair will have to be broken up into smaller groups next time.

Making ends meet on a pension is a constant problem for the retirees. Many husband their money so closely that they feel they cannot afford the 40-cent round-trip bus fare to the drop-in centers. To assist, the UAW furnishes a free bus ticket home to all those who pay their way to the centers.

One committee, meanwhile, is plugging for reduced rates for the senior citizens on city buses. Petitions circulated in this project

have as many as 30,000 names. But still they come, seeking companion-

"Boy, you should have been here yesterday," said 80-year-old Fred Martin to a drop-in center visitor. "We had 130 people at our birthday party. Square dancing and everything."

Colorado River Storage Project

EXTENSION OF REMARKS

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES Friday, February 4, 1955

Mr. ANDERSON. Mr. President, I ask unanimous consent that two resolutions supporting legislation to authorize the Colorado River storage project, one from the Tucumcari Chamber of Commerce, Inc., and the other from the Albuquerque Chamber of Commerce, be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Be it hereby resolved, That this organization is on record in firm support of enactment of legislation to authorize the Colorado River storage project, which provides for development of the upper Colorado River Basin. We urge the Congress to approve this legislation, because of the great economic benefits it will provide for the States of Colorado, New Mexico, Utah, and Wyoming, and for the Nation as a whole. We endorse this project because it will aid national defense, help the Navaho Indian Tribe, lengthen the life of Hoover Dam, provide water and power for a growing West and yield countless other benefits; be it

Resolved further, That our respective members show their support for this project by enrolling as "aqualantes" or water vigilantes; be it

Resolved further, That we as members of this organization do take it upon ourselves to become acquainted with the project and what it means, and that we ask our friends in other States to write their Congressmen in support of the Colorado River storage project; be it

Resolved, That Congressmen from our respective areas be informed at once of this resolution and of this action today.

This resolution is adopted unanimously because the Colorado River storage project is in the best interests of all the citizens of this great Nation.

TUCUMCARI CHAMBER OF COMMERCE, INC. TUCUMCARI, N. MEX., January 24, 1955.

Be it hereby resolved, That this organization is on record in firm support of enactment of legislation to authorize the Colorado River storage project, which provides for development of the upper Colorado River We urge the Congress to approve Basin. this legislation, because of the great economic benefits it will provide for the States of Colorado, New Mexico, Utah, and Wyo-ming, and for the Nation as a whole. We endorse this project because it will aid national defense, help the Navaho Indian Tribe, lengthen the life of Hoover Dam, provide water and power for a growing West and yield countless other benefits; be it

Resolved further, That our respective members show their support for this projby enrolling as aqualantes or water vigilantes; be it

Resolved further, That we as members of this organization do take it upon ourselves to become acquainted with the project and what it means, and that we ask our friends in other States to write their Congressmen in support of the Colorado River storage project; be it

Resolved, That Congressmen from our respective areas be informed at once of this resolution and of this action today.

This resolution is adopted unanimously because the Colorado River storage project is in the best interests of all the citizens of this great Nation.

ALBUQUERQUE CHAMBER OF COMMERCE.

JACK WENTWORTH, President. ALBUQUERQUE, N. Mex., January 26, 1955.

The National Labor Relations Board

EXTENSION OF REMARKS

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. METCALF. Mr. Speaker, in recent months we have seen the National Labor Relations Board arrive at administrative decision in the interpretation of the Taft-Hartley Act that completely change the impact of that law. These decisions have, by administrative fiat, practically amended the Taft-Hartley law to bring about the changes recommended by some of the spokesmen for management in the hearings held during the last Congress. The following statement by the executive council of the American Federation of Labor gives some examples of this new system of amendments that could not get through the Congress being incorporated into the law by the National Labor Relations Board:

STATEMENT BY THE EXECUTIVE COUNCIL OF THE AMERICAN FEDERATION OF LABOR ON THE NA-TIONAL LABOR RELATIONS BOARD

Since December of 1953, alarming changes have been made in the Taft-Hartley Actnot by congressional action, but by administrative rulings and interpretations of the National Labor Relations Board as reconstituted under the Eisenhower administration.

The executive council finds a startling parallel between the decisions of the NLRB during the past year and the changes in the law advocated by the Department of Com-merce early in 1953 in response to pressure from business organizations. For example:

1. Business urged that much of the Federal jurisdiction over labor-management disputes be yielded to the States. Congress refused to enact such legislation. Then the Eisenhower-appointed majority on the NLRB adopted new rules under which it henceforth will not handle cases involving so-called small business, thus depriving millions of workers of Federal guaranties of their right of self-organization, even though interstate commerce is affected.

2. For years reactionary employer interests have been clamoring for what they call greater rights of free speech, by which they really mean greater license to discriminate against and discourage union membership. NLRB has acceded to this pressure through two decisions. The first leaves employers generally free to force workers to listen to antiunion tirades on company time and property without giving the union equal opportunity to reply. The second ruling permits employers to question individual workers about their union affiliation despite the fact that previous boards and the Supreme Court had held that such questioning inevitably has coercive effects.

3. Another major item on the agenda of

big business has been further legislative restriction of the right to strike. This, Congress rejected in 1954. But the NLRB has now ruled that every labor-management contract have an inherent no-strike clause. Under previous NLRB decisions, employees covered by a contract without an explicit no-strike clause were free to strike for changes or additions at any time during the life of the contract provided only that they gave the required 60-day and 30-day notices. Under the new rule, no strike can be engaged in before the end of the contract term or a specified reopening date. The penalty is freedom for the employer to discharge all union members engaging in such strikes.

4. Employers have sought perennially to prevail upon Congress to restrict peaceful picketing. The NLRB has now come to their rescue with a ruling that held peaceful picketing at a construction project unlawful where more than one contractor was engaged in work-even though the picket signs clearly indicated the dispute was only with one particular contractor. The NLRB decided in this particular case that for such picketing to become lawful, the union must go to the extreme of requesting other crafts representing workers on the job not to respect its picket lines.

5. The NLRB has refused to hold employers responsible for acts of violence by vigilante groups seeking to oust labor organizations from a community. It has now gone to the opposite extreme (in the case of the BVD Co. and the ILGWU) of holding the union responsible for acts of violence committed by outsiders, with no showing that the strikers themselves had engaged in such violence. The NLRB held that discharged strikers were not entitled to reinstatement or back pay because they had not taken affirmative steps to repudiate or disavow the acts of violence with which they had no connection.

6. In another recent decision (in the case of McAllister Transfer and the International Brotherhood of Teamsters), the NLRB undermined the previously established "Con-way express" doctrine, under which labor organizations were allowed to negotiate unfair goods or hot cargo clauses, permitting union members to respect picket lines without fear of discharge or retailiation. Two of the Eisenhower appointees to the NLRB voted to overrule that doctrine and hold such contract clauses illegal. The two holdovers from the previous administration voted to uphold the settled policy of the Board. Chairman Farmer, also an Eisenhower appointee, in an amazing straddle, held that such agreements were legal but decided, at the same time, that the employer could repudiate them and insist that his workers cross picket lines under particular circumstances. Thus, the value the such contractual agreements is jeopardized and the freedom of collective bergaining further restricted by administrative flat. This case goes far beyond the Teamsters' Union. It also affectse very other union which seeks to obtain agreements from employers that employees will not have to handle struck or unfair work.

The foregoing cases are but a few outstanding examples of how the probusiness majority on the NLRB has warped and distorted the intent of Congress as expressed in the National Labor Relations Act, even as amended by the Taft-Hartley Act. Step by step, the whole trend of decisions in the past year deliberately was aimed at effecting antilabor changes in the law desired by big business organizations which they had falled to prevail upon Congress to approve.

The NLRB is virtually the "supreme court" over most of the day-to-day relations between labor and management. For more than a year, it has been dominated by an openly antilabor majority. With the retirement of Albert C. Beeson, the Board is now deadlocked, 2 to 2.

The executive council of the American Federation of Labor feels that the appointment of another probusiness member to fill the existing vacancy would be the equivalent of packing the Supreme Court. lieve that President Eisenhower has the op-portunity of correcting a national disgrace by choosing an outstandingly fair and unbiased fifth member of the Board, thus restoring equal justice under the law to the workers of this country.

Resolution of Dublin, Ga., Post No. 17, American Legion

> EXTENSION OF REMARKS OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. DAVIS of Georgia. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following resolution which was presented by Past Commander H. Dale Thompson, of the Dublin (Ga.) Post, No. 17, American Legion, at the sixth district meeting held in Milledgeville, Ga., on January 9, 1955:

Whereas the State department of veterans' service under the guidance of the director, Hon. Pete Wheeler, arranged a tour of the Veterans' Administration's facilities in the State for our congressional delegation, composed of the following Members: Hon. JAMES C. Davis, Fifth Congressional District; Hon. HENDERSON LANHAM, Seventh Congressional District; Hon. PHIL LANDRUM, Ninth Congressional District; Hon. John G. FLYNT, Sr., Fourth Congressional District; Hon. J. L. PILCHER, Second Congressional District; and the heads of the various veterans organizations: and

Whereas during this tour the group visited in at least two places in our district, we feel that much good was accomplished by these people doing something extra in and above their usual duties: and

Whereas we feel that not only the veterans of the sixth district but all of the veterans of the State will greatly benefit by the efforts of these people: Therefore be it

Resolved by the sixth district of the American Legion in regular convened meeting, we commend the Honorable Pete Wheeler and those members of the visiting delegation for their efforts in our behalf in trying to better acquaint themselves with the problem of the veterans and Veterans' Administration and in spending their time in an effort to better serve us.

Respectfully submitted.

ROLAND ATTAWAY, Sixth District Commander. Attested to:

EDWARD D. JENSEN. Sixth District Adjutant.

Natural Gas

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks. I wish to make the following statements on the subject of natural gas.

A matter of grave concern to the State of Louisiana, and the Nation as well, is the recent Supreme Court decision in Phillips Petroleum Co. v. Wisconsin et al. (347 U. S. 672).

As a result of that decision, the Federal Power Commission, under the Nattural Gas Act, is now exercising pricefixing controls over gas producers who sell their gas into interstate commerce. This involves a basic concept of government. Under our form of government, the business of producing commodities or manufacturing products has been left to free competition in the market place. Heretofore, except as a war measure, the producers' and manufacturers' prices have not been regulated. If at any time there is a lack of competition our antitrust laws stand as a guardian over the consuming public.

Yet, under this court decision and the actions of the Federal Power Commission in implementing the decision, this basic principle of government is cast aside. As a result, today there is chaos and confusion throughout the gas-producing industry. The consumer of gas, as well as the producers, have a primary interest and should be alert to the existing situation and the consequences that are sure

to come.

If permitted to continue, this situation will retard the exploration and development of gas. The producer is confronted with the uncertainties and burdens of suddenly being treated as a public utility although his activities are in no way like that of a public utility. His efforts to find and produce gas are disrupted. He is waiting to see what is

gas for the consumer.

There are three phases to the naturalgas business: First, production; second, interstate transmission; and, third, local distribution

Historically, local distribution of gas has been regulated as a public utility by legislative enactment because of the inherent monopolistic aspect of the business. -The distributor operates under a franchise which limits or prevents competition.

The interstate transmission of gas has similar characteristics. As a result the Congress passed the Natural Gas Act in 1938 and delegated to the Federal Power Commission the authority to regulate this activity. These interstate pipelines operate under certificates issued by the Commission which restrict competition and stabilize their business by providing assured market outlets.

To the contrary, the production of natural gas has none of these public utility characteristics. The Congress recognized this distinction when it passed the Natural Gas Act in 1938. It was intended that the act should not apply in any way to the local activity of producing and gathering gas. The law so states in clear and unmistakable language. For 16 years it was so inter-preted. The Federal Power Commission itself recognized it had no authority over production.

The Supreme Court has reversed all this. The Federal Power Commission is now applying public utility regulation to the production of gas-inappropriate and disrupting as it is.

This is a matter of national concern. There are about 20 million natural-gas customers. Natural gas now accounts for almost one-fourth of the mineral energy consumed in the United States. Cur State of Louisiana is vitally interested, as it is the second largest gasproducing State and supplies about 15 percent of the United States total.

The Nation's peacetime economy and welfare are involved. More important, the national security would be adversely affected if restrictive regulations are permitted to hamper the development of the Nation's natural-gas resources.

I am hopeful that the Congress will give this matter its early attention and take action that will amend the Natural Gas Act so as to make absolutely clear that the Federal Power Commission has no authority over the production and gathering of gas.

I intend to lend my efforts to that end.

Gambling Capital of the United States Unmasked-V

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. ANFUSO. Mr. Speaker, the following is the fifth in the series of articles by Bob Considine on the fantastic story

going to happen. This will mean less of Las Vegas, the capital of legalized gambling in the United States, which appeared in the Chicago American on January 27, 1955:

> LAS VEGAS UNMASKED-PIRATE LAFITTE'S DE-SCENDANT MOPS UP-INVESTIGATOR CRACKS DEN WITH "MIKE" IN WATCH

(By Bob Considine)

LAS VEGAS, January 27.-Last October, Hank Greenspun needed some help in a hurry. Greenspun runs the Las Vegas Morning Sun, once held a minor interest in the Desert Inn, and is part owner of a Strip

(He recently was arraigned in Federal court on a charge of attempting to incite the assassination of Senator McCarthy.)

The Las Vegas editor had publicly accused Clark County (Las Vegas) Sheriff Glen Jones of owning an interest in Roxie's motel, a 20-girl bawdy house at Formyle, just south of Vegas. Jones, up for reelection, ran last in a field of five in the primary. He sued Greenspun for \$1 million, charging libel.

Greenspun countered by bringing to Las Vegas one of the most remarkable characters in modern police work, a mysterious soul named Pierre Lafitte, who proudly traces his lineage back to the famed privateer and smuggler.

Lafitte is a bustling little man whose story would fill a thick book. He is, by trade, an undercover investigator. And there are those at the FBI and in various major police departments who will swear he's tops in his field.

He has lived with some of the most sinister criminals in our recent history while obtaining information for law officers. His undercover work and fearless court testimony have broken at least two major nar-cotics rings, into which he bravely ingratiated himself.

PUT UP IN STYLE

Once in Las Vegas, Lafitte was put up in style at El Rancho Vegas. He registered under the name Louis Tabet (with "Mrs. Tabet"), assumed a tough Italian-American ganglord's manner of speech. It was subsequently testified that he arranged to meet the manager of Roxie's, a convicted panderer named Dick Kellogg.

Tabet said he wanted to buy a chunk of Roxie's. He was introduced to Mrs. Roxie and Eddie Clippinger, principal owners, and they talked. Tabet had a microphone in his wrist watch and a recording device strapped under his shirt.

He came away with such information as the amounts Sheriff Jones was reportedly paid for protection, and the house's receipts for a typical month—\$77,000—which inferred a million dollar a year business.

He demanded assurance of the protection before he'd put out his money, Tabet said. Kellogg brought in Sheriff Jones and two county commissioners to confer with the supposed hoodlum from the East.

Protection payoff fees were decided upon, and as a binder, the tax commission was told, the sheriff accepted a \$575 television set.

And one of the commissioners accepted what must be labeled a new note in futuristic bribes-a \$450 Geiger counter for prospecting for uranium.

PARLEY RECORDED

That much arranged, Tabet began talking at a second conference of buying into a gambling casino. He said he had lost interest in Roxie's, which since has been closed.

All of that conference was recorded via a mike hidden in the folds of a window drape.

Subsequently, Tabet said, he was told that gambling involved another kind of "fix." He said Kellogg told him he'd have to line himself up with former Lt. Gov. Cliff Jones no relation to Glen Jones. Former Lieutenant Governor Jones had just been named Democratic national committeeman for Nevada, over the objections of numerous rank and filers.

He is no longer national committeeman. He resigned for party harmony in November, having held office only 6 weeks.

At this point, Greenspun called in District Attorney Foley, who assigned Gordon Haw-kins of his staff to monitor the recordings of the stealthy adventure.

Tabet's story was that he told the former lieutenant governor that his police record back East included raps for murder, manslaughter, a little narcotic, and bootlegging, but no convictions for the past 10 years.

Jones was portrayed by Tabet as assuring him he'd get a gambling license without any trouble, after the election.

FIRING PORESERN

Tabet said Jones went on to explain that former Gov. Vail Pittman was going to be elected over the incumbent, Charles H. Russell. This in turn would mean that crusading Robbins Cahill, Nevada's foremost champion of clean gambling, would be fired from his key job as secretary of the Nevada State-Tax Commission—the license body.

Jones, according to Tabet, hinted that once

those things came to pass he, Jones, would

be in the saddle.

Then, said Tabet, Jones in an apparent attempt to impress him, bragged that he was partners with Jake and Meyer Lansky in the Thunderbird, which he praised as the smoothest run place on the "Strip." Jones owns 11 percent of the hotel and casino, and has pieces of other Las Vegas properties.

Jake and Meyer Lansky are to the Kefau-

ver reports what Custer and Sitting Bull were to the battle of the Little Big Horn.

Jones told him, Tabet related, that it would cost him a little money, of course, and to decide on the amount. Jones promised to send along his law partner, Louis Weiner, for another talk.

The tape recorder was in fine fettle when Weiner called on Tabet in his flower-decked suite at El Rancho Vegas. By this time Tabet had convinced the men he was dealing with that he had lost interest in Roxie's and now wanted only a gambling place and the Las Vegas Sun, Greenspun's newspaper.

WORRY FOR TABET

Tabet told Weiner the prospective purchase of the Sun was a worry to him. He said, and the tell-tale tape noted:

"So I got a man from New York who's a lawyer. He's a good man and he said, Louie, what the hell, you tell me He's a good man and he tells me, you going to buy a apple tree someplace, a mustard tree, I understand it, but for you, a newspaper, no.' I say look, don't ask me no questions."

Weiner was happy over Jones' new post in Democratic circles. He told the prospective client:

"That's important. It's important to us to have Cliff in there because there are a lot of things that Cliff can get. He knows what's going on. We've got to have a pipeline to know what's going on because, if you don't know what's going on, you can be in bad shape.

"When Pittman is in Cliff is the top dog in the State. * * * This fellow Russell is nobody. When Pittman is in and changes that commission and sits on that himself, you got no problem."

In a breast-beating tone, Tabet said: "I'm not more dirty than-for (censored) sakethan a lot of guys in here. Listen, I'm not more dirty or perfect than a lot of guys around town."

NO QUESTION

Weiner: "No question about it . . they know Doc's in the sands. Do you think they don't know Doc's in there? You think they don't know Meyer and Jake are in the Thun-derbird, huh?"

(The "they" referred to the licensing commission.)

Tabet audaciously claimed intimate rela-tions with several Las Vegas figures. They included Beldon Katleman, owner of El

Rancho Vegas, and Tony Cornero, former gambling-ship operator who has been trying to get a Nevada license for a year.

NOT A CHANCE

Later: Tabet: "Suppose the other fellow gets elected?"

Weiner: "Russell? He hasn't got as much chance to be elected as I have, and I'm not even running * * * If he doesn't get beat 3 to 2 or 2 to 1. I'm a monkey's uncle. Oh, he hasn't got a prayer * * * He's a wonderful guy, but he's nobody knows. We are going to get our own Senator in, and he will be McCarran's protege. With McCarran we were—we just sat right up there."

Called before the State tax commission, and questioned by Special Counsel E. Frandsen Loomis, Weiner shrugged and said:

"If you have a tape recording of my voice taken at the El Rancho I presume I said what it says."

Pittman, to whose campaign fund big "Strip" operators contributed \$42,000, took a beating from underdog Russell in the November elections.

Marion B. Hicks, president of the Thunderbird, denied that the Lanskys were part owners. He wired Greenspun: "The statements are false and untrue. We

"The statements are false and untrue. We wish to advise that all records and books are available at any time to the State tax commission."

Cliff Jones joined in the denial and protested he had not been guilty of any wrongdoing.

Jones made his denial to the press. But when he appeared before the State tax commission at a hearing last October 26 in Carson City, and was asked whether the boast about the Lansky's being partners in the Thunderbird was true, he refused to answer.

On December 1, the State's gambling control agency at Carson City ordered the Thunderbird Hotel to show why its license should not be revoked or suspended.

The seven-man commission, headed by the triumphant Russell, also voted to investigate charges by Virgil W. Peterson, operating director of the Chicago Crime Commission, that remnants of the Capone gang have interests in certain Las Vegas and Reno gambling places.

SHERIFF ARRAIGNED

A week before this, Sheriff Glen Jones and Clark County Commissioner Rodney Colton were arraigned in Las Vegas. District Judge Frank McNamee released Sheriff Jones on \$1,000 bond. Colton posted a \$2,500 bond.

The men had been indicted by a grand jury which based its action on the tape recordings and the testimony of Hawkins who monitored them. It was further charged that in addition to the TV set, which was impounded, Jones was promised \$5,000 in cash and \$1,000 a month until his term expired. Colton assertedly was promised \$10,000 in cash and the aforementioned Geiger counter.

Lafitte, alias Louis Tabet, disappeared from town as quietly as he had entered, his fee unannounced. Greenspun, the Strip says, emerged as a power. None of the bigger operators seems very happy about this. They are distressed, too, by the Thunder-

They are distressed, too, by the Thunderbird case—though the eager gambling public continues to patronize the hotel and casino as enthusiastically as ever.

The big operators would wish that Las Vegas were portrayed simply as a clean, sweetly fragrant resort, noted for its fine desert air, the fishing in nearby Lake Mead, winter sports on Mt. Charleston, great dude ranches, golf on the Desert Inn's fine course, beautiful hotels, stupendous floor shows, reasonable rates, and, if you must, gambling at honest tables and wheels.

Las Vegas indeed has all these things. And the A-bomb testing ground at Yucca Flat to boot. But deep beneath the tinsel it has its troubles, its worries, its inherent leaning to "fix" rather than fix.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congressional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the Record without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record.—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.
- 2. Type and style .--The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.
- 4. Tabular matter.—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.
- 5. Proof furnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

- 6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr.—addressed the Scnate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.
- 7. Thirty-day limit.—The Public Printer shall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.
- 8. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the Congressional Record.
- 9. The Public Printer shall not publish in the Congressional Record Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.
- 10. Official reporters.—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.
- 11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional Record which is in contravention of this paragraph.
- 12. Illustrations.—Pursuant to section 182b, tttle 44, United States Code (as shown above), requests for authority to insert an illustration in the Record should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the Record and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.
- 13. Corrections.—The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Appendix

American Education in Crisis

EXTENSION OF REMARKS

HON, CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I should like to insert an article entitled "American Education in Crisis," by the Honorable Earl J. McGrath, former Commissioner of the Office of Education, presently president of the University of Kansas City, Kansas City, Mo.

This address is an excellent comment on the arresting inadequacies in our educational system and the current educational problems.

The article follows:

AMERICAN EDUCATION IN CRISIS
(By Earl J. McGrath)

It is a real pleasure to meet with the Missouri members of Phi Delta Kappa. I want to talk today about matters which I consider to be of considerable importance not only to members of the profession but to citizens generally. It is fitting to do so because education in the United States is in a crisis. In some communities the quality of education has for several years been steadily deteriorating, and will continue to do so in the immediate years ahead.

The members of our professional fraternity are dedicated to the advancement of education through research, service, and leadership. One of the greatest services we can render to the American people today is to inform them about the arresting inadequacles in our educational system and to help them in coping with current educational problems.

Now, when I say that the quality of American education has deteriorated in recent years I want to be explicit about my meaning. First I want to say that I do not share the views of some who lately have made severe attacks on the public schools for their failure to teach the basic subjects in the elementary schools. Some of these criticisms come from well-intentioned and thoughtful citizens. Others come from people who have no knowledge of, and I regret to say little interest in, contemporary education. With the former we should spare no effort to assist them in gaining a fuller understanding of the things the public schools are trying to do. As we do this the vast majority of American citizens will come to the support of the efforts being made to provide superior instruction in the basic subjects and the small percent of carping critics will be rendered innocuous.

In regard to the questions that some fairminded citizens have raised concerning the teaching of the fundamental subjects, such as reading, writing, spelling, and arithmetic we can say with all confidence that when one considers the school population as a whole these subjects are taught just as effectively as they were years ago, and I would go further and say that in many classrooms

they are taught more effectively. It is true of course, that many children do not read, write, spell, or calculate as accurately as one could wish. This has always been the case and doubtless always will be. But numerous studies show that modern methods of teaching used by qualified teachers produce better results than in the past. Moreover, the schools now undertake many additional responsibilities in the teaching of the social studies, the fine arts, physical education and in providing a rich complement of other experiences totally missing in the school program of even 25 years ago. Our children today are better informed, more interested in finding out about the world in which they live, and certainly much happier in school than they have ever been in the past.

There are of course some classrooms, some schools and indeed, some entire school systems in which there is much room for improvement. The inadequacies in these cases however, stem generally not from innovations in content and modern methods of teaching but from the very reverse, traditionalism.

If the content and the methods of instruction are not responsible for the inadequacies in the educational system what do I mean when I say that the quality of education in the United States is deteriorating, and that the situation will get worse before it can get better? In answering this question attention must be focused on certain facts of American life not directly related to education.

Statistical information is not needed to prove that since 1949 the birth rate has risen rapidly in the United States. All one has to do is to look around. Children are everywhere. But for the purposes of this discussion figures are needed to indicate the enormous burden which these additional children are placing on the schools. For a number of years each fall a million more additional children have stood at the schoolhouse doors of the Nation than in the preceding year. In 1 year the number rose to more than a million and a half. Even though the figure will vary from year to year as the children already born reach school age, it will not markedly shrink. Indeed the elementary and secondary school population which was 26 million in 1945, is now 36 million, and by 1960 will reach 42 million, an increase over 1945 of 61 percent.

This biological phenomenon is the principal, though by no means the sole, cause of the weaknesses which are now developing in the school system of the United States. It has resulted in a severe shortage of teachers and school buildings. Let us look at the teacher shortage for a moment. As Commissioner of Education in 1952 I reported that the schools of the Nation were short 52,000 teachers, but the present Commissioner reports that that figure has risen to 102,000. If the rapidly rising enrollments in the lower grades are compared with the number of college and university students preparing to enter teaching, it is patent that the present shortage is going to become more acute in the next 3 or 4 years, to say nothing of the more distant future. By 1960 Commissioner Brownell reports there will probably be a shortage of 292,000 elementary and secondary schoolteachers.

This shortage of teachers, in my judgment, constitutes nothing less than a national crisis. It is true that in some communities, especially those with large financial resources, most children study under well-trained teachers and receive an education superior to that of their fathers and mothers. But in many communities, and in an increasing number, the lack of teachers is causing a watering down of the educational program. Let me repeat that the inferior teaching in these communities is not a consequence of radical new departures in subject matter and teaching methods, but rather a result of the conditions under which the educational program is carried on. Because of the shortage of teachers many schools now operate on double shifts, one in the morning and the other in the afternoon. In other schools, class size has risen to 40 or 50; yes, even 60. Several years ago I visited a class of 63 third-grade pupils in a school near Dayton, Ohio. Moreover, many classes are now conducted by teachers who hold only emergency or temporary certificates.

It is a truism to say that the teacher is the most important factor in the entire educative process. American citizens should, therefore, be vitally concerned about the present disturbing shortage of adequately prepared teachers. They will wish to exprepared teachers. They will wish to examine thoughtfully the question, what are the causes for the present situation? The causes are complicated and many. At the top of the list, however, I would place teachers' salaries. Again salaries vary widely in the various communities of the United States, but the average is not high enough to attract many college students who now choose to enter more lucrative vocations. There is a great deal of idealism among the members of our profession. They do not place monetary values ahead of the human considerations, which motivate the dedicated teacher. Yet, it is true that many teachers cannot earn enough in their professional activities to provide even the common necessities of life for their families. It is a re-flection on our culture that many teachers, especially men, now drive taxi cabs, serve as drug-store clerks, or sell insurance outside the hours of the school day. In some cities janitors receive a higher wage than teachers. Many communities will continue to have double sessions and large classes until their salary scales are able to attract and hold young people in the profession.

Secondly, the unwarranted attacks in recent years on the teaching profession as a whole are repelling many of the most alert and sensitive minds. Every loyal American, among whom we can count the members of the teaching profession, agrees that we do not want any one in the classroom who will instruct American youth in subversive doctrines. All agree that every step should be taken to exclude such persons. Equal vigilance should be exercised to protect loyal teachers against the unwarranted assaults of hysterical and thoughtless citizens. Unless our people do this, the present teacher shortage will continue, and those who remain in the profession will be further demoralized.

The second major problem in American education is the shortage of schools. Unlike the teacher shortage the causes of the lack of classrooms and other educational facilities is perfectly clear. The basic factor is the increasing number of children of school age.

Simple arithmetic will show that for every additional million children, with an average class size of 39, over 33,000 new classrooms will be required, to say nothing of other

facilities such as auditoriums, gymnasiums, laboratories, and libraries. The present need for classrooms caused by the increased birth rate has been aggravated by the fact that in the 1930's few schools were built because of the depression, and in the 1940's because of the Second World War. All these factors operating together have created a classroom this year of 370,000. A schoolfacilities survey authorized by the Congress several years, now nearing completion, shows in a report issued only a few days ago, that it will be necessary to construct during the next 5 years approximately 720,000 public elementary and secondary classrooms and related facilities, at an estimated capital outlay investment of approximately \$28 bil-If the present rates of construction are continued over the next 5 years, we shall have a backlog need of 470,000 classrooms. It should be made clear that these are not figures dreamed up by an expansionist bureaucrat in Washington. They are the validated statements of the chief State school officers in the several States based on a study of needs in local school districts.

The same study shows that with maximum State and local financial effort to erect these schools many States and local communities will not be able to provide adequate funds. It is, therefore, perfectly clear that if all America's children are to have the kind of education the people of this country have traditionally considered an individual right and a social necessity some Federal assist-

ance is imperative. No one is more eager than I to reduce Federal expenditures and taxes. But to any fair observer the facts indicate that the bills for Federal financial assistance for the construction of schools introduced 3 or 4 years ago, and again in the last Congress by more than a dozen Representatives and Senators of both parties should have been passed long since. If we truly believe in equal educational opportunity for all American youth some such legislation will be passed in the next session of the Congress. No more facts or discussion are needed to come to a decision and action on this urgent social problem. Unfortunately, the education of chil-dren cannot be put in the deep-freeze while we indulge in hair-splitting arguments as to exactly how much help is needed and how it is to be distributed. Those who urge delay for conferences and committee discussions are dealing cavallerly with the educational opportunities of American children, and indeed with the welfare of the Nation itself. A cooperative program of schoolhouse construction involving the financial participation of local, State, and Federal governments would constitute one of the best examples of the partnership arrangement advocated by President Eisenhower to advance the well-being and the continued prosperity of all the American people.

These major problems in American education are only two examples of many others which could be cited to show that the condition of education in the United States is deteriorating. Without attempting to go into any detail I would merely mention other problems connected with school district reorganization, which when solved will result in a more efficient administrative structure for the operation of schools, and at the same time markedly increase the quality and scope of education in many communities. other problem relates to the several million children who are classified as exceptional because they deviate from the normal in body or in mind. Among these are the victims of polio and others crippled by other diseases. There are the emotionally disturbed and the handicapped, in sight or hearing, the rheumatic heart cases, and a multitude of others too numerous to mention. All these children, the physically and the mentally handicapped for humanitarian, as well as economic reasons, deserve the

best education we can give them. We know where adequate education is provided many of them can become happy and well-adjusted individuals and productive workers.

My principal purpose in making this brief review of some of the most pressing problems in American education is to point out that these problems are national problems. They extend from one end of the country to the other. It is my studied opinion that they will be solved only by national efforts. Let me be perfectly clear that I believe firmly in the local and State control of education in the United States. It is this feature of American education more than any other that has been responsible for the widespread experimentation, for the interest of local citizens in their own schools, and for the large measure of political freedom which we enjoy in this country. After having examthe matter from the local, the State, and the Federal point of view, I would be the last one to propose any arrangement by which the Federal Government could diminish or infringe upon the authority which local citizens have over the education of their own children. Having said this, however, I must point out that many of these problems, though they may not require local financial support of education by the Federal Government, will require national leadership.

This leads me to the matter which I believe more than any other now needs to be discussed thoughtfully, critically, and sincerely by the members of our profession, and, indeed, by citizens generally. The thesis which I wish to advance for serious consideration is that these national problems can be dealt with most effectively by leadership at the national level. I believe this leadership must be exerted by the educational agency of the Federal Government, the United States Office of Education. The historic purpose of the Office of Education in the early years of its existence was to collect information about the condition of education in the United States and to disseminate it throughout the country. These functions it has served with reasonable success for many years. In recent years it has accepted more operational functions in cooperation with the States and local school systems in comprehensive studies which have led to recommendations concerning action programs to deal with current educational problems. In my judgment this function must be considerably enlarged if some of our pressing problems are to be dealt with

adequately.

There are, of course, a number of voluntary private agencies in the field of education which operate on the national scene. Many of these make investigations and reports peculiar to their own membership, but because of limited resources they cannot make comprehensive and large-scale studies. A concrete illustration of this point is the school-facilities survey just mentioned. This study was done in the United States Office of Education under a congressional appropriation of \$3 million matched by an equal sum from the participating States. No private agency could possibly have undertaken such a comprehensive investigation with its limited resources. Only the leadership of the staff of the Office of Education, with the cooperation of the State educational authorities, made such a national study possible. Many other areas of education urgently need similar study.

If the United States Office of Education is to perform these functions efficiently and without political interference, two steps need to be taken. A staff capable of directing educational investigations of this magnitude and importance, and of securing the cooperation of leaders outside the Government must be provided. They must represent all the branches and levels of education from the elementary school through the university. Such a highly qualified professional

staff could take leadership in organizing cooperative studies involving the several States and institutions of higher education, as well as national professional associations. could act as counselors to members of the profession and school systems which seek assistance and guidance. They could publish reports on superior educational practices as these exhibit themselves in our complex school system. They could call regional or national conferences to deliberate on current educational problems and to recommend sound courses of action. Through the Commissioner of Education they could, from time to time, issue pronouncements on educational matters to the profession and the public generally, with the purpose of gaining the support of the American people for the entire educational enterprise.

The United States Office of Education, except when special grants have been made available from the Congress, or from private sources, has not been organized and staffed for this kind of leadership in American education. It has, of course, had highly competent professional educators on its staff, but in insufficient numbers, and for limited periods. In this day, however, when the need is greater than ever before in our national history, the Office of Education has lost many of the distinguished members of its staff whose names this audience would immediately recognize as among the leaders of the profession. Whole sections have virtually been abolised through the attrition of qualified personnel. Unless larger funds are provided, and unless positions on the staff of the Office can be made attractive and secure, the Office of Education will soon become what Dr. William G. Carr, of the National Education Association, foresaw 2 years ago as its possible destiny-a plaque on the wall of the Department of Health, Education, and Welfare. It is in the national interest that the present contraction of the staff and the services of the United States Office of Education be stopped, and steps taken at once to establish the kind of serv ice needed in this national emergency in education.

Secondly, if the functions of the Office of Education are to be efficiently performed the Commissioner and all the members of his staff must be free to carry on their work with considerable autonomy. Many of the matters with which they must necessarily deal will involve differences of opinion and sometimes serious controversy. If, however, they are to study educational problems and report their findings and recommendations to the Congress, the profession, and the general public, they must not be subjected to political or any other kind of non-professional restrictions or pressures.

After prolonged and careful examination of the Issues involved, I have concluded that the position of the United States Office of Education in the Federal governmental structure should be changed in 1 of 2 ways. Either would in my judgment have the result of dignifying the Office of Commissioner, and through him the entire educational fraternity. At the same time either of these arrangements would guarantee him and his staff complete freedom of activity and expression within, of course, the limits of the law.

Such autonomy can be achieved either by the establishment of a Federal Board of Education appointed by the President of the United States, a non-partisan body of laymen and educators whose responsibility it would be to select a Commissioner of Education on a non-political basis, and with his professional guidance and counsel promote the program, the interests, and support of the United States Office of Education. An alternative to this plan would be the establishment of another secretarship in the Cabinet concerned exclusively with problems of education in the United States.

Both of these proposals have been vigorously advocated in years past. I have studied each of them carefully. There are advantages and disadvantages in both. In theory I, myself, lean toward the secretaryship rather than the Federal board because I believe that a Secretary would be more effective in advocating the cause of education with the administration and the Congress, and because a secretaryship would dignify education by placing it on exactly the same level as the other important agencies of Government. On the other hand, since the educational enterprise in the Federal Government is likely to remain relatively small in the immediate future, it may be politically impossible to achieve the secretaryship. am, therefore, forced to the conclusion that the educational profession should work vigorously for the separate Federal Board of Education.

My purpose now, however, is not to debate the merits of these two proposals but rather to focus attention on the end which I think would be achieved by either. If the Commissioner of Education is to report fully and accurately on the condition of education in the United States in all its various branches and levels, and if he is to recommend to the Congress, to the profession and to the people generally the measures needed to keep the educational enterprise at a high level of efficiency, it is absolutely necessary that in the formulation of policies to advance the interests of American education he not be inhibited by, nor subject to the improper influence of, any officer of the Government. His own professional judgment must prevail, until he is considered professionally unfit to occupy the office. In making this statement I want to make it perfectly clear that during the more than 4 years I had the high privilege of holding the office of Commissioner no member of the Government either in the administrative or legislative branches ever attempted to determine my appointments to the professional staff, or to curtail my utterances or influence my opinions. It should be clear, therefore, that I am talking about principles, policies, and practices rather than persons. The point can be made concrete by the use of an example.

When the Congress authorized the study of schoolhouse facilities and located that study in the United States Office of Education the staff proceeded to develop this project cooperatively with the several States in accordance with their best judgment and that of other leading consultants from many sections of the country. When the first phase of the study was completed the facts showed that the school plants of the United States as a whole were totally inadequate to serve the educational needs of this and succeeding generations. As Commissioner of Education I reported to the Congress and to the public generally, through the press, that a critical situation existed and that \$15 to \$18 million would have to be spent in erecting schoolhouses in the imme-diate years ahead. I urged Federal support of this program on the basis of facts that were unmistakably clear and irrefutable. There was then, and there is now, of course, a difference of opinion as to whether such Federal support was necessary or desirable. The point I am trying to emphasize here, however, is that the Commissioner of Education must be free to report the facts, and his recommendations, if there is to be intelligent consideration of educational problems and action taken on them. If a political appointee superior to the Commissioner rank or authority is to be permitted to close his mouth or to share his statements in accordance with political expediency or per-sonal convictions the usefulness of the Office of Education will be destroyed, and American education generally will be commensurately damaged. If the ends of education are to be served, such statements on controversial subjects must necessarily be issued whenever the facts are clear and the purpose proper. This freedom of action and expression can, I believe, be more fully guaranteed than it is at present under either of the arrangements which I have suggested.

Let me conclude by saying that not a matter far removed from the interests and the welfare of the members of Phi Delta Kappa in the State of Missouri, nor from other members of our profession wherever they may live and practice their profession, for I return to my basic idea which is that the condition of education in every hamlet in the Nation will ultimately be affected by the effectiveness of the leadership at the national level. I make no pretense that the solutions I have suggested are completely adequate or easy to put into effect. On the contrary, they deserve the most thoughtful consideration and criticism by all members of the profession. In the end the profession must play an active part in reaching the decision as to which of these alternatives will benefit and protect education. This is my reason for discussing these matters with you today in the hope that the members of Phi Delta Kappa and other professional organizations will in the months ahead give serious consideration to the present troubled situation in American education.

Address Given by Archbishop at the Second Annual Journalists' Mass

EXTENSION OF REMARKS OF

HON, JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks. include a sermon recently given by Most Rev. Richard J. Cushing, D. D., archbishop of Boston, at the second annual journalists' Mass, on the feast of St. Francis de Sales, patron of newspapermen, on the responsibility of the press.

The sermon follows:

[From the Pilot, Boston, Mass., of February 5,

[1955]
POWER OF THE PRESS INCLUDES RESPONSI-BILITIES-ARCHBISHOP CUSHING ADDRESSES JOURNALISTS AT ANNUAL MASS

(The following is the complete text of the address given by Archbishop Cushing at the second annual Journalists' Mass, held in the Oratory of St. Thomas More on the feast of St. Francis de Sales, patron of newspaper-

For the second year we gather on the feast of St. Francis de Sales to ask the special blessings of God on the men and women who, in their varying capacities, are part of what is simply called the press. St. Francis, who was a prolific and persuasive writer, long ago was named the patron of the press because he so remarkably appreciated the power of words to impress and influence the human mind. In our days of organized propaganda we know to what lengths this power is used. Its most authoritative voice is the daily press. Every one who assists in the production of the present-day newspaper and, indeed, even those who buy the paper must feel that they have made some contribution to its existence and in this sense at least bear some responsibilities for its effects in the comEvery weekday in the United States of America more than 50 million newspapers are printed and distributed. On Sundays a little less than 50 million papers come into the homes of America. If we can presume that more than one person reads each paper it is easy to conclude that many people, perhaps even most people, actually read more than one paper a day.

LOST WITHOUT IT

The newspaper has become so much a part of our daily lives that we feel somehow lost when, for one reason or another, we are without it, Even when its delivery is delayed we are annoyed and in many cases we become so attached to a certain paper and its style that we find it difficult to read the news with the same interest from another source.

Once upon a time people worried about what radio would do to the newspaper and more recently there was a certain anxiety about the effect of television. As matters turned out both radio and television have merely opened up new subjects for news-paper treatment; the approach of these other media to the problems of the news has been interesting and effective in many ways but it has not replaced, and can't conceivably replace, the newspaper in the modern world.

HISTORY UNFOLDING

The ordinary citizen finds in his newspaper the history of his own time unfolding before him. He sees its triumphs and disasters, its enthusiasms, and its worries; he finds there an explanation for the complexities of international life; he finds, too, a description of the decisions affecting the life of his own nation; he learns the meaning of the happenings in his own community.

In the pages of his paper he becomes acquainted with his neighbors, with those who present a program for human better-ment and with those who find it necessary to criticize the existing order of things. reader of the daily press meets all kinds of people in its pages, the man in political life who, as an elected official, seeks his support; the religious leader, who recalls for the edification of his people, the spiritual values of man in society, the professional man in law or medicine or education who informs the public on the area of his interest. Along with these he meets all those who as each day passes make the news.

Of course, he also meets in his daily paper the troublemaker, the lawbreaker, and the victim of accident and personal tragedy. He finds there also, and sometimes in lurid detail, that special brand of person that defles convention or decency or simple propriety merely for the sake of notoriety and personal attention. Even if in somewhat uneven terms, the ordinary citizen reads in his paper the history of his own days, and the historians, who one day will record from another time the story of our years, will look to the newspapers for the most accurate and most detailed description of the life we led, the ideas we had, and the ideals we sought.

RESPONSIBILITY

Against this background it might be salutary to call to our attention this morning the responsibility of the press in the face of the tremendous influence it holds over the minds and the manners and the morals of men. Certainly no one can read his newspaper without being affected by it—if it is no more than mere information that is added to a human mind, if it is only a point of view that somehow seems to be attractive, if it is only impressions, not even clear ones, that somehow seem worthy of his attention. The reader at any rate carries away from his perusal of the paper something which he did not have before, something which makes him at least in a little way a different person. In this sense the newspaper might be said to form as well as to inform its readers.

It shapes, in fact, the society which it

serves.

When newspapers are excited and noisy and frightening, their readers cannot help being, in turn, enkindled and aroused to a similar kind of hysteria. When the newspapers are turid and suggestive and improper they plant the same subtle poisons in the mentality and emotions of their readers. When the newspapers are inaccurate and partisan and prejudiced they prepare the ground for faulty judgments in the citizens they serve.

But when newspapers are alert and accurate, when they are fair and impartial, when they are efficient and dedicated, these virtues too are reflected in the dispositions of the citizens who read them. It is obvious, of course, that there is no such thing as a perfect newspaper any more than there is such a thing as a perfect man, but we all strive for perfection. We work toward perfection as toward a goal and, unless we set for ourselves a goal so high as to seem to be beyond our reach, we will, in fact, always fall below the good that we are capable of doing. When a paper is satisfied with itself it is taking its first step backward, for the best minds will know that even as men we generally fall short of what we should be

be.

We know that our first responsibility is to truth and we try to serve it with a genuine and sincere heart. Every newspaper and periodical, whatever its immediate objectives, can find justification for its existence only in the part which it can play in keeping the public accurately informed and in molding public opinion along the lines of an objective and constructive philosophy of life.

We are rightfully indignant as we learn of the shameful subservience of the press behind the Iron Curtain to the enslaving power of the state. We would certainly offer vigorous protest, were we to be ordered by the highest authority in the land to misrepresent and distort facts simply because the truth of facts would be dangerous for the continuance in power of the existing government. We would hardly regard it consistent with our constitutionally guaranteed human freedom if we were required to convert the resources of American journalism into agencies of propaganda, whose criterion of truth would be governmental decrees and whose norms of morality would be estab-lished by the varying whims of ruthless dictators.

PARTISAN INTEREST

Let us keep this terrifying possibility in mind as we reflect upon the rights and functions of a free press in a free country. There is a tendency in every group to isolate itself from the total community of which it is an integral part, to allow selfish and partisan interests to motivate its activity and to make expediency and observable results rather than complete honesty and devotion to the truth the standard of success.

Among certain groups of artists, for example, the principle "art for art's sake" seems to indicate their determination to make artistic expression an end in itself rather than a means of helping human nature to realize its noblest yearnings for eternal truth and peace. Again, among many modern scientists there is a tendency toward intolerable glorification of scientific progress which we might similarly characterize as science for the sake of science alone. I wonder if there may not be a tendency among journalists to follow in practice the principle "news for news sake," even while protesting that news is essentially and necessarily the reporting of the truth.

It is precisely this inconsistency that can make it possible for the press to lose its freedom. If news value, rather than objective truth determines the manner of reporting, we are destroying the noble ideals which makes it possible to resist the pressure of shortsighted minorities who would use your tremendous power for their own advantage, to the detriment of society as a whole. If we yield to the temptation to trifle with the truth for the purposes of a sensational story, we will have no defense against the unprincipled demands of a growing political despotism which, if unresisted, will bring the press in this country to the sorry state into which it has fallen in countries behind the Iron Curtain.

We have another responsibility. We must have a right understanding of the faults of human nature. Human frailty, in all its ghastly forms, is regrettably a part of each day's news. The reporter must take note of it; he must chronicle the events in which it is involved: he must often, in the interest of accurate and impartial evaluation of the news, stress certain aspects of delinquency and crime which in other circumstances he might be disposed to ignore. For this reason the journalist perhaps finds himself quite frequently in a troublesome dilemma. His reading public seems to demand a certain type of reporting, a certain questionable portrayal of prevalent vice and sin. If he refuses to provide material for the gratification of morbid curiosity, he may run the risk of incurring the censure of employers.

I am merely pointing out the problem I am well aware that it has no immediate solution, and I confess that I do not know precisely how a future solution can be worked out. Without question the people themselves must bear the greater part of the blame, if for no other reason than that their collective tastes and preferences carry so much weight in the forming of a newspaper's policies.

May I suggest, however, that it is neither impossible nor impractical for a newspaper to contemplate positive resistance even to deeply rooted and widely prevalent moral depravity. We should not be satisfied to give people what they want; we should give serious thought to the need of giving them what they need and what will do them the most good. Otherwise we are merely taking our place in a vicious circle of social corruption which will engulf us all together once its whirling madness gets out of control.

COMMUNITY PROBLEM

From time to time you must seek for a measure that will in some way give an account of your success. Since you are such a potent force in the shaping of society, society itself will reflect your virtues, your ideals, your work, and your success. Here in our own community you may look with satisfaction upon what you have accomplished.

Boston and its surrounding area has many special problems—some of them very serious problems. But this is as it should be. A growing city and a progressive community will always be changing and out of its change will come new situations which raise new questions. The fact that we have problems is no reflection on our city or upon ourselves. It is the manner in which we handle these problems, it is the energy and the insight that we use in their solution that give us the key to our true success.

I see in our city, on almost every level, evidences of enlightened leadership and forceful action that with each passing day bring our community closer and closer to the realization of that good society which is our common aim. In this task many forces, of course, are at work—political, economic, social, civic, and all the rest. No one of these forces wields a power greater than that of our daily press. Our press has been consistently constructive and positive in its analysis and its presentation of the local scene and its special difficulties. Continue to be so. I urge you this morning to be even more attentive to the evils that, from time to time, seem to flourish in our midst. Do

not spare them your strong denunciation when the occasion demands, but be sure, at the same time, to give them your most earnest assistance in a constructive way that will remove the causes that produce them.

This brings me to my final point. We live

This brings me to my final point. We live and work and struggle not merely to survive in the present, but to prepare ourselves for the world to come. We are truly human only if we keep our eyes fixed firmly on the ideals which express the noble destiny of our common humanity, and direct our efforts, shoulder to shoulder with all men of good will, toward the realization of these ideals.

It is an inspiring, if somewhat sobering thought that the words which run so smoothly from your typewriters are received and read, commented on and believed by countless thousands of your fellow men. Your power is far greater than that of those who hold positions of high responsibility in our legislative and executive bodies. Truly, you are men of destiny. It is not a rhetorical exaggeration to refer to you as prophets, in the literal sense of those who speak to their fellow men as representatives of God, For truly your power over the minds of men is second only to that of Him who made these minds to know Himself.

To the extent that you become conscious of your vocation, to that extent will you be worthy of the confidence which your fellow men place in you, and of the mission which God has given you to fulfill. May God give you strength to live and work as lovers of the truth, to build yourselves up into unshakeable columns of resistance against the deterioration of modern society. And may St. Francis de Sales, whose heavenly patronage we invoke today, inspire you all to work unselfishly and perseveringly to further the cause of decency and professional dignity which has prompted you to take part in this edifying ceremony.

Address by Dr. Milton S. Eisenhower Before Dallas Council of World Affairs

EXTENSION OF REMARKS

HON, BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the Appendix of the Congressional Record, I include the address given by Dr. Milton S. Eisenhower in Dallas before the Dallas Council of World Affairs, February 3, 1955.

I would like to call my colleagues' attention to this address for their consideration and the treatment of our hemispheric relations in which the United States is depicted as evolving from the good neighbor of the past to that now of a good partner.

The address follows:

I am happy to have this opportunity to address members and friends of the Dallas Council on World Affairs. I know we share an abiding interest in good hemispheric relations. Moreover, I have for some weeks wished to review the major developments in such relations since my good-will mission to Latin America, and there is no better place to do this than before you here tonight.

It was in April 1953 that the President asked me to visit Latin America to do three things:

First, to express the sincere conviction of the United States that sound economic, military, political, and cultural relationships between our countries are necessary to our common future:

Second, to obtain a broad continental perspective of those conditions which affect our relationships; and

Third, to consider what changes might be desirable in United States policies and programs in order to contribute to the meaningful unity which we all desire.

After visiting the 10 South American Republics, I submitted to the President a report which stated what I felt the executive branch of the Government, the Congress, and leaders in private life might do to strengthen hemispheric relations.

Those recommendations fell into two cate-The first included measures to strengthen understanding and mutual respect, in the conviction that these elements are basic to abiding cooperation among nations: All other cooperation-political, economic, military-may break down in serious crises unless there is much more than superficial understanding of one another's cultures, problems, and aspirations.

The second group of recommendations related to measures designed to strengthen economic cooperation. It was emphasized that stable economic ties would be mutually advantageous. Trade amounts to about \$31/2 billion in each direction annually. As a market for our exports Latin America is as important to us as all of Europe, and more important than Asia, Africa, and Oceania combined. As a source of our imports, the other American Republics have greater importance than Europe or the other continents. And, of course, the United States is just as essential to the Latin American states as a market for their products, and as a source of their imports.

During the months since that report, a number of significant developments have vitally affected inter-American relations. Indeed, I know of no other period in which such relations have undergone greater change. In my judgment, these changes will greatly strengthen economic cooperation, understanding, and mutual respect.

I shall not tonight discuss military co

operation, which has been improved, nor political cooperation, except to recognize the historic importance of the anti-Communist resolution adopted at Caracas last spring, and the significance for the security of the American Republics of the steps recently taken by the Organization of American States in the Costa Rican crisis.

Rather, I wish to concentrate, as I did in my report, on mutual understanding and

economic cooperation.

In the United States, during the past year and a half, citizen interest in all aspects of inter-American relations has grown remarkably. This heightened interest may have arisen from the anxiety our people felt at the Communist threat so narrowly averted by the Guatemalan people. It may derive in part from the public awareness of the importance of the two inter-American conferences at Caracas and Rio. More recently, this interest has been stimulated by the swift steps taken by the Organization of American States to determine the real facts in the Costa Rican situation, and to assist Costa Rica to defend itself against revolutionary activity receiving help from outside its ter-

Whatever the cause, the greater interest is most wholesome, and has been manifested in the Congress, where problems affecting this area have received sympathetic study, and in sustained coverage of major events in the nations of this hemisphere. All this has led to a keener appreciation of the differences that distinguish the various countries, of the problems each country faces, and of the measures appropriate to their solution.

A good many affirmative steps which I recommended for strengthening understand-

ing and mutual respect have been taken. Thus, our educational-exchange program has been increased by more than 60 percent and additional funds for this purpose may soon be available under the new surplus-disposal act. Government support of American schools in Latin America, and Governmentsponsored visits in Latin America by United States citizens eminent in the sciences, arts, and letters, have been increased by 66 percent.

One of the urgent recommendations I made as a result of long visits with democratic labor leaders in several South American countries—leaders who told me that many trade unionists were at Soviet expense undergoing indoctrination behind the Iron Curtain-was that we increase greatly the visits of leading Latin Americans, including labor leaders to the United States. I am glad to say that our efforts of this type have been increased by more than 200 percent. The number of technicians and labor leaders trained each year in the United States has increased from 560 to about 1,500.

Among the thrilling experiences I had in Latin America were visits to binational centers where thousands of young and older people are learning English, and much about our culture. These centers get some held from us, though they are primarily supported by local funds. Our support was increased by

20 percent this year.

The United States Information Agency has expanded its existing programs of intellectual and cultural cooperation in Latin America. It has also developed new ones especially designed to create better understanding of the economic interdependence of the nations of the Western Hemisphere, the role which private investment and private enterprise can play in improving standards of living, and the contributions which atomic energy can make to the peaceful development of this hemisphere.

I cannot overemphasize the significance of the fact that high officials in most nations of this hemisphere are becoming more familiar with relevant regional and hemispheric problems. Fortunately, in Secretary Dulles, Under Secretary Herbert Hoover, Jr., Henry Holland (Assistant Secretary of State) and Nelson Rockefeller (Special Assistant to the President) we have men who know Latin America intimately and who have a passionate desire to do all that is possible to create better cooperation. How fortunate, too, that during 1954 visits to many parts of Latin America were made by four members of the President's Cabinet, the chairmen of two Senate committees and high officials of the Department of Defense. Shortly, Vice President Nixon and Assistant Secretary Holland will visit those Latin American countries which time did not permit me to include in my own good-will visit. I am tremendously sorry that pressing duties at my university, during its centennial year, prevent me from making the trip with Vice President Nixon as he graciously asked me to do.

Similarly, during 1954 governmental and business leaders from more than half of the countries of Latin America visited the United

Yes, we can surely say that the past 14 months have witnessed intensified, constructive, and successful efforts to strengthen understanding and mutual respect among all the Americas.

And what has been done to promote understanding has also effectively strengthened economic cooperation, the second of the two principal objectives of the recommendations I submitted to the President.

Indeed, it is in the economic area that we have, in my judgment, the greatest opportunity to strengthen relations between the United States and the Republics of Latin America

My most important recommendation here was that the United States adopt and ad-

here to trade policies with Latin America which possess stability and a minimum of mechanisms permitting the imposition of increased tariffs or quotas. I emphasized that real cooperation in this hemisphere can flow only from adherence to consistent economic programs, honorably and continuously observed.

A tremendously important United States contribution to improved inter-American economic relations occurred when the President announced clear and reasonable policies with respect to trade, international finance, and technical aid. Application of these policies in this hemisphere can de-cisively benefit the economies of all American Republics, including the United States.

The policy of our national administration with respect to international trade was stated in two special messages which the President sent to the Congress during the past 12 months. In those messages the President insists we must have a foreign economic program that will stimulate economic growth in the free world; that it is essential for us to take the leadership in promoting the achievement of those high levels of trade that will bring to all the economic strength upon which the freedom and security of all depends; that such levels can be promoted by specific measures with respect to trade barriers; and that we and our friends abroad together undertake the lowering of barriers to trade and investment.

A policy of reduced tariff barriers and expanded trade will contribute more toward the strengthening of the economies of all American republics than any other single measure which could be adopted. Assurance of access to the great market of the United States is the most effective guaranty of economic stability in Latin America. Similar assurance that the other nations of this hemisphere can continue to buy much. of our surplus production is one essential of economic prosperity in the United States. During 1954 our Government demonstrated its determination to assure continued access of Latin American products to this market; thus, the President refused to impose new trade restrictions on lead, zinc, and tung oil.

In a second economic field, that of international finance, our Government has recognized that public and private lending for sound economic development projects must go forward on a substantial scale. In 1954 the United States announced a new policy in this regard. That policy recognizes Latin America's need for additional capital and seeks to meet it, first, by encouraging more activity of private investors, both domestic and foreign and, second, by an expanded program of governmental lending.

Primary emphasis is placed, as it should be, on measures to encourage private investment. Obviously, this encouragement can most effectively be given by the Latin American governments themselves, though we can

be helpful.

Of course the best incentive the United States can give to private investment in Latin America is the maintenance of stable trade relations and a high level of economic activity in our own country, thus helping to assure similar conditions in those countries. Another opportunity to encourage private investment has to do with tax policies. In his message of January 10, the President recommended enactment of legislation that would provide for taxation of business income from foreign subsidiaries or branches at a rate 14 percentage points lower than the regular corporate rate. He recommended that taxes on this income be deferred until it is removed from the country where it is earned. He suggested that we explore the use of tax treaties as a means of encouraging the flow of United States capital abroad, and recommended still other measures which, when adopted, should afford strong encouragement for larger amounts of private capital to flow from the United States to those areas in Latin America where the local investment climate is favorable.

But it is not enough merely to encourage the flow of United States private capital. Public loans should finance desirable, sound projects for which private financing is not available.

In my report I recommended that lending by the Export-Import Bank be expanded and intensified. That has been done. Our Government has assured the nations of Latin America that we will do our utmost to satisfy all applications for sound economic development loans for which capital is not reasonably available from private sources or from the International Bank.

This change in policy is more important than most seem to have realized. Public lending, intelligently managed, can stimulate the development of certain key enterprises—such as transportation—which will make possible the growth of sound private industries and businesses, and for those private capital can be found. Today, in Latin America we have about \$6 billion in private investments, and more than one and a half billion of public investments. On the whole, the return on these investments has been satisfactory. But the flow of capital had at this same time slowed appreciably.

The new Export-Import Bank policy was announced in the middle of 1954. Since then, the bank has authorized 22 loans in 10 Latin American countries, for a total of more than \$158 million. These included loans to private, governmental, and mixed borrowers. They involved agriculture, aviation, rallways, highways, power production, municipal water systems, mining, steel production, and a variety of industrial enterprises.

The International Bank for Reconstruction and Development, also active during the past year, authorized loans to 6 countries, totaling more than \$111 million.

These figures show that substantial public credits are now being extended. Our new Government policy insures that this will continue if a sufficient volume of applications for sound loans develops. At present, interestingly enough, both the Export-Import Bank and the International Bank, with ample funds to lend, are prepared to process applications greatly in excess of those now on hand.

The President has announced that, as agreed at the Rio Conference, the administration will support the creation of a new international financing agency. He has recommended approval of Congress for the United States to participate in an International Finance Corporation, as an affiliate to the International Bank. The new corporation will stimulate private investment abroad by making loans without governmental guaranties. Its proposal capital of \$100 million will enable it to undertake operations greatly exceeding that amount by participating with private capital in jointly financing productive enterprises.

The economic development of the Western Hempisphere is just as dependent upon access to technical knowledge and experience as it is upon access to capital and markets. Our technical cooperation programs have been effective in Latin America. This is true of the programs we have undertaken directly with many Latin American governments, and of those conducted by the Organization of American States and the United Nations.

In 1953 I urged that United States participation in these programs be expanded. I am happy to say that United States funds for direct help in Latin America were increased from \$20.4 million last year to \$26 million this year and will likely be increased still more next year; the "servicio" type of cooperative administration—involving United States and host-country sharing of respon-

sibility—has been strengthened; greater use in technical matters has been made of the United States universities, with contracts for such purpose jumping from \$700,000 to \$4.3 million, and a further increase in sight. And our contribution to the technical program of the Organization of American States has been increased from \$1 to \$1.5 million annually.

The United States has recently gone to the aid of several Latin American neighbors when they faced emergency difficulties. Thus, when Bolivia faced a chaotic condition caused by declining tin prices and a resulting inability to import sufficient food to meet the minimum needs of her people—Bolivia normally imports half of the food she consumes—we undertook a program of emergency assistance in that country. That program is providing emergency food supplies, and is also helping Bolivia Increase her food production and transportation facilities so that she will not long need outside help.

Also as an emergency measure, we are now helping Guatemala overcome some of the adverse effects upon her economy left by a period of Communist influence. Similarly, when Haiti was hard hit by hurricane and flood damage last fall, we provided foodstuffs, medical equipment, and other materials which helped her to meet the emergency.

So it is with real satisfaction that we can review recent developments in our inter-American relations. Since the submission of my report to the President, our Government has developed policies of profound importance to all nations of this hemisphere. Applied positively and consistently, those policies will further strengthen the cultural, political, and economic ties that bind together the American family of nations.

These new policies have been exhaustively analyzed in two historic inter-American conferences. They appear to be acceptable to the overwhelming majority of Latin American leaders. At the conclusion of the Rio Economic Conference a statement, unanimously issued by the heads of the 21 delegations, said:

"We leave this conference with the satisfaction of having proved that the American nations here represented are in complete agreement as regards their great objectives in the economic field. These may be summarized as a determination to speed up the progress of each and every one of them within the framework of freedom and justice, through substantial intensification of our inter-American economic, financial and technical cooperation."

The delegates to the Rio Conference Initiated a number of important studies and agreed to meet again—the next time in Buenos Aires in 1956.

Finally, may I say that the new United States policies have the enthusiastic, bipartisan support of all our people. The things we have said we will do are being done.

Let no man, no leader, here or anywhere in the hemisphere doubt the sincerity, the intention, the determination of our Government and our people to do all that is feasible to build a stronger family of nations in this hemisphere.

The President has underscored this determination. In his message to the delegates of the Rio Conference he said that, in the American family of nations, the United States will seek to be more than a good neighbor. It will be a good partner.

This signifies more than a difference of words. It emphasizes a new approach to the problems with which we and our friends in the hemisphere are wrestling. This new approach is a logical evolution of the good neighbor relationship. As good neighbors each American republic tried in the economic field to adopt policies and pursue courses which would not prejudice the inter-

ests of the other members of the total community. Each sought in good faith to respond constructively to requests for cooperation and assistance from the others. In our own country this bipartisan policy gave meaningful direction to our hemipheric relations.

That policy has logically carried us to the relationship that exists between us today, one which is so close that it can no longer accurately be described as that of neighbors. So interdependent are our destinies today that each American republic must recognize its direct, continuing, and even selfish interest in the solution of the critical problems of every other member of the family. We must now be dependable partners in a great and lasting enterprise—the peaceful independence, the prosperity, and the happiness of all our peoples—peoples with great cultural diversity but with interdependent common goals.

This partnership concept is, I believe, shared by our neighbors. It found expression last year not only at two conferences involving all members of OAS, but also in regional conferences in which interdependence and mutuality were the keynotes.

I am grateful to you for asking that I undertake this review. It was almost historic accident, so far as I personally am concerned, that I should have represented the Government and people of the United States on a mission designed to improve relations among some 20 interdependent nations. I knew upon my return that whether relations actually improved would depend upon attitudes yet to be formed, actions yet to be taken. Fortunately, most developments since my trip and report have exceeded my fondest hopes. I should like to express my admiration for this fact to the leaders and peoples throughout the hemisphere.

Surely it will be generally agreed that in the past 14 months we have made progress toward better understanding and mutual respect, and better political, military, and economic cooperation. That is of transcendental importance. As I said in concluding my report, "Working together, the nations of this hemisphere can, if history should so decree, stand firmly against any enemy in war, and prosper mightily together in times of peace."

We Must Stay One Jump Ahead of Our Enemy

EXTENSION OF REMARKS

HON, WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an editorial entitled "We Must Stay One Jump Ahead of Our Enemy," which appeared in the January 31, 1955, issue of the Park City Daily News, of Bowling Green, Ky.

With the prospects of a hot war in the Far East it is of supreme importance that the best engineering brains in our country be encouraged to help develop new weapons and methods of warfare entirely different from anything we have had in the past. The attractive future that Russia holds out to young people in this field is increasing her number of scientists at an alarming rate while in the United States the number is dimin-

ishing. A lag in the development of new weapons could mean the margin of free-

The editorial is as follows:

WE MUST STAY ONE JUMP AHEAD OF OTTR ENEMY

When France dug in behind the costly Maginot line after World War I, it was common for forwardlooking military men to say the French were "preparing to fight the last war again." France's bitter defeat in World War II seemed to confirm this judgment. and free peoples have tried to learn a hard lesson from that experience.

The lesson is that we must not be shackled by outmoded weapons and materials and strategies as we plan for our safety in the face of hostile forces. The pace of tech-nological advance today is terrific. We must stay abreast of it in the military field particularly, if we want to hold our freedom

Our leaders well know this. And while we are still planning specifically for a possible war in which nuclear explosives would be delivered by piloted aircraft, we are actually developing weapons for an even more frightening phase of warfare—the age of intercontinental missiles.

American defense authorities tell us they have reached the "pay-off stage" in putting together a guided missile that will be able to sweep 5,000 miles across the globe at speeds up to an incredible 9,000 miles per hour.

This means that such a weapon launched from a site near our eastern seaboard could in little more than half an hour strike deep into eastern Germany. Missiles launched westward from Hawaii could seek out targets on the huge China mainland.

One of the most amazing features of this rocket, which would of course be fitted with an atomic warhead, is its potential accuracy. Our experts are aiming at a weapon which will strike within a 20-mile-wide circle after a 5,000-mile trip through the stratosphere.

Presumably our experimental missiles are not yet that accurate, and they will not be tested on any important scale until they approach that goal. When that time arrives-and even informed guesses about it are rated military secrets—we will have to begin seriously reshaping both our offensive and defensive strategies.

Indeed, it is not too early now to start thinking about the kind of warning systems and defensive weapons we shall need when intercontinental missiles become a major part of not only our arsenal but Russia's as

There can no longer be comfort for us in mere numerical superiority, whether it be in "conventional" nuclear weapons or the new guided missiles. Our future safety may depend on the quality and ingeniousness of the weapons we devise. As our experts put it, we must stay one jump ahead of our enemy.

That one jump could be the margin of freedom.

Opinion of Vegetable Growers

EXTENSION OF REMARKS OF

HON. KARL C. KING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. KING of Pennsylvania. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following resolutions of the

Vegetable Growers Association of Amer-

1. Subsidies and price supports: We are opposed to public subsidies and Government price supports for the production of vegetables because they decrease efficiency of production, increase cost to the consumer, and in the end involve Government regulation and artificial controls of production itself. We urge all other segments of agriculture to embrace this principle as rapidly as possible and thus avoid the otherwise ultimate socialization of agriculture and the further degeneration of the individual.

2. Secretary of Agriculture, Ezra Taft Benson: The Vegetable Growers Association of America commends Ezra Taft Benson, Secretary of Agriculture, for his effort to bring marketing and production freedom to American agriculture and endorses his position that high, mandatory supports encourage overproduction, inefficient farming, and ulti-

mately lowered prices.

3. Released acreage under price-supported crops (diverted acreage): The Government is temporarily committed to high price supports for certain agricultural commodities, and under the production controls of those crops substantial acreage will be forcibly removed. In the interest of avoiding a shifting of the crisis of overproduction from crop to crop and particularly to those crops whose producers request no artificial supports by public moneys, American sense of fair play and equity demand that all acreage thus removed from production of supported crops be planted or devoted to soil-building crops for nonharvested, nongrazing, soil-conserving purposes only, and that such compliance be made a condition of eligibility for any price supports or subsidy payments. Legislation required to define and accomplish this

Ten Commands for Our Youth

EXTENSION OF REMARKS OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. AUCHINCLOSS. Mr. Speaker, the youth activities committee of the Asbury Park Elks Lodge, No. 128, under the leadership and inspiration of Joseph A. Liebesman, has started a movement to promote a more thoughtful approach to life and American principles and ideals among the youth of the land, and I am glad to call it to the attention of my colleagues. They have had printed in color on special paper, approximately 8 by 10 inches in size, what is entitled "Ten Commands for Our Youth," which are as follows:

Thou shall have faith in our country. Thou shall have faith in our leaders. Thou shall have respect for thy teachers. Thou shall have good thoughts. Thou shall keep good company. Thou shall be optimistic. Thou shall help the unfortunate.

Thou shall honor and respect thy parents. Thou shall be thankful for America.

Thou shall practice the Golden Rule.

Copies have been distributed widely through various outlets by the Benevolent Protective Order of Elks in different parts of the country, and it has met with general approval by many who

have to do with the problems of youth. May I quote from a few of the letters which Mr. Liebesman has received:

It was nice of you to offer the very important youth commands, and we will be happy to make these available to our scout organization.-J. Fred Billett, scout execu-

May I thank you for your courtesy in this matter. We are impressed with the tenets there set forth for the guidance of young American.—Rear Adm. W. F. Boone, Super-intendent, United States Naval Academy.

We have in Spokane several gentlemen who are interested in young men and they were delighted to receive these, and will make good use of them in their work .- Arthur Meehan.

mayor, Spokane, Wash.

I wanted you to know how pleased I am to receive copies of the Ten Commands for Our Youth. This advice to the youth of our country is indeed appropriate, and you are most thoughtful in bringing these commands to my attention.-J. Edgar Hoover, Director, Federal Bureau of Investigation.

I wish to take this opportunity to thank you for sending me the copies of Ten Commandments for Our Youth. I believe they are very good. You are to be commended for your work on behalf of the youth of our Nation. I plan to display these Ten Commandments on our reading table-I believe that they have a great deal of merit, not only for the youth, but for we older people as well .-Sigurd Anderson, Governor of South Dakota.

Mr. Speaker, these are only a few quotations from the many letters which Mr. Liebesman has received, and I am sure we all wish him well in distributing such a sound doctrine for the benefit of the youth of our country.

The President's Budget

EXTENSION OF REMARKS

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article taken from a recent bulletin issued by the Southern States Industrial Council, as follows:

Ike's budget presents a number of contradictions and some possibly wishful thinking. First, some of the contradictions:

The President says that this budget was shaped by a "liberal attitude toward the welfare of the people and a conservative approach to the use of their money."

Just what, precisely, does that mean?

Does it means that the liberal attitude toward welfare is to remain an attitude only, that it is not to be implemented by various welfare programs, all of which cost

In other parts of the budget we find the answer: An increase in spending for health, education, and welfare. "I am recommend-ing." the President said, "somewhat increased expenditures in particular areas important to human well-being."

As a matter of fact, and showing the trend,

this is the largest request for welfare funds ever submitted to Congress. For the first time, requested appropriations for this purpose are greater than those for agriculture, commerce, general government, or natural resources. Only the proposed appropriations for national defense, veterans' benefits, interest on the national debt, and foreign aid are greater.

Another contradiction is found in the view, which is a new one for Ike: That the budget can never be balanced by reduced spending, but only through increased revenues.

but only through increased revenues.

In a budget which includes such astronomical sums as \$12 billion for "the various civil benefit programs of the Government" and \$3.5 billion for foreign aid—an increase, incidentally, of three-quarters of a billion over what Congress appropriated for this year—it should be possible to find areas where additional cuts can be made. To deny this, it is argued, is scarcely the best way to "foster the traditional incentive of the American people." As the President himself admitted, Federal taxes now take approximately 25 percent of the national income.

That the present boom will continue to roll and expand is the fervent hope of the administration and almost everyone else. Maybe it will. Ike has been almost fantastically lucky. But is this hope and Ike's luck sufficient warrant for the assumption that there will not be even a slight recession during the coming 18 months? Many people here feel that it is not—that a greater margin of safety should have been allowed.

Congress Shouldn't Trim on Pay Hikes

EXTENSION OF REMARKS

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Chicago Sun-Times of February 5, 1955:

CONGRESS SHOULDN'T TRIM ON PAY HIRES

If the salary scale for Federal judges and Members of Congress were based on individual merit or time spent on the job, some would deserve substantial pay cuts. But a majority of the Members of Con-

But a majority of the Members of Congress and of the Federal judiciary are conscientious, hard working and underpaid. They shouldn't be penalized as a class for the derelictions of a few dunderheads and laggards who happen to be in their midst.

The arguments in favor of raising the pay of judges and Federal lawmakers are over-whelming. For one thing, higher compensation would be bound to attract candidates for Congress who are well qualified but who now hesitate to run because of the financial sacrifices that would be involved. While few lawyers would turn down an appointment to the Federal bench, it is nevertheless true that many have accepted the posts at a sacrifice far beyond the normal call of duty.

The average Senator and House Member must maintain two homes—one where he hails from and the other in Washington. Some get around this expensive problem by maintaining full-time residences in the Capital and part-time residences, sometimes in a hotel, at home. But even that, or a reverse of it, is not cheap. Moreover, the average Member of Congress is expected to keep in fairly close touch which his constituents and that entails considerable travel to and from the Capital—most of it being paid for out of the lawmaker's own pocket.

He is expected to dine, if not wine, his constituents when they visit him in Washington. Not infrequently, a visiting constituent may ask him for a memento, such

as a flag which has been flown briefly over the Capitol and which the constituent can boast about after he has returned home. These items are paid for by the lawmakers.

At present, Senators and House Members receive a total personal compensation of \$15,000 a year. While many of them could live comfortably on that salary as private citizens at home, they, as Members of Congress, are unable to make ends meet. As a consequence, many Senators and House members take to the lecture platform or write magazine articles to increase their incomes to meet family obligations.

Of course, some Members of Congress are men of private means and others have law practices which benefit as a result of their holding congressional office. But wealth or a law practice should not be a requisite for men or women seeking a seat in Congress.

The salary of a Member of Congress should be enough to enable him to live in dignity without going into debt, and to permit him to meet his obligations as a Federal lawmaker as well as private citizen.

Senate and House subcommittees have now approved congressional pay raises that vary between \$7,500 and \$10,000 a year. We believe that the higher figure, recommended by a special commission last year, is the one that should be adopted. The overall difference between the higher and the lower figure in the Federal budget would be infinitesimal. Congress should have the courage to do right by itself, regardless of what some disgruntled constituents or political opponents at home may say.

By the same token, the boosts in pay for Federal judges recommended by the same committees are generous, but not generous enough. The present recommendation is to raise United States district court judges from \$15,000 a year to \$22,500, instead of the \$27,500 recommended by the special commission last year. Supreme Court Justices would be raised form \$25,000 to \$35,000, instead of the \$39,500 urged by the commission.

As in the case of the congressional pay increases, we feel that the Nation would be better served if Congress were to approve the higher rather than the lower figures for the Federal judiciary.

Free China Day

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include remarks made by me on October 10, 1954, in Boston, Mass., at a dinner conducted by the Chinese Community in Boston celebrating Free China Day, proclaimed by the Commonwealth of Massachusetts and the city council and mayor of the city of Boston.

The address follows:

October 10 is a great day among freedomloving Chinese all over the world. It is to the freedom-loving people of China and to Chinese nationals here and abroad what the Fourth of July is to our beloved country.

And it was on October 10, 1911, that Dr. Sun Yat-sen put into motion the democratic revolution in China that changed the face of Asia. This is the "double 10" anniversary of the free Chinese all over the world, commemorating that great event and rededicating themselves to the principles for which Dr. Sun stood and which the Chinese revolution carried into effect.

We all know of the great principles that Dr. Sun stood for and put into operation, of his struggle for a free government in China, of the ideal of government that was truly representative, truly free, and dedicated to the welfare of the people.

The policy of our Government in relation to Formosa and adjoining islands under control of the Nationalist Chinese Government is most confusing to me, and I am sure to you.

We know that under President Truman there was a firm policy which was clearly understood by everyone. That policy did not change from week to week or from month to month.

We remember the promise of the present administration to unleash Chiang Kai-shek and his forces, meaning they would return some day to the mainland to liberate China and its people. It is well know that millions of Chinese on the mainland oppose the Communist regime and are waiting and praying for the day of their deliverance.

They are waiting to help overthrow their vicious tyrants, for the Chinese are a liberty-loving people with an intense love of the family life.

Some months ago we found out that Chiang could not engage in any activity—even from islands other than Formosa, without the consent or permission of our Government. That was a great surprise to me, as I am sure it was to you. That secret agreement was inconsistent with the other promise openly made: To unleash the forces of Chiang Kai-shek.

There was certainly no unleashing if Chiang and his forces could not move without our permission.

In recent months, the aggressive Red move against Quemoy has brought about some noticeable changes.

You will remember, as I do, that the President said, in substance, that the Red Chinese would have to roll over the 7th Fleet if they attacked Formosa.

That was a clear and understandable state-

But statements have been made in recent months which tend to conflict with this and to confuse me.

It was only recently that an admiral with the 7th Fleet said that we would not consider nuisance air attacks by Red China on Formosa as a violation of our policy. In the first instance, it was strange that a military man should issue this statement which if true, and it has not been denied, constitutes a change in our policy toward Formosa itself.

It is most unusual under our form of government for military men to announce a policy, and this particularly applies to foreign affairs. This disturbs me very much.

Military leaders submit their views within their proper field. But decisions on foreign affairs and their announcement is a civilian duty and responsibility under our form of government.

When made, involving the military, the military carries out the decisions and the policy.

This is not the first time in recent months when a military leader has made public announcement concerning foreign policy.

You will also remember it was an admiral who publicly announced that the Pescadore Islands would be defended by the 7th Fleet, in the event of a Red attack. While I agree with this, it should have been announced by civilian and not military authorities.

For ours is a civilian and not a military government. I am greatly disturbed during the past 2 years with the military usurping civilian responsibility.

civilian responsibility.

I am a strong supporter of a powerful military organization—but as the servants are

not the masters of our Government, we cannot afford the military to inject themselves further into matters that belong to the civilian side of government.

Furthermore, what is a nuisance attack? That raises many serious questions.

It might well be observed that that statement could well operate as an excuse for the Reds to attack Formosa by air. If so will we tie the hands of Chiang in any action to meet and prevent such attacks?

Is such a statement consistent with rolling

over the 7th Fleet?

When is nuisance attack not a nuisance attack?

Who will determine this question?

My understanding is that the Reds would have to roll over the 7th Fleet was that any kind of attack on Formosa would violate this policy. That seems to me to be commonsense.

And I now find out that nuisance attacks will not. What number of Red planes would

constitute a nuisance attack?

I am wondering where does that leave us. What interpretation will be placed upon it by the Chinese Reds and the Soviet Union? Will they consider such a statement an excuse or an invitation to attack by air?

And what about Quemoy?

Outside of a few persons, and I am not one of them, no one knows what our policy will be if the Reds attack Quemoy.

There have been intimations from responsible American sources that if Quemoy is attacked-outside of furnishing arms and advice-the United States will remain inac-

One admiral connected with the 7th Fleet has indicated this in a press conference

of a few weeks ago.

Admiral Radford, to the contrary, in a recent speech strongly indicated that the loss of Quemoy would be harmful to the defense of Formosa. In other words, the defeat of Quemoy would make it easier for a successful Red attack on Formosa.

And yet our policy, so far as I can ascertain from the newspapers, is supposed to be a flexible one—we will keep the Reds guessing. That involves a calculated risk, either way.

It is my strong opinion that a firm statement by our duly substituted authorities that a Red attack on Quemoy would be considered an act of aggression might well deter

such an attack being made.

It is my feeling that our present policy in relation to Quemoy will invite and might

well prompt the Reds to attack.

And then we come to the latest information with reference to our policy in relation to Formosa and the islands held by the Nationalist Government.

While to date there is no official announcement, all papers have carried the story from reliable diplomatic sources that "Nationalist China has stopped bombing attacks on the Chinese mainland at the suggestion of the United States." This confuses me further.

Certainly this is not carrying out the promise of unleashing Chiang Kai-shek and his forces. It seems to me that, if the news item is correct, this would seem to be tying

his hands.

I am frank in stating that I am confused. I have no definite idea as to what our policy is now in connection with Formosa and that important area of the world.

It is my opinion that our policy should be a firm one, should be made known, and the line drawn, and that we let the Reds know

We will stand by our policy.

Certainly, if we will help defend Formosa and the Pescadores Islands in case of attack, if that is our policy, and I consider it a wise one, it seems to me that this should cover any other Nationalist-held islands that are important to the defense of the Formosa and the Pescadores group.

Population of 220 Million Seen by 1975

EXTENSION OF REMARKS OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include herewith an editorial entitled "Population of 220 Million Seen by 1975," which appeared in the February 2, 1955, issue of the Owensboro Messenger, of Owensboro, Ky.

This editorial urges that our planners from the White House down to our little township offices study these figures and in turn take proper action thereon. I am in complete agreement with this view.

When we realize that we have 7,000 new mouths to feed each day in this country it is time for us to pause and consider just what this increasing population means to our agricultural policies and programs. This increase means that more production will be needed every year unless we reduce our standard of living.

The editorial is as follows:

POPULATION OF 220 MILLION SEEN BY 1975

Some of the American people may think the population experts are talking through their hats when they predict a United States population of 220 million by 1975. But the figures for 1954 certainly make the experts look good.

Last year the number of Americans Increased by 2,830,000, the largest yearly gain in the country's entire history. For 8 straight years, we have added more than 2,500,000 people annually to the population.

How do these astonishing figures come about?

In the first place, in 1954 we had around 4,060,000 births, the most in any year on record. Secondly, tentative indications are that the death rate dropped to an all-time low of 9.2 per 1,000 population.

The great boom in births is by now an old Not so well appreciated is this continuing improvement in the national health, as reflected by declining death rates. The death rate has now been below 10 per 1,000 for seven successive years, an especially notable thing in the light of the steady rise in the proportion of older folk in the American population.

In addition to these factors, of course, we get each year a small increment from immigration. Last year it came to some 200,000.

But obviously, in projecting population prospects for the next two decades and beyond, the experts are deeply impressed by the continuing remarkable trends in birth and death rates.

Trends are not sure-fire. They can be radically altered by unforeseen factors. Another great war, a real depression, such cataclysmic events could upset all predictions. World War II and its aftermath certainly threw out of the window the experts' forecasts made during the 1930's.

As a sidelight on the gains that have brought our present population total to approximately 164 million, it is interesting to note that the Pacific Coast States still are climbing at a rate higher than the national average, though not as fast as during the Florida is still pushing upward gains of around 6 percent a year, three times the United States average. Nevada and Arizona have even higher rates of increase, but they start from a low total population base.

Let's hope that our planners, from the White House down to dusty little township offices, are reading these figures and acting upon them. If they do not, the United States by 1975 will be the most tangled civilization on the face of the globe.

Sale of Government-Owned Synthetic-Rubber Plants to Private Industry

EXTENSION OF REMARKS OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. AYRES. Mr. Speaker, on January 24 there was submitted to this House and referred to the Armed Services Committee a report recommending sale of the Government-owned synthetic-rubber plants to private industry.

I have spoken on previous occasions of the legislation which we passed to authorize this sale. Today I would like to commend the Rubber Producing Facilities Disposal Commission on an out-

standing job.

Since we required them to operate under a very strict set of ground rules with respect to assuring free competition, obtaining full fair value, and guaranteeing the security interests of the United States, they were compelled literally to pioneer new fields. No previous disposal of Government property had ever been taken under such restrictive

How well they did this job is reflected

in the report now before us.

As for security, contracts for every facility contain clauses assuring the availability of that facility to the Nation's security needs for 10 years.

As to the fair value criterion, the recommendations point out that the synthetic-rubber program, including contract prices, cash on hand, and inventories to be disposed of, will return \$401,-565,000 to the United States Treasury. Of this amount, the recommended sales of the plants, miscellaneous equipment, and inventory accounts for \$310,565,000.

Not all of the facilities are being sold. Because there were no bids on some facilities or because bids on another were too low, the Commission recommends placing in ready standby three facilities with a net book value as of April 30. 1955, of \$18,557,000.

The unrecovered investment of the American people in the plants recommended for sale, plus the plants to be put in standby, plus operating losses for the wartime years, is placed by the Commission at \$272,918,800. Recommended plant sales—even taking into account the plants earmarked for standby-represent 96.6 percent of the taxpayers' unrecovered investment.

Against the yardstick of any previous disposal of Government's property, this would certainly represent full fair value, in my opinion.

As regards the Commission's directive from the Congress to develop a disposal pattern shaped to foster a free and competitive industry, I would call attention to this phase of the report.

Rubber manufacturers who were successful bidders and have in their own requirements for rubber a captive market are required by contract to divert fixed percentages of their production to the free market to be available to small business.

. In two instances, sales were made to nonrubber manufacturers who have no captive market. It is interesting to note that the several hundred rubber manufacturing companies which will have no interest in the facilities disposed of, purchased from the Government last year 127,000 long tons of general purpose synthetic rubber to meet their requirements in a year of high industrial activity.

The disposal recommendations create a pattern which would make 242,000 tons of total rubber available to the non-

captive market.

port:

This would in effect put 2 pounds of supply in competition for every pound of market in the whole area of non-captive rubber requirements. This will be a reassuring thing, I am sure, to the small consumer. It is evidence, moreover, of the earnest effort put forth by the Commission to satisfy the criterion of free competition which we laid down in the Disposal Act of 1953.

In this connection, I would like to call your attention to the following editorial from the Akron Beacon Journal of January 26, 1955, which I feel makes significant comment on the Commission's re-

GOING, GOING

Unless Congress disapproves within 60 days, 24 plants which comprise the bulk of the Government-owned synthetic rubber industry will be sold to private corporations for a total of \$310.565,000.

Far from disapproving, Congress and the Nation as a whole ought to applaud this highly satisfactory conclusion of a historymaking chapter of cooperation between the

Government and private industry.

Of the billions upon billions of dollars which the United States had to spend to carry World War II to a successful conclusion, none produced a greater money's worth at the time nor has turned out to have a better "cash-in" value.

Creation of the plants early in the war was an industrial miracle, brought about by Government money and priorities and the rubber, chemical, and oil industry's technical knowledge. Without this source of rubber, every phase of our military and civilian activities would have been crippled and victory would have been long delayed.

In the years immediately following the war, the rubber-making facilities kept consumers—and that includes everyone in this country—from being gouged of hundreds of millions of dollars in inflated prices for na-

tural rubber.

Ever since 1948, the Beacon Journal has been urging that the plants ought to be sold to private industry; that in peacetime the Government had no proper function as a manufacturer and that private competition might improve the product and lower the cost.

The Korean war postponed active steps toward disposal but in 1953 a Republican Congress set up a procedure for sale, based largely on a pattern set under a Democratic administration in 1948.

On July 25, 1953, we said:

"The surest way to carry the rubber disposal program on to a successful conclusion would be for the President to name to the Commission three men of such recognized integrity and sound judgment that no one would think of questioning their recommendations.

"This would be a Commission of comparable standing to the one which, in 1942, sized up the Nation's serious rubber shortage and made drastic recommendations for its solution."

President Eisenhower appointed Holman D. Pettibone, a Chicago banker, as Chairman; Leslie R. Rounds, a banker from New York and Maine, and Everett R. Cooke, a Memphis cotton broker. They, in turn, chose Eugene Holland, a Chicago industrialist, as executive director.

This group was not as well known as the Baruch-Conant-Compton Commission of 1942 but its performance has been equally as competent, hardheaded, and patriotic.

competent, hardheaded, and patriotic.

After surveying its responsibilities through a personal inspection of all the facilities, the Commission carried on months of tough bargaining with potential buyers and has come up with bids that represent a return to the taxpayers of 96.6 of their total unrecovered investment.

No one but an out-and-out demogog could possibly call these proposed sales a giveaway.

No one but an out-and-out Socialist would argue that ownership of these facilities should remain in the hands of the Government.

Adequate safeguards have been provided to make sure that defense need will be fulfilled in case of war. The Attorney General has certified that the prospective distribution of ownership is such that no problem of monopoly is involved.

By all means, Congress ought to give its blessing to the sales as arranged by the Rubber Producing Facilities Disposal Commis-

sion.

Federal Aid to Education Means Federal Control

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorials from the Shelbyville (Ind.) News and the Greenfield Daily Reporter:

[From the Shelbyville (Ind.) News]
FEDERAL AID TO EDUCATION MEANS FEDERAL
CONTROL

The Indiana PTA Members Study Group, which has long contended that the members of every local parent-teacher association should have a vote on the legislative program of the National Congress of Parents and Teachers, has come forth with some statements which seem to us to make good sense in reference to Federal aid to education.

"No responsible person," says a bulletin from the study group, "advocates Federal control of education. In fact, proponents of Federal aid invariably couple with their proposals the qualifying phrase, with maximum local control."

"This is a very important fact to remember. For in any controversy, each point that can be removed from the realm of dispute simplifies the consideration of issues that remain.

"If, therefore, all agree that Federal control of education is bad, the only question left is whether or not Federal aid to education is likely to bring Federal control of education.

"The friends of Federal aid take a cheerful view of this question. Their zeal seems to overwhelm their judgment. They are confident that education can be financed in Washington but controlled at home.

"The foes of Federal aid prefer to base their predictions on history rather than hope

"Vocational education has long enjoyed the fruits of Federal aid and it is most frequently set forth as exhibit A in proof that the Federal purse strings need not become instruments of control.

"Of course only the naive, or those who thought their listeners were naive, would refer to this example. For the slightest investigation readily reveals that in vocational education, as in every other endeavor importantly financed by the Federal Government, the Federal Government controls the program."

The PTA Members Study Group Bulletin also calls attention to House of Representatives Document No. 529, 75th Congress, 3d session, as a summary of the happenings in the cited instance as follows:

"The conclusion is inescapable that the Federal control over vocational education has been so administered under the authority of the statutes as to shape very definitely and decidedly the development of the programs of vocational education in the States and local communities. The federally supported program has to a considerable extent become a federally dictated program. * * *"

The same sentiment, the bulletin cites, has been expressed as follows by George E. Myers, professor of vocational education at the University of Michigan, in an article appearing in the Harvard Educational Review:

"The control will go more and more to the Federal Government, whatever legislation is enacted. Many State directors of vocational education are coming to be looked on as agents of the United States Office of Education rather than as employees of their State boards of vocational education."

"The lessons of history," the study group bulletin adds, "are clear and without exception. In every instance, in every field, Federal control has accompanied Federal money. Thus only those who want such controls should seek Federal funds. When this point is clearly understood the whole movement for Federal aid to education will promptly and properly collapse."

Another important instance of the workings of Federal control is cited in the fact that the State of Indiana has been ordered by the United States Civil Service Commission to fire four employees of the State Department of Conservation because they allegedly took part in politics in violation of the Hatch Act governing Federal employees. The Federal Government takes the position it has the right to dictate to our State in this manner because it gives Indiana some \$345,000 a year for conservation. Thus we are again forcibly reminded that a State cannot take Federal aid without taking Federal orders.

In short, the Government in Washington considers that it has bought and paid for the right to control us. But bought it with what? With \$345,000 of our own money. "If you'll be good," they as much as say, "we'll give you back \$345,000 of the more than a billion dollars we take from you each year."

And yet there are those who say that we can get Federal aid for our school budgets and for erecting new school buildings without sacrificing our independents to run our own school affairs.

[From the Greenfield (Ind.) Daily Reporter] COME EASY—GO EASY

Aside from an FHA-style loan insurance by the Federal Government for local communities faced with the necessity of heavy borrowing for school expansion, which will be included in the coming presidential proposals for the school emergency, there is still a strong sentiment in Congress for more direct and substantial cash aid from Uncle Sam.

Senator Lister Hill, of Alabama, chairman of the Committee on Labor and Public Welfare, has introduced a bill along this line. In a broad sense it proposes to take the ultimate revenues which the Government stands to gain from the present arrangement as to offshore oil, and spend a considerable portion of this in aid for school construction.

Of course, this is strictly "counting your chickens before they hatch." There are estimates of the value of the United States portion of this petroleum at around \$6 billions. But this is ultimate, not now, as the oil is still in the rock, There might be a lot of illiterates reach adulthood before these funds were available, were they the only source of school development.

However, a speculative, "windfall" proposition has considerable appeal to a lot of people. At least, it would be a substantial fund which would not be directly reflected in Federal taxes or deficits. "Come easy, go easy" has a human connotation.

Even if the supposed fabulous fortunes of offshore oil were already available, we still would not favor a free-hand distribution to the pressed local school corporations of the land. Such a situation encourages extravagance and waste, as well as encouraging local school corporations to relinquish a part of their rights and responsibilities for operating schools to a far away central government, which soon might be dictating method and curriculum and extending centralized control over a vital local job.

It is not too hard to imagine some future Washington administration which might seize upon the opportunity to indoctrinate socially and politically the youngsters required to attend the schools thus partially built or maintained. This could be done by a Federal hand in the selection of school texts, twisted histories, biased economics. You say: "It couldn't happen here." Perhaps not, but it did in Germany and Russia where the Central Government had free hand with the schools. We have had occasional trouble in this country, with text selections pinned to the State levels, where books which were quite notably slanted crept into the approved lists and there has been the Devil's own time getting rid of them, even after they had been discovered and exposed.

School corporations fall broadly into three categories: (1) Those who are able and willing and stoutly shoulder the considerable load of maintaining adequate schools; (2) those which by reason of poverty, extravagance, poor management or other unusual circumstances are honestly, although perhaps temporarily, unable to do the best of school jobs; (3) schools who have a similarity to Secretary Wilson's "kennel dogs." They are content to sit on their tails and howl, far short of being fully extended, awaiting some good fairy to come along with an easy solution to their dilemma.

Our observation is that several areas have quite a percentage of these last. They appear more frequently in States where the public-school system has never been exemplary or on a high standard. Always primitive, they remain so, and are frequently

selected as horrible examples by those who are the most earnest partisans of promoting substantial aid from outside.

But there is not good reason to penalize the taxpayers residing in those areas which are willing and able and doing a good job with their schools, in order to help the other areas whose citizens are unwilling to go all out under their own power to accomplish school improvement. And, that is definitely what most forms of Federal grants of funds would do.

What Can We Do About Communism?

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include, with pleasure, the articles written by a close friend whom I admire very much, Hon. Thomas Dorgan, of Boston, Mass., clerk of the Superior Court for Criminal Business of Suffolk County, Commonwealth of Massachusetts.

The first article, "Truth Destroys Reds," appeared in the Boston Traveler of January 27, 1955, and the second one, "Atheism Is Red Source," in the Boston Traveler of February 3, 1955. Mr. Dorgan has consistently and intelligently fought and exposed for years the sinister evil and destructive plans and purposes of international Communism in the United States and on the world scale.

The articles follow:

[From the Boston Traveler of January 27, 1955]

WHAT CAN WE DO ABOUT COMMUNISM?— TRUTH DESTROYS REDS

(By Thomas Dorgan)

In fighting against the Communist conspiracy it is necessary to enlist the powerful weapon of public opinion. We have seen how the Communist conspirators hate the light.

They cannot stand exposure. They shout hysterically when their actions are being uncovered. They are afraid of public opinion.

An attitude is often more important than a law in society. In a women's club, where there is no law against drinking on the premises but where there is a firm attitude against it, you will have no drinking.

But if there is a club with a law against

But if there is a club with a law against drinking, while at the same time the attitude of the members favors drinking, you will have much violation of the law.

POWERFUL FORCE FOR CORRECTION

So it is with public opinion. A properly formed and informed public opinion is one of the most powerful forces for correcting social evils, deterring crime, encouraging integrity among public officials and fostering public decency and morality.

In a free society, people have free access to the truth. The organs of public education and information are dedicated to the spread of truth.

The schools, the press, and radio, the pulpit, and public rostrum seek to discharge their public responsibility by first of all being loyal to the truth.

If the people became confused, misin-

If the people became confused, misinformed on vital issues, then the society of such people is being threatened with extinction through indifference, or explosion through blind revolution.

SOFTEN UP PUBLIC OPINION

Before they can take over a country, the conspirators must soften up public opinion.

When the Red and pink press enthusiastically pumped the party line into the stream of American public opinion, Americans naturally became confused about the reality of the Communist conspiracy.

Today, American public opinion is changing. The public exposures of the congressional investigating committees are having a telling effect.

People want to learn more about the great conspiracy and are more opened-minded toward information concerning it.

The publishing houses are responding to the ready market. Writers and journalists who are anti-Communist have readier access to contact public opinion.

A few of the basic ideas that the Red and pink press repeated constantly to the confusion of public opinion are:

1. Communism is an idea and must be taken care of in the market of ideas.

But there was a big void in the market of scholarly writing and documented records opposing the evil of the conspiracy. The "market" often was closed to anti-Communists.

2. The challenge of communism can be met only by social reform.

But if the Communist conspiracy goes unchecked, social justice will have no future. 3. Let's clean up our own backyard first.

No one will contest the sound advice contained in this idea. But the muddled liberals made it mean that we should concentrate exclusively on removing the injustices from western democracies, while ignoring the much greater and inhuman injustices of the Communist conspirators throughout the world.

4. The Communist Party in America is only a political party.

They want us to think that the Communist group of conspirators must be given the same legal recognition and protection for public assembly and discussion and propaganda as any organization of loyal American citizens. The tragedy is, they have largely succeeded.

5. Something ought to be done about communism, but—

This was the line followed by the pinkoes who talked out of both sides of their mouths at the same time. They professed to be opposed to communism theoretically.

But they maintained you could not find any practical way to restrain it without destroying the "freedom" and "liberty" of loyal citizens.

6. Everybody has a right to a government job.

When the Eisenhower administration said the basic issue was not loyalty but rather security, and openly declared that the safety of the Nation came first, it helped to clarify public opinion and protect the Nation against this false idea.

7. Nobody can incur guilt by association with Communists.

In upholding the constitutionality of New York State's Feinberg law, the United States Supreme Court, by a majority vote of 6 to 3, dealt a decisive legal blow to all psuedo-liberal "associationists." The Court said:

"One's associates, past and present, as well as one's conduct, may properly be considered in determining fitness and loyalty." What can we do about communism?

What can we do about communism?
One of the main answers surely ought to

One of the main answers surely ought to be to clarify our own minds on the confused ideas that work as a smokescreen for the conspiracy.

The truth shall make men free, and this is particularly important in dealing with the great conspiracy that loves darkness and confusion.

An informed public opinion is one of the most powerful antidotes to the poison of militant atheistic communism.

[From the Boston Traveler of February 3, 1955]

WHAT CAN WE DO ABOUT COMMUNISM?— ATHEISM IS RED SOURCE

(By Thomas Dorgan)

The main problem presented by communism is a spiritual problem. Before you can find out what human society should be, you have to know what man is.

The question many people must begin to aswer today is: "Are we apes or men?" answer today is:

Those who believe in God also believe there is a difference between the ape and a They believe a man has been made in God's image and likeness.

SOURCE OF ALL IDEALS

That is why they have such a high idea of man's dignity. That is where they find the source of man's inalienable rights.

That is where they get the foundation for

man's code of conduct.

For people who do not believe in God, there is only a difference of degree between apes in the jungle and his blood-brothers dwell-

The difference is merely in the fact that city dwellers have been domesticated. They have been tamed. They have been trained by education.

It is not surprising that, when cornered or frustrated, the atheist easily reverts to the law of the jungle.

EXPLAINS RED CHARACTERISTICS

This explains the constant, cunning deceit, the butchery and torture, the heart-less defiance of human dignity, moral law, international law, civilization and world opinion that has characterized the inhuman march of the atheistic comrades toward world conquest.

When people ask what can we de do about communism, many answers can be given.

I have suggested a few in this series of articles, which is being completed today.

I believe that on the basis of the record of the past 35 years, it is utterly futile to try to discuss human affairs intelligently with these barbarians.

The "ape men" in the Kremlin should never had been permitted to sit as equals

in the society of nations.

(The United Nations Charter calls for peace-loving nations" to sit within its chamber. What is peace-loving about Russia and her satellites?)

FORCE IS ONLY CHECK

Internationally, the only check for the advance of this 20th century barbarism is superior force of arms.

On the national level, as I have pointed out, communism should be checked by constantly relentless public exposure, plus firm and adequate legal measures enforced by civil authority.

But to check communism is not the same as to conquer it. You can check it on 100 different fronts. To conquer it you must go after the source.

The source of the horrible evil is found in atheism.

If we want to get rid of the Marx-Lenin-Malenkov-Stalin brand of communism, we must get rid of atheism.

cannot do this with guns. It is a problem for our spiritual leaders.

It is a problem for all men of good will, rekindling the fires of their faith and love.

MUST TEST CONSCIENCE

But it will help mightily in this battle if, as a nation, we make a healthy examination of conscience and find out the source of the spread of atheism.

It is foolish to wait until we have to face the conspiracy on the battlefield. We must be concerned with it here and now as it exists in our midst.

What can we do about communism? There are many answers.

Let us not underestimate it. Let us know it. Let us relentlessly expose it. Let us take legal measures to check it.

Let us seek to eliminate its harmful influence that rises from its poisoned source on the lips of those professors who brazenly propagate or subtly insinuate athelsm in our schools and colleges.

Let school boards and boards of trustees be more vigilant in whom they hire.

Above all, let us join with all men of good will in bringing about a spiritual reawakening in the lives of our communities.

If Communists are militant, let us be more militant. If Communists seek brotherhood, let us seek brotherhood more earnestly.

But let the watchword be "freedom and

brotherhood under God."

"Junk" Mail

EXTENSION OF REMARKS OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following petition of the Saginaw-Bay-Midland branch of the Michigan Rural Letter Carrier's Association and concerning the rates on firstand third-class mail:

RESOLUTION OF THE SAGINAW-BAY-MIDLAND COUNTIES BRANCH OF THE MICHIGAN RUBAL LETTER CARRIERS' ASSOCIATION

Whereas the Post Office Department has admitted, by its retraction of the "simplified address" order, that this type of "junk" mail does not pay its way, and also hinders the expeditious handling of other types of

Whereas there can be no defense of taxpayers' money being used subsidize advertisers who use this type of mail; and

Whereas there is no demand for this service from any group except the advertisers;

Whereas rural patrons complain about the flooding of their mailboxes with unwanted, unaddressed circulars: Therefore be it

Resolved, That the Saginaw-Bay-Midland branch, RLCA, go on record as unalter-ably opposed to the omission of rural routes from the cease and desist order of the Post Office Department, which is scheduled to be effective April 1, 1955, and which will prohibit mailing of "simplified address" mail for delivery anywhere except on rural and star routes; and be it further

Resolved, That said branch, RLCA, is also opposed to the raising of the first-class rate, unless and until the third-class rate is adjusted to cover the full cost of handling such matter; and be it further

Resolved, That said branch, RLCA, herewith petitions it's national officers to work to these same ends; and be it further

Resolved, That copies of these resolutions be sent to our national and State presidents, chairman of the Senate and House Post Office Committees, and our Michigan Senators and district Representatives.

The above was presented to a regular meeting of Saginaw-Bay-Midland. On motion duly made and supported it was adopted.

R. ROY MCLAUGHLIN, Secretary.

FREELAND, MICH.

A Flexible Approach

EXTENSION OF REMARKS

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Kendallville (Ind.) News-Sun. It seems to me that the thinking contained therein is particularly appropriate just now.

The editorial follows:

A FLEXIBLE APPROACH

The Formosan policy which President Eisenhower laid down and Congress has moved swiftly to support is designed with a shrewd flexibility that should serve well America's interests in the Far East.

At root this policy is not new. We are flatly and firmly committed to the defense of Formosa and the nearby Pescadores islands. Any attempt by the Chinese Reds to conquer these territories means war with the United States. Our unratified Formosan treaty with Chiang Kai-shek spells out this commitment.

The Communists have known for a long time that if they tried to take these islands they would have to pierce the protective screen provided by the United States 7th Fleet. Congress is now authorizing the President to employ American forces more broadly, which at least would also include our air arm, to safeguard Formosa.

Where Mr. Eisenhower's newly enunciated policy is most distinctively different, where it is most flexible, is in the matter of our possible defense of other areas, particularly lands close offshore from mainland China, which are related to the protection of Formosa.

The President did not ask Congress to commit this country to the defense of Que-moy, Matsu, the Tachens, or any other coastal Instead he is getting the authority to send United States forces "wherever they are needed" for the defense of Formosa and the Pescadores.

This broad power quite obviously could allow use of our naval and air arms for defensive operations in and around the key coastal islands. On the other hand, we are leaving the way open for not coming to their aid, if our military men should view such action as impractical and unwise.

Most of the coastal islands are within shellfire range of the Red mainland. Our fleet might be sorely handicapped in attempts to manuever effectively in the narrow waters between the continent and those offshore patches. Furthermore, there are reports that the Reds have superior air power in this general area today; the fleet might be hard pressed unless we first engineered a considerable buildup of our own air strength

The net military effect of the latest American policy moves would seem to make it crystal clear to Red China that the American people, through both their President and their Congress, are stoutly braced against any Communist intrusion upon Formosa; but to keep the Reds still guessing as to what this Nation will do about any specific advance against the coastal islands.

The coastal group gives Chiang bases for minor harassment of the mainland and serves secondarily as observation outposts. And while we have discouraged him any mainland ventures of major scale we would be pleased if he could hold these islands. Their vulnerability, however, would appear to limit what we can do in their defense.

Herbert Hoover-When Was He Right? When Was He Wrong?

EXTENSION OF REMARKS

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the No. 45 winter issue, 1954-55, of the magazine entitled "Prevent World War III":

Herbert Hoover-When Was He Right? When Was He Wrong?

During his many years of service in public life ex-President Herbert Hoover has dis-played a marked interest in German affairs. He has been regarded by the Germans as one of their tried and trusted friends. Indeed, when he visited Germany recently he was hailed as their "savior." Since the end of World War II, Mr. Hoover has played a leading part in the formulation of United States policy toward Germany. Of late, he has been quite definite in his views with regard to the future role of Germany. "I have always said that Western civilization cannot survive without a unified Germany" (New York Times, October 31, 1954). Mr. Hoover has stated that German nationalism is not a bad thing per se and that Germany can be depended upon to act as the great defender of democracy. "My prayer is that Germany may be given the unity and full freedom which will restore her to that mission in the world" (New York Herald Tribune, November 25, 1954).

Mr. Hoover did not always believe in Ger-many's mission to save Western civilization. In this connection we cite two examples:

EXHIBIT A

In 1918 a book was published entitled "The Iron Circle, The Future of German In-dustrial Exports, Etc.," by S. Herzog. Mr. Hoover signed the introduction, excerpts of

Which we publish herewith:

"'If there is anything to be gained by being honest, let us be honest; if it is neces-Bary to deceive, let us deceive.' Thus wrote Frederick the Great in the middle of the 18th century—the man who laid the foundation of Pan-Germanism, which this world war was expected to achieve. Not content with dominion by force of arms, we find Germany Plotting for commercial supremacy with that insolent disregard of the rights of others and that resort to deception that has characterized all her policies since Frederick the Great's reign.

"For 40 years the Germans have been plotting to realize their dream of Pan-Germanism-eventual world conquest and dominion. For two generations they have been thinking in terms unknown or little understood by an innocent and unsuspecting World. The Prussian philosophy that might makes right, that the state is supreme, has completely possessed the ruling and upper classes of Germany, both military and com-mercial, until deception and fraud form the background of their most important international relations and undertakings. They have made Germany an inherently dishonest nation. . .

"German rule means the breaking-down of all order, the exchange of personal liberty and national freedom for force, of right for might, of justice for the mailed fist.

"The world should have been forewarned. Books were written, maps constructed, by well-known German authorities for the en-lightenment of the German people, and these books reached the outside world, but civilization, accustomed to the pursuits of peace, turned a deaf ear, and is now paying the penalty for refusing to see and hear.

"Now another conception comes out of the heart of Germany, that threatens the com-mercial interests of unsuspecting nationscarefully thought out, with characteristic German thoroughness, openly advocating the breaking down of all business ethics, relying upon trickery and circumvention to gain their end. This promises to stop at nothing, from national dumping of goods to crush competition to false labels and disguise of the origin and the breaking of contracts that prove disadvantageous to the German.

"Let the manufacturing and banking interests and the laboring and professional classes of all nations be warned in time to devise antidotes and counterattacks to the Machiavellian devices of a class gone mad with lust for conquest, deliberately plotting to fatten itself upon the life blood of other peoples even after the war. Let us consider in making peace what protection we can give to the commercial existence of the freed nations."

EXHIBIT B

On the eve of the San Francisco Conference (1945) which created the United Nations, Mr. Hoover wrote a special piece for the North American Newspaper Alliance. Here are excerpts of this article:

"My fourth proposal for the San Francisco Conference is that agreement upon con-tinued and total disarmament of the enemy nations must be entered into either as part of the United Nations Charter or as a separate agreement. In any event it will have to be enforced by the Security Council. And it profoundly affects the whole question

of peace. "Three years ago Mr. Gibson (Hugh Gibson, American diplomat) and I proposed that the enemy states must be completely disarmed for an entire generation. pointed out one of the great errors of the Treaty of Versailles in which Germany was permitted to retain a professional army of 100,000 men, supposedly for the purposes of maintaining internal order. She was permitted to have a navy limited only in ton-nage and type of ships. We stated that this leeway perpetuated her professional armies and navies. It perpetuated the warrior caste and all its traditions. It afforded a skeleton army and navy of skilled men ready for quick expansion. It insured the continuity of the general staff with its military skill, brains, and ambitions. It perpetuated their knowhow to make war.

"Repeated experience with the warrior caste of these nations in their intimidations, aggressions, blitzes, and attacks without even declarations of war should be enough for the world in this particular. We must make a better job of it this time. We should prohibit the manufacture of arms of any kind by these countries."

Prayer for Peace

EXTENSION OF REMARKS

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. AVERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a short letter received from Rev. David W. Bletscher, pastor of

the Evangelical United Brethren Church, Randolph, Kans.

In a few words, I believe this letter expresses the hopes and thinking of thousands of mothers and fathers in our State of Kansas. Because of the tense situation in the Formosa area, I feel this letter is of particular significance at this

The letter follows:

THE EVANGELICAL UNITED BRETHREN CHURCH, Randolph, Kans., January 25, 1955. Hon. WILLIAM AVERY.

Washington, D. C.
DEAR Mr. AVERY: Greetings. I am writing to you as our Representative and asking you to use every influence you can to keep us out of war. We hope and pray that there will be another way to solve the Formosa situation besides war, which never has and

never will settle anything.

I am a rural pastor and I hear very little complaint on the part of the farmers. Generally they seem to be well satisfied with the Republican administration in Washington. we can be kept on this fine peacetime basis, it will be much better all the way round than a wartime basis, say nothing of the moral, spiritual, and economic disaster that always follows. I know I am speaking for thousands of fellow Americans.

May I suggest that we make this matter a matter of earnest prayer, praying that our Nation may be kept in peace and that peace

may come to all the world.

May I also suggest that Congress set aside a day of prayer and penitence, asking God to keep us in the ways of peace.

You probably remember my wife as the former Goldie Thrush from Wakefield. May God bless you in your responsibility.

Sincerely,

DAVID W. BLETSCHER

Salary Increases for Postal Workers

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. HOLTZMAN. Mr. Speaker, many times in the past 2 years have I spoken to this body on the need to enact adequate legislation to increase the salaries of our postal workers.

During the last Congress, I had introduced a bill calling for an \$800 per annum increase for postal workers, but, unfortunately, no action was taken on this measure. However, legislation granting somewhat smaller increases to postal and other Federal workers was approved by the House and the Senate and sent to President Eisenhower for signature. The President chose to veto the bill on August 23, 1954, after the adjournment of Congress when it was impossible for the Congress to take any additional action to override the veto.

Legislation has been introduced in in both the House and the Senate which will provide a 10-percent increase in the basic compensation of postal employees, with a minimum increase of \$400 per annum, and I am introducing similar legislation in the House today, with the hope that this measure will be reported favorably by the Committee on Post

Office and Civil Service.

There has been a move afoot to tie in the salary increase with an increase in the postal rates. The one is not interdependent upon the other and to approve such tie-in legislation would be to establish a very poor precedent.

The last increase granted the postal employees was in 1951, and we are all well aware of the fact that the cost of living has increased considerably since that time. These employees have been desperately trying to catch up with the rapidly rising cost of living, but are far short of the goal and hard pressed to provide their families with even the bare necessities. The vast majority of postal workers have been forced to supplement their incomes by taking part-time employment elsewhere or having their wives work-a situation which is certainly far from ideal, particularly when there are children in the home.

The employees of the Post Office Department are hard working, loyal, and most deserving of our prompt and favorable consideration, and I respectfully urge each and every Member of the House to get behind this legislation to provide more adequate remuneration for those who have served us so faithfully and efficiently.

The President's Conflicting Advice

EXTENSION OF REMARKS

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Roscoe Drummond from the New York Herald Tribune of February 7, 1955:

THE PRESIDENT'S CONFLICTING ADVICE (By Roscoe Drummond)

WASHINGTON.-If you were President of the United States, which of these two alternative lines of advice would you take in ordering a review of the Government's personnel secu-

rity program?

It is agreed by the differing advisers-and by the President—that there has been a sufficient number of injustices to individuals and loss of skilled people to the Government so that some reexamination of the system Itself is necessary. The issue isn't whether the system, including Executive Order 10450, shall be reviewed but how thoroughly it should be reviewed, whether there should be an incidental look-see by a few officials al-ready busily operating the system, or a major clinical checkup, including X-rays, by detached and distinguished bipartisan commission.

That is the question and here is the conflicting advice the President is receiving.

"There are two reasons for not making any big-splash issue out of reviewing the security

"First, it is, in the main, working well and the greatest anxiety of the country is that we safeguard the Government. The percentage of cases which have gone wrong is relatively low.

"Second, if you name an outside, bipartisan commission to study how to improve

the system, you will take the issue of dealing with subversion out of politics, and it shouldn't be taken out of politics. To do so would be to strike from the hands of the Republicans a legitimate political issue; namely, that we can and are doing the job better than did the Democrats."

The counteradvice, which also comes from presidential associates inside and outside the

administration, is this:

"The American people are united on these two objectives-to protect the Government from subversion and to protect the employee from unfairness by his Government. To continue to make this security issue a partisan matter is to divide a united people and is bad politics, not good.

"There are many more miscarriages of justice under the security system than you realize, Mr. President. You ought to get all the facts and find out what has brought them about. The best way to do so is to let a commission of trusted people look frankly and thoroughly into the system to see where it can be improved.

"Remember, the Truman administration was hurt-and rightly hurt-because, for a period at least, it was not sufficiently alert to protecting the Government against sub-Your administration can and will version. be hurt if it allows the country to feel that it is not sufficiently alert to protecting the employee from unfairness by his Government.

There are the alternative lines of action which continue to be explored when the question is discussed between the President and his close advisers. Thus far Mr. Eisenhower favors the within-the-administration review of the security operation and rejects the high-level commission approach. would not think that a different decision is permanently foreclosed.

I know of one high official of the Government, who has no personal stake whatsoever in the matter, who is convinced that an administration which decisively takes the security program out of politics and operates it with full regard to both security and fairness will be rewarded by the voters.

For this reason, he would recommendand his recommendation has not yet reached the White House-that Mr. Eisenhower appoint the most bipartisan commission within his power to review the program. He is prepared to name names.

For chairman he proposes the only living retired Justice of the United States Supreme Court, Owen J. Roberts.

For the others he proposes the only two living ex-Presidents of the United States-Herbert C. Hoover and Harry S. Trumanand the two latest defeated Republican and Democratic Presidential nominees-Thomas E. Dewey and Adlai E. Stevenson.

Some might think that such a commission would produce only disagreement. I suspect that, after looking at all the facts, it would produce remarkable unanimity.

I Speak for Democracy

EXTENSION OF REMARKS OF

HON. W. PAT JENNINGS

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include a speech of one of my young constituents, Miss Pauline Rose, a student of the Tazewell (Va.) High School.

Miss Rose has shown an exceptional understanding of the American way of life and has included her ideas in this outstanding speech. I feel that it deserves appropriate notice and I commend her for the interest and initiative she has demonstrated. The speech follows:

I SPEAK FOR DEMOCRACY (By Pauline Rose)

I speak for democracy, I speak for the golden land of opportunity—a land where the people have more food, clothing, medicines, automobiles, radios and TV sets, schools and playgrounds-than the people of any other country. But it is a land, where the innermost desire of every individual to think, to believe, and to live, is fulfilled.

A land where great universities, wellequipped libraries, and modern laboratories are open to those who are willing to work and try, whether they be rich or poor. The highest offices in our schools, communities, and Nation are held by persons belonging, not to a royal family or privileged class, but by persons whom the people have chosen.

We have cast our ballots and bestowed the highest honor in our country upon men from every walk of life. Abraham Lincoln was born in a log cabin in the backwoods of our country. Andrew Johnson was a humble tailor; George Washington, a plantation owner; Franklin D. Roosevelt, a cripple; Dwight D. Eisenhower, a soldier. These are only a few of the truly great Americans who, through their own initiative and ability, have held the highest office in our country.

The many libertles of Americans are revealed by our daily lives. The right choose can be seen in a young high-school boy looking at a college catalog, planning his own future, or in a newly wed couple studying the designs of a home, which they will build by the quiet seaside. A newspaper boy on the street of a small American town crying, "Extra! Extra! Get your papers. Read all about it," rings out the news of freedom to publish and to read. The determined voice of a politician, the calm voice of a minister, or the noise of a newsreel, coming to the American people over millions of radios and TV sets, demonstrate our opportunity to speak and to hear. Jewish synagogues, beautifully decorated Catholic cathedrals, tall, peaceful Protestant churches, standing on the streets in the busy cities, in quiet towns, and in the lovely countryside, show in a way that nothing else could, an American's wonderful privilege to worship God as he chooses.

An American's happiness can be seen in the smile of a medical student, as he receives his diploma giving him the right to administer to the sick, or in the joy of a mechanic having just finished repairs on an automobile, both typical of every American, smiling because he is completely satisfied, proud and happy to be using the talents which God has given him.

Combine this nationwide happiness, liberty, and equality, and you have a golden land of opportunity.

Yes, it is true that persons wishing to control and conquer the lives of men have tried to destroy these opportunities, but through the courage, faith, and bloodshed of men such as those who fought at Valley Forge, Old Baldy, Argonne Forest, and Iwo Jima, and the Yalu River of Korea, these opportunities live on today.

To any of you who have the slightest doubt concerning the ideas of democracy, I ask you to compare the possessions, the liberty, the equality, and happiness of every American man, woman, and child to the people of any other country, and I believe that all doubts will be erased from your minds. I know, for I live in this golden land of opportunity. I speak for democracy.

An Analysis of H. R. 864

EXTENSION OF REMARKS

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. MASON. Mr. Speaker, H. R. 864, a bill to amend the Tariff Act of 1930, introduced by Congressman Van Zandt, is designed to restore to Congress the final responsibility for any adjustments made in the tariff. To this end H. R. 864 would empower the Tariff Commission under stated conditions to increase or reduce or to establish rates of duty, or to impose, modify, or withdraw import quotas, subject only to congressional veto.

The stated aim of the bill is to establish imports on a fair competitive basis, first, by avoiding import injury to domestic producers; and, second, by providing means of reducing excessive rates to the peril point, that is, to the point below which import injury would occur. This might include complete removal of a duty.

Mr. Speaker, H. R. 864 would give statutory standing to the rates now owing their existence to a trade-agreement concession. Therefore, there would be no increase in any rate of duty upon expiration of the existing trade agreements law. All existing trade agreements would remain in effect in accordance with their own terms until or unless expressly repealed.

The overall objective of this bill is to assure the largest volume of imports that may be absorbed by this country without causing import injury. It provides the machinery by which our tariff may be adjusted, item by item in individually investigated cases, to bring about such a maximum volume of trade.

The adjustment of any tariff rate could be initiated in a manner very similar to the present initiation of an escape-clause action. To date this has been confined to applicant industries that have alleged serious injury from imports. Under H. R. 864 producers who suffer injury from import competition could apply to the Tariff Commission for a tariff adjustment. The Commission would make an investigation, hold hearings, and—if convinced of the need for relief—would issue a tariff adjustment order consisting of a change in the tariff or a quota limitation or both.

The tariff adjustment order would then go to Congress where it would lie for a period of 60 days. If the order were not voted down by either House during that period, it would go into effect.

Export or import interests who feel that a particular rate of duty is too high could likewise apply to the Tariff Commission under the same procedure. If the Commission found the rate to be too high, it would issue an order reducing it to the peril point. From there the procedure would be the same.

Mr. Speaker, the Congress, through the provisions of this bill, would lay down guides to the Tariff Commission for its use in judging whether import injury or lack of fair import competition exists. Eleven points of evidence of injury are set forth as a guide.

While the executive branch would no longer have the final word in a tariff adjustment, the bill, nevertheless, provides that the Department of State might, if it so desired, send to Congress a statement setting forth its views on any tariff adjustment order. The National Security Council would likewise be given a voice in the determination of cases to the extent of having a representative sit with the Tariff Commission during hearings.

Mr. Speaker, the system proposed by H. R. 864 would not lead to any general increase or reduction of the tariff. Rate changes would be made or quotas would only be imposed or modified after investigation of individual cases. If an existing rate were satisfactory or no application were made to have it modified, there would be no modification. Thus, only a limited number of rates would be changed—increased or reduced—per year. The Tariff Commission would be given 9 months to conclude any 1 investigation.

There is no similarity in this procedure to—or remote connection with—the old system of logrolling when Congress itself wrote the rates. The principal difference between this method of changing the tariff and the present system lies in changing the final authority in a tariff modification from the executive to the legislative branch. Also, the tariff would no longer be used as an instrument of diplomacy by the State Department or as a means of bargaining for concessions from other countries.

Small Business the Backbone of Our Economy

EXTENSION OF REMARKS

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. McDONOUGH. Mr. Speaker, small business is the backbone of our Nation and the very foundation upon which our free-enterprise system is founded.

Through small business, the individual citizen has the right to "be his own man," to take upon his own shoulders the responsibility for his future, and to rise or fall as a result of his own ability, industry, and perseverance. Big business is, after all, merely an extension of small business, and if the history of most of our great corporations were examined, they are the direct result of the foresight, courage, and labor of an American who founded a small business which grew and grew.

Today we frequently hear words of discouragement to the young men and women who are considering entrance into the field of small business. They are told that small business is declining, that the risks are too great, the profits too small.

This is not true and it is important to the future of our Nation that the truth be known about small business, that our citizens be encouraged to become small businessmen, and that the Federal Government continue its assistance to small business which today holds a vital place in our national economy.

The following editorial which recently

The following editorial which recently appeared in the Los Angeles Times repudiates many of the false allegations circulated about small business and is an excellent review of the true facts about small business and its importance to our Nation:

Some Facts About Small Business

Generalizations are frequently employed by those who are not too sure of their facts. One of the generalizations we have been hearing frequently in recent years is that the importance of small businesses is declining. A picture has been drawn of small businesses withering like stunted saplings in a forest, denied the life-giving sunlight by the growing shadows of big business.

THE STORY AS IT GOES

Small business is on the way out, we are told, and big business is taking everything over. It costs too much to start a small business and too much to run it. The chances of failure are too great.

Now for some facts. The Chamber of Commerce of the United States in a pamphlet, "Small Business: Its Role and Its Problems," which may be obtained by sending 50 cents addressed to the Chamber of Commerce of the United States, Washington 6, D. C., presents some interesting figures.

One—and this may come as a surprise—is that about 95 percent of all businesses in the country employ less than 20 employees. Another is that about 75 percent employ 3 or less employees. Even in manufacturing where the popular conception of big business is centered, the percentage of establishments with 3 or less employees is far in excess of those employing 20 or more. Of 331,000 manufacturing plants, there are 148,000 with under 4 employees.

THE 50-YEAR HISTORY

This does not seem to indicate that small business is on the verge of extinction. On the contrary, according to the national chamber, small business is showing big gains. As recently as 2 years ago 340,500 businesses were launched, most of them small.

It is also important to note that over a 50-year period the average manufacturing firm has doubled in size while the relative proportion of small, medium and large firms has remained at about the same level. There is, of course, a high portion of resources concentrated in large firms, but on the other hand corporations with assets of \$250,000 or less possess resources totaling a substantial \$29 billion.

The national chamber observes that "the ability to experiment, to adapt, and to change is one reason why the small business is so important to the economy as a whole. The small business is the economic seedbed from which arises the majority of new ideas, new methods, and inventions * * with some 330,600 different manufacturers and hundreds of thousands of service establishments, each competing for the market, prices tend to be lowered and quality improved."

It must be recalled, also, that some of our largest industries of today were relatively small operations in their beginning. Automobiles are a case in point; radio, television, and aircraft are more recent examples. The man who starts a small business cannot al-

But small business which remains small has than would ever be returned here in Federal a permanent place. a permanent place.

THERE ARE PROBLEMS

Small business provides products and services that big business can't possibly hope to offer. As far as personal products are concerned, take the case of women's hats. It would require a vivid imagination to picture a woman purchasing a hat identical with 20 million other mass-produced hats. There are fields in mass production which small businesses are not suited to enter just as there are fields in small business which will never be encroached upon by big business.

This is not to say that the life of a smallbusiness man is without problems. The national chamber has listed two major problems for the small business. One is inefficiency or incompetency and the other is restrictive tax policies.

Inefficiency and incompetency are strictly the affair of the operator. But high corporate and personal income taxes are something else. If the Government wants to give small business help, it can do it, as the national chamber says, not through special privileges, but by maintaining conditions which stimulate business in general.

In any event, small business was, and is a major part of our American economy. It will remain so just as long as we have men with ideas, intiative, and resources, and a governmental atmosphere that affords them the hope of securing a fair return.

Federal Aid to Schools

EXTENSION OF REMARKS

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following articles, one from the Saginaw News of February 2, 1955, and concerning Federal aid to schools, and the second from the Detroit Free Press of February 3, 1955, and concerning unemployment:

[From the Saginaw News of February 2, 1955] MICHIGAN WOULD LOSE IN SCHOOL AID POOL

States with low money resources are constantly after a share of other States' wealth. Their most successful approach has been through formulation of Federal aid legislation.

If some of our Michigan Representatives in Congress would forever keep that fact in mind, they would not be tempted into plumping for more Federal spending.

Most recent example is the bid for Federal emergency school construction money.
Michigan's Democratic Senator McNamara has been sitting in on Labor and Public Welfare Committee hearings on the subject. Ecnator Hill, of Alabama, is its chairman.

Apparently Mr. McNamara has heard enough to satisfy him that Federal aid is the only solution. Having served as a member of the Detroit Board of Education, he undoubtedly has a good working knowledge of the problems confronting education generally.

But Mr. McNamara would do well to consider what cost to Michigan would be imposed. As a State contributing heavily to support of the Federal Government, Michigan could expect only to pay in far more

Michigan's school construction problem is chiefly one of finance. Michigan has the resources to meet the problem. Why invite even greater burdens by encouraging a Federal program?

Mr. McNamara has expressed impatience with Congress for its failure to have enacted Federal aid legislation long ago. He wants an immediate appropriation authorized.

If we could generate this kind of zeal at the home community level, the school prob-lem would be solved much faster—and at far less cost.

It is not narrow selfishness that dictates a do-it-yourself viewpoint. All of us must assume a share of the burden where extreme distress exists in the country. But emergency aid is far different from creation of a nationwide building fund into which all 48 States would dip greedily. Many, like Michigan, if such a fund were set up, would be forced to it in self-defense-in an effort to salvage something from the State taxes taken from them by the Federal Government. Many others would dip in glee at the fat sums falling to them for free.

Beyond the unnecessary inequity and inevitable extravagance that accompanies federally administered domestic programs is a moral question of educational freedom.

Sooner or later the Federal Government, through increasing support of education, would exert an ever greater control of education. Local communities would be forced to abdicate some of their responsibility to Central Government.

Michigan taxpayers should should know this even as they view the history of their State sales tax, most of which is now frozen into constitutional provision for distribution to schools under a rigid formula.

Our own State aid to education has become a political concern, taken almost entirely out of the hands of local communities. School boards and school administrators lay plans, seek or reject students, with an eye to the State aid formula. And all the while these same dollars were potentially available in most home communities.

Because local taxpayers chose to duck or eject home responsibilities to their schools, the school people carried their case to the State capital. As a result, a State tax has been blanketed in for all time, and offending communities, Saginaw among them, are being penalized as tax contributors exceeding taxes returned.

The proposed Federal program is but a magnified blueprint of State aid. Better to get Federal spending down for the day of lower Federal taxes so that the taxpayer can better afford to support his own schools in his own community. That is always the better

[From the Detroit Free Press of February 3. 1955]

JOBLESS INCREASE AMID PROSPERITY IS GROWING PROBLEM

(By Sylvia Porter)

There are probably more than 3,500,000 American men and women looking for jobs, and when the Government's official tally of unemployment in the February-March period is released, it may show the total above 4 million

This total admittedly would be an economic red flag and be politically explosive. Yet, there unquestionably is a rosy glow throughout our economy in this second month of 1955.

There is no doubt that we have been in rising business trend since the fall of 1954. It well may be that this year our output of goods and service will hit an all-time high.

This is it, the economic paradox of our times: A hard core of unemployment and, at certain seasons, a steeply rising total of jobless in a period of overall good times.

To date, all official statements from the administration have soft-pedaled or ignored

In his economic report, for instance, President Eisenhower simply said developments "hold out promise that we shall achieve a high and satisfactory level of employment within the current year."

Yet, the puzzler remains: In today's good times, millions can't find jobs, and in some areas unemployment is critical.

Why this paradox? Let's rip apart the economists' technical jargon, put it into our language. Here are the reasons why:

1. Every year more people are coming into our labor force than are leaving it, and at today's pace of advance, industry is not creating enough new jobs to absorb the extra workers.

The official estimate is that a full million additional workers will be seeking jobs in 1955. To absorb all of these, our economy would have to be expanding at a much faster rate than it is.

2. Every year our workers and machines are becoming more efficient, meaning it is taking fewer workers to turn out the same total of goods.

In November 1954, industry turned out the same total of goods as in November 1953, but with 850,000 fewer workers.

The considered forecast of top experts is that our economy will expand by 10 to 12 billion dollars this year. But to slash unemployment to 1953's good times level, the judgment is that our growth in 1955 would have to reach 25 to 30 billion. Mighty few think this is in the cards.

So this is our choice:

We can settle for a steady but moderate expansion in our economy this year and in the years to come. And we can argue that in this sort of business climate prices will be stable, inflation will remain under control, the dollar's value will hold, and, in the end, America will be stronger and the majority will be better off.

But if we settle for this, we also accept the likelihood that millions of jobless families will find chatter of prosperity a bitter mockery and unemployment will be our key problem.

Or we can insist on a much bigger and faster expansion this year and in the years to come, and we can demand Government actions-immediate tax cuts, speeded-up spending, etc.—to impel the growth.

But if we insist on this, we also accept the risks of a rising price level, a renewed inflation and the danger that the dollar's value will shrink year after year.

This is the dilemma that rises out of the

paradox.

Business is not yet facing up to it. Neither is our Government. But both will have to. And how much better for all of us it would be if industry meets the challenge first and thus proves it truly understands its responsibilities and can fight for the freedoms it cherishes.

On Food Production

EXTENSION OF REMARKS OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the include an editorial and a column from yesterday's Washington Post and Times-Herald:

BRAKE ON SOVIET POWER

If the Soviet bloc were as successful in expanding its agriculture as it has been in building its industry, it would be a much more formidable opponent of the West than it is today. Agriculture is the real limiting factor in Soviet strength. Nothing that is being done indicates that Russia is about to overcome its weakness in this important area, for the Kremlin is combating human nature, the elements, and vast areas of impoverished land. Today half the population of the Soviet bloc is required for farm work compared to one-third of the population in Western Europe and one-seventh in the United States. "Agricultural production is United States. "Agricultural production is the tightest bottleneck standing in the way of the further rapid industrialization of both the Soviet Union and the captive countries of Eastern Europe," the Congressional Joint Economic Committee says in a timely report on the relative strength of the Soviet and Western Powers.

Russia's propaganda has glossed over her agricultural failings and boasted of her great industrial gains. Some of these have been extraordinary, but unless the farm picture is taken fully into account it is impossible to get an accurate picture of the Soviet's economic strength. The speed of Soviet indus-trial development is what has captured the imagination of the underdeveloped countries. Thirty years ago Russia was unimportant as an industrial nation; now it is second only to the United States. Since 1929, Soviet production has expanded at a much greater rate than American produc-tion, but in the last 5 years the difference has

been narrowed.

The joint committee's report—prepared by the Legislative Reference Service of the Library of Congress-says that while the rate of growth in Russia may continue to be higher than in the United States the absolute gap in the size of the two economies will widen over the next two decades as the United States builds from a larger and stronger base. This also is the conclusion of Donald R. Hodgman in his book, Soviet Industrial Production. Further industrial expansion, Professor Hodgman says, will at a declining rate because so much of the Soviet labor force will continue to be needed on the farm and because technological expansion will not be so rapid as when machines first were introduced.

Three other limiting factors in the development of Russia's industrial potential are inadequate power and transportation, consumer goods, and housing. However, if Russia should develop low-cost atomic power before the West does, its economic posi-tion would be materially improved. As was shown by their success in developing atomic and hydrogen bombs, Russian scientists have the skill and the governmental support necessary for very rapid work. Russia does not hesitate to spend great sums of money where it thinks results can be achieved. The Kremlin thus can develop a concentration of effort that may not always be possible in the free countries, and this is an extremely important factor in industrial expansion.

Grover W. Ensley, staff director of the joint committee, emphasizes this point in insist-ing that "above all, sight must not be lost of the intense, continuing efforts of the Soviet Union to maximize production within its own borders and within those of the captive countries of Europe." It is not enough, he correctly says, to have recovery in the free world. There must be a continued, dynamic economic growth if the West is to maintain its economic lead over the Communist bloc.

Appendix of the Record, I am pleased to A Population Myth Exploded for United STATES

(By Herbert Elliston)

Nowadays we are inclined to look outside our shores for what have come to be called the underdeveloped areas. Thinking of what may be done for China with point 4 aid, for instance, we point to that country as a great underdeveloped area. The fact is that no-where in the world does agriculture reach the same levels of intensive production as in China. Look to the West for the real under-devolpment. Dr. L. Dudley Stamp, the re-nowned geographer, has written in a new book called, Land for Tomorrow, that one of the outstanding underdeveloped countries is the United States. He estimates that the Mississippi Valley alone should be able to provide enough food for half a billion people, given the application of existing ideas of husbandry.

Dr. Stamp supports his statement about American underdevelopment with data of actual and potential populations that are and could be sustained on land resources now used. He finds that northwestern Europe employs its used acres at maximum. What would happen, he asks, if other arable lands of the world were farmed as efficiently as they are in northwestern Europe? This startling result is what this great authority on land use finds on the basis of a recent,

though unstated, year:

Population [In millions]

	Actual	Potential
England and Wales United States India and Pakistan Canada U. S. S. R	44. 5 150. 0 420. 0 13. 0 200. 0	24. 5 500. 0 330. 0 90. 0 556. 0

Note.—Since this base year our own population has burgeoned to 163,900,000.

Thus the old countries are, by present standards, overpopulated. To cope with overpopulation, Britain imports, India is underfed; while Canada and the United States are not only self-contained but have great possibilities for population increase, and at higher living standards.

Let us now look at the data on population increase to see what is actually going on in this department as recorded by Dr.

Stamp.

Our flesh is often made to creep with the statement that the colored races since the war are outstripping and will continue to outstrip the whites. Fifty years ago, Henry and Brooks Adams held to this pessimistic belief. Brooks Adams wrote with inspissated gloom of the passing of the white race as the result of outbreeding on the part of the colored peoples themselves. Negro writers in the United States are sometimes themselves guilty of writing about absorbing the world's white minority. Such writing is much more common now than last century because of the revolutionary fever for independence.

Such a misconception is related to the myth of underdevelopment, and ought to be scotched at the same time. Actually the censuses show that the high rates of natural increase are not in India or China or in Europe, which are overcrowded. Nor are they in Africa, which is overcrowded in big areas and as a whole has lost ground so markedly in a relative sense that the black peoples have dropped from one fifth of the population of the world to one fifteenth. high, the highest rates of natural increase

are in—the Americas.

More narrowly, the English-speaking whites in the Americas have shown the greatest growth since 1945. We are noting, of course, natural increase. The Englishspeaking whites in the Americas have increased four times as rapidly as the peoples of the world as a whole. Yet it seems only the other day that the experts were fore-casting a stationary population for the United States.

Compare the United States and India. In India, the net gain was 13.3 per 1,000 in 1933, but only 1.4 in 1944. In the United States, the net gain shot up from 5.9 per 1,000 in 1933 to 15.7 in 1947. In other words, America is prolific in babies (a record 4,-000,000 last year) as in everything else, and in bables who survive as well; and she is outspeeding the word in this department. Truly there is much we believe that is not

A final word-about the Soviet Union. Last century it used to be said that the fecundity of the Slav woman was the greatest menace confronting the British Empire. Data, however, are unreliable, even loaded. In 1927 I recall taking a bunch of statistics from Moscow with me to an appointment I had in Berlin with the head of the Reich statistical office, Dr. Ernst Wagemann. In my innocence I said these figures came from statisticians who were retained from the Tsarist regime. "No wonder," Wagemann snorted. "Those fellows were such accomplished liars."

House Joint Resolution 172, Proposing a Constitutional Amendment To Limit the Treatymaking Power

> EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, January 31, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, recently the Honorable George A. Finch, an eminent authority on constitutional law, said that "the Yalta agreement is the blackest page in American diplomatic history."

To avoid more Yaltas I have proposed constitutional amendment that if adopted would limit the treatymaking of the President.

Mr. Speaker, my House Joint Resolution 172 is a revised draft of a constitutional amendment to limit the treatymaking power. It will be observed that it omits in terms the controversial "which" clause.

However, it would not be fair to say that it puts no limitation on the creation of power in Congress to enact legislation through the exercise of the treaty

If, as was indicated by the late Chief Justice Hughes in his address before the American Society of International Law in 1929, the treaty power is not subject to any express, and may not be subject to any implied, constitutional limitations, then section 1 does subject the treatymaking power to constitutional limitations.

Section 1 provides that a treaty to become the supreme law of the land must be made pursuant to the Constitution That provision is intended to overrule the concept that a treaty to be valid need

only be made under the authority of the United States, and not in pursuance of the Constitution, as is the case with statutes. Under this provision treaties as well as statutes must conform to the Constitution.

Section 1 also provides that a treaty must not conflict with any provision of the Constitution. The purpose of that provision is to overcome a possible construction that since the treaty power is created without any express limitations, and perhaps even without any implied limitations, other provisions of the Constitution must be construed and reconciled with the treaty provisions and be regarded as not limiting the power to make treaties; in other words, that other provisions of the Constitution must give way to an unlimited treatymaking power.

An example of what the provision is intended to accomplish is illustrated by the Pink case (315 U.S. 203 (1942)). In that case an international agreement made without the advice and consent of the Senate accomplished the taking of property without compensation in violation of the prohibition of the fifth amendment. This taking was held valid. Why should it be possible to assert that a treaty should be permitted to violate constitutional prohibitions? Why should it be possible for a treaty to "override the Constitution"? Why should the treatymaking power be greater than its source, the Constitution of the United States? Why should it be constitutionally possible to cut across the Bill of Rights? He is indeed bold who asserts that it should be possible by treaty to subject an American citizen for an offense committed within our territorial limits to the jurisdiction of an international criminal court without the safeguards which our Constitution provides for the protection of persons charged and tried in our own courts?

The Constitution provides that "all legislative powers" therein granted are vested in the Congress. Can it be doubted that it should not be constitutionally possible by treaty to transfer that power to the Executive or to vest it in an international organization or body?

This does not mean that the power will not exist to make any treaty essential to the proper conduct of our foreign affairs and the carrying on of our external relations. But it does mean that the treaty power must conform to the provisions of the Constitution as a whole and must not violate the intent and spirit of any individual constitu-tional provision. This resolution will not interfere in any way with the power of the executive branch to conduct our foreign relations and enter into treaties, conventions, and agreements with foreign nations with respect to our external affairs; but it will prevent a violation of the provisions of the Constitution through the exercise of the treatymaking power. For example, it will prevent the taking by treaty of a person's property without due process of law and the payment of just compensation. It will prevent the creation of power in the Congress by international agreement to legislate with respect to those matters that have no legitimate relation to the

conduct of our foreign affairs—matters that have traditionally been and should be within the local jurisdiction of the States.

Section 2 places no limitation on the power to make treaties or other international agreements self-executing by virtue of their terms, insofar as they bind the United States under international law as a party thereto, and deal with foreign relations and external affairs; but it does prevent them from becoming internal law within the United States binding on individuals without the sanction of legislation.

Mr. Speaker, as part of my remarks, I am including the following copy of my resolution hereinbefore referred to as I have introduced it:

House Joint Resolution 172

Joint resolution proposing an amendment to the Constitution of the United States relative to the making of treaties and executive agreements

Resolved by the Senate and House of Representatives of the United States of America Congress assembled (two-thirds of each House concurring therein). That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States, within 7 years from the date of its submission:

"ARTICLE -

"Section 1. A treaty or other international agreement, or any provision thereof, not made in pursuance of this Constitution or in conflict with any of its provisions, shall not be the supreme law of the land nor have any force or effect.

"Sec. 2. A treaty or other international agreement shall be effective as internal law within the United States only through legislation.

"SEC. 3. On the question of advising on, and consenting to, the ratification of a treaty, the vote shall be determined by yeas and nays, and the names of the persons voting for and against shall be entered on the Journal of the Senate."

Gambling Capital of the United States Unmasked—VI

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. ANFUSO. Mr. Speaker, here is the sixth article of the series by Bob Considine telling the story of America's gambling mecca, Las Vegas, which appeared in the Chicago American on January 28, 1955:

Las Vegas Unmasked—Other Side of Nevada's Gambling

(By Bob Considine)

LAS VEGAS, January 28.—Nevada treats gambling like any other State treats its biggest industry.

It has surrounded wagering with rules and regulations. It is as dependent upon games of chance as Michigan is on the auto plants.

Many dark illusions have been made to sinister tie-ins between big gambling opera-

tors and the politicians at Carson City and elsewhere in the State. Actually, there is little need for the gambling fraternity to spend much money attempting to elect "safe" officials.

An antigambling politician would stand no chance in Nevada. Gambling is as legitimate as churchgoing, but attracts many

more people.

The aspiration of Nevada officials is to keep the thing clean and without warfare, to police it as well as a limited budget permits. They also aim to discourage the arrival of hoodlums of too recent vintage.

CRIME GROUP

Newly elected Republican Gov. Charles H. Russell has asked the legislature for a Nevada crime committee, to be set up with private funds. It would be fashioned after similar groups in Illinois, California, New York, and Florida. Russell also has asked for extraordinary personal authority to revoke gambling licenses.

Under present law an operator suspected of violating the codes is first presented with a show cause order. Weeks and months usually drag on while an inquiry is made.

Russell wants the right to clamp down in a hurry, an authority which successive Nevada legislatures have withheld from their governors.

Gambling in Nevada is controlled by the State Tax Commission, a seven-man group named and headed by the governor. The commissioners are chosen from loftier professions, serve without pay, and currently appear to be held in a combination of respect and awe by most operators.

GAMBLING LAW

The Nevada gambling law was passed in 1931 when the State teetered on the brink of bankruptcy because its mining and cattle industries were almost extinct. It covered 15 pages of fine print. Basically, it provides:

15 pages of fine print. Basically, it provides:
No operation may begin until the applicant has obtained all the required licenses—State, county, city, or town. The granting of a license by one political subdivision is not binding upon another. Refusal to grant a license by one licensing agency renders the remainder inoperative.

All applicants for licenses are fingerprinted and the prints checked with the FBI. Along the Las Vegas "strip" no one can receive a license who has been convicted within 5 years of the date of application. In the city itself, the limit is 20 years.

Names and records of partners and stockholders owning 2 percent or more of a gambling place must be supplied under pain of losing the license.

No person licensed to conduct gambling in Nevada may own or control any interest of any kind in gambling establishments or games in States where gambling is illegal.

Regular inspection of gaming equipment and slot machines is provided by law. Violators who tamper with the dice, cards, wheels, and machines are subject to a fine of \$1,000 or 6 months in jail, or both.

INCOME RISES

When Bugsy Siegel came to Las Vegas and brewed his dreams of making it the gambling mecca of the country, the State had no concept of what it might draw out of the lusty industry.

In 1945 the State's bit came to only \$100.-

792.22. In mid-1947 Nevada increased its tax bite from 1 percent to 2, put a fee on tables and instituted a tighter system of small fines for minor infractions. In 1950 it taxed the race-wire business.

By 1953 its 2 percent of the gross winnings amounted to \$1,668.896.86. Additional levies and fines brought the figure to \$2,170,-272.21—plus \$350,000 from pari mutuel racing.

One can only guess how much money is brought into the State treasury indirectly from gambling. Only a microscopic fraction of the stream of visitors to Nevada falls to stop off and spend money for goods, services, or at games of chance. There is a furious building program in the Las Vegas area. Real estate has skyrocketed in value.

WORKERS ARRIVE

Gambling has brought thousands of workers to Nevada, notably to Las Vegas, to man the big establishments. More and more build homes, take root, and contribute to the State through property taxes and other ways. Lt. Gov. Rex Bell, former Hollywood cowpoke, declares:
"I don't know why we should be put in

the position of apologizing for our gambling

industry.

New York apologize for Belmont "Does Park? Does California apologize for Santa Anita? No. But everybody knows that racing doesn't give the player nearly the honest shake that, say, dice does. There aren't enough people in the whole State of Nevada to keep a New York or California racetrack going."

Big operators around Las Vegas fear that what they call the "Bible beit" Congressmen in Washington soon will be demanding a Federal share of money being gambled all over the State.

HIGHER TAXES

They plead a Federal tax would be confiscatory. But they seem resigned to the fact that the politicos at Carson City will in time increase the State tax. At this writing there are plans for a jump to 4 percent. The operators will fight it.

Some of gambling's earliest promoters here were criminals. A handful remain, but the trend long has been toward respectability.

The older thugs are in happy retirement here, by and large, content to sit back and let the house percentage take care of them.

COLLEGE TRAINED

The elders lean more and more on young men they scarcely would have trusted in the old days. These are mostly college trained and willing to put in long hours.

The prototype of this second generation of important figures in the Las Vegas gambling, hotel and entertainment picture is Allard Roen of the Desert Inn—which was begun by Wilbur Clark and completed by a Cleveland bootlegging and gambling combination, which retains control.

In response to queries, Roen writes: "Our earnings are made on a relatively small percentage and operate no more dramatically than the stock market fluctua-

"Owners and operators of Las Vegas and Reno establishments are busy training a new group of younger people to handle this oc-cupation. I am of this group. I was gradu-ated from Duke University in 1942, majoring in business administration. I entered the Navy in 1943 and served until 1947, a period which included 27 months in the Pacific and participation in several engage-ments, including Okinawa. I left with the grade of senior lieutenant.

"I studied complete hotel management, for that is what this hotel embraces. My Work entails booking and supervising the production of our stage shows, setting up credit systems for casino as well as hotel operations, and a host of other duties which include scheduling and handling the activities of our annual golf Tournament of Cham-pions, from whose proceeds we donate each year \$35,000 to the Damon Runyon Cancer

"Beyond a program of perpetual building, the revamping of existing structures, and maintaining this 400-room operation, I work closely with Lawrence Hughes, who built our golf course from the desert up.

"These multifarious details have been my responsibility. I, too, have just completed a

home on the course for my wife, Evelyn, and our daughters, Priscilla and Judith Anne.

"There is no onus attached to gambling in Las Vegas. The community has a good moral tone, a low crime rate, a population of almost 50,000 who attend 35 churches of all denominations. There is a good junior and senior grade school system. Residents, in general, are proud of Las Vegas.

BRINGS PROSPERITY

"The present prosperity of Las Vegas is, of course, due to gambling. Most Americans know this is a legal business in Nevada, carefully controlled by officials appointed by the

Governor.
"Gambling in Nevada is directed by men who have been engaged in this occupation for many years. Western States were a natural for gambling, what with mining camps, prospectors, and quick fortunes in gold and silver mines. Nevada comes honestly by this principal occupation. It was a pioneer business, once illegal but now respectable and very important to the State's economy.

"Those who are attracted to Nevada to practice the business of gambling were men who had learned their trade elsewhere, and Until recent times there beyond the law. were no legal practitioners of this business because there was no place to learn it in the full light of legality.

HIS PHILOSOPHY

"You ask me to outline my philosophy about choosing this career. I feel that many of the biggest fortunes in our country were originated by men who ignored the laws of the time to take advantage of the natural needs of supply and demand.

"These included fur trappers, land poachers, cattle rustlers, early railroad barons, and bootleggers, among others. But time and a new life within the law and the raising of families placed their descendants among the blue bloods of the Nation's society.

"In the old days of floating crap games and high-stakes contests an operator might make a quick killing and move his action to another locale.

"Our setup is different. We are now, and hope to remain, a permanent fixture in Las Vegas, performing in a perfectly legitimate manner. To the very best of my knowledge, the operators are civic-minded and charitable and have been exemplary members of the community.

"I do hope this gives you another view of

Gambling Capital of the United States Unmasked-VII

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. ANFUSO. Mr. Speaker, the following is the seventh and last article in the series by Bob Considine on the story of Las Vegas, the gambling capital of the United States, which was published in the Chicago American on January 29, 1955:

CHICAGO HOODLUMS HOLD HIGH SPOTS IN VICE CITY

(By Bob Considine)

LAS VEGAS, January 29 .- If you collect characters, this is your town.

If you want contrasts, buy a ticket to Las Vegas, which was located a million miles from nowhere until circumstances turned

it into the world's lushest gambling spa, serviced by several airlines, the Union Pacific Railroad, bus companies, and fine roads.

If an early figure in the gambling business in Las Vegas, Tutor Scherer, a well-educated and frequently married man, took a full page in the January issue of Las Vegas Magazine, hired an artist to draw the head of a man looking hungrily at a voluptuous doll, and with his eye in a fine frenzy rolling, wrote:

"I love your hands; I hold them.

I love your arms;

I fold them.

I love your lips; I kiss them.

I love your eyes; I miss them

When closed in sleep."

-Tutor Scherer, Poet Laureate of Nevada.

Scherer, in his 70's, married Laveeda Marie Varley in what turned out to be Las Vegas' biggest social event of 1951. The attractive bride, about half a century his junior, was a former cocktail waitress and bingo manager.

TWENTY-FIVE-THOUSAND-DOLLAR CHAMPAGNE PARTY

The champagne party after the wedding was reputed to have set back the happy poetgambler \$25,000, and the necklace he gave his bride was valued in the local press at

Not long after this happy event, Tutor showed up in a hospital shot through both legs, but filed no complaint.

Shortly thereafter, Laveeda sued for di-vorce and, in court, estimated her husband's income at a good \$50,000 a year more than the President of the United States receives. Several of his friends were offended because, they said, she low-rated him.

The poet laureate is happily remarried. this time to Judy Cauley, 24-year-old former

cocktail waitress.

Las Vegas lost a colorful resident when Benny Binion, once of Dallas, was cordially invited to jail as a tax dodger.

Benny, an old-style gambling operator who would also gamble, arrived in Las Vegas somewhat hurriedly several years ago in the wake of an indictment that associated him with the numbers business in the Dallas area and a dynamiting job on the car of a business rival, Herbert Noble.

Mrs. Noble, unfortunately, was the one to step on the starter of the car, touching off

volcanic charge.

Binion was succeeded in the operation of the huge Horseshoe Club in downtown Las

the huge Horseshoe Club in downtown Las Vegas by Joe W. Brown, who casually paid him \$558,000 for the property and is proud of the fact that he got his license pronto.

Brown has oil and gas holdings that bring him \$40,000 a month, and made a great fortune running gambling establishments in New Orleans in competition to Frank Costello and Phil Kastell, and in Texas.

A distinguished-looking and articulate man, Brown told me as we sat in his office, not far from the \$1 million in cash he has

on display at his front door:

"Don't listen to any talk that I have silent partners. The only partner I have in this enterprise is Mrs. Brown. I didn't need this, financially. I went into it to help Binion, a friend of mine, though it didn't turn out to be much help to him. Also I had a dozen fellows who had been with me a long time in gambling operations, and I wanted to see they had a steady place to work in."

Brown, who has 50 thoroughbreds in train-

ing, and owned the famous Dorsett line, employs 400 in his Casino at wages ranging from \$50 a day pit men (supervisors) to \$25 a day dealers. His payroll runs a couple of million dollars a year. He told me:

"But I make money here. I want anything I do to be a success. It's a matter of pride, I guess."

I asked him if he was ever tempted to gamble himself. He seemed surprised, and

"We get a 1.40 percent break on craps and the rest of the games give us more. If I went against that, even the dice I figure my arm would drop off."

A MONEY-MAD TOWN

"But," he continued, listening contentedly to the offstage sounds of a busy day, "I guess a lot of people don't agree."

Las Vegas is a town which produced an \$8,000-a-year executive secretary who quit her job to become a cocktail waitress in one of the "strip" hotels. Figured she could make more money—and had the figure to

It is a place where one of the property holders—apartment houses—is Marshall Caifano, who made the mistake of going over to Beverly Hills, Calif., the weekend before last. There, Police Chief Clinton C. Anderson arrested him for failure to register as a convicted felon—a precaution Caifano (a handsome Chicago hoodlum also known as Joe Russo, Frank Rinaldi, and George Mariani) does not have to take in Las Vegas. He was fined \$50 and told to blow.

Anderson said Caifano had a record of 12

Anderson said Caifano had a record of 12 arrests between 1929 and 1952, including arrests on murder, auto theft, and bank-robbery charges.

Caifano is expected to get a thoroughgoing inspection from the Nevada Crime Committee when and is set up. He has not applied for a gambling license, which would have to be screened by the State tax commission. The crime committee, however, is not limited to such things.

VIRGIL PETERSON'S OPINION

Las Vegas police say Caifano, sometimes called Mr. Marshall, is the messenger for Tony Accardo, who once was arrested as a vagrant (one of the richest ever) in the city of Las Vegas but is welcome along the "strip" outside.

Virgil Peterson, director of the Chicago Crime Commission, calls Caifano important in what is left of the Capone organization.

Insiders say that in June of last year a meeting was held in Chicago which served as a test of strength between Accardo and Paul (the Waiter) Ricca, jockeying for the overall top spot. The meeting proved indecisive.

A second meeting was held in July with Frank (Buster) Wortman, syndicate chief in East St. Louis, and his lieutenant, Elmer (Dutch) Dowling, attending along with Accardo and Ricca. Johnny Torrio, Chicago boss before Capone, sat in as mediator. Still nothing conclusive.

In August a third meeting was held, this time in Las Vegas. Caifano sat in on that one, along with Phil (Milwaukee) Alderisio and James (the Weasel) Fratianno. Meyer and Jake Lansky were on hand, too, according to reports.

These meetings preceded the violent deaths of Charles (Cherry Nose) Gioe and Frank (the Immune) Maritote, Al Capone's brother-in-law and one-time muscleman for the outfit.

Caifano, who carries a slight cauliflower from his ring days, is the younger brother of Leonard (Fats) Caifano, killed in 1951 while attempting to kidnap Theodore Roe, wealthy Negro numbers king in Chicago. Marshall was picked up for questioning in that case but Roe could not identify him. A few weeks later, Roe was killed,

CAIFANO'S CHICAGO CAREER

Caifano was a familiar figure on Chicago police blotters by 1943 when he was questioned in the bludgeoning and burning to death of Estelle Carey, dice girl and friend of a hoodlum named Nick (Dean) Circella, now fighting deportation.

now fighting deportation.

In 1950 he was questioned again after the murder of former Chicago police lieutenant

William Drury, foe of Accardo and Jake (Greasy Thumb) Guzik.

When he was arrested in the Roe case, it meant the 19th time he had been pinched for crimes tanging from bad to worse.

for crimes ranging from bad to worse. But Mr. Marshall up to now is as accepted along the "strip" of Las Vegas as Marlene Dietrich, who was paid somewhere in the neighborhood of \$25,000 a week for singing and wearing a dress with a plastic bodice, or that even more welcome soul, Joe Blow, a visitor eager to try his hand at the tables.

Calfano lives or lived not far from the Last Frontier Hotel in whose dining room the Rotary Club, among other local civic groups, meets.

I went to one of the club's luncheons during my stay in Las Vegas early this month. It could have been a Rotary luncheon in Osawatomie, Kans., or Snohomish, Wash.

ROTARY FUNCTIONS NORMALLY

We sang America, pledged allegiance to the flag, ate chicken and peas, sang Happy Birthday to a lot of fine elderly members, and listened to a speech on communism by Chet Lauck, who is Lum of Lum and Abner, and had just returned from making a TV film in Yugoslavia.

Explained Maxwell Kelch, who runs radio station KENO:

"Las Vegas has three populations. First are the tourists, who range from 20,000 to 25,000 a day, even in summertime—now that almost everything is air conditioned.

"Then there is the gambling fraternity, perhaps 8,000 to 10,000 strong and tending now to be less transient and settle here.

"And finally the basic population, moral and sober sided. There's a church for nearly every 1,000 of us. We're building new school-rooms at the rate of about 2 a day. Our bank accounts are about 75 percent demand, or checking accounts, and 25 percent savings, which is about right for an expanding area.

"The locals do little gambling. In fact, I don't think the operators like to have us around the tables. But we're not too hard to discourage. We just have other things on our minds. That's why the racetrack here falled. A track needs a solid local gambling backing. We couldn't supply it."

GAMBLING HELL IN NEXT ROOM

While we ate, sang, prayed, and listened to Lum on Tito, action was fast and loud in the next room of what was then largely Jake Kozloff's Gambling Hell.

Since then, Jake has bowed out and been replaced chiefly by Beiden Katleman, young (36) lone wolf with a nongangster background who has almost if not all of El Rancho Vegas down the road.

Jake won't starve, exactly. Years ago as time is measured in fast-moving Las Vegas he picked up a slab of desert hard by the colorful old Last Frontier. It cost him the Vegas equivalent of peanuts.

It cost him \$40,000 in 1948. It is now worth \$550,000.

There are a variety of stories as to why Kozloff, a former brewer, bowed out. He denies the report that it is a result of Katleman's vigorous demand—as a stockholder—that the books be scrutinized.

Kozloff, the favorite innkeeper of the younger and livelier nuclear physicists who come to Les Vegas for A-bomb tests, says he agrees with oldtime downtown gambler Guy McAfee, who states:

"Gamblers have too much invested to gamble with trouble. We'd be knocked right out of the box."

Gambling in Las Vegas, and probably elsewhere through the State, often has financial structures and labyrinths which would confound the wolf of Wall Street.

The Hot Dice Hotel and Casino, to name a mythical spot, but one not far from actuality, may have up to 50 owners of the basic corporation, which owns the land and the main building. But they've usually plunked

down only a downpayment on this property and have a husky mortgage to sweat out.

CORPORATIONS GALORE

The basic corporation, once it has its license, leases out the gambling, the bar, restaurants, newsstand, and other shops.

Whoever takes over the gambling concession usually must underwrite the loss on the cabaret, where the floor show could cost almost as much per week as fine long-playing Broadway productions used to cost.

Often the gambling equipment is on lease from as many as 10 different corporations. If the Hot Dice Hotel and Casina takes

If the Hot Dice Hotel and Casina takes hold, it begins to expand. A wing of rooms is put up by a new finance group and leased back to the basic corporation, which may guarantee as much as a 12- to 25-percent-ayear return on the investment.

And so on. One famous "strip" hotel and casino is a nest of 67 separate corporations and leases.

People, by and large, don't seem to care. They are pouring through Las Vegas, for instance, at the rate of about a million a year, leaving behind tens of millions of dollars. They would rather see "Nick the Greek" play faro or "go with the house" all night at dice than know about the worries and connivings of the operators behind the scenes.

Americans like to gamble, and as long as Las Vegas lasts they won't have the slightest difficulty getting a little action—with girls, comedians, crooners, attractive hotel rates, sun, A-bombs, jet planes, and a dam named Hoover to boot.

The Tragedy of Yalta Should Be Repudiated

EXTENSION OF REMARKS

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. McDONOUGH. Mr. Speaker, to-day, February 7, 1955, marks an anniversary in history. Not a glorious anniversary day for celebration and rejoicing, for honor and commemoration, but the anniversary of an event which has cast a shadow across the bright unsullied shield of the United States itself. Today, February 7, is the 10th anniversary of the "Big Three" meeting at Yalta which led to the now infamous Yalta agreement.

This was an agreement reached by Stalin, Churchill, and Roosevelt. It was an agreement entered into by Franklin Delano Roosevelt as a great career was fast drawing to its close. Ill, worn by the terrible responsibility of the war years, forced to look to those he trusted for the facts upon which to base his momentous decision, with a scant 60-odd days of life remaining, Roosevelt in the eyes of history made a tragic mistake in entering into the Yalta agreement.

The United States was just emerging triumphant in victory in the last months of World War II. By force of arms and sacrifice, at the cost of the youth of our Nation, a war was won. At Yalta in a few ill-fated hours, the victory and the peace were irrevocably lost.

A decade of uneasy peace, hot and cold war, record spending and debt which has placed a yoke of high taxes, military conscription, and depleted value of currency upon the American people has emerged as the result of the Yalta agreement.

Through the door opened at Yalta, Russian imperialistic expansion has reached the proportions of a menace to all freedom-loving nations of the world.

During the last decade China has been lost to the Reds. Poland was abandoned to Soviet domination. The Iron Curtain was forged shutting off millions from the freedom they had cherished and fought for. Korea brought a futile war where for the first time in the history of the United States victory was not the objective. Indochina fell.

And today only the 11th hour decision of our great President, Dwight D. Eisenhower, to stand firm in the Far East to stem the Communist aggression of Red China, and the instant backing of his policy by the Congress, has momentarily stemmed the Red tide.

The Yalta agreement was indeed the opening of a modern Pandora's box which has brought and is still bringing tragedy to the free world.

But we can be grateful for one thing. The Yalta agreement was never given the force of a treaty. It was referred to the Senate but it was never ratified, and thus is not legally binding upon the United States.

And its complete repudiation should be effected by the Congress and the Executive to eliminate all doubt as to the position of the United States on this agreement.

To fully realize the infamy of the Yalta Agreement, perhaps the best example for examination is the tragic plight of Poland, a nation which throughout its history has championed the cause of individual freedom and religious tolerance, two of the most cherished ideals of our own Nation and fundamental to our American philosophy.

The Poles have founght courageously and tirelessly in the face of insurmountable odds to restore freedom to Poland during their darkest hours of enslavement. During the black years of partiticn, Polish legionnaires fought with French troops in the hope that a Napoleonic victory would bring liberation to Poland. Seventy thousand of them marched with Napoleon's Grand Army into Russia, and the battlefields of Europe heard the song of the Polish legions:

Poland has not perished wholly While we live to own her.

This song is echoed in the hearts of Poles wherever they may be found in the world today.

Parliamentary procedure existed in Poland dating from 1454, and as early as 1505 Poland gave its citizens the greatest guaranty of personal freedom and independence. It was a nation where religious wars never took place in spite of the deep religious conviction of its people

As an example of Polish tolerance, these were the words of Chancellor Zamoyski, who served the Polish people during the reign of Stephen Batory. Referring to Poles who had strayed from the church, he said:

I would give half my life if those who have abandoned the church should voluntarily return to its fold; but I would rather give all my life than suffer anybody to be constrained to do it, for I would rather die than witness such oppression.

Poland regained its independence as a nation at the end of World War I as a result of the Allied victory. The work of restoration of the Republic was monumental, but great strides were made and a nation described as "by the whole of the people for the whole of the people" emerged.

It is, indeed, a tragedy that the Allied victory in World War II and the resultant Yalta agreement destroyed Polish hopes of freedom and independence.

Poland enjoyed a scant 20 years of liberation before the German invasion, and now Poles in all parts of the world as well as in the Polish homeland pray for independence for their nation, which was denied at Yalta.

It is high time the Congress of the United States takes official action to repudiate the Yalta agreement which has brought so many millions under the Communist domination of Soviet Russia, and on this 10th anniversary of the Yalta agreement I sincerely urge that this action be taken without further delay.

Administration Health Bill

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. WOLVERTON. Mr. Speaker, I have introduced the administration's health bill, H. R. 3720. It is an omnibus bill that has six titles. These separate titles provide the necessary legislation to make effective the several recommendations made by President Eisenhower in his health message addressed to Congress.

The enactment of the legislation would go far in providing improved health facilities for our people. It deserves the favorable consideration of the Congress,

The following is a summary of the several titles of the bill as they deal with separate features of the legislation:

SUMMARY OF TITLE I—HEALTH SERVICES PREPAYMENT PLANS

IN GENERAL

As a partial attack on the problem of making needed health services and facilities available to the maximum number of people on a prepayment basis, this title of the bill would authorize a two-pronged program within the Department of Health, Education, and Welfare, namely (a) technical advisory and informational services, without charge, to health services prepayment plans, and (b) reinsurance for health services prepayment plans established and operated by commercial insurance carriers or by non-profit carriers.

ADMINISTRATIVE STRUCTURE

1. The bill would vest all responsibility for the administration of the program in the

Secretary of Health, Education, and Welfare. (Under existing law, the Secretary could delegate all or any part of this function and either place it in an existing major unit within the Department or place it in a new unit.)

2. The bill would provide for a national advisory council on health services prepayment plans consisting of 12 members appointed by the President, one of whom would be designated by the President as chairman. The council would advise, consult with, and make recommendations to the Secretary on matters of policy relating to the Secretary's activities and functions under this title of the bill.

3. In addition to authorizing, in general terms, utilization of other Federal agencies, or of any other public or nonprofit agency or institution, the bill would provide for maximum utilization by the Secretary of the various State insurance departments (or other State agencies supervising carriers of health services prepayment plans), especially in determining compliance with requirements and standards prescribed by the Secretary as a condition of approval of a health services prepayment plan for reinsurance. Final responsibility for such determinations would, of course, rest with the Secretary.

4. Regulations under this title of the bill could not authorize any Federal officer or employee to exercise any supervision or regulatory control over any participating carrier, or over any hospital or other health facility or personnel furnishing personal health services covered by a participating prepayment plan.

TECHNICAL AND ADVISORY SERVICES

Under this part of the program, the Secretary would be authorized to conduct studies and collect information on the organizational, actuarial, and other problems of health services prepayment plans, make the results of such studies and the information so collected generally available, and provide to sponsors of such plans, without charge, organizational and other technical advice and information, including information on morbidity and organizational methods.

bidity and organizational methods.

For this part of the program a separate appropriation would be authorized.

REINSURANCE PROGRAM

1. Four types of plans would be eligible for reinsurance under title I of the bill.

(a) Plans for average and lower income families: These are plans designed primarily to provide reasonable coverage for families of average or lower income, and which meet certain requirements set forth in the bill. These requirements are—

(1) For service type plans, provision of—
(i) Seventy or more days hospitalization

per year;
(ii) in-hospital surgical and other medical care;

(iii) home and office physician care.

(2) For indemnity-type plans—
(1) not more than 15 percent coinsurance

 not more than 15 percent coinsurance for hospital care, 25 percent for physician care, and 25 percent for other care and services included in the plan;

(ii) maximum deductible of \$100 per illness per beneficiary or \$150 per year per beneficiary or family and maximum liability of at least \$750 per illness per beneficiary, or \$1,000 per year per beneficiary or family.

(3) For both types of plans—

(i) no illness exclusions (except for certain specified illnesses, such as tuberculosis,

etc.);
(ii) maximum age of at least 70 years and automatic renewal on reasonable terms after 5 years;

(iii) conversion of group policies on reasonable terms;

(iv) compliance with other requirements in regulations.

(b) Major medical expense plans: These are plans designed to provide protection against the exceptionally high costs of medical and hospital care per illness per beneficiary, which meet certain specified condi-These are: Not more than 25 percent coinsurance (with respect to the personal health services specified in the plan), coverage of all illnesses (except for certain specifled ones), conversion of group policies on reasonable terms, and other requirements in regulations.

(c) Plans for rural area families: Plans designed primarily for rural area families which comply with requirements in regula-

(d) Other plans: Other plans which will carry out the purposes of this title of the bill and which comply with requirements in regulations.

The Secretary would also be authorized, as a condition of granting reinsurance, to establish by regulation terms, conditions, and requirements as to the other types and kinds of prepayment plans which will be reinsured, coinsurance, deductible amounts,

2. This program is designed to be selfsustaining, over a reasonable term, through reinsurance premiums paid into a revolving reinsurance fund. An appropriation of not to exceed \$100 million to a capital-advance account in the Treasury would be authorized, which would be available, without fiscal-year limitation, as a line of credit for advances of working capital to the reinsurance fund. When and as the condition of the fund permits, such advances would be repayable to the capital-advance account and the amount so repaid would again be available for future advances to the fund if needed. Until repayment, interest on the outstanding balance of advances to the fund would be payable to the Treasury as miscellaneous receipts.

3. Reinsurance premiums would, pursuant to regulation, be fixed by the Secretary at rates determined with a view to achieving the objectives of the program and fiscal self sufficiency over a reasonable term. Such premiums could, and probably would, be fixed separately for each plan (for the initial reinsurance term, and thereafter again for each renewal term).

4. Reinsurance liabilities under the program would be limited to and paid from the fund, except that the Secretary could set up separate reinsurance accounts within the fund, in which event liability would be limited to the account to which a plan is allocated. It would be possible, under this provision, to establish, for example, special re-insurance accounts for each of the types of plans eligible for reinsurance as described above in paragraph 1, for classes of carriers, or for members of a group of affiliated or

5. The fund would be invested in Federal, or federally guaranteed, interest-bearing se-

associated carriers.

6. Authority to write reinsurance in given field would be subject to a standby or no-competition provision. That is to say, the Secretary could reinsure plans of a given kind or type only if, in the Secretary's judgment, reinsurance for such plans, on terms and conditions, and at premium rates. comparable to those offered under this title of the bill, is not available from private sources to an extent adequate to promote the purposes of the program. By implication, the Secretary would have to stop writing reinsurance when such a finding could no longer be made.

7. Reinsurance for a plan could not be granted unless (a) the applicant carrier is operating and proposes to operate according to law, (b) there is no reason to believe that the carrier is financially unsound or that it operates in an unsafe manner, (c) the reinsurance of the plan will promote the purposes of the program, (d) the carrier

agrees to submit such reports concerning its operations under the reinsured plan as the Secretary may from time to time reasonably require, (e) the carrier has agreed to the reinsurance premium rate fixed by the Secretary for the plan, and (f) the plan, the policies or contracts thereunder, and proposed method of operation comply with the terms and conditions prescribed for reinsurance. Certification by the State insurance department (or corresponding supervisory agency) of the carrier's home State as to whether there is reason to believe the carrier is financially unsound or unsafe, as determined in accordance with criteria established by the Secretary, could be accepted by the Secretary as conclusive. As to utilization of State agencies with respect to (f). see paragraph 8

R As a condition of granting reinsurance, the Secretary could, among other things, specify (a) minimum benefits; (b) safeguards against undue exclusions of preexisting conditions or of specific illnesses, against other undue exclusions or limita-tions; (c) standards for deductible and coinsurance provisions, limits of maximum liability, waiting periods for benefits, and other such policy provisions; (d) standards for the duration, cancellability, and renewability of such policies or contracts: and (e) standards for plan provisions with respect to costs and charges of providers of personal health services payable by the carrier, to the extent such standards are necessary to protect the fund against abuses or arbitrary cost increases. The Secretary would be precluded from reinsuring any plan for which the car-rier's premium rates are such as to make the plan financially unsound, or any plan with respect to which the carrier's breakdown of its single-premium rate, as between reinsured and nonreinsured types of benefit costs, is unreasonable, or any plan reinsurance of which would not promote the purposes of this title of the bill, but in other respects the Secretary would be pre-cluded from setting any standards for the carrier's premium rates. The State insurance department or corresponding State agency of a carrier's home State (as defined) would, if willing, be utilized to certify to the Secretary whether the plan complies with the terms and conditions stipulated as a condition of granting reinsur-

ance. 9. The Secretary could not approve for reinsurance any plan for direct provision of medical or dental services by the carrier through a salaried staff of physicians, surgeons, or dentists in the employ of such carrier, unless the carrier has an organizational structure vesting control over the practice of medicine or dentistry solely in duly licensed members of the professions

10. The liability of the reinsurance fund with respect to a reinsured plan would be fixed and limited as follows:

(a) The reinsurance base

The fund would not underwrite all of the carrier's annual benefit costs under the plan. Rather, the reinsured portion of such costs would be limited to the excess, if any, of

(1) aggregate annual incurred benefit costs under the plan, over

(2) the difference between (i) gross annual earned premium income and (ii) a portion of such income called the "administrative-expense allowance."

The administrative-expense allowance applicable to a given year for a reinsured plan would be determined by multiplying the gross earned premium income for the year seven-eighths of the carrier's preestimated (and thus predetermined, prior to the commencement of the reinsurance term into which the year falls) ratio of its annual

administrative expenses under the plan 1 to its annual earned premium income under the

Thus, before reinsurance would begin to apply, the carrier would in effect have to absorb fully out of its premium income, as benefit costs, (1) the anticipated portion of premium income normally devoted to benefit costs for such a plan, (2) the portion anticipated as available for profits (in the case of a carrier organized for profit) and for contingencies, and (3) one-eighth of the portion of premium income anticipated as administrative expenses. However, there is one variation of the foregoing for rural-area plans. Instead of absorbing one-eighth of the anticipated administrative expenses, the carrier could at its option absorb 2 percent of its anticipated premium income if this would result in reinsurance of a larger portion of its benefit costs.

Procedurally, the ratio of administrative expenses to earned premium income of the carrier under the plan would be estimated by the carrier, and that estimate would be submitted, with supporting data, with the application for initial reinsurance or renewal of reinsurance. In order to prevent distortion, the Secretary could require the submission of an average ratio based on a period not in excess of 3 years. The carrier's estimate would have to be approved by the Secretary unless considered to be unreasonable or not

in good faith.

For plans operated to a substantial extent on the basis of personal health services to be furnished by the carrier directly through its own staff or indirectly through the staff of an affiliate, or on the basis of payments made by the carrier to a provider of personal health services which is an affiliate of the carrier, the above formula would not apply, but the Secretary would, by regulation, prescribe a formula calculated to achieve for such plans reinsurance protection reasonably comparable in scope and extent to that provided for other types, taking into account their inherent differences.

(b) Coinsurance

The liability of the fund would be limited to 75 percent of the carrier's reinsured cost so arrived at. This is an adoption, for this purpose, of the principle of coinsurance.

11. The reinsurance term would be stipulated for a given (regular) period, e. g., a Secretary could, by or pursuant to regulation, provide for letting the reinsurance term extend beyond such regular period with respect to policies or subscriber contracts issued during such period and running beyond it. Also authorized pursuant to regulations would be the combination of a carrier's experience under two or more reinsured plans during the same term. In addition, regulations could provide for the extent to which experience during a term will be combined with experience during extensions thereof and the extent to which policies issued during, but running beyond, the reinsurance term will be treated as though issued in a subsequent term.

12. Reinsurance for a plan could be terminated by the Secretary on any ground specified in regulations in effect not less than 90 days in advance of the commencement of the current initial or renewal term of such reinsurance. However, reinsurance with respect to policies or subscriber con-

As here used, the term "administrative expenses" is intended to include all of the carrier's expenses and charges incurred under the plan, except the benefit costs and except any provision for contingencies, profits, dividends, and refunds. The Secretary would be authorized to define "administrative expenses" for such purposes more particularly.

tracts in effect on the effective date of such termination would remain in force until the normal expiration of the term.

MISCELLANEOUS

1. The bill would confer broad powers on the Secretary with respect to enforcement or settlement of claims, and would authorize the Secretary to hold hearings, etc., in connection with investigations under the program,

2. Criminal penalties would be imposed, not only for falsely advertising or representing that a carrier is reinsured or has applied for reinsurance but, regardless of the truth or falsity of the representation, also if the representation is not authorized by, or falls to conform to, regulations prescribed by the Secretary.

3. The effective date would be the 30th day following enactment, but in view of the necessity for a preparatory period the Secretary would not be required to receive or consider applications for reinsurance before a date determined by the Secretary.

SUMMARY OF TITLE II—MORTGAGE INSURANCE FOR CONSTRUCTION OF HEALTH FACILITIES

IN GENERAL

In order to facilitate further the financing and development of needed facilities, the bill would authorize the establishment, within the Department of Health, Education, and Welfare, of a program of mortgage insurance to stimulate, on a self-sustaining basis, a continuing flow of private credit to finance the construction, expansion, modernization, and conversion of privately owned and operated health facilities. It would also remove certain restrictions on certain federally regulated lending institutions with respect to their investments in loans on real property in the case of such federally insured mortgages, and the existence of the program would encourage the removal of similar restrictions imposed on such loans under State

ADMINISTRATIVE STRUCTURE

- 1. The bill would vest responsibility for the administration of the program in the Secretary of Health, Education, and Welfare. Under existing law the Secretary could delegate all or any part of this function and either place it in an existing major unit within the Department or place it in a new unit. In addition, the bill carries express authority to utilize, by delegation or otherwise, the services and facilities of any other Federal agency by agreement with the head of the agency.
- 2. The bill would authorize the Secretary to consult with and otherwise use the services of existing advisory councils, to appoint new members to serve with such councils for purposes of this program, or to establish additional advisory groups as deemed necessary.
- 3. Except as otherwise specifically provided, no Federal officer or employee would be authorized to exercise any supervision or control over the administration, personnel, or operation of any privately owned and operated health facility. The bill also expressly precludes any possibility of its being interpreted as authorizing any association or corporation to engage in the practice of healing or medicine as defined by State law, or as conferring on any person the right to exercise any control over any individual's personal right to select his own hospital, physician, or group of physicians.

FINANCING OF THE PROGRAM

1. The health facilities mortgage insurance program is designed as a self-sustaining business-type financial operation. Premiums for insurance of the principal of eligible mortgages would be paid into a revolving fund, to be known as the health facilities mortgage insurance fund, which would be used for carrying out the program. An initial appropriation of \$10 million, and such additional sums thereafter as necessary, would

be authorized for the purpose of establishing a separate working-capital account from which needed capital would be transferred to the health facilities mortgage insurance fund by the Secretary. Such capital advances would be repayable to the workingcapital account as the condition of the insurance fund permits, beginning not later than July 1, 1965, and would then be available for future advances to the fund on like terms. (Interest would accrue to the Treasury on such capital advances, and would be payable annually as and when sufficient reserves, etc., have been built up in the insurance fund.) Should additional funds be required to meet liabilities incurred under insurance contracts of the program, such funds could be obtained by the sale of notes or other interest-bearing obligations to the Treasury, which would become liabilities of the insurance fund and be redeemable out of income and other assets of the fund. This line of credit has a limit of \$25 million or, if greater, 75 percent of the outstanding total insurance under the program.

2. The aggregate authorized insurance outstanding at any one time would be limited to \$200 million. This program ceiling could be raised by the President up to an aggregate increase of \$150 million, if he determined that such increases were in the public

3. The Secretary would be authorized to fix premium charges at rates adequate to cover expenses and reserves but not in excess of 1 percent of the outstanding principal obligation of insured mortgages. Reasonable charges for appraisal and inspection would also be authorized.

ELIGIBILITY FOR MORTGAGE LOAN INSURANCE

1. Mortgages would be eligible for insurance if made to secure loans to finance health facilities conforming to standards of construction and equipment satisfactory to the Secretary and to all applicable requirements of State law. The mortgagor would also be required, as a condition of eligibility, to give satisfactory assurance that operation and maintenance of the completed facility would be in compliance with applicable require-ments of State law. No mortgagor would be eligible who was not the owner and operator, or prospective operator, of the facility and who could not satisfy the Secretary as to his responsibility and ability to repay. ever, employers and nonprofit organizations (as defined) would be considered "operators" for purposes of this program if they owned the facility and had made contractual arrangements with providers of health services to use the facility primarily for furnishing services in the facility for such owner's employees, subscribers, or members, or their dependents, under a plan of such employer or organization, though use of the facility would not necessarily be restricted to such employees, subscribers, members, or dependents. No mortgagee would be eligible unless approved by the Secretary as responsible and able to service the mortgage properly.

2. The mortgage insurance program would assist in financing the new construction, or expansion, modernization, and so forth, of a wide variety of health facilities, including hospitals, diagnostic or treatment centers, nursing homes licensed by the States, and rehabilitation centers. It would not be available to finance facilities devoted primarily to domiciliary care. The loan secured by the insured mortgage could include costs of construction, initial equipment, and site acquisition, and, in the case of expansion, remodeling, or conversion of an existing building, it could include the cost of acquiring the existing building and site or of refinancing an existing indebtedness thereon.

3. Mortgage insurance would be authorized for mortgages securing loans in amounts not in excess of 80 percent of the estimated value (upon completion) of the property (including the land), for terms not in excess of 30

years. This maximum percentage could be lowered by regulation, either for particular classes or types of facilities or otherwise. As a condition of insurance the mortgagor would be required to agree to repay forthwith any amount by which the mortgage loan exceeded 80 percent of the actual cost (as defined). (In determining such estimated value or such "actual cost," the Secretary would be required to deduct the amount of any Federal grant, such as a grant under the hospital survey and construction program, to which the sponsor is entitled for the project.)

The Secretary would be authorized to prescribe by regulation the form and content of applications to be made by mortgagee and other terms and conditions for the insurance of eligible mortgages and would be required to find in each case, as a condition of insurance, that the project was economically sound and that the health facility would be operated on a basis that provided a reasonable prospect of continuing and adequate sources of revenue to pay the secured obligation. (In passing on the question of economic soundness in the case of a hospital project, the Secretary would be required to take into account available information as to existing hospital facilities, population-bed ratios, and bed-utilization rates in the area to be served, other programed hospital construction which would affect utilization of the projected facility, and similar relevant matters.) Each mort-gage would be required, among other things, to contain an undertaking that, except as authorized by the Secretary and the mort-gagee, the property would be used as a health facility during the life of the mort-gage or until the contract of insurance had been otherwise terminated.

INSURANCE CONTRACT AND INSURANCE BENEFITS

1. The insurancy fund would be primarily liable under mortgage insurance contracts. The Government's obligation under the contract of insurance would be to pay in cash to the mortgagee, upon 30 days' default of the mortgagor, 95 percent of the value of the mortgage (defined as unpaid principal, plus certain charges and expenses for taxes, insurance, etc.) with 3-percent interest from the date of default. As a condition of this payment the mortgagee would either assign the mortgage to the Secretary or, through foreclosure or otherwise, convey to the Secretary title to the mortgaged property, but in the event of mere assignment of the mortgage to the Secretary, which would relieve the mortgagee of foreclosure costs, etc., 1 percent of the unpaid principal of the mortgage would be deducted from the insurance payment.

2. In addition to the payment in cash of an amount equal to 95 percent of the value of the mortgage, the Secretary would also issue to the mortgagee a certificate of claim for the difference between the amount of the cash payment and the amount the mortgagee would have received if the mortgagor had paid all his obligations in full under the mortgage, plus an allowance for the mortgagee's expenses where the mortgagee had foreclased the mortgage or otherwise acquired title for the Secretary. The certificate of claim would bear 3-percent interest but would be payable only out of the proceeds of the property after the fund had been made whole for all payments and expenses incurred under the mortgage insurance transaction.

3. The bill provides for adjustment of premium charges in case the principal obligation of an insured mortgage is paid in full prior to maturity, and for termination of the insurance contract in the event the mortgage, after 30 days' default of the mortgagor, fails to assign the mortgage, or to have title delivered to the Secretary, as required under the bill in such cases and elects not to claim the insurance after de-

fault of the mortgagor. In addition the Secretary would be authorized to require the mortgagee to accelerate the debt on breach of covenant or other undertaking contained in the mortgage, if that course should be found to be necessary for the protection of the insurance fund or required by the purposes of the program.

MISCELLANEOUS

1. The Secretary would be given broad powers to sue and be sued, compromise claims, acquire, manage, and convey property in carrying out the program, and generally to exercise all the rights of a mortgagee with respect to mortgages and the rights of an owner with respect to property acquired in the administration of the mortgage insurance program. In order to facilitate the sale of mortgages acquired by the Secretary or executed in connection with the sale of property which had been acquired by the Secretary, the insurance of such mortgages would be authorized without regard to the limitations with respect to eligibility for mortgage insurance otherwise applicable.

2. The bill would authorize the collection

The bill would authorize the collection and distribution of information and statistics pertaining to the insurance of mort-

gages

3. Insured mortgages would be exempted from certain investment and other restrictions under Federal laws, as is the case with mortgages insured under the National Housing Act.

4. Criminal penalties are provided for in the bill for fraud or forgery in connection with transactions under the mortgage insur-

ance program.

The effective date of this program would be October 1, 1955.

SUMMARY OF TITLE III—PRACTICAL NURSE TRAINING

Title III of the bill authorizes a 5-year program in the Office of Education for the extension and improvement of practical nurse training through grants to State vocational education agencies for the training of practical nurses.

GENERAL

Vocational education grants to States for the 5-year period beginning July 1, 1955, for extension and improvement of practical nurse training of less than college grade would be authorized. The program would be applicable to all States, including Alaska, Hawail, the Virgin Islands, Puerto Rico, and the District of Columbia.

APPROPRIATION AUTHORIZATION

Two million dollars would be authorized for fiscal 1956, \$3 million for fiscal 1957, and \$4 million each for fiscal 1958, 1959, and 1960.

ALLOTMENTS

Allotments to the States would be based on relative State population, but with a minimum to each State of \$7,500 per fiscal year (\$3,750 in case of the Virgin Islands).

MATCHING

The Federal share of approved projects for extension and improvement of practical nurse training would be 75 percent for the first 2 fiscal years, and 50 percent for last 3 fiscal years.

STATE PLANS

The States would have to submit plans—
1. Designating the State board (the State board of vocational education or the State board primarily responsible for supervision of elementary and secondary education) as the sole agency for administration of the plan, or for supervision of administration by local educational agencies, with a registered professional nurse in charge of or available for consultation to the State board.

2. Showing the plans, policies, and methods to be followed under the plan and providing such fiscal procedures, etc., as are necessary for efficient administration.

3. Containing minimum qualifications for teachers, teacher-trainers, supervisors, and directors.

4. Providing for reports to the Commissioner of Education as necessary.

WITHHOLDING OF FUNDS

The Commissioner may withhold payments, after notice and hearing to the State board, for fallure to comply with requirements applicable to State plans. A State may appeal to Circuit Court of Appeals and then to United States Supreme Court if dissatisfied with the withholding of funds.

ADMINISTRATION

This title of the bill would be administered by the Commissioner of Education. The Commissioner would (a) make relevant studies, investigations, and reports, (b) render technical assistance to States, and (c) disseminate pertinent information. He would also be authorized to make rules and regulations and to delegate his powers and duties, other than rule-making, within the Office of Education.

EFFECT ON OTHER LAWS

Nothing in this title would affect the availability of amounts paid to States under the Smith-Hughes Act (39 Stat. 929), as amended and extended, or the George-Barden Act (60 Stat. 775), as amended and extended, for practical nurse training.

SUMMARY OF TITLE IV—GRADUATE TRAINING OF PROFESSIONAL NURSES AND OTHER PRO-FESSIONAL HEALTH PERSONNEL

Title IV of the bill authorizes a revised program of traineeships in graduate nursing and in public-health specialties.

This title of the bill adds a new section 305 to the Public Health Service Act authorizing the Surgeon General to establish and maintain two broad categories of traineeships in the service and elsewhere. There would be traineeships for graduate or specialized training in public health for doctors, engineers, nurses, and other professional health personnel; also authorized would be traineeships for training professional nurses for teaching or for administrative or supervisory duties in the various fields of nursing.

This new section of the Public Health Service Act also authorizes the provision of the traineeships through grants to public and nonprofit institutions. The traineeships would include stipends and allowances in amounts to be determined administratively.

SUMMARY OF TITLE V-PUBLIC HEALTH

This title of the bill would, effective July 1, 1955, replace the present separate authorizations for public-health grants under section 314 of the Public Health Service Act, including the separate authorizations for control of particular diseases, with an authorization for grants for support of publichealth services generally and for extension and improvement of such services and grants for special projects.

GRANTS TO STATES FOR PUBLIC-HEALTH SERVICES
Allotments and payments for public-health
services

Allotments and payments under the revised section 314 of the Public Health Service Act for general support grants would be made as follows:

1. For the fiscal year ending June 30, 1956, and the fiscal year ending June 30, 1957, each State would be allotted an amount equal to its allotment under section 314 for the current fiscal year (ending June 30, 1955), including its current allotment for cancer grants but excluding its current allotment for mental-health grants.

2. The remainder, after allotment according to paragraph (1), of the appropriations for the fiscal years 1956 and 1957, and all sums appropriated in succeeding fiscal years would be allotted in accordance with regulations on the basis of (A) population, (B)

extent of particular health problems, and (C) relative financial need of the States,

3. Payments from the State's allotment, except from sums set aside under subsection (c) for extension and improvement grants, would be made in accordance with the Federal share (established for each State, as described below, on the basis of relative per capita income) of the cost of public health services under the State plan, the cost of training personnel for State and local public health work and the cost of administering the State plan.

Extension and improvement grants

The Surgeon General would be authorized to establish a percentage, not in excess of 20 percent, to be set aside from the allottenents to the States for public health services. The percentage would be uniform for all States. The percentage of the allotments so earmarked could be used only for approved projects for extension and improvement of public-health services, which are included in the State plan. Payments for any 1 such project could be made for 4 years only. Payments would equal 75 percent of the cost of the project for the first 2 years, and thereafter could meet not more than 50 percent of project costs, including costs for administration and training of personnel for State and local public-health work.

State plans

The Surgeon General would be required to approve any State plan which meets the requirements prescribed by regulation. Separate State plans for mental health would have to be submitted in States with a separate State mental health authority.

Regulations

As under existing law, all regulations with respect to grants to States under the new section 314 could be made only after consultation with a conference of State health authorities, including State mental health authorities when grants for work in the mental health field are concerned, and with their concurrence insofar as practicable.

Withholding of grants

As under existing law, notice and hearing to the State authority is required prior to the discontinuance of grants for noncompliance with the requirements applicable to the State plan.

Such withholding would apply to the State's allotments for public health services, including extension and improvement thereof, and including its allotments under the new section 315 for mental health services, or the withholding could apply only to a particular project or portion of the State plan affected by the State's failure if the Surgeon General deemed such action appropriate.

Judicial review would be authorized for any State dissatisfied with the Surgeon General's action withholding its allotments.

The Federal share

The Federal share establishes the portion of the cost of public health services which may be paid from grants under the new section 314 (not earmarked for extension and improvement projects). It is defined as a percentage which equals 100 percent minus the percentage which bears the same ratio to 50 percent as the per capita income of the State bears to the per capita income of the continental United States (excluding Alaska). However, the Federal share could not exceed a maximum of 66% percent nor could it be less than 33% percent; and the Federal share would be fixed at 50 percent for Hawaii and Alaska, and at 66% percent for Puerto Rico and the Virgin Islands,

Method of computation and payment of grants

Payments of amounts from the State allotments (including the portion for exten-

sion and improvement projects) would be based on estimates made on the basis of records and information furnished by the State and any other necessary investigation with subsequent adjustment to correct any errors in estimates. Payments would be made in such installments as the Surgeon General might determine.

In case an officer or employee of the Public Health Service is detailed to a State, or to a political subdivision, or public or nonprofit organization or agency in the State, for the convenience and at the request of the State, the Surgeon General would be authorized, when so requested by the State health authority, to reduce any payment to the State by the amount of the pay, allowances, traveling expenses, and other costs related to the detail of such officer or employee. The amount of that reduction would then be available for payment by the Surgeon General of the costs of the detail.

Technical assistance and detail of personnel

The Surgeon General would also be authorized, in order to assist further in the extension and improvement of public health services, to train personnel for State and local public health work, to detail personnel to Guam and American Samoa, and to extend training investigation, demonstration, and consultative services to Guam, American Samoa, and the Trust Territory of the Pacific Islands.

Combination of allotments

The new section 314 also authorizes the Surgeon General, at the request of a State, to combine a portion of its allotment for public health services, or extension and improvement projects, with that of another State for purposes of supporting a particular and clearly defined public health service, or a project, undertaken by another State.

GRANTS FOR SPECIAL PROJECTS

Section 502 of the draft bill would amend section 303 of the Public Health Service Act (which now relates to mental health) by replacing it with a new section.

The new section 303 would authorize appropriations, beginning with the fiscal year ending June 30, 1956, to enable the Surgeon General to make two types of project grants: (1) grants to States (or with the approval of the State authorities, to interstate agencies or political subdivisions) for part of the cost of public health services having importance for the solution of public health problems which are emergent or acute in specific geographical areas or are common to several States, or problems for which the Federal Government has a special responsibility: and (2) grants to State and local agencies, universities, laboratories, and to individuals for investigations, experiments, demonstrations, studies, and research projects which have been recommended by the National Advisory Health Council.

For purposes of this section, Guam would be deemed a State.

SUMMARY OF TITLE VI-MENTAL HEALTH

Title VI of the bill would authorize a separate grant program for mental health for the 5-year period beginning July 1, 1955, consisting of grants for public health services in the field of mental health, comparable to the grants authorized by title V for public health services in general. It would also authorize special project grants for specific problems related to the improvement of care, treatment, or rehabilitation of the mentally ill and improvement in the administration of institutions providing care for such per-

GRANTS TO STATES FOR MENTAL HEALTH SERVICES

Section 601 of the bill would amend the Public Health Service Act by redesignating present section 315 as 316 and inserting a new section 315.

The new section 315 would authorize, in addition to the sums appropriated under

the new section 314, which are also available for mental public health programs, additional appropriations for a 5-year period, beginning with the fiscal year 1956, to be available specifically for public health services in the field of mental health.

Allotments from these appropriations to the States would be made in accordance with regulations, on the besis of population, extent of mental health problems, and financial need.

The provisions on payments from the State allotments are the same as under section 314 (as amended by title V of the bill); and the provisions of that section on regulations, methods of payment, and combination of allotments of States would be applicable here also.

GRANTS FOR SPECIAL PROJECTS IN MENTAL HEALTH

Section 602 of the bill would amend the Public Health Service Act to add a new section 304.

The new section 304 would authorize annual appropriations for a 5-year period, beginning with the fiscal year 1956, to enable the Surgeon General to make project grants in the mental-health field similar to the grants authorized in section 303 (a) (2) for public health in general. The special projects in mental health authorized under this section would be directed particularly toward improved methods of care and treatment of the mentally ill and improved methods of operation and administration for institutions providing such care and treat ment. Grants could be made to individuals and to public and private agencies, including the State agencies responsible for administration of State institutions for care and treatment of the mentally ill. Grants could be made only upon recommendation of the National Advisory Mental Health Council.

For purposes of this section, Guam would be deemed to be a State.

TRAINEESHIPS IN MENTAL HEALTH

Section 603 would amend the Public Health Service Act by adding a new section 306.

The new section 306 would make clear that the general authority of the Surgeon General (sec. 433 of the Public Health Service Act) to establish and maintain traineeships in fields of diseases in which an institute has been established in the Public Health Service applies in the field of mental health.

Salty Alameda History Recalled by Windjammer Restoration

EXTENSION OF REMARKS

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. MILLER of California. Mr. Speaker, the slender masts of the Alaska packers' fleet of sailing ships were a part of Alameda, Calif., up until the early thirties.

The estuary of San Antonio knew the graceful lines and towering masts of windjammers long beyond the memory of our oldest living inhabitant.

I am glad that the Alameda Times-Star has assigned Thad Spinola to write a series of articles on the history of these once-proud ships. It is part of the heritage of the West that should be preserved. Mr. Speaker, here is the first of these articles:

SALTY ALAMEDA HISTORY RECALLED BY WINDJAMMER RESTORATION

(By Thad Spinola)

"Two big windjammers, right, tight, and shipshape, poked their clean-cut bows through the Golden Gate on the morning of April 3 (1928) bound for the shores of Bristol Bay * * * just north of the Aleutian Archipelago.

"When well clear of The Heads, towlines were let go as big ships broke out their gleaming white tops'ls, to-gallants'ls and fore-and-afters. Their high-flung canvas caught a rollicking breeze out of the south-west—a fair wind—sending them acuttling away into the North, the spume hissing and roaring under each sharp prow."

The two windjammers were both flying the house flag of the Alaska Packers Association and they were contending for speed honors in the last blue-water classic the world was ever privileged to witness.

LAST BACE

The bark Star of England and the ship Star of Alaska, both Yankee windjammer were subjects of a stirring account written by Tom White in the July 22, 1928, issue of the San Francisco Chronicle. The occasion being a do-or-die race to Alaska and the stakes being the high-flying honor and glory of two of APA's most illustrious ships.

The race was reminiscent of the days when hard-sailing, hard-fisted skippers cracked on every drag they could find to be the first home with their fragrant cargoes from the Far East, wrote White:

"Oh, a Yankee ship came down the river; Blow, bullies, blow.

A Yankee ship with a Yankee skipper, Blow boys, bully boys, blow."

The Star of Alaska got her canvas up first almost as soon the red-stack tugs dropped their towlines and left the two ships to the skilled hands of their skippers. As the tugs pulled away, the Star of Alaska was clearly 6 miles ahead of her sister rival, the Star of England.

The wagers were against the Alaska, but the racing wind filled her salls fit to burst as if in contempt of the bettors, and in 17 days, 21 hours, with her bow raking the sky like she owned it, the Star of Alaska dropped anchor off Chirikof Island. She had won a cup of gold—the fastest run between San Francisco and Alaska ever made.

tween San Francisco and Alaska ever made.
Romping with the spirit of the victor, she set sall again westward to Chignik, making the passage in 19 days, beating her rival by 14 days, 4 hours.

Telegraph Hill and Cliff House were favorite sitting spots for shipping men and the old skippers who watched as the old windjammers slipped through the Golden Gate (the heads) and dipped obediently to the long swells of the sparkling Pacific, headed north.

ALASKA RUN

Out in the spring and back in the fall. The Star Fleet outward bound carried tinplate, box shooks, cannery supplies, and other materials for putting up the salmon pack, and the cannery workers themselves—150 to 200 packed "tween decks."

This was the beginning of the end of the Star Fleet. The long, black wispy hair of smoke along the horizon coming from the newfangled steamers looked threatening and forbidding to the oldtime saliors, whose contempt knew no limits when expressing their opinions about the lumbering hulks that bullied themselves through the sea, blackening the skies all the while.

It was a battle to the death between wind

It was a battle to the death between wind and steam power—between the windjammer and the coal-burning steamer—and the monkey wrench all but vanquished the marlinspike.

Alaska Packers operated 25 of the old-timers even as late as 1922; but their number was gradually cut down, with the old ships returning 5 and 6 at a time to be laid up

indefinitely.

Nineteen of these were "Star ships"—The Star of France, the Star of Russia, the Star of Bengal, the Star of Italy, the Star of England, the Star of Chile, the Star of Falkland, the Star of Finland, the Star of Greenland, the Star of Holland, the Star of Iceland, the Star of India (called the fleet's fairest). the Star of Lapland, and the Star of Peru, the Star of Poland, the Star of Scotland, the Star of Shetland, and the Star of Zealand are all part of a rich history now and but only one remains to tell of it.

Moored to the narrow quays at their Alameda winter quarters, their long, slender bowsprits nuzzled gently against but well over the poop deck of the one just ahead, the slender sisters of the Star fleet crooned softly in the language of ships, recounting weird tales of adventure in the Bay of Bengal, the terrible Cape of Good Hope, the howling Hatteras hurricanes, and the heady breath of offshore winds in the South Seas.

DIFFERENT ENDS

Many of the ships went many different Some gave up the struggles against the pounding sea and now rest on the ocean's breast; others were mutilated, stripped of their identity, hulls used to cart copra between the Tropics; coal from New Zealand. Others were bought greedily for scrap iron by the Japanese and some became targets for Nazi torpedoes during World War II.

Of one of the ships that went the way intended for it, White wrote:

"But this fall when the prim old ladies of the deep remove their quaint, white hats and shawls and foregather for another winter their tales will be tempered with a note of sadness at the loss of one of their sisters, the Star of Falkland, whose battered hulk with tangled rigging lies on the rocks of Unimak Pass

"Better at that," they agree bitterly, "than

to end her days as a coal barge."

'The packer's ships are headin' north: There's one that sails today. Her skipper had his orders To proceed to Bristol Bay."

The Star of Alaska returned to Alameda last summer, the last of a long and laudable breed, she was spared an indecent end when a group of public-spirited citizens in San Francisco decided to buy the ship, restore it as much as financially possible, and place it on view for all future generations to see.

The San Francisco Maritime Museum believes "from understanding of our past flows confidence in our future," Argonaut Bay. confidence in our future." Argonaut Bay, where the Star and other vessels will be anchored, will be a living memorial to the great sailing ship era, and to the men and ships that made it great.

TWO REMEMBER

There aren't many men left who remember the iron sailing ships, but there are a few who de recall that the Star of Alaska, now the Pacific Queen, was launched in Scotland. christened Balclutha. At least two of these men still live in Alameda.

The ship was built in 1886 at Glasgow, Scotland, by C. Connell & Co., for R. Mc-Millan, of Dumbarton, who ordered two fullrigged ships of 1,600 tons each to join his McCleod. The Sirenia and her sister ship, Balclutha, were the first steel ships built by Connell.

The Sirenia was lost 2 years after her launching when she sank off the Isle of Wight, homeward bound from San Francisco, according to information furnished by D. P. Campbell, captain and master mariner who joined the Sirenia as an apprentice sea man and served aboard her until she was lost in March 1888.

A. K. Tichenor, former vice president and superintendent of Alaska Packers, now re-tired, lives at 1717 Dayton Street. The other man sailed under the late Capt. Nick Wagner on the Star of Alaska as a carpenter in

He is John Rankin, of 2151 Lincoln Avenue, born in Scotland, the birthplace of the Balclutha.

Small Business and Government Procurement Programs

EXTENSION OF REMARKS OF

HON, THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. PELLY. Mr. Speaker, I am convinced that the arbitrary definition and classification of small business in connection with Government procurement programs is completely failing to achieve the objective of Congress when it created the Small Business Administration. The intent of the law was "to utilize the potential production capacity of plants operated by small business concerns." I am told that the standard of 500 or fewer set by the Defense Department and acceded to by the Small Business Administration can be and is being vitiated by the simple process of large concerns appointing individual sales agents. It appears to me Congress should spell out its intent and see to it that small manufacturers are favored in Government procurement.

For the information of Members, I am inserting a copy of my letter to the Administrator of the Small Business Administration together with a copy of his

Needless to say, I think the reply is unrealistic and unsatisfactory.

HOUSE OF REPRESENTATIVES, Washington, D. C., January 20, 1955. Mr. WENDELL B. BARNES,

Administrator, Small Business Admin-istration, Washington, D. C.

DEAR MR. BARNES: As you know, Congress provided in the Small Business Act of 1953 that a small-business concern shall be deemed to be one which is independently owned and operated and which is not domi-nant in its field of operation. Thus, it is the policy of the Congress that a fair pro-portion of the total purchases and contracts for supplies and services for the Government be placed with small-business enterprises.

I understand that the Small Business Administration has the power and is directed "to consult and cooperate with officers of the Government having procurement powers in order to utilize the potential production capacity of plants operated by small-business concerns." This consultation with procure-This consultation with procurement officers has included defining of small business, and after such consultation I am informed it was decided that the Small Business Administration would follow the same definition in procurement-assistance programs that the Department of Defense uses; namely, any business having 500 or fewer employees including affiliates is considered

Is this arbitrary ruling regarding 500 or fewer employees in conformity with the policy of Congress? I think not and, in fact, I believe it will be found that this definition in many cases actually is working to the detriment of small business.

The glaring weakness of the 500 employees or less classification definition is that in one or less classification definition is that in one line of business 1,000 employees is small business, such as in the steel industry, whereas in another type of business 500 employees would be definitely big business. But the real weakness, in my opinion, of the arbitrary ruling comes from failure to distinguish between the manufacturer and the distributor. Thus, a large manufacturer represented by a small distributor or sales agent is favored as against a small manufac-

turer represented by a large distributor.

A fairer method of classifying big versus small business could easily be worked out within the wording and intent of the present law. But it appears that the Small Business Administration is reluctant to open up this subject and prefers to duck its responsibility by going along with the old Defense

Department definition.

Meanwhile, I am informed that many large manufacturers are appointing individual agents to handle their bids on Government business. Incidentally, this results in unsatisfactory service to Government agencies because individual agents do not carry inventories or give the service offered by regular distributors. However, I believe the important factor which the Congress should consider is that aid to small business is best accomplished at the production level. other words, production per dollar involves many times the expenditure of labor that selling or the distribution dollar involves. Thus, it appears to me the size of a sales force of a business concern is not nearly as important as the size of a manufacturer's payroll. No consideration is apparently given to the number of employees in the manufacturer's plant; rather, preference is given in procurement by the Federal Government to the number of employees of the selling agent.

Altogether it seems to me that appropriate legislation to correct this situation should be considered by Congress, or the Small Business Administration should recognize its responsibility and forthwith review its present policy.

Before bringing this subject to the attention of the Congress, I would greatly appreclate a statement of your viewpoint.

Sincerely,

THOMAS M. PELLY.

SMALL BUSINESS ADMINISTRATION, Washington, D. C., February 1, 1955. Hon. THOMAS M. PELLY, House of Representatives,

Washington, D. C.
DEAR MR. PELLY: This is in reply to your recent letter pertaining to the definition of small business.

As you state, for procurement purposes any concern with fewer than 500 employees including affiliates is considered a small business. As you know, this definition has been used by the Government procurement agencies for several years.

We recognize that size varies depending on the industry or other kind of business activity. We also recognize the inequities of the 500 standard, or any other single nu-merical standard to define a small-business concern. While we take size variations into consideration in designating which business concerns are small for SBA financial assistance program purposes, the number of small business-loan applications is very few compared with the number of Government procurement transactions. This difference in numbers permits us to consider applications for loans more deliberately on an individual basis than is possible for Government procurement actions.

A departure from the 500 standard has been discussed with officials in the Department of Defense. After careful consideration of the administrative problems which would result from changing the present standard and of what would be gained in the way of small business procurement assistance as a result of such change, it has been decided that it is not advisable at this time to change the definition of small business for the purposes of procurement-assistance programs.

We are also aware that a small distributor may sell commodities purchased from a large manufacturer and that occasionally a small manufacturer does lose out to a small distributor. On the other hand, our experience is that this happens infrequently.

In the circumstances, we feel that we are doing a reasonably good job by using our present definition of small business. We think you will agree that it would not be possible to achieve absolute perfection no matter what approach were taken to the solution of this problem. The choice which has to be made is to provide the maximum of assistance to small business with the resources which are available.

Sincerely yours,

WENDELL B. BARNES,
Administrator,

Tenth Anniversary of Yalta Meeting

EXTENSION OF REMARKS

HON, HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. DONOHUE. Mr. Speaker, the approach of the 10th anniversary, on February 7, 1955, of the famous wartime meeting at Yalta of the Big Three, which marked the beginning of a series of retreats of the free world before the forward march of Soviet aggression, serves to forcefully remind us of the continuing tragic fate of Poland.

With the current gravity of governmental indecision in the Republic of France, and the pregnant situation in the Far East, it is becoming increasingly evident that the American people must concentrate upon the vital need for a prompt overall European settlement. It is supremely important that the Government of the United States decide whether any peaceful and lasting world order can be achieved when such international commitments as those written in the Atlantic Charter and the Yalta agreement are so boldly violated.

It is increasingly evident that there is no semblance and no intent whatever of any real democracy being permitted to exist in Poland under Russian dominance.

This country is morally bound to make it clear that in its conscientious judgment what did occur, and is now occurring, in Poland embraces a violation of the third article of the Atlantic Charter, to which every member of the United Nations is committed.

The duty of the American Government to take a decisive stand in Poland's case cannot be forever disregarded. It is a matter of official record that in addition to the pledges set forth in the Yalta agreement, the United States during the war years repeatedly and specifically assured the Polish people, through their representatives, that it would never recognize a government "not representative of Poland."

The United States cannot hope to retain the confidence of the smaller nations, and to exercise a continued influence in world affairs, if it disregards pledges of so solemn a character. The United States must redeem our pledge by calling upon the United Nations to assume the humanitarian responsibility of demanding that the Christian people of Poland, who suffered so much in the Allied cause, shall not become victims of the ruthless pagan imperialism of an oppressive totalitarian government.

Lynwood, Calif., High-School Students
Put on Successful Get-Out-the-Vote
Campaign in the November 2, 1954,
Election

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

Wednesday, January 26, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me heretofore so to do, I am pleased to herewith set forth information and evidence of the very active, very well-organized, and very successful campaign by the students of the Lynwood, Los Angeles County, Calif., High School, which started October 18, 1954, and continued through election day, November 2, 1954.

The Lynwood Press, a community-conscious newspaper, gave the students deserved and extensive publicity by printing on the very front page thereof on October 28, 1954, the following letter:

OCTOBER 18, 1954.

DEAR STUDENT BODY: We seniors at Lynwood High School are out to prove that we have what it takes to really make democracy live. Seniors in previous years became truly alarmed when they learned that but 67 percent of the qualified voters of Lynwood had shown up at the polls when some truly crucial issues were at stake. The senior problems classes sparked a "Get out the vote" campaign, the results of which were astounding. In the presidential campaign of 1952, 92 percent voted.

We're proud of what these "alums" did, but we're not yet satisfied with the civic participation of our voters. We know more moms and dads should get to the polls. We're wondering how you feel about this situation, and we're thinking maybe you will be interested in knowing what we are doing. Maybe you can give us some ideas, too.

Under the chairmanship of two livewire seniors, we've organized committees that are really on the beam. We've a big sign ready to stretch from walk to walk over our main street. When Mom goes to the market she's going to find a right smart hand bill stowed away with the groceries. Even car bumpers are reminding Lynwoodites that November 2 is a day to remember. (We're particularly proud of the seniors who designed these signs, and of the printshop boys who did the producing.) One of the very special features of our homecoming parade is going to

be the surprise "Get out the vote" senior

To be sure that mom gets to the polls, we're sending out crews of specially trained baby sitters; expert chauffeurs will drive her to the polls if she doesn't have her own transportation. We don't care how mom votes, and dad's choice for Senator is his own secret, but we do want to be sure they both get to the polls—our neighbors, too. We want to make the voting percentage of our Lynwood the highest in the good old United States.

Will you go along with us on this project, and make your plans for a get-out-the-vote campaign? May we hear from you? Footnote: As the November elections draw

Footnote: As the November elections draw nearer Lynwood high-school students are working fast and furiously toward a goal which is vastly important to us and to the American way of life.

What we are asking of you, our parents, is not a difficult thing to accomplish. It requires no effort, no money, and very little time. What it does require is thought—thought for your future and for ours—thought for freedom and a way of life surpassed nowhere, by no one. When the November elections roll around, we want you to get out and yote.

to get out and vote.

We want to keep alive not only the idea of democracy, but the practice of it as well.

Our efforts in this campaign are not en-

Our efforts in this campaign are not entirely unselfish, however. We want to be sure you leave our country in great shape for the time when we take over your privileges and responsibilities—the greatest of which is the right to vote.

If you need transportation or a baby sitter so that you can visit the polls, call NE 1-6153. The candidates will not thank you for your votes nearly as much as we will, the future citizens, who will benefit by them.

We are willing to put forth time and effort to get you to the polls. Are you willing

to get out and vote?

Nora Gaede and Jim Dunn,
Cochairman of Steering Committee,
Florene Herreid, Secretary,
Sally Johnson,
Director of Public Relations,
Tom Bancroft, Supervisor.

Other publicity channels carried the same story and the Lynwood High School student paper Castle Courier on October 29, 1954, on the front page of that splendid, sizable 6-page student publication carried in prominent place the following text:

VOTE—STUDENTS IN ALL-OUT CAMPAIGN FOR URGING COMMUNITY TO VOTE

Vote more in 1954. That is the slogan used by the senior class this year in an allout campaign to get citizens of Lynwood out to vote November 2.

The campaign is under the direction of Mr. Tom Bancroft, faculty advisor, and Nora Gaede and Jim Dunn, student chairman of the student steering committee. The members of this committee are Florene Herried, Secretary; Jerry Ackley, Dale Costa, Sam Leonard, Diane Olhoeft, Meredith Perkins, Sondra Sanders, Carol Sturtevant, Sally Steele, Mary Cornell, Arlene Watts, Jackie Crammer, and Margie Stone.

The committee has organized various ac-

The committee has organized various activities that they are undertaking. They have already sent out letters to every school in southern California telling of plans and asking that they might try to do something on the same order to by to increase their voting percentage.

Students have contacted the ministers of Lynwood asking them to remind the people of their churches to vote. Handbills were printed and were distributed throughout the community in the gas stations and in the grocery stores. Speeches were made to the various service clubs and to the schools around Lynwood.

A banner was erected to hang across Long Beach Boulevard in front of the bank. This is a constant reminder to the citizens of Lynwood to vote on November 2.

A float that will long be remembered by everyone in Lynwood was the one entered by the student steering committee, in the

homecoming parade.

The senior class has asked that the citizens who vote on November 2 turn on their porch lights. If their porch light is not on it will help the students to find the ones who have not yet voted and they will remind them to do so.

Meredith Perkins, senior class president, says, "We of the senior class are hopeful of a 100 percent turnout this year for Lynwood."

In addition thereto the same Castle Courier, on its editorial page carried the following:

FROM THE EDITOR'S DESK

Vote. Vote. Vote. That is the cry of the senior class. This year they are going all out in a campaign to get 13,000 people out

How do they propose to do it? Well, they have many activities planned and they are working very hard to carry them out. The senior problems classes elected a representative to represent them on the Student Steering Committee. They are Jerry Ackley, Dale Costa, Mary Cornell, Jackle Crammer, Jim Dunn, Nora Gaede, Florene Herreid, Sam Leonard, Diane Olhoeft, Meredith Perkins, Sondra Sanders, Margie Stone, Lynn Butler, Carole Sturtevant, Sally Steele, and Arlene Watts. They are guided by a very efficient advisor by the name of Mr. Tom Bancroft.

From this committee they appointed two co-chairmen who are Nora Gaede and Jim Dunn. Also a secretary, Florene Herreid.

Among the activities that they have carried

Among the activities that they have carried out, has been, the banner stretched across Long Beach Boulevard, reminding the voters to vote on November 1.

The print shop has been busy printing up the handbill which will be passed out throughout the community to the gas stations and grocery stores. They have been busy making speeches to the primary schools, in an effort to get them to tell their parents about the campaign. Also they were given the handbills to take home to their parents and to those who don't have children.

Letters were sent to all the schools in southern California, telling them all about the all-out campaign put on by the senior class, and suggesting that they might do the same.

Speeches were given to the service organizations of Lynwood asking for their support.

Then they had their float in the homecoming parade advertising their campaign. The public address system was used to advertise it all the more.

Election day they will supply free babysitters and free transportation for mothers who wish to vote at that time.

These students have put hours upon hours of work on this, and I think we should all take our hats off to them and the whole senior class for the tremendous job that they have done.

Now let's all help them by reminding our parents to vote on November 1.

FLORENE HERREID.
Assistant Editor.

The same Lynwood Press carried the following:

TURN ON YOUR PORCH LIGHT AT 5 P. M. IF YOU HAVE VOTED

Next Tuesday, November 2, is election day in California. Every registered voter is urged to get out and vote for the candidate of his choice by the get-out-the-vote committees of the Lynwood High School, chamber of commerce, Kiwanis Club, realtors, and many other organizations.

The committee at the high school asks that at 5 o'clock, if you have voted, turn on your porch light. Students will call on every home without the porch light on, to remind the residents that it is still not too late. If you need a babysitter call the high school, NE 1-6153, and one will be furnished. If you need transportation the high-school students or any member of the Lynwood-Compton Realty Board will furnish it.

The sample ballots mailed recently tell where to vote.

In addition to all the foregoing vigorous and timely publicity, the Lynwood High School students in their own print shop produced many thousands of handbills on the outside of which were the following words: "For Adults Only," while on the inside thereof was used a graph of a Democratic donkey and a Republican elephant. But in addition thereto the following language in very readable type: "Get-out-the-vote campaign—sponsored by Lynwood High senions and Lynwood Chamber of Commerce. For free transportation and baby care call NE 1-6153 until 3:30 p.m." These were distributed throughout the total city population.

Nor was this Lynwood student body in my great 23d Congressional District the only student body which actively put on campaigns to get out the vote. However, so far as has come to my attention, it appears that the Lynwood High School student body was the most active with its punch line and with a large number of students participating and with a very sizable and active community response and cooperation.

Mr. Speaker, I know that you and all my distinguished colleagues join with me in extending congratulations to this very large high-school student body which, by the evidence of its activity to get out the vote has become early conscious of this duty of every American entitled to cast his or her ballot.

As you well know, Mr. Speaker, each one of the four terms I have already previously served in this great legislative body I have very strongly emphasized on the floor of this house and in many visible ways my belief that it was the duty of every Member of this great legislative body to do his or her utmost in their respective congressional districts to cooperate with all community groups and organizations to see to it that the maximum number of American citizens exercise their voting franchise and perform their duty at the polls. For instance, on August 4, 1954, on pages 12449 and 12450, appear my remarks on the subject of "vote on election day."

And now I wish to emphatically state that I think it is not too early for all Members of this great Congress to in every practical way urge and assist every possible community effort in their respective congressional districts to promote and plan that the largest possible number of American voters in their respective congressional districts shall go to the polls and vote. Nor do I confine myself just to elections for Members of Congress and for the President of the United States. I refer to what might be termed local elections, as well as State, county, and national elections.

This voting participation is one of the factors which is clearly certain to help perpetuate democratic processes and, therefore, our American way of life

The Serious Game

EXTENSION OF REMARKS

HON, GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial from the Textile Challenger, official publication of the United Textile Workers of America:

THE SERIOUS GAME

President Eisenhower believes that 90 cents an hour is enough for millions of underpaid workers.

His economic advisers certainly know that living costs are at the peak and that manhour productivity has reached the highest point.

There is a delightful musical on Broadway called The Pajama Game based on the book Seven and One-half Cents, the same being an increase in wages demanded by overworked pajama workers. The President has increased the 7½ cents, but the Pajama Game is a play; we are dealing here with real, live, hard-working humans. "This is for keeps" affecting the home life of millions of men, women, and children. They want and need a living wage.

A DECENT MINIMUM

Labor is united for \$1.25 an hour as a minimum and this can be justified when we consider what has happened to the dollar and to living costs since the 75 cents an hour became effective.

The President's economic advisers should also know, for example, that workers in the textile industry are producing at back-breaking speed, and if they can work 40 hours at 90 cents, their weekly wage of \$36 is not a living wage.

Labor's proposal for \$1.25 would not only provide decent living standards, it would provide increased purchasing and consumer power with more employment. Last but not least, it would provide added compensation for increased production, a vital necessity if we desire to keep the economy in balance.

Governor Harriman, of New York, has recognized these principles when he advocated a minimum wage of \$1.25. He sees it as the means of combatting unfair competition, creating industrial stability, a curb on runaway mills, and the evil of migratory subsidies.

The working people are looking with expectation to Congress. The President's proposal is inadequate. Ninety cents is too low. Congress can right the wrong.

New York's multi-million dollar men's clothing industry backed Governor Harriman in his appeal for a Federal minimum wage of \$1,25 an hour.

EMPLOYERS FAVOR \$1.25

The New York Clothing Manufacturers Exchange, representing 36 companies with 40,000 workers, became the first major employer group to record itself in favor of a 50-cent rise in the present wage floor.

The clothing association, whose members all pay wages well above \$1.25, sent telegrams to all members of the legislature endorsing the Harriman proposal.

CHANGE WOULD AID INDUSTRY

The employer group contended that the \$1.25 base would "protect New York industry against the unfair competition of low-wage areas, would deter movement of industry out of the State, and would improve business by increasing consumer purchasing power."

The messages were signed by Isidore Grossman, president of the exchange, and Arthur

J. White, its executive secretary.

Some sections of the clothing industry have been especially hard hit in recent years by the establishment of rival plants in the South and in other areas where unions are weak and wage standards are low.

The Open Shop Crusade

· EXTENSION OF REMARKS

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial from Trainman News, official publication of the Brotherhood of Railway Trainmen:

THE OPEN SHOP CRUSADE

Not many railroad workers are going to be fooled by the so-called right-to-work bills now being pushed in State legislatures throughout the country by the Nation's most

reactionary interests.

At least none will be fooled who stops to recall another trick phrase which down through the years has prejudiced people against us and persuaded some lawmakers that we are just a bunch of highbinders trying to get something for nothing.

That phrase is "featherbedding." It was coined by an unprincipled word artist who didn't know anything about railroading or about the workers who keep the railroads running and cared less.

He did know how to count, however, so he just took what the rallroad companies said about us and made it pay off handsomely for himself and for the railroads.

The result was one of the most effective propaganda weapons ever conceived to im-Pede organized labor's march toward fairer wages and working conditions and economic

fustice generally.

The word "featherbedding" poisoned the minds of many people against the railroad minds of many people against the railroad. man and his goals and has been a formidable obstacle in every wage and rule campaign.

And it all started when the railroad companies dangled some gold before a conscienceless writer.

We don't know who thought up the term, "right to work." but judging by the sponsors of such legislation we're fairly sure that they don't care much about anybody's rights and positive that they don't give a damn about any worker's rights.

The people behind these laws are those Who have always fought labor every inch of the way in its struggle for economic and social justice and just a plain square deal for the Nation's workers. They're the open for the Nation's workers. They're the open ahoppers, the hirers of thugs and strike-breakers in days gone by, the die-hard opposers of social security, fair labor laws, railroad retirement, broader public education and every other endeavor of the worktion, and every other endeavor of the workingman to improve his way of life and to Participate more fully in the fruits of civilization and technological progress.

The right-to-work drive is a concerted, well-planned, and richly financed campaign of the National Association of Manufacturers, the United States Chamber of Commerce. and many State and local affiliates, various employer associations, and certain so-called better citizens and patriotic groups which are nothing more or less than political arms of the giant corporations.

The reason they're working so hard now on the States is that they know in the present Congress there isn't a ghost of a chance in making the Taft-Hartley Act into a tighter straitjacket than it already is. And they want to get all their licks in against labor before the next presidential year, when the voters are apt to be fed up with reaction and turn out the legislators upon whom they must depend to tie labor into knots.

The right-to-work bills have no relation to anybody's right to work. They have been conceived as a device calculated to destroy labor unions, reduce workers to what would amount to slavery, and in general put workers in their place, which means at the mercy

of the bosses.

These laws do not guarantee a man a right to work any more than they create employment. If anything, they curtail the right to work by placing the employee at the whim of his employer-for wage cuts, complete loss

of employment, dignity, and self-respect.

Delegates to the Brotherhood of Railroad Trainmen's recent convention put the BRT squarely on record against such legislation when they said: "We denounce the use of the title 'Right To Work' to describe these measures as a subterfuge, intended by false and misleading language to obtain a favorable response from citizens who are all of one mind respecting our right to work, when, as a matter of fact, these victous open-shop measures have the real purpose of undermining existing trade unions, preventing their growth and responsibility in the field of collective bargaining."

Some people are bound to be misled by Big Business' self-righteousness and its proclaimed big bleeding heart for the rights and welfare of labor. Not many unionists, how-ever, will fall into the trap. Even if they're too young to remember labor's long and bitter struggle for recognition and for achievement, their commonsense should tell them that the Devil doesn't prescribe any elixir for long life.

"Featherbedding" or "right to work." they're both trick phrases to blitz labor unions. Is there anything in the NAM's or chamber's record to indicate any concern at any time for the welfare of workers?

We're not fooled, and we're going to do everything in our power to see that the public and the legislators are not fooled, although it's an uphill fight all the way, with the press, radio, and propaganda media all at the disposal of the open-shoppers

Authorizing the President To Employ Armed Forces of United States To Defend Formosa, Etc.

> SPEECH OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. DINGELL. Mr. Speaker, I have listened with keen attention to the words of our wise and beloved Speaker the gentleman from Texas [Mr. RAYBURN], and with equal deference to the opinions of

our level-headed and experienced col-league the gentleman from Texas [Mr. KILDAY] as he, too, expounded his views regarding the requested authority by President Eisenhower in connection with the Formosa threat. I agree heartily with all they said. Their deductions are patriotic, sound, and unimpeachable, but I am not going to quibble about the President's interpretations to the contrary. I am going to vote as the President requests, to prove to the world that there is unity among us on the point of presenting a solid front, and to disregard minor differences where security and peace are the chief concern.

I agree, too, with my good friend the gentleman from California [Mr. Holi-FIELD] whose analytical mind and brilliance are equaled by his patriotism and aggressiveness, so valuable to our beloved country. I not only listened to his brief remarks here on the floor, but also read and agree with his statement which is to be printed in the RECORD and which was released to the press. I believe the President owes it to the people to make some explanations about the employment of the 7th Fleet. What he, the President, said to Congress on February 2, 1953, does not square with what was said as he backtracked on the same subject in his address to the Congress on January 24, 1955. I shall circulate the released Holifield statement in my district should I deem it necessary to do so for the edification of the people who are interested in unimpeachable facts.

Who Owns Formosa?-Walter Lippmann Says Nobody, Vicente Villamin Says the Republic of China (Nationalist)

EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, January 7, 1955

Mr. McDONOUGH. Mr. Speaker, the question of who owns Formosa has been raised by Mr. Walter Lippmann, the distinguished columnist. He contends that its ownership has not yet been determined. Mr. Adlai Stevenson, the former candidate for President, and an increasing number of radio commentators and writers agree with him.

Mr. Vicente Villamin, the well-known Filipino lawyer, economist and writer, disagrees with Mr. Lippmann and says that Formosa is a part of the Republic of China-Nationalist-having been automatically reincorporated into the Chinese national domain immediately after Japan lost the war and lost control of that island which she took from Japan as a war booty in 1895.

His article follows:

FORMOSA IS PART OF CHINA (By Vicente Villamin)

In a recent article Mr. Walter Lippmann said that Formosa belongs neither to Nationalist nor to Communist China (Mr. Adlai Stevenson has since repeated it), and that the right of the United States to defend that island from Communist attack "rests on the fact that it is territory ceded by Japan about which 'the ultimate disposition' not not been settled." He also said that Formosa was "captured from Japan by the United States, not by China."

He then asserted that, in saying that the United States would defend Formosa and the Pescadores but not certain islands which are not vital to their defense, President Eisenhower predicated the policy position of the United States on consideration of strategy rather than law, and he called it American imperialism and implied that the United States was intervening in Chinese internal affairs—the very claims the Communists have been loudly making.

If Mr. Lippmann is right that Formosa's

legal status is not yet settled, then the Na-tionalists have no right to be in Formosa and exercise sovereignty there, as the Communists equally have no right to displace them on that island. From that premise it may be stated that not only the United States but all her allies, 47 signatories to the Japanese Peace Treaty of San Francisco, should defend Formosa from Communist attacks because, if they succeeded, they would take over the island. Therefore, Mr. Lippmann's theory, if carried out, would lead to a general war, the very sequel he is trying to avoid.

This paper contends that Formosa automatically became a part of China when the war was won by the Allies in 1945 and before the conclusion of the Japanese Peace Treaty in 1951-6 years after. It was recaptured from Japan, the illegal possessor, not by the United States alone, though, indeed, she exerted the major effort, but with the help of her allies, including China, which had been fighting Japan for 4 years before the United States entered the war.

Now let me give the ground for my contention: Chapter II, article 2-b of the Japanese Peace Treaty, which Mr. Lippmann cites to uphold his thesis, states that "Japan renounces all right, title, and claim to Formosa and the Pescadores." Then he called attention to the fact that "though Japan has renounced the title, no one else has acquired it," that is, China, its lawful owner, had not acquired it.

Mr. Lippmann is upheld, but only episodically, by the following language in the report on the treaty of the Senate Foreign Relations Committee: "It is important to remember that article (chapter) 2 is a renunciatory article and makes no provision for the power or powers which are to succeed Japan in the possession of and sovereignty over the ceded territory."

A similar thought is expressed in the statement of principles which the United States delegation to the peace conference operated under. Its relevant part reads: "Japan * * * (c) would accept the future decision of the United Kingdom, the U. S. S. R., China, and the United States with reference to the status of Formosa, Pescadores, South Sakhalin, and the Kuriles, In the event of no decision within a year after the treaty came into effect, the United Nations General Assembly would decide. Special rights and interests in China would be renounced."

Of the above statement, only the last sentence found expression in the peace treaty, in chapter 4, article 10. The rest was not acted upon by the conference and therefore not binding.

Now for the refutation of Mr. Lippmann's thesis. On behalf of the United States delegation, which was headed by the then Secretary of State Dean Acheson, Mr. John Foster Dulles, the author of the treaty, told the peace conference the following: "What is the territory of Japanese sovereignty (under the treaty)? Chapter II deals with that. Japan formally ratifies the territorial provisions of the Potsdam surrender terms. * * *

The Potsdam surrender terms constitute the only definition of peace terms to which, and by which, Japan and the Allied Powers as a whole are bound."

The Senate committee report, mentioned above, follows the thinking of Mr. Dulles and "Japan surrenders sovereignty over the territory which representatives of the great powers at the Potsdam conference agreed should be taken from it. Article 8 of the proclamation defining the terms of the Japanese surrender adopted at Potsdam on July 26, 1945, states: 'The terms of the Cairo declaration shall be carried out.'" In other words, that declaration, is a part of the surrender terms, which, in turn, are a part of the peace treaty, specifically those pro-

visions relating to territorial dispositions.

The pertinent part of the Cairo declaration, dated December 1, 1943, follows: three great allies (as represented at Cario, Egypt, by President Roosevelt, Generalissimo Kai-shek, and Prime Minister Churchill) are fighting this war to restrain and punish the aggression of Japan. They covet no gain for themselves and have no thought of territorial expansion. It is their purpose that Japan shall be stripped of all islands in the Pacific which she has seized or occupied since the beginning of the First World War in 1914, and that all the territories that Japan has stolen from the Chinese, such as Manchuria, Formosa, and the Pescadores, shall be restored to the Republic of China."

The declaration was endorsed by Soviet Russia in her war declaration against Japan. dated August 8, 1945, in the following words: 'True to its obligation as an ally, the Soviet Government has accepted the proposal of the allies and has joined in the declaration of the allied powers of July 26," (Potsdam) which says that "the terms of the Cairo

declaration shall be carried out."

Conclusion: The Cairo Declaration is written into the Japanese Peace Treaty. When Japan was defeated it became automatically effective even before the treaty was con-cluded 6 years later, and Nationalist China established its Government there forthwith nearly 4 years before President Chiang Kaishek arrived there from the mainland. Its sovereignty was tacitly recognized by the peace conference by its omission to challenge it and to provide for a future conference to determine its status. The fair inference from these two omissions is that the members of the conference accepted the fact of Chinese sovereignty over that island.

Indeed, with its occupation by its rightful owner, China, after the trespasser, Japan, had been driven out, Formosa was thereby reincorporated into China's national domain. There was no need for a formal conveyance because the ownership of China was versally conceded. Formosa had been a part of China from time immemorial until it was wrested from her by Japan as a war booty. Her recovery was the result also of a war. Conceding for the sake of argument that

a settlement is to be made in the future as to who owns Formosa, it would be unthinkable that that island would not be adjudicated to China. A negative determination would be a travesty on history and justice. Verily, to challenge now the ownership of China over Formosa is academic, pure and

The United States position as to Formosa is correct, legally, morally, historically, and internationally. She recognizes Nationalist China as the only legitimate Government of China. Her policy is to defend Formosa and the Pescadores and such islands as the President as Commander in Chief of the Armed Forces decides to defend. That policy is based on her own vital interests and on her treaty obligations to countries, including the Republic of China (Nationalist China), which are alined with her in the life-anddeath struggle against the Communists and their plan of world conquest and domina-

The Formosa Debates

EXTENSION OF REMARKS

HON, FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include an admirable editorial by the Wall Street Journal of January 31, 1955. This is a cool and objective appraisal of the present Formosa crisis and its relation to American-China policy. past and present.

REVIEW AND OUTLOOK THE FORMOSA DEBATES

The Senate debate on the Formosa resolution finished Friday night. This morning the United Nations Security Council begins its debate on a cease-fire in the Formosa area. There are those who feel misgivings about both the character of the Senate debate and the implications of the Security Council debate.

It is feared, for example, that a proposal to let the Chinese Communists attend, without voting power, the Security Council sessions will only increase their international prestige and might even be the prelude to

U. N. membership for them.

That the Communists' presence at the U. N., if they come, would increase their prestige, particularly in Asia, is certain. But the important question is whether there should be efforts toward a cease-fire. If there should be such efforts, then clearly it is necessary to meet with the Communists. fact that the meeting place, the U. N., happens to be in New York City does not mean that the United States is appeasing the Communists if it lets them into this country for this purpose. In fact, the United States did the same thing in 1950, in connection with the Korean war.

Should the United States, then, associate itself with efforts toward a cease-fire? It depends on what is understood by a ceasefire. Some of our allies may be toying with the idea of a deal whereby the Communists would be given eventual U. N. membership That kind of in exchange for a cease-fire. arrangement the United States could not countenance, and there is no shred of evidence to indicate that Washington would countenance it.

It should be emphasized, however, that a cease-fire which means literally what it says—a cessation of the present fighting in preparation for a peaceful settlement of the Formosa issue—is not appeasement. Those who contend that it is must ask themselves what is the alternative.

Whether there is any hope of a cease-fire is something else again. The propaganda blasts reported yesterday from both Moscow and Peiping do not seem to offer much hope. But the attempt to arrange a cease-fire, providing it is the right kind, is one with which the United States can honorably identify itself.

As for the Senate debate, some concern is expressed about the delay in passing the Formosan resolution. It is thought that this, plus the charges exchanged and the reservations voiced during and after the debate, shows a lack of complete unity on the issue and might play into the hands of the Communist propagandists.

It is certainly true that some of the objections raised in the Senate-particularly the one that the resolution is a green light for preventive war-were ill-considered and remote from reality. All the same, we think it is a very good thing that the lawmakers took as much time as they did to examine President Eisenhower's request. There are Several reasons.

The commitment to defend Formosa and the Pescadores is an old one, made by President Truman at the start of the Korean War. But the resolution offered the Senate does broaden the commitment to permit Mr. Elsenhower to take action affecting other islands and even the Red China mainland If he considers it necessary for the protection of Formosa.

This extension of the original commitment undoubtedly makes military sense. But precisely because it represents an important further step it merited careful questioning. One may deplore the lack of wisdom of some of the criticism, but one cannot deplore the fact of debate on a matter of major policy. The Senate of the United States is not the Soviet parliament.

Moreover, the debate promptly produced a tangible result in the form of a clarification of the President's intentions. To still the idle chatter about preventive war, Mr. Eisenhow-er explained that he alone would decide Whether United States forces should be used for purposes "other than immediate selfdefense or in direct defense of Formosa and the Pescadores."

In other words, he ruled out two possible dangers—that American commanders might too broadly interpret their authority, and that the Chinese Nationalists might bring this country into war by attacking the main-The military discretion is solely reserved to a man who has consistently sought to lessen rather than enhance the chances of War

This clarification should soothe any for-eign fears of American "impetuousness." The slowness of action charged against the Senate debate should operate to the same end. It shows that the Senate, far from being stampeded, took days to scrutinize the resolution to make sure that it did not authorize any rash or precipitate action.

And if the debate stimulates the American People to think deeper about our Far Eastern policy it will serve a further useful pur-pose. For the reaffirmation of the decision to defend Formosa does not answer all the

questions about that policy.
In the circumstances there was no practicable alternative to reaffirming the original decision. But that is not the same as saying the decision was sound in the first place, or that a general policy of defending every piece of the Far East the Communists might choose to threaten is necessarily the best way of strengthening our defenses against communism. We do not profess to know whether it is. But we do know this country has already fought two major Far Eastern wars in little more than a decade; it nearly got into another last year and now again is endan-

The Senate debate did not go into these broader questions. It was not the occasion. Nor can the Security Council debate be ex-Pected to shed much light on them. But the debates may suggest that the questions exist. At some point they will have to be asked.

Statement on Poland

EXTENSION OF REMARKS OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. FULTON. Mr. Speaker, this is the 10th anniversary of the enslavement of the Polish Nation at Yalta on February 7, 1945. We who have friends and relatives in Poland under the present dictatorship, and who are interested in the regaining of the freedom and independence by the Polish people, keep this date on our calendars for remembrance and for renewed hope.

We commemorate this day each year and renew our associations with our friends in a determined reserve to see a free and independent Poland.

We look forward with confidence to the time when Poland, a free and independent nation, will join the peaceful nations of the world in advancing the progress and raising the standards of living in cooperation with all the friendly nations and the citizens of the free world.

Addresses by Gen. Douglas MacArthur

EXTENSION OF REMARKS OF

HON. JGHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. RAY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include three addresses delivered by General of the Army Douglas MacArthur at Los Angeles on January 26.

The three addresses are complementary and I think they should be printed together. I request, under unanimous consent, that these important addresses be printed as parts of one insertion.

ADDRESS BY GENERAL OF THE ARMY DOUGLAS MACARTHUR, MADE JANUARY 26, 1955, AT THE DEDICATION OF A MONUMENT TO HIM IN LOS ANGELES

I have listened with deep emotion to these solemn proceedings. My heart is too full for my lips to express adequately my thanks and appreciation for the extraordinary honor you do me. Even so, I understand full well that this memorial is intended to commemorate an epic rather than an individual; an armed force, rather than its commander; a nation, rather than its servant; an ideal, rather than a personality.

But this only increases my pride that my name has been one chosen as the symbol of an epic struggle in victory by millions of unnamed others.

It is their heroism, their sacrifice, their success, that you honor today in so unforgettable a manner. And this statute and this park are but the selected reminders of their grandeur.

Most of them were citizen soldiers, sailors, or airmen; men from the farm, from the city, from the schoolroom, from the college campus; men not dedicated to the profession of arms; men not primarily skilled in the art of war; men most amazingly like the men you see and meet and know each day of your life. But men inspired, animated, and ennobled by a sublime cause to the defense of their country, of their native land, of their very hearthstones.

DIVINE IMPULSES GUIDED MEN

The most divine of all human sentiments and impulses guided them, the spirit and the willingness to sacrifice.

He who dares to die, who lays his life on the altar of his nation's need, is beyond doubt the noblest development of mankind. In this he comes closest to the image of his Creator who died on the cross that the human soul might live.

These men were my comrades in arms. With me they knew the call of the bugle at reveille, the distant roll of drums at nightfall, the endless tramp of marching feet, the incessant whine of sniper bullets, the ceaseless rattle of sputtering machineguns, the sinister wail of air sirens, the deafening blast and crash of bombs, the stealthy stroke of hidden torpedoes, the aimless lurch of perilous waves, the dark majesty of fighting ships, the mad din of battlelines, and all the stench and ghastly horror and savage destruction of a stricken area of war.

They suffered hunger and thirst, the broiling sun of relentless heat, the torrential rains of tropical storms, the loneliness and utter desolation of jungle trails, the bitterness of separation from those they loved and cherished. They went on and on and when everything within them seemed to stop and die. They grew old in youth; they burned out in searing minutes all that life owed them in tranquil years.

KNOWS GLORY OF THEIR DEATH

When I think of their patience under adversity, of their courage under fire, and of their modesty in victory, I am filled with an emotion I cannot express.

Many of them trod the tragic path of unknown fame that led to a stark, white cross on a lonely grave. And from their tortured. dving lips, with the dreadful gurgle of the death rattle in their throats, always came the same gasping prayer that we who were left would go on to victory.

I do not know the dignity of their birth. but I do know the glory of their death. I am sure a merciful God has taken them unto Himself

In these troublesome times of confused and bewildered international sophistication, let no man misunderstand why they did that which they did. These were patriots, pure and plain; these were men who fought and perchance died for one reason only for their country, for America. No complex philosophy of world intrigue and conspiracy dominated their thoughts. No exploitation or extravagance of propaganda dimmed their sensibilities. Just the simple fact that their country called them, just the devoted doctrine of Stephen Decatur when he said: "My country, may she always be right. But, right or wrong, my country."

BULWARK OF NATIONAL STRENGTH

Be not deceived by strange voices heard across the land, decrying this old and proven concept of patriotism. From the very beginning it has been the main bulwark of our national strength and integrity.

Seductive murmurs are arising that it is now outmoded by some more comprehensive and all-embracing philosophy; that we are provincial and immature, or reactionary and stupid when we idealize our own country; that there is a higher destiny for us under another more general flag; that no longer when we send our sons and daughters to the battlefield must we see them through all the way to victory; that we can call upon them to fight and even to die in some half-hearted and indecisive effort.

That we can plunge them recklessly into war and then suddenly decide that it is a wrong war, or in the wrong place, or at a wrong time; or even that we call it not a war at all, but by some more euphemistic and generic name; that we can treat them as expendables, although they are our own flesh and blood. And even in times of peace, for some romantic reason, they must share not as an act of generosity but as a bounden duty, their national blessings and goods built from nothing to a height never before reached by man-with others because, whether for neglect or not, they have not fared so well.

IGNORE PROPHETS OF DISASTER

That we, the strongest Nation in the world, have suddenly become dependent upon others for our security and even our welfare. Listen not to these voices, be they from one political party or from the other; be they from the high and the mighty, or the lowly and the forgotten. Heed them not. Visit upon them a righteous scorn born of the past sacrifices of your fighting sons and daughters.

Repudiate them in the market place, on the platform, in the pulpit. Those who are our friends will understand. Those who are not we can pass by. Be proud to be called patriots or nationalists or what you will, if it means that you love your country above all else, and will place your life if need be at the service of our flag.

I wish again to express to the citizens of this community my gratitude for their gen-erosity in creating this memorial, and my thanks and appreciation to all those present here today.

You have etched for me in indelible memory a patriotic friendship and sympathetic understanding. You have made me feel far greater than my just deserts and yet more humble than I care to admit.

ADDRESS BY GENERAL OF THE ARMY DOUGLAS MacArthur, Delivered January 26, 1955. AT A BANQUET SPONSORED BY THE AMERICAN LEGION IN LOS ANGELES

Seldom in history has living man been honored as this famous community of Los Angeles has honored me today. You have etched in my heart an unforgettable memory of patriotic fever and national devotion. You have aroused an indelible emotion of gratitude that I am unable to express adequately in words. Yet, the reality of life enables me to apply an appraising perspective: to understand that your action springs not so much from a desire to memorialize a personality as to proclaim a people's adherence to ideals long ago fabricated into the warp and woof of what is called the American way of life.

That you have chosen me to symbolize this rich heritage of principles is an honor which makes me feel far greater than any just merit; that my name should stand for the millions of unnamed others whose faith and courage built the immortal way from which was fashioned the true greatness of our country creates within me a feeling of humility far in excess of all possible pride. It makes me revere the stars in our flag far more than any stars on my shoulders.

I am so grateful to all who have wished me birthday greetings. I know such expressions of good will would have brightened the eyes of that gentle Virginia lady, my mother, on this her day. Thank you—thank you in her name again and again—and, as "old soldiers never die," I promise to keep on living as though I expected to live forever. That famous barrack-room ballad apparently counts on us, those old soldiers who have escaped the carnage of the battlefield, to find the fountain of youth. And, indeed, we might if we only understood what the poet said, that youth is not entirely a time of life—it is a state of mind. It is not wholly a matter of ripe checks, red lips or supple knees. It is a temper of the will, a quality of the imagination, a vigor of the emotions, a freshness of the deep springs of life. It means a temperamental predominance of courage over timidity, of an appetite for adventure over love of ease. Nobody grows old by merely living a number of years. People grow old only by deserting their ideals. Years may wrinkle the skin, but to give up interest wrinkles the soul.

Worry, doubt, self-distrust, fear, and despair—these are the long, long years that bow the head and turn the growing spirit back to dust. Whatever your years, there is in every being's heart the love of wonder, the undaunted challenge of events, the unfailing childlike appetite for what next, and the joy and the game of life. You are as young as your faith, as old as your doubt; as young as your self-confidence, as old as your fear; as young as your hope, as old as your despair. In the central place of every heart there is a recording chamber; so long as it receives messages of beauty, hope, cheer, and courage, so long are you young. the wires are all down and your covered with the snows of pessimism and the ice of cynicism, then, and then only, are you grown old-and then, indeed, as the ballad says, you just fade away.

Many in this brilliant audience were my comrades in arms in the days of used to be. They have known war in all its horror and, as veterans, hope against its recurrence. How, we ask ourselves, did such an institution become so integrated with man's life and civilization? How has it grown to be the most vital factor in our existence?

It started in a modest enough way as a sort of gladiatorial method of settling disputes between conflicting tribes. One of oldest and most classical examples is the Biblical story of David and Goliath. Each of the two contesting groups selected its champion. They fought and, based upon the outcome, an agreement resulted. Then, as time went on, small professional groups known as armies replaced the individual champions, and these groups fought in some obscure corner of the world and victory or defeat was accepted as the basis of an ensuing peace; and from then on, down through ages, the constant record is an increase in the character and strength of the forces. with the rate of increase always accelerating. From a small percentage of the populace it finally engulfed all. It is now the nation in

Within the span of my own life I have witnessed this evolution. At the turn of the century, when I entered the Army, the target was one enemy casualty at the end of a rifle or bayonet or sword. Then came the ma-chinegun designed to kill by the dozen. After that, the heavy artillery raining death upon the hundreds. Then the aerial bomb to strike by the thousands-followed by the atom explosion to reach the hundreds of thousands. Now, electronics and and other processes of science have raised the destructive potential to encompass millions, and with restless hands we work feverishly in dark laboratories to find the means to destroy all at one blow.

But this very triumph of scientific annihilation-this very success of invention-has destroyed the possibility of war being a medium of practical settlement of international differences. The enormous destrucnents makes it impossible for the winner to translate it into anything but his own

The Second World War, even with its now antiquated armaments, clearly demonstrated that the victor had to bear in large part the very injuries inflicted on his foe. Our own country spent billions of dollars and untold energies to heal the wounds of Germany and War has become a Frankenstein to Japan. destroy both sides. No longer is it the weapon of adventure whereby a shortcut to international wealth and power-a place in If you lose, you the sun—can be gained. are annihilated; if you win, you stand only to lose. No longer does it possess the chance of the winner of a duel; it contains rather the germs of double suicide. Science has clearly outmoded it as a feasible arbiter.

The great question is-does this mean that war can now be outlawed from the world? If so, it would mark the greatest advance in civilization since the Sermon on the Mount, It would lift at one stroke the darkest shadow which has engulfed mankind from the beginning. It would not only remove fear and bring security-it would not only create new moral and spiritual values-it would produce an economic wave of prosperity that would raise the world's standard of living beyond anything ever dreamed of by

man. The hundreds of billions of dollars now spent in mutual preparedness could conceivably abolish poverty from the face of the globe. It would accomplish even more than this; it would at one stroke reduce the international tensions that seem so insurmountable now to matters of more probable solution.

For instance, the complex problems of German rearmament, of preventive war, of satellite dominance by major powers, of universal military service, of unconscionable taxation, of nuclear development for industry. of freer exchange of goods and people, of foreign aid and, indeed, of all issues involving the application of armed force. It would have equally potent political effects. It would reduce immeasurably the power of leaders of government and thus render more precarious totalitarian or autocratic The growing and dangerous control by an individual over the masses—the socialistic and paternal trends resulting therefrom— is largely by virtue of his influence to induce war or to maintain peace. Abolish this threat and the position of chief magistrate falls into a more proper civic perspective.

You will say at once that although the abolition of war has been the dream of man for centuries every proposition to that end has been promptly discarded as impossible and fantastic. Every cynic, every pessimist, every adventurer, every swashbuckler in the world has always disclaimed its feasibility. But that was before the science of the past decade made mass destruction a reality. The argument then was along spiritual and moral lines, and lost.

It is a sad truth that human character has never reached a theological development which would permit the application of pure idealism. In the last 2,000 years its rate of change has been deplorably slow compared to that of the arts and the sciences. But now the tremendous and present evolution of nuclear and other potentials of destruction has suddenly taken the problem away from its primary consideration as a moral and spiritual question and brought it abreast of scientific realism. It is no longer an ethical equation to be pondered solely by learned philosophers and ecclesiastics but a hardcore one for the decision of the masses whose survival is the issue.

This is as true of the Soviet side of the world as of the free side, as true behind the Iron Curtain as in front of it. The ordinary people of the world, whether free or slave, are all in agreement on this solution; and this perhaps is the only thing in the world they do agree upon. But it is the most vital and determinate of all. The leaders are the laggards. The disease of power seems to confuse and befuddle them. They have not even approached the basic problem, much less evolved a working formula to implement this public demand. They debate and tur-moil over a hundred issues, they bring us to the verge of despair or raise our hopes to Utopian heights over the corollary misunderstandings that stem from the threat of war. but never in the chancelleries of the world or the halls of the United Nations is the real problem raised. Never do they dare to state the bald truth, that the next great advance in the evolution of civilization cannot take place until war is abolished.

It may take another cataclysm of destruction to prove to them this simple truth. But, strange as it may seem, it is known now by all common men. It is the one issue upon which both sides can agree, for it is the one issue upon which both sides will profit equally. It is the one issue-and the only decisive one-in which the interests of both are completely parallel. It is the one issue which, if settled, might settle all others

Time has shown that agreements between modern nations are generally no longer honored as valid unless both profit therefrom But both sides can be trusted when both do profit. It becomes then no longer a problem based upon relative integrity. is now no longer convincing to argue, even if true, that we cannot trust the other side, that one maverick can destroy the herd. It would no longer be a matter depending upon trust, the self-interest of each nation outlawing war would keep it true to itself. And there is no influence so potent and powerful as self-interest. It would not necessarily require international inspection of relative armaments, the public opinion of every part of the world would be the great denominator which would ensure the issue, each nation would so profit that it could not fail eventually to comply.

This would not, of course, mean the abandonment of all armed forces, but it would reduce them to the simpler problems of internal order and international police. It would not mean utopia at one fell stroke, but it would mean that the great roadblock now existing to the development of the human race would have been cleared.

The present tensions with their threat of national annihilation are kept alive by two great illusions. The one, a complete belief on the part of the Soviet world that the capitalist countries are preparing to attack them; that sooner or later we intend to strike. And the other, a complete belief on the part of the capitalist countries that the Soviets are preparing to attack us; that sooner or later they intend to strike. are wrong. Each side, so far as the masses are concerned is equally desirous of peace. For either side, war with the other would mean nothing but disaster. Both equally dread it. But the constant acceleration of preparation may well, without specific intent, ultimately produce a spontaneous combus-

I am sure that every pundit in the world, every cynic and hypocrite, every paid brain-washer, every egotist, every troublemaker, and many others of entirely different mold, will tell you with mockery and ridicule that this can be only a dream—that it is but the this can be only a dreamvague imaginings of a visionary. But, as David Lloyd George once said in Commons at the crisis of the First World War, "We must go on or we will go under." And the great criticism we can make of the world's leaders is their lack of a plan which will enable us "to go on."

All they propose merely gravitates around but dares not face the real problem. They increase preparedness by alliances, by distributing resources throughout the world. by feverish activity in developing new and deadlier weapons, by applying conscription in times of peace-all of which is instantly matched by the prospective opponent. We

are told that this increases the chances of peace-which is doubtful-and increases the chances of victory if war comes—which would be incontestable if the other side did not increase in like proportion. Actually, the truth is that the relative strengths of the two change little with the years. Action by one is promptly matched by reaction

from the other.

We are told we must go on indefinitely as at present—some say 50 years or more. With what at the end? None say—there is no definite objective. They but pass along to None say-there is no those that follow the search for a final solu-And, at the end, the problem will be exactly the same as that which we face now. Must we live for generations under the killing punishment of accelerating preparedness without an announced final purpose or, as an alternative, suicidal war; and trifle in the meanwhile with corollary and indeterminate theses—such as limitation of armament, restriction on the use of nuclear power, adoption of new legal standards as propounded at Nuremberg-all of which are but paliatives and all of which in varying form have been tried in the past with negligible results?

Dangerous doctrines, too, appear-doctrines which might result in actual defeat; such doctrines as a limited war, of enemy sanctuary, of failure to protect our fighting men when captured, of national subversive and sabotage agencies, of a substitute for victory on the battlefield-all in the name of peace. Peace, indeed, can be obtained at least temporarily by any nation if it is prepared to yield its freedom principles. But peace at any price-peace with appeasement-peace which passes the dreadful finality to future generations—is a peace of sham and shame which can end only in war or

I recall so vividly this problem when it faced the Japanese in their new constitution. They are realists: and they are the only ones that know by dread experience the fearful effect of mass annihilation. They realize in their limited geographical area, caught up as a sort of no-man's land between two great ideologies, that to engage in another war, whether on the winning or the losing side, would spell the probable doom of their race. And their wise old Prime Minister, Shidehara, came to me and urged that to save themselves they should abolish war as an international instrument. When I agreed, he turned to me and said, "The world will laugh and mock us as impractical visionaries, but a hundred years from now we will be called prophets."

Sooner or later the world, if it is to survive. must reach this decision. The only question is. When? Must we fight again before we learn? When will some great figure in power have sufficient imagination and moral courage to translate this universal wish-which is rapidly becoming a universal necessityinto actuality? We are in a new era. old methods and solutions no longer suffice. We must have new thoughts, new ideas, new concepts, just as did our venerated fore fathers when they faced a New World. must break out of the straitjacket of the past. There must always be one to lead, and we should be that one. We should now proclaim our readiness to abolish war in concert with the great powers of the world. The result might be magical.

This may sound somewhat academic in view of the acuteness of the situation in the Far East. Strategically, the problem there has developed along classical lines—the familiar case of a concentrated enemy in a central position deployed against scattered allies. Red China, inherently weak in in-dustrial output for modern war but strong in manpower, engaged on three fronts— Korea, Indochina, and in civil war with Nationalist China. Fighting on all three simultaneously meant defeat, but individually the chances were excellent. The hope for tory depended on getting a cease-fire some fronts so that the full potential of its limited military might could be thrown against the remaining one or ones.

That is what has happened and is happening. First was the cessation of the civil-war action by the isolation in the Formosa area which practically immobilized National China, one of the allies. Red China then concentrated against Korea and Indochina. But even the double front was too much for its strained resources. So a cease-fire was obtained in Korea. This immobilized the so-called United Nations forces and the South Koreans and left Red China free to concentrate on the third front-Indochina and the French. Successful there, the Reds now turn back to the old first front located in Formosa. As Napoleon Bonaparte once said: "Give me allies as an enemy so that I can defeat them one by one."

Militarily the situation demonstrates the inherent weakness of the theory of collective security-the chain is no stronger than its weakest link, and what is even more vital-its full power can only be utilized when all links are brought simultaneously into action. The diverse interests of allies always tend toward separation rather than unity.

Whatever betides the ultimate fate of the Far East-and indeed of the world-will not be settled by force of arms. We may all be practically annihilated—but war can no longer be an arbiter of survival.

I cannot close without once more thanking this beautiful city of Los Angeles for its gracious hospitality. It has been an inspira-tion to be here, where missions once stood as lonely outposts in the advance of our Christian civilization, but where this great metropolis now stands as a monument to American industry and adventure—a symbolic reminder of Californian strength and fortitude. I hate to leave-but, as I once pledged under very different circumstances, I shall return.

ADDRESS BY GENERAL OF THE ARMY DOUGLAS MACARTHUR, MADE ON JANUARY 26, 1955. UPON RECEIVING IN LOS ANGELES AN AWARD OF THE PROTESTANT EPISCOPAL CHURCH FOR DISTINGUISHED SERVICE TO THE CHURCH OF GOD AS A CHRISTIAN STATESMAN AND SOLDIER

Your honor, your grace, and all in reverent attendance at this convention, I cannot begin to express adequately my thanks and appreciation for the signal honor you have conferred upon me. It creates an unforgettable sense of distinction far in excess of any just merit, and arouses a feeling of gratitude that is indelible.

Much of my life has been dedicated to the profession of arms. Much of my experience has been in the practice of the art of war. For such a one it is a rare privilege, indeed. when an occasion arises permitting construction rather than destruction, to build not to

destroy.
Such was the unusual and unique opportunity presenting itself in the field of religion when our victorious soldiers entered Japan. These were veteran troops, troops who had come from behind, soldiers constantly outnumbered, and consequently constantly operating in the shadow of death. Now they had come through against all odds, and were duly thankful to a merciful God. They were spiritual to the highest degree. The most religious army of modern times. Men who prayed before they fought. Men who built their churches even before they built their hospitals.

Japan itself was in a state of utter collapse. It was completely exhausted. Its long war effort had reduced its industrial output to almost nothing. Its military defeat had de-stroyed not only its sense of self-reliance, but its sense of self-respect. The religious disintegration was even worse. It was universal and absolute.

In this vacuum, material, social and spiritual, the occupation began. Three concepts of divinity existed in Japan prior to the war: Shintoism, bred to the native culture of the Japanese; Buddhism, introduced from the Asiatic mainland; and Christianity, an occidental importation, a poor third. The latter influence became negligible during the war.

The first two were practically taken over by the Government as a means of regimenta-tion of the masses. The priesthood represented one of the most cultured, influential and intellectual segments of society, but was dominated by the state. The temples were supported by national funds, and the priests themselves, to all intents and purposes, were but agents of those in political power.

Under Government tutelage, the people had been thoroughly indoctrinated with a belief in the invincible character of their armed forces. The propaganda was complete, and up to the very end no Japanese dreamed of anything but victory. The shock of sudden defeat was thus enormously increased, and left the populace doubtful and resentful, not only of their military and political leaders, but of their religions as well. I am a Christitan and an Episcopalian, but I believe in all religions. They may differ in form and ritual, but all recognize a divine Creator, a superior power, that transcends all that is mortal. I, therefore, felt that it became my duty as a soldier of God to attempt to restore and revive religion in Japan, to fill this moral vacuum, just as it was my duty as a soldier of the Republic to revitalize the material well-being of the country; that to fulfill my obligation it must be of the spiritual as well as of the flesh. But the problem was how.

Should I, with my full military power, arbitrarily decree the adoption of the Christian faith as a national religion? Like all men of human frailty in their hour of defeat and despairing agony, I knew they must turn to some higher spiritual power for moral comfort and support. Would not this be the moment to order them to abandon their own and turn to our God? Their utter help-lessness, their dire necessity, born of complete disaster and dependence, would have perhaps forced an outward compliance, but it would have been only a fictitious and superficial sham, and would surely have defeated the very purpose I had in mind.

The solution I adopted I believe you would have approved. It was to befriend all religious, to permit complete freedom of religious worship as individuals might choose, to free all creeds, Shinto, Buddhist, and Christian, from any Government control, to stop all proselyting of the church by national subsidy, to return to the temples their fundamental obligation of religious tutelage, to make the priest no longer an agent of political coercion or espionage activity. In short, to render unto God that which is His, and not unto Caesar which he would.

It worked like a charm. The priesthood responded to their relief from governmental dominance with a spiritual fervor that swept all before it. No slave passing to freedom ever exceeded their buoyant reaction. The religious vacuum disappeared, and, because I was Christian, and had acted so, it aroused among the Shintoist and Buddhist a great curiosity of the religion which had dictated my decision.

Their own creeds, good in part as they were, were based to some extent on a quid pro quo concept that one should do good in this life, because he would profit from it in the life to come; that he would be repaid; that he would get back more than he put in as a reward in another world was a main incentive. The concept of faith, the concept of Christ that man should do what is right, even if it entailed personal sacrifice, that the urge of conscience was greater than any material reward, was something new and novel.

It seemed to me that the great opportunity was to guide Shintoism and Buddhism toward this basic concept of religious faith, rather than the impossible task of replacement by a conqueror's own creed. That if the lessons of the Scriptures of the Sermon on the Mount could be integrated and welded into their own religious cultures, if basic spirituality could be common to all, it would mean little whether a Japanese were a Buddhist, a Shintoist, or a Christian.

I called upon America for Bibles. An offer of 100,000 was raised by me to 10 million, with an ultimate figure of three times that number, and that is the story up to now.

I am not trained in ecclesiastical methods, nor am I skilled in theological lore, but I want you to know that with such frail personal equipment as was mine I did my best, and that no phase of the occupation, with its many attempted military, political, social, and economic reforms, has left me with a greater sense of personal satisfaction than my spiritual stewardship. Although I am of Caesar, I did try to render unto God

that which is His. And I even dared to hope that through this resurgence of religion Japan will, in the struggle that lies ahead, be indissolubly confirmed against any whose doctrines embrace the deadly poison of atheism. It might prove more potent than bullets, or bayonets, or bombs, or even bread.

Eisenhower Position Squeezes Democrats

EXTENSION OF REMARKS

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include the following article by Roscoe Drummond, from the Christian Science Monitor of February 5, 1955, entitled "Eisenhower Position Squeezes Democrats":

EISENHOWER POSITION SQUEEZES DEMOCRATS
(By Roscoe Drummond)

Washington.—The 84th Congress is into its second month and, in the judgment of most correspondents, the Democrats have not come up with a national issue they can use effectively against the Eisenhower administration either this year or next.

There is Democratic criticism of the administration decision to bring down the military manpower during the next 18 months, but few Americans will distrust the President in believing he would lightly put dollars ahead of needed defense.

There is Democratic controversy over the Dixon - Yates - Atomic-Energy - Commission private power contract, but this is not an issue on which elections are won or lost.

There is Democratic talk of trying to repeal the Benson flexible farm price support program and restore the rigid 90 percent of parity in its place, but it is doubtful if the Democrats have the votes. Also, the principal evidence in the 1954 congressional campaign was that the farm vote stayed substantially on the Republican side.

What is significant about this Democratic plight is that it looks as though it might continue. Naturally, you can't rule out sudden and unexpected political change, but the present consensus is that the Democrats have not any good issues in prospect unless there is a recession.

As the White House sees it, this is no accident. There's a reason. Its reason is that the Eisenhower leadership is succeeding in making conservative government sufficiently humanitarian—in fact, not just in theory—in staking out the best political ground come 1950.

The significant political fact is that Mr. Elsenhower is proving himself effective in making his brand of conservatism popular largely because this conservative administration is not negative and is showing that the conservative approach, while different from the New Deal at vital points, is a way of dealing with national problems, not an excuse for neglecting them.

As measured by presidential elections, conservative leadership has not been nationally popular with the American electorate since the depression—until Dwight D. Eisenhower became the symbol of the Republican Party. Mr. Eisenhower has disappointed some Republicans by showing himself too humanitarian. He has dismayed many Democrats

by showing himself too effectively humanitarian.

I foresee that if the President's principal policies become the fabric as well as the symbol of the Republican Party and if the Republican Members of Congress give him genuine voting support, the Democrats face a formidable political drought

formidable political drought.

Mr. Eisenhower constantly identifies himself as a middle-road person. What this means, it seems to me, is that the President—probably because it comes natural to him—has planted himself right in the middle of American thinking. His leadership leaves the Democrats relatively little room in which to maneuver for position. This is the plight in which the Democrats in this Democratic-controlling 84th Congress find themselves. The consequence is that the Democrats today are having a hard time finding points at which to attack him without sliding off into one extreme or the other.

Some right-wing Republicans will argue that President Eisenhower is Just a New Deal welfare stater under a conservative label, and some left-wing Democrats will argue that he is just an economic reactionary under a humanitarian label. It is a fair and fundamental question to ask, therefore, what the President really means by "conservative" and "humanitarian." These are his own terms. He uses them often—"conservative" with the people's money and "humanitarian" in dealing with their problems. What are the tests of "conservatism" and "humanitarianism"? I think it accurate to say that the administration considers itself truly conservative:

Because it stands against what it deems the central error of the New Deal philosophy—the "Federal fixation," the theory that "Washington knows best," that the best solution to any problem anywhere in the United States is for the Federal Government to pass a law about it, appropriate a billion dollars, and spend it fast.

Because it is arresting, slowly but visibly, the long trend toward drawing to Washington more and more power over more and more things.

Because it is steadily replacing this policy of Federal control with a policy of Federal-State partnership. This applies to power development, school construction, medical facilities, etc.

Because it aims to take the Government out of competition with private business (for example, the recent sale of 24 Government synthetic-rubber plants) and free competitive private enterprise from most controls.

Because it believes that American competitive enterprise will be more productive and expansive for the benefit of all without minute governmental direction, and that the Government can do more for both capital and labor by creating a favorable climate for both than by trying to ration the economic raindrops.

On such a foundation the Eisenhower administration believes it can erect sound social-welfare measures without fostering the welfare state. It is carrying forward most of the social legislation initiated during the New Deal and expanding some of it. Its conviction is that these measures—expanded social security, unemployment insurance, health reinsurance program, etc.-make for a fluid, stable, resilient society when they are sustained by a private enterprise free from continuous Government Intervention. Its purpose is not to use welfare measures to redistribute the wealth but to distribute wealth by increasing it.

This is not to suggest that the Eisenhower administration is always right and that performance parallels promise. But these are its fundamental directives and its fundamental direction.

Travelers Aid Celebrates Its 65th Anniversary

EXTENSION OF REMARKS

HON, RICHARD W. HOFFMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. HOFFMAN of Illinois. Mr. Speaker, the Travelers Aid Society of Chicago is commemorating its 65th anniversary of continuous service to humanity, irrespective of creed, color, or national origin. Here is an agency of mercy that has been and is daily accomplishing miracles, without fanfare or publicity. Very few are familiar with the vast and complex problems that confront these fine Workers every hour of the day and night. In this complex world, of which we are all a part, we are prone to take for granted the existence of certain agencies composed of many good men and women Who go about doing some of God's work, with the only reward being the consciousness of knowing that they are helping mankind. In 1953, over 234,000 people were helped in some way by Chicago Travelers Aid; over 18,000 of these had serious problems requiring casework service. Their volunteers served over 71,000 hours gratuitously, and its board of directors include some of the leading citizens of the great community of Chicago. In this connection, I direct the attention of my colleagues to the following article which recently appeared in the Chicago Tribune:

TRAVELERS AID CELEBRATES ITS 65TH ANNIVERSARY

(By Norma Lee Browning)

It was a day just like any other at the La Salle Street station—milling mobs, clanging bells, droning loudspeaker announcements of train departures—and a young girl alone threading her way cautiously through the crowd in search of something.

She found it, a desk with a white globe thus lettered in blue, "Travelers Aid."

"I want to see someone about getting a job," she told the volunteer worker at the desk.

The girl wore blue jeans, yellow T-shirt, white ankle socks, and black-patent sandals. She carried a gray poplin jacket and no lugge gage. She was slender and pretty, but disheveled, tired, and obviously bewildered. She wore a wedding band. Inside the office as a caseworker interviewed her she began to cry.

It happens every day and dozens of times a day in Chicago's big, bustling railroad and bus terminals. Here at the Nation's transit crossroads thousands of runaways, escapees from life, get trapped in the crossroads of their own emotions.

Here, where east meets west with a railroad timetable, the big station clock ticks off a steady stream of broken hearts in flight. Destination: nowhere.

Like the girl who asked Travelers Aid for a job. She didn't want a job. She had just left her husband, an alcoholic, and two children, walked out on them cold, hitchhiked for 3 days, and wound up in Chicago—her first big city—with only \$2. Hers is a typical, not an isolated, case. Behind the simplest request at the Travelers Aid desks is usually a well-masked emotional scar. The woman who asks for a diaper pin is probably running away from herself—or trying to.

"And it can't be done," says Dr. Henry H. Fineberg, psychiatric consultant and board member of the Travelers Aid Society. "Trying to escape through travel is a very common experience, but you cannot escape what's inside you. Flight is one of the fundamental characteristics of the human animal. When trouble hits, it's either fight or flight, and those who can't fight try to maintain the phantasy of escape through flight.

"They always hope that somewhere else things will be different, but hope is merely a delusion for those who hit the road to get away from it all."

Traveling, adds Dr. Fineberg, is not really living, and anyone who travels excessively and purposelessly, anyone who talks of retiring just to travel constantly, anyone who floats from job to job, from city to city, is fleeling from some inner conflict he cannot solve.

His theory is borne out by the day-by-day records of the Travelers Aid workers. Most people think of Travelers Aid as a between-trains service of incidentals such as checking schedules, playing nursemaid to children, advancing short-term emergency loans when a ticket is lost, or finding overnight housing for stranded passengers. All this and much more Travelers Aid does.

But 90 percent of its time and money is spent on travelers in flight from reality.

Some are searching for the pot of gold at the foot of the rainbow, some are drowning their troubles, some are seeking a one-way ticket to a hazy and happier past that won't be the same when they get there.

be the same when they get there.

Not long ago a feeble, 84-year-old man was guided to the Travelers Aid desk by a station-master. He was distinguished looking, impeccably groomed, and independent as a hog on ice. All he needed, he said, was a day's rest. He had plenty of money; he used to be an engineer. But he'd been living in London, Ontario, and his last wish in life was to go West and die with his boots on. So he was going.

Travelers Aid found him a room and, to his disgust, a physician who advised against continuing the trip until he was stronger.

He escaped. A week later a Dallas newspaper carried his obituary, the brief account of a bewhiskered old gentleman who had insisted on dying with his cowboy boots on, but a complete stranger to the past he had tried to recapture. No friends or relatives came to claim his body. It was sent back to Ontario.

These things happen daily, a pathetic parade of old people returning to the past, but even more tragic are the unwanted ones shunted from relative to relative.

An 83-year-old man was brought to the desk in a wheelchair. He sobbed out a story that is all too familiar to the case workers. His daughter and her husband had put him on the train in Montana, presumably to

visit relatives in a nearby town.

It was long after the train pulled out before he realized what had happened. His ticket read Chicago. He had no friends or relatives here. He was suffering from severe fatigue and malnutrition, and was placed in a sanitarium while Travelers Aid got busy locating his relatives. A son in New York, whom he hadn't seen in 4 years, offered to come to Chicago and get him. Overjoyed, he kept saying he didn't know that any of his children would do that much for him. He was luckier than many.

In-flight travelers fall into six major categories: (1) the senile, (2) runaway children and teen-agers, (3) custody cases, i. e., youngsters shunted between squabbling parents and relatives, (4) fugitives from marital problems, (5) chronic wanderers, and (6)

serious neurotics or psychotics.

Last June, Travelers Aid in Chicago helped write finis to an incredible but true flight from reality case that had baffled social agen-

cies and police for 12 months in nearly 48 States.

A policeman found a small boy sitting sobbing on a suitcase in the Greyhound bus station. He took the child to the Travelers Aid desk. The boy said his mother had told him to sit there until she got back. He had been waiting for 2 days. The child was placed in a home. Two more days later the mother walked into the bus station and nonchalantly asked. "Where's my child?"

She had got a job as a waitress, she explained, and fully intended to come back for her son when she had enough money to buy a bus ticket.

It developed that the woman was a paranoid. She had escaped from a mental hospital in the South, kidnaped her own son, and for more than a year had been traveling from town to town and leaving her child at the bus station while she earned a day's wages to exist and move on. She carried a revolver and had definite homicidal tendencies.

Her husband and family back home, in a small backwoods town, had been paralyzed by fear and shame and apparently had not made much effort to find her. A Travelers Ald worker escorted the boy home to his father. The deranged mother is now safe behind the walls of Cook County Hospital's psychopathic unit.

This, of course, is an extreme case. Most travelers who need aid are not psychotics at all, but emotionally disturbed people running away from life's problems.

In some, particularly the chronic wanderers, the basic problem is so deeply rooted there is little a social agency can do except offer temporary superficial assistance.

There is, for instance, Horace, the nice, docile little man who drifts in and out regularly. Travelers Aid has become probably his only permanent address. He usually turns up in Chicago in the spring of the year, or sometimes in the fall. Travelers Aid helps him find a cheap room and a job—as a waiter, busboy, or bellhop—and tries to persuade him to save enough money to go home and visit his old mother in Alabama. But he never does.

When the loneliness of one city overpowers him he moves on to another.

Why?

"We've never found out," says Mrs. Betty Gordon, supervisor of Travelers' Aid case workers at La Salle Street and Dearborn stations. "Horace comes back to us every year, but all we know is that in some way life has damaged him too much."

On the records Korace is listed simply as a statistic under the heading "Financial Difficulties." But, like many of the more than 300.000 served annually by the Chicago Travelers' Aid, he is fleeing from something inside himself.

Sometimes in a strange city, a strange setting, in the muted, kaleidoscopic chaos of a railroad station, the fugitive does his first backtracking to reality. He may suddenly think, "My God, what have I done?" Or she may cry her heart out in the waiting room, then take the first train home.

A matron found a 19-year-old serviceman's wife sobbing hysterically in the waiting room and called a Travelers' Aid worker. The girl had a 5 months' old baby. When she was finally calmed and could talk coherently, she said she had been home with her husband on leave, visiting his family in Ohio, and after an argument had stormed out of the house—with no place to go. She had no family or relatives. She was sure he wouldn't want her back, and, besides, she didn't know where to locate him. He was being transferred, to San Diego, or Portland, or somewhere.

He was eventually located and took his wife back.

Chicago's Travelers' Aid was organized at the YWCA in 1890 to meet trains bringing girls to the city in search of jobs. This was in the heyday of the notorious Everleigh sisters' bawdy-house business, and the main purpose of Travelers' Aid then was to keep good girls from going wrong in the city.

Today some 500 part-time volunteers, plus nearly 100 full-time paid employees, including 22 caseworkers and 5 supervisors, cover 8 big transportation terminals—6 railroads, bus, and airport. Last year the agency advanced \$99,821.97 in emergency relief loans to stranded passengers and got \$97,450.22 of it back—a 97.6-percent reimbursement.

"Most people who come to us," said Mrs. Gordon, "are honest. But they're unhappy. They're seeking some kind of temporary gratification in flight. Often it's a minor request—for a safety pin or a train schedule—that provides an outlet for an emotional tempest that has been brewing.

"We try to help them pick up the pieces, bring their problems into focus, and face realities with this question: 'Is this really the thing I want to do?' Not only are they passengers stranded between trains; they are people stranded between conflicts that are too much to cope with; they always think they'll be happier somewhere else, and it just is not true."

A fat woman trailed by five rumpled youngsters approached the desk and asked, "How do I change my ticket from Portland, Oreg., to Mississippi?" Then she broke into sobs; bells clanged; the loudspeaker droned on; and the big station clock ticked off another runaway trapped at the crossroads.

An Open Letter on Tariffs to All Congressmen

EXTENSION OF REMARKS

HON, DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. REED of New York. Mr. Speaker, I assume that the Members of the House are aware of the fact that a member of the Randall Commission has proposed, in connection with H. R. 1-the trade-agreement extension-that any industry, or the town in which it is located, that is ruined by imports shall be moved to some other part of the country, and if necessary the employees of that industry be retrained for some other line of business. This proposal is meeting with violent opposition from the employees of the various industries of this country. The employees are so worried over this proposal that they are carrying paid advertisements to let the Members of Congress know how deeply they and their families feel against this un-American proposal.

Under leave to extend heretofore granted, I am inserting the 1-page advertisement which appeared in the Stafford Press, Stafford, Conn., on Thursday, February 3, 1955, which was paid for by 1,004 workers in the textile, button, and allied industries:

AN OPEN LETTER ON TARIFFS TO ALL CONGRESSMEN

DEAR MR. CONGRESSMAN: I like living in the United States. I like living in Connecticut. I like living in Stafford, because it's my own choice, so is my job. But Mr. Congressman, H. R. 1 will change my freedom of choice. It will give away my job protection. I may have to move and find another job. Maybe I am too old.

And, Mr. Congressman, if you have the right to set my minimum pay, why give up your right to protect me from wages in foreign countries that are from less than one-tenth to one-third of what I get.

My boss has spent a lot of money for new equipment to make my job easier. Even so, I can't compete with the fellow overseas. I don't want to lower my standard of living nor give up my freedom of choice of job and where I live.

And, Mr. Congressman, there are a lot of people just like me all over the country.

And, Mr. Congressman, there are lot of other people in this town and in other towns that are dependent on my job and pay and that of my fellow workers for their livelihood.

And, Mr. Congressman, don't forget a uniform is the first issue to a boy in the Armed Forces. I have helped make a lot of woolen cloth for those boys. I don't want the uniform of my son or any other boys to come from some foreign country.

from some foreign country.

And please, Mr. Congressman, if you are interested in me, my family, my home, my job, and my town don't approve H. R. 1.

Respectfully yours,

CHARLES W. FITZ, A Worried Worker.

(This advertisement was paid for by 1,004 workers in the textile, button, and allied industries.)

The Late Judge Camille Kelley

EXTENSION OF REMARKS

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. HAYS of Arkansas. Mr. Speaker, in the death of Judge Camille Kelley at the home of her son, Heiskell B. Kelley, in Little Rock, the Nation lost a distinguished jurist. The universal esteem in which Judge Kelley was held was well

in which Judge Kelley was held was well expressed in a tribute in the Arkansas Gazette, and under leave to extend my remarks I include the following editorial which appeared on January 30:

JUDGE CAMILLE KELLEY

Judge Camille McGee Kelley left a deep and lasting imprint on the social fabric of her generation. Few jurists have achieved the wide recognition she won in her chosen field—the juvenile court.

The kindness and understanding of the problems of the young prompted the National Probation Association to award her court the description of second to none in spirit. It also became known as the heart center of Memphis and the city honored her further by setting aside February 20 as Camille Kelley Day to commemorate her work among the youth.

Camille Kelley's interests were broad and far reaching. She was a noted speaker, an authority on juvenile delinquency, and following her retirement in 1950 had written an impressive number of books and television scripts on her career as an aid and adviser to young people in trouble. They, along with the learned members of her profession and the laity as well, will remember her as a wise and gentle lady whose presence made the world of young people a better place.

H. R. 1

EXTENSION OF REMARKS

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a statement of the Lead Pencil Manufacturers Association, Inc., re H. R. 1 submitted to the Committee on Ways and Means. I enclose the statement because of the presence in the city of Jersey City, which city I represent in the Congress, of the Joseph Dixon Crucible Co. and the General Pencil Co., members of the association. If these firms are adversely affected by H. R. 1, I am afraid that serious unemployment difficulties may arise in my district. The statement reads as follows:

STATEMENT RE H. R. 1 PURPOSE OF STATEMENT

It is the purpose of this statement to present the viewpoint of the lead-pencil manufacturing industry relative to pending legislation which would permit further possible reductions in lead-pencil tariff rates.

This statement is submitted by the Lead-Pencil Manufacturers Association, Inc., 60 East 42d Street, New York, N. Y., on behalf of the 18 lead-pencil manufacturing companies of the United States, comprising 13 association member companies and 5 non-member companies which have specifically approved this statement. A full list of the participating companies is attached to this statement as exhibit A.

BACKGROUND OF INDUSTRY Nature of product

The lead-pencil manufacturing industry is approximately 100 years old in the United States. During this period, the lead pencil has been the basic writing instrument of education and industry at an economic, consistently low cost to users, in striking contrast to the general price inflation seen in other consumer products.

The lead pencil is a precision-made instrument, composed of up to 40 ingredients which are put through more than 125 operations to bring to the public the writing tool with which it is so familiar. Among the better known ingredients are California incense cedar, sheet brass, crade and synthetic rubber, graphite, clay, waxes, adhesives, pigments, lacquers, and packaging materials. The industry is a substantial contributor, relative to its size, to the import trade through its foreign purchase of clay, graphite, rubber, waxes, an dother raw materials.

Makeup of industry

The lead-pencil manufacturing industry is a small industry. The 18 manufacturers, who account for the entire production, range in size from firms employing less than 50 persons to those having upwards of 500 employees. In total, the industry employed 5.433 persons as of January 1, 1954, and its payroll amounted to \$15,504,000 in 1953, representing 57.3 percent of the industry's \$27,024,000 sales during that year.

The 18 manufacturers of lead pencils in the United States have an investment in land, buildings, production equipment, and inventories in excess of \$60 million. In 1953, the industry paid taxes of more than \$2 million to Federal, State, and local agencies, aside from the taxes paid by its employees, and in 1954 paid at least an equal amount.

ESSENTIALITY OF PRODUCT

Black and colored pencils are indispensable operating supplies for every branch of the Armed Forces and are essential to the maintenance of practically all functions and operations of cooperative life and business. They are required for the entire student population. They are indispenable in the Pursuit of all trade and commerce, for the luse of financial and insurance organizations, for the operation of all transportation and communication services and systems and for public utilities, and by all operating departments of the Federal, State, and local governments.

Because production of all machines, machine products, and construction of every type starts on the drawing boards, the lead pencil is a basic tool of the designer and draftsman in preparing his original sketches, finished drawings, and blueprints. The products of the industry are used not only in offices and drafting rooms, but black-lead pencils, colored and copying pencils of many types are used in all factories for planning, supervising, and directing production, and for recording production data on which workers are rated and compensated.

The wood-cased pencil is a product which meets all of the standards of essentiality laid down by the War Manpower Commission in World War II, except that it is not directly utilized for combat purposes. In a large measure, it is almost like a machine tool: Neither is used directly in combat, but both are essential to the manufacture of combat materials. Actually, huge quantities of pencils go into combat areas along with other small but indispensable items.

A review of lead-pencil import figures during the past 50 years will show clearly that in 1914 and 1940 this country and its allies were abruptly cut off from all foreign supplies of lead pencils. Had not American manufacturers been able to fill the critical need for general and special pencils required by all civilian, military, and industrial elements a truly serious situation would have resulted. Maintenance of the pencil industry and its skills on a standby basis, to be activated only in time of war, is impossible.

CURRENT DISTRESSED INDUSTRY CONDITIONS

Competitive industry

The lead-pencil manufacturing industry in the United States is a highly competitive, low-profit industry. Due to falling exports and other factors, present production is considerably less than the industry's capacity, which was enlarged to meet war and early postwar demands. This has resulted in intense competition in the domestic market and a depressed price level. In spite of drastic cost increases, as will be shown later, lead pencils are still selling at the same retail prices of 2 for 5 cents, 5 cents, and 10 cents, which our grandfathers paid 50 years ago for pencils that could not compare in quality with today's product.

As a result of this, it is well to note that the rate of profit for the lead-pencil industry in 1953, although sales volume increased, was below 1 percent of invested capital. This is in marked contrast to the average rate of profit for all manufacturing corporations in 1953, which was 10.4 percent, according to a Federal Trade Commission study. Figures for 1954 are not yet available, but they would show no improvement over 1953.

Rising costs

During the last 20 years (1934-54), all elements of industry costs have increased substantially. A 1954 survey showed that wood costs are up by 189 percent, erasers by 103 percent, leads by 180 percent, brass by 187 percent, packaging by 176 percent, and labor by 265 percent. Since the survey date, wood, rubber, and brass costs have again risen. The industry's cost increases from 1934 to the present time have far exceeded

the 1930 tariff rate on imported lead pencils. The industry has barely managed to survive by improving its processes and equipment to the maximum possible extent.

Falling production

The last official Bureau of the Census production figures for this industry, covering the year 1947, reveal that 10,890,000 gross of pencils, having a manufacturers' value of \$31,181,000, were produced, of which 2,968,-220 gross were exported. By 1953, industry grossage, according to industry records, had fallen to 9,472,000, with a manufacturers' value of \$27,024,000, of which only 553,347 gross were reported.

The substantial decline of pencil exports in recent years has been a serious blow to the industry. Exports have fallen 81.3 percent between 1947 and 1954. Some of the industry's most important export markets have been entirely lost to foreign manufactures following their postwar rehabilitation. Domestic manufacturers are unable to compete pricewise in the few export markets still open to them because of the substantially lower cost advantages enjoyed by foreign producers.

Exports and imports

Our industry is vulnerable to foreign competition, in both export and domestic markets. Because of the industry's difficulties, caused by keen competition, distressed price levels, a production overcapacity, and the fact that exports have been drastically reduced, the industry is definitely at the peril point, or below, under present tariff rates. Any further reduction of lead pencil tariff rates would greatly increase pencil imports and destroy the domestic industry. Even under present rates, foreign manufacturers continue to increase their share of the American market. They do not need lower tariff rates to be effectively competitive in a normal, peacetime economy.

The reasons for this are clear. Our domestic pencil products have no important differences in appearance or performance to shield them from being displaced by closely comparable imports. Foreign manufacturers are equally mechanized and have equivalent know-how. Their production per man-hour is equal to ours. However, according to official Government figures, the average hourly earnings for individual workers in the United States is \$1.78, while in Japan it is \$0.19, and in Germany it is \$0.44, and this sub-stantial wage gap will probably increase as higher wage minimums are enacted. The effect of this tremendous disparity in wage rates can be judged by the fact that payroll represents over 57 percent of the industry's dollar volume.

In 1932 and 1933, when the full tariff rate of 50 cents per gross and 30 percent ad valorem was in effect, Japanese producers were able to flood the American market with cheap pencils. This created such a serious condition for our industry that the United States Tariff Commission, after an exhaustive study of the wood-cased lead pencil industry, sent its Report No. 91 (second series) to the President of the United States, with recommendations to give the industry relief from this foreign competition. As a result of this study, the State Department negotiated an agreement fixing a quota restriction on the Japanese imports complained about. This relief was granted in recognition of the distressed economic status of the pencil industry, shown by the conditions in the industry set forth in the Tariff Commission's report.
Since 1945, the ad valorem duty on lead

Since 1945, the ad valorem duty on lead pencils has been cut by 50 percent. To further reduce these tariff rates would cause dire hardship to American lead pencil manufacturers.

CONCLUSIONS

The lead pencil manufacturing industry of the United States earnestly opposes leg-

islative provisions that permit further reductions in import duties on pencils or pencil leads. The lead-pencil industry is already at the peril point and must have for survival at least the present tariff protection for the following reasons:

- 1. The ad valorem duty on all important classifications has already been reduced the full 50 percent permitted under existing law.
- 2. The industry's products are articles of prime essentiality and of strategic necessity.
- 3. Since the industry is in serious difficulty because of rising costs, loss of exports, and a depressed price level resulting from intense domestic competition, it is clear that a large influx of foreign pencils, which would inevitably follow a further reduction in duty, would be fatal to American manufacturers.
- 4. The American pencil industry cannot convert its main productive facilities into the manufacture of any other product; its machinery can be used only to make pencils.
- 5. The total dollar volume of the American pencil industry is so small that if foreignmade pencils captured the entire domestic market the resulting benefit to international trade would be insignificant, yet American workers would lose wages in excess of \$15 million each year, Government would lose annual industry taxes of more than \$2 million, and a century-old industry, essential to the Nation in time of war and peace, would be destroyed.
- 6. So long as our domestic market is protected by a reasonable, competitive tariff, the sale of lead pencils in the United States, as shown by past records, will rise and fall according to general business activity. This industry does not wish its domestic market to be curtailed by unemployment and business depression brought about by reducing tariffs that now protect many other industries vulnerable to foreign competition, which industries, we understand, employ more people in this country than industries whose productivity or special nature is such as to make them independent of foreign competition.

H. B. VAN DORN, Chairman, Foreign Trade and Tariff Committee, Lead Pencil Manujacturers Association, Inc.

Delaware River Project

EXTENSION OF REMARKS

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. GRANAHAN. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution passed by the City Council of the City of Philadelphia relative to the deepening of the Delaware River:

Resolution memorializing the President of the United States, the United States Senate, and the House of Representatives relative to the deepening of the Delaware River at Federal expense

Whereas the Delaware River from Trenton, N. J., to the Atlantic Ocean is the very lifeline of one of the most populous areas of the United States; and

Whereas the industry and commerce of this great section depends in a large measure on the possibility of oceangoing vessels making their way safely to the great cities on its banks, including Philadelphia and Chester in Pennsylvania, Trenton and Camden in New Jersey, and Wilmington in Delaware, in addition to many other smaller communities; and

Whereas since the earliest days of our national history it has been the responsibility of our Federal Government to maintain rivers and harbors in navigable condition for the promotion of trade as well as for the recurity of our Nation; and

security of our Nation; and
Whereas this policy remains in effect, as
witness the Federal Government defraying
the cost of river and harbor operations in
the St. Lawrence, in Puget Sound, in the
Florida Keys, and elsewhere; and
Whereas the Delaware River must be

Whereas the Delaware River must be dredged to the depth of 40 feet to permit the safe passage of craft bearing supplies for defense plants and other industries; and

Whereas the Federal Government appears to be discriminating against the three States of Delaware, New Jersey, and Pennsylvania in requiring that local interests must defray two-thirds of the cost of the operation, a requirement unprecedented in the history of our Nation; and

Whereas this requirement will do much to destroy the growth of business and industry in Delaware Valley, United States of America, an area of 10 million inhabitants: Therefore

Resolved by the Council of the City of Philadelphia, That we hereby memorialize the President of the United States, the United States Senate, and the House of Representatives to avoid this unfair discrimination and, on behalf of the security of the Nation, and the prosperity of Delaware Valley, United States of America, to proceed forthwith with this vital project of deepening the Delaware River, and at Federal expense; and be it further

Resolved, That certified copies of this resolution be forwarded to the President of the United States, the President of the United States Senate, the Speaker of the House of Representatives, the Director of the Bureau of the Budget, the United States Senators from Pennsylvania, New Jersey, and Delaware, and the Members of Congress from the metropolitan area representing districts in the Delaware River Valley.

JAMES H. J. TATE, President of City Council.

Senator Taft on Formosa in 1950

EXTENSION OF REMARKS

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. SHEEHAN. Mr. Speaker, from a newspaper editorial which appeared in the Chicago Tribune of February 5, 1955, it appears that the late Senator Taft, in January of 1950, suggested that the United States Navy patrol the Straits of Formosa to prevent a Red invasion. At that time, his suggestion was not looked upon with any favor. Five years have lapsed since he made that suggestion. Now the general agreement as expressed by Congress in its passage of the Formosa resolution shows the wisdom with which Senator Taft was endowed.

The editorial is as follows:

WHAT HAPPENED TO THE ANVIL CHORUS?

We have been waiting in vain for some manifestations of dissent to Mr. Eisenhower's assertion that Formosa is essential to American security and that the United States will not permit it to fall to communism, even if there has to be a shooting defense.

For, in January 1950, when the late Senator Taft suggested that the United States Navy patrol the Straits of Formosa to prevent a Red invasion, the verdict was practically unanimous that he was all wet.

When Dean Acheson, then Secretary of State, made a speech dismissing Mr. Taft as a backward pupil, the Washington Star pronounced this rebuttal brilliant and far reaching and said it should be "required reading for all Americans who have let their emotions get the better of their heads" over China.

The Star has now said (January 25) of Mr. Eisenhower's request for a conditional declaration of war in defense of Formosa, "No one disputes the point that the security of the United States requires that Formosa be kept out of Communist hands." But we thought that was just what the Star was disputing when Senator Taft said it.

The New York Herald Tribune announced its position even in advance of Senator Taft's statement. On December 31, 1949, it said editorially that the risk of identifying American policy with the now discredited Chiang, are greater than the political risks which would have to be accepted should the island fall to the Communists and so become a base for further Communist infiltration."

Now that Eisenhower has spoken, the Herald Tribune has no objection to defending Formosa and the Pescadores, and even talks of the support from free nations which we can properly expect in executing this policy. This newspaper also says, "The President's message will stand as a landmark in the development of American policy, an example of the way a great nation can use its strength for good."

This catalog of flip-flops could be extended endlessly through a whole roster of newspapers and commentators. But the point is plain enough: When Mr. Elsenhower catches up with one of Senator Taft's ideas 5 years later, it is an inspired decision and everybody is disposed to say, along with the New York Times, "We welcome this development."

But when Senator Taft, along with General MacArthur, and Herbert Hoover, had the original idea, nobody had a kind word.

Rules of Debate in the Senate and House

EXTENSION OF REMARKS

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. BURDICK. Mr. Speaker, the people generally have an idea from what is taught in our schools just how Congress works, but that theory is far from the actual operation of Congress. I am not familiar with how the Senate operates, but, from reading the newspapers, it seems to me that it is like ancient Gaul, divided into three parts. Those are the majority, the minority, and investigation committees. In this body there are more investigating committees than fleas on a homeless dog. Every department has to be investigated, employees have to be investigated, Senators have to be investigated, then, finally, the Senators have to talk. There is no limit in the Senate how long a Senator can talk. It depends not on what he knows about the subject but the state of his health. If he can talk for 4 nights and 3 days without

stopping he impresses the country. There may be no one in the Senate but the Presiding Officer and the clerks, but he can take encouragement because when one of the 2-mile horses gets going the public likes to see him go. I do not know whether the public bets on him or not, but it is safer than betting on horses. A horse may quit, but a Senator never. Senators like two I have heard do not look like endurance champions, but you cannot always go by looks. You would swear that neither one of them could last 30 minutes, but there is where the public is fooled. Either one can talk from Washington's Birthday to the Fourth of July without any perceptible weariness. One stumbled and fell once, but before he received any aid he was up and going stronger than ever.

It is an education in itself to hear these 2-milers talk. You can never tell what the subject is, for they go into minute details from building a mousetrap to building an atomic bomb, and, of course, they are not experts at either. They are not curtailed because they might give away top secrets. What they say is not top secret at all, but it is something that everybody already knows. New thoughts are seldom added, but they grind up known information and spit it out in better rhetorical form than the language facts come in. Football, baseball, horseracing, and the other sports will never please the rooters like one of these marathon exertions of a Senator.

In the House the Members have no such unbridled liberties. The majority and minority committee members deal out the time. Committee members have the first call, and if a Member wants to talk on a subject where there are 30 committee members each having 30 minutes—and this is greatly underestimated—900 minutes are consumed by these members. That would be 15 hours debate. Usually the longest debates are 8 hours, so you can see where a Member, if not a committee member, gets limited time.

There is only one way another Member can talk at all, and that is when the actual debate ends and the bill is read for amendment. A Member can speak then, providing he offers an amendment that the Speaker thinks is germane, and he has 5 minutes. Most of these attempts are ruled out as "Not being germane," whatever that means. Anyway, it means that the Member cannot talk.

The worst part of the whole proceeding is that if a Member thinks he has just a mere chance of getting the floor. he has to stay in the Chamber and hear all these speeches and grin and bear it. Some do not even grin. Another impediment to a noncommittee Member is that after he gets his 5 minutes, he is asked to yield by some friendly Member-and these noncommittee Members are always polite—and the natural result is that most of his time has been consumed before he has said a word on the pending bill. This happened to me one time—I obtained 5 minutes and a friendly Member asked me to yield and, being polite, I did so. This Member

consumed 4 minutes—a little over that—and I saw that the Chairman was getting all set to bang down the gavel and end the great contribution I was making to the bill. I saw my time was short. I did not want to say "Goodby" as I was too riled up for that, so I had time to say, "I have waited a year to speak on this bill. I did not have time to say a word about it, so if you Members do not see me in the well of this House for another year, allow me to wish you all a Merry Christmas and a Happy New Year."

There is one good thing about the House practice, though. If you never say anything, you cannot be quoted in the next campaign by some devilish upstart that goes gunning for your seat in Congress. This has brought me through a winner in many campaigns. Probably if I had been permitted to talk, as I wanted to, I would not be here now. So you can see that while you are limited in debate by the rules of the House, plus the advice of the Speaker, I presume it is a premeditated plan to keep these silent Members in Congress.

Personally, I would rather spend a short time in Congress than to be roped and hog-tied for 20 years. During my service here I have learned to be a good listener, and while you hear very little that will enlighten you, good manners and the rules of the House give you great protection in campaigns if you have your heart set on being a Member of Congress term after term. Increased congressional salaries will be before the House in a few days now, and when it comes up I am going to propose that hog-tied Members receive a raise and the volatile Members get just what they are now getting, or less. It is worth more to sit here year after year and be compelled to listen to what committee members have to offer-which is not

Here you have a picture of the debates in the Senate and House; which method to pursue, for political reasons, I hesitate to say.

Democrats Impair Atomic-Energy Program

EXTENSION OF REMARKS

HON, TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. SHEEHAN. Mr. Speaker, according to an editorial in the Washington Star of February 5, it is stated that the Democratic member of the Atomic Energy Commission has testified that the controversy over the Dixon-Yates contract has impaired the Atomic Energy Commission's work in both the military and nonmilitary fields, and he has warned that there is likely to be further serious damage in that respect if the administration insists upon going ahead with the project.

If the above is true, then the Democrats ought to put the welfare of their country above partisan politics and per-

mit the Dixon-Yates contract to go through without further obstruction, so we can get along with our atomic-energy program.

What should come first—the country's welfare or partisan politics?

The editorial from the Washington Star is as follows:

POLITICS AND THE ATOM

It is unfortunate that the Joint Congressional Committee on the Atom continues to be at political war with itself, along strict party lines, over the so-called Dixon-Yates contract, and more unfortunate still is the fact that the Atomic Energy Commission remains caught in the middle of the fight. Nevertheless, if the contract itself is as meritorious as he obviously believes it to be, the President is on sound ground in declaring his firm intent to go through with it even though the committee's Democratic majority has voted solidly in favor of cancellation.

True enough, veteran Commissioner Thomas E. Murray has testified that the controversy over this issue has impaired the AEC's work in both the military and nonmilitary fields, and he has warned that there is likely to be further serious damage in that respect if the administration insists upon going ahead with the project—a private undertaking designed to supply the TVA system with 600,000 kilowatts in the Memphis area in order to make up for a comparable amount of TVA power being delivered to our atomic plants at Paducah. But Mr. Murray has taken an on-again-off-again position on the matter-first opposing the contract, then approving it in its final form, and now switching back to the opposition-and his latest change of mind seems to have been brought about primarily by a desire to put an end to partisan politicking rather than by any sudden discovery of grievous faults in the contract's terms.

In other words, if this is a fair assessment his new position, Mr. Murray would abandon the contract, not so much because it lacks merit as because the joint committee's Democratic members (who do not have the unanimous support of their party colleagues) threaten to keep on vexing and distracting the AEC with unremitting attacks on the Dixon-Yates project. However, the Republican administration can hardly be expected to surrender to such a threat if it is honestly convinced of the project's worthwhileness, and this seems particularly true in view of considerations like the following: (1) Chairman Lewis L. Strauss' categorical assertion that the undertaking has in no degree been injurious to the AEC's primary operations, and (2) the fact that the con tract's terms appear to be economically better than those already in effect with private companies supplying power to atomic installations elsewhere.

Yet, politics being what they are, and because advocates of public power regard Dixon-Yates as a phrase meaning an encroachment of "creeping capitalism" on the territory of the Tennessee Valley Authority, the joint committee's Democrats are not likely to diminish their attacks.

Thoughts From the Grassroots

EXTENSION OF REMARKS

HON. JOHN C. WATTS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I wish to

insert an editorial appearing in the News-Herald, of Owenton, Ky., on February 3, 1955. While the comments paint a rather desolate and dark picture. it nevertheless points up very lucidly the situation with which many of our smaller communities are confronted. It brings home the need for prompt and immediate action on the part of Congress to provide a program of Federal assistance for school-construction purposes during this session. It is our responsibility: the needs are known to all of us. Further delay on the part of Congress in enacting an affirmative, constructive, and practical program under which there would be eliminated these black marks would be a serious error of omission.

I urge each of my colleagues to read this splendid editorial carefully.

OUR SCHOOL PROBLEMS

Once again a group of citizens are organizing themselves in the county to try and help solve the many problems facing the county board of education. A large group of parents met Monday night at the REA building and set up a committee. Highly unsanitary conditions at the Owenton elementary school was the chief topic of concern—although the list of complaints is a long one. The group visited the school on Tuesday morning for a personal inspection of the building.

Previously a committee had been set up by the New Liberty School PTA to tackle similar problems in their school.

Many of the Owenton group reported that, despite the conditions of the building which is in reality too old and unsafe to be used, the place is not kept clean. Everyone knows the danger in this. Disease germs breed in uncleanliness and fiith. This is too great a risk to run for the welfare and health of our children and community.

We believe these unsanitary conditions can be corrected and the heating system operated to provide sufficient heat for the children and teachers. On cold days they are forced to keep their overcoats on until around noon.

All this reemphasizes the age-old problem of the county school system. There is not sufficient revenue for the school board to operate all the schools properly. Something is going to have to be done in the not too distant future as far as financing is concerned. Several of the school buildings in the county are inadequate. They must be replaced. We don't know where the money is coming from to do all this—but the problem has been put off about as long as possible.

Granahan Says Showdown on Delaware River Project Will Come in Appropriation Bill

EXTENSION OF REMARKS

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. GRANAHAN. Mr. Speaker, under leave to extend my remarks, I submit herewith a statement I have made in support of legislation I introduced making an appropriation for the prosecution of the Delaware River Channel deepening project:

Granahan Says Showdown on Delaware River Project Will Come in Appropriation Bill

Congressman WILLIAM T. GRANAHAN, Democrat, of Philadelphia, said today the showdown on the Delaware River Channel project from Philadelphia to Trenton "will probably have to come in the appropriation bill if present efforts to persuade the President to change his mind do not succeed."

Granahan introduced a bill today to provide for a \$25 million Federal appropriation in the coming fiscal year to begin work on the \$90 million project. President Eisenhower's budget for the 1956 fiscal year had called for only a \$6 million appropriation contingent on local industrial interests (United States Steel Corp.) providing \$18 million toward the project before any Federal funds are made available.

"The series of conferences we have been holding in devising strategy to try to get the President to change his mind and allow this project to go forward—as Congress said it should—without the \$18 million local contribution, may be effective, and should certainly be pushed full-speed ahead. Governor Leader, Governor Meyner, and Governor Boggs are all making a fine contribution to this goal.

"But unless the President changes his mind, we will have to get this thing accomplished in the same way we pushed through the enabling legislation last year—that is, by convincing the Congress of the dangerous precedent which would be set if the administration's position were allowed to

prevail.
"That is why I am cosponsoring a special appropriation bill to get this matter formally before the House Appropriations Committee when the civil functions appropriation bill

is called up for hearings.

"We must not only convince the Appropriations Committee of the soundness of our position but we must also impress on all Members of Congress whose districts include navigable waterways that the President's idea of requiring huge private contributions to waterways-development work will stiffe industrial expansion and raise all kinds of serious economic problems for the future.

"We are pretty much in the same situation that we were last year when the enabling legislation was before Congress. At that time the administration insisted that the authorizing law require an \$18 million local contribution. Intense efforts were made to try to get the administration to change that position. When those efforts falled, we took the fight to the Congress and won. We may have to do exactly the same thing again—and I sincerely believe we can win the fight all over again."

Devastation of Low Tariff on Industrial Expansion in the United States

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. REED of New York. Mr. Speaker, I am inserting, under leave to extend, a letter from Mr. Earle W. Gage, editor of the Jamestown Shopping Guide, of Jamestown, N. Y., together with an article which appeared in the Buffalo Eve-

ning News of February 1, 1955. As stated in the article the Depew, N. Y., mill of the Albert Goode Bedin, Inc., has abandoned plans to erect a new plant in Depew because of the threat of strong competition from imported goods.

FEBRUARY 2, 1955.

Hon. DANIEL A. REED,

Washington, D. C.

Dear Mr. Reed: I enclose clipping from Buffalo News which is in line with your brave fight against reducing tariff rates, and hope that you may place this in the Recomp for all to read who wish to know what could happen to American industry with flood of cheaply made foreign products.

Sincerely,

EARLE W. GAGE.

[From the Buffalo Evening News of February 1, 1955]

TOLD TARREST CUT IS THREAT TO JOES—GOODE BEDIN CONCERN ABANDONS PLAN TO BUILD NEW PLANT, SAYS IT MAY HAVE TO SHUT OLD ONE

A 37-year-old weaving mill in Depew which makes silk boiting cloth and stencil silk has told its employees that their jobs are in danger because of a proposal before Congress to cut the tariff on this type of textile.

The mill is the production unit of Albert Goode Bedin, Inc., 437 Fifth Avenue, which does an extensive business in silk bolting cloth and nylon and vinyon-filter fabrics. About 60 are employed in the Depew plant. Many of them are writing United States Senators and Representatives protesting the tariff-lowering proposal.

Because of the threat of strong competition from imported goods, the Depew mill has abandoned plans to erect a new plant in Depew, according to Julian Faisant, su-

perintendent.

ASKS HELP OF EMPLOYEES

The new building was to have been located on Calumet Street. Operations will be continued in the older plant at Calumet Street and Terrace Boulevard, part of which was taken over by the Marco Industries about 10 years ago.

Bolting cloth is used in flour mills to sift flour. It is in a class with stencil silk used in the process of printing on fabrics.

President Henri Barbet, of Albert Goode Bedin, Inc., in a bulletin for the employees

at Depew, said:

"If the proposed cut in the tariff becomes effective, this country will be flooded with Japanese stencil slik which, in the event of war, could no longer reach our shores. * • • Your help is needed to put a stop to this tariff-cutting plan."

CALLED STRATEGIC MATERIAL

Mr. Barbet told the employees in Depew that "this time the Government people want the tariff cuts to apply directly for the benefit of Japan. They have said so officially." He added:

"If the United States goes on cutting tariffs without seeing to it that foreign nations do their fair part in helping build up trade, this company believes our country will be hurt badly. We believe your jobs will be endangered.

"Sooner or later, lower tariffs can only mean the closing of this company and the loss of your job. In the long run, it won't help Japan or anybody else if tariff cuts wreck an American industry."

Mr. Barbet pointed out that boiling cloth is regarded as a strategic material—that this textile has been used to sift explosives, abrasives, and chemicals, ingredients necessary for the conduct of war.

The Spirit of Free Poland

EXTENSION OF REMARKS

HON. WILLIAM E. McVEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. McVEY. Mr. Speaker, the 7th of February marks the 10th anniversary of the famous wartime meeting of the Big Three which marked the beginning of a series of retreats of the free world before the forward march of Soviet aggression. The spirit of Poland, although at times under the yoke of foreign aggression, still lived in the hearts of the Polish people, and we firmly believe that it survives today. Her courage under various circumstances should be an inspiration for future generations of Poles to carry on with that same indomitable spirit which has characterized their actions throughout the years.

Much disappointment has been felt not only by the people of Poland, but by many nations who share the spirit of liberty, that the Atlantic Charter has failed to carry out its provisions with regard to the rights and freedoms of people who have been subjected to the yoke of oppression. Those who committed their signature to the Atlantic Charter gave their approval to the following ideals on the part of the charter's membership.

First. Countries should seek no aggrandizement, territorial or otherwise.

Second. The signators desire no territorial changes that do not accord with the freely expressed wishes of the people concerned.

Third. The rights of all people to choose a form of government under which they will live is sanctioned by the Atlantic Charter, and the charter expresses the dictum that the sovereign rights and self-government shall be restored to those who have been forcibly deprived of them.

The Union of Soviet Socialist Republics endorsed these objectives and became a signator to this charter on January 1, 1942. The freedom-loving people of Poland accepted this charter and hoped that it meant a spiritual rebirth of the principles of freedom to which they had dedicated their lives on May 3. 1791. By their previous record they had earned the right to such expectations. They had made the same sacrifices on the altar of human decency and liberty as the soldiers of other lands in their fight against the tyranny imposed by Adolf Hitler. They had also placed their trust and their faith in the intellectual honesty of America.

But what happened? The agreements made at Yalta surrendered much of the principles which had been laid down in the Atlantic Charter. The freedom-loving people of Poland were locked behind the Iron Curtain, where they remain today. The events of those fateful hours at Yalta in the year 1945 constitute, perhaps, the darkest pages in the history of

our Republic. We pray that in some manner we may atone for the wrongs committed on a people who placed their trust in our honor.

Today the Polish people are under the yoke of a conqueror, but their spirit is not crushed. That intense patriotism which has always characterized this people will continue to exist until the day when they will again throw off the rule of the oppressor and take their rightful place among the freedom-loving peoples of the world.

Spiritual Issue in World Schism Will Be Neglected at Our Peril

EXTENSION OF REMARKS

HON. CHARLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include an editorial that appeared on Sunday, Februrary 6, 1955, in the Charlotte Observer of Charlotte, N. C. This is a thought-provoking editorial and makes points about which too little has been said in the debates on our foreign-aid programs. I commend the contents of this editorial to the consideration of my colleagues in the House. I also hope it comes to the attention of officials in the State Department and in FOA.

Norman S. Buchanan and Howard S. Ellis, of the University of California, have made a report for the 20th century fund saying that one of the best weapons against communism is to help underdeveloped countries improve their economic status. They offer this as an offset to the quick and easy remedies of communism.

The two professors do not say that economic development is the only antidote to communism, but too many people do. They do not contend that a higher standard of living will automatically make good democrats, but many other people do. The professors argue that economic improvement cannot be imposed from without but must grow up from within, stimulated by only a minimum of outside aid. This aid, they say, should be chiefly in the form of private capital investment and a better opportunity to sell goods on the world market.

With all of that we are in hearty accord. But the danger of overemphasizing economic development as an antidote to communism is that we shall look upon it as a quick and easy remedy on our side. We have been doing that too much already. Many Americans were so enthusiastic about such panaceas as point 4 that they became convinced that all that is needed to make good democrats of a backward people is to raise their standard of living.

That reasoning is an adaptation of the very Marxist materialism that we are trying to counteract. Those who contend that materialism can be overcome by more materialism have forgotten that the facts of history do not bear them out.

The classic example of how a backward country can be opened up and helped to develop economically was United States friendly aid to Japan beginning with Peary's visit in 1860. The subsequent economic growth of Japan was one of the marvels of

the next half century, but it did not make Japan a democratic nation—just the opposite. The Japanese did not become democrats until we crushed them in a bloody war, and there is some doubt even yet.

Few nations have been more advanced technically, economically, or educationally than Germany under the Kaisers and under Hitler. Czechoslovakia, one of the most industrialized countries of Europe with one of the highest living standards, was an easy pray to communism. The countries that fell first and most easily to communism were not backward nations.

On the other hand, the stanchest foes of communism have been Greece, Turkey, and Spain, all backward industrially and with low living standards. Iran, one of the most underdeveloped of all, has been under the direct threat of Russia for years but has stubbornly held to its independence.

Economic improvement is desirable; it will be a great help in the struggle against communism; it should be promoted by all practicable means. It is not, however, the main issue in this world schism. That issue is moral and spiritual. The underdeveloped people want independence and freedom more than they want any amount of industry; they want human dignity more than they want the highest standard of living.

Those moral and spiritual-values are America's specialty. They are the one boon we can give to oppressed peoples that communism cannot give them. If we forget that—if we allow ourselves to be deluded into offering those people the stone of materialism when they ask for the bread of the spirit—we shall throw away our strongest weapon.

Discrimination in Hospitals

EXTENSION OF REMARKS

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. O'HARA of Illinois. Mr. Speaker, I am happy to number among my constituents Dr. Quentin D. Young, an eminent physician who on January 24, 1955, spoke at the luncheon circle meeting of the Council Against Racial and Religious Discrimination in Greater Chicago, on the board of which worthy organization I have enjoyed the high privilege and honor of serving. I commend Dr. Young's address to the thoughtful reading of my colleagues.

Dr. Young's address is made the more noteworthy by statistics, compiled by indefatigable research, showing that many sick persons of a minority group who are willing and able to pay for hospitalization are compelled to go as charity patients to a public hospital for the one and only reason that there are no facilities available for them in private hospitals.

Because of the unusually clear and illuminatingly practical nature of this address on a subject challenging the interest of all good Americans, and believing that many of my colleagues having read it will wish to preserve it for future use and reference, I have sought to make its reading easier by inserting subheads. The address follows, the subheads being mine:

This afternoon, in a spirit of mixed optimism and distress, I shall attempt to bring you up to date on the pattern of discrimination against minority groups in hospitals. The optimism stems from increasing signs that conscience and social pressure are combining to effect a decisive change in a bad situation. Distress, because even at this late date, the actual gains have been small. The established practices in so fundamental an area as accessibility to health facilities remain indefensible and demand correction.

In Chicago, when one speaks of a minority, one speaks of the Negro segment, which constitutes perhaps one-sixth of the total population. Of course, it is self-evident that the meeting of health needs requires more than access to hospitals: poor housing, low income, inadequate education, all contribute to intensifying health needs. However, this afternoon I hope to delineate the extent of the discriminatory pattern as regards hospitals, and to suggest some reasonable and workable proposals for revision.

One way to analyze the effects of inequality of health opportunities is to examine the causes of death of the minority population and compare these with the causes of death among the white population. Dr. Herman M. Bundesen, president of the board of health of the city of Chicago, has very generously prepared for us a body of statistical material which, I submit, vividly portrays in terms of death the culmination of discrimination. These figures are based on the latest available information, all deaths throughout the city of Chicago in 1953.

WHAT NEGROES DIE OF

There is a group of so-called degenerative diseases, such as heart disease, cancer, cirr-hosis of the liver, which are generally associated with increasing age and represent processes which medical science has so far failed to cure. Sixty-six and two-tenths percent of white deaths were of these three causes, whereas only 49 percent of the Negro deaths fell in this category of essentially unpreventable deaths. What, then, did the Reviewing Dr. Bundcaen's Negroes die of? tables, we find that accidents, tuberculosis, pneumonia and influenza, and diseases of infancy-all causes of death which modern techniques have largely controlled-accounted for 9.5 percent of white deaths, while Negroes dying of these causes constituted a startling 21.1 percent of total Negro deaths. These cold figures represent, in terms of death, net costs of inequality to the Negro population.

An interesting sidelight is the fact that a significantly higher proportion of Negroes (59.3 percent) die in hospitals than do whites (50 percent). This stems from the causes of death themselves in that the acute, overwhelming cause of death results in hospitalization more consistently than does a terminal chronic, degenerative disease. We have the paradox, then, of proportionately more Negroes dying in hospitals—and incidentally, proportionately more than twice as many Negroes as whites dying en route to hospitals—and yet, when we examine the opportunities of these people to enter hospitals in Chicago, we are confronted by an ominous and menacing picture.

COOK COUNTY HOSPITALS GETS 71 PERCENT

Warden Fred A. Hertwig, chief administrator of Cook County Hospital, has asserted, "We're the attending physician to Chicngo's Negroes. While some other hospitals in the city—notably Provident and Michael Reese—do care for a large number of Negroes, we get more. The plain truth is that there are not enough other medical services available to Negroes in Chicago today." With these words, Mr. Hertwig has ably defined the problem.

Dr. Bundesen was unable to supply statistics relative to the racial distribution of hospital admissions, since "hospital admis-

sions are not reported to the board of health by race." However, there remained another valid yardstick for measuring the composithe number of tion of hospital populationsdeaths, Negro and white, which occurred in these hospitals during the period of a year. In the few hospitals where the racial com-position is known, notably Cook County, Michael Reese, and Provident, deaths by races

conform closely to admissions by races.

To validate Warden Hertwig's statement, 71 percent of all Negro hospital deaths in occurred at Cook County Hospital. Indeed, a Negro dying anywhere in Chicago in 1953 had a 42-percent chance of breathing his last at County Hospital. There are 8 other hospitals in Chicago—2 of them, like County, public institutions-which accounted for 21.5 percent of Negro hospital deaths. Thus, in all, the other sixty-odd hospitals in Chicago, 7½ percent of Negro hospital deaths occurred. In 22 hospitals not 1 solitary Negro death occurred (although as many as 432 whites died at just one Negro death. Six hospitals had two. These 35 hospitals reported 19 Negro deaths out of a total of 6,643. This is the pattern of discrimination in Chicago hospitals.

SCANT MATERNITY FACILITIES

The Welfare Council of Metropolitan Chicago in May 1953 published an extremely complete and authoritative study of maternity facilities in Cook County. This report deserves careful study by every thoughtful citizen. But just a few quotes will reveal how even childbirth is beset by bigotry:

'Seventeen of the 61 [maternity] pitals had no Negro births and 24 had less than 10 Negro births. On the far South Side of Chicago, the area with the second largest number of Negro mothers in 1951, no hos-pital reported as many as 10 Negro births." (Yet 22 percent of Negro mothers lived there.)

"Eighty-two percent of Negro births in 1951 were in four hospitals, or under the supervision of the Chicago Maternity Center; 54 percent took place at Cook County Hospital, as compared to 2 percent of the white births."

QUESTION OF INDIGENCY

Invariably the question of indigency is raised when discrimination is under scrutiny, yet a survey of Cook County maternity pa tients in the welfare council's report indicated that in 1 sampling 20 percent of patients were of sufficient income for pri-vate care and 78 percent of these were Negroes. The whole problem is best summarized by the welfare council report itself:

"3. Regarding lack of availability of beds

to Negro patients:

"(a) Voluntary hospitals and their medical staffs would need to remove intake limitations based on race, where such limitations exist, to relieve Cook County Hospital of its large load of patients (principally Negro) who are not medically indigent. Relaxation of limitations based on race would enable voluntary hospitals to use their beds more fully for the medically indigent in the event that additional funds from public or private sources are made available for this purpose.

"(b) Although approximately 20 percent of births in Cook County are Negro, maternity beds are virtually unavailable for Negroes in 2 out of every 3 hospitals.

(c) The concentration of the population in certain areas makes some maternity beds too far distant to be available, practically.

"(d) The almost complete lack of medical staff appointments for Negro physicians in virtually all voluntary hospitals limits the opportunity of Negroes who are private patients of Negro physicians to receive hospitals of Negro physicians to receive hospitals. pital maternity care under the supervision of their own private physicians."

WILLING AND ABLE TO PAY

The problem of discrimination is only to a very small extent a problem of indigency. Of far greater concern to the fair-minded citizen must be the denial of access to hospitals of the financially competent citizen, because of race. The direct effect of this ill, of course, is denial of free choice of physician, the bulwark of our free American system of medicine. Far from being medically indigent, thousands of Negro citizens are excellently prepared for hospital costs by virtue of their employment in basic in-dustries. These industries, such as steel, meatpacking, farm equipment manufacture, all have as a condition of employment comprehensive health insurance plans. Is it fair for American citizens to spend substantial amounts of money in good faith to insure against hospital costs, only to find themselves at the county hospital, an institu-tion created by law for charity patients? The effect of this highly developed trend is to strain the already loaded facilities of Cook County Hospital, at the taxpayers' expense, by patients who are willing and able to bear their costs in private hospitals. The time is arriving when insurance carriers and the general public must answer whether this practice can, in conscience, be considered justifiable.

Just one example will dramatize the inequalities in the situation: all employees of the meatpacking industry in Chicago are the beneficiaries of the most liberal type health insurance plan. Far from medically indigent, a man and his family so insured are well prepared to meet major medical costs. Local No. 347, UPW, CIO, covering Armour & Co. employees, examined the claims from hospitals from December 1, 1953, through November 18, 1954. There were 946 such claims, 217 or 23 percent of which were from Cook County Hospital. Eighty percent of the members of this local union are Negroes.

SUGGESTION OF REMEDIES

This, then, is the pattern of discrimination. What remedies are available? Some reside in the conscience and good faith of the community and responsible authorities. We physicians and our organizations must extend our traditional concern for maxi-mum private free choice medicine to the area of minority citizens. Hospitals, hospi-tal councils, and hospital board members must face their responsibilities to render eare without racial discrimination. Finally, taxpavers and county officials must safeguard charity institutions from the abuse wherein financially competent persons of the unwanted race are channelled into county hospital.

In addition, there are specific legislative remedies: the tax-exempt status enjoyed by most hospitals is, in effect, a subsidy from all Certainly, this privilege from the State of Illinois cannot justifiably be granted an institution which will not serve an important segment of the State of Illinois, the Negro people. Therefore, a bill to remove the tax-exempt status of hospitals which discriminate because of race or color has been introduced into the State legislature and should be adopted.

The Chicago Board of Health licenses hospitals and requires certain health and safety standards to be maintained-discriminatory admission practices logically fall within this purview, and therefore the ordinance which provides "no hospital shall deny admission or equality of care, or the use of any of its facilities to any person on account of race. creed, color, national origin or ancestry, except that hospitals maintained by religious, fraternal or other associations may limit admission exclusively to members of its group or may grant preferential admission to said members, provided however, that all admissions and care provided for persons other

than said members be made available without regard to race, creed, color, national origin or ancestry" should be passed.

BRANCH OF COUNTY HOSPITAL

There is one other legislative matter of importance. There has lately been considerable serious discussion and proposal of an extension or branch of the Cook County Hospital. Certainly all needed expansion of that institution to meet its legally constituted responsibility-the care of charity patientsmust be provided. However, the expedient of locating a branch of county hospital in the midst of the Negro area of the city might well serve to extend and crystallize the pattern of shunting all Negro patients to county. A logical location of any needed extension would be on the far south side of Cook County, where distance is a factor in securing hospital care for many medical indigents.

In presenting this outline of the current situation, I feel I must not leave you with a sense of inactivity. A number of factors are combining which seem to indicate that a basic change is in the making. outstanding institutions, of which Michael Reese and Billings Hospital are examples, have a rich experience in democratic, interracial policies. Their success offers all the reassurance needed to the rest of the hospital community. A small but significant number of Negro physicians has been admitted to white staffs. I must stress that staff membership for the Negro doctor is the crux of this entire problem. No total solu-tion can be implemented that does not provide for full equality for the Negro physician.

In the American tradition, injustice is not countenanced endlessly. More and more, in-dividuals and organizations have concerned themselves with the search for a solution to this problem. And I am confident it will soon be solved when reason, fair play, and maturity, coupled with sound medical practice, prevail.

Back Home Again-Mission Accomplished

EXTENSION OF REMARKS OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following clipping from the Pasadena Star News, January 17, 1955, by the sports editor, Rube Samuelsen, title of the article, "Back Home Again-Mission Accomplished":

RUBE-BARRS

(By Rube Samuelsen)

BACK HOME AGAIN-MISSION ACCOMPLISHED

It happened in Bombay. Maj. Sammy Lee, the world's greatest diver and a good-will emissary of the United States State Department, was giving an exhibition from the high tower. As he appeared for the third straight day, attendance had increased to the extent where fences were broken down and ropes severed when the crowd became unwieldy. Police reserves were called out. An Indian girl was hurried before a microphone-to sing that country's national anthem.

Why the turmoil? Why the unmanageable

excitement?

It is best explained by the fact that the tiny Lee, standing out 5 feet 134 inches in height, so captured the Indians' imagination—even the Communists—that, by the hundreds, they impetuously sought his autograph, to shake his hand, or, more than anything else, to touch him. The hope, apparently, was that some of Sammy Lee's class, his very beliefs, would rub off on them.

his very beliefs, would rub off on them. Sammy, now visiting here with his charming Chinese wife, Rosalind, says one of his strongest memories is that of, when he was being ushered out through quickly drawn police lines, seeing two long rows of outstretched hands. All of them, as he passed by, strove to rub his arms softly. That, incidentally, is an oldtime custom in India.

ON BOTH COUNTS

It need not be emphasized that Maj. Sammy Lee, United States Army Medical Corps, and self-styled oriental from occidental, did himself, and also Uncle Sam, proud during his recent tour of southeastern Asia, Brutus Hamilton is in India now, bent upon a similar mission, while Rev. Bob Richards, Mai Whitfield, and Harrison Dillard have also had State Department assignments in recent months. But it was Sammy Lee, the dedicated patriot, who blazed the trail. Nor could a better choice, which was that of a young man of vision in the State Department by the name of Harold E. Howland, have been made.

Sammy, who will remain here for another week before reporting at Fort Carson, Colo., his next base, reveals a tell-tale incident in Colombo, Ceylon, which points up the effectiveness of his good-will trip. So expertly have the Communists propagandized that portion of Asia that a large percentage of the natives believe that members of minority races get nothing but the shabblest of treatment in the United States. For instance they couldn't conceive of Lee, a brownskinned Korean by ancestry, being both a world's champion athlete and a man with a profession (ear, nose, and throat specialist). And so, he had a straightforward, point-bypoint debate with a rabid Communist who insisted the United States frowned upon a two-doctrine world and, as a result, communism would be adopted sooner or later on a worldwide basis.

"Why can't the entire world be democratic?" Lee asked.

"Because your capitalistic country insists upon subjugating the colored races," was the answer.

"Then," persisted Lee, "how could I possibly become a world's diving champion and also a doctor of medicine? And, how is it that, in two Olympics, I have never seen a member of the colored races represent the Soviet Union or one of its satellites in that brotherly competition?"

"That is because orientals are backward in the Soviet Union," the Communist returned.

"Then who, in this world of two doctrines, is retarding the colored races' development?" Lee declared.

Score one for the champion. That's the way it went for Sammy Lee all over south-eastern Asia. I say it was one of the best one-man jobs ever turned in for his country.

IN A LIGHTER VEIN

Now for the humorous side:

It happened at Dalac, Vietnam. No pool being available, Sammy was asked to dive into a muddy river in giving his exhibition. Assured the depth was 18 feet and that the bottom was free of sharp objects, Lee gave his quick assent.

On his last dive, Sammy, upon returning, cut his foot on broken glass and, reaching the surface, shouted to the French recreational director in charge, that he was in trouble. The director gave gestured instructions to an aid, who scurried away and soon returned with a small bottle. Then he gave it to Lee, who started to pour the contents on his bleeding foot.

The director, astounded, held up his hands in horror.

"No, no, no," he remonstrated. "Eeet ees 20-year cognac. You do not geeve eet to the feet. You dreenk eet."

Welcome back, Sam.

Shocking and Dangerous

EXTENSION OF REMARKS

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. PATTERSON. Mr. Speaker, today I introduced a bill providing for scholarships in the undergraduate and graduate levels for students desiring to engage in a career relating to the field of atomic energy.

Each Senator and Representative would nominate a worthy applicant to be the recipient of a Government scholarship to include tuition and living expenses of the student.

If the student accepts employment in the Government within 90 days of the completion of the course of study, that time spent in school would be considered as a continuous period of Government employment.

Each day spent under the scholarship program would be considered the equivalent of one-half day of service by the then applicable military training law.

In view of the fact that at our present rate of graduation of scientists and engineers the United States will lose its lead by 1960, as a member of the Atomic Energy Committee, I feel the passage of my bill is a long-needed and most important step in the right direction. By recognizing the importance of our scientists in our overall military preparedness program, congressional attention on much the same basis as already granted to officer-training programs would be effected.

Under this plan, both men and women of outstanding caliber would be selected to further provide scientific leadership of our Nation for both peacetime technological advances and national security.

While we are all aware of the lack of trained scientists and engineers in our industrial activities and Government agencies, this program should alleviate to some extent at least the shortage now existing.

The following is an editorial from the Washington Evening Star:

SHOCKING AND DANGEROUS

It is clear that the United States is facing a serious shortage of sorely needed engineers. The latest warning to that effect—voiced at a press conference in New York the other day—has come from a group of distinguished authorities, including Dr. M. H. Trytten of the National Research Council and Dr. John R. Dunning, atomic expert and dean of Columbia University's School of Engineering. These men are not alarmists, but they have left no room for doubt that there is reason for deep concern over indications that the Soviet educational system threatens to move far ahead of ours in training young people for scientific work.

In fact, in Dr. Dunning's judgment, it is impossible to overemphasize "the true gravity of the situation." This is his feeling because authoritative figures show that we are in danger of quickly losing the present advantage we enjoy in having about 15 or 20 percent more engineers than the total at work in the Soviet Union. Of course, if such a margin of difference could be counted upon to be lasting, there would be no cause for alarm. Unfortunately, however, if present trends continue—that is to say, if our educational system fails to effect a sharp increase in the annual output of engineering graduates—the Russians will catch up with us in the next 5 years, and after that they will pass us in the race.

To bear out Dr. Dunning's warning, Dr. Trytten has cited a fact whose seriousness can hardly be exaggerated. As he has put it, "Although the industries and the Government of the United States are urgently calling for more scientists and engineers, the supply fell from a peak of 50,000 engineering graduates in 1950 to 19,000 in 1954." Meanwhile, by way of contrast, "Russia completely reversed this situation, with 28,000 graduates in 1950 and 53,000 in 1954." other words, there has been a steady and drastic decrease in the number of such scientifically trained personnel turned out by our schools, while in the Soviet Union there has been a spectacular increase. The comparative figures seem almost unbelievable, but they are none the less true, and they should shock the Nation into taking corrective action.

Certainly, in this supremely technological age, our shortage of engineers (and a similar deficiency exists in other categories of scientific personnel) is much too dangerous in its potentialities to be shrugged off and ignored. Quite obviously, with our population increasing at a rate of about 24 million every decade, and with our country confronted with implacable hostility from the Communist world, we need far, far more engineering graduates than our schools are turning out. And action, not just talk, is what we must have to solve the problem. Otherwise, by continuing to be negligent or indifferent in this field, our Nation can lose vital ground to the Kremlin.

Lincoln: A Great American Who Sought To Preserve Union Without Bloodshed

EXTENSION OF REMARKS

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. BURDICK. Mr. Speaker, in the history of the world truly great men seldom advance beyond their own geographical confines and become world characters. Again, it is not only the ability of the man himself, but the surroundings in which he is placed and the gravity of the situation before him that brings out those characteristics and qualities that stamp him as an immortal in history.

The United States has contributed its share of great statesmen who have risen above their own territorial limits.

In this category George Washington's name stands out among us, and throughout the world itself, because he led a movement for freedom, and not content with winning the cause of which he was

the commander, he followed it up with the organization of a great republic in the New World, where life, liberty, and the pursuit of happiness was guaranteed to every citizen. This purpose of government was the prayer of man for ages; hence it was that the name of George Washington is a familiar one in every country on earth.

The name of Thomas Jefferson is another name that has flashed across the history of the world, due to his able writings on the principles to be pursued in a republic such as ours. Many nations in adopting their constitutions, were inspired by Jefferson and their documents followed his words very closely.

HOPE TO OPPRESSED

The name of Abraham Lincoln flashed across the country and did not dim at territorial lines, but went on and on throughout the world where people were struggling for freedom. Abraham Lincoln was unique, as he came up from poor people and did not have the advantages of schools to attend, but was largely his own teacher. He struggled for an education; he struggled against poverty; and what he learned in this flery furnace of necessity he never forgot.

Some have said and written that he was an accident, but when you come to study his ancestry you find that one of his granduncles was a surveyor for General Washington and author of a book on mathematics. The textbooks he wrote were written in longhand and illustrated in freehand; and anyone examining one of these rare books is impressed with the exactness of the writing and the illustrating figures. There is not a blot in the whole book, not a line retraced. Several of the early Lincolns were men of this type, and it is not surprising that Lincoln's speech at Gettysburg is a model of English expression.

The environment surrounding Lincoln was a grave epoch in the history of the United States. The old question of the sovereign rights of States as to owning slaves was not settled in the Constitutional Convention, and in Lincoln's time was threatening the preservation of the Union. The South was backing the cause of State rights and the North was aroused over slavery. Lincoln saw that the people were divided and he did his utmost to pacify the two divergent views. His famous statement that "a house divided against itself could not stand," while logical and prophetic, did not allay the rising storm.

ASKED COMMONSENSE

On entering upon his duties as President of the United States he again appealed to the commonsense of the people to avert hostilities and unite in preserving the Union. This failed of its purpose and the War Between the States ensued.

Some of his contemporaries thought he was too slow to action and too temporizing with those who had declared themselves out of the Union, but he stood firm as a rock upon the proposition that the Union must be preserved, and prayed that it might be done without bloodshed.

His own administrative assistants were not always working in the best interests of the President, and many of them were candidates for that office themselves. Knowing of the many disloyal acts and disagreements between himself and some members of his Cabinet, most Presidents would have discharged these men, but Lincoln knew, and said that in spite of their interference with his plans they were the best men for their places.

He was besieged for jobs, and one illustration of this annoyance may be cited. A gentleman from Ohio, who had done outstanding work for the President in the campaign, wanted a job. He came to Washington and saw Lincoln. During the course of his conversation with the President, this man asked, "Mr. Lincoln, don't you think I merit a job with the Government?" Lincoln then stated, "Of course you are entitled to a place, but the trouble is I do not seem to have much influence with my administration."

CONVINCED BANKERS

When a delegation of bankers met with the President and protested against his plan to issue greenbacks directly from the Government, a great and noisy argument ensued. In the midst of all the talk Lincoln said that the situation reminded him of a man who was traveling horseback through an unsettled portion of Kentucky where there were only trails and no roads and in some way missed his path. To add to his difficulties night came on, and with it a terrific rainstorm. The lightning crashed all around the traveler, and it was only on these occasions that he could see any portion of the trail. Soon a terrific flash of lightning struck. The man fell off his horse and was brought to his knees on the ground. He was by no means a praying man, but since he was already on his knees and the storm still raged, he made the following prayer: "Oh, Lord, if it is all the same to you, give us a little more light and less noise." That settled the conference and the bankers left. The greenbacks were issued, and some are still in circulation.

People in any country who read the life of Lincoln can see how a very humble citizen had arisen in the Republic of the United States to carry the torch of freedom.

Lincoln's ringing voice we still hear when he said:

Our safety, our liberty, depends upon preserving the Constitution of the United States as our fathers made it, inviolate.

The people of these United States are the rightful masters of both Congress and courts, not to overthrow the Constitution, but to overthrow the men who pervert the Constitution.

Lincoln's sound judgment, his patience, his indifference to any consequences that might come to him, his great human heart, his deep and abiding sympathy, always exhibited in every act of his as President, gave a new definition to this Republic, and people throughout the world came to love this great man of the people. A world character he surely is, and his thoughts and actions live with us today. The name of Abraham Lincoln today means more to the people of the world than the name of any other man who has crossed the stage of history, save one.

Lincoln and Unity

EXTENSION OF REMARKS

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. HALLECK. Mr. Speaker, it was my privilege to participate in the 30th annual Lincoln Day memorial exercises held Sunday, February 6, at the Nancy Hanks Lincoln State Memorial at Lincoln City, Ind. The impressive program honoring the memory of Abraham Lincoln and his mother, Nancy Hanks Lincoln, was sponsored by the Santa Claus (Ind.) Chamber of Commerce. Among organizations taking part in thees traditional ceremonies were St. Meinrad's Archabbey, the Funkhouser American Legion Post, Veterans of Foreign Wars, Indiana Department of Conservation, and the Spencer County Home Demonstration Chorus. It was a matter of particular pleasure to me that I was introduced by my former colleague in the House of Representatives, the Honorable D. Bailey Merrill. Under leave to extend my remarks in the RECORD, I include herewith the text of my address on Lincoln and Unity, delivered on this occasion:

Not so long ago, as the world measures time, a barefoot lad came with his family from the hills of Kentucky to begin a new life here among the rugged pioneers of the old Pigeon Creek neighborhood of Spencer County.

The family's heavy burden of poverty is a matter of historic record.

We can only imagine the added anguish suffered by the little boy and his sister occasioned by the illness and death of their beloved mother not long after they had arrived on Hoosier soil.

That we are here today paying homage to the memory of Abraham Lincoln, a backwoods boy, and his mother, Nancy Hanks Lincoln, is, in itself, a tribute to the greatness of America and to the greatness of our people.

Abraham Lincoln and his family were what our sociologists today would probably call underprivileged people.

Fortunately for us, Lincoln didn't know he was underprivileged.

My guess is that he felt lucky to be a freeborn American.

Certainly, at any rate, he refused to give up to what must have appeared to him a forlorn prospect that he would ever amount to much.

There is, perhaps, little new we can say about Lincoln's life here in southern Indiana.

We know this is where he spent his formative years—14 of them—growing into manhood before he moved once more with his family, this time to Illinois.

In our mind's eye, we can see Abraham Lincoln, the boy, doing what he could as a child to help the family carve a home out of the wilderness.

We can see him as a youth, doing the physical work of a man to provide the essentials of life, not only for himself but for others of a household enlarged as a result of his father's remarriage to a good widow with three children of her own.

with three children of her own.

We know of Lincoln's early thirst for knowledge and we have read of his attempts to educate himself by reading the Bible, Pligrim's Progress, Weem's Life of Washing-

ton, and whatever other books might come his way in a day when schools were few and far between and public libraries were an unknown luxury.

Yes; history leaves no doubt that Lincoln's earlier life was one of underprivilege as far as material blessings were concerned.

We must go deeper into his background to discover and to understand the secret of his greatness.

The devotion of mother and son offers us a clue.

The later understanding and sympathy of a stepmother offers another.

What did Sarah Johnson, this widow with three children of her own, see in little Abe that led her to give him the encouragement that meant so much?

Did she, perhaps, detect the spark of greatness even then developing into a flame destined to light the way for freemen through the ages?

As Hoosiers, we like to think, and I believe not without justification, that the hard and simple life of Pigeon Creek in the early part of the 19th century offers us another clue to the genesis of Lincoln's wisdom and

Lincoln came to Indiana because his was a family seeking a better way of life-not an easier way of life, but a better way.

Here he joined in the work and play of other rugged Christian pioneers-God-fearing people dedicated to the simple virtues honesty, thrift, and self-reliance, a dedication, may I say, still appropriate for every American citizen.

It was here in Indiana that Abraham Lincoln developed his sense of perspective.

It was as a Hoosier that he learned patience, tolerance of others, and his deep humility.

And we can surmise with safety that here he enjoyed a companionship rich in the ways of homely Indiana humor—a peculiarly Hoosier type of wit which Lincoln himself employed so often and to such good purpose throughout his adult career.

The sad face of Lincoln the President portrays vividly the loneliness, the personal tragedies, and the compassion of this great

But if the gravity of his responsibilities left their mark on his soul, one thing we know about Lincoln-and it is one more great-hearted virtue that endears him to us-Abraham Lincoln could laugh at himself.

He was a man of positive virtues-integrity, ambition, courage in the face of adversity, and an abiding faith in his fellow men.

However, there is, it seems to me, something else we must consider in seeking the ultimate answer to Lincoln's greatness

Lincoln was a man incapable of malice.
"I shall do nothing in malice," he once wrote to a friend. "What I deal with is too vast for malicious dealing."

There was no trace of bitterness in his soul-this man who might well have excused whatever failures came his way on the grounds that, after all, he had never had the advantages of more than the barest material wealth nor more than a meagar formal education.

Here, I think, was the true measure of Lincoln's greatness: the measure of a man fighting his way from humble circumstance to the most powerful office in the world. without losing that most precious of giftsgentleness of character.
This, my good Hoosier friends, is the mark

of a truly noble man.

The time of Abraham Lincoln was a diffi-

cult period for America.

This young Nation, dedicated, as he put it, "to the proposition that all men are created equal," had been forced to the acid test by the secession of the Southern States.

Fortunately for us, the country had at its helm during those trying days a man who had learned, as a member of a family working together for its very survival here in Indiana, that in unity there is strength.

Succeeding generations of Americans have revered Abraham Lincoln as the man who saved the Union in its darkest hours. Engraved on the wall of the magnificent Lincoln Memorial in Washington are these majestic words: "In this temple as in the hearts of the people for whom he saved the Union the memory of Abraham Lincoln is enshrined forever.'

Today, we look to his memory for strength and guidance in another battle to preserve our way of life from the threat of a creeping menace-the menace of a militant communism determined to destroy human liberty as we have known it.

These, too, are times that try men's souls. Already a great portion of the world's people has been trapped into a new form of bondage—slavery to political masters—and the end is not yet in sight. There can be only one answer to that

threat.

It is the answer Lincoln would have given.

Americans must stand united in their determination to defend the precious birthright of freedom regardless of the sacrifice.

We have witnessed a heartening demonstration of such unity of purpose in recent

The Congress of the United States, almost to a man, acting as the elected representa-tives of the people of this Nation, has stood foursquare behind the President in his courageous decision with respect to our foreign policy in the Pacific.

By this action, we have demonstrated our ability once more to rise above partisanship

for the common good.

By this action, we have kept faith with Lincoln's admonition: "Let us at all times remember that all American citizens are brothers of a common country, and should dwell together in the bonds of fraternal feel-

Lest I be misunderstood, let me hasten to assure one and all that we have not reached

the millenium in Washington.

The art of politics-that art so deeply relished by our good citizens of Indiana—and an art, I might say, in which Abraham Lincoln himself was no amateur-is still very much alive in the Nation's Capital.

Lincoln, we must not forget, was a firm champion of the two-party system-a champion who understood its strength and its weaknesses.

And it is by no means to his discredit that he worked for the success of the party he represented-that he worked at politics, if you please-in his long and difficult campaign toward the Presidency.

One of the Lincoln anecdotes which took on a new significance for me after November of 1952, and which serves to illustrate the ridiculous extremes of responsibility which sometimes fall to a man in the White House, is this one:

When Lincoln became President, the Democrat Party had been in power for many years.

(That part of the story certain has a familiar ring.)

Every patronage job had been filled with a Democrat, and now Republicans besieged the White House demanding appointments.

(So does that.)

One day, a Senator, coming into the President's office, found him holding a note. There was an expression of anxiety and detection on Lincoln's face.

"What's the matter, Mr. President?" the Senator inquired.

"Has something gone wrong? Have you heard bad news from Fort Sumter?"

"No," said the President, shaking his head wearily, "It's the post office at Jonesville, Mo

So, I don't want to imply that the recent display of unity in Washington means that a complete moratorium has been declared as far as partisan politics is concerned.

But I do think this action in support of President Eisenhower serves to point up an awareness on the part of all men and women in responsible positions that these are, indeed, serious times.

These are times when all of us-we in public life and you with your important duties and obligations as private citizens of this great Republic-must do our best to heed the precepts of Lincoln.

We must do our best to be worthy of the priceless heritage of freedom-a heritage. may I say, saved for posterity by this noble man and the thousands of his fellow Americans who rallied to his leadership.

Make no mistake about this: America is faced with a battle for survival today just as much as America was faced with a battle for survival during the time of Abraham Lincoln.

The foe today is external, but it is no less dangerous to our national security.

History plays no favorites.

During the Civil War, the Nation was guided by Republican leadership.

During World Wars I and II, and for most

of the Korean war, leaders of the Democrat Party were at the helm.

At all such times, right-thinking Americans dedicate themselves to the task of defending their beloved country.

So today, as we struggle to solve the problems arising from the aggressive intent of dictator nations, it seems to me that all loyal citizens will want the present leadership to succeed in its program to provide for the security of our Nation and to achieve a just and lasting peace for the world.

We are not in a war.

Living, as we are today, in the awesome shadow of the mushroom of the atomic bomb. it is the hope and prayer of all of us that we will never be subjected to the horrors of a military holocaust.

But ours is a world of uneasy peace. The task before us is to win that peace, however long and difficult the road.

It is a task calling for an exercise of those virtues which characterized Abraham Lincoln's leadership:

Integrity.

Patience and forbearance.

Courage and steadfastness of purpose.

Self-reliance and a willingness to sacrifice. Faith in the Almighty and a belief in the dignity of man.

The program set before us for winning the peace is not an easy one.

The burden of building and maintaining defense adequate for America is heavy.

The necessity for calling our young men into the service as long as the threat to our freedom exists is not to the liking of a people by tradition unmilitary in their inclina-

But we are today in a zone of uncertaintya zone of dim shapes and shadows, some reassuring in their promise of things to come, others fearful in their portent of evil.

Let us all hope we are in the morning light of a lasting peace and not groping in the twilight hours before a new darkness of armed conflict.

In such a period, these words of Abraham Lincoln echo from another age:

"The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new. so we must think anew and act anew."

Today it is the challenge of communism which must be met.

We dare to hope the time will never come when that challenge must be resolved on the field of battle.

Of this you may be certain: Under the leadership of Dwight D. Eisenhower, every avenue in the direction of an honorable world peace is being-and will continue to be-explored.

But until that way is found, we cannot relax our efforts to provide a maximum defense against armed attack-a maximum defense consistent with the minimum needs

of our domestic economy.

This is the crux of the Eisenhower administration's program for a secure and prosperous Nation.

Somewhere between the extremes of opinion on what our course of action should be lies the proper balancing of needs-needs of our Armed Forces and needs of the civilian machinery on which the military must always depend for its sustenance.

I see these extremes of opinion reflected in the mail I get as a Congressman and I respect the sincerity of those expressing such views.

There are some, for instance, who believe the efforts we are making to provide an adequate defense against Communist aggression are too little.

These people urge an all-out mobilization

There are others who hold that the defensive structure we are undertaking to maintain is too much-that disarmament and wholesale discharge of military personnel, together with an end to the draft, is the surest way to peace.

Close examination of either position poses

sober questions.

How long, we may fairly ask, could this Nation, great as it is—with all its vast re-sources, its massive industrial potential, its inventive genius, and its capacity for production-how long could we stand the strain of an all-out mobilization?

And what if, having mobilized, we found

curselves without a war? The risk of such a course is obvious,

It is the risk of the destruction of our economic system from within—a system crushed under the sheer weight of a defensespending burden-without a shot having been fired either by or at us.

The Communists would like that. It must

not happen.

Even more evident, however, is the peril to our security in a course of drastic dis-armament and cutbacks in military man-

power at this time.

No, my friends, the realism and commonsense that was so typical of Abraham Lincoln demands that we maintain what has been aptly called a posture of strength as long as the leaders of Communist-dominated na-tions maintain their hostile and belligerent attitudes toward the peoples of the free world.

Until, by acts of good falth, these leaders demonstrate an unmistakable willingness to forego aggression as an instrument of international policy, realism and common-sence dictate that we remain prepared and vigilant.

As we set ourselves to this continuing task, it is vital, as President Eisenhower pointed out in his state of the Union message to the Congress, "that each of us understand the frue nature of the struggle now taking place in the world."

"It is not," he said, "a struggle merely of economic theories, or of forms of government, or of military power. At issue is the true nature of man.

"Either man is the creature whom the pealmist described as 'a little lower than the angels,' crowned with glory and honor, holding 'dominion over the works' of his Creator; or man is a soulless, animated ma-chine to be enslaved, used, and consumed by the state for its own glorification.

"It is, therefore, a struggle which goes to the roots of the human spirit, and its shadow falls across the long sweep of man's destiny. This prize, so precious, so fraught with ultimate meaning, is the true object of the contending forces in the world."

No mortal in the history of the world was ever more deeply conscious of the majesty of the human soul than Abraham Lincoln. None was ever a greater champion of

liberty.

honor him today for his magnificent contribution to freedom, justice, and peace, the support of which is-today as thenforemost among the purposes of government.

As we meet here on ground hallowed by association with our martyred President, it is fitting and proper that we heed his admonition, delivered in those immortal words

at Gettysburg:
"It is * * * for us to be here dedicated to the great task remaining before us-that these honored dead we take increased devotion to that cause for which they gave their last full measure of devotionwe here highly resolve that these dead shall not have died in vain-that this Nation, under God, shall have a new birth of free-dom—and that government of the people, by the people, for the people, shall not perish from the earth."

A man named Homer Hoch once wrote, "There is no new thing to be said of Lin-

"There is no new thing to be said of the mountains, or of the sea, or of the stars.

'The years go their way, but the same old mountains lift their granite shoulders above the drifting clouds, the same mysterious sea beats upon the shore, and the same slient stars keep holy vigil above a tired world.

"But to mountains and sea and stars men turn forever in unwearled homage.

"And thus with Lincoln.

"For he was mountain in grandeur of soul, he was sea in deep undervoice of mystic loneliness, he was star in steadfast purity of purpose and of service. And he abides.

Yes, Lincoln abides.

And we need say nothing new of him. We need only look to his memory as a source of towering strength in these years of turmoil and strife.

His strength is our strength and his great faith in America—her institutions and her people-is our faith as we move with courage and diligence toward a brighter and happier tomorrow.

The Turning of the Tide in Vietnam

EXTENSION OF REMARKS OF.

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. HIESTAND. Mr. Speaker, with the attention of the world concentrated on Formosa and the Communist threat toward it, the critical and perhaps encouraging situation in Vietnam is escaping attention.

Having studied this situation by firsthand observation last September, I am happy to present to the House and for the RECORD a summary of the situation which appeared in the January 1955 issue of Vietnam, which says in part:

THE TURNING OF THE TIDE

After the Geneva armistice of July 1954, a dangerous pessimism about Vietnam developed in America, a pessimism fed by

stories and newspaper reports, true or false, of internal discensions in South Vietnam among the different authorities and forces that should have been working together for the defense of the free world. Reports circulated of disagreement among the American and French authorities; among the Vietnamese Government, the police, and the army; and among the politico-religious sects. In the light of recent developments in Vietnam, is that pessimism justified?
That there were disagreements no one can

And in truth, the rebellion of the army chief of staff set an example of insubordination and paralyzed the government for nearly 3 months, at one of the most critical periods in the history of Vietnam. The rebellion was finally quashed by his dis-missal from office at the end of November 1954 by Vietnam's chief of state, His Majesty Bao Dal.

Since then, in just 6 weeks, President Ngo dinh Diem has succeeded in restoring order through a series of political successes, the vital importance of which has gone almost unnoticed in the United States, lost in the bustle and preoccupations of the new year.

The following events are of decisive importance for the future of Vietnam and deserve to be better known and understood in the United States.

DIRECT AMERICAN AID

1. On December 21, Gen. Lawton Collins handed a check for \$28 million to President Ngo dinh Diem to be used for aid to the refugees. Compared to the enormous needs to be met and to the hundreds of millions of dollars lost by the United States in the Indochinese war, the sum is relatively modest, but "it is not what you give, it is the way that you give it"-this check marked the beginning of direct American ald which alone could have saved and can still save Vietnam.

ECONOMIC INDEPENDENCE

2. On December 31 the government obtained the abrogation of the Pau Accords of November 1950, which had permitted the French authorities to maintain control of the economy and finances of Indochina. New economic accords were passed, the administration of the port of Saigon was transferred to the Vietnamese Government and on January 5, the Bank of Issue and the Office of Exchange as well. Without these Vietnamese independence had been largely theoretical.

THE SECTS RALLY

3. Early this month, armed only with high principles, President Diem was bold enough to order the closing of the famous gambling house, Le Grand Monde, operated by a powerful armed sect, the Binh Xuyen, said to be in control of the Saigon-Cholon area. Gen. Le van Vien, the head of this sect, the so-called gangster, had enough wisdom and patriotism himself to bow to this decision and to accept the integration of his private troops into the national army as well. Le Grand Monde and two other gambling houses were closed on January 16.
4. On January 9, Col. Trinh Minh The.

leader of the Cao Dai dissidents, who for more than 2 years operated on a guerrilla basis in order to fight both the French and the Viet Minh, announced that he was going to rally to the national government, with his

army of 5,000 men.

5. On January 16. Col. Nguyen Van Hue, one of the leaders of the Hoa Hao religious sect, who had also gone underground for the same reasons, offered to come over unconditionally with about 3,000 armed men, "having become convinced," he said, "that Vietnam was now independent of French rule."

WELCOME TO DIEM

6. In the first days of January President Diem received a movingly enthusiastic wel-come from the people during his 3-day tour of the Nha Trang Phan Rang, Phan Ri, and

Pham Thiet areas of South Vietnam, which had just been freed from Viet Minh control His trip is described in Time of January 17 as well as in a report from the United States Information Service dated January 5 and reprinted here.

THE EXODUS CONTINUES

7. On December 31, 4,549 refugees arrived in Saigon aboard the American ship, General Howze. Among them were 2,900 coming from Vinh, the native Province of Ho Chi Minh.

8. On January 4, 4,000 more refugees left

Haiphong for the south.

9. The newspapers of January 11 reported that three highly placed Viet Minh officials

had asked to leave the north.

10. On January 11 the International Control Commission had to send 2 international mobile units, one after the other, to settle a bloody incident which broke out at Ba Lang between 10,000 Catholics, who wished to evacuate, and regular Viet Minh troops, who were attempting to stop them.

Coming just at Christmas and the new year, these events passed almost unnoticed. Yet they are very important and indicate that the press reports of a month ago erred in representing President Diem as an incorruptible, patriotic, but politically incapable leader. The best government in the world could not have obtained better or more important political results in so short a time and under such difficult circumstances.

THE TIDE TURNS

Above all, these events show that there is no reason to be pessimistic, and that in Vietnam the tide is turning, even turning strongly, in favor of the free world. It was enough for the Ngo Dinh Diem government to act as an authentically national and rigorously honest government, and for it to receive firm American moral support. The rallying of thousands of Hoa Hao and Cao Dai dissidents who controlled large areas in South Vietnam and thus created a state of insecurity which favored Communist expansion; the continuing flow of refugees from the north, abandoning all their possessions, risking their lives on frail boats, and even fighting, barehanded, with Viet Minh regular troops that try to stop them; the warm reception given President Diem as he toured South and Central Vietnam; all are moving testimony to growing countrywide support And thus this government which had been called shaky has been able to bring about an almost miraculous reversal of the political situation within a few weeks and to become the rallying center of the anti-Communist forces of Vietnam.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Dele-gate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furhish to subscribers the daily RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

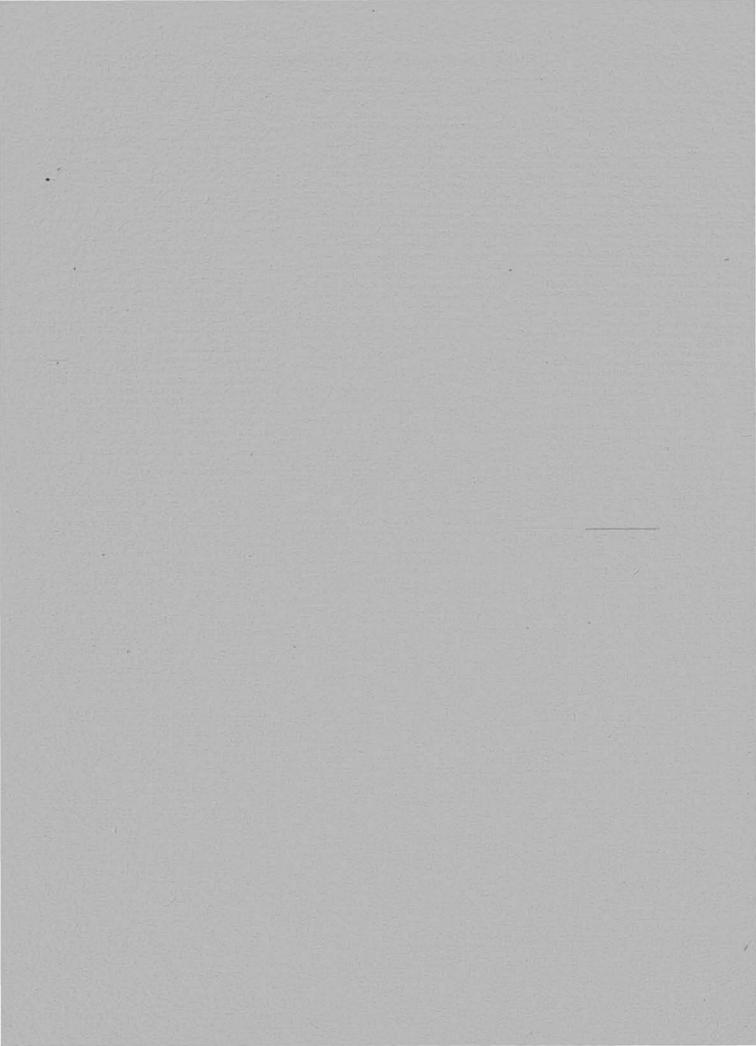

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES .- The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim re-port of proceedings shall take all needed action for the reduction of unneces bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

Title 44, Section 182b. Same; ILLUS-TRATIONS, MAPS, DIAGRAMS .- No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered
- 2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the Record shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These re-strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.
- 4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.
- 5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

- 6. Notation of withheld remarks.-If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.
- 7. Thirty-day limit.—The Public Printer shall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days. unless otherwise ordered by the committee.
- 8. Appendix to daily Record.-When either House has granted leave to print (1) a speech not delivered in either House, (2) a news-paper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the Congressional Record.
- 9. The Public Printer shall not publish in the Congressional Record Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.
- 10. Official reporters.—The official reporters each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.
- 11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.
- 12. Illustrations .- Pursuant to section 182b, title 44. United States Code (as shown above). requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.
- 13. Corrections .- The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Appendix

Unity in Charity-Freedom in Justice

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the Record, I include the following splendid sermon of Most Rev. Lawrence J. Shehan, bishop of Bridgeport:

Unity in Charity—Freedom in Justice (Sermon delivered at the Red Mass in the Cathedral of St. Matthew, Washington, D. C., February 6, 1955, by the Most Reverend Lawrence J. Shehan, bishop of Bridgeport)

While the year is still young and the new Congress is still planning its program, we have come to the Cathedral of St. Matthew to ask God's blessing on the three branches of our Government: On the President and the executive departments which are under his direction; on the Congress in whose hands lies the legislative power of our country, and on the judiciary to whose wisdom is committed the interpretation of the law in the circumstances of our national life.

It is doubtful if our Government ever faced a more difficult and important task than that which now confronts it. During the Civil War, it is true, the whole future of our country was at stake. But then it was only our own country that was involved. Now the fate of all Western civilization depends in large measure on the decisions and actions of our Government. In World War II we lived through some very dark days. Then, however, we were united by the presence of a threatening enemy and by our determination to triumph, and we were supported by allies who were joined to us in a common will to victory. Now we face an even more powerful and insidious enemy With our unity often severely tested but happily, in recent days overwhelmingly reaf-firmed with and uncertainty about allies on whom we can count.

Nor is the problem simply one of external threat. Here at home are grave evils which, if permitted to grow, are bound to sap our national strength. Increasing breakdown of family stability, mounting crimes of violence and dishonesty, of wanton cruelty and gross sensuality; youthful delinquency of a magnitude frightening in its implications for the whole of our younger generation-all demand our undivided attention and united effort. Nor can we overlook the fact that in the years of our greatest prosperity the national debt has grown to a size that surpasses our powers of realization. In spite of earnest efforts to balance our budget, our mounting financial obligations constitute a problem which requires the joint concern of both parties, of all branches and departments of government, and of all our people.

If we are to meet these problems, we as a Nation must have unity—unity of mind, unity of heart, unity of effort. What we need is not that monolithic unity imposed from above, which from the beginning has been characteristic of Soviet Russia and

every country that has come within its orbit, as it was also the mark of Nazi Germany. Such a unity is contrary to our most sacred traditions and is repugnant to the free institutions which have been our most prized possession and the source of our greatest strength. What we need is a moral unity—a unity which springs from the will of all our people—a unity which, with a full recognition of the gravity of our problems, will lead us to join our efforts in the determination to save not only ourselves, but also the whole free world, from disaster. Such a unity can be achieved only in a national atmosphere of charity; for charity is the bond of unity—it is the first duty that springs from our common brotherhood.

The brotherhood of man is more than a mere phrase—it is a sacred truth springing from the fatherhood of God and capable, with God's inspiration and grace, of transforming man's world. That, in the face of this common bond, enmity should exist anywhere in the world is indeed a tragedy; that there should be enmity, bitterness, dissension among the citizens of this country is a double tragedy. For, in addition to the bond of our common brotherhood, the ties that should bind us together in mutual love and understanding are stronger and more urgent here than anywhere else on earth.

First, there is the bond of our common heritage. Practically all of us are descended from ancestors who came to this country to escape oppression of some sort—religious, political, or economic. Here they established, or came into the enjoyment of, true freedom. Here they found unrivaled opportunity. Here they found abundance waiting to be called from the rich land by their skill and effort. Here they developed a civilization and a culture, admirable in many respects and great with potentialities—a civilization and a culture which is our very own. All these form the heritage which together we must preserve.

No part of our common heritage is more sacred in our eyes than the freedom which has always been the outstanding characteristic of our country and the dominant theme of its history. What particularly we must bear in mind is that freedom depends upon justice just as truly as the plant depends upon the soil in which it grows. freedom is man's distinguishing characteristic and, after life, his most basic right, fustice has no higher object than the protection and preservation of man's liberty. Furthermore, freedom can exist only as a sacred right; it cannot exist as a privilege granted by government. It is no accident that under regimes that have discarded the concept of man's rights, the ideals of both justice and freedom have been banished.

So close is the dependence of freedom on justice that, whenever justice is breached, freedom is impaired; where justice is seriously and consistently impeded, freedom ceases to be. In the early history of our own country, the blot of slavery could have existed only against a background of grave injustice to the members of a whole race. The history of the labor movement shows that insofar and just so long as the workingman failed to obtain real justice, he was deprived of true liberty. Religious freedom, on the other hand, has continued to flourish in this country because from the very beginning it has been protected by provisions of justice written into the Constitution through

the amendments known as the Bill of Rights. It is justice then that safeguards liberty; when justice fails freedom is imperiled.

One of our most precious rights is freedom of education, so closely allied to freedom of religion, freedom of speech, and freedom of assembly. Like all freedom, that of education can be hampered and even destroyed by lack of justice. While no one will deny that lack of justice. While no one will deny that the state has a legitimate and even necessary concern with education, yet it seems to many of us that the exclusive support by government of a system of state education of ever-increasing costliness can, in the long run, seriously hamper and ultimately destroy real freedom of education. The wealthy, no doubt, will continue to be able to support, in addition to the state program, the kind of education they desire for their children. But already is some places freedom of education seems to be threatened for the man of small or moderate means, who feels that he has a duty to provide for his children the kind of education which includes religious instruction and training as an integral part of the school curriculum. Justice would seem to require recognition of the public service involved in all properly qualified educational programs carried on by private groups and voluntary associations. time when increasing recognition is being given to the importance of restoring religious and moral influence to education and to the whole of life, those should not be misunderstood who ask for consideration of what justice requires for the preservation of freedom as a part of their sacred heritage.

Even more than by a consciousness of our common heritage the citizens of this country should be united by a sense of their mutual dependence. For all the good things we possess come not from the wisdom and power of some benevolent despot who has set us to work and stands ready to turn benevolence into tyranny at the first sign of our lagging. Under God it has come from the joint thinking and planning and working of the millions who have found in this land their true home. It is perfectly clear that our blessings will remain secure in our hands only so long as we continue to think

and plan and labor together.
But that love which is the bond of our unity involves something more than a consciousness of our common brotherhood, an appreciation of our joint heritage and a sense of our mutual dependence. It involves also love of the country of which each of us forms an integral part. America is something more than the sum total of its land and its citizens. It is a nation; it is a state; it is a body politic in which each of us has a voice, and each of us exercises a vital function. No nation on earth can boast an origin more noble and inspiring. None of the great states of the world was conceived and brought into being with such deliberation, such wisdom, such care. No body politic has more consistently pursued as the object of its existence the common good of its people.

In the course of our history the Constitution has become the symbol of what is best in this country and the foundation of that juridical system which is the framework of our national life. The strength of that Constitution comes not merely from the human wisdom with which a system of government truly representative of the people was devised. It comes also and especially from the clear concepts embodied within it, first of the dependence of civil law on moral law, and, secondly, of the true nature of the common good as the sole object of government

Our own times have seen a tendency worldwide in scope to ignore or to deny the con-nection of moral and civil law, and to sub-stitute the good of the state, i. e., the advantage of the government, for the common good. In the broadest and true sense the good of the government must coincide with the common good, since government has no other reason for existence. But often there is a vast difference between the common good entertained by governing people. Too often men who come into power show a tendency to make the common good secondary to the good of themselves and their party. That legislators, administrators, and jurists in this country have some times been affected by this trend is no doubt true. is to be hoped that by increasing emphasis on moral law as the foundation of all law, and on the concept of common good as the sole object of government, our country will preserve its noblest traditions which are the basis of our patriotic love.

Perhaps that which has done most to endanger the sense of brotherhood and the feeling of grateful love of the country which has brought us so many blessings has been man's worship of material progress-particularly his worship of the science which was so largely responsible for that progress. a little book published not long after the end of World War II, Charles Lindbergh, who perhaps more than any man has symbolized the generation which came to manhood in the years following World War I, and to the full stature of maturity during World War II, tells us how he and so many of his generation worshipped at the altar of science. 'I grew up," he says, "as a disciple of science. I know its fascination; I have felt the Godlike power man derives from his machines. To me in youth science was more important than man or God."

But in the wisdom that came with the experiences of World War II, the illusions of youth faded away. At its end, seeing the horrible destruction science has brought about, and contemplating the even more horrible disaster of a possible world war III, he came to the conclusion that: "if his civilization is to continue, modern man must direct the material power of his science by the spiritual truths of God." And he ends with these words: "There is no material solution, no practical formula which alone can save us. Man has never been able to find his salvation in the exact terms of politics, economics, and logic." From Plato's Republic down to the latest blueprint for a better order of things, "his planned utopias have not proved the answer, for the answer is at a deeper level. Our salvation, and our only salvation, lies in controlling the arm of western science by the mind of western philosophy, guided by the eternal truths of God."

To God then modern man must turn for his salvation. That salvation will come not merely from a knowledge of the truths of God, but from the love of God which is the essence of true religion. From God comes the brotherhood of man, and from God comes all the blessings this country has brought to us. Only through love of God can man overcome that selfishness which seeks to destroy both love of fellowmen and love of country.

In our hour of need we turn to Christ, the God-Man, who in His unity with the Father and the Holy Spirit is the perfect exemplar of that unity which must exist among men. In His hour of peril He prayed: "that all may be one as Thou Father in Me and I in Thee; that they may be one in Us." In that prayer we, the people of this country, are included.

Dear Saviour of mankind, in our hour of trial and temptation give to Thy children of this great country true unity of mind and heart. Grant that they may put aside all hatred, rancor, and division. Give to them the wisdom to see clearly the tasks that must be done. Grant that, being truly united, they may put forth that strength which may save both themselves and all the world from the forces of slavery and of destruction. Amen.

H. R. 1

EXTENSION OF REMARKS

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. CRETELLA. Mr. Speaker, under unanimous consent granted to me, I should like to introduce into the Record a letter addressed to my colleague, the Honorable Antoni Sadlak, Congressman at Large of the State of Connecticut and a member of the Ways and Means Committee, from Alfred C. Gilbert, Jr., president of the A. C. Gilbert Co., of New Haven, in my district.

The letter and accompanying statistics are self-explanatory.

When I was a young man, still in my teens and working my way through school, I was an employee of the A. C. Gilbert Co., and have had the privilege of seeing this small concern grow to its present size and contribute so much to the welfare of the youth of America, as well as to the defense of our country.

I am mindful of the inroads made on this company by the importation of Japanese-made goods and the importation and sale in this country of a competitive erector set, which is the hallmark of this company. It must compete with an inferior quality of merchandise, a much lower wage scale, and, to add insult to injury, a competitive name used with the obvious intent of deceiving the American buying public.

While I am mindful of the very serious consideration to which H. R. 1 is entitled, nevertheless, I believe this is an industry which would be vitally affected if any further changes were made in the tariff schedules which would permit further importation at further reduced tariff rates.

The letter follows:

JANUARY 27, 1955.

Hon. Antoni Sadlak,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN SADLAK: As a toy manufacturer I am extremely concerned with the President's request for power to cut tariff rates, toys having been specifically mentioned. I understand that hearings are now underway on H. R. 1 before the House Ways and Means Committee, of which you are a member.

About 40 years ago my father appeared before this committee, then considering the Smoot-Hawley Act. As a result, toys were given a 75 percent ad valorem rate. At that time, even Senator Garner, a free trader, approved of the provision for the toy industry on the pasis that next to the school itself the toy industry is the most important educational factor in America. Many toys, such

as the career-building ones we manufacture (chemistry, microscope, erector), are responsible for the great national interest in engineering and science. Many great scientists and engineers have told us our toys were the original stimulus for their having followed technical vocations.

President Eisenhower has expressed concern for the preservation of essential defense industries. I submit that the supply of technically trained men is the most vital factor whole defense program. Since it is an established fact that educational toys are a key factor in getting men into the technical sciences and professions at an early age, it should certainly be obvious that our toy industry should not be sabotaged by imports of foreign toys, primarily from Germany and Japan. Today there are Japanese microscopes in toy stores that undersell ours due to the fantastic differences in wages paid their workers. The same holds true for German electric trains.

If the American toy industry was deemed essential by the administration 40 years ago, and since the reasons for its importance are even stronger today, let's not ruin it by further reducing tariff rates on imported toys.

Yours very truly,

THE A. C. GILBERT CO.,
A. C. GILBERT, Jr.,

President.

Sermon of Most Rev. Lawrence J. Shehan, Bishop of Bridgeport

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I have been informed that my colleague from Massachusetts, the Hon. JOHN W. McCORMACK, will secure permission to print in the CONGRESSIONAL RECORD the sermon of Most Rev. Lawrence J. Shehan delivered yesterday at the Red Mass at the Cathedral of St. Matthew here in Washington. It is a beautiful sermon and I greatly enjoyed hearing it. I am sure it will be inspiring to others. When Bishop Shehan was at St. Patrick's Church here in Washington, I always enjoyed talking with him when there was an opportunity, being fellow New Englanders we had a good many things in common.

The Formosan Situation

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very interesting article by the distinguished columnist and author, Mr. Walter Lippmann, entitled "A Main Clew," which appeared in the New York Herald Tribune on February 7, 1955. I think it will be of much interest to Members of the Congress.

There being no objection, the article was ordered to be printed in the RZCORD, as follows:

TODAY AND TOMORROW
(By Walter Lippmann)
A MAIN CLEW

In calculating the risks and in estimating the top abilities in the Far East, we need an explanation of the fact that both Peking and Washington talk as if the struggle to seize Formosa were a near possibility. Yet, except for the lone voice of Mr. Joseph Alsop, who thinks that the intelligence estimates of Chinese power may be unreliable, the general assumption is that the Red Chinese do not have the military means needed to conquer Formosa. They have no navy and the hundred miles of water in the Formosa Strait are guarded by the most powerful navy in the world. Yet, as Mr. Alsop says, "the Peking government has been promising its people to take Formosa this year at the top of its voice," and "it is really hard to see why the brilliant Chou En-lai should have engaged Peking's prestige to the very hilt if the threat to Formosa is a mere vain-glorious maneuver."

Mr. Alsop's point is, I believe, well taken. The question then is why Chou En-lai, who has no navy, can afford to talk about conquering an island a hundred miles out at sea? How does he think he can capture Formosa this year, or even next year? The answer to this question, and the answer to many of the obscurities and ambiguities in the whole problem is that Chou En-lai is counting upon the instability of Chiang Kai-shek's regime in Formosa. He could not be promising to "liberate" Formosa soon unless he hoped and believed that the Chinese Army and officials might do on Formosa what was done so often during the civil war on the mainland—that is to say, to change sides and to make peace.

If this is the basis of Chou En-lal's hope, it is the basis of Washington's underlying fears. No doubt we believe that Chiang's regime is more solid than Chou En-lai is assuming it to be. But a dominating consideration in our whole Chinese policy is the knowledge that the regime at Formosa is fragile and that to keep it going everything must be done to bolster its morale. If the administration feit sure that Chiang's regime in Formosa were solid, it would not hesitate much longer to recognize it for what it really is—as the government not of China but of Formosa. The bloc to that policy is the well grounded fear that the Chinese in Formosa would not settle down peacefully as exiles but would come to terms with the mainland Chinese.

The Chinese on Formosa tell us, and Americans who are in close touch with them believe that Chiang's regime would crumble in disaffection and intrigue if there were cut off the practical hope of a return to the mainland. Whether or not this is the fact, the Formosan Chinese insist on it and their supporters in Washington agree with it. Yet the fact of the matter is that the United Sates Government has not only abandoned hope of a restoration but has put its decision in this matter in writing in connection with the proposed Formosa pact.

Nevertheless, in Formosa the decision is not regarded as final and conclusive. The speculation is still alive that the United States will be and can be drawn into a great war in which Chiang might be able to return to the mainland. The Administration, afraid that morale might crumble, has allowed the government in Formosa to nourish this hope. It has at least refrained from dashing it conclusively. This desire to keep up Chiang's spirits by letting him go on hoping for war is almost surely the real reason for the costly and dangerous fuzziness about the offshore islands. These islands are not part of the strategic defense of Formosa. They are symbols of a conceivable return to the mainland.

The administration does not have a clear policy. There is in it a basic contradiction which will in one form or another have to be resolved.

On the one hand, there is the decision not to support an attempt by Chiang to return to the mainland. This decision carries with it the unavoidable conclusion that Chiang's government in Formosa is not the Government of China, and that it is not entitled to the Chinese seat in the United Nations.

On the other hand, there is the desire to keep Formosa out of Red Chinese control, and the assumption that the only way to do this is by supporting the Chinese Government in Formosa.

The combination of these 2 decisions would be the policy of the 2 Chinas, and it would be a feasible policy if only 1 uncertainty could be removed. That is whether the Chinese in Formosa would stay in Formosa and would not make their peace with Peking. If we could be sure of that, which we cannot, the defense of Formosa ought to be quite feasible.

Chou En-lai's hopes are based on the belief that the Chinese in Formosa can be induced to come over to his side. We are not sure that they cannot be induced to do that. It is not a comfortable situation, and that is why every one who is serious about this business feels that he is standing on very uncertain ground.

We have staked a lot on the reliability of Chiang's regime. Yet in deciding, as our own vital interests require, against supporting his return to the mainland, we have done what is most likely to sow fatal doubts within his regime. To offset these doubts, to preserve the morale of the Chinese of Formosa, we have felt compelled to become entangled in the Chinese civil war on the offshore islands. So we find ourselves unable to draw a clear line or to take an intelligible position that can command the support of world opinion.

The President's Stand on Formosa and the Pescadores

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an edi-

torial entitled "The President Backed," which appeared on January 30, 1955, in the Greenville News, of Greenville, S. C. The editorial lauds the unity of Congress in backing the Formosa joint resolution, and appears in one of the Nation's outstanding newspapers.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRESIDENT BACKED

There have been few displays of such unity as that Congress showed in backing the resolution authorizing President Eisenhower to use our Armed Forces as he sees fit in guarding Formosa, the Pescadores, and related positions and territories against Chinese Communist attack. The House supported it by a vote of 409 to 3, the Senate by 85 to 3. Some constitutional lawyers contend that it did not confer upon the President any power that he did not already have, but certainly it makes it clear that the people's representatives approve the policy of removing any doubts that the potential enemy might have about our readiness to fight for the preservation of what we consider our own defense line.

The authority now specifically given the President means that should the Chinese Reds force war upon us there will be no privileged sanctuaries on the mainland. Moreover, in the event of such a development, the United States forces will be in action in support of their own Government's proclaimed policy, and presumably would not be subjected to United Nations restrictions which many people feel cost us a real victory in Korea. That does not mean that we are not sincerely hopeful that the U. N. may be able to bring about an acceptable cease-fire agreement before matters worsen.

Passage of the resolution is a tribute to the trust that the American people have in President Eisenhower. No one desires peace more earnestly than they; yet they are willing, under his leadership, to run the gravest risk of war in the hope that such action will prevent it. This is the response to the way in which the President himself has shown his eagerness for the establishment and preservation of real peace in the world. If war should come, it will certainly be despite very valiant Presidential efforts to avoid it.

Address Delivered by Hon. William F. Knowland, of California, Before the Montgomery County Republican Organization

EXTENSION OF REMARKS

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1955

Mr. BEALL. Mr. President, on February 2, 1955, at the Congressional Country Club, Senator William F. Knowland delivered an address before the Montgomery County Republican organization.

The force and scope of that address so impressed me that I ask unanimous consent to have it made part of today's RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

DEFENSE OF THE PACIFIC

(Address by Senator WILLIAM E. KNOWLAND)

Mr. Chairman, distinguished guests, and fellow Americans, we are gathered here to pay tribute not only to our first President but to discuss in the limited time that we have some of the accomplishments of the administration of a great American and outstanding President of the United States, Dwight Eisenhower. Now in the few years that he has occupied the office of President of the United States, he has given leadership to this Nation and has helped to bring our economy back to our free economic system which built this Nation of ours from a small colony of 3 million on the Atlantic seaboard to a great Nation of 165 million people with the most productive industrial and agricultural economy the world has ever known. When he took office, the Nation was under a system of controls-price controls, wage controls, and the allocation of materials. And in conformity with the platform pledges, they were removed. The cost to the Federal Government in the limited period of time he has occupied the White House has been cut by more than \$10 billion. The American people have been given substantial tax reductions by the last Congress amounting to over \$71/2 billion. In addition to that we have had a better administration of the Federal Government. We have had number of reorganization acts passed. We have created the new Department of Health, Education, and Welfare. The President, who perhaps more than any other man has a keen knowledge of the defense needs of the Nation, has been giving his personal attention to the increasing of the firepower of our armed services in the troubled world in which we find ourselves. There has been an extension of social-security legislation and the unemployment-reserves legislation.

But tonight I want to talk with you about one of the great problems that concerns us not as Republicans, not as Democrats, but as Americans. I speak of the issue now growing up in the Pacific relating to the defenses of this Nation and the defenses of the free world. It has been my position, and I believe it has been the position of responsible Republicans in the administration and in the Congress of the United States, that in these grave prob-lems facing our Nation, Americans regardless of their partisan affiliation must stand shoulder to shoulder in meeting whatever the challenge that may confront us. I have said time and time again that there is only one party of treason in our Nation. That is Communist Party and all Americans should stand shoulder to shoulder in seeing that that does not subvert our institutions. So it happens that in addition to being the anniversary of the first of our Republican Presidents, the month of February is also another anniversary and one that we do not remember quite as timely. This coming week is the 10th anniversary of the Yalta conference which met in the Crimea 10 years ago from February 4 to February 11, and in that brief span of 1 decade, Communist world has increased its hold upon human beings—increased it from 200 million in 1945 until today they control more than 800 millions of people as we meet here tonight. This has been a tremendous change in the world's balance of power. The President of the United States this past week came to the Congress with a message dealing with the critical situation in Formosa and in the far Pacific. He made his recommendations, and in a display of national unity seldom equaled in our Nation, the House by a vote of 409 to 3, and the Sanate by a vote of 85 to 3 approved the necessary resolution supporting the President. Now I believe that this was a demon-

stration of President Eisenhower's fundamental belief in our constitutional system of Government. There are some who legalistically might argue that as Commander in Chief, it was not necessary for him to come to the Congress of the United States, but he has felt and he has known that under our constitutional system, the President and the Congress are coequal branches of the Federal Government. He has never wanted and he has never expected and does not want and does not expect the Congress of the United States to be a mere rubber stamp. And in this great problem which confronted our Nation and after consulta-tion not alone with his own party leaders in the House and the Senate but on a bipartisan basis with the Democratic leaders as well, he determined to submit the matter to the Congress so that we could present to our friends abroad and to the would-be aggressors abroad a demonstration of what a great and free constitutional Republic can when it has finally been challenged in the matter that affects its own vital security interests. And that was done. Now there are some who tried to make out that this resolution was an act or a prelude to an act of aggression on our part. no such thing. Those who made charges of that kind knew that they were not true. There is not a single scintilla of evidence to support any such thesis that this was anything other than what the President purported it to be and that was an effort to stabilize conditions in the Pacific and to preserve the peace of the world. It was on this basis and after free and full debate in the House and in the Senate of the United States that he received overwhelming approval. Now some may have asked what is the importance of Formosa in this scheme of things as far as our defense is concerned. Formosa is not some isolated island in the Pacific.

It contains 91/2 million of free Chinese. This is a larger population than 32 members of the United Nations have today. It is a larger population than such important countries as Sweden, Norway, Finland, Denmark, Austria, Ireland, and New Zealand, and it is the approximate population of Australia. So, in itself from a population point of view, it is important that it not pass behind the Iron Curtain. But what is more important is that it is a part of a defense chain in the Pacific for ourselves and the free world which runs from the Aleutians down through Japan through our great air base at Okinawa through Formosa to the Philippines and anchors on Australia. And if the island of Formosa should pass into unfriendly hands, it would drive a wedge into the heart of that defense position. It would outflank Okinawa a few hundred miles to the north and would outflank the Philippines a few hundred miles to the south. The think that is difficult for me to understand is how some of our associates in the United Nations or elsewhere constantly fell that the way of solving the problem with the Communist world is by taking the road to appeasement. world should have learned at the time of Munich that the road to appeasement is not the road to peace. It is only surrender on the installment plan. Now we have drawn a line in the Pacific. It is for the purpose of preserving the peace in the Pacific and the peace of the world. There is no intent of aggression against any other nation on the face of the earth . But if our Air Force is challenged and fired upon, they are not going to sit there as sitting ducks. They are going to fire back with effective fire. If our fleet which in consultation with the Government of the Republic of China may be used for a screening opposition is subjected to attack, they in turn will defend themselves. But this, Mr. Chou En-lai and Mr. Mao Tse-tung should understand; they should understand in advance. If there is trouble in the Pacific, it will come because they have precipitated it. And if they precipitate trouble in the Pacific, they must know in advance that there will never again be a Yalu River sanctuary behind which they can go to rearm and refuel. Now we must not be deceived by those who would think that we can get a cheap and easy solution problem through the course of

appeasement.

There are some who believe that this doctrine of so-called peaceful coexistence is some new indication of a basic change in Soviet policy. It is no such thing. basic concept of Soviet policy is no different today under Malenkov than it was under Stalin or under Lenin. Their idea and peaceful coexistence was discussed by Lenin and by Stalin. Their idea of peaceful co-existence is that they will allow their neighbors to exist only until they can be subverted from within or destroyed by armed aggression from without. It is the type of peaceful coexistence that they planned for us that a Thanksgiving turkey has up until few days before our national holiday of being well fed and housed until the ax falls on its neck. Now I had a letter not many days ago from a minister of the Gospel who had been concerned by this talk of peaceful coexistence. He had known some associates of his who had suffered at Communist hands in Communist China and in some of the satellite states of eastern Europe. He sent me this quotation from the second Corinthians 6, 14: Be ye not unequally yoked together with unbelievers, for what fellowship has righteousness with unrighteousness, and what communion has light with darkness. I think that the minister who wrote me had a much better appreciation of the meaning of communism and their type of coexistence than the sum of our socalled neutralist friends of India and others who even tonight as we are meeting here have come up with various suggestions including the admission of Communist China into the United Nations; the giving up of the islands of Quemoy and Matsu to the Chinese Communists; the ultimate turning over if need be of the entire island of Formosa to the Chinese Communists. I have said on the floor of the Senate of the United States and I repeat to you here tonight that in my judgment the admission of Communist China into the United Nations would be a betrayal of every principle that that organization is supposed to represent. They have not qualified in any sense of the word as being either willing or able to live up to the charter obligations of a nation devoted to international law and order. As far as I am concerned, as long as I have a voice and a vote in the Senate of the United States, I shall oppose the admission of Communist China into that Organization.

Now the American people want peace, but we want peace with honor, and there is a vast difference between peace with honor and peace at any price. If anyone asks what the hopes and the aspirations of the American Government and the American people are in regard to living together with our neighbors, would point to our great neighbor of Canada to the north where we have a frontler of more than 3,000 miles stretching from the Atlantic to the Pacific. Along that entire frontier there is not a single fort or military post of any type or character whatsoever. Our hope would be in our lifetime or that of our children other nations would be as civilized and as peaceloving as our great neighbor of Canada to the north so that not only in the Americas but in Europe and in Asia and in the Middle East people might live together as good neighbors as we live with our great neighbor of Canada to the north. But, if we are half as prudent as the men who gave us our Republic, if we are half as prudent as those who pioneered the winning of the West, we will continue to hope and to pray for peace, but we will, like they, keep our powder dry. For we know that the age in which we find ourselves all nations are not as civilized or as peaceloving as are some of our friends to whom I have referred. I am reminded of a quotation out of one of Kipling's verses called the "Truce of the Bear." He said, "When he stands up like a tired man, tottering near and near; when he stands up as pleading, in wavering, man-brute guise; when he veils the hate and cunning of his little, swinish eyes; 'when he shows as seeking quarter, with paws like hands in prayer, that is the time of perilthe time of the truce of the bear'."

I think we must recognize that the mere fact that the Chinese Communists may accept an invitation to go to New York and discuss a cease-fire is no guaranty that while they are discussing they may not at the same time be fighting. I call your attention to the fact that when the negotiations at Panmunjom were going on some of the bitterest fighting of the Korean war took place. Why? because the Communist technique is to try to win victories and to break the morale of the opposition. When the great powers had gathered together at Geneva, out of a spirit of mercy the request had been made that they permit the evacuation of the wounded from the fortress of Dien Bien Phu, They turned it down and they insistedwhile the countries were meeting-on reducing that fortress and causing a complete surrender of its garrison. So in that case the mere fact that they negotiate in no sense guarantees that they may not use the same time to cause us trouble if they can. have been some who have suggested that perhaps, as a price of a temporary cease-fire, the Chinese Nationalist Government should be requested to give up fortress outposts of Quemoy and Matsu. This not only would be detrimental, in my judgment, to the defense of Formosa because it would open up the great harbors of Amoy and Foochou in which invasion fleets would be mobilized for the amphibious attack upon Formosa, but, in addition to that fact, it would be psychological defeat for the Republic of China, which again wuld be asked to give up more territory as the price of appeasement to the Chinese Communists. They will not be satisfied with any such price being paid, for they have publicly time and time again an-nounced that their determination, regardless of our position and that of the free world, is to take Formosa by force. I do not know why it is that there are some nations in the world, who should know better, who constantly advocate that the free world retire and give up territory and give up human beings behind the Iron Curtain. I have never seen a suggestion from Mr. Nehru or any of the others that the Communist world give up some of its territory and free some of its people.

They suggest the doctrine of the two Chinas—a fatal policy. For in the first place neither the Communists or the Nationalists could possibly accept the doctrine of the two Chinas. You would not bring peace in the Pacific. You would make inevitable a conflict. Just as in the long term of history you cannot have two Germanys or two Koreas. But I am convinced that if we as a Government and we as a people only use the same courage and the same commonsense that motivated the men who sat at Philadelphia and under what I believe was divine inspiration gave us first our Declaration of Independence and later our Constitution of the United States, there are none of our domestic problems which we as a free people cannot solve, and there is no foreign foe we need ever fear.

Address of Paul M. Butler, Chairman, National Democratic Committee, Before the National Press Club

EXTENSION OF REMARKS

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Paul M. Butler, chairman of the Democratic National Committee, before the National Press Club, Washington, D. C., February 1, 1955:

Since coming to Washington as chairman of the Democratic National Committee, I have been impressed repeatedly with the truth of the observation that "most of the world's troubles arise from words."

This was not said originally, as some may suppose, as a comment on John Foster Dulles' diplomatic methods. It is generally credited to Lord Mansfield back in the 18th century.

So it seems that the habit of using words carelessly or imperfectly is not a recent phenomenon, nor is it entirely a peculiarity of Republican Washington. This business of words is, of course, an old story to you, but it is a subject endowed with perpetually fresh interest to man who is just beginning to learn his way around in the verbose air of the National Capital.

For one thing, I find that publicity and public relations represent a large and growing part of the national committee chairman's duties. For another, our committee develops material for a certain monthly magazine, the Democratic Digest, 35 cents a copy, only \$3 a year. We also issue fact sheets featuring analyses of Presidential messages, and we prepare other memoranda—both special and confidential—which steadily grow more numerous and, we think, more interesting.

This development is not at all surprising in a day when the range, volume, and complexity of our public affairs taxes the indexing powers of even the New York Times. Though much of this is routine to most of you, I propose to discuss it here today since the operation is largely new to me, and I am concerned with ways in which we can make the Democratic National Committee's part in the news presentation more useful to you. to the general public, and the Democratic Party. We have to live together and work together, and a better understanding of each other's operations and purposes will contribute much to the pleasantness and the efficiency of that relationship. Perhaps I can best illustrate the point by referring to a few recent incidents which indicated that understanding of our committee's functions was something less than total.

Let me say here that I mention these matters not at all in a spirit of complaint or faultfinding, but entirely with the object of reaching a clearer definition of responsibilities that rest on all of us in the realm of public debate in a free society. Some of you doubtless recall there was a difference in interpretations of my New Orleans statement last December. My remarks were reported accurately in the press, but in some quarters there seemsd to be an exaggerated notion as to what constitutes a personal blast. You know, of course, that there is a profound difference between personal attacks, such as those made on the President by a conspicuous member of his own party, and questioning or challenging his conduct of national

affairs. I have said this before, but apparently not too often. You know, too, that the normal practice in American politics is to hold the President responsible for the act of his administration and the leadership of his party. To pretend—as some do—that the taking of such a stand is introducing a new policy, or is a departure that is somehow inimical to orderly political relations, is simply preposterous. Worse than that, such confusion over our natural and traditional political processes cannot but have the purpose to discourage the normal exchange of information, views, and opinions, upon the continuation of which the good health of the Republic depends.

When the Republican national chairman and others sought to dismiss my statement as a personal attack on the President, and as a junking of Democratic pledges of cooperation in the 84th Congress, they were at variance with the long-established ground rules for American political debate. It is impossible to view their action as other than an effort to muffle legitimate Democratic criticism of the man who today heads the Republican administration. The effort to put the President on a pedestal, ruling out realistic debate whenever it touches the Chief Executive, is detrimental to effective Government today and every day. None of our past Presidents has been sacrosanct. Republicans who seek to silence Democratic critics of Mr. Eisennower today were following a quite different rule when Mr. Truman and Mr. Roosevelt were in office.

Let us face it, the rule which the Rapublicans now are attempting to introduce would limit us to blind opposition or blind approbation. Through 20 years, the Republican leadership followed the rule of blind opposition. Viewing the effects of that partisan extremism today, Democrats are not tempted to follow their example. But blind approbation can have even more devastating results. A nation without an articulate opposition is no longer a democracy. If we were to retreat to the position deemed proper for Democrats by Chairman Hall and others who want to hear no word of Mr. Eisenhower's mistakes, we might as well close up shop at Democratic headquarters and discard the two-party system. There is going to be no such retreat, I can assure you, but in-stead, there will be a continuing effort to play the part of a responsible constructively critical opposition.

This represents no departure from the Democratic position in this matter which was stated repeatedly and definitely long before my election as chairman. One of the notable statements came near the close of the 1954 campaign, when Mr. Elsenhower's confusion of cold-war tactics with domestic politics prompted Democratic Senate Leader LYNDON Johnson and House Democratic Leader Sam RAYBURN to send the President a joint telegram. In view of some subsequent events, I believe that their remarks on that occasion bear repeating. After citing the numerous instances in the 83d Congress where the Democrats upheld the President against the extremists of his own party, on important policy questions, they said:
"We believe that issues like these are the

"We believe that issues like these are the overriding ones that are vital to the continued security of our Nation, and we believe that on these issues a Democratic Congress and any man who is determined to be Precident of all Americans can work together in harmony. This is no pledge of rubber-stamp support. We will continue to oppose you when we believe you are wrong. To do any less would be to betray ourselves and those who voted for us."

I do not see how anyone can read into that message any declaration of a Democratic moratorium on legitimate criticism of the Chief Executive. I have not heard from any Democratic source on Capitol Hill or elsewhere the slightest suggestion that we are

now committed to a policy of unthinking approbation. On the contrary, in this and in all other Democratic expressions we find a clear restatement of the Democratic policy

of responsible opposition.

The record of the 83d Congress shows that the Democratic Party consistently stood on this ground—when the Democrats fought to protect the President's rights against the GOP Old Guard which tried so hard to re duce them, and when they criticized the President for his surrenders of Executive rights; when Democrats supported the President on foreign policy, but opposed his New Look cuts in our defense program; when they fought for the President's liberalized -trade program, but opposed his effort to pack the Tariff Commission with high protectionists; when they fought to save the President's public housing program, but still criticized the Executive for his inadequate housing plan. In the 84th Congress, which they control, the Democrats continue to follow this balanced approach to the twin objectives of bipartisan action and intelligent opposition.

All of us are improved by legitimate criticism. Dwight Eisenhower, I should say, has been blessed in this regard. Whatever prog-ress his administration has made, he owes quite as much to the thoughtful Democratic criticism he has received as to the discriminating support from the same quarter.

Republican confusion over the ground rules in the exchange of public information was demonstrated again in the GOP reaction to Democratic analyses of the President's messages to the 84th Congress. For example, our committee's memorandum on the state of the Union message was pictured in some quarters as dooming the bipartisan approach in the present session of Congress. Senator STYLES Bamges, Republican policy chairman, spoke of this preliminary analysis of the state of the Union message as a "blast" against harmony in Congress. Senator Estes Kepauvez pointed out that it was strictly an analysis, confined entirely to relevant figures, facts, and questions. Senator Kefauver cleared up the confusion by reading sample passages from the memorandum itself. It's a technique which Democrats recommend to others. Let us use it here as applied to just one item in the analysis of the state of the Union message. The committee memo quoted this passage from the President's message: "So today, the transition to a peacetime economy is largely behind us."

The comment in the Democratic memo was: "This could hardly be called a peacetime economy since defense spending, while down from its peak, is still well above what it was at the height of the Korean fighting.

In both his state of the Union and his budget messages, Mr. Eisenhower spoke of the supposed war-to-peace transition. Now the committee's memos did not point, as they might well have, that these phrases on the mythical war-to-peace transition re-peated one of the major Eisenhower themes in the recent campaign. Some might ques-tion the propriety of injecting stump speeches into messages of state. However, we left the Republicans to follow their own sense of the proprieties. On the other hand, we admit to some surprise when Democrats are accused of adopting disruptive partisan tactics on the basis of a release which simply points up facts that do not support the warto-peace transition fable.

These memos and fact sheets are routine operations of the committee. The one issued on the state of the Union message represented no departure, in either style or content, from what the committee has been doing for the last 2 years. In other words, they come under the heading of pure and essential research. They are, we believe, useful to our busy Senators, Congressmen, and other party leaders. And we hope they are also useful to the press in getting a balanced account of the issues before the reading public.

It is only natural, I suppose, that there should be a certain amount of misinterpretation and misunderstanding over almost every conceivable report or comment in the political arena. You encounter this phenomenon in your own work quite as much as we do in ours, I am sure. I am also certain that you have observed that the habit mislabeling research and objective reporting as something irreverent and even unpatriotic has been carried to ridiculous and dangerous extremes by overzealous partisans.

In addition to the incidents I have already mentioned, there are other recent instances in which research and criticism have been falsely pictured, in what seems to me a patent attempt to drown out the voice of the opposition, or to make it unpopular to

exercise the critical faculty.

You will recall that not so long ago the Republicans advanced the proposition that the Democratic Digest should be stopped at the water's edge, on the basis of the unsupported accusation that the Digest was-and quote—"deliberately encouraging distrust courselves and our ideals abroad." Actually, what troubled the GOP was that

the Democratic Digest was rather completely reporting the masterful job that anti-Eisenhower Republicans were doing to undermine confidence in the President's stoutest policies.

You remember, too, the recent Republican "gloom and doom" chant, which was de-signed to drop a black-out on realistic discission of the nation's economic condition.

But why go on? There are about us today too many evidences of pressures which would drive Americans toward blind approbation.

These matters are of immediate concern to you, for the effort to stifle Democratic criticism is one part of a still growing movement to restrict freedom of expression in many espects of our national life. In the last two years, you gentlemen of the press have en-gaged in a long series of battles against that backward trend.

One of the major issues today is this Administration's Federal employees' security program. Without the light that was shed by a free press, there would have been no effective stand against the fantastic injustice that was done against Wolf Ladejinsky. For the partial redress that was made when he was reinstated in Harold Stassen's FOA, Mr. Ladejinsky acknowledged his debt to our newspapers, radio, and TV. In what certainly must be classed as one of the year's more eloquent statements, he said: "I pro-pose three cheers for these media." I am happy to join him in that toast.

But the battle is far from over. The press already has turned a searing light on the GOP's "security risk" numbers game, but the recent upping of the hoax figure to 8,008 tells us that the searchlight of an informed public must have a still wider and more

piercing beam.

Masked political raids on the civil-service system have raised a challenge which can be met only by an active opposition and a free press. The Nation needs to have much more information about the administration's defense cuts. Commerce Secretary Weeks' establishment of an Office of Stategic Information designed to guide newsmen in publishing information concerning unclassified strategic data, needs much more explaining. The Dixon-Yates deal requires further airing.

In all these matters there is a concerted effort to pit the President's popularity against the public's right to know. The mere questioning of the accuracy of a presidential statement of fact is represented as a personal attack on the President, or a scrapping of bipartisan harmony. Whether or not it is designed to do so, this tends to have a restraining influence on potential critics—and it is a disservice to both the President and his country when his prestige is used to stifle honest dissent.

Now there are those who centend that there remain few, if any, vital issues between the two parties, since, it is claimed, President Eisenhower has stolen the Fair Deal-New Deal thunder, and left us no issues for 1956. Actually, there are rather more grave issues than is good for the country and it is not a healthy sign when some of our important citizens are blind to that fact.

We do not mind when President Eisenhower borrows Democratic policies, for he always returns them as he did after the 1953 campaign. But those of us who are genuinely devoted to those policies could wish that his attachment to Democratic ideas was a little less fleeting as in the cases of his pledges on 90 percent parity prices for farmers, TVA, civil-service protection, Federal aid to education, rural electrification, and a long

list of other programs.

In closing, I must refer again to the issues that is, or should be, the first concern to all of us-the issue of the free press, monitor

of all our liberties.

In our committee, we read some 200 daily newspapers and also check carefully some 80 other periodicals, along with radio and TV cripts. We get, I think, a pretty good crosssection of what the press is saying and we have a very lively appreciation of the con-tributions which this Nation's publishers, editors, and reporters are making to the defense of our first freedom.

Bearing on this point, I would like to quote briefly from a recent address by one of the country's foremost editors. It was spoken in memorial tribute to John Peter Zenger, the first American editor to go to jall in the

long stand against tyranny.

"Liberty, like peace, is indivisible." said Editor Palmer Hoyt, of the Denver Post. "Once we permit any demagog to lay hands on the rights of individuals and let him get away with it, it only becomes a matter of time before all other rights guaranteed under the Constitution, including freedom of the press, are placed in mortal jeopardy."

We have seen, in our daily study of the press, a growing realization that the drive toward anti-intellectualism, toward conformity and creation of a fear psychosis, is aimed at shackling free speech and freedom of thought. We have observed mounting awareness that the distortions and the intimidation methods practiced by some among us strike first and hardest at the integrity of the press. We have seen increasing recognition that the deliberate perversion of words and facts is as violent an attack on the free press as are overt invasions of constitutional guarantees.

We have seen more and more evidence that newspapermen realize that their own freedom is under attack when the constitutional rights of Government employees are infringed under an unconscionable "security risk" system, designed primarily to serve partisan ends; when ministers, teachers, and scientists are falsely linked with subversion under the evil doctrine of guilt by association; when our great foundations are sullied by political extremists who label honest research and experimentation as "socialism" "communism."

In our own magazine, we have told some of the recent instances of the editorial profession's stout defense of the questing mind, and we will tell more. In this work, we like to think not only that we are useful to the free press but that we are in fact a part of the free press.

There has been frequent comment on the fact that many of the reports and com-ments in the Democratic Digest come from Republican or pro-administration journals. Actually, there is nothing remarkable in this, for the free press knows no party line. There is still a large one-party press in this country but there is also a vigorous "noparty press." It dwells in city rooms all over the country, and these enlightened inde-pendents include some who are Democratic and some who are Republican by inclination. But they are all newspapermen first, and they have a much greater future than the one-party press.

My sentiments are well expressed in the often quoted remark of Thomas Jefferson:

"Were it left for me to decide whether we should have a government without newspapers, or newspapers without a government, I should not hesitate a moment to prefer the latter."

Fortunately, we do not have to make that choice, but it is perhaps truer today than it was in Jefferson's time that man's hope for the reign of liberty, justice, and decency on earth is principally in the keeping of the gentlemen of the press. Nowhere is the image of a better tomorrow imprinted more clearly than upon a column of clean type.

Thank you.

Address by Hon. Theodore R. McKeldin at Dorchester Day Memorial Service

EXTENSION OF REMARKS OF

HON. DeWITT S. HYDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. HYDE. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD the following speech made by the Honorable Theodore R. McKeldin, Governor of the State of Maryland, on February 4, at the Dor-chester Day memorial service at the B'nai Israel Synagogue, Washington,

We are gathered here today to pay tribute to a living man. True, his body was long ago claimed by the insatiable sea and, in our petty carnal way of reckoning, the place that knew him shall know him no more forever; but he has passed beyond that reckoning, and places that never knew him in the flesh know him now-all places where valor is held in honor and holiness in reverence know him, and shall know him forever. He lives in a truer sense than you and I, here present in the body, are living; he is more vibrantly

alive than most of us will ever be.
With our feeble human mathematics we count him as one of four, but in a tremen-dous moment of terror and glory the four were fused into one. Our creeping, earthbound logic deems him a Jew standing with a Catholic and two Protestants; but in the soaring logic that rules the universe there stood together neither Jew nor Catholic nor Protestant, neither creed nor dogma, no trace of division but only a group of servants of the Most High God who, standing face to face with the Arch Fear, proved worthy of

The tale has the stark simplicity of all great epics. Four chaplains, noncombatants charged with the cure of souls of our fighting men, were on a ship struck by the enemy so swiftly and so furiously that it was immediately plain that all could not escape; so the men of peace handed to men-at-arms the lifebelts that might have meant rescue, and standing together on the blood-smeared, battle-torn deck, repeated the supreme con-fession of faith of the patriarch Job, "Though he slay me, yet will I trust him; he also shall be my salvation."

The sea closed over them, but "dull must he be of soul" who could think that that was the end of their lives. On the contrary,

that was the moment when millions first learned of their existence, and it is only since that moment that they have been shining figures in the hearts and minds of men throughout the Nation. At the moment when the sea closed over them, the mortal put on immortality, and a nation filled with pity and awe could begin to understand the meaning of that great taunt to the terror of the world: "O death, where is thy sting? O grave, where is thy victory?"

"Let us now praise famous men," sang him whom we know only as the Preacher, we are gathered here in response to that admonition; and we do well to respond,

"The Lord hath wrought great glory by them Through His great power from the beginning.

These were honored in their generations. And were the glory of their times.'

But we shall not do well if we pay tribute only to the splendor of the deed and take no note of the stern rebuke it carries to the narrow mind, the small soul, the bitter heart all too prevalent among us. How dare I say, how dare you say of any man among them, "He was not of my religion"? If my religion teaches that it is God who has planted in the human heart the knowledge that there is something more precious than life, something more necessary that life, then in the fundamental thing he was of my religion and I am of his. In the pres-ence of that great unity, the bickering and strife, the spite and prejudice that we allow to creep into our human relations shrivel into cinders, little and mean and pitiful.

As a schoolboy I was taught that George Washington, when he was a schoolboy, entered in his copybook the motto, "Labor to keep alive in your breast that little spark of celestial fire—conscience." As a schoolboy I accepted it as a pious platitude, with-out thinking much about it. Not until I had become a man did the experience of life pound into my mind with hammer-blows reason for keeping alive the spark of celestial fire. It is by way of preparation of one of those terrible moments that come to every man when he stands face to face with stark reality.

For if the spark is still aglow when that moment comes, the blast of the tempest may cause it to burst into full flame and the man is transformed, is lifted above the human level and becomes a miracle striking all beholders with amazement and dread. I am certain that this is what occurred in the case of the four chaplains. As far as we know, all their lives up to that moment they had been quite ordinary men, not very different from you and me; but throughout all their humdrum days they had kept alive the spark of celestial fire, and that made the difference. Blown upon by the fury of the storm it flamed up and enveloped them, so that they were no longer men but be-came what Moses encountered when he saw the bush that burned and was not consumed—they were visible evidence of the presence and power of God and the place whereon they stood was holy ground.

So their story comes down to us as both a rebuke and a promise, and so we must cherish it while memory lasts. It is a stern reminder of how the quarrels and spites and prejudices that we think important-

"Thronging the safe, companion'd ways of

life, Shrink trembling from the cold, clear eye of death."

Which sees all men as one. It rebukes our wasted years and wasted energies, our silly pride and our equally silly fears. Down through the years it calls to us in the words of Abraham speaking to Lot: "Why should there be strife between thee and me? For we be brethren."

Let us acknowledge here today that the rebuke is merited. Let us make part of our tribute a firm resolve that it shall be heeded, not in a moment of transfiguration, but in our daily lives, and that the influence of these men, far from diminishing, shall strengthen and increase with passing times; so they shall live forever and mortality have no power over them.

The promise of the story lies in the fact that we, too, carry within our breasts the celestial spark unless we shall have extinguished it by our own act; and while it glows we to may hope that in the moment of our utmost need it may be fanned into flame, giving us power not of ourselves to face triumphantly what of our own strength we could not bear.

So bringing to this rite of remembrance humility and contrition we may carry away from it pride and confidence, not in ourselves, but in the knowledge that he who is the servant of the Most High may hope in his most dreadful hour—to stand not of himself alone, but with the borrowed strength of the God of Hosts, "and the gates of hell shall not prevail against it."

Yet while I believe that this story tells of a moment of transfiguration when the spirit of God lifted mortal men above the human level, there still remains the purely human After all, they did wear the uniform of the United States of America, and, after all, they did add to the wordly honor of this Nation. Therefore they are due the customary honor that the world pays to the brave; and while I regard it as a lesser thing than their spiritual honor, I render it gladly, it briefly.

These were among the valiant whom it is not fitting to mourn, but only to honor and praise; and the style has been set for us in the stately music of John Milton. Here then, is their epitaph:

"Nothing is here for tears, nothing to wail or knock the breasts; no weakness, no contempt.

Dispraise, or blame; nothing but well and fair,

And what may quiet us in a death so noble."

A Program for an Expanding New **England Economy**

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following program for an expanding New England economy adopted by the newly formed New England Council of the CIO, which I am confident the membership will find to be of interest and enlightening:

We, the trade unionists of New England, have faith in the future of our region and are determined to work for the growth and stability of the economy of these 6 States.

We point to the weak spots in the economy of New England so that we may develop sound plans to protect our standards and build for the future of our region.

The CIO economic program for New England seeks to protect and promote the regional economy and support the growth of the national economy. There are special problems within the region which require attention. They stem from the contraction of the textile, leather, and electrical products

industries, which are shrinking in the region either through direct closings or migration. The protection of our standards from unhealthy competitive pressure must be combined with a positive program of stimulation of the regional economy to both help the older industries and aid in the development of new plants and employment opportunities.

We look askance upon the ideas promoted by financial circles that only the increase in jobs in service and durable-goods manufacturing industries means improvement for the region. The exact reverse has taken place. The wages paid by many new plants continue to be low and to undercut the wage levels in the established textile, leather, and electrical products industries.

The CIO dedicates itself to rally the workers in these plants to correct this condition through trade-union action. But we note with alarm that the workers formerly employed by closed plants who have obtained new employments have had their earnings severely cut in these new industries. We must face up to the fact that thousands of displaced workers from older plants have not been absorbed by new plants or industries.

The New England community has not addressed itself wholeheartedly and with de-termination to the stimulation of new employments and enterprise. The CIO program is intended to awaken the entire region to the need for concerted action by all groups working unitedly behind the planks which we herewith offer. Our program will aid all sectors of the population and convert our economic stagnancy into one of active, healthy growth.

1. Minimum wage: We urge the approval

of \$1.25 minimum wage.

2. Walsh-Healy Act: We urge repeal of the Fulbright amendment, immediate enforcement of the Secretary of Labor's findings and full implementation of the act.

3. Federal tax system: We urge the denial of all tax exemptions to local government bonds issued for the purpose of financing the construction of equipment of private enterprises or the use of local communities' concessions in the capitalization of any company for tax purposes. The Federal tax law must disallow as expenses all allowances for transportation of machinery and equipment where such transportation results from the abandonment of a plant and disallow the deduction of rent from taxable income by companies which lease plants built from the proceeds of municipal bond issues.

4. State and local tax laws: We urge the prohibition of all tax exemptions or subsidies or the use of public credit for private busi-

ness enterprise.

5. Federal tax on abandoned plants: We urge a 25 percent tax on all gains from liquidation of plants. Such proceeds should be used to finance local development programs, aid workers to adjust themselves and set up public works and development of local resources and facilities.

6. Unemployment insurance: We urge the adoption of Federal minimum standards which shall provide benefits of at least 65 percent of a worker's full-time weekly wage. up to the State minimum which should be at least two-thirds of average weekly wages in covered employment, for a period of 39

weeks.

- 7. Federal old-age security: We urge the enactment of a Federal long-term disability law; 60-year retirement age for employees displaced as a result of plant closings; liberalization of benefit provisions.
- 8. Vocational education: We shall work for a more adequate program of Federal and State vocational education to enable persons displaced from older industries to adapt and train themselves to newer employments.
- 9. Textile industry: The Federal Government should immediately pursue the following course to help the stimulation of the textlle industry:

(a) Government stockpiles of textiles for military uses so that production orders can be released immediately.

(b) American textiles should be used in

the same fashion as surplus food and coal

for the relief of needy peoples overseas.

(c) Textiles should be distributed to needy Americans as surplus food is now distributed.

(d) Government contracts should be negotiated and awarded to mills in distressed manpower areas.

- (e) The United States Department of Agriculture should provide the leadership in establishing a wool fabric "library" to stimulate new design and aggressive merchan-
- dising.

 (f) The Federal Government should provide a research program for the develop-ment of new products, uses, markets and programs for stimulating new demands for textiles and textile products.

10. New England tax system: We urge greater reliance by State governments on personal and corporate income taxes and reduction and elimination of sales taxes.

- 11. New England power: Public development of power resources must be under-taken by valley authorities. Funds for the development of Passamaquoddy power must be appropriated by the Federal Government. We applaud Governor Muskle's proposal for the repeal of the Fernald Act. A regional investigation must be undertaken to determine why power rates in New England are the highest in the United States. Necessary steps must be taken to assure that power from St. Lawrence and Niagara is made available to the public and nonprofit bodies at the lowest possible cost.
- 12. Regional expansion: A regional planning and development board should be established representative of the various interested groups, to undertake the study and development of the regional economy. shall also provide aid to State and local community development projects.
- 13. Small business: Development of lending technical assistance and government contract aid for small business.
- 14. Integrated steel mills: We urge the establishment of an integrated steel mill in New England.
- 15. Atomic energy: We urge the formation of a public corporation to produce and distribute electricity produced by atomic reactors.

The CIO State councils hereby establish a New England Council of CIO to promote and follow up on the enactment and realization of this program.

Tariffs on Textiles

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

TEXTILE WORKERS UNION OF AMERICA. New York, N. Y., January 11, 1955. Hon. EDITH NOURSE ROGERS,

House Office Building,

Washington, D. C.
DEAR CONGRESSWOMAN ROCERS: We are enclosing a copy of a statement we filed with the United States Tariff Commission in connection with the pending treaty negotia-tions with Japan. We are inalterably opposed to any reduction of ad valorem or specific rates on textile items. The attached brief provides the basic facts in support of our position.

Our position stems from the serious dislocations and widespread unemployment in all regions in the textile industry. Further reductions in tariff rates on textiles would invite a greater flood of goods at reduced prices which will compound the unfortu-, nate plight in which hundreds of thousands textile workers find themselves. shrinkage in the industry resulting from the loss of markets to competitive materials and technological advances are displacing large numbers of workers. This is not a proper time to aggravate internal conditions.

The rising level of productivity will ultimately permit the American textile industry to hold the domestic market in face of any foreign competition. As a result, no foreign country can hope to hold permanently markets which it would gain temporarily in this country. Tariff reductions would aggravate bad conditions in the domestic in-dustry without providing permanent outlets for increased foreign trade.

We hope that we can count on your support for this program to exempt the textile industry from reductions in tariff rates in the forthcoming trade agreement negotiations with Japan.

Sincerely yours,

JOHN CHUPKA.

STATEMENT TO THE UNITED STATES TARIFF COMMISSION CONCERNING POSSIBLE TARIFF CONCESSIONS ON TEXTILE ITEMS IN THE NEGOTIATION OF RECIPROCAL TRADE AGREE-MENTS WITH JAPAN, SUBMITTED BY SOLO-MON BARKIN, DIRECTOR OF RESEARCH, TEX-TILE WORKERS UNION OF AMERICA, CIO, DECEMBER 22, 1954

We appear before your committee to attest to the impropriety of reducing tariff rates on textile items. An expansion of textile imports would have a highly unfortunate effect upon the workers in the industry. They are now suffering under the double impact of a high rate of technological change and intense competition among different fibers, processes, and products. Thousands of workers have been displaced and thrown onto a labor market where few opportunities for alternative employment exists. It would be unfortunate to add to the workers' dislocation and anxieties by threatening the continued existence of those branches of the industry which would be seriously affected by foreign competition. Moreover, the lowering of tariff rates would create further dislocations without providing a substantial permanent market for the foreign textile industries in this country.

We are impressed with the unusually high level of unemployment in our industry at a time when the country is enjoying a high level of employment and business activity. The high rate of displacement of jobs because of technological and style changes is of a continuing character and therefore any move which would add to the difficulties of the industry would have lasting effects upon the economy and would scriously aggravate the problems of the unemployed.

The utmost care must be employed in a review of tariff rates on textiles at this time. We submit the following propositions as basic to the consideration of the textile tariff problems:

1. A high level of unemployment prevails in many divisions of the textile industry. Alternative employments are limited in textile areas.

2. Current technological changes, interfiber, interprocess and interproduct competition are threatening many more jobs

3. In view of the prevalance of unemployment this is an inopportune time for further concessions which would complicate the adjustment process.

4. Certain branches of the textile industry included in the current negotiations are the branches of the traditional industries which

have the best chance for continued survival in interfiber competition and therefore should not be threatened by a new increase in the volume of imports.

5. The industry has lost many foreign markets and export volume has been sharply re-

duced and is further threatened.

6. Concessions to Japan under Most Favored Nations Treaty will extend to all world textile exporters.

7. Textile imports should not be conceived as primary sources of international trade for countries involved in the proposed negotia-

8. The maintenance of an adequate American textile industry is essential to our na-tional standard of living, position, and de-

9. The American textile industry is one of the largest of all national textile industries and its position must be maintained.

10. Protection of the American industry has had few unfavorable effects upon the American or world textile economy.

11. The tariff mechanism is a faulty determinant of the flow of textiles and is complicated by current raw material price poli-

12. Concessions should not be negotiated for products which are primarily supplied by countries other than those with whom negotiations are contemplated.

13. Limited types of imports of textile products can contribute to new ideas, developments, fabrics, and designs but they should not come in such volume as will destroy segments of the American industry.

14. We urge the promotion of international fair-labor standards in the world textile industry to avoid competition on the basis of exploited labor.

I. A HIGH LEVEL OF UNEMPLOYMENT PREVAILS IN ALL DIVISIONS OF THE TEXTILE INDUSTRY. ALTERNATIVE EMPLOYMENTS ARE LIMITED IN TEXTILE AREAS. TEXTILE WORKERS ARE OLDER PERSONS SO THAT REEMPLOYMENT PROVES DIFFICULT; PERIODS OF UNEMPLOYMENT PRO-LONGED; MANY EXHAUST UNEMPLOYMENT BENEFITS; LARGE NUMBERS PREMATURELY FORCED OUT OF LABOR MARKET

Unemployment is currently widespread among textile workers throughout the coun-The number of workers in the textileproducts mills in October 1954 was 988,000 which is 281,000 less than in February 1951. This is the net reduction in jobs. The total number displaced is much greater, as many who lost their jobs have been replaced by others.

All textile areas are suffering from this unemployment. (See table I). dred and seventeen thousand jobs were lost to the industry during the past 2 years in New England,85,000 in Middle Atlantic States, and 52,000 in the South. The largest employment reductions were suffered in Massachusetts and Pennsylvania and substantial losses were also registered in several southern

As textile mills are generally located in nonmetropolitan areas, frequently comprising 1-industry or 1-mill communities, alternative employments in the locality are lacking. The slump in textile employment, therefore, depresses entire communities and leaves workers and their families stranded. The significance of this concentration is borne out by the fact that 5 of the 8 major areas in the continental United States which are designated areas of very substantial labor surplus by the Bureau of Employment Security, are textile areas. In addition, 4 smaller textile areas are classified in this category (having 12 percent or more of the labor force unemployed). There are also 20 textile areas (including 7 major communities) in the substantial labor-surplus classification, i. e., with more than 6 but less than 12 percent of the labor force employed. (See table II). These communities have not prepared for this situation with new industrial developments. The people have a life-time investment of skills in the textile

The concentraton of textie manufacturing in the States along the Atlantic seaboard makes these areas peculiarly dependent upon the industry. The proportion of total manufacturing employment accounted for by the textile industry is in excess of 50 percent in North and South Carolina and more than 25 percent in Rhode Island and Georgia. In addition, substantial proportions of the factory employment in New Hampshire, Maine, Massachusetts, Vermont, Connecticut, Pennsylvania, New Jersey, Virginia, Alabama, and Tennessee are provided by the textile industry.

Many thousands of the textile workers who are unemployed have no prospect of reemployment in their communities because the mills in which they were employed are permanently closed. At least 556 plants in the major branches of the textile industry (cotton and rayon, woolen and worsted, and dyeing and finishing) have been liquidated since the end of the war, throwing more than 144,000 workers out of their jobs. (See table III.) Many of these are located in isolated communities where no opportunity for other employment exists. As a result, with year ended June 30, 1954, almost 100,000 New England workers were unable to find jobs during the period covered by unemployment compensation, exhausting their benefit

The effect of the current drastic contraction in the textile industry is being felt particularly by the older workers because this industry has an unusually large proportion of mature and middle-aged employees. Mill liquidations and reductions in employment are most severe in the areas with the oldest work populations. The latest study of the ages of workers in establishments covered by the old-age and survivors insurance shows that the proportion of male workers 65 years of age and over was 5.2 percent in textiles as compared with the average for all manufacturing industries of 2.7 percent.

The older workers are the chief sufferers from mill liquidations. They have the greatest difficulty in finding new jobs when the mills in which they have been working, frequently for several decades, shut down. skills which they have acquired over the years are largely wasted, as there has been little transferability of skills from the textile industry to the industries which are growing in textile areas. Indeed, the recruitment policies of the firms which are expanding militate against the employment of former textile workers because of the emphasis on hiring young people. As a result, thousands of able-bodied men and women are being relegated to a new industrial scrap heap.

The insurmountable obstacles faced by older workers seeking employment as a result of technological displacement or plant shutdowns are indicated in a number of surveys conducted in recent years on the experience of the labor force of liquidated textile mills. In July 1947, the Oakes Mill in Bloomfield, N. J., was closed permanently and the union surveyed 132 of the former employees a year later to determine their experience in obtaining employment. While 63 percent of the workers had found some job during the year following the mill's closing, only 6 percent of the workers aged 65 and over had been so fortunate. Moreover, while 44 percent of the workers were still employed on the date of the survey (July 31, 1948), none of the 65 and over group had retained his job.
In May 1948, the Esmond Mills in Esmond,

R. I., was liquidated and a union survey of 628 former employees in November 1948 vealed that while 48 percent of the workers were able to obtain a job in the half year following the mill's shutdown, the proportion of successful job seekers dropped sharply after the age of 50: In the 40-49 bracket, 56 percent had obtained a job, 30 percent in the 50-59 class, 28 percent in the 60-64 class, and only 15 percent in the 65 and over category. Similar disparities were indicated in the distribution of former Esmond Mill workers who were employed as of November 30, 1948: While 39 percent of all workers were employed, only 15 percent of the 65

and over group had a job.

In 1952, the staff of the Committee of New England of the National Planning Association conducted studies of the postliquidation experience of employees of two textile The report of the committee is currently in the process of publication. It will show that there was little transference of skill levels among those who were able to find jobs. With regard to one of the plants studied (a New Hampshire woolen and worsted mill) the committee found that 13 percent of the labor force withdrew from the labor market after losing their jobs, most of these being older workers, particularly women past 60 years of age.

A study currently underway by the Bu-

reau of Business and Economic Research of Northeastern University in Boston, has resulted in the interviewing of 756 from 3 liquidated mills in New Hampshire and Massachusetts (1 in Fall River and 1 in Lowell). William H. Miernyk, director of this study, has reported the first findings Displaced textile workers are as follows: generally not being absorbed by the growth industries. "New industries evidently are filling jobs with newcomers in the labor market instead of with displaced textile market instead of with displaced workers, according to the bureau's findings," workers, according to the bureau's findings," Lowell, younger male workers found new jobs, but those over 45 years of age still were largely unemployed after a year. In New Hampshire, 2 years after the shutdown, almost a third of the 200 laid off in the woolen mill were still out of work."

The above report of the Committee of New England concludes that "job displacement as a result of the liquidation or migration of a mill or factory is particularly hard on the older worker. If a worker past 50 years of age can continue at this present work, he may have many years of productive and remunerative employment left to him. If he loses his job most employers will be reluctant to hire him. He may be barred from productive work at a relatively early age and he may be forced to accept such casual employment as comes his way or to withdraw from the labor force entirely."

The prevalence of these circumstances in the textile communities makes it vital for us to insist that no concessions in tariff rates be granted which would aggravate this condition.

TI. CURRENT TECHNOLOGICAL CHANGES, INTER-FIBER, INTERPROCESS, AND INTERPRODUCT COMPETITION ARE THREATENING MANY OTHER

The record of postwar technological changes in the textile industry is most impressive. The advances of modern tech-nology are penetrating the American textile industry and affecting processes, procedures, mill layout, and mill management. It is not our purpose herein to provide any detailed sketch of these changes. We mean merely to indicate that productivity per man-hour is rising primarily through the reduction of manpower. The current rate of increase is in excess of 5 percent per annum. The large numbers of employees already displaced is a symbol of the more far-reaching difficulties facing the textile worker. Older skills and personal associations are being eliminated by these advances.

A measure of the amount of technological change is provided by data on textile mill expenditures for new plant and equipment reported by the Department of Commerce. Since World War II, the industry's expenditures have amounted to over \$4 billion. bulk of these expenditures was for the purchase of new equipment rather than new buildings. Moreover, the rush of new equipment suggests strongly that there are new and more far-reaching changes on the drawing boards and in the pilot stage. These are radically changing the production meth-

ods in the industry.

These new innovations are of many kinds. The most dramatic is of course the introduction of new fibers. Rayon came in the thirties. Nylon was truly the fiber of the early postwar period. Now orlon and dacron have gained substantial footholds, displacing the older textile fibers. Saran, glass, dynel, and other fibers are being produced. was dealt a striking blow by nylon. Wool is now being seriously threatened by dacron and other synthetics in the suiting fields, by synthetics in the floor-covering area, and by new chemical finishes which provide insula-

The mills whose products are being displaced generally cannot handle the new fibers. Plants which had not manufactured these products have come into the field to take the place of the traditional producers. Ghost towns are beginning to develop and workers are left stranded.

Older textile industries are being revolutionized by new machines. They are sturdier, faster, run more smoothly, telescope processes into fewer operations, and reduce the amount of labor required for their operation. Parts are being added which facilitate the operation and thereby reduce subsequent processing. Better mechanical and new electronic controls are increasing the precision of each operation and make them more and more automatic. Material is being mechanically delivered and removed. Better layouts are reducing the required floor space and the amount of handling. Fans, blowers, and suction pipes are eliminating much of the manual cleaning. Oiling is being done by mechanical oiling systems or parts are being inserted which require little oiling. Air conditioning is improving operations and reducing yarn-breaks. Better parts are insuring longer life, less replacement, and less maintenance.

These changes can be found in each division of the industry. One-process pickers and material-handling devices have sharply cut the manpower in the opening and picking operations in the cotton mills. drawing frames and long-draft devices have telescoped the roving and spinning operations. Winding has become so automatic that the work force on these operations is a mere fraction of the labor required in prewar mills. Warpers have been speeded, slashers have been made more automatic. Looms have been speeded and made more versatile and more revolutionary changes are impending.

In the woolen industry, opening and picking have been mechanized. The mules have been displaced by spinning frames. Highspeed winders and warpers have replaced older equipment. The nonautomatic loom has practically disappeared. In the worsted industry, the most radical changes have been the introduction of the pin drafter and long draft frame spinning which have radically reduced manpower complements.

The finishing processes on all fibers have been revolutionized through the introduction of ranges which combine several operations in continuous processes with machinery which is controlled through instrumentation.

But these changes have also been accompanied by process competition. Cotton-type spinning equipment is making great inroads in the worsted-type processing of long fibers. The conversion of tow into yarn is competing with the spun-rayon manufacture. Bonded fibers and roving are competing with fabrics, yarns, and ropes. Knitted products are supplanting woven products in many areas. Tufted carpets are replacing woven ones. Synthetic filament fabrics are displacing spun-yarn fabrics of different fibers. Finishing processes are being required to perform services which the weaving industry had formerly done.

In addition to these changes, the textile Industry is losing out to other products. Plastics are substituting for textile fabrics in some uses such as automobile-seat covering, household uses such as draperies, tablecloths, seat coverings, packaging. Paper products have displaced textiles in household uses such as towels, napkins, bookbinding, packaging, etc.

The increase in the rate of technological change has also affected management. accent today is on efficiency. Management has been reorganized to exercise centralized control over production. New techniques have been developed to safeguard quality. Mechanical controls have been introduced at virtually every point in the manufacturing process. Time and motion study methods have been used to improve plant layout and raise work assignments. Incentive wage systems have been more widely adopted. chief objective and chief result of this pursuit of efficiency has been to reduce the labor required per unit of output.

On top of all these technological and fiber changes the textile industry has been hit hard by marked changes in consumer tastes. With millions of families moving to the suburbs, taking up backyard sports, and puttering around home workshops and gardens, interest in attire has been lessened. Television has helped make the home the focal point for leisure-time activities. As a result, apparel has become a more casual item in the consumer budget and casual wear has become acceptable for a multitude of uses for-merly requiring "dressy" attire. Thus, pro-duction of men's suits fell to 21.8 million in 1953, a decline of 25 percent per capita from the 1939 level. Along with this trend toward casual attire there has been a marked shift toward lighter clothing and housefurnishings. Men's overcoat and topcoat production in 1953 was at the same level as in 1939 in spite of the rise in the population of males 18 years and over of 17 percent. Blankets and comforters are among the other products which have felt the impact of these trends.

The net effect of these shifts in popular preference and the vast increase in consumer indebtedness flowing from the postwar boom in housing construction and consumption of durable goods like TV sets, automobiles, refrigerators, and the like, has been a sharp decline in the proportion of total consumer expenditures going for apparel. From 10.4 percent in 1946, this proportion declined to 7.3 percent in 1953, and the 1954 ratio will probably be less than 7 percent. This production is well below the prewar level of 8.6 percent recorded in 1939.

The combined result of these changes and shifts has been a serious blow to the workers in the industry. Such industrial transitions are rarely easy even when other jobs are available. The new openings seldom arise at a time and place where displaced workers can take advantage of them. Moreover, the long-term trend in the consumption of textiles is not reassuring. The higher productivity of the industry is not being matched by a rise in the per capita consumption of textile products. New uses have not arisen. Further contraction of employment opportunities in this industry appears inevitable even in a period of relatively high employment in the economy as a whole.

We are therefore particularly concerned lest the number of jobs be further reduced through the substitution of foreign products for American output.

III. CERTAIN BRANCHES OF THE TEXTILE INDUS-TRY INCLUDED IN THE FORTHCOMING NEGO-TIATIONS ARE THOSE WITH THE BEST CHANCE FOR CONTINUED SURVIVAL IN INTERFIBER COMPETITION AND THEREFORE SHOULD NOT BE THREATENEND BY A NEW HIGH VOLUME OF IMPORTS

A number of branches of industry as indicated above are faced with serious competition from new fibers and processes. These are bringing critical problems to the fore. However, several branches of the industry subject to the forthcoming negotiations are the ones in the best position to survive this competition and thereby moderate the degree of disturbance within the textile industry. The workers involved will continue to be subjected to the sweeping technological changes now being effected. It is essential to avoid challenging the survival of these branches through a higher volume imports.

The products which are in a good position to provide a degree of stability to the industry during these difficult times are, among others, the following:

Fine cotton fabrics (par. 904).

Velveteens (par. 905).

Sheets and pillowcases (par. 911 (b)). Lacings (par. 912).

Staple fiber (par. 1302). Bureau and table covers, etc. (par. 1529

Quilts and bedspreads (pars. 911 (a) and 1529 (a)).

Specific discussion of a number of other items will be presented in a detailed analysis of the specific commodities.

IV. TEXTILE IMPORTS SHOULD NOT BE CONCEIVED AS A PRIMARY SOURCE OF INTERNATIONAL TRADE FOR COUNTRIES INVOLVED IN THESE NEGOTIATIONS

One major problem in formulating tariff policy is to determine whether the encouragement of the imports of textiles into this country will in the long run be desirable for these countries. Can they be expected to maintain long run advantages? Can they be expected to maintain a textile export industry?

Current technological product and fiber changes in the American textile industry point to large-scale reductions in labor re quirements per unit of output. A significant proportion of these technical changes are American in origin and spring from our needs and technical culture. Moreover, the increased penetration of modern scientific development in the textile industry of the United States is suggestive of the continu-ing future volume of changes.

In the utilization of these technical innovations, the American industry enjoys many advantages which assure its wider use of these developments. First is the great wealth of the American textile industry. Its huge war and postwar profits have resulted in the amassing of tremendous capital resources, which, at the end of 1953 amounted to \$6.2 billion as compared with \$2.5 billion at the end of 1939. The industry can afford to spend freely for innovations. Some new textile buildings are coming up to exploit the advantages of modern plant design. trast, other countries do not have the money for complete modernization of their equip ment and structures. Japan had one major experience in the post war period but is not likely to engage in a similar program again. As time passes, the advantages of more modern productive capacity in the United States will probably become more marked and should offset the differences in wage rates.

Our textile manufacturer is acquiring an increasing knowledge of the procedures and methods followed in other American industries. They are being introduced into the textile industry. These procedures are particularly adapted to our large mass market. Textile production and marketing

techniques are feeling the influence of the introduction of characteristic American industrial techniques. By converting the industry into a modern one, the American product becomes less vulnerable to foreign competition.

Our working population is also best pre pared for the operation, maintenance, and development of the newer technology. new, precision-built machines need a highly trained operative who can keep records and understand the principles of production.

The textile worker had been converted into a machine tender after serving years as an artisan. Now he is being increasingly required to be the operator and regulator of complicated machines which involve refined use of electronic techniques and instrument controls and careful recording of observed performance. The high level of education makes it easier to install these techniques on a wholesale scale in this country.

The large-scale organizations in this country with accumulations of capital, scientific knowledge and skilled technical, production, and merchandising personnel, provide a base for the introduction and rapid extension of

technological changes.

In contrast, the other countries of the world are short of capital, lacking in facilities for large-scale modernization, and suffering from a shortage in trained personnel. The more advanced industrial countries are likely to find, as England is concluding, that there are more attractive avenues for investment of such capital as it does have available. In the search for relative returns on various type of industries, textiles will rate very low in advanced countries and in Japan.

Another phase of the problem is the determination as to whether the foreign countries are likely to maintain a large volume of textile exports. There has been an expansion of textile capacity into new countries and in older industrialized countries. despite the destruction of equipment during the war. Among the countries which have expanded cotton goods production are the following: India (from 3.9 billion yards before the war to 4.9 billion in 1953); Pakistan (240 million yards in 1953); Chile (from 14 million yards before the war to 28 million yards in 1952). Total world consumption of cotton has risen by 10 percent since 1939 (from 30.6 million bales in crop year 1939 to 33.4 million in crop year 1953).

The significant fact about the volume of production is that it has been moving into new areas. With this expansion has come the contraction in the volume of international trade. While total production of textiles has expanded over the last few decades, the volume of international trade has steadily declined. In cotton textiles, world trade was estimated at 9.5 billion yards per year before World War I. The volume declined to an average of 8.5 billion in 1926-28, to 6.4 billion in 1936-38, and was 5.8 billion in 1951-53. The proportion of total consumption supplied by domestic production was 82 percent in 1936-38 as compared with 73 percent in 1926-28. In 1951-53 the proportion of consumption provided by domestic production of cotton goods was approximately 88 percent.

There is every indication that these trends are being continued. The newly industrialized countries are determined to provide their own textiles and reduce their depend-

ence on textile imports.

We believe that it is unwise to build up any significant degree of dependence in these countries upon the export of textile products. Moreover, these very countries are likely to have to expand their own consumption of textiles in order to raise the standard of living of their own peoples. The more advanced industrial countries, some of which are included in these negotiations, must look toward more productive channels for their industrial expansion. One such channel may well come through the utilization of their textile experience in the production of textile equipment

V. THE MAINTENANCE OF THE AMERICAN TEX-TILE INDUSTRY IS ESSENTIAL TO OUR NATIONAL STANDARD OF LIVING, POSITION, AND DEFENSE

The American textile industry has developed many characteristics peculiar to the American market. Unlike the textile industries in other countries, its products are designed for mass production and consumption of quality merchandise. The manufacture and distribution of apparel fabrics is responsive to the desire for an economic product which meets style trends prevailing in this country. The great middle class provides the pattern for our goods.

Our producers are constantly developing new effects and products which can gain favor in the American market. Innovations must be devised and experimented with in this country. The very nature of the style trends requires proximity to the market and close understanding of the underlying trends

within the society.

The textile industries in other countries have been differently fashioned. They have either sought to meet the needs of the lowest income groups or the luxury trade; they have grown up in periods when mass markets were not available; they have emphasized short runs for the international luxury trade or large runs of staple fabrics for special export markets; they reflect the patterns of the economies in their countries, in which the distinctions in consumption patterns among various income levels are much sharper than they are in this country.

In the field of household fabrics the same trends may be noted. We have an emphasis on mass consumption even of the more highly priced fabrics. Our large expanse makes this possible. The ready acceptance of new style trends makes it easy to introduce the higher-priced material in great The foreign textile producers have not adjusted themselves to this type of pro-

duction and merchandising.

We wish also to point out that it is essential to maintain the textile industry of our country to furnish us the textile products needed for military defense. The capacity which was considered excessive in the prewar years proved indispensable to military Cotton production was expanded to 12 billion yards, woolen and worsteds to onehalf billion yards, and rayon to 1.5 billion yards, and many other textile products were turned out. Without them we could not have clothed the large armies we put into the field nor met the large needs of our allies. Nor could the industries of our country have been kept going. No combination of countries in the world could have performed the assignment in textile production which we met. It is, therefore, vital to keep this capacity available.

VI. THE AMERICAN TEXTILE INDUSTRY IS ONE OF THE LARGEST OF ALL NATIONAL TEXTILE INDUSTRIES AND ITS POSITION MUST BE MAIN-TAINED

By clearly comprehending the size and proportions of the American textile industry, we can appreciate the degree of caution which one must use in proceeding to affect its ability to meet the country's needs.

A. The total number of employees covered by all sections of the textile products and synthetic-yarn industry in December 1953 was 1,200,000. (Textile mill products plus textile bags, handkerchiefs, curtains, draperles, and other textile housefurnishings, and synthetic-yarn fibers).

B. These workers constitute a substantial proportion of the total employment in a number of States along the Atlantic seaboard.

The high concentration of textile employment in several States is significant for sev-

eral reasons: (1) It suggests the absence of local alternative employment, and (2) the dependence of vast areas of our country upon this industry. The industry has deep roots in many local and State economies. The largest proportion of the industry is located in the nonmetropolitan areas. They are concentrated in one-industry and some times one-mill communities. Alternative oppor-tunities and facilities for transfer are completely lacking. The disappearance of industries in many areas means migration for the workers as new local industries are not usually available. The communities have been backward in securing diversified industrial development. Textile employers in many instances have discouraged such diversification. Such migration as will result would have to be out of the regions affected. It is therefore vital to legislate with great care.

Employers and our private economy have blindly pushed ahead in the pursuit of their profits and left ghost towns and displaced thousands of persons. We call upon the Government not to aggravate the condition of

the textile communities.

C. The American textile industry is one of the largest in the world. As of July 31, 1953, we had 22.9 million cotton-system spindles in place, 18 percent of the world's total. In the year ended July 31, 1953, we consumed 9,457,000 bales of cotton, over 28 percent of the total consumed in the world. Per capita consumption of the 3 major apparel fibers in the United States was 16.9 kilograms in 1952, compared to a world

average of 4 kilograms.

The destruction of the textile capacity of this country would be a disservice to the world economy. It would aggravate the net deficit in textile-producing capacity which It would aggravate the net is likely to exist over the next several years. The lifting of the standards of living in all parts of the world will require an expansion of consumption. A destruction of capacity would therefore be undesirable. development of a fund of dollars for international trade must come from other sources.

VII. PROTECTION OF THE AMERICAN TEXTILE IN-DUSTRY HAS HAD FEW UNFAVORABLE EFFECTS UPON THE AMERICAN OR WORLD TEXTILE ECONOMY

One of the complaints against protection has been that it results in monopoly and consequently high prices. This contention cannot stand up in the case of the textile industries

Most of the American textile industries have been highly competitive as to price. The reductions in costs of production through technological developments have been transmitted to the consumers. In fact, during the thirties, the consumers reaped the greatest benefits so that the workers were kept at substandard wage levels.

It may be confidentially declared that textiles are now better and cheaper the world over because of the contributions made by the American industry. More recent changes have been initiated in this country than in any other. The American environment has been and is at present conducive to technical advances. No other country has made the strides we have, and we have shared them with the rest of the world.

Prices of American textiles at the present time are, with few exceptions, within the range of reasonableness which is to be found in American industry.

We have established the highest wage levels in the textile industry the world over and. therefore, have provided a wage target toward which textile workers in other countries might aspire. We have not attained the might aspire. wage levels of the large modern industries characteristic of American production, but our organization is determined to move in that direction. Average straight-time hourly earnings in the textile industry are now

\$1.33. In the synthetic-yarn industry the average hourly earnings are \$1.80.

The textile industry in the United States has been the most technically progressive one in the world. It has contributed substantially to the advances in foreign technology, styling, and merchandising.

VIII. THE TARIFF MECHANISM IS CIRCUMVENTED BY POREIGN GOVERNMENT POLICY AND IS COM-PLICATED BY CURRENT RAW MATERIAL PRICE POLICIES

The tariff mechanism is based on the as sumption of a free market in which only commercial considerations enter into the determination of the final selling price. This assumption is no longer characteristic of most foreign countries. In many countries, industries enjoy special advantages in the form of subsidies either in the purchase of equipment or raw material or in the sale goods to foreign countries. The final costs are not truly representative of those common to a private industrial enterprise. The wholesale manner in which subsidies are applied considerably affects the competitive situation. Prices offered by foreign sellers may not truly represent the comparative advantages of their countries in the production of various goods for international trade. These unusual price determinants are now strongly affecting the flow of commerce. To protect the American textile industry from low wage and subsidized industries, the tariff rates must be maintained.

The current Japanese experience highlights this fact. A cutback of some 15 per-cent in cotton spinning is being contemplated to dispose of a surplus of stocks and to effect a rise in export prices. Various attempts to check the dominant trend in export prices had failed because mills which had previously agreed on a voluntary reduction had violated the agreement. Japanese stocks of cotton goods at the end of June had risen to 420,000 bales. While exports during the first 9 months had increased from 634 million square yards to 924 million square yards, prices had dropped more than 25 percent. The Japanese cotton manufacturers carrying large debts at high interest rates given to them by banks dependent on government aid felt compelled to dump goods on the world market almost in the prewar manner in order to keep ahead of the banker.

In the textile industry we have another serious problem arising in connection with the prices of raw materials. American cotton prices are maintained by an internal price control program which has raised them to abnormal levels. They are unrelated to the actual costs of production. If it is desired to relieve the foreign drain on American dollars, there is a suitable procedure for doing so by lowering the prices of raw cotton exports. They are a heavy call on available dollar exchange. If this country is intent upon protecting the price of raw cotton and maintaining a market for cotton in the United States, then the cotton textile industry must not be victimized by a flood of foreign imports.

We have been financing the export of raw cotton to Japan. Now in order to permit that country to pay, we are being urged to permit the Japanese to displace American textile products so as to provide them with dollar exchange to repay in part the cost of the cotton we sent them. The result is that we are asking the cotton textile industry to be sacrificed for the large raw cotton growers with little ultimate benefit to them. Since each yard of Japanese cloth sold in this country will displace a yard of American cloth with a consequent loss of an equivalent American market for raw cotton. Moreover, the prices paid by Japan for cotton are exorbitantly high as they are for the American consumer. The American taxpayer, in-

cluding the textile worker has underwritten these high prices. We are therefore financing the very forces which seek destruction of major sectors of the American cotton textile industry.

We are being asked in the interest of cotton growers who have forced the sales, to Japan pay them, and the Government endorsed loans.

The textile workers are being asked to yield their jobs to help cotton growers continue to sell their surpluses to Japan as the growers have been unwilling to curtail their acreage in the degree necessary to obviate this neces-We do not believe that the textilemill industry should be sacrificed to get the growers out of difficulty which they have brought upon themselves and which course can be of no ultimate profit to themselves.

In the case of wool, another price problem exists. Our domestic wool industry is protected by tariff rates and financial grants. The domestic consumption of woolen products is handicapped by the constant rise in raw wool prices. If they continue to in-crease on the international market, the woolen products may truly become luxury items. One of the ways in which to reduce the cost and thereby assure a higher volume of raw wool imports is to eliminate the raw wool tariff and increase the direct financial alds to the domestic wool grower. But if the present tariff on raw wool is maintained, tampering with tariff rates on woolen products will only have adverse effects on the consumption of wool in this country. The program designed to protect domestic wool growers will also be injured. The soundest solution is a program of lower tariff rates for raw wool and an income-support program for wool growers.

The Textile Works Union of America, CIO, has affrmed its keen interest in a restudy of the agricultural price practices in this country. Certainly, the present program, except for the new wool-payments system, benefits the small farmer only moderately and pays off substantially to the larger farm-The domestic consumer pays twice for this program, through high prices and high governmental expenditures. The conflict in approaches between the foreign-trade program and the agricultural-price program is brought sharply into focus in the discussion of textile items. To allow any substantial increase in the volume of imports of textile products would be injurious to the agricultural program. Present high prices are also reducing the consumption of textiles. The way to approach this basic question is not by adversely affecting the textileproducing industries. It is by finding a new method of aiding the agricultural popula-tion which would lower raw-material prices, encourage expanded consumption, and assure adequate income to farmers and growers, provide foreign countries with lower-priced raw materials and allow for higher imports of raw materials.

IX. CONCESSIONS SHOULD NOT BE NEGOTIATED IN THE FORTHCOMING DISCUSSIONS FOR PROD-UCTS WHICH ARE PRIMARILY SUPPLIED BY COUNTRIES OTHER THAN THOSE WITH WHICH THE NEGOTIATIONS ARE TO BE CARRIED ON

A number of the products up for negotiation in the forthcoming discussions are sub-stantially supplied to the United States by countries other than Japan. Thus, in 1953, the United Kingdom was the largest source of United States imports of bleached countable cotton cloth (3,934,000 square yards, as compared to imports from Japan of 2,102,000 square yards) (tariff par. 904 (b)). India was the major supplier of imported quilts and bedspreads, block printed (excluding jacquared-figured), accounting for 71,707 of the 102,959 articles imported; only 9 came from Japan (tariff par, 911 (a)). The Refrom Japan (tariff par. 911 (a)). The Republic of the Philippines accounted for imports of 180,443 dozen pairs of knitted gloves and mittens wholly or chiefly cotton or other vegetable fiber, compared to 83,555 dozen from Japan (tariff par. 915). Belgium shipped us 5,802 terry-woven towels (not under 45 cents each) and we received none of this category from Japan in 1953 (tariff par. 923).

In schedules 10, 11, 12, 13, and paragraph 1529, most articles currently under consideration are predominantly supplied by countries other than Japan. In fact, the 1953 record shows no imports from Japan in the following categories:

Jute yarns or roving (single) and sliver (par. 1003).

Jute webbings (par. 1015).

Jute bagging (par. 1019). Wool blankets (par. 1111).

Wool floor coverings, n. s. p. f., valued over 40 cents per square yard (par. 1117 (c)). Silk gloves and mittens, not embroidered,

no lace (par. 1208). Rayon and other synthetic yarns, except single yarns weighing 150 deniers or more (par. 1301).

We believe that it is desirable that these products not be included in the discussions since the principal beneficiaries from any concessions would not be required to recip-

X. LIMITED TYPES OF TEXTILE IMPORTS CAN CONTRIBUTE TO NEW IDEAS, DEVELOPMENTS, FABRICS, AND DESIGNS, BUT THEY SHOULD NOT COME IN SUCH VOLUME AS WILL DESTROY SEGMENTS OF THE AMERICAN INDUSTRY

We recognize that there is a place for a limited import volume of specialized textile These can offer new ideas in products. design, pattern, use, and style. We learn much from foreign countries. In fact, some of the products imported into this country can stimulate domestic interest and demand for textile products. But these imports must be selective. The present tariff rates allow for such imports. They have come in. No prohibition of textile imports is contemplated by the present tariff-rate structure.

XI. WE URGE THE PROMOTION OF INTERNA-TIONAL FAIR LABOR STANDARDS IN THE TEXTILE INDUSTRY TO AVOID THE PRODUCTION OF TEX-TILES ON THE BASIS OF EXPLOITED LABOR

We wish to point out that the labor movements of various countries recognize that low earnings and substandard working conditions and long hours have provided unfair competition with the workers in other countries.

Many of the complaints of unfair competition built on law wages could be eliminated through the negotiation of fair minimum labor standards for all textile producing countries.

We shall submit specific data and analyses on the individual items to be considered in the negotiations.

"Voice of Democracy" Contest

EXTENSION OF REMARKS OF

HON, HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. VELDE. Mr. Speaker, again this year I should like to call attention to some of the splendid work being done by several of the high-school students in

my congressional district. For the past 8 years the Radio & Television Manufacturers' Association and the Association of Radio & Television Broadcasters have, in conjunction with the junior chamber of commerce, sponsored nationally the "Voice of Democracy" contest. The competi-tion is limited to all sophomore, junior and senior high-school students, who must prepare and deliver a 5-minute script designed for broadcast purposes.

I am sure Members of this House will find the thoughts as expressed by these young people very enlightening and most refreshing.

Following are the names and texts of the four finalists for the Voice of Democracy contest in our Peoria, Ill., area:

I SPEAK FOR DEMOCRACY (By Ben Garber, senior, Peoria High School)

When I came to the United States 5 years ago, many things arrested my attention in this great country. I was amazed by the huge size of everything, the hustle and hurry of the people, the roar of the motors and the factories and the beauty and richness of the American countryside. All these things and many more made me realize what it is to be an American. Yet, there is one thing which stood out in my mind. It was the great number of cars which I saw in the streets. It seemed that every American owned a car, his own car, something which the most powerful and greatest Government upon this earth couldn't take away from him. From the European country that I am from the people didn't own any cars, the people didn't own anything. All your possessions as well as yourself belonged and were a part of the State.

I remember the first time when I went to American school, I couldn't speak in English. Upon entering the classroom I was afraid, greatly afraid that the boys and girls staring at me right now wouldn't accept me

and make me a part of their crowd. The sat down in my seat. Very hard and painfully I tried to understand what the teacher was saying. After some time fear took hold of me, the kind of fear I knew during the Nazi occupation and later during the Russian regime. The fear grew on me from second to second, I wanted to run away, go back to Europe, go anywhere but stay in that classroom. After a while the bell rang and I went out with the other boys into the schoolyard. I stood there alone for a while, when all of a sudden several boys walked up to me and started talking. Although I couldn't understand what they were saying, I realized that they wanted me to join them in a game. Without any hesitation I did, and that is how I played my first game of tag in America. Later, after school they walked home with me. Even then I wasn't sure of them, but after a while I realized that I on that day I learned my first English words.
I learned to say "Yes," "No," "How are you?"
and above all I could say "hokay" like a real American. After getting home I walked to the window and watched them go away. They waved to me and I waved right back to them. "Tomorrow," they said, "we play football, and basketball, and many other games." "Hokay," I shouted back "tomor-Right then and there, for the first time since stepping on American soil I felt at home once more.

at home once more.

I also remember the day when my father came rushing home from work. He ran up excitedly to my mother, kissed her and exclaimed, "Lisa, look what I got." As we looked at the small piece of paper that he held in his hand he said, "My first paycheck \$20. Look everyboy, my first paycheck." That check wasn't just \$20. No it was a symbol, a symbol of the countess doors of opportunity which are open to every American. opportunity which are open to every American boy and girl no matter what their creed is color or religion. It also means that even an immigrant like my dad has a chance for a better and more prosperous life in these United States.

To me America means many things. One of them is that on our Jewish holidays I can go to our synogogue and worship God in my way and not be persecuted for doing so. For in Europe six million of my people were killed by the Fascists and now many more are being killed by the Kremlin's servants because they are Jews.

To me America is laughter, vitality, en-

ergy, strength and power to remove any fears from the hearts of the most persecuted people in the world.

To me America is an equal chance and opportunity for all people, no matter what

their background may be.

To me America is the right to express one's thoughts and not being afraid to do so. I have been to many countries in the world. yet I have not found one where people can say anything they like about their government and get away with it.

These things I speak of and many more represent America to me. I love this country and these people. And I wouldn't change it for any way of life on earth, for there is no country as great and as wonderful as ours. Like you, I am an American; I speak and I will speak for democracy.

VOICE OF DEMOCRACY

(By John Harris, sophomore, Chillicothe Township High School)

Today the whole world talks of democracy. What is it? It is a word that has many meanings. It is a way of life which changes

with the years. It is a state of mind which like the spirit of God is always present. Yet, always must be sought. Democracy is a word, a way of life, a state of mind. It arose from the dreams and ideals of Thomas Jeffera flaming sword which made thrones tremble, a guiding light to the enslaved people of the world, and a priceless heritage.

Let us listen to Jefferson's address to the House of Burgesses, as he links this heritage to the future. "Gentlemen, for the first time in the history of this world we have a privilege never given to civilized men before—the privilege of beginning anew, here, now, a government of freemen. This is a glorious challenge."

Our forefathers accepted this challenge and so began a new way of life—democracy. Having secured this precious heritage of democracy, what do I, a twentieth century high school student, possess? What do I, and my fellow Americans, hold in our hands?

First of all I am free. My parents were American citizens and I was born to the high privilege of citizenship in this republic.

Any person so born is free.

I am the spiritual descendent of those who fought at Lexington, Concord, and Bunker Hill. The blood of Ticonderoga, Valley Forge, and Yorktown was shed for me. John Paul Jones, Ethan Allen, and George Washington are my spiritual forebearers. I am an American. Every door is open to me because I am an American.

When I was old enough to begin my education the finest free school system in the world was at my disposal. I did not need a rich father to secure my admission. I had a rich uncle—Uncle Sam. When I completed my elementary education, a fine high school was waiting, and when I graduated from high school, a State-supported university-all free.

If I enter politics I can aspire to the highst honors in the land for which my talents

and abilities have fitted me.

In commerce I can win my way without interference of class or handicap of birth. Every great American fortune has been accumulated by a poor man of genius and ambition who was willing to work.

This is the heritage. These are a few of the privileges and opportunities that I, and my

fellow Americans, hold in our hands.

For every privilege there is a responsibility. So it is with democracy. It is our respon-sibility as Americans to defend democracy from the common dangers. Two of these main common dangers as I see them, are: First, ruthless foreign agents here in America want to overthrow our free Government. Let us be on guard. Let's be modern minutemen and fight anyone who attempts to take away our rights, our privileges, and our freedom. Second, let us not be lulled into the false assumption that one vote alone does not count. Your influence and your vote does count. In order to maintain our rights, we must continue to exercise our rights as Americans

As Jefferson and our forefathers accepted the challenge of forming a new government, we must accept the challenge of defending that government. No price is too high, no dangers too great in our struggle for freedom. Our struggle is our strength and glory.

The words of courageous Samuel Adams echo through the years: "For my part, I ask no greater blessing than to share the common dangers, and the common glory."

The greater the struggle, the more glorious the victory. Beware, anti-Americanism. I speak for democracy.

I SPEAK FOR DEMOCRACY

(By Dave Sills, junior, Woodruff High School)

"Democracy" a word derived from the Greek "demos" meaning people and "kratos" meaning government, which literally translated reads "government by the people." If we looked up democracy in the card catalogue in the library, we find many corre-lated subjects—like this: Democracy: See also elections, individual-

ism, laissey faire, and liberty. It would appear then that democracy means many To the politician it is our country's great political system; to the businessman it is our vast and prosperous economic system: to the scientist it's man's initiative to create; and to the teacher it's the right to question in search of the truth. Many different ideas and no two alike, and yet it is this divergency of opinion which is the very essence of democracy. Democracy to me then, is each person's idea of what it is; it's the thing which belongs to you and to me and makes us individuals. This is the American ideal of democracy..

Around this ideal we have built our way

of life founding it on three basic principles. The first of these is social freedom. forefathers sought these shores to break away from a society of privilege to estab-lish a free society based upon justice and equality. In our democracy authority and leadership are dependent upon the individual's diligence, his ability, and his toil. Men are judged according to their abilities, not upon their hereditary rank, wealth, or pres-tige. Our system of free schools and public libraries manifest this equality of opportunity which is the birthright of every Ameri-And as a result of this every citizen enjoys an equal chance to succeed.

The second principle of democracy, economic freedom, is inseparable from the first. Social freedom would be worthless to us if we were victims of a regimented economy. For this very reason we respect and encourage free enterprise and private initiative. Every American, great or obscure, rich or poor, is free to select his own occupation. We can till the soil, serve industry, or aspire to the Presidency, but most important, it's our choice, and democracy gives us the right to decide for ourselves. This spirit of fair competition has built for us a dynamic economy which has given us a higher standard of living than any other people in any other place at any other time.

The third principle of the American way is political freedom. Political freedom is more than majority rule or representative government. It is that freedom granted to all of us to speak, to read, and to think as we please. It is our right to worship God as our conscience dictates. It is our guaranty to a speedy and just trial and our protection against cruel seizure or punishment. Such freedom does not, however, give us the right to infringe upon the liberties of others. simply means that we must respect the rights of all people, remembering our freedom ends where the other fellow's begins.

These are the principles, as I see them, upon which democracy is founded. I have attempted to state them clearly and simply so that everyone, child or adult, American or foreigner, can understand them. For by understanding them, we can recapture the confidence, the enthusiasm, the shining faith in democracy which will enable us to meet and surpass the fanatic fervor of those who would change democratic Americanism for isms of another sort.

The future of democracy rests with me and thousands like me. I am only one, and I can't do everything, but I can do something; what I can do I ought to do, and what I ought to do, by the grace of God I will do, for I am part of the whole which is democracy.

I SPEAK FOR DEMOCRACY

(By Mary Jane Tedford, junior, Academy of Our Lady)

I believe in America. I have faith in America because I believe that faith in democracy goes hand in hand with faith in God. I speak for democracy, that light of freedom and liberty which has become a living part of our existence. Kane Republican of February 1, 1955:

Follow this light with me. See our democracy, founded on Christian principles, lit by the torch of freedom. Watch the light. It is a burning, searing fire at Bunker Hill, at Saratoga, at Richmond, at Vicksburg, and at Gettysburg. It is a roaring sheet of flame eating Berlin, pushing back the enemy at the Marne, turning the Pacific a gory red at Pearl Harbor, gleaming on battleworn, victorious faces in Normandy. It burned in the men at Seoul. This light of freedom casts a red glow of courage over the marble monument of the Unknown Soldier and above the row upon row of white crosses in the battlefields of the world where the valiant lie. But our national tradition is not confined to the glories of war or national heroes: It is the light in the first grade of a country schoolhouse where a freckle-faced little girl in a plaid dress is reciting her A B C's; it is in the high school, where the son of an Italian immigrant is being handed the tools to carve a prosperous future; it is in the university, where a young man is developing into a brilliant lawyer, doctor; it is in a school for the handicapped, where a blind person is learning to lead a happy, useful life. It is the flame under a scientist's test tube,

who seeks a cure for cancer; it melts the Nation's gold, silver, and iron; it turns the wheels of the gigantic machinery in America's Industrial centers; it shines in the artist's studio, the writer's den, and on the blueprints of the architect. See the light of democracy reflected on our American coins. True, the writing is small, but the message

tremendous: In God we trust.

It is the warming sun at a baseball game, at a Sunday concert in the park, at a family picnic on Labor Day. It is the soft rays of the moon beaming on a canoe, or hovering on the rooftops of millions of happy, free American homes, reflecting on mile after mile of winding highways. It is the spotlight on the goods of the Na-

tion where Americans can buy the products of a free industry-penicillin and aspirin, automobiles and kiddle cars, bobbypins and home permanents, stoves, refrigerators. These are bigger, better, and more abundant because the light of democracy has shown the way to wealth, opportunity, prosperity.

It is the fire that cooks the Nation's food,

the electricity that freezes its ice cream, the

power that purifies its milk.

It is the flame of candles in a Catholic chapel, in a Protestant church, in a Jewish synagogue. It is the light that guides our Congress. It is the first light an American baby sees and the last light to a dying man before he goes to meet his God.

The light of freedom shows us human dignity at its fullest glory, because America is founded and depends on the belief that all men are endowed by their Creator with certain unalienable rights. Because this light is founded on the recognition of God it becomes the only key to American democracy. It is its origin, its existence, its future. Is this light the key to world peace? I think it is. I believe it is. And because I have faith in the American way of life, I speak for democracy as the light of the world.

A Costly Business

EXTENSION OF REMARKS OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the

A COSTLY BUSINESS

The Pennsylvania Commission on Intergovernmental Relations recently published some interesting facts bearing on what Uncle Sam does for the people of Pennsylvania in the form of financial aid. Among its conclusions was the finding that the Keystone State could easily go it alone, without Federal aid, if left to its own resources.

In 1953, for example, we received a total of \$120,549,000 in Federal grants, as reported by the Census Bureau. Our total income payments to the Federal Government were \$19.4 billion. Of this, \$2.9 billion were in individual income tax payments and withheld old-age insurance payroll taxes. The other billions were made up in corporate income, excise, estate and gift taxes. The conclusion here is simple: Federal aid programs are costing the citizens of Pennsylvania much more than they are receiving.

What's more the Federal grants to Penn-

sylvania only amount to \$9.62 per person while the average for all of the States is \$16.32. And Federal grants to Pennsylvania were only 0.5 percent of the amount we pay the Federal Government compared with a

national average of 0.9 percent.

All of which proves that big government and the socialistic theory that Washington ought to handle everything for the people of the United States is a very costly business for the people of Pennsylvania. The less we have of it the better.

The Republican Record and the Challenge We Face

EXTENSION OF REMARKS OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I wish to include an address made by the Honorable Ezra Taft Benson, Secretary of Agriculture, before the Women's National Republican Club at the Waldorf-Astoria Hotel in New York City on January 29:

THE REPUBLICAN RECORD AND THE CHALLENGE WE FACE

(Address by Secretary of Agriculture Ezra Taft Benson)

It is a signal honor and a most welcome privilege to be your guest at this 34th annual luncheon of the Women's National Republican Club.

Since November 2 my talks have been largely concerned with such things as parity, the corn-hog ratio, and efficient farming. am happy to have this opportunity to don my political headgear for the day and discuss Republican record and the challenge which confronts our party.

Although this is a larger gathering of women than I ordinarily have the pleasure of dining with, I am not a complete stranger to such company. In addition to Mrs. Benson, there are four young ladles on the distaff side of our family. Consequently, although I may not always know what women are thinking about, I am something of an authority

on what they are talking about.

And—very seriously—I believe the foremost issue American women are thinking about, talking about, and trying to do something about thing about is the preservation of peace. They want, above all else, a world in which the family life of each succeeding generation

shall not be broken or even shattered by the juggernaut of war. The wives and mothers and the children of this world have suffered too long from such disasters.

Here in the United States, this quest for a peaceful and more secure world has unquestionably been reflected in political developments of recent years. American women are participating more actively in politics than ever before. They are not only registering and voting. They are joining political organizations such as yours. They are becoming candidates—and successful candidates for public office in greater numbers.

I am told that in New York State, more women than men registered for the 1952 elections-the first time this had ever happened. The conclusion is inescapable that a great majority of the new women registrants voted for President Eisenhower. The political pulse-takers are generally agreed the women of this country contributed greatly to the sweeping Republican victories of 2 years ago.

There is some evidence that the women of America are still more strongly Republican than the men. As you know, Minnesota has been one of the most consistent "barometer" States in presidential elections. A recent poll conducted in that State by the Minneapolis Tribune is most interesting in that connection. It shows that President Eisenhower would again carry Minnesota by a comfortable margin, against the same opponent, and that his popularity is greatest among women voters. Fifty-eight per-cent of the women polled said they would vote for President Elsenhower; only 38 percent for Governor Stevenson. indicated a preference of 53 percent for the President; 41 percent for Stevenson.

There is a further statistic which I pass along to you without comment. Six percent of the men who were polled couldn't make up their minds. Among women the

figure was only 4 percent.

All of this suggests that American politics might be in surer hands if we follow the advice of that panel show and Leave It to the Girls. Certainly "the girls" - the women of America-our wives and mothershave made themselves a force to be reckoned with in the political arena. And I will be candid enough to admit that this has come about in no small measure because the men were not always doing the best possible job. Women are exerting a constructive, healthy influence upon our national affairs todayin elective and appointive positions and as informed and vigilant voters.

When historians of the future appraise the record of the Eisenhower administration, I am certain that the efforts to achieve last ing world peace will rank high on the list of accomplishments. The constant objective has been to attain not peace at any price but a permanent peace with honor.

There is peace in the world today, uneasy though it may be. The prolonged fighting in Korea has been brought to an end.

The transition from war to peace always involves some economic readjustments. The American people infinitely prefer these re-adjustments to war and bloodshed.

Actually, we have been making the changeover to a peacetime economy with far fewer dislocations than ever before. There is still some unemployment, but it is less than in 1950 and only a fraction of what it was in the decade preceding World War II. Disposable personal income reached a record rate last month. As a matter of fact, 1954 was the most prosperous year of peace in all of our history.

Truly the economic health of America is good.

Gross national production in 1955 will equal, probably exceed, the 1954 level of \$357 billion. It could even equal the record of \$365 billion in 1953. Our gross production is expected to reach \$500 billion by 1965. This would mean an average increase of 20

percent for each of us, above our present living standards.

Ranking high on the overall list of administration accomplishments is the restoration of honesty, integrity, and efficiency in Gov-The saving, rather than the spending, of a dollar has again become a respectable objective in Washington. Sharp reductions in Government expenditures—\$11 billion last year—made possible the greatest tax cut in history—\$7.4 billion. That is the equivalent of \$180 for every family in America.

Inflation has been halted. The dollar has been stabilized. The savings of our people, the pensions of our retired citizens are no longer being gnawed away by a continuing decline in the buying power of the dollar.

Stifling bureaucratic controls over the national economy have been ended. The housewife no longer has to get in line to buy a

roast at the grocery store.

Today we have the strongest and most efficient Armed Forces in all of our peacetime history. A tax dollar is buying a dollar's worth of defense.

We have an agricultural program which will permit us in the years ahead to work toward better balanced production and a generally prosperous, expanding, and free farm economy

This Nation has made real progress during the first 2 years of the Eisenhower ad-ministration. That forward march will be continued during the 2 years ahead and-I sincerely hope-well beyond 1957.

In our great President, we have a man of character, a man of honor, a man of unswery ing devotion, and dedication to the eternal principles which made this Nation great. Yes, he is a man of deep spirituality recognizes that this Nation has a spiritual foundation. He is providing the kind of leadership that is so sorely needed in this troubled world—the kind of leadership that gave this country direction in its formative

I believe with all my heart that our Constitution was established by men whom the God of Heaven raised up for that very purpose. I believe that this is a Nation with a great mission—a great destiny. It's not just another nation. It's a truly special great country. The God of Heaven intended that it should serve as a beacon to liberty-loving people everywhere.

I believe that liberty-freedom-is a Godgiven eternal principle. It didn't begin with the Founding Fathers. They didn't originate it. It came from above. It's one of those inalienable rights—this right of men to be free. It's not right in the eyes of the Al-mighty that men should be in bondage one to another. It was intended that men should be free. This means freedom of choice, freedom to make their own decisions, freedom to move about, freedom to choose their own vocations, freedom to assemble and speak their own minds, freedom to make mistakes and to pay the penalty for those mistakes.

Governments were intended to be the servants of the people, not their masters. There's no true joy without freedom. When there's coercion, intimidation, and force, the antithesis of freedom, there can be no real soul-satisfying joy and happiness.

I believe today we are living a part of eternity and it is our obligation while living here to build ourselves into upright men and women. Character is the one thing we make in this life and take with us into Any program, whether it is sponsored by party or another, one group of men or another, by one government or another, any program which tends to weaken character. is not worth the price.

A planned and subsidized economy tends destroy character-to demoralize the people. Frograms sponsored by government should help people to help themselves and protect, preserve, and strengthen their freedom of activity. No program sponsored by government should ever be manipulated to serve partisan political purposes.

Now, I don't claim to be a historian but I love to read history. I enjoy prophecies. And true prophecy is just history in reverse. It's an account of things before they happen and history is an account of events after they have transpired. I am deeply impressed by the causes eminent historians have assigned for the collapse of some of our earlier civilizations. One book, entitled "Caesar and Christ," embraces the years from 800 B. C. to 325 A. D. It covers the period of the rise and fall of the Roman Empire and the coming of Christianity. As I read it for the first time some years ago, I couldn't he!p but think: Are we in America moving in the same direction? And I became convinced that in some particulars, at least, we were tending to move in the same direction. I checked some other accounts of the fall of the great Roman Empire and other empires now dead. I jotted down a summary of the things that seemed to cause those great empires to crumble.

The first reasons were what you might call social. They have to do with the family, the weakening of the home, the refusal of people to shoulder the sacred, all-important responsibilities that must go with home and family life. Moral decay resulted. There was a deferment and avoidance of marriage. It started first among the wealthy classes, the so-called educated classes, and then

Another group of causes had to do with the waste of natural resources; with deforestation, erosion, neglect of irrigation systems. But most important of all was the national neglect of harassed and discouraged menthe failure to teach high moral principles even to the youth of the land. Of course, youth is every nation's greatest asset.

Then, there was another group of causes:

the rising costs of government created by great standing armies, by doles, public works, expanding bureaucracy, by parasitic courts. There was depreciation of the currency and absorption of investment capital by confiscatory taxation. Inflation stole the savings of the people. Doles weakened the poor. Luxury weakened the rich. National decay resulted.

Then, there was a group of political causes rooted in centralized control and the increas ing despotism of the state. This tended to destroy the citizens' civic sense and to dry up statesmanship at its source. People be-came powerless to express themselves because of the authority of the state and its control over the mass media of information. The people lost interest in government. Yet I presume, in the case of Rome at least, she had few rivals in the art of government. She certainly achieved a democracy of free men and then destroyed it by mismanagement, by corruption, by violence.

We have seen in the last two decades some evidence of tendencies in these same directions. Nations may sow the seeds of their own destruction while enjoying high prosperity, full employment, and other outward appearances of strength.

In fact, a nation may sow the seeds of its own destruction long before it reaches the zenith of its power. I believe there are a few signposts along the road today if we will look. Even in this blessed land, there is always the danger that we will be lulled away into a sense of false security. That is why we need real leadership in governmentmen of strength, men of character and principle, men of vision-for where there is no vision the people perish-men who will put the national welfare above their own personal interests.

It seems to me that the goal of any administration in Washington should bethe goal of this administration is-to preserve our eternal principles, to strengthen the American way of life, to achieve a pro-ductive, free, and expanding economy in

which all of our people will share. It should preserve and strengthen our capitalistic system-our free enterprise system. Admittedly this system has some weaknesses because it's operated by men and women who have weaknesses. Yet it has produced more of the good things of life, a higher standard of living, and a greater abundance of individual freedom, than any other system. It is still fashionable in some quarters to point out the weaknesses of our system without referring to its virtues and its accomplishments.

The job of defending the American way against creeping socialism and the other "isms" has fallen largely upon the Republican Party during the last 2 decades. This is not to say that only the Republican Party stands for free enterprise and for the preservation of our Constitutional rights. Mil-lions of Democrats believe in these same things. But I do say that the Republican Party has never been successfully penetrated by left-wing elements. Republican Party policies have never been shaped by the starryeyed dreamers who would remake America as a welfore state. And, to borrow a phrase from the advertising copywriters, no other major political party can make that state-

Now I realize that some of our Democratic friends are very sensitive on this point. They have never been at all comfortable in the associations which have been forced upon them through the ADA and certain other adjuncts of the Democratic Party.

It is the responsibility and the duty of the Republican Party to carry forward the fight against creeping socialism, subversion and undue concentration of power in the Federal Government. In that effort I am sure we will be joined by those Democrats who still believe in the principles of representative government laid down by Thomas Jefferson many years ago. We must preserve and strengthen the foundations of our free enterprise system which has made possible so many of the good things of life for all of us.

The Republican Party must also exercise continued vigilance to insure integrity and efficiency in the operations of our Govern-This must flow from the top down, as well as from the bottom up.

Economy must remain a watchword. know that greater local responsibility-both in administration and cost-sharing-can promote increased efficiency and considerable savings in some of our Federal assistance programs. A tax dollar just can't make the trip to Washington and back home again without a substantial bite being taken out We'd like to see our people spend more of their tax dollars at home.

I believe there is a growing sentiment in America for less competition by Government with its own citizens in various business fields. Before Government embarks upon any new enterprise, it seems to me that we should ask three questions: First, can this service, assuming it is needed, be performed more efficiently by Government than by private enterprise? Second, how will this venture affect our free institutions, our State and local governments, the home, and our schools and churches? Third, we need to ask how will it affect the morale, the character and the general well-being of our citizens? Unless the people can be reassured on these three points, Government should certainly not undertake the program.

Just as an example of government encroachment, you might be interested to learn that when I became Secretary of Agriculture, I also found myself in the hotel business. As a member of the Virgin Islands Corporation Board, I discovered that among our properties, which by the way way were losing huge sums annually, was Blue Beard's Castle Hotel, a plush establishment when built by the Government back in 1934.

For a hotel operating as far in the red as this one was, the use of the word "blue"

in its name seemed singularly inappropriate. We sold it for \$410,000. It has been estimated that when the Eisenhower administration was installed 2 years ago, the Federal Government owned or had a stake in \$120 billion worth of railroads, ships, coffee roasting plants, sawmills, paint factories, bakeries, and refineries, as well as a rum distillery and a package liquor trade, and countless other enterprises. It was operating more than 100 business-type activities and was adding steadily to the list.

We are at last moving steadily in the op-

posite direction now. And none too soon.

You-along with many other active party workers throughout the Nation-will determine in large measure whether this Republican crusade shall continue. Your ability to convince your fellow citizens—Republi-cans, Independents and Democrats alike that the interests of this country will be best served under a Republican administration will again be tested next year. \ It is not too early even now to begin the spadework within the precincts.

The Women's National Republican Club, under the fine leadership of Mrs. Anderson and your other officials, has a great opportunity to keep the fires of freedom burning. I know that you, as members of this great organization, will welcome this opportunity for service to your country and will accept the challenge under the leadership of our great President. With your help we will not fall in the great task that lies ahead.

I have never posed as a political expert. Most of my experience has been in other Yet I have always felt that what is right is good politics. And I know that this administration is firmly dedicated to what is economically, morally, an spiritually right. I wish I might take each one of you into a Friday morning Cabinet meeting that you too might feel the spirit of your administration in Washington.

"Let us raise a standard to which the wise and honest can repair; the rest is in the hands of God." These words of George Washington, spoken before the Constitutional Convention, are as sound today as they were

Yes, there is a new look in Washington today and the Nation is better off because Government costs have been cut, Taxes have been reduced. Inflation has been halted. Living costs have been stabilized.

We have proven that it is possible to have peace and prosperity at the same time. The transition from war to peace has been made with fewer dislocations than most people thought possible. The economy is prosper-ous and stable. The trend toward centralized controls has been reversed. Bureaucracy is on the decline. There is less looking to Washington for direction and more of a fceling of pride and responsibility in the States, counties, and local communities. Integrity, honesty, and efficiency in government have been restored.

But we have only made a start. The cusade for honesty, integrity, and efficiency in government must go on.

Some of the grave decisions which lie ahead may not be ours to make. The Communist aggressors who have enslaved half the world give little indication that they will be content with less than all of it. We may have to live with this constant threat for many years.

However difficult the road ahead may appear, however discouraged we may become in our diplomatic dealings with men who recognize neither truth nor compassion, we mu t for the sake of all humanity continue to seek a peaceful solution to the seemingly insoluble problems of our age. At the same time, we must remain strong-strong economically, strong socially, and, above all, strong spiritually—strong enough to meet this ever-present threat of new Communist aggression. To be strong, we must remain productive, for it is the almost unlimited productivity of our Nation which stands as the great barrier against the Red onslaught.

must hold high America's brightburning torch of freedom that one day it will surely dispel the shadows of ignorance and despair now blanketing the minds of communism's slaves.

May God strengthen us in that resolution.

Mettler's Woods and Trenton Marshes Are irreplaceable and Should Be Conserved

> EXTENSION OF REMARKS OF

HON. FRANK THOMPSON, JR.

OF NEW JERSET

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, the following letter was carried in the letters to the New York Times of February 7, 1955. The author, Julian P. Boyd, is the librarian of Princeton University and the distinguished histo--rian and editor of the Papers of Thomas Jefferson.

Dr. Boyd argues that Mettler's Woods and the Trenton Marshes, virtually untouched by man through the centuries, should be preserved for posterity. Mettler's Woods has more than a monetary value: It has been and should continue to be useful to botanists and others interested in studying a climax forest in equilibrium with its surroundings. The Trenton Marshes, a marsh and lowland area of 2,000 acres of great archeological and ornithological interest, is one of the most valuable feeding and nesting stations for migratory birds to be found on the Delaware River, and is also the site of the largest and best-known Indian village of New Jersey, an area once occupied by aboriginal peoples for over 2,000 years.

The letter is included for its great informational value:

LETTERS TO THE TIMES-TO CONSERVE JERSEY AREAS - METTLER'S Woods, MARSHES DECLARED IRREPLACEABLE

(EDITOR'S NOTE .- The writer of the following letter, librarian of the Princeton University Library, is the editor of the Papers of Thomas Jefferson.)

TO THE EDITOR OF THE NEW YORK TIMES:

The announcement in the New York Times of January 2 that the State of New Jersey had acquired some 56,000 acres of south Jersey woodlands, comprising the greater part of the famous Wharton tract, is good news for all who are interested in the protection of our natural resources.

In July 1953, under Governor Driscoll's administration, the State bought from the Phipps heirs the 10-mile spit of sand dunes and coastal forest separating Barnegat Bay from the ocean, the only primitive beachland in the State still preserved in the condition in which it was seen by 16th-century ex-

In September 1954, under Governor's Meyner's administration, the State acquired the Worthington tract, adjoining the Delaware Water Gap, containing some 6,000 acres of woodlands along a 5-mile stretch of river, in-

cluding a mountain stream with falls and pools along slopes covered with laurel, birch, and hemlock; a lake at an altitude of 1,300 feet, and a forest-crowned summit that provides a spectacular panorama of the mountain ranges of eastern Pennsylvania.

UNIQUE RESOURCES

These and other acquisitions represent a wonderful step forward, and all who have had a part in them deserve applause—the private citizens who labored early and late to awaken the public conscience in the cause of conservation; the State officials who acted with wisdom and far-sighted attention to the best interests of the people, and the owners who recognized the quasi-trusteeship involved in the possession of unique and irreplaceable natural resources.

But much yet remains to be done. Mettler's Woods and the Trenton Marshes, to mention only two tracts that are sorely threatened, should be removed for all time from the dangers of encroschment or destruction that threaten them.

It is to be hoped that the State will take up the option on the remaining 46,000 acres of the Wharton tract. But it would be far better to waive this option than to allow Mettler's Woods to be destroyed by lumber interests that have looked with acquisitive eyes on its 65 acres of oaks and hickories.

This little tract of woods, preserved virtually untouched in one family since its first settlement in 1701, is a tiny island of primitive forest such as the earliest inhabitants of this region knew. Its great hard-woods with underlayers of dogwood and deep shade plants rise out of a carpet of leaf mold and virgin soil that is in places as much as 3 feet deep.

Its surrounding acres of thin, eroded topsoil and shale stand as an eloquent witness to the contrast between nature as the first settlers found it and as, during two and a half centuries, they and their descendants have affected it.

VALUE TO BOTANISTS

Even if it thus stands as a symbolic rebuke, Mettler's Woods has more than a monitory value; it has been and should continue to be useful to botanists and others interested in studying a climax forest in equilibrium with its surroundings. Its acquisition would require only a fraction of the amount of money needed for the remainder of the Wharton tract and would protect such a re-source as cannot be duplicated elsewhere in the State, whereas the purchase of the additional Wharton lands, though desirable, would only add another tract of woodland similar to that already possessed. Both should be protected for the future, but the priority should on all counts be granted to Mettler's Woods.

The same may be said for the Trenton Marshes, a marsh and lowland area of 2,000 acres of great archaeological and ornithological interest. This tract, one of the most valuable feeding and nesting stations for migratory birds to be found on the Delaware, is also the site of the largest and best known Indian village of New Jersey, an area once occupied by aboriginal peoples for over 2,000 vears.

It would be tragic if these woods and marshes, virtually untouched by man through centuries, were not to be preserved "for another century," as John Adams used to say when in his old age he planted young saplings. These salutary resources of forests and mountain streams, of marshes and beach lands, are invaluable to us even today. But, great as our need is, the next century will need them infinitely more, if a thousand signs mean anything at

JULIAN P. BOYD. PRINCETON, N. J., January 31, 1955.

Face the Nation

EXTENSION OF REMARKS OF

HON, LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following transcript of a television broadcast of Sunday, February 6, 1955:

FACE THE NATION

Guest: Representative Joseph W. Martin, Jr., Republican, of Massachusetts; Ted Koop, director of public affairs, CBS, Washington, moderator; William H. Lawrence, national correspondent for the New Times; Jack Steele, Washington correspondent for Scripps-Howard newspapers; William K. Hutchinson, Washington bureau chief for International News Service.

Mr. Koop. How do you do. And welcome

to Face the Nation.

Mr. Martin, or, as many people call you, "Mr. Republican," we are particularly happy to have you with us today on your first appearance of this kind.

You are starting your 31st year as a Member of the House of Representative from Massachusetts. Today you are the minority, that is, the Republican floor leader. You and the Democrats' SAM RAYBURN have been swapping the title of "Mr. Speaker" back and forth for more years than we care to remember.

And, as you phrased it when you turned over the gavel to him last month, it's been a case of "Off agin, on agin, gone agin, Fin-

negan."

Next Saturday is Lincoln's birthday, and this week the Nation will resound with traditional Republican oratory. You, as "Mr. Republican," will be in the forefront of the celebrations, and within this oratory may well lie some of the answers to success or failure of President Eisenhower's legislative program, for which you are responsible in the Democratic-controlled House.

The storm signals are already flying on such issues as the size of the Army, the Dixon-Yates contract, and, above all, the serious situation in Formosa, where the answer may well be peace or war.

Millions of Americans are seeking responsible answers to these vital issues.

To direct their questions to you, here is

our panel of newsmen:

Mr. William H. Lawrence, national correspondent for the New York Times; Mr. Jack Washington correspondent for Scripps-Howard newspapers; and Mr. William K. Hutchinson, Washington bureau chief of International News Service.

Now, for the first question, Mr. Lawrence. Mr. LAWRENCE. Mr. Speaker, are we head-ing into war in the Far East?

Mr. MARTIN. No; I don't think we are. I think the Formosa resolution showed strength and was the best guaranty I know of for peace. I believe that the—Red China, they are going as far as they possibly can go without fighting, and that they are testing the American people, but I don't believe there will be any war.

Mr. LAWRENCE. Mr. Speaker, there was, of course, remarkable unanimity on this action proposed by the President and approved by the Congress; and it is, of course, the hope of everybody who passed it that it doesn't mean war. But, do you expect any challenges, do you expect some skirmishes, perhaps, if not fighting?

Mr. MARTIN. Well, no one could say with certainty that there wouldn't be some skir-mishes, but I don't think that it could lead Because, after all, you must realize to war. that Red China can't make any war with the United States. Red China is a country that has no manufacturing of ammunition and no chemical industry; half of the freight of China is transported on human backs. nation like that couldn't wage a successful war with the United States.

Mr. HUTCHISON. Mr. Speaker, along that line, I have heard estimates in the last few days that if the United States was forced into war with Red China, the United States would win within a possible 6 hours, or possibly it might last as long as 30 days.

What are your views on that?

Mr. MARTIN. Well, I am naturally conservative and don't want to go in for any extra-vagant claims; but I wouldn't think that Red China could hold out for 30 days.

Now, of course, they'll get, if they should support from Communist Russia, which I doubt very much, that might keep some semblance of fighting going on, but it couldn't be much because you have to re-member that Russia doesn't want to lose its existence, either. It isn't going to go into a hopeless engagement.

Mr. HUTCHINSON. You don't expect Russia to intervene, then, if the United States

should go-

Mr. MARTIN. No; I don't think so because the Russian people must realize what hap-pened to Hitler and those others—the other people who have challenged the free world. I don't believe that Russia would dare risk a general engagement.

Mr. Koop. Gentlemen, just as we came on the air I was handed this Associated Press

bulletin from Tokyo that reads:

"The Red Chinese Pelping radio says the United States 7th Fleet has been conducting military provocations near Chinese waters. The broadcast, which was heard in Tokyo, says the provocations threaten the peace and security of China and the Far East. The broadcast gives no clue as to whether the Communists would interfere with the Tachen evacuation, but, the Associated

Press adds, it has an ominous sound."
Mr. MARTIN. Well, every sound that comes from the Far East will be ominous from now on, and, of course, I am a newspaperman, like you folks are, and we don't underwrite

a story.
Mr. STEELE. Mr. MARTIN, the agreement yesterday between Nationalist China and our Government to evacuate the Tachens focuses the spotlight on two other island groups, Quemoy and Matsu. As you know, they are just off the coast of China and they are regarded as possible stepping stones for a Communist invasion of Formosa.

Do you think we should defend Quemoy and Matsu in event the Reds try to invade

them?

Mr. MARTIN. I'll answer that question, which I had anticipated, by reading a quotation from a very famous statesman. said:

"The belief that security can be obtained by throwing a small state to the woives is a

fatal delusion."

Those are the words of Mr. Churchill, of England, and I believe it. I believe it is necessary—and I think, from what I under-stand, what I gather, it is necessary—I be-lieve that we shouldn't permit the Red Chi-nese to get these islands, which would make it easier for an attack on Formosa.

If we are going to defend Formosa and the Pescadores, we've got to make-defend it under the best possible conditions; and I with Churchill that giving anothera little more to-another little nibble, you might call it that-to the Red Chinese would not be the best way of defending Formosa.

Mr. STEELE. May I carry that one step fur-

President Eisenhower has not given any public pledge to Chiang and the Nationalists

that we will help them defend Quemoy and Matsu if they are invaded. At the same time, administration spokesmen have been quoted as saying that we will.

Do you think it will be our policy, or is our policy now, to defend them in that case?

Mr. MARTIN. I would not want to anticipate what the President would do, or the State Department might make-recommend; but I do believe that it is wise not to make it too definite. I believe President Eisenhower should have all the leeway that he desires to do that which he thinks is best establish the American viewpoint in Formosa.

Mr. LAWRENCE. Well, Indeed, Mr. Speaker, the Congress did give him precisely that

broad authority.

Mr. Marin. That's why we gave it to him. Mr. LAWRENCE. In the face of efforts to restrict it.

Mr. Martin, That's right. Mr. Lawrence. It did not include Quemoy and Matsu.

Mr. Martin. We wanted to give him a free hand because we can trust Mr. Eisenhower, And we know he is a soldier; he knows the dangers of war and peace, and he knows also how to protect the country; and so we did, with, I think, only three exceptions in both the House and the Senate, we gave him that authority.

Mr. LAWRENCE. Well, now-

Mr. Koop. Go ahead, Mr. Lawrence.

Mr. LAWRENCE. Now, Mr. Speaker, I'd like to follow up a bit an answer which you gave to Mr. Hutchinson.

You said that you thought if war came. and you don't regard it as likely, but if it came, that you didn't think the Red Chinese could hold out for 30 days.

Mr. Martin. No; not as the Red Chinese.
Mr. LAWRENCE. By that are you talking about a limited kind of war, or are you talking about conquering the mainland of China

Mr. MARTIN. Oh, well, what I mean is that they wouldn't be any formidable opposition after 30 days. They'd be so flattened out.

Wars can go for years, and—take the

Philippine Insurrection, how many years that ran after war was practically at an end. I wouldn't say there wouldn't be some guerrilla warfare.

Mr. LAWRENCE, Where, sir? On the mainland of China?

Mr. MARTIN. Not with us, because we wouldn't send troops to the mainland.

Mr. LAWRENCE. That is what I was getting at. Are you talking about a successful defense, or resisting an attack based on these current operations, rather than a fullscale war with Red China?

Mr. MARTIN. Oh, I don't think there will be a full-scale war. It's not our policy, and I don't think it will be our policy to send any troops into the mainland. We, I think, are pretty unanimous, both Democrats and Republicans, as far as that's concerned.

Mr. LAWRENCE. I just wanted to bring that back into scope, because-

Mr. MARTIN. I am glad you did, so there will be no misunderstanding.

Mr. STEELE. May I follow that, one other step further: Do you think we might have to send our ground troops into Formosa, or into Quemoy or Matsu, to defend them in case of a Nationalist—or a Communist invasion of the Nationalist territory?

Mr. Martin. Well, of course, I am not a soldier, Jack, but I don't believe we would. I think the Chinese Nationalists have got troops enough to defend it with the aid of Air Force and our Fleet. The Chinese Nationalists in the last 2 years have come a long way in being trained and equipped, and I think they have sufficient forces to defend themselves with our umbrella, so to speak.

Mr. Koop, In such a case, you would not anticipate the Congress would issue a declaration of war, but would just let the President act under his new authority?

Mr. Manrin. Well, I think, Ted, we probably would let him act under his authority, but you can never safely predict what Congress would do.

Mr. STEELE. Well, in a sense, Mr. Martin, didn't Congress, in this resolution, which passed so overwhelmingly, abdicate its power to declare war to the President?

Mr. MARTIN. Well, it makes a difference, Jack, what you mean by "declaring war.

There are wars that go along, and they are pretty good sized wars, too, but you make no declaration.

Mr. STEELE. But this war might be, perhaps, as violent and as vigorous and as largescaled, perhaps, as the Korean war, without having a declaration of war.

Mr. MARTIN. We gave the President unreserved authority to defend Formosa and the Pescadores Islands, and he doesn't need to come to Congress, if he doesn't want to. He didn't need, I don't believe really, to ask for that authority. I think that's in hisalthough I understand that it was a twilight border, and he wanted to get this authority to, not only to have the united support of the people back of him, but also to clear up any doubt that might exist in anybody's mind.

Mr. LAWRENCE. Well, politically, you were drawing a bit of a contrast, were you not, between the handling of this one and the handling of Korea?

Mr. MARTIN. Why, there is no politics in foreign affairs, you know, Bill.

Mr. Lawrence. There never has been, you'll excuse me; it was just an oversight on my part, because I thought there was.

But, to return to the political thing, didn't you think that was a pretty remarkable demonstration of Republican and Democratic-

Mr. MARTIN. I though it was a remarkable demonstration of unity on both the Democratic and Republican sides.

Mr. Koop. In view of this situation in the Far East, Mr. MARTIN, what do you think of the President's proposal to cut the size of the Army?

Mr. MARTIN. Well, I think it is a good suggestion, because, I'll tell you why: He is going to devote, he believes, as I understand it, in devoting more money for the atomic weapons that would keep war away from the United States.

You take, it would cost probably, if these additional soldiers were kept, about \$2 million a year, which is a lot of money, and before those soldiers could ever be brought into action, in the event of war, before they could ever be brought into action, we'd have to provide the transportation to bring them over to across the water, and in that interval you could train all the men you wanted to.

Mr. LAWRENCE. Well, you do remember that we found ourselves caught a little short when we ran into an old-fashioned type of war in Korea.

Mr. MARTIN. Well, I don't think we are in that position today.

Yes, we were caught very well short in Korea.

I remember when the Tenth Army was being chased to the sea, we didn't have but one division in the United States that could be sent, and they didn't quite dare to send that because they though it might be needed somewhere else; but we have come a long way in the last 2 or 3 years-

Mr. LAWRENCE. Well, aren't the Republicans and the administration taking a chance with this cutback in the Army, that if we should get into that kind of a situation again, the country would be pretty well up in arms about it, that there was this cutback with the possibility of that situation?

Mr. Martin. I don't think we'll get caught in that way.

Another thing to be thought of is this: You can collapse through spending just as well as you can collapse through assault on the battlefield, and apparently the Communist is intent on war some time or other, at least his actions would indicate that. He is only waiting for the day when he thinks he can safely attack. He knows he can't beat us now, and we've got to have-be able financially to continue that defense, so that hour he waits for will never come.

Mr. HUTCHINSON. You see a whole difference, a lot of difference between fighting in Korea and fighting in China; this time there won't be any river boundary that you can't go across.

Mr. MARTIN. Well, I would expect, Mister, if we got into any war, that all-we would fight to win.

Mr. Hurchinson. And with the atomic bomb, too, wouldn't we?
Mr. Martin. Well, I would expect we

would-

Mr. HUTCHINSON. Atomic weapons.

Mr. MARTIN. Use all the weapons within the command of the American forces to win, because we can't—if we got forced into another engagement, we can't continue these frittering wars that fritter away the strength of America and not affecting the nation that is particularly seeking to put its ideology all over the world.

Mr. STEELE. Has something the President said convinced you that that would be the case, that we would attack the Chinese main-

land and bomb it?
Mr. Marrin. No, the President has never given me any intimation of what his course would be, and of course I wouldn't tell you if he had, to be perfectly frank about it, but I am not disturbed over the strength-

You know what I think? I think we, here, not so much in America but in many of the other nations of the world, and perhaps it's logical they should be, because they are nearer to the scene, I think the free world is losing because they fear Russia.

Mr. Lawrence. And this is a step in the

other direction, you saydetermined that there is going to be a free world, in this country, in this world.

Mr. LAWRENCE. Well, again, the answer you gave Mr. Hutchinson, it seems to me, I'd like

to follow up a bit.

It's been suggested in very responsible quarters that we are not talking in terms of conflict here that would involve trying to destroy China; it would simply be to try to destroy any attack upon our forces or upon any attack which might be made against Formosa or in the related areas, which includes Quemoy and Matsu.

Mr. MARTIN. There isn't any question, the United States wants peace, and they are not going to be the aggressor, but we are not going to let Red China take islands that Would make it so that we would be subjectthat not only Japan and the Philippines and Western coast of the United States would

be open to attack.

Mr. LAWRENCE. Well, we've talked a lot in . the last year about massive retaliation, the doctrine laid down by Mr. Dulles. It's been suggested in this occasion that massive retaliation is "out the window," that that is

not what we are talking about.

Mr. MARTIN. We are not going to send soldiers over. I haven't got the slightest idea that we will send soldiers in millions, like We did in the other wars. No, I don't think that, I think that's out of the question. That's why it isn't necessary to have so many men on the mainland. We are building up a pretty good National Guard, we are developing reserves, we've got pretty good forces that could take care of anything that might happen, if we come under attack here.

Mr. Hurchinson. Can I take you to politics for a moment?

Mr. MARTIN. Certainly.

Mr. Hutchinson. You've been, I think you have a world's record as serving as convention chairman-four times.

Mr. MARTIN. I don't know anything about the world's record; I have the record in America here

Mr. HUTCHINSON, Political party conventions, let me put it that way.

Do you intend to serve again in 1956 as chairman of the Republican Presidential Convention?

Mr. MARTIN. Bill, I'd even hate to think of That's the hardest job I know of. A chairman of conventions sees less of the convention than any man in the convention.

Mr. HUTCHINSON. Except the reporters. Mr. Koop. Do you know where the Repub-

licans are going to held their convention yet? Mr. MARTIN. No; I do not. I suppose it will be between Chicago and Philadelphia, and, of course, Philadelphia is handlcapped a bit because of its hotel situation; and, it is further handicapped by the decision of the Democrats to go to Chicago.

I don't necessarily mean that we've got to do what the Democrats do. I'd like once, if it could be brought about, for the Republicans to have their convention after the Democrats. I don't think it makes too much difference in 1956, but one year I'd like to try that just for the novelty of it.

Mr. LAWRENCE. Who are you going to nominate in 1956?

Mr. Martin. Personally, I believe that it will be inevitable that Mr. Eisenhower will be renominated and reelected.

Mr. LAWRENCE. Has he suggested to you that he would prefer not to run?

Mr. MARTIN. Yes. He has, but I will tell

you a little story:

A year and a half ago, I, in an indiscreet moment perhaps, said in Wellesley, Mass., that I thought Mr. Eisenhower would be nominated and elected. The next-2 days later-I happened to be sitting next to him in the Gridiron dinner, and he says, "I saw what you said," and he says, "What would you bet on that?"
"Well," I says, "I am not a betting man, and I wouldn't bet."

I says, "No; let me tell you, Mr. President: I know you are sincere, and I know you believe what you say, but I've been here 30 years, and I know conditions develop that make it-inevitable for a President to be-to accept another nomination and be reelected. Those things work that way."

And, in my judgment, they are getting more serious than I could have anticipated at that time. You have a foreign situation so tense and so-everybody wondering what is going to happen. He's an experienced man, a man that has been through it all. You have the soldier that knows how to fight a war, if one comes, which we all pray to God won't come. So, I think it's inevitable, his nomination and election.

Mr. STEELE. You think he would yield to

that pressure?

Mr. Martin. Well, I'll tell you why I think he will.

They teach, at West Point and Annapolis, service to the country. Mr. Eisenhower has been taught to serve his country if the call comes. If the call comes, I don't think he would refuse.

Mr. STEELE. Well, despite your confidence-

Mr. MARTIN. That he could refuse. Mr. Steele. If he should refuse, does the Republican Party have a lot of other potential candidates around that you could go to, do you think?

Mr. MARTIN. Well, I haven't even thought of any more because I felt for a certainty that he would be the one.

Mr. Koop. Now that the Democrats are in control of Congress, how are you getting along with them?

Mr. Martin. Oh; I always get along very well with the Democrats.

Mr. Hutchinson. Going back to your 30 years, Mr. Speaker, in the Congress, you came here about 1924, didn't you? Mr. MARTIN. That's right.

Mr. HUTCHINSON. What do you think of the seniority rule for bossing Congress?

Mr. MARTIN. For what?

Mr. HUTCHINSON, The seniority rule Mr. MARTIN. You mean in the commit-

Mr. HUTCHINSON. Committee chairmen. Mr. Martin. I don't know; there are faults in that system but, frankly, I don't know of any system that is a better system.

Most any man who reaches the top of a committee has had years of service and years of study, and if he is of the caliber that he normally is, he makes a good chairman.

Now, there are exceptions. There are people that get there at the top that aren't; but I think, on the whole, that the-service is the only way you can pick a chairman.

Mr. LAWRENCE. To go back to the statement you made a while ago, that you always get along with the Democrats, I did a little research and find that on September 15, out in Louisville, Ky., 1954, when there was a campaign going on, you said this:

"Should the Democrats control the Congress, there would be a stalemate in Washington. That is something no thoughtful American wants to see happen."

Is your prophecy standing up, or-Mr. MARTIN. I don't know yet. That will be dependent on how the Democrats take action on major parts of the Eisenhower legislation. Certainly anyone knows that it would be-that a stalemate in Congress, between the Congress and the President, is not desirable for the country. It's not a healthy picture, because you can't plan your pro-gram as you'd like to plan it. You can't put You can't put it through in the shape in which you always want it to go through.

Mr. STEELE. Do you see any signs-

Mr. MARTIN. What's that?

Mr. STEELE. Do you see any signs of this stalemate developing as yet in the action in the House?

Mr. MARTIN. Jack, we haven't started yet. We have-the committees are still working, and I think-of course, they are protesting; many Democrats were elected on the platform that they could support the President more efficiently than could the Republicans.

They haven't been given their chance. I think they will, in many instances, and I think occasionally, probably on a vital bill, the temptation, thinking of 1956, will be too much for them.
Mr. Lawrence. What is the—what are the

big, vital bills that you see, that have just got to go through this year?

Mr. MARTIN. Well, there is the reciprocal-

trade bill.

Mr. LAWRENCE. The Democrats will help on that; won't they? Mr. MARTIN. Yes-

Mr. LAWRENCE. Probably more than the majority of the Republicans?

Mr. MARTIN. Well, I don't know. I'm not so sure about that, Bill. I did think so be-fore the session started, but I have noticed that since the industry went down South, that there's been quite a parade of Alabama and Georgia and North Carolina and Louisiana people up and down to the well of the House, all preaching for protection. So, you see, you can't always anticipate what will happen.

Mr. LAWRENCE. You think somebody else's

ox is being gored?

Mr. MARTIN. It's just as General Hancock

said a great many years ago:
"A tariff is a local issue; when it gets so that it affects adversely any local industry, why, sometimes statesmanship vanishes.

Mr. Koop. I believe you are making some Lincoln Day speeches down South this week, aren't you, Mr. MARTIN?

Mr. Martin. Yes, I am. I am making 3 in Florida and 1 in Texas. It happens these speeches are for the most part inwhere we elected a Republican Congressman

last year, the party having had a beachhold, we are going to try to see if we can expand a little bit more.

Mr. HUTCHINSON. Do you expect to win more Republican seats in the South next year?

Mr. Martin. We've got very substantial chances.

Mr. HUTCHINSON, In Florida?

Mr. MARTIN. Well, we might get 2 more; that may amaze you, but there are 2 good chances, and of course we are not going

Mr. Hurchinson. What about Texas? Mr. Martin. Well, I wouldn't say too much

about Texas, although we have-if they redistrict Texas, and cut up Houston, it will take one of the Houston districts.

Mr. LAWRENCE. When is that up; is that up this year?

Mr. MARTIN. Well, it can always be up, because they have a Congressman at Large in Texas, and at some time or other they get around to redistricting.

· Mr. STEELE. Mr. MARTIN, I would like to get in a question-

MARTIN. And in Houston is where probably the break would come, because Houston has got more people than two Congressmen would take care of.

Mr. Steele. I would like to get in a question that some of your colleagues consider

rather touchy.

As you know, the House Judiciary Committee has reported out a bill to increase the pay of Members of Congress from \$15,000 to \$25,000 a year.

I wondered whether you are going to be for that; have you made up your mind? Mr. Marrin. Well, Jack, I don't know. It

hasn't come out. I think they are going to report it out on Tuesday. I think that— I don't know what the amount will be when it finally comes out of committee, but I am frank to admit, this doesn't apply to me so much because I'm a single man and don't have the demands upon my purse that a great many other people would. But these young men, the very type of men you want in Congress, they are coming in with a couple of boys they have to send to college, and girls that they have to send to school, and they are unable to live on the salary that they get, and I think it is better for the country to pay them satisfactory salaries.

Mr. Koop. Since you brought it up, how have you managed to remain a bachelor all this time? I can ask the question which the

married men here cannot.

Mr. Martin. And I am glad you asked, rather than Bill.

Because I haven't had any great tempta-

tions-

Mr. Koop. Thank you, Mr. Martin, for facing the Nation, and answering the questions being asked today by our panel of correspondents: Mr. William Lawrence, of the New York Times; Mr. Jack Steele, of the Scripps-Howard newspapers; and Mr. William K. Hutchinson, of the International News

School Situation in Chicago-Need of Federal Aid

EXTENSION OF REMARKS

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include the following letter from John M. Fewkes, president of the Chicago Teachers' Union, which merits the attention of Members on both sides of the aisle:

Hon. BARRATT O'HARA

House Office Building,
Washington, D. C.
DEAR REPRESENTATIVE O'HARA: The Chicago Teachers Union urges speedy action of Fedfor school construction.

The children of Chicago are housed today in an inadequate number of buildings, many of which are too old for use. Thirty-six percent of the 434 elementary buildings in Chicago were built in 1900 or earlier, and several before the Civil War. To replace these outworn buildings is an educational necessity.

For the next 6 years, children already born will increase the school population by ten thousand every year. It will require 15 new elementary schools each year to house this increase alone. If the 15 new elementary schools are not built, 20 thousand more pupils will go on double shift (or half day) each year. By 1960, the high school population will double. Several of the 43 Chicago high schools are already on extended day programs.

In 1951, the board of education succeeded in obtaining one bond issue for school buildings of \$50 million. This amount has been spent. The legislature on January 31, 1955. authorized a referendum of the voters of Chicago in April on a second \$50 million bond issue, secured by an increase in the property tax. This amount will provide only 27 elementary schools. Thirty are needed for immediate use in the next two years merely to keep up with the increase in pupils without replacing old structures, during that time.

The Chicago Teachers Union is working hard to obtain State aid for school construc-We know however, that the State does not have the resources to make the total appropriation needed. There must be Federal aid, and aid immediately.

Congress is investigating the causes of juvenile delinquency. Inadequate school opportunities are clearly one cause. Here is major service the Federal Government can render quickly to the youth of the Nation.

We ask your active support of immediate

Federal aid to education.

Respectfully yours,

JOHN M. FEWKES, President.

Let's Be Friends

EXTENSION OF REMARKS OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. PELLY. Mr. Speaker, the State of Washington is holding its fourth international trade fair in Seattle March 11 to 25, 1955. Members of Congress who were here during the 83d Congress will recall the passage of House Joint Resolution 537 authorizing goods for exhibit at this fair to be brought into the United States duty free. Now, as a result of that legislation, another fine example of an enlightened international merchandising program is about to become a reality.

Following is a short explanation, taken from the official prospectus, which I think covers the idea back of this trade LET'S BE FRIENDS

The international trade fair grew out of an oceanwide desire to be friends and exchange goods.

It reaches maturity this year because that desire is universal among the free nations of the Orient and the Far East, just as it is along the western fringes of the world's biggest sea.

The idea of a trade fair first was voiced in Seattle. This city's emissaries carried the thought to Japan where its counterpart already was alive. Out of their meeting of minds grew the initial fair in 1951. The seeds of that exposition found fertile soil in many nations.

In 1954, the third international trade fair attracted exhibits from more than a score of nations. This year, many of the 40 free countries of the Pacific rim, the Far East and the western units of Latin America will display their native merchandise before buyers from throughout the United States and Canada.

The sales made at the trade fair mean precious dollars to this Nation's friends abroad. Many of these dollars return to buy our farm and industrial products. Thus, trade fair becomes a two-way street. And it also exemplifies the commonsense of the policy known as trade-not aid.

Nowhere else in the world can a fair of this scope and significance be found.

Not only is the international trade fair unique in its concept, but it is unmatched in the nature and variety of the products exhibited.

From these many foreign lands, with their millions of artisans, the fair attracts the quality handicrafts. The very best that the age-old skills and and traditions of Pacific Asia can produce are offered to all North

As a market place, it is an economic factor of great significance. As a public showplace, it is unsurpassed in color and interest.

And as an expression of American policy in a troubled world, the fair voices the strongest urge of all who are still free—"let us be friends."

Some Lessons of Our International Experience

EXTENSION OF REMARKS . OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, February 8, 1955

Mr. WILEY. Mr. President, I send to the desk the text of an address which I was pleased to deliver last Thursday night in Dayton, Ohio, to the Dayton Council of World Affairs. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Some Lessons of Our International Ex-PERIENCE: THE DANGER OF APPEASEMENT AND THE DANGER OF CHARACTERIZING ALL NEGO-TIATION AS APPEASEMENT

(Address by Hon. ALEXANDER WILEY, of Wisconsin)

It is a great privilege to address this outstanding organization.

I am talking tonight to leaders in this community and its surrounding area, leaders in constructive thinking on America's position in world affairs.

America's future course in this great city of Dayton whose plants and laboratories produce so vast a quantity of goods America's security, as well as for our ever higher standard of living.

It was a fortunate choice for America's welfare that placed the Wright-Patterson

Air Base in your area.
The Wright Air Development Center spends. I understand, more than 75 percent of all funds allocated for Air Force research. It has contracts assigned to over 130 colleges and universities in addition to commercial laboratories and manufacturers. This research money is as integral a part of future American defense as is the Strategic Air Force, or the Continental Air Defense Command, or any of the other indispensable arms of United States security which depend so crucially on research.

Fortunately, the leadership of Dayton in science and invention is not a new thing. Many Daytonians who are living today knew the modest pioneer inventors, Orville and Wilbur Wright, thanks to whose efforts man first took wing, thus ushering in a new age of speed and opportunity and challenge.

One of the great inventors of our time "Boss" Kettering, chairman of the Department of Commerce's National Inventors' Council, calls Dayton home. This Council by the way, is in my judgment, one of the outstanding instrumentalities for American strength in this atomic age. Unfortunately, in the postwar years, it has practically been starved for funds, but I have hopes that we are going to see some constructive changes in that picture.

The inventive genius of America, joined with the inventive genius of other Allied Nations, is one of our greatest assets in the critical race-with the Soviet Union-for technological superiority.

"Research, research, and more research"pure and applied research—these are the indispensable ingredients for our survival.

You, here in Dayton, a center of the Air Age-know that we of America cannot rest on previous laurels or live in an outmoded past. You know that we cannot, in this contracted world, live unto ourselves alone. You know that the free, peace-loving nations must stand together or they will fall separately.

You know that the moth-eaten arguments of the isolationists, the backward longers for a so-called "Fortress America", are as impractical as the horse and buggy in this jet age of supersonic flight.

Peace is only attainable by the strong, the forward-looking, the bold.

SEVERAL SIGNIFICANT CURRENT PROBLEMS

Now, as we look around this fast changing World of the atomic age, we see innumerable phases of foreign policy which command our attention. The most obvious phase is, of course, the crisis in the western Pacific.

But there are a great many other problems as well, less dramatic, perhaps, less urgent, but in the long run, equally or almost as significant.

I refer, for example, to the challenge of implementing the inspiring "Atoms for Peace Program." which was advanced by President Eisenhower in his unforgettable address to the United Nations General Assembly on December 8, 1953.

I refer to the future of the U. N. Itself and to possible revision of the U. N. Charter;

I refer to the vital world economic problem, to the conference in Geneva on the General Agreement on Tariffs and Trade, and other phases of the problem of increased worldwide exchange of goods and services;

I refer to the nationalist and racial and economic ferment in the huge underdevei-

oped regions of the earth, the scene of com-It is most appropriate that we consider munism's most spectacular advances—in the recent past, and, unless we are alert and adequate, possibly in the early future.

But since time will not permit my attempting to cover these important questions, let me turn to the immediate problem in the Pacific. And then let us look at a few of the overall lessons which we have learned on the international scene.

LITTLE MARGIN FOR ERROR TODAY

Why learn these lessons?

The reason we must do so is that, as one wise man well said:

"Those who ignore the errors of history are condemned to repeat those errors."

And another thinker said:

"Every time history repeats itself, the price goes up."

Today, it is particularly important that we profit from the lessons of the past. Why? Because we have little margin for error in today's world.

In times past, diplomats or military leaders or politicians could make mistakes. The consequences of their mistakes were usually rather limited—by today's standards.
But today the results of international

error, the results or miscalculations are potentially so ominous as to give pause to any thinking individual anywhere in the world.

The decisions which we make must be the right ones—and they must be timed right.

This does not mean that we can be certain in advance that they are indeed the right ones. On the contrary, almost anything we do or don't do involves risks. Invariably, our choices are between several possibilities, none of which is particularly appealing, and all of which are fraught with varying degrees of danger.

CONGRESS' FORMOSA RESOLUTION A BOLD STEP FOR PEACE

When Congress so overwhelmingly enacted the joint resolution relating to Formosa, the Pescadores, and related areas, there could be no guaranty of the resolution's success in deterring war in the Pacific.

But the fact of the matter is that the alternative to our passing that resolution was an almost certain guarantee of failure.

And so, we chose a path of strength and firmness. We did so with due deliberation and in one of the great historic demonstrations of executive-legislative teamwork in our time.

Thus the test which we must continue to apply is: not which path is certain to bring us peace, but which path is relatively more likely than other paths to bring us peace.

When you are making history, as we particularly of the Atlantic community are, by our system of collective security-there is no guaranty that history will occur ultimately the way we want it.

But if you leave it to others to make history-particularly if you leave the initiative to the force of international communismyou can be quite sure that the contents of tomorrow's pages in history books will not be anything like what you and I would want them.

COMPLEX EVENTS INTERACT

Making history constructively is not easy. It cannot be done at any one place and in only one way.

The Pacific crisis is a striking illustration how events breaking in the four corners of the world interact on one another. cannot simply keep your eye on Matsu or Quemoy, you must keep pace with developments almost everywhere. The recent events have been breaking principally in 7 places: In the committees and on the floor of the United States Congress; in the Conference of Commonwealth Prime Ministers in London; at United Nations headquarters in New York; in the Kremlin in Moscow; in Peking, headquarters of the so-called Chinese People's

Republic; in Taipeh, capital of Formosa and of our brave Nationalist Chinese ally; and in the embattled Straits of Formosa themselves.

Some people, however, refuse to open up

their eyes to these facts.

They refuse to acknowledge the nature of today's world is such that we cannot assume to contribute to it alone from the capital of our own country. We cannot wave a magic wand in Washington, D. C., or anywhere else in our land and have history as we would want it. We must work and consult with our friends and allies in many different places, and, yes, we must talk with our foes as well—a point to which I shall refer again later on.

Only a child believes that daddy can remake the world exactly the way the child wants it. A mature adult knows that we can and should do our part for a better world, but we must not assume that we are omnipotent or omniscient.

THE LESSON OF THE FOLLY OF APPEASEMENT

We should have learned this from the past. But now what about those overall lessons to which I referred earlier?

The very first lesson which I shall elaborate on is the lesson of the folly of appease-

I need not spell out to you in detail that the world has learned to its sorrow that you can never succeed in satisfying the appetite of a criminal by offering him new victims.

In the 1930's, we witnessed the criminal aggression, step by step, nation by nation, of

the Axis Powers.

In the latter part of World War II, and in the postwar years, we witnessed step by step the aggression of international communism

and its enslavement of peoples.

We should know now that communism cannot be appeased. We should know that it respects only strength. We should know that surrender of one free nation to it only paves the way for the Politburo's demanding the surrender of additional free peoples. We should know that appeasement whets the Communist appetite, increases the Commu-nists' disrespect for the free world, tempts it to further aggression.

THE DANGER OF TERMING ALL NEGOTIATION AS

At the same time, I want to state very clearly that there is a danger of "going overboard" and characterizing every effort to negotiate-through strength-with the Communists, as so-called appeasement.

I say that there are some quarters in the United States that seem to think that any and every reasonable effort which we makeeven with utmost caution and care-in trying to sit down with the Communists and work out our problems at the United Nations or at other international conferences constitutes "appeasement."

"Appeasement" has become such an evil

label that it is being used irresponsibly by some to smear reasonable diplomatic efforts.

I say that it is not appeasement to explore every possible basis for a stable, workable system of peace.

It is definitely not appeasement to talk face to face with the Red Chinese, as the United Nations Secretary General did at Peiping, or as the United Nations has sought to do in connection with the proposed ceasefire in the Formosa Strait.

It is not the act of talking with the Communists which is appeasement. It is what might conceivably be said to the Communists at the talk which theoretically could

constitute appeasement.

But I say we need have little fear that Secretary of State John Foster Dulles or U. N. Ambassador Henry Cabot Lodge-two great courageous public servants-will talk appeasement. So, I say, give them a chance, give our other allied and neutralist diplomats a chance to talk, to explore, to evaluate, rather than mistakenly label every dis-cussion as "appeasement."

There are some people, however (and I do not question their patriotic motive) who seem to want to slam the door to all eastwest talk. These are the people who talk irresponsibly of "our getting out of the United Nations." These are the people who want us to proceed unllaterally, independent of our allies, independent of the U. N., in attempting now—all by ourselves—an arbi-trary naval blockade of the more than 2,000 miles of Chinese coast.

Some likeminded people—the extremists in this group—even seem to want to throw ultimatums at Red China. They, of course, ignore what could happen if the ultimatum

deadline were to pass. Yes, some few of these extremists talk loosely of a "showdown now with Red China," as if we were doomed unless we were to force issues to a head within the next few days or

"PREVENTIVE WAR TALK" IS NONSENSE

Fortunately, these people are in the minority—a very tiny minority. Fortunately, the responsible leadership of the United States Government, executive and legislative, totally rejects this type of an "all-or-nothing" concept, of a "showdown now"

You and I know that the concept of a socalled preventive war which is implied by a very few extremists-all of whom are out of office—is sheer madness. A preventive war actually means world war III—in all its gotten This absurd concept has horror. exactly nowhere, and will get exactly nowhere with our countrymen. Moscow, kindly note. Your propaganda to the contrary is a lie and you know it. Peace is and

always has been our mission.

We are grateful that the man who occupies the White House today is a man of peace. He has seen war in all its fury and bitterness and devastation. He has seen young men under his command make the supreme sacrifice. He has seen the tragic aftermath of war in the wrecked minds and bodies in the Nation's veterans hospitals. So, Dwight D. Eisenhower is determined to maintain peace and the American people are determined to give him every possible support in his patient efforts for peace.

It will not be—it could not be—a peace

appeasement. But neither can it sibly be a peace which refuses all diplomatic face-to-face exchanges, a peace which spurns efforts at reasonable negotiation—

from strength.

Now, before I leave this matter of the problem in the Pacific, let me point out that the next move is squarely up to Red China. If the Peking government and the Moscowgovernment desire war (which I for one doubt) then the world will recognize that the sole blame for whatever ensues is at the doorstep of Peking and Moscow.

For ourselves we desire peace, security and freedom in the Pacific and elsewhere.

We are not looking for trouble. We do not want trouble. But neither are we running away from trouble.

Now, no man here can foretell what Red China will choose to do in the Western

My own feeling is that the strong demonstration of American unity and American toughness will deter Peking from starting a chain reaction which could lead to world

The long-run danger I feel is really elsewhere, as in southeast Asia. The Formosa Straits issue should not blind us to ominous events there and in other areas.

DANGER IN OTHER THEATERS

I refer, for example to the disturbing intensification of Red activity in the Republic of Indonesia. There, a Communist party, reputedly 500,000 strong is wielding increasing power.

But, that is not the only danger sign. Inflation, guerrilla war and other difficulties are also occuring in this land which, by all rights, should be a garden of Eden. But due to a combination of circumstances. Indonesia is unfortunately experiencing serious internal difficulties-which provide ideal setting for the Reds to exploit.

As for ourselves, we have nothing but good will for Indonesia. We wish naught but peace and prosperity and freedom for this vast nation which emerged less than a halfdecade ago from colonial rule. It is our earnest hope that the forces of freedom in Indonesia will find it possible adequately to protect that land from Communist Imperialism.

DANGER OF STRAIGHTJACKETING PRESIDENT

But now, let us turn to a second lesson of our recent past.

It is the lesson that the Chief Executive of our country must remain in a strong position to fulfill his Constitutional authority.

Our experience with respect to the Formosan crisis is a complete vindication of the position which many of us had taken last year on the controversy over treaties and executive agreements.

You will remember that in the 83d Congress, the Senate soundly rejected efforts which would have attempted seriously to limit the treatymaking powers of the President of the United States and the powers of making executive agreements.

It was our position that there are more than ample safeguards under the Constitution against any Executive abuse of power.

We contended that the nature of the atomic age is such that the President of the United States must at all times be in a position to take emergency action with our allies-action necessary for the protection of our country. Such action would always, of course, be within the framework of the Chief Executive's constitutional authority.

On the other hand, our opponents (who were then fortunately in the minority and who are today in a still smaller minority) contended the reverse. They preferred in effect to straitlacket the hands of the Presi-They were so fearful of abuse of power that they wanted very little power to be ex-ercised without the most detailed congressional supervision.

I, for one, throughout the debate, had pointed out that no one could possibly foresee the many types of emergencies which might arise which might require almost split-second decision by the executive

EVENTS HAVE DEBUNKED OPPOSITION ARGUMENTS

I contended that it would gravely weaken American foreign policy if the strongest Nation in the world, to whom all freemen look, were to paralyze the one man who, under the Constitution, is supposed to spearhead our foreign policy-the Chief Executive.

Now, my contentions and those of many individuals who supported this position, have been completely sustained. The opposition has been flattened—not by words, but by events-whether they realize it or not.

Many of those who wanted to tie the hands of the Chief Executive practically did a complete flip-flop once they were confronted with the Formosa crisis. Most of them said nothing about the considerable power which was being confirmed as residing in the Chief Executive's hands.

Some who did speak, emphasized that, in their judgment, there was really no alternative but to pass the joint resolution.

I want to commend these men with whom I have disagreed for recognizing the hard facts of the international situation.

I hope, however, tht they will realize that the Formosa crisis was not a rare exception. It is the sort of crisis which may recur on many occasions in many places in the future-when international communism prepares a thrust and when the Chief Executive must be in a position to parry that thrust.

THE LESSON OF "DOING THE IMPOSSIBLE"

The third and last lesson to describe within the available time-another lesson that we should have learned—is that the word "impossible" should rarely be used in foreign affairs. "Impossible" is usually used by gloomy pessimists to justify a status quo position.

Some people dismally assumed it was impossible to set up an effective United Nations Organization or to make the Marshall plan work, or the North Atlantic Treaty Organization, or now the Southeast Asia Alllance.

They assumed that it was impossible to make the Organization of American States a dynamic entity.

As a matter of fact, every time we have tried to progress in international relations the gloom mongers have said that it "couldn't be done." But usually it has been done. We have made substantial prog-We have done the so-called impossible in all the instrumentalities which I have just mentioned.

Further, I cite to you the situation in the troubled Middle East. Certainly here is an area in which there are difficulties which would faze even the most optimistic nego-

Yet what do we see? We see a skilled Presidential envoy, Eric Johnston, patiently making splendid progress toward an historic Arab-Israel agreement on Jordanian and other water, long considered a so-called impossible objective.

Now, too, we see Iraq prepared to enter into an agreement with our stanch friend, Turkey, thus complementing the Turkish-Pakistani Alliance already existing in a necessary northern tier of security.

see, too, that the so-called impossible dispute over the Suez Canal has been settled; the so-called impossible Iranian oil impasse resolved.

Now, I do not mean to imply that we can expect miracles. I do not mean to imply that all disputes are capable of quick solution, because obviously they are not. But what I do mean is that there are very few, if any, problems which do not yield to progressive change if we are willing to dedicate our abilities and our hearts to the cause.

We have seen our great Secretary of State, John Foster Dulles, travel tirelessly around the world in the cause of peace. We have seen him time and again snatch diplomatic victory from the jaws of apparent defeat. We have seen his great spiritual faith vindicated by the resolving of apparent deadlocks and defeats, as when EDC was transformed into a Western European Union.

Let us, therefore, share the President's and Mr. Dulles' faith.

Let us give no heed to the gloom-mongers, who assume that what exists today will exist tomorrow, or that evil will grow stronger and good weaker, that tension will give way only to increased tension.

Let us have faith that we can make progress, and I say, we will indeed make progress.

CONCLUSION

It is on this sound note of faith that I should like to conclude. It is on this note of realistic optimism that I should like to turn this subject over to your own consideration.

I began by stating that it is appropriate that here in Dayton, a great center of aeronautical research, that you and I ponder America's future in world affairs.

The essence of research is faith-faith that we can unlock the mysteries of nature, the mysteries of the atom, the mysteries of time and space.

The essence of research is courage-the courage to look forward and not backward. You of the Dayton Council on World Affairs are similarly dedicated to blazing new trails for America.

trails for America.

As the scientist in his laboratory pierces the veil of the future, so you in this council seek to have us pierce the past mists of international prejudice, of blindness, of fear, and emerge into the clear light of peace and progress and faith.

Few missions could be more important for

a citizen or for a public official.

Thanks for your kind attention, and good luck to you all.

Progress in Reverse

EXTENSION OF REMARKS

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Recorn an address which I had prepared for delivery before the antitrust law section of the New York State Bar Association, New York, on January 26, 1955.

Unfortunately, because of the meeting of the Senate on that day, I was unable to deliver the address personally. Instead, it was delivered by the very competent and able counsel for the Antimonopoly Subcommittee of the Committee on the Judiciary, Mr. Sidney Davis, to whose work on the subcommittee I wish to pay high tribute. I have been informed by Mr. Davis that the subject matter of the address gave rise to some interesting discussions at the meeting.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROGRESS IN REVERSE

(Address of Hon. Estes Kefauver, of Tennessee)

The general theme of today's session is given as Antitrust Law Progress. For reasons which I shall endeavor to make clear the title of my address is Progress in Reverse.

As the antimonopoly subcommittee pointed out in a report printed Monday, January 23:
"The attention of the country has been focused more and more on the gathering momentum of the corporate merger movement. Our economy was subjected to its first great merger movement in the two decades, 1885-1905. A second significant wave of corporate mergers took place in the latter part of the 1920's * * *, Against this background, it is understandable that the third great corporate merger movement in our history, now in progress, should be the subject of widespread public, governmental, and congressional concern."

As I look at what has become of our antitrust laws in very recent years, and note the continuing increase in economic concentration and the wave of industrial mergers now taking place, I am reminded of the story of a recent atomic bomb explosion which took place down in my part of the country. After everyone had been moved to a safe distance, the bomb was set off, creating an enormous hole in the ground. The experts went to the edge of the chasm, peered over the side, and much to their astonishment saw at the bottom a human figure who slowly picked himself up off the ground and then began to climb to the top. When he reached the top, they found themselves confronted to their further amazement with a gaunt old man dressed in an old Confederate uniform and carrying an old Confederate musket. The man shook the dust from his clothes, looked into the chasm, sighed, and said, "I don't care what General Lee says, I'm giving up."

Back in 1946, as chairman of a Subcommittee of the House Small Business Committee, I issued a 432-page report on the then current status of the antitrust laws. entitled "United States versus Economic Concentration and Monopoly." In our report we stated that: "Concentration of economic power is a constantly moving, powerful force which can only be fought by an aggressive and consistent Federal legislative program, followed up by a steadily continuing active enforcement of antitrust laws by the executive agencies." After making an industryby-industry analysis of the concentration problem and a detailed investigation of the operations and effectiveness of the antitrust agencies, we concluded that "the imprint of failure is everywhere." In retrospect, all I can say is that if "failure" was the right word for 1946, the right word for today is "calamity." The temptation is strong indeed to echo the sentiments of the old Confederate veteran.

Let us consider some of the differences between then and now. There is first the subject of appropriations, a matter of prime interest to the antitrust agencies. In the, late forties and early fifties appropriations for the antitrust agencies were on the increase; between 1946 and 1953 appropriations for the Federal Trade Commission rose by 92 percent, while those for the Antitrust Division increased by 106 percent. Despite these increases the resources available to the antitrust agencies were pathetically inade-quate. Yet, since 1953 the trend has been In the opposite direction; between 1953 and 1955 appropriations have fallen 3 percent for the Federal Trade Commission and 11 percent for the Antitrust Division.

Then what has become of the Government's efforts to break up existing monopolies? In 1946 we had grounds to be reasonably hopeful on this score. In its decision in the Aluminum case handed down in 1945 the special court headed by Justice Learned Hand held that 90 percent control of an industry by one company was sufficient and that 64 percent control might be sufficient to constitute a violation of the Sherman Act. In the Tobacco case decided a year later the Supreme Court stated that it welcomed the opportunity to endorse cer-tain statements in the Aluminum case opinion, which were to the effect that a monopoly cannot be disassociated from its power, that its power cannot be dissasoclated from its exercise, and that if 90 percent of the ingot producers had combined it would have constituted an unlawful monopoly. On May 31, 1946 the then At-torney General, Mr. Tom Clark, announced a new program designed to break up existmonopolies, stating that the times required that competition be restored "by the seldom used processes of divestiture, divorcement and dissolution." The cases instituted in the next few years against the United Shoe Machinery Co., the major meatpacking companies, the Western Electric Co. and A. T. & T., the Du Pont Co., and General Motors were all part of this program. But where is any dissolution program today?

Perhaps the bitterest pill is what has happened in the field of mergers and acquisitions. In 1946 we were striving to plug up the long-standing loophole in section 7 of the Clayton Act, and we had every reason to believe that once this had been done, the Government would at long last be able to put a halt to competition-destroying mergers. Finally, after a truly incredible amount of work the Celler-Kefauver Antimerger Act was passed in 1950. As anyone who reads its legislative history and the accompanying

committee reports must agree, this is a strong and potentially far-reaching measure. Yet what use has been made of it? According to the Federal Trade Commission 2,300 mergers and acquisitions were reported to have taken place between 1951 and 1953. If the merger movement continued at the same rate through 1954, this would mean a total of around 3,000 mergers and acquisitions since the act was passed. I am not contending for a moment that all mergers are necessarily harmful in and of themselves. Yet it is almost inconceivable that out of this total there are not at least scores which might have adverse effects upon competition. Against this wave of merger activity what have the antitrust agencies done? We find that the Federal Trade Commission has issued 3 complaints and the Department of Justice has announced in the case of 1 proposed merger that it will object, should the merger take place. No final orders of any kind have yet been issued. So the box score reads, out of probably scores of times at bat, 4 hits and no runs.

There are still other issues where the promise of yesterday is the despair of today. Take, for example, the matter of basing point pricing. In 1946 we were most hopeful that the Supreme Court would uphold the Federal Trade Commission in the Cement case and that we would at last be rid of the evil, restrictive effects of this monopolistic pricefixing device. Insofar as the Court's decision is concerned, our hopes proved to be not unfounded. But what use has been made of that magnificent legal victory? During the last 2 years accounts have appeared in the press suggesting that industries which, following the Cement decision, abandoned the basing point system, have been quietly returning to it, or to something which closely resembles it.

Or, as another example, we did not dream back in 1946 that in an antitrust case the Supreme Court would turn back the clock and make the question of subjective intent paramount above all other considerations, even the effect on competition. But that is exactly what did happend when the court handed down its decision in the Standard Oil of Indiana case. As a result "good faith" now a complete defense to a charge of price discrimination. As Senators Macnuson, Langer, and I said in a report dealing with this decision: "We do not think that good faith should be paramount and controlling above all else. * * We know of no other satute, past or present, in which good faith licenses a person to violate the prohibitions of the law with impunity and without inter-ference. The controlling consideration must be the actual effect on competition, not the question of good faith."

The crippling effects of that decision can be seen in the fact that since it was handed down, the Federal Trade Commission under its new administration has not issued a cease and desist order in a single contested Robinson-Patman Act case in which the good faith defense was offered.

I could go on to cite other illustrations of deterioration in the antitrust laws and in antitrust enforcement, but these examples should make it clear why I have entitled my address. "Progress in Reverse".

As serious as these setbacks have been, they may well be overshadowed by a new development which casts a threatening shadow over the entire structure of the anti-trust laws. I am referring to the current agitation not only to revive but to extend the so-called Rule of Reason.

There is something plausible about the phrase "Rule of Reason," which, unfortunately has a peculiar semantic appeal. The semantics are also beguiling for other terms, such as "workable competition" and "taking all relevant economic factors into consideration," terms which appear with such frequency in current antitrust literature, and

which seem to be the modern-day synonyms of the "Rule of Reason."

Apart from its plausible sound, the term "Rule of Reason," as every member of this audience knows, is a term of art, with a special, and to my way of thinking, de-plorable meaning of its own. Since first handed down in the Standard Oil case in 1911, it has probably done more damage to the effective enforcement of the antitrust laws than all other rulings combined. Let recall the prophetic words of Justice Harlan in his vigorous dissent in that case. Pointing out that the Supreme Court had on two previous occasions refused to accept this doctrine, Justice Harlan stated:

"But my brethren, in their wisdom, have deemed it best to pursue a different course. They have now said to those who condemn our former decision and who object to all legislative prohibitions of contracts, combinations and trusts in restraint of interstate commerce, 'You may now restrain such commerce, provided you are reasonable about it; only take care that the restraint is not un-due.* * * When Congress prohibited every contract, combination, or monopoly, in re-straint of commerce, it prescribed a simple, definite rule that all could understand and which could be easily applied by everyone wishing to obey the law, and not to conduct their business in violation of the law. But now, it is to be feared, we are to have, in cases without number, the constantly recurring inquiry—difficult to solve by proof whether the particular contract, combination, or trust involved is or is not an 'un-reasonable' or 'undue' restraint of trade." (221 U. S. 102, 103 emphasis in original.) Before this audience I need not dwell upon

of this doctrine into the enforcement of the Sherman Act, particularly with respect to dissolution cases. Against the known record of the carnage which it has wrought, it is hard to realize that this doctrine is not only being strongly urged as the standard of lawfulness, but is apparently receiving in-

the catastrophic effects of the introduction

creasing acceptance.

It may have been forgotten in some quarters, but one of the principal reasons behind the enactment of the Federal Trade Commission Act and the Clayton Act in 1914 was the desire of Congress to pass legislation to which reason" the "rule of would not be applicable. The legislative history leaves no room for doubt on this issue. Thus the Senate Interstate Commerce Committee in its report of February 25, 1913 on what became the Federal Trade Commission Act recognized that the Sherman Act had become subject to the "rule of reason," and stated that because of that very fact new legisla-tion was needed to which this doctrine would not apply. Referring to the majority decision in the Standard Oil case, the commit-

"The fair conclusion is that it is now the settled doctrine of the Supreme Court that only undue or unreasonable restraints of trade are made unlawful by the Sherman Antitrust Act, and that in each instance it is for the Court to determine whether the established restraint of trade is a due restraint or an undue restraint."

Then after making it clear that it had "full confidence" in the "integrity, intelligence and patriotism" of the Supreme Court, the committee went on to state that—

"It is unwilling to repose in that court or any other court, the vast and undefined power which it must exercise in the administration of the statute under the rule which it has promulgated. It substitutes the court in the place of Congress, for whenever the rule is invoked the court does not administer the law, but makes the law. If it continues in force, the Federal courts will, so far as restraint of trade is concerned, make a common law for the United States just as the Figlish courts have made a common law for England.

"The people of this country will not permit the courts to declare a policy for them with respect to this subject. . . . It is inconceivable that in a country governed by a written Constitution and statute law the courts can be permitted to test each restraint of trade by the economic standard which the individual members of the court may happen to approve." (62d Cong., 3d sess., S. Rept. No. 1326, p. 10.)

It is gratifying for me to note that Judge Medina, speaking for the Second Circuit Court of Appeals, made the same interpretation of Congressional intent in his recent decision in the Dictograph case. This case involves exclusive dealing contracts which, the court held, were in violation of section 3 of the Clayton Act. In discussing the legislative history of this section Judge Medina

"With respect to exclusive-dealing contracts, the evident impulsion toward including a specific proscriptive provision was the desire on the part of the Congress to overrule by legislation an earlier decision of the Cir-cuit Court of Appeals * * * upholding, as not violative of the Sherman Act, what was tantamount to the refusal, by a leading producer of chewing tobacco, to sell to a dealer because the dealer would not agree to deal exclusively in the seller's products * * * was to make sure that the Sherman Act 'rule of reason' would not be employed to validate further transactions of such a patently undesirable nature that the proscriptive provision under discussion was thought neces-

sary. It is hardly likely that the insertion of the qualifying phrase, 'where the effect " " may be to substantially lessen competition or tend to create a monopoly,' was intended to reinstate the same Sherman Act tests which had, at that very time, been determined to be inadequate." (Dictograph Products Inc. v. Federal Trade Commission,

October term, 1954.)

Frankly I have become increasingly distressed by signs that the Federal Trade Commission, is reading the "Rule of Reason" into parts of the law where it is no longer applied by the Supreme Court, or what is worse, reading it into other parts of the law where Congress never intended it to apply. The essential question is whether the requirements now being imposed as to the amount and type of evidence constitutes in effect the adoption of the "Rule of Reason." I am concerned particularly with recent actions by the Federal Trade Commission in requiring extensive and perhaps unnecessary bodies of

The best description of what I am worried about appears in the November 1954 issue of Fortune magazine, entitled "The Urge to Merge." Referring to the Department of Justice's case against the Du Pont Co. for monopolizing the cellophane industry, the article states that, "Unless the the article states that, try, the article states that, "Unless the decision is reversed by the Supreme Court, the case appears to have shifted antitrust enforcement policy back to the 'rule of reason' of the 1920's." The article then

goes on to say:
"Essentially, this means that menagement, using its own data, can itself decide how much of a market it can exploit safely through a merger without inviting an antitrust action. Economists and statisticians, in other words, take the place of lawyers in helping management reach decisions of this kind. How good this is for the economy and how much it will lessen competition only the future will tell. Rule-of-reason enforcement has undoubtedly slowed down enforcement of antitrust; neither the Department of Justice nor the Federal Trade Commission has the budget or trained personnel to watch the markets constantly and move against a company or a group of them trying to rig one. The threat of antitrust action probably will stop flagrant attempts to minimize competition, but it need not stop a merger if management's conception

of the market position after merger is sound in antitrust terms. If Eugene Grace, for example, believes that the proposed merger of Bethlehem and Youngstown will strengthen competition in the steel industry (and many outsiders believe it will), chances are the merger will go through."

I realize, of course, that no journal speaks officially for the administration. At the same time, however, Fortune is a most reputable organ which, before publishing such an article, could certainly be expected to have familiarized itself with the administration's views. Moreover, the emphasis upon the rule of reason as the test of what is sound in antitrust terms is, of course, wholly in keeping with the general philosophy of Professor Oppenheim who, after all, is the cochairman of the Attorney General's committee on antitrust law revision. If this passage represents anything approaching an accurate reflection of the administration's views, the area of difference between the administration's interpretation of congressional intent and the interpretation made by those of us in Congress who sponsored and supported the measure is rather wide,

There is a possible historical parallel here which is worth noting. Several years before the Supreme Court established the "rule of in its decision in the Standard Oil reason" case, a bill was introduced to accomplish this same result through legislation. On behalf of the Senate Judiciary Committee Senator Nelson in 1909 reported adversely on the bill and it subsequently died. In his report Senator Nelson stated:

The injection of the rule of reasonableness or unreasonableness would lead to the greatest variableness and uncertainty in the enforcement of the law. The defense of reasonable restraint would be made in every case and there would be as many rules of reasonableness as cases, courts and juries. A court or jury in Ohio might find a given agreement or combination reasonable, while a court and jury in Wisconsin might find the same agreement and combination un-reasonable * * * To amend the Antitrust Act, as suggested by this bill, would be to entirely emasculate it, and for all practical purposes render it nugatory as a remedial statute." (Cited and quoted in 221 U.S. 96, 97.)

What Congress refused to enact in 1909, the Supreme Court read into the law in 1911. The Federal Trade Commission may be sorely tempted to emulate the Supreme Court of 45 years ago. It may be sorely tempted, but I trust it will not do so.

The daily press tells us that American business is today combining, uniting grouping and regrouping, merging, remerging and merging again. Competition as a way of life is under constant attack and small, independent business is on the decline. I, therefore, think it is of the utmost importance that Congress develop facts concerning the scope of the merger movement, the extent and strength of the thrust toward monopoly, and the decline of competition

in our economic life.

Congress needs to make an examination into the rise of new financial and industrial oligarchies, and highly integrated forms of business and management. Congress needs to examine business practices aimed at limitor eliminating competition. The ining or eliminating competition. The in-vestigation which our subcommittee con-ducted of monopoly in the power industry should be continued and broadened and deepened, so that the Congress may be fully informed as to the extent of monopolistic abuses which threaten a repetition of the Insuil-Hopson scandal. We need a full-scale inquiry into the growth of monopoly, is withering effects upon the small business of this country, and its effect upon our free competitive economy.

Perhaps new and better tools and policies of enforcement are called for. Meanwhile it is important that the executive branch make the best use possible of the tools now at its disposal. Congress meanwhile must concern itself not only with its important policymaking function in the field of monopoly but also with enforcement of these policies by the executive branch of the Government.

I can emphasize the necessity for this no better than by reading to you the concluding paragraph of the report published Mon-

day by our subcommittee:

"The danger to the country from monopoly run wild is written in large letters across the recent economic and political history of this Nation. The committee therefore feels that it cannot overstate the imperative necessity for the Congress to deal with this issue immediately."

Thank you.

Address Delivered by Former Secretary of the Air Force Thomas K. Finletter

EXTENSION OF REMARKS

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1955

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a very penetrating and keen analysis of American Asiatic problems and policies, set forth in a speech delivered last Saturday by the former Secretary of the Air Force Mr. Thomas K. Finletter.

There being no objection, the address was ordered to be printed in the RECORD,

as follows:

REMARKS OF THOMAS K. FINLETTER AT ROOSE-VELT DAY DINNER, WASHINGTON, D. C., FEB-RUARY 5, 1955, UNDER AUSPICES OF AMERICANS FOR DEMOCRATIC ACTION

It is now nearly 10 years since the death of the great President whose memory and

achievements we honor tonight.

It is often said that one of these great achievements—the New Deal—has had its day; and that the Democratic Party had better stop thinking of the old policies of the 1930's and 1940's and of the coalition of groups of voters which brought it the victories of those days.

This attitude misunderstands what Franklin D. Roosevelt did for the Democratic Party and for the country from 1933 on. For, while it is true that the Roosevelt revolution is now a part of our accepted social fabric and that a party cannot live on the remembrance of things past, there is one part of the New Deal that still lives on with continued, dynamic vitality. That is its deeply felt concern for the just and right, and its spirit of adventure in seeking the good.

I am not speaking, of course, of the aggregation of policies of the 1933-40 period. Nor do I mean the result of those New Deal policies—the coalition of groupings of voters which kept the Democratic Party in power

for 20 years.

I mean the spirit which motivated these policies, a spirit whose great quality is a willingness to make a change, to try the untried, if doing so will help satisfy a deeply-felt urge to defeat injustice, illiteracy, ill health and poverty, and to see to it that the people of America have full access to the privileges of free men.

It is important that this spirit be kept alive and vigorous. Important to the Democratic Party. Important to all the people

of the country.

I do not believe that the Democratic Party can win the votes of the American people unless it keeps this sense of adventure for the good. The one thing the Democratic Party has which the Republican Party has not, is this spirit.

The reason the country went normally Democratic in 1933 and has stayed that way is because after their experience with Presidents Franklin Roosevelt and Harry Truman the people came to believe in the Democratic Party. The reason they believed in it was that they were right in believing it. The party was not fooling them; it was not trying to win votes with favors and promises of favors. This was not circuses and bread, It was the real thing.

It was the real thing.

I do not mean that the Democratic Party was not trying to win the votes of the people during the Roosevelt and Truman administrations. Of course it was. But it was the way it sought the votes that was important. It sought them by offering the best merchandise for the money. It did not offer shoddy goods. It did not offer goods that looked well on the surface but were intended to wear out so that replacements would have to be bought. It did not rely on advertising packaging, or merchandising. It offered the best it could make, the goods which would serve the customer best.

Of course there were failures, of course there were exceptions to this high-minded New Deal standard. The Democratic Party being part of the human race is not perfect. But I do think that this description I have just given rightly describes the spirit which dominated the Roosevelt and Truman administrations.

At the moment temptation is in the air. For there is another way of appealing for the votes of the people and it seems to be mighty effective with so many of the voters. This other way is the opposite of what I have described as the New Deal way. It is the way of salesmanship, of the bad kind of salesmanship, the kind that does not concern itself with the quality of what it sells. It is a political salesmanship which seeks to keep the people's mind off the issues that are important, the issues on which we Democrats know the people would support us if it were possible to have a debate on the merits. This political salesmanship is a short-term operation. It uses gadgets and tricks whose impact is immediate, violent and effective. It focuses on getting those votes in that next election. It relies heavily on the techniques of advertising. It sometimes—too often, alas—relies on falsehoods. Worst of all, on issues of great importance it often puts the interests of the party above those of the country. This political salesmanship is in a deep sense unconstitutional. For unless we use restraint in our struggles between the two great parties, unless we mark a boundary beyond which it is not permissible to go, no matter how close the election and how much either party wants to win it, our constitutional system will not stand the strain upon it. All Americans know or should know where this boundary is, in any given circumstance. It is where the politicking begins to harm the interests of the country. And all Americans know or should know that this boundary has been badly violated in the recent past.

There is a real problem for the Democratic Party how to meet this kind of political campaigning. It is all very well to say, let us believe in and practice the right, and right will triumph. But it is understandable that men in the Democratic Party should think; let us fight fire with fire, we can have our ideals (to be put into practice when we get into power) but there is this important preliminary business of getting elected. Let us fight this battle with the weapons, however illegitimate they may be, which now seems to be the customary ones.

Then, having beaten our opponents at their own game, we can go back to being what we really are.

Fortunately, for its own sake and for the country's, the Democratic Party has no intention of meeting fire with fire in this

The Democratic Party can defend itself against the techniques of salesmanship only by having confidence in the American people and by doing what it can to unmask the slogans and the advertising, and the falsehoods, so that the voters will be able to judge the two parties on their merits of their intentions and their acts.

But at the same time, the Democratic Party must continue to be better than the Republican Party on the merits. This it will not do unless it keeps up that readiness to explore and that concern with the well-being and the individual rights of human beings which are the substance and the soul of the New Deal.

It is not only of the political fortunes of the Democratic Party of which I am speaking. For as goes this struggle between political salesmanship on the one hand and the spirit of responsibility and concern for the right on the other, so will go the future of the American ideal of individual liberty under law. Unless the spirit of adventure in method and of idealism in substance wins out, liberalism in the United States will not come safely through the crisis in which we now are.

May I digress to defend that word "liberalism"? I might have used the word "freedom," and that would have been unexceptionable. But it is high time that we reject the slurs that have been put on the words "liberal" and "liberalism" and restore them to the high estate to which they are entitled. Liberalism is the method of freedom. If we let slander take that word away from us we shall have lost something of priceless worth. And slander is the way our opponents often take to try to make us give up the principles in which we believe.

May I add, too, that Americans for Democratic Action, now, and particularly now, has an important role in this struggle. The fundamental rights of freemen for which this country fought the Revolutionary War, and for which it has battled ever since, are under attack. Liberalism and idealism, and the organizations that stand for liberalism and idealism, as does the ADA, are the targets. Liberalism and those who support it are the bulwarks of the rights of freedom. They must not yield; they must be brought through the crisis in which they are now, to their old high place of prestige and honor in our great country.

in our great country.

It is for these things, for the substance of freedom and the method of liberalism, that we are now fighting. It is not alone, or even I think primarily, our physical safety which is threatened by Russia and its evil creed of communism. Of equal importance with our hides are our souls. And so far it is the latter which have received the worst wounds and are the most threatened, not, tragically enough, by our enemies but by ourselves.

This integrity of the creeds and of methods of freedom is an end, indeed, the greatest of political ends, in itself. So I could stop this argument at this point, and say that the end of freedom and the means of liberalism must be defended for their own sake against these improper and unconstitutional attacks that are being made upon them.

But there is one more point that is important and should be said. It is that unless we show considerably more respect for the proper limits of political debate on matters affecting our foreign policy, if we continue this idea that anything goes in politics so long as it wins votes, regardless of what harm it may do to our efforts to defend ourselves in the world and to seek peace, then

we cannot possibly have a proper foreign policy and cannot possibly defend ourselves adequately in the dangerous world in which we live

Already our failure to respect the proper limits of political debate, our injection of domestic political considerations into our national policies, have harmed us grievously in many ways.

It has harmed us in the image which we project of ourselves abroad. Our failure to stand by our principles of freedom and of liberalism at home have worried our friends in Europe and have discredited us in Asia.

Our use of slogans and catch-words has impaired our military strength. Slogans have actually cut into our military striking power, slogans such as the curious notion that cutting the military budget will give us more military strength than we had when we spent more money under the Democratic administrations; that a new magic efficiency will give us, in the words of that inelegant slogan, "more bank for a buck"; the talk of "paper wings" in the Air Force under the Democrats; and by those who put budget balancing above the Nation's safety, the line that the Russians are plotting to trick us into spending ourselves into bankruptcy.

Slogans such as these have cut our military budget below the safe level, and similar slogans have weakened our foreign policy or led it into dangerous paths in Europe and

As a result our prestige and our influence are at new lows in Europe and in the world outside of Europe.

We used to say, somewhat immodestly, that we, the United States, were the leaders of the free world. We do not hear so much of this talk now, not since the British and French took over the reeponsibilities of the free world at the Geneva Conference last November, after the Chinese had defied all our threats of massive violence and, disregarding the large chip on our shoulder, conquered Dienbienphu and all of northern Vietnam. Nor was our talk of our world leadership stimulated by the French rejection of the European Defense Community in the face of the most awesome warnings from us that we would massively withdraw from Europe unless she signed the EDC treaty promptly.

At the moment it is in Asia where we are in special trouble, with the dangerous crisis of Formosa, the second such we have had within a year. First it was in Indochina where threats by the United States clashed with Chinese aggression, and we came close to war. Now it is in the Formosa Straits.

This is not the time, unfortunately, to talk about how we got into our present position of defending Formosa and the Pescadores, alone, without allies, and not as part of an agreed United Nations position. Nor is this the time to discuss the merits, or lack of merits, of the foreign policies, and of the domestic political partisanship which brought this about. The critical nature of our position in the Formosa area, and the truculence of the Red Chinese, put upon all of us the obligation to support the President unitedly if the Red Chinese try to take Formosa and the Pescadores by war.

At some later date, when the situation, let us hope, will have become less dangerous, we must discuss this far-eastern policy of the administration, and particularly how it is that we got curselves into the position of being alone the defenders of Formosa, and why we have failed to try to internationalize our position of trusteeship in the area. For the present we must be restrained in our debate so that the Chinese and the Russians will have no grounds at all for doubting of our unity and our determination.

But this is not to say that there shall be no debate at all upon our Formesan policy. As long as we make clear to the Chinese and the Russians that we are united to resist any attempt by them to take Formosa and the Pescadores by war we may properly question various aspects of our policies in that area. The Chinese and the Russians will understand that debate in a free democracy is a proof and a source of strength, not of weakness.

The debate of this issue has already clarified and improved our agreed national policy. We have been assured by the President that he alone and not his military or his other advisers, especially the less temperate ones, will make the decisions where and how we are to fight if we are to. And we have been assured too that the President will allow our Armed Forces to be used for defensive purposes only.

I say our Armed Forces, for no one can be sure that once the fightling starts it can be limited to air and sea forces alone, or that it can be surely confined to the area of Formosa and the adjacent mainland, or even to the Continent of China itself. Let us not delude ourselves with the notion which has been so prevalent in much of our Far Eastern policy, that if we do have to fight we can do so cheaply, as the West used to do during the weak period of China under the Manchus and the Republic of 1912. There is no sure foreseeable limit to the fighting once it may start in the Formosa Straits.

So, in our constructive debate on the Formosa policy we may ask some questions. We may question whether it is a good practice to give warnings to our enemies, in advance, of just what we will and will not do with respect to this and that area of the world, and whether these warnings should be made by the executive branch alone or in the form of a joint resolution submitted to the Congress for its action. My own view is that as a general matter this policy of specific warnings should be applied only in exceptional cases; but that in the present instance it was necessary to use it. This, for the reason that our failure to follow through in Indochina on our warnings to the Chinese Reds about massive retaliation if they advanced further into Vietnam might have given the Red Chinese the idea, unless we had fortified our warnings about Formosa by the debate in Congress on the joint resolution, that we would also fail to react if they attacked Formosa and the Pescadores

We may also ask whether the Administration still wishes to press for a ratification of the United States-Nationalist Chinese Defense Treaty, or whether events have not so changed that this treaty would now run counter to the prospects of internationalizing Formosa and the Pescadores.

And, in this connection, we may ask for a clarification of the reasons for our position in Formosa. During the course of the tough line we have been following, alone, in the Far East recently we took on some serious moral commitments, including this commitment to Formosa and the Pescadores to defend them if they were attacked by the Red Chinese. But it is not clear whether this moral commitment is the basis for the action we have taken in the recent joint resolution or whether the basis for it is the military importance to the United States of Formosa and the Pescadores. The joint resolution itself seems to indicate that the reason is that "the secure possession by a friendly government of the western Pacific island chain, of which Formosa is a part, is essential to the vital interests of the United States." If this is true, the situation is very serious indeed. The word vital means necessary to life, the life that is, of the United States. This premise, it seems to me, nceds some examination.

Particularly, too, may we ask about this question of the internationalization of the islands, of our giving up our go-it-alone policy there. Why is it that the policy of internationalization of Formosa, which had been begun at the time of the Korean war, has been neglected.

You will remember that shortly after the Korean war President Truman announced that the future of Formosa and the Pescadores would be decided in the Japanese Peace Treaty or by the United Nations. Later in the same year 1950, in a note to Russia, the United States proposed a peace treaty with Japan which would have the four major powers concerned, Russia, China, Britain, and the United States, decide the future of these islands; or if they falled to agree within 1 year, would have the matter settled by the General Assembly of the United Nations where, it will be noted, there is no veto.

The Japanese Peace Treaty was finally signed, not just by the United States alone, but by 48 other nations. Certain areas not including Formosa and the Pescadores, were trusteed with the United Nations, with the United States as the sole administering authority; but the future of Formosa and the Pescadores was left open. Japan relinquished her claims to them, but where the title went to was not clear. If it went anywhere it would seem to have gone to the 48 nations which signed the peace treaty with Japan, as trustees, and with the duty to turn over their trust responsibilities to the United Nations just as soon as that body would accept them.

Clearly this Formosa-Pescadores problem is no longer a matter for the United States alone. It is for the United States to insist not only that the United Nations resist any aggression by the Red Chinese and do its best to arrange a cease-fire, but also that it relieve the United States from the go-it-alone responsibility which the United States has assumed for the protection of these islands, and further, that the United Nations take over the juridical duty of adjudicating the future of the inshore islands and of Formosa and the Pescadores as well.

The United States, I believe, should give up entirely this go-it-alone policy in Formosa and the rest of the Far East and should substitute for it a policy founded on juridical commitments and juridical principles. If we stop showing how tough we are and start showing how lawful we are we may have success and peace in our policy in the Far East.

Admittedly, we are dealing with a truculent and difficult enemy in that part of the world, who is not concerned with law, an enemy who has little interest in juridical principles. But if we, the United States, show that our concern is to do what is right and lawful, we may be sure of two things. First, that our national security will not be thereby impaired; on the contrary, it will be strengthened. And, second, that world opinion will support us and not the Red Chinese.

If we follow the opposite course, if we purport to act as the go-it-alone arbiter of much of the world, we shall imperil our politico-military security and we shall not have the support of world opinion.

Thus, because of the dangerous importance to the American people of the Formosan question, one is justified I believe, in suggesting that our policy there follow certain lines. For example:

1. The country will support the administration in the defense of Formosa and the Pescadores if the Red Chinese make war to conquer them.

2. We should quickly liquidate the position we find ourselves in of being alone, without allies, and not as a part of the United Nations, in defending Formosa and the Pescadores. We should quickly, wholeheartedly, and forcefully submit to the United Nations that the defense of Formosa and the Pescadores be internationalized; that those who, under international principles and international commitments are responsible with us for this defense, join fully in it; and that the responsibility for deciding the juridical status of Formosa and the Pes-

cadores, and of the inshore islands as well, be internationalized. These tasks should, most preferably, be undertaken by the United Nations. The solitary, go-it-alone position of the United States should be liquidated as

rapidly as it can be.

3. The Armed Forces of the United States must be used only and strictly only for defensive purposes. The Commander in Chief will decide what that requires. But it is of the highest importance that our United States forces be so deployed and employed as to avoid any legitimate charge that they have been provocative. It must be very plain, for world opinion and more importantly for United States opinion, that if shooting starts in this area it will be unmistakably the result of Red Chinese initiative.

The United States, which Franklin Delano Roosevelt did so much to build, is in a dangerous crisis. We must pray, devoutly and more solemnly than we may have for a long time, that we shall come safely through it, with honor, and with peace.

James F. Byrnes, Educator

EXTENSION OF REMARKS

HON, STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Tuesday, February 8, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "James F. Byrnes, Edu-cator," which was published on January 23, 1955, in the State, of Columbia, S. C. This newspaper is one of the Nation's outstanding publications.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

JAMES F. BYRNES, EDUCATOR

In his long public career Mr. Byrnes excelled in many fields of public endeavor. As a member of each branch of the Congress of the United States he displayed unusual and effective legislative abilities. He was able to reconcile conflicting views and to fashion from these reconciliations well-drafted legislation. Though without any senatorial seniority, it was Mr. Byrnes, more than any other Senator, who was the effective force in pushing through the sweeping changes made in the first two terms of Franklyn D. Roosevelt's administration. As war mobilizer and assistant President he made a magnificent contribution to our World War Il efforts. As Secretary of State under President Truman he was the discoverer of the realities of Russian political ambitions and the architect of our present foreign policies.

Conceding the important services rendered in these and in other fields, it is Mr. Byrnes' contribution to public education, of which we wish to speak today. He had little formal education himself. He attended no high school, no college, no law school. He holds only honorary degrees from colleges and unionly honorary degrees from colleges and universities. Yet, because he made an unexcelled contribution to public education, no one more richly deserves the title of "Edu-

cator."

During his administration as governor, 1,200 small and uneconomical public school districts have been consolidated into 102 effective and only of school buildeffective units. The value of school buildings has increased from about \$90 million to \$190 million. Within these four years school facilities have been equalized as between white and Negro. This has been accomplished by allocating some 60 per cent of the capital funds for school construction to Negro schools. An average of \$147 has been allocated for each white pupil and \$314 for each Negro pupil.

Equally important has been the equalization between rural and urban children. In our concern over the inequalities as between races, we lost sight of the fact that the small country school district could not adequately provide for its children. For many years the Negro child in Columbia or Charleston has received a better education than many white children in our rural areas.

A statewide school bus transportation system has been effected so that all school children have modern transportation to consolidated and efficient schools. Teacher pay has been increased. Colleges have been given funds to help keep pace with the public schools and to provide teachers for them.

Much remains to be done. Much of the credit for this educational revolution belongs to legislators, to reports of educators, to school administrators, to experts in education and in finance. We are glad to say that our newspaper was an early advocate of a bond issue for school improvements. There

is credit enough for all.

But without Mr. Byrnes the revolution would not have occurred. He sensed the need for immediate action. It was his standing in the State that encouraged the legislature to enact the needed legislation. It was his influence that speeded the consolidation of school districts and the equalization of facilities.

Truly he has proved himself one of South Carolina's leading educators of all time.

Some Interesting Facts on Big Business, Big Government, and Big Labor

EXTENSION OF REMARKS OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES Tuesday, February 8, 1955

Mr. CURTIS. Mr. President, I wish to submit for the RECORD an article by Mr. Gardner Cowles which appeared in Look magazine on February 8, 1955. It pertains to a survey which I believe will be of interest to those who read the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

An overwhelming majority of American adults today accept—and endorse—the viewpoint that big business is a good thing for the country. Those who approve those who disapprove by a proportion of 10 to 1. This approval is strengthened to 1. This approval is strengthened to 1. because the majority can, and do, cite specific reasons for their attitude.

These are major findings in a nationwide survey recently conducted for Look by the Opinion Research Corporation of Princeton, N. J. The survey reached into 83 communities in all parts of the country and sampled the opinions of all political and economic groups. Those who answered constitute a statistically accurate profile of the United States voting population.

For a new Congress, it may be politically significant that the survey shows general satistaction with present laws regulating big business. The findings also establish that three times as many people worry about the power of big labor unions as worry about the power of big business.

Bigness in government itself causes concern to just as many people as does bigness in

business, the survey indicates.

Despite disclosing a generally favorable attitude toward big business, and an impressively large acceptance of the idea that it is good for the country, the survey provides no sweeping mandate for big business to extend its political or economic influence. As tables and figures which follow indicate, sizable groups have criticisms of some business methods—although not of the concept of bigness in business itself.

The Opinion Research Corporation report closely follows a period in which considerable attention has been paid by the press and some agencies of government to several mergers of sizable industrial enterprises. It was likewise a period in which some elements in the Congress were announcing plans for active investigations into mergers and alleged tendencies toward monopoly. Yet, only one in a hundred of all those surveyed raised any question voluntarily about mergers, and less than a fourth expressed any fear of a tendency toward monopoly.

The ORC report, however, speaks for itself, and readers may draw their own conclusions from the factual material here presented. It has been abstracted from a series of detailed

statistical tables.

This was the first question asked in the survey: "In general, do you think that big business has been a good thing, or not, for the country?" It produced these responses:

Perc	ent
Good for the Nation	80
Not good	8
Both good and bad	7
No opinion	5

This basic idea that big business is good. rather than bad, cuts across the boundaries of the Nation's accepted political and economic groupings.

Percent saying big business good

Perc	cent
Upper income	84
Middle income	82
Lower income	75
Men	84
Women	76
Republicans	84
Democrats	79
Independents	79
Union members	73
Nonmembers	81
	1.38

Conductors of the survey went beyond this general question to find reasons for the atti-They asked for volunteer tudes expressed. comments on what was good or bad about big business. They then presented a series of statements on each side of the question and recorded agreement with statements. Then they asked which 2 or 3 of the comments seemed most important in each case. Here are some of those findings:

1. Big business provides many jobs—37 percent volunteered this as the greatest contribution of big business; 63 percent ranked this among the most important factors; 90 percent agreed when the statement was read to them. It was the most important pro-business factor in all three measurements.

2. It lowers prices through mass production—25 percent volunteered; 41 percent ranked it of highest importance; 83 percent agreed.

3. It promotes research-12 percent volunteered the observation; 40 percent-the third largest group—called it a most important

factor; 87 percent agreed.

4. It is the backbone of defense production-only 3 percent volunteered this point about national role of big business, 27 per-cent ranked this in the most important factors; but 79 percent—the fourth largest group—agreed with it. 5. It helps the Nation's growth and prosperity—13 percent volunteered; 26 percent ranked it in the most important list; 79 per-

cent agreed with it.

6. It improves our standard of living—12 percent volunteered this comment; another 14 percent cited better wages and benefits, and 20 percent mentioned that it provided more and better products. Two out of three agreed that big business provided better wages and benefits, and 57 percent agreed on the benefits of mass production.

Against this background, the survey then sought out attitudes on the regulation of business. Two out of every three persons feit that present laws regulating business were sufficiently broad and strong, and more than half feit that these laws were being adequately enforced. Nearly two-thirds thought a good job has been done in regulating big business, and 3 out of 4 thought that regulation in the present form was necessary and proper.

In this connection, the comment of a beauty-parlor operator in Missouri was one of many which seemed to sum up the attitude found in the survey: "I see no reason why they should be broken up by the Government if they are not infringing the laws. Let the Government stay out. If the business is law-abiding, why should the Government interfere?" On the question whether big business should be broken up, 84 percent favored keeping a close watch on them, only 10 percent favored breaking them up.

Against the feeling that a good job had been done in regulating big business, only 35 percent felt a good job had been done in keeping labor unions under control, while 56 percent thought that big labor unions were getting out of hand and this attitude cut across economic and political lines:

	Unions under control	Out of hand
Upper income Middle income Lower income Republicans Democrats Independents	Percent 31 34 41 26 43 34	Percent 64 57 48 68 47 54

Principal fears about big business are: It may harm small business or it may abuse its great economic power. Volunteered comments showed that 28 percent felt that the pressure on small business was the greatest problem, 24 percent that big business tended to become monopolistic and 15 percent that it represented too much power. When similar statements were read to people, a majority agreed that these are the major problems arising from big-business operations.

But the chart above indicates a marked rise in the number of business enterprises in the country. In May 1954, The Survey of Current Business reported: "Some 55 percent of the 1945-51 over-all increase in employment was in firms with less than 20 employees. * * This group accounts roughly for 95 percent of all firms and about one-fourth of all paid employment."

As the table at right indicates, the public still holds many erroneous notions about big business. What seems most significant is that, despite these notions, there is that broad underlying acceptance of and endorsement of bigness in business. On balance, it would indeed appear that these public attitudes should have a thought-provoking effect on any groups which seek to make bigness in business a political issue.

Statements read by interviewer	People think state- ment is—		
Seatements read by interviewer	True	False	No opinion
Practically all big companies make at least 6 percent net profit on sales. Fact: In 1963, 52 of the 100 largest manufacturers carned under 6 percent net profit on sales; 16 of those carned under 3 percent.	Percent 67	Percent 20	Percent 13
2. Since World War II, auto prices have gone up more than auto-industry wages. Fact: Average bourly earnings are running 62 percent and average weekly earnings 71 percent over 1946 levels, auto prices 49 percent higher.	45	32	23
 Practically all big companies have more employees than stockholders. Fact: Of the 100 largest manufacturers, 55 have more stockholders than employees—General Electric, for example, has 248,000 shareholders versus 222,000 employees. 	65	23	12
 Growing big companies have cut down the number of small companies in last 10 years. Fact: U. S. Tressury statistics show number of small firms, in last 10 years, increasing at about same rate as large companies. 	60	25	15
5. Big companies usually make more profit on defense orders than on regular business. Fact: Precise statistics are unavailable, but financial statements of large firms certify that defense work is low-profit business.	66	21	13
 In industry, big firms do a larger share of the business than they did 15 years ago————————————————————————————————————	88	5	7
 Most oil relining in United States is done by 3 or 4 big companies. Fact: Latest census gives first 4 firms 37.3 percent of oil-refluing business, a ratio that has actually declined since the 1930's 	75	14	11
 The 100 largest corporations make more profit than all the others put together. Fact: They account for much less than half of total corporate income. In 1953, their share of total corporate income (net) was 33 percent. 	48	23	29
9. After paying all expenses and taxes, what percent net profit on sales would you say the typical corporation makes? 3 out of 10 persons replying could not guess. The median estimate of those who did was 14:1 percent net profit. Fact: In 1953, the average net profit on sales for all corporations was 3.3 percent. The 1929-53 average was 3 percent.			

The Situation in Asia

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1955

Mr. LEHMAN. Mr. President, on Sunday evening, January 30, Mr. Justice

William O. Douglas, of the Supreme Court, delivered a speech at New York University on a subject he knows well, and at first-hand—the situation in Asia.

In the course of that speech Justice Douglas made what I consider some very arresting suggestions. I ask unanimous consent that this important speech by one of the outstanding public figures of our time be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Asia these days is turbulent; and the turbulence can be expected to increase in the years ahead. There was a time when a gunboat could go up the Yangtze or enter some troubled Asian port and perhaps without firing a shot, quiet the troubled waters. Those days are gone—forever. For those days, which meant quiet and peace to the western world, meant oppression and exploitation to the East.

Asia is on the march. She is partly democratic, partly Communist. Both forces are strong—one symbolized by Nehru of India, the other by Mao Tse-tung of Red China. Which of those forces will in the end be dominant in Asia, no one knows. But it is fairly clear that any victory of the democratic forces in Asia will turn primarily on the Asians themselves. If Asia is saved from communism, the Asians must save it. If the tide of communism is to be turned back in Asia or checked, the Asians themselves must manage it. No western power can determine Asia's fate.

India, protaganist of the democratic faith, is in a dramatic race with Red China, champion of communism. Each nation is bent on raising the standard of living of its people through an industialization program. Red China is doing it the Communist way: India, the democratic way. What the western nations do at this critical point in history is, of course, extremely important. If, for example, India requests increased financial aid for her program, the West would aid mightily in the fight against communism by pouring the aid to India.

But the west is in no position to dictate,

But the west is in no position to dictate. The nations of Asia, though young, are intensely proud. They are bent on retaining their independence. They are extremely sensitive to any intimation or suggestion that they should do the bidding of any foreign power. They seek recognition among nations as equals. They are determined to be beholden to none.

One reason why the Asian nations are acutely sensitive is the inferior status they were accorded by the foreigner through the centuries. The Asians are the colored people of the world, long looked down upon by the whites, long under the domination of colonial powers.

That history has made them sensitive to criticism from the West; stubborn when ordered around; militant when their independence is even remotely threatened.

These emotions run deep in Asia. That is why great disaster rides on the tides now sweeping Red China and Formosa.

Chiang Kai-shek's army is a good one. I was with it on maneuvers in 1952. But it is old; it is small; it is limited. It would not be able to land on Red China's coast unless the United States Navy put it there; and it would not be able to stay on the Chinese mainland, unless the United States Army and Air Force kept it there. In other words, if Red China is to be invaded, the United States must do it.

Invasion of Red China would be the most disastrous adventure possible for America. The sacrifice of our men and the waste of our fortunes would be part of the disaster. China is so vast and so deep and so heavily populated that armies can be easily swallowed up. Every invader learned the impossibility of conquest.

But there would be more than military tragedy in a war with Red China. The presence of a foreign army on China's shores would have two instant results. First, China would become united behind Mao Tse-tung just as we would become instantly united, if an Asian army ever landed on the west coast. Second, we would squander at once most of our prestige in Asia, We would demonstrate by deeds that we

were bent on a program of military, not political action in Asia.

While an invasion of Red China would be sheer tragedy, a surrender of Formosa to the Communists would be equally tragic. I have said before and I say again that the leadership in Formosa represents the past that failed, not the future with its hopes. The leadership in Formosa has no major following in Asia. Asia marches under reform banners, not under the flag of the old Kuomintang. But Formosa nevertheless represents important values. It has important military values to us, in the sense that our position would be weakened if it were in hostile hands. But I do not speak of that. I speak of the great humanitarian values at stake in Formosa.

That island has about 7 million people. They are mostly refugees—some Christian, some not, but most of them good citizens of the world community. Though Formosa is more or less a police state, social and economic programs of reconstruction have gone ahead at a good pace. Those programs would in time have saved the mainland from the scourge of communism. And on Formosa they offer a fair measure of social justice to the common man so far as his livelihood and his health are concerned.

It would lie very heavy on our conscience if we surrendered those seven million people to the communist executioners either by agreement or by the act of forsaking them. The President's decision to stand by them is, therefore, the only course which we in good conscience could tolerate.

That course, however, is only the beginning of the problem. Unless we look beyond it to the possibility of an ultimate peaceful solution, we may have no alternative but all-out war with Red China. And as I have said, that would be the most disastrous event that could befall us.

Political solutions of the China question are, I think, not only possible but within reach if we start from the premise that there are today two Chinas-the China of Pormosa and the China of the mainland. The problem is to draw a line between them and get a guaranty of nonaggression from each with some sort of United Nations trusteeship over the intervening islands involved in the controversy, until the dispute can be amicably resolved. That at least is the starting point. From there on the problem involves settlement of the differ-ences between Red China and the West and the admission of Red China into the United Nations, not to take the place of the other China but to take another seat. That is to say, the ultimate political settlement of the China problem involves recognition of two Chinas and the grant of seats in the United Nations to both of them. That is, I think, substantially the British viewpoint. The fact that it's British does not, of course, mean that it is necessarily sound. But at this point of time in history the British attitudes and policies toward Asia have a realism we sometimes lack. For the Brit-ish Commonwealth not only has roots in Asia as well as in Europe and North Amer-ica It is multiracial as well. Today ica. It is multiracial as well. Today Churchill therefore speaks with more authority the world around than we can often command.

The Charter of the United Nations presently includes the Republic of China in the Security Council and that seat is held by Chiang's China. Some change in that arrangement would be necessary. India, Pakistan, or some other democratic Asian nation could be substituted for China or added as a counterpolse to China on the Security Council. Or the present China seat on the Security Council might rotate among the larger Asian nations.

The continued nonrecognition of Red China will mean constant turmoll and trouble in Asia. There may be continuation of the turmoil and trouble, even after Red China gains admission to the United Nations. But the situation will be more manageable with Red China in, than when she is an outlaw. As an outlaw on the outside she will gain stature as a martyr in millions of Asian eyes. Inside she will be forced to a more responsible role. With Red China inside the United Nations we all will have a better chance to observe how tightly tied to Soviet Russia she really is.

The bald truth is that Mao is in control

The bald truth is that Mao is in control of the mainland with no prospect for an overthrow of his regime. It is the historic policy of the United States to recognize regimes who are firmly in control of a nation whether we like them or not. Recognition does not mean, and never has meant, approval. Recognition merely means (1) an acknowledgment that a regime is in control of a nation; and (2) that we should undertake to treat diplomatically with that power.

The subject of Red China has long been a bugaboo in American public discussion. Discussion of the subject has been banned from some schools. Those who expressed themselves in favor of recognizing Red China were disqualified for certain posts. One's attitude on the subject almost seemed to be a litmus paper test of his loyalty. It is time to put an end to the rule of the black silence of fear. It is time we got rid of the bugaboo. It is time we faced the issue of Red China squarely. This is the hour to bring into plain focus all the fears and suspicions and problems concerning Red China and to resolve them by debate.

If we do not face them now, we may be swept into the cataclysm. The risk of the cataclysm is needless. For our political ingenuity working through the offices of the United Nations are equal even to the staggering problems of Asia.

Water Conservation Plan

EXTENSION OF REMARKS

HON. EARLE C. CLEMENTS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1955

Mr. CLEMENTS. Mr. President, a very excellent essay contest is being conducted in Kentucky by the Louisville Courier-Journal, the Louisville Times, and radio station WHAS, in conjunction with the soil conservation districts in the Commonwealth. This is the annual soil conservation essay contest participated in by the high-school students.

The fact that these essays are the work of our younger citizens is a good sign for the future. These young men and women show remarkable understanding of the vital part conservation plays in protecting the natural resources of our Nation.

The Rowan County News, of Morehead, Ky., in its issue of February 3, discusses this contest and reprints the winning entry in the Rowan County Soil Conservation District. The winner in this district was James Caudill, 16, of Elliottville, Ky. I believe James has written a very excellent essay, and to me it is a fine example of the many entries by students throughout Kentucky. I recommend a reading of it by my colleagues,

I ask unanimous consent to have the article from the Morehead newspaper regarding the prize-winning essay inserted in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARMER WISE TO FOLLOW GOOD WATER CON-SERVATION PLAN, DECLARES ESSAY CONTEST WINNER

(By John D. Alexander)

James Caudill, 16, son of Mr. and Mrs. John Henry Caudill, Elliottville, a student at Morehead High School, has been selected by the local soil-conservation district as the Rowan County winner in the annual soil-conservation essay contest sponsored by the Courier-Journal, Louisville Times, radio station WHAS, and the Rowan County soil-conservation district. James will receive a \$25 savings bond for submitting the best essay in the contest.

The Rowan County soil-conservation district also sponsored a second place award of \$10 and a third place award of \$5. The second place award was won by Carl Caudill, 15, son of Mr. and Mrs. John D. Caudill, Sharkey, and the third place award was won by Freeman Hamilton, 16, son of Mr. and Mrs. Frank Lewis, Smile.

The subject of the essay was, How Water Conservation Benefits My Community. A total of 66 essays were entered in the contest, The three winners were students of Morehead High School and are members of the local Future Farmers of America chapter under the direction of Herbert Webb, vocational agriculture teacher.

tional agriculture teacher.

The first and second place essays were submitted to the Courier-Journal, Louisville Times, and radio station WHAS for competition in the State contest.

The following essay, written by James Caudill, won first place in the Rowan County Soil Conservation District contest:

"HOW WATER CONSERVATION BENEFITS MY COMMUNITY

"Everyone should have a vital interest in water conservation. Water is so important that without it we would be unable to live. Without water our fertilizers would be worthless. We all are affected by the conditions of the water in the community. This should be for everyone. They should be willing to make whatever contribution they can to water conservation. Cheap food today at the cost of water will mean not only high-cost goods tomorrow, but malnutrition and inefficiency.

"The farmer who follows good water-conservation practices has a better standard of living. He participates in many community activities, has a better income, pays his taxes, and is able to make a greater contribution to his community. The farmer who falls to follow good water-conservation practices differs somewhat in his judgment of values. He gets in few community activities, pays a minimum of taxes, and seems to get little joy out of life.

"The people of our community are bound together by common interests and ties. The community uses water for fire protection, sanitation, irrigation purposes, recreation, drinking purposes, animal growth, and other uses. In order to have good tobacco, corn, hay, pastures, or anything else, it is necessary to have a good water-conservation program.

"To do a complete job of soil and water conservation, a farmer must control erosion. He must drain excess water from wet land that is to be used for crops. He must farm his land in such a way that the soil will not run together. He must keep a good supply of plant food and organic matter in the soil. He must handle irrigation water, where irrigation is used, in such a way that he will not waste water or damage soil.

"Pastures cannot be used to good advantage without a dependable supply of water for livestock. On some farms this can be provided by developing springs, and making use of streams flowing through the farms. Ponds are also very useful for recreational purposes.

"Irrigation is being used more and more as a tool in conservation farming. Irrigation guarantees early germination and continued rapid growth of fall seedings of winter cover crops on rotation cropland. It makes possible good production of forage crops in periods of dry weather. Irrigation is most profitable on fertile soils.

"The area of our county is small. Morehead is the county seat and community center. People buy necessities, pay taxes, work, and live here. Morehead serves all of Rowan County, and sometimes neighboring counties. There is some industry here, but the people of the community depend largely upon farming for a living. This makes water conservation very important to them.

"Our water comes from rain and snow. A part of this water soaks into the soil. This supplies springs and wells. The movement of water from the clouds to the land, from the land to the oceans, and from the oceans back to the clouds is known as the hydrologic cycle.

"The community has a medium water supply. The average rainfall for Rowan County is 46 inches per year. We have some underground water, which supplies wells. The community gets water from ponds, lakes, and water that is impounded. We also get some water from streams.

"The importance of watersheds and reservoirs has been brought to our attention with the coming of the Soil Conservation Service and other agricultural agencies. The watersheds of our community are relatively small. The main stream is the Licking River. Some of its tributaries are Christy Creek, North Fork of Licking, Triplett Creek, and North Fork of Triplett. A watershed is all the area from which water flows to a central point, It may be a few hundred acres draining into a small creek, or it may be a million acres. All the water from the Licking River and Ohio River drains into the Mississippi River, and it, in turn, drains into the Atlantic Ocean. Everyone in the community benefits from a watershed-protection program. The farmers profit from higher incomes per acre and improved yields. City people benefit from the higher purchasing power. A watershed-protection program also keeps silt out of lakes and reservoirs and helps maintain water supplies for industry and the homes.

"Frequent floods are caused by lack of a watershed-protection program. A watershed-protection program includes using each piece of land for what it is best suited. These practices include: Soil treatment, contour cultivation, sod waterways, cover crops, terraces, diversion channels, ponds, woodland conservation, and many other related practices.

"We should pay more attention to terracing and contouring. They reduce erosion. A contour is a line around a slope at the same elevation at all points. Terraces are constructed across a slope so that water will soak into the soil, as it flows slowly off the land. Water properly managed does not wash away our topsoil. We should sow our fields in cover crops to reduce erosion, take up available nitrogen, and add more organic matter to the soil.

"Our community is affected by mismanagement of water. One mismanagement of water is the pollution of streams. This makes water unsafe for use. Some people clear the hills and cultivate them, thus causing siltation of the streams. We should not

burn the forest or let livestock graze the woodlands. Protecting the forests will not only improve the woodland stand, but will also leave more leaves on the ground to hold water.

"Last summer people had a shortage of water. Many ponds were constructed because of a shortage of water. This shortage of water causes farmers to receive lower yields of crops and less production of livestock. This brings about a lower standard of living.

"Our lives, the growth and health of our communities, the growth of industry, our prosperity, all depend upon a regular supply of good, clean, and usable water. To live a healthy, happy life, to go boating, swimming, and fishing, we need good water."

Irrigation Brightens Dixie's Future

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Irrigation Brightens Dixie's Future," which appeared in Nation's Business magazine for February 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IRRIGATION BRIGHTENS DIXIE'S FUTURE (By Stanley Frank)

Irrigation that transformed western deserts into productive land is moving back to the South and Southeast to help fight prolonged dry spells in a normally heavy rainfall area.

Less than 3 percent of the tilled land in the United States today is irrigated. Yet it yields a fourth of the Nation's agricultural products. Southern farmers never thought they needed irrigation. They're now finding out that having water when it's needed can mean increased production and elimination of damage to crops by drought.

The drought that ravaged the South last year, the worst ever recorded, was a disaster forecast by Jim Eleazer with the fervor and conviction of a Biblical prophet.

Mr. Eleazer, a homespun South Carolinian, has been the most ardent missionary for irrigated farming in his section for a decade. Like other crusaders with long-range objectives, his warnings have been shrugged off as false alarms. Few men can restrain the impulse to crow "I told you so" when their vision is vindicated, but the fulfillment of his prediction gave Mr. Eleazer no satisfaction. It was a victory achieved at frightful cost. In his home State alone, \$120 million worth of crops withered on the vine in 1954.

"The tragic part of the whole thing is that irrigation could have brought profits 3 times greater than the losses," says Mr. Eleazer, agricultural information specialist at Clemson College.

"That figure is not guesswork," he says. Controlled experiments in Southeastern States have proved conclusively that irrigation triples, at the very least, the productivity of the soil.

All the money that went down the drain last year could have irrigated the 11 million acres under cultivation in South Carolina

if farmers had prepared for it a few years ago when times were good.

Cost of installing and operating irrigation systems in that region is negligible compared to costs in the West. "We don't have to bring water a thousand

"We don't have to bring water a thousand miles from distant snowfields," Mr. Eleazer says. "The Good Lord sends us ample rain. The trouble is it doesn't always come when we need it. Our problem is to conserve rain and draw upon it when dry spells threaten crops during critical growing periods."

Mr. Eleazer believes that something as

Mr. Eleazer believes that something as simple as digging a pond, or a big, open pit on every farm will do the trick. The water lost by seepage and evaporation will be balanced by the average rainfall, he says. "If that supply is not sufficient," he con-

"If that supply is not sufficient," he continues, "another cheap source of water can be tapped from wells. Although the water table is at an all-time low due to last year's drought, surveys show there is much better than an even chance of hitting an underground spring practically anywhere in the southeast. It's a sad commentary that our farmers had to pay through the nose before they were convinced that irrigation is crop insurance, but it's a lesson they won't forget in a hurry."

Irrigation, the new byword, is a strange word in the South. Every schoolboy knows the vital role irrigation has played in the development of the West and in the expansion of the national economy, but the South ignored the tremendous implications of the new water frontier opened beyond the Mississippi.

The fertility of vast western tracts which were barren 2 generations ago has been achieved at no expense to the Government. A common misconception is that western farmers owe their prosperity to lavish handouts from Federal agencies in the form of dams and watersheds built with public funds. Such is not the case.

Fully two-thirds of the 22 million acres now under irrigation are serviced by privately and cooperatively owned enterprises. The remaining 7 million acres are supplied with water from 69 major projects built by the Department of the Interior's Bureau of Reclamation and operated on a self-liquidating basis. Assessments vary with distance and terrain, but farmers pay an average of \$3.50 for every acre-foot of water used and they are charged about \$3 per acre a year to amortize construction costs.

Further, the tax revenue from land irrigated by Federal facilities has amounted to more than \$3 billion since 1916—a sum that exceeds by 25 percent the total cost of building and equipping the projects. The evidence is clear that irrigation is good business for all concerned.

In the past 50 years there have been two great revolutions in America's largest industry—mechanization and irrigation. The traditionally conservative South adopted mechanization, the more expensive proposition, but irrigation was considered unnecessary in an area singularly favored by indulgent nature.

Meteorologists call the region between the Mississippi and the Atlantic the rainfall belt. Compared to the rest of the country, it is. The average annual precipitation in the United States is 30 inches. Southern States average 50 inches of rain a year, apparently adequate for the inch of water a week which crops need for good harvests. The Appalachian Mountain Range, running like a spinal column from Alabama to the Canadian border, feeds an extensive network of rivers and streams. The South is in fine shape for water—but it's all a snare and a delusion.

"Official records of the past half century show that South Carolina averages siz

droughts a year, each lasting at least 2 weeks," Mr. Eleazer points out. "The figures for neighboring States are about the same as ours. It's a mortal cinch that one important crop a year will be ruined by a dry spell. But from time immemorial farmers have accepted crop failures as unavoidable hazards.

"That's utter nonsense. It's high time they took measures to protect their investments in crops. I shudder to think of the consequences if they don't. Long-range weather forecasters say we are heading for a period of prolonged drought. We had one of those cycles in the early 1900's and I still have a vivid recollection of the suffering it caused. I don't want to see a catastrophe like that again."

Southern farmers are not the only people who have been guilty of apathy and lack of foresight in failing to embrace the advantages of irrigation. Experts were guilty of the identical charge. They pulled a mon-umental boner when the Tennessee Valley Authority was created in 1933. Congress approved the construction of 27 dams for power, flood control and navigation in an area of 41,000 square miles-but not a single men-

tion was made of irrigation.

"It's incomprehensible that irrigation was not included in the TVA Act." comments D. S. Mitchell, chief of the Bureau of Reclamation's land and water division. added cost would have been a drop in the bucket, but everyone subscribed to the belief that supplementary irrigation was not needed in the South." Mr. Mitchell adds that another stumbling block was an old law restricting the Bureau to operating irrigation projects in 17 States west of the 100th meridian.

"That law is still in effect," he says, "but there is no question that it must be Every section of the country can amended. use irrigation sometime during the year. Farmers in the rainfall belt think they can do without it, but once every 4 or 5 years they're hit by drought-and they clamor for help. Right now, truck gardeners are put-ting on a big drive for irrigation on the Maryland peninsula, where it seems to rain

all the time."

The South's currently intense interest in irrigation stems directly from the efforts of two men. One, of course, is Mr. Eleazer. The other is W. B. Camp who, by Mr. Eleazer's own testimony, "is my mentor, sponsor, and chief inspiration."

A South Carolinian, Mr. Camp went to work for the United States Department of Agriculture after graduating from Clemson College in 1916. He was sent to Bakersfield, Calif., to make trial plantings of long-fiber cotton and promptly ran into violent opposition. Californians called cotton a "poverty crop" and

Wanted no part of it.

Today, the revenue from cotton exceeds California's combined income from fruit, the State's better-known product. The Kern County Land Company gave him a small plot of undeveloped land for the Shafter Experimental Station, however, and he began to raise cotton by irrigation.

In 1928, Mr. Camp left Government service to go into irrigation farming on his own. He now is one of the biggest farmers in the country with his bumper crops of cotton, potatoes, alfalfa, and sugar beets. ure of his success is that it costs him about \$6 million just to plant his potatoes.

In 1946, he returned to Clemson College in South Carolina for his 30th class reunion, an event that was to have a significant impact on southern agriculture. Disturbed by conditions in his home State, Mr. Camp decided to do what he could to raise the level of farm income among his old friends and neighbors, and he knew no better agency than irrigation, which had conferred such bountiful benefits upon him. He chose Mr. Eleazer, his classmate, to be his disciple and to spread the gospel of irrigation.

Jim Eleazer, the son of a poor country doctor, wanted a farm "so bad I could taste after graduation, but he had to settle for a job as county agent, keeping farmers informed of new developments. By 1941 he was known so well in the field that approximately 100 newspapers printed his weekly columns and a network of rural stations carried his weekly radio programs. During the war, Mr. Eleazer also ran the Clemson College agricultural information service in his spare time. He admits he had nothing more than an academic interest in irrigation until he was exposed to Mr. Camp's contagious enthusiasm, and then he went whole hog for it.

The crusade was launched with a \$15,000 donation from Mr. Camp for portable irrigation equipment to give demonstrations in South Carolina and adjoining States. Mr. Eleazer applied his knowledge to experiments on private farms and State agricultural stations. You don't have to hold a degree in agronomy or even know which end of a cow eats to understand the spectacular results achieved. The figures tell an eloquent story.

Two adjacent acres were planted with cotton at Clemson last spring. One, not irrigated, produced four-tenths of a bale worth The other was irrigated and produced 1.6 bales worth \$320. It cost \$100 to prepare the acre for irrigation, leaving a difference of \$140 in additional income. The differential will be closer to \$230 an acre, however, because irrigation costs are only \$10 a year after equipment is installed. In another experiment, at the Watkinsville Experimental Station in Georgia, an average of 742 pounds of seed cotton was gathered from an acre of irrigated land in 1952 against 253 pounds from fields watered only by rain.

W. N. Henderson, of Ninety Six, S. C., watered 1 cornfield 4 times in 1953, and got 110.6 bushels an acre. Another field, irrigated twice, produced 73 bushels an acre. A third field that was not irrigated at all gave 8.3 bushels of nubbins. Veteran farmers were flabbergasted when the national corn-growing champion of 1952 turned out to be 13-year-old Lamar Ratliff, of Baldwin, In a year of severe drought, Lamar grew 214 bushels of corn on 1 acre. He used irrigation.

Other experiments have proved equally astounding. W. D. Workman, of Timmons-ville, S. C., increased his tobacco yield by 498.7 pounds an acre with irrigation. In Kentucky, the tobacco yield was increased by an average of 561 pounds per acre on 42 farms in 19 counties.

Unmistakable evidence of an awareness of Mr. Eleazer's drive for irrigation can be seen and heard at every turn in South Carolina. At the Clemson House, where I checked in recently, I asked the bellman, who was obviously a student at the college across the road how things were going.

"Everything would be fine if it would only rain," the boy answered. "We won't have to worry about that in a few years, though. We won't have to depend on the weather when we have irrigation."

The following day the paper featured the prize-winning exhibit at the Anderson Fair, a model of a farm bearing the inscription: "Irrigation-The Missing Link." The Commercial Bank & Trust Co. of South Carolina ran, a page advertisement in the Columbia State urging the legislature to enact laws making water available for irriga-tion. "This bank and the other banks in the State of South Carolina have plenty of money to loan good, substantial farmers to buy irrigation equipment, if water can be provided," the ad read.

"Such measures must be taken to protect the farmer and the economy of the country," Mr. Eleazer maintains. "Irrigation insures the good harvests a farmer requires today to meet high costs of production. In the old days, all a farmer needed was a good, strong arm and a compost heap for fertilizer. If a drought wiped out his crops, he tightened his belt, his family wore patched clothes, he put off painting his house and maybe his children didn't go to school. He managed to tide himself over until the next year by selling timber or a few head of livestock.

"But those days are gone forever. farmer now has a heavy capital investment in machinery and improvements on his land. He no longer can afford losses. Farming is big business today. To realize his potential, a farmer must be assured of water when he needs it and irrigation is the only solution to his age-old uncertainty. Without it he faces the specter of ruin constantly."

Mr. Eleazer's argument is irrefutable. The farmer is a businessman, with an average investment of more than \$14,000 in land and property. That is somewhat more than the corresponding figure for many small retail

Research Foundation at Lowell Technological Institute, Lowell, Mass., Is Known as the Textile Bureau of Standards

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following material by Mr. James Nevin Miller concerning the work being done at the Lowell Technological Institute at Lowell, Mass., in testing textiles for the Department of the Air Force:

PULLING STRINGS FOR THE AIR FORCE-RE-SEARCH FOUNDATION AT LOWELL TECHNO-LOGICAL INSTITUTE TESTS PARACHUTE FABRICS BY ELECTRONICS TO LEARN BREAKING POINT

(By James Nevin Miller)

All over America Lowell Technological Institute is known as the Textile Bureau of Standards. The nickname is well earned. The institute occupies the No. 1 position in education in the fields of textile chemistry, manufacturing and engineering.

Tech also maintains one of the Nation's leading research foundations. Under the guidance of John H. Skinkle, a graduate of Massachusetts Institute of Technology, the foundation is investigating industrial and military problems relating to physics, biology, engineering and industrial economics in the fields of textiles, paper, leather, plastics, electronics and related areas of interest,

Take note of some recent achievements of the foundation while conducting safety research for the United States Air Force. standing is the development of a device that can measure shock forces built up when a truckload of supplies worth up to \$25,000 and weighing 100,000 pounds is dropped from Then there's a new test proan airplane. Then there's a new test pro-cedure that tells in a matter of minutes exactly how and why a piece of nylon fabric breaks and causes a parachute to open im-

For months the Air Force has been using various cushioning materials that are placed around aircraft "drop kits." The latter are boxes containing supplies and equipment, which are dropped from airplanes into remote areas. Sometimes complete truckloads weighing up to 60 tons are dropped and often the cost to Uncle Sam for a single load may exceed \$25,000.

Obviously, the cushloning material must be foolproof. For evaluating its worth, the Lowell researchers devised the shock-measuring machine. The only one of its kind, it analyzes samples up to 2 feet in diameter and 1 foot high at temperature extremes down to -60° F. and up to 160°. Impact loads in excess of 100,000 pounds have been recorded at simulated speeds up to 35 miles per hour. On the basis of the data now being obtained, the Lowell scientists hope they can help select the safest and best cushioning materials.

Used in connection with the shock machine is the standard testing device called an analog computer. This calculates and records the results of tests made in the shock machine. The device will do in 1 minute the complicated work that normally requires 3 scientists a full day to complete.

scientists a full day to complete.

The new test procedure developed for measuring wear and tear on nylon parachute fabrics uses an electronic-mechanical machine that simulates the effects of speeds and other factors that create friction on the parachutes and reduce their wear. James Sweeney is the top technician on this program. Under the method, he explains, a small piece of fabric from the main "um-brella" of a parachute is wrapped around a wheel. A piece of parachute shroud is wrapped over that, with a dead weight hanging from it. The wheel, with the two pieces of attached fabric, is then made to rotate at a speed of 50 miles per hour for 30 seconds. From the damage recorded on the fabric the researcher not only evaluates exactly how and why the fabric wears and tears but also the value of lubricants used in the fabric to give it special qualities.

The importance of such research scarcely can be exaggerated. For years the Air Force has been studying the improper functioning of parachutes caused by tears on the canopy and shroud lines. The big safety problem is to find methods of preventing such tears. Another aim is to develop new and more efficient lubricants. As soon as the Lowell research has been completed and analyzed, the immediate objective is to place parachute fabrics in wind tunnels and see how they stand up under the battering of strong winds that develop at simulated supersonic

speeds. Another new machine developed at Tech is one that measures the amount of static electricity in a piece of parachute fabric. The machine is so sensitive that it can record the breathing of a man 10 feet away. Static electricity may not sound important to the average person, but it always has been a headache to manufacturers of women's nylon slips. Sometimes during the manufacturing process the static gets so bad the materials cling to the machinery and damage the fab-Fibres and yarns also tend to stick together. The problem is even more serious to the air force because if a section of parachute is even slightly worn due to static electricity, the 'chute may rip apart and fail carry an airman to the ground.

Today the static electricity machine is being used mainly to evaluate a number of new antistatic agents used in parachute fabrics. It is airtight and can be set up for any desired temperature and humidity, as low as -30° F., and as high as 125°. Operator of the machine places a sample piece of fabric between two electrodes and in less than a minute is able to measure the electrical resistance of the sample, either in its original, manufactured state, or when impregnated with an antistatic agent.

Such are a few of the recent achievements of Lowell Tech's research foundation. It is performing valiant service for the Air Force, the Bay State, and the Nation. Kaiser Aluminum Grows

EXTENSION OF REMARKS

HON, HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1955

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial from the American Metal Market, entitled "Kaiser Aluminum Grows," which reviews the growth of the company since 1946, including the proposed plant at Ravenswood, W. Va.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KAISER ALUMINUM GROWS

The recent acquisition of an aluminum forging plant at Erie, Pa., by Kaiser Aluminum & Chemical Corp., and that firm's earlier announcement of its plans to build a sheet and foil rolling mill at Ravenswood, W. Va., attract attention to an industrial organization whose rapidity and solidity of growth are remarkable even in the aluminum industry—itself a phenomenon of growth among industries.

Growth is probably the salient characteristic of Kaiser Aluminum's corporate An instinct for dynamic and aggressive growth, tempered by an innate businesslike conservatism which causes the firm to consolidate its position in each area before moving on to new fields of endeavor, has enabled the company, in the brief span of 8 years, to establish itself as one of the major pillars of the Nation's aluminum industry. In the past 3 years the corporation has more than doubled its production. It now produces close to 30 percent of the Nation's total aluminum output and is constantly extending its fabricating activities into new fields. Or the record, there would seem to be a sound basis of fact for Kaiser's claim to be the fastest growing of the major aluminum producers.

An interesting feature of this company's growth pattern is that it reverses the historical direction of industrial expansion in the United States—Kaiser Aluminum has expanded from the West to the East.

From the firm's point of origin on the west coast, where it has corporate headquarters at Oakland, Calif., the center of gravity in Kaiser Aluminum's activities has shifted steadily eastward toward the Nation's biggest markets. The company's sales headquarters are in Chicago, a central position from which the firm can closely direct its competitive effort in the Midwest and East. With the advent of the Ravenswood and Erie projects, the bulk of Kaiser's operations now lie east of the Mississippi.

While Kaiser Aluminum's growth has been rapid, apparently each move has been carefully planned. The location of the firm's proposed Ravenswood sheet mill is a case in point. Centrally situated with respect to the great markets in the East and Midwest. the mill will be in the rapidly growing Ohio River Valley industrial area--an advantageous site for the many smaller aluminum fabricating firms that invariably spring up in the vicinity of a major producer's plant. Another advantage of this location on the Ohio River lies in the fact that Kaiser's huge Chalmette, La., reduction plant-the Nation's largest-is located on the Mississippi, providing a potentional transportation link,

The driving force behind Kaiser's growth has been a basic optimism with regard to aluminum's future. When the company, privately capitalized, entered the aluminum field in 1946 by leasing—and later buying—the Mead reduction plant, Trentwood rolling mill, and Baton Rouge alumina plant, many economists and industrial experts viewed aluminum's postwar potential with misgivings. "Aluminum will be coming out of our ears" was an expression frequently used to characterize the metal's market prospects. All these facilities had been closed at the end of World War II, and the Defense Plants Corporation almost despaired of finding a qualified firm willing to assume the responsibility of owning and operating them. Kaiser was willing to shoulder not only these responsibilities, but new ones. In 1947 the firm purchased a second aluminum reduction plant at Tacoma, Wash., and in 1949only 3 years after entering the aluminum field—it purchased, with private capital, the 3 originally leased plants.

Expansion and integration of these plants and diversification of their products began almost immediately, followed by planning for new facilities to keep pace with the rapidly expanding market for aluminum products. By 1949, also, the firm had established a rod, bar, and wire plant at Newark, Ohio, and was rolling foil in a mill at Permanente, Calif. In 1951 it began operating an extrusion plant at Halethorpe, Md.

Upon completion of these installations, a

Upon completion of these installations, a \$230 million facilities expansion program—again privately financed—was launched. It came to a climax with the completion of the Nation's largest reduction plant at Chalmette, La., and development of companyowned bauxite mines on Jamaica in the Caribbean.

Kaiser's primary aluminum capacity in 1946 was 216 million pounds. Today its annual capacity is more than 800 million pounds—nearly 30 percent of the Nation's total primary capacity. In addition, Kaiser is today capable of turning out 600 million pounds of aluminum mill products. Sales for the past fiscal year totaled \$226,641,000. The company employs approximately 13,500 persons who share a payroll totaling more than \$50 million. It pays \$10 million yearly in Federal, State, and local taxes. It spends \$88 million on purchases throughout the Nation. Altogether, Kaiser can view its past 8 years with justifiable pride.

Venezuela's Solidarity and the Campaign Against Petroleum Imports

EXTENSION OF REMARKS

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1955

Mr. FASCEIL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Americas Daily, of Miami, Fla., on February 2, 1955:

VENEZUELA'S SOLIDARITY AND THE CAMPAIGN AGAINST PETROLEUM IMPORTS

For some years a movement has been detected in a certain sector of the United States, with tendencies toward the restriction of foreign petroleum imports, which, if it evolved into a Federal law, would be disadvantageous to the Venezuelan economy.

During the last few months the campaign has been gaining momentum, and although it has not as yet found acceptance in the spirit of the leaders of public opinion and in Congress, the problem has been evolving in a manner that takes chances, for want of a better word, with the good commercial relations existent between the United States and Venezuela.

It is tremendously important to the Government and the people of the United States to have petroleum in Venezuela and that those wells be in full production, in the case of a military emergency and, in addition, so that Venezuela can export it and acquire dollars to permit it, as it is doing, to import great quantities of materials from the United States.

As soon as the crisis in the Far East took on preportions of grave danger, the Venezuelan Government manifested its solidarity with the Government in Washington and, above all, has emphasized their offer of na-

tural and strategic resources.

If, unfortunately, a third world war were to break out, a terrible but not discarded possibility, the Venezuelan petroleum which a minority in the United States would now refuse, would become extraordinarily and de-

cisively important in the defense of this country and the Western World.

It would not be fair, to say the least, to think about closing the doors to this Venezuelan product in time of peace, to later take advantage of it, as a matter of urgency, when the circumstances of war demanded it.

There is an overt contrast between the solidarity offered by Venezuela to the United States and the attitude assumed by a certain sector of the economy of this country which is exerting political influence, or trying to exert it, for the purpose of disrupting the Venezuelan economy with measures, which in reality, will benefit but little the economy of the United States.

On the other hand, removing the problem from the field of political solidarity and from its military aspect, it is well to emphasize that the economic advantages that might accrue to this country as a result of limiting petroleum imports could result in very bad commercial consequences for the United States. And that is so because drastically reducing the buying power of Venezuela, would of necessity imply reduction in the volume of imports made by that country from the United States, imports which reach many hundreds of millions of dollars per year.

Fortunately the movement to which we have referred has not been favorably received by the majority of the official circles in the Capitol nor by the President. On the contrary, the attitude of the White House has been clear in discouraging any measure tending to harm the economy of Venezuela or of any other Latin American country.

Statement by Mr. Charles P. Taft, President, Committee for a National Trade Policy, Inc., Before the Ways and Means Committee of the House of Representatives in Support of the Trade Agreements Extension Act of 1955, February 7, 1955

EXTENSION OF REMARKS

HON. JERE COOPER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1955

Mr. COOPER. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following:

There has been a simple pattern in the testimony on H. R. 1 over the past 10 days.

Those who have testified in support of H. R. 1 have included spokesmen for practically every large organization whose primary concern is with the national interest. The bill has also been supported by many individuals representing many industries or groups of industries. On the other hand, almost all of the testimony in opposition to the bill has come from groups which were worried about some particular product or some particular segment of their industry.

There have been allegations of specific injury calling for protection. There have also been broader-based attacks on the bill. Take the question of defense. The people in one fragment of the chemical industry, part of the watch industry, some segments of the petroleum industry, and some of the electrical industry have told you that more tariff reductions will hurt our defense production facilities. But Secretary Dulles and Secretary Wilson, who worry about our defenses on a full-time basis, have said that we need H. R. 1 to keep our defenses strong.

Consider the question of employment. The glass workers, pottery workers, fishermen, mine workers, and hat workers, have told you in effect that they are afraid some of them may loss their jobs if this bill is passed. But the national organizations of the CIO and the A. F. of L. and the Railway Clerks say that this bill will help American labor and will increase job opportunities. And the Secretary of Labor agrees with them.

Very much the same pattern has held in the testimony of business and other groups. Representatives from a score or so of different industries have testified that H. R. I is bad for their business. But broadly-based business groups, like the United States Chamber of Commerce, the CED, and the Committee for a National Trade Policy and the groups that represent just people, like the League of Women Voters, say that this bill is good for the national economy.

This distinction occasions no surprise to anybody. It is the same distinction that existed 10 years ago, in 1945, when the only previous debate on increased authority for the reciprocal trade-agreements program Then, as now, the pottery intook place. dustry, the glass industry, the organic chemical group, the glove industry, the hatters and others told you that the trade-agree-ments program would destroy them. Then, as now, the administration and the broad national groups representing labor, industry, and the consumer, denied it, and opposed the position of these industries. Then, as now, I stood here before this committee and urged the continuation and expansion of the reciprocal trade-agreements program. Many of you gentlemen behind the bench today were present then to hear both sides of the issue.

The plain fact is that few industries which have to face foreign competition like the idea. Except for the once rare but now more numerous business statesmen like John Coleman, Charles H. Percy, and Clarence Randall, not many are ready to agree that the foreign competition they face in this market may be good for them. Yet when they get off to one side, away from the worries and strains of their own particular businesses, and think of themselves as part of the whole American economy, most of them are driven to this only possible answer—that more foreign trade is good for this Nation, good for its foreign policy, good for its defense, good for its jobs, and good for its consumers.

This is one basic fact we should not lose sight of. Most Americans, including most businessmen, are for the continued gradual reduction of our tariffs. There have been Gallup polis, polls by the League of Women Voters, polls by Congressmen of their constituents, and other straw votes. The Gallup polls, like the others, show more Republicans for reducing the tariff than for raising it. I think it is fair to say that of those Americans who express an opinion there are twice as

many for the continuation of the program as are against it. In the Congressional Record for August 4, 1953, Senator, then Congressman, George Benner, of Ohlo, reported on a poll made of every elected Republican precinct committeeman and woman in Ohlo. In response to the question "Do you approve of the reciprocal trade-agreements program?", 3,330 said "Yes" and only 1,970 said "No." The most extraordinary poll, because it came last year in New England, which used to be the stronghold of protectionism, was the poll by the New England Council. The poll showed that 63.5 percent of the 800 businessmen polled were in favor of lower tariffs.

Though the leaders on both sides of this issue have not changed much since 1945, except perhaps for a little graying at the temples, the world in which we live has changed a great deal. Time has proved that we who spoke on our side of the debate in 1945 were better prophets than those who opposed us. Although our imports of goods, as greatly feared then as now, have increased from \$3.9 billion in 1944 to \$10.9 billion in 1953, our gross national product has in the same period increased from \$211 billion to \$364.8 billion and our employment to record figures. Our exports have risen again well above the wartime lend-lease levels to \$15.6 billion in 1953 and contributed substantially to our high employment and prosperity. If the reciprocal trade-agreements program has hurt us, it has been a hurt very well concealed.

THE OPPOSITION RECORD

I don't for a moment want to leave the impression that some of the industries that have spread their complaints before you over the past 10 days don't have problems. Of course they have problems. In some cases the problems may not be quite as serious as they would have you believe. For sick industries, some of them have displayed an enormous amount of vitality, tenacity, and financial resources in attempting to defeat H. R. 1.

To be sure, some of these industries, like the chemical, electrical, and cotton-textilegoods producers, may be confusing sickness with growing pains. The spectacle of these enormous, vital industries threatened by a trickle of foreign imports is a picture which defies belief.

They are still as much prophets of gloom today when they talk about tariff and the effects of its possible reduction as they were in 1945.

In 1945 Mr. Rose, of the American Tariff League, described the bill for new authority, a possible 50-percent cut from then existing tariff levels, as involving "the possible breakdown of the American market, American price structure, American wage level, and American living standards by opening the gates of this country to widespread competition with the products of other countries 'with the thing we grow or make in this country.'"

On November 5, 1953, in a statement to the Business Advisory Council, Edgar Queeny of Monsanto wrote just what he and his associates have told you here:

sociates have told you here:

"Should not the United States freeze present duties until their full effect in a surplus economy can be observed? For, even at their present level, our adverse balance during the first 6 months of 1953 indicates that before too long we may again see apple selling by the unemployed during this Republican administration, too."

This is the official position of the opponents of H. R. 1 in 1955 as it was in 1953 and 1945. On January 26, Mr. Anthony, of the American Tariff League, said here that the President's program includes the ingredients of general economic distress which could help set off a downward trend in the national level of prosperity.

tional level of prosperity.

These people, for all their extraordinary business record since 1945 and their optimism in their annual statements to stock-

holders, are professional pessimists when they talk to Congress about tariffs.

Mr. Calvin Campbell of Dow, about the same time as Mr. Queeny's statement of 1953, said in a speech to the American Tariff

We know that in isolated instances we excel in technology or other advantages to a degree sufficient to offset the wage differen-tial."

THE CHEMICALS INDUSTRY

Now really. Would you believe that with such a poor opinion of the strength of our economy and of their own industry the chemical industry would put into new plants in 1954 \$1.2 billion and project \$1.5 billion for 1955? But that they did, and it is better evidence of their real judgment than what they feel and say here about the tariff and its effects. They produce annually \$20 billion of goods and chemical exports for the first 9 months of 1954 were running at the annual rate of \$894 million excluding special military items, against only \$242 million of imports. They have grown 10 percent a year for 25 years, and developed more than 7,500 new products in that period.

Mr. Campbell and Mr. Queeny and Mr. Lehner are more concerned about synthetic organics. Very well. The total production in this category was about \$4 billion, of which \$300 million was exported in 1953 against only \$50 million imported. Mr. Lehner admitted to you that in the coaltar-chemical category of synthetic organics, where, incidentally, exports still exceed imports, no more than \$10 million in 1953 was competitive under Tariff Commission deter-A recent check of Tariff Commission data shows that the accurate figure for competitive coal-tar-chemical imports was only \$5.8 million in that year.

This is a price question, not one of taking away business. Here is what a purchasing agent of one of the smaller chemical companies told his own industry a few weeks

ago:
"The howls against chemical imports are even more ridiculous than those of the sick coal industry against imported crude oil. Imported oil is a tiny fraction of the problem, but it makes the best headlines. What the coal industry really wants is a return to steam locomotives, no gas pipelines, lower wages, and subsidized exports. It has done a notoriously poor job of uniting to find new uses for coal and it seems determined not to face the future problem of atomic energy. The healthy chemical industry should devote less energy to fighting a few imports and more toward new production techniques or superior competitive products where imports are a threat. And, to give due credit, ultimately American manufacturers do meet the threat by lowering their prices, revealing their excessive profit margins, and claiming that they were about to do so anyway. (Just between us purchasing agents, of us know why the prices come down.)

"Incidentally, some of those who rail against imports of chemicals have been remarkably avid in importing new chemical ideas from abroad, to the certain detriment of less alert competitors. Synthetic detergents came out of Germany two decades ago. Thorazine originated in France. polyurethane is a powerful newcomer from Germany which promises to make deep inroads into the foam-rubber business. My own company has felt the competition of reserpine, an importation from India. Instead of yelling to Congress about how our business has been hurt by this 'foreigner,' we are rushing development of new specialties of our own which we believe will be even more effective. Like the rest of our industry, we are constantly searching around the world for new ideas to relieve the ills of mankind. That's competition and that's progress, and the beneficiary is the American citizen's comfort and his pocketbook.

"It is to your own self-interest on three counts to keep international competition active. First, as purchasing agent for your own company, your job should be to lower your company's costs in any legitimate way you can while insisting on the triple standard of quality, service, and price. If you haven't the courage to combat the arguments of the 'one-standard-all-American-price' boys, you will do your management a favor by resigning and letting your secretary copy prices from vendors' catalogues and the Oil, Paint and Drug Reporter. Your self-interest also requires that you keep American competion alive as protection against foreign monopoly, and most experienced purchasing agents don't need to be told how to distribute your purchases to keep them all bidding."

THE ELECTRICAL INDUSTRY

I don't need to add much about the electrical industry. Its production reached \$17 billion in 1953 and it exported \$800 million in that year. Imports were a little over \$50 million, or one-third of 1 percent.

As to electrical equipment for power plants, the domestic industry still retains considerably over 98 percent of the American market. Phil Reed told this committee last week he was particularly concerned about sales of foreign equipment to the United States Government, and pointed out the very great difficulty the American industry had in competing with foreign producers.

It seems to me there is one extremely significant aspect of this situation which has not been emphasized. That is the matter of economy to the United States Government which merely having foreign bidders in the picture appears to afford. In the case of the eight large generators for the Dalles Dam. the General Electric bid was over \$1½ million below that of the nearest foreign bidder— English Electric. In the case of generators for Chief Joseph Dam, after the first bids were thrown out, Westinghouse secured the contract with a reduction of \$716,000 from its original bid price, or a reduction of about 14 percent.

One is forced to wonder whether it is not the pressure on profits which causes leaders of the heavy electrical equipment industry to testify against foreign competition rather than pressure on costs. These two cases make one believe that United States industry can in fact compete on this kind of equipment if it is forced to. In any case, as was admitted by Messrs. Reed and Price, this is not a tariff problem. Tariffs on heavy elec-trical equipment are only 15 percent ad valorem and H. R. 1 would, at the maximum, bring a reduction in duty of 2.25 percentage points in 3 years.

FREE ENTERPRISE AND COMPETITION

Do these men really understand what free enterprise means as an American institution? It means competition. It certainly does not mean a domestic monopoly of the American market. Of course we believe in policing our domestic competition here, but since when have we ceased to compete domestically in standards of pay? Wages are low elsewhere because they can't produce as efficiently or at as low costs. We stay ahead on know-how and ingenuity with high wages Do you remember your Kipling? Here the skipper of the Mary Gloster:

"They copied all they could follow, But they couldn't copy my mind, And I left 'em sweating and stealing A year and a half behind."

Americans worry about foreign cartels. Cartels are not progressive. The cartel mind tries to eliminate risk taking, which is an essential part of the free-enterprise system. Is there not perhaps a little of the cartel psychology involved in an unwillingness to

meet competitive pricing?

Free enterprise depends on free choices and flexibility and mobility, not on fixing the pattern forever. Robert Calkins, president of the Brookings Institution, put it right 2 weeks ago. "No settling down to established practice is in sight. Instead wave after wave of technological innovation is in prospect." The president of the Methods Engineering Council of Pittsburgh said the same thing 2 days later and applied it to the tariff. While conceding that tariff protection is sometimes necessary on a temporary basis, he main-tained that "a tariff which permits a company to do business without the necessity for improving its methods is a dangerous expedient.'

Free enterprise depends on integrity, too. That is not promoted by phony statistics to prove that Great Britain, for instance, is a high tariff country. The United Kingdom imposes its tobacco and gasoline taxes at the time of import of the raw materials or finished product. This is not a protective device or trade restriction at all, but a revenue producing measure, such as the United States taxes tobacco and gasoline for revenue. If you take these taxes out, the United Kingdom tariff average, even on the American Tariff League basis, is 4.6 percent, lower than ours at 5.6 percent.

HOW HIGH IS OUR TARIFF?

Calling our tariffs "low" depends upon ignoring what is kept out by the tariff. Below there is a table showing the rates on some important chemicals with their 1952 import figures in dollars, which indicate how prohibitive rates keep out imports.

	TABLE I		
Tariff para- graph	Tariff schedule and com- modity (commodity description abbrevi- ated)	Value of United States imports, 1952	Rate in effect on Jan. 1, 1953, or ad valorem equivalent thereof

PROBLEM AREAS

Many industries do have problems. don't know that hand-blown glass should be put down so much as an industry. Is it not rather an art? As such it competes not on price but on prestige and taste. The tariff can't help it much; it would take an embargo. Are we going to embargo prestige and taste and art that belongs to foreigners?

Nobody could deny that the hat industry has been plagued by the insistence of American men and women on going bareheaded. Do we therefore put an excise tax on bare

The coal problem, like that of the wool textile business, is the problem of a sick industry. Let us by all means do all we can to help each cure itself. But let us have all the facts, not the selected ones which coal spokesmen and their auxiliaries bring to this committee.

Let me give you a few basic ones. 1947 was the all-time peak production year for bituminous coal. Since 1947, through 1953, bituminous coal demand has decreased by 155 million tons.

What was the composition of this decline in demand? Bituminous lost: (1) 82 million tons in railroads, largely to diesel oils; (2) 38 million tons in space heating to natural gas and light fuels; (3) 35 million tons in exports; (4) 29 million tons to other industries.

Coal consumption in public utilities increased 26 million tons. There have also been minor gains in other categories. Com-Pared to this coal loss of 155 million tons in 6 years, heavy residual fuel oil consumption increased by only 11 million tons equivalent over the same period. Six million tons of this was in public utilities where coal consumption increased by 26 million tons.

In the face of that record, how can the President of the Pennsylvania Railroad come in here and blame residual oil for anything? His answer to Mr. Mn.Ls on this implied that he would not mind the injury to the coal business if only residual oil were domestically produced; that domestic products in the last analysis were to be preferred to foreign, irrespective of price and convenience. Are these his instructions to his own purchasing agents? Doesn't he support foreign trade at all? Has he ever added up the exports and imports which his railroad carries in and out of New York, New Jersey, Philadelphia, and Baltimore?

Residual oil is not "dumped." Over a period of 7 or 8 years, except for 20 months total, the barge-delivered price of heavy fuel oil in New York Harbor area was higher on an equivalent basis than barge-delivered coal. The prices fluctuated independently. The coal people have never made any request to the Government under the Antidumping Act.

There is no evidence that shutting out residual oil helps coal. In the first 10 months of 1954, use of residual oil by public utilities reporting to the Federal Power Commission dropped 21.4 percent from the prior year, coal increased 1 percent (more than accounted for by new facilities), and natural gas increased 13.6 percent.

Shutting out residual oil definitely hurts American manufacturers in 30 States employing 30,000 people in manufacturing for export to Venezuela. They send \$170 million of goods paid for by the 80 percent of Venezuela residual oil imports that would be excluded by the proposed 5-percent quota.

So far as national defense is concerned, existing mines by going to a full week without overtime could add 150 to 200 million tons of coal a year. With all the shifts that have taken place to oil and gas, even with our present industrial capacity, 400 million tons of bituminous in 1954 plus 70 million tons is ample for war needs. According to the latest Bureau of Mines data. current capacity in the bituminous industry actually is 670 million tons.

The real employment problem in coal mining is the turn to strip mining, which accounts for fully 25 percent of total bituminous production. This is a technological change opposed as vigorously by the United Mine Workers as is the importation of residual oil, but with less publicity. This is because strip mining employs many fewer people, and has no place for most of the skills of deep miners. In fact, of the 142,000 out of work since 1947, the loss of 85,000 can be attributed to improvements in technology and productivity. How much of this is better machinery in deep mines and how much strip mining, is a question the coal people had better answer to this committee. At least it is not imports of residual oil.

In addition I found out last week that the mines in southern Kentucky and Tennessee, on the Southern Railroad at least, had no competition from residual oil since the last reduction in freight rates down

The other industry that is often called sick is textiles. This is another case where we need to look at the facts. There is not one textile industry but many, and only a few are sick. Woolens and worsteds and carpets have been sick. Cottons and synthetics have not. We export 6 percent of our production of cotton textiles and import the equivalent of only one-half of 1 percent. In cottons, the great middle area has no important competition. Only in very high grade specialties and in the very cheap lines has there been any particular effects from imports.

For support of this last statement I quote Matthew J. Cuffe, president of the Textile Export Association in a speech to the American Cotton Manufacturers Institute at New Orleans on April 23, 1954. In the so-called middle ground, he said, United States cotton textiles cannot be surpassed in price or

"There are no mills in the world which can produce denim, percales, chambrays, vatdyed twills and drills, corduroys, sheets, towels, and other items at prices equal to ours when quality factors are taken into

consideration."

The best labor union economist in the business told me the same thing a year ago. Our cotton textile industry is the most efficient and most innovating in the world. Any temporary advantage in wages abroad will not upset the industry.

The synthetic textiles are even better off. As to most countries trying to send staple textiles here, their textile industries have been built up as part of a colonial system and they are not efficient. The number of European textile workers has shrunk greatly and is still shrinking. A United Nations report published in Geneva on Monday a week ago confirmed this. The director of the study also confirmed my main point to this committee that the capacity of economic systems to change is one of the main determinants of their capacity to grow. Protecting the status quo by using tariffs is stagnation and death, not American growth

and success.

Wool textiles are in a different status. They have been badly organized. There were many old inefficient mills which had to be reorganized. Synthetics hit them hard. From 1947 to 1953 there was a decline in sales of men's woolen suits of 7 million units. High protected wool prices, fluctuating widely, aggravated a bad situation. The rash of mergers in the last year has helped; the last and one of the most important of these was announced last Friday. The conclusion from all this is that the manufacture of woolen textiles must be done in integrated companies which can adjust flexibly to consumer tastes and de-They are now moving fast in that direction and the prospects are good.

would agree that reductions tariffs should be aproached cautiously, but the approach should favor efficient operations. This is exactly what H. R. 1 would do.

HIGH PRODUCTIVITY VERSUS LOW WAGES

Since they cannot demonstrate actual injury, the opponents of the bill shift to arguments about the threat of injury in the future. At the center of their position is the age-old slave-wage argument. You all know that one too well for me to add anything. But let me say a word, anyhow. There are a few cases in which foreign in-

dustry, operating with cheaper labor costs, has managed to overcome all of its other obstacles and has undersold its American competitors in this country. In the few cases in which this has happened it has represented a real triumph of man over his environment. For the European competitor of the American manufacturer starts with close to three strikes against him. In many European industries cheap labor is not cheap at all, once the manufacturer calculates his costs on a unit basis; it costs very little by the hour but often costs a great deal by the piece. In every industry, the European pays 2 or 3 times more for his capital than his American competitor. In every indus-try, his power costs are higher; in most industries, his raw material costs are higher, too. Almost universally, he does business on a scale so small that he cannot begin to equal the economies of his American competitor. And, finally, he often operates in an environment saddled with the restrictions of cartels, where the incentive to cut costs is weak and diffused. His wage costs are multiplied by fringe benefits, too. With these handlcaps, the European who can match our prices in our market is a man to be admired.

In any case, for every case in which a European industry can match our price here, there are a dozen which run the other way. Scores of American industries, big and little, have been able to outsell Europeans in their own home territory and in third-country markets. Our export figures already referred to are a conclusive demonstration of the position of American industry abroad. The fact that foreign countries have had to ration the dollars which their citizens use to buy our goods only emphasizes how much our goods are demanded and bought.

THE CONCEPT OF RECIPROCITY

Ten years ago and again in 1948, when I appeared before this same committee, there was a great deal of discussion as to whether

this reciprocal-trade program was really "reciprocal." There is even more discussion

of that point today.

As far as I am concerned, I think that the record of the last 10 years bears out the most optimistic expectations as to the response of other countries to a reciprocaltrade program. Look at the facts. Ever since 1945, there has been what

Ever since 1945, there has been what amounts to a universal tariff truce throughout the world; there have been none of the outbursts of tariff wars that sporadically used to rock the world's trade between the two great wars. More than that, well over 50,000 items in the tariff laws in more than 40 countries have been reduced or prevented from increasing under this program.

It has become fashionable to say that other countries' tariffs don't really matter; that quantitative restrictions and exchange controls have taken their place. This is a substantial overstatement of the case, of course, since some of our biggest customers, such as Canada and Cuba, do not use quantitative restrictions and others, such as Swit-

zerland, use them sparingly.

But let us have a close look at the picture on quantitative restrictions. In 1946 practically every nation on the globe except the United States was maintaining extremely tight quantitative restrictions on its imports. Most of them had no choice; they had to use their scarce dollars to buy American cotton, wheat, oil, and machinery, even if it meant denying their citizens other American products they also wanted.

Since 1946 there has been an extraordinary change in this picture; the change has come about by little unspectacular steps, by slow and cautious measures, but its total impact has been little less than revolutionary. Whereas close to 100 percent of our exports in 1946 were subject to quotas and import licensing restrictions, I would judge that half our exports—perhaps even more—are now free of such restrictions.

The trend began with Canada, In 1948 the Canadians dropped the quantitative restrictions they had been using to ration their scarce dollars and invited United States

goods to come in without license.

The next major steps took place in 1951 and 1952, when Belgium first began to relax its import restrictions against dollar goods on a broad scale; today the Belgians have just about wiped out the extensive system of restrictions they had 4 years ago.

In 1952, the dismantling process moved a

In 1952, the dismantling process moved a great deal faster. The U. K. paced the process when in the fall of 1953 it authorized unlimited imports of wool, wheat, and grains, then followed up by freeing copper, lead, zinc, and many chemicals from import restrictions. In 1954, the U. K. went so much further in the process that by the end of the year 50 percent of its trade with the United States was free of restrictions.

In Germany, Holland, Italy, Greece, and other western European countries, very much the same process has been taking place.

Now, I am not sure how one goes about measuring "reciprocity" precisely in the trade agreements program. But this much is clear: other countries have made substantial reductions in their tariffs in return for the tariff reductions we have made. More recently, they have taken major steps in scrapping the system of quota restrictions which existed at the time we entered into our agreements with them. On our side, to the contrary, the trend has been the other way; we have more quota restrictions on imports in effect today than at any time since the end of World War II. If these trends continue, the case of unreciprocated concessions may more frequently be made by other nations than by us.

DEFENSE ARGUMENT FOR PROTECTION

Although our committee fully supports the necessity for such protection of defense industries as may be really required, I have not said much so far about the relation of this problem to the trade-agreements pro-A few additional words do need to be said. First, the Symington Amendment to the present act remains in force, stipulating that no duty should be reduced if the President finds that such reduction would threaten domestic production needed for projected national defense requirements. That places the responsibility for taking into account national security considerations exactly where it belongs-with the President, his National Security Council, and his Department of Defense, which are primarily and directly concerned with these matters.

But beyond that, nobody is really sure what the right defense-mobilization base may be for an era of thermonuclear warfare. It is not clear to me, and I do not apologize for my ignorance, whether we are better off relying on plants concentrated in the industrial areas of the United States, or on plants scattered throughout the free world to supply the needs of ourselves and our allies if we are to meet this strange new type of warfare. I am not even sure whether a mobilization base will be a meaningful concept any more in such a war, or whether we shall simply have to make do with the material at hand after one great initial strike.

However, if we can afford to think of a mobilization base in conventional terms, then the question is whether the tradeagreements program helps or hinders the development of such a base. On that score, this committee has heard a succession of claims from sections of one industry or another that its particular plant and its particular set of skills are crucial to the conduct of warfare and that foreign competition is squeezing out its plant and its skill.

The one major mistake this Nation could make in mobilizing itself for modern warfare—convention or otherwise—is to compartmentalize its skills. If another war should ever occur, even the most optimistic of us will have to assume that our plants and industries will be cruelly bombed. Crucial plants may be razed; transportation facilities disrupted.

The experience of Germany in World War II, as disclosed by the Strategic Bombing Survey, taught us one major lesson in the conduct of that kind of warfare. Nations can get on with next to nothing in resources, provided they have versatility and flexibility in their industry; they can substitute and made do so long as the general level of their industrial skills and engineering and executive abilities is high.

This is the antithesis of the pattern into which we would be pushed if we were to succumb to the pressure of protecting every little pocket of specialized industry, every little branch of specialized skills. The one thing we cannot afford to do is to allow the extraordinary talent in our chemical industry, our electrical industry and our machine-tool industry to grow soft under easy competition. On the contrary, every American skill should be constantly exposed to the best competition the world can bring to bear against it. Every stimulus should be encouraged to find new ways in American industry of making better products at lower costs. I am confident that American industry, by and large, will meet most of the challenges thrown in its way by foreign competition. Whether it meets the challenge or not in each individual test, America's knowledge and strength will be enhanced in the process of trying. If we insulate ourselves from the impact of foreign competition, the smugness and dry rot of protected industry will sap our strength without our even being aware of the process.

While I am on the subject of America's defense, let me say a word about Japan. I cannot for the life of me understand the callousness with which some of us approach the problems of trading with Japan. A few

days ago, the American Congress gave the President the power to go to war if necessary in order to protect our outposts in Formosa. We look on the maintenance of this island—rightly, I think—as so important to our future that we are willing to risk our national life to retain it.

But there are more ways than one of losing an island. If Japan goes over to the other side—or if Japan decides that she has to play economic ball with both sides of the Iron Curtain in order to live—we will have lost an outpost more important than Formosa. Yet there are those who urge that this risk ought to be taken in order to preserve America's knit-glove industry and the handkerchief lines in our textile mills. I do not think that our knit-glove industry or our handkerchief lines will disappear in the face of Japanese competition, but, even if they did disappear, the plain fact is that it would be far better to lose them than to lose Japan.

Civil Defense Faces New Peril

EXTENSION OF REMARKS

HON, RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. BOLLING. Mr. Speaker, in connection with House Concurrent Resolution 66, which provides for a joint committee to study the feasibility of industrial and urban dispersal as a means of defense against H-bomb attack, there follows an article by Ralph E. Lapp, which appeared in the Bulletin of Atomic Scientists for November 1954. In language understandable to the layman, Dr. Lapp discusses radioactive fall-out, that new and little understood threat to the human race:

CIVIL DEFENSE FACES NEW PERIL (By Ralph E. Lapp)

On March 1, 1954, chalk-white dust fell on 23 Japanese fishermen 72 miles from Bikini. It took 3 hours for the pulverized coral to start falling-out from the air and coat the Lucky Dragon tuna ship with a mantle of radioactive debris. However, it was not until late this summer that the Federal Civil Defense Administration felt the impact of "fall-

Q-cleared officials in FCDA were briefed on the nature of the fall-out. They were shown colored charts with neat elliptical contours describing the range of lethality of the residual radioactivity from superweapon explosions. Up to this point FCDA had worked and thought mostly in terms of circles—the symmetric patterns of primary damage from superbombs which the Bulletin published last month. Now superimposed upon the great circles of H-bomb blast and heat, there were zeppelin-shaped ellipses which stretched far beyond the circles of primary damage.

These ellipses stunned civil defense planners. By a major shift of policy they had replaced previous "duck-and-cover" or "stay put" planning by a policy of preattack evacuation which dispersed metropolitan populations beyond the inner circles of near-total and heavy blast damage. Gov. Val Peterson, as head of FCDA, made the policy switch once he took a good hard look at the blast and heat effects of our MIKE explosion of November 1, 1952. What Governor Peterson realized very clearly was that

Footnotes at end of speech.

MIKE was not the last word in superweapon development. Indeed, a weapon twice its power was tested in the March-April CASTLE series of tests in the Pacific in 1954. Moreover, this weapon was a bomb, not a "device"—meaning that the United States now possesses a droppable bomb in the range of 20 megatons.

Faced with the prospect of corresponding weapons in the Soviet arsenal, Governor Peterson recognized that too much of America's metropolitan population resided inside the 14-mile radius of the superbomb's punch. It was sheer suicide, he reasoned, to put 35 million Americans in the sitting-duck category. This is the simple background for the policy of evacuation which is now being implemented.

It was at this point in the evolution of civil defense policy that "fall-out" descended upon civil defense planners.

Now radioactivity was not a new wrinkle to the planners. The Baker shot of a 20 kilotron bomb in the Bikini lakoon in July of 1946 saturated the mushroom cloud with awesome quantities of radioactivity. lions of tons of salt water were erupted into the air and a misty radioactive steam surged across the lagoon surface. An egg-shaped ellipse about 3 miles in length constituted the lethal area of this radioactivity. area was not comparable to that of a metropolis, so as time went by radioactivity as a menace shrunk to less formidable propor-tions in civil-defense planning.

The dimensions of the superbomb "fall-

out" greatly exceed those for a 1946 A-bomb explosion. Unfortunately, the exact or even rough forecasting of these dimensions is subject to a number of uncertainties. These can be appreciated by describing the fall-out from a superbomb detonation. When the bomb explodes there is a flash of penetrating radiation consisting of neutrons and gamma rays. Fortunately, the area subjected to lethal bombardment by this primary flash is small compared with that affected by the heat and blast of the explosion. Although altitude-dependent, the area is much less than that of total destruction from the blast

Once the bomb explodes and the heatblast waves have run their course, we have to consider the fate of the bomb cloud. If the bomb is burst high in the air so that there is no significant cratering effect, the bomb cloud will contain only such surface debris as is sucked up into the ascending column. In this case, the cloud radioactivity consists predominantly of split uranium or plutonium atoms (technically called fission products) which are intensely radioactive. Two factors take their tool in reducing the menace of this activity. One—the high velocity upper air winds disperse the fine (usually invisible) particles in the bomb cloud so that they are dispersed over a very large area before they finally settle out and to earth. Two-radioactive decay sharply reduces the activity on the following

time schedule:	
	Radioactivity
Time (after burst):	(arbitrary units)
1 minute	1,000,000
1 hour	7, 300
1 day	162
1 week	
1 month	3

Assuming that there were no mass deposits of radioactive debris in the early history of the bomb cloud, then we would have to relegate the problem of cloud activity to the controversial area of global atmospheric contamination and human genetics.

Superbombs which burst close to the surface present quite another problem. In this case, the 31/4-mile-wide fireball of a 10-mega-

ton bomb introduces a radically new factor into the fallout equation. Much of the sub-stratum below the exploding bomb is dislodged and volatilized into particles impregnated with radioactivity. In addition, some of the elements in the substratum may become radioactive by the primary penetrating radiation from the bomb. Sodium in sea water, for example, is easily activated (made radioactive) and can become a hazard. The pulverized substratum is funneled unward much in the manner of a cyclone. In this way, the coral and sand of a low-lying Bikini atoll island were sucked up into the bomb

As is well known the cauliflower cloud mushrooms upward to a height of over 10 miles in about 12 minutes. The characteristic 40- to 60-knot winds of the stratosphere then distort the mushroom in a downward direction. At this point the difference between a high air burst and a low one becomes significant. The subsurface particles tend to fall out from the bomb cloud early in its history because of their massiveness. Fall-out of up to 50 percent of the radioactive debris occurs in the first 24 hours with the maximum activity being deposited

in the 1- to 3-hour period.

Estimation of the area of serious-to-lethal fallout involves many unknowns. First, there is the power of the bomb. Second, the architecture of the weapon, involving principally the contribution of fission to the energy release in the bomb. Third, there is the height of the bomb burst. Fourth, one is confronted with the nature of the substratum-both as a carrier of the radioactivity and also as a producer of radioactivity. (In general, it would seem that induced activities cannot compete with the radioactivity produced in the bomb itself. However, a bomb burst close to sea water would produce vast quantities of radiosodium and radiochlorine. For example, a bomb burst in the Pacific Ocean off the coast of Los Angeles would probably cloak the city in a lethal fog even though no blast shook the city.) Finally, the meteorology at the time of the burst would determine the location and extent of the fallout.

It is like seeking the Holy Grail to quest for hard data on the fallout as applied to an American city. The unknowns enumerated above make prediction of the fallout a highly tentative business. About all one can hope to do is to define what might happen. Assuming a 15 megaton superbomb burst close to the ground the author has made the following estimates I for the fallout ellipses:

Time (after burst) (hours)	Area (square miles)	A verage intensity (gamma radiation) (Roentgen- hours)
1	250 1, 200 4, 000	2, 500 200 30

It must be remembered that this fallout will occur downwind. Upwind for 15 miles and sideways for 20 miles the fallout should not be lethal. Integration of the dosage rate for the 4,000-square-mile area leads to the conclusion that people will receive a serious to lethal dose in the first day. The area and hazard represents a conservative calculation. The radioactive hazard is truly immense. The explosion of 50 superbombs could blanket the entire northeast United States in a serious to lethal radioactive fog.

A schedule for the effects of external radiation upon a man in the open is as follows:

Footnotes at end of speech.

Dose ! (Roentgen units)	Effect on man	Acc
50 to 100	Few percent casualties, 50 percent casualties,	
200 to 300	100 percent casualties plu mortality.	s some
400 to 500	50 percent mortality. Close to 100 percent mortal	ity.

¹ Delivered in a period of less than 1 hour. If delivered over several days the required effect dosage is doubled.

Applying the 500 roentgen criterion to the fall-out pattern at 1 hour after the bomb burst it is clear that an individual within the 2,500 r/hour area would accumulate this dose in 12 minutes. At 3 hours a person much farther downwind might be exposed to a very serious dose. Here we must consider the relation between the intensity of the radioactivity and the time of exposure. Fortunately, the process of radioactive decay reduces the intensity quite sharply as time goes by. However, one must seek shelter as a protection against the radiation if caught in a near-lethal area. That is, unless some means is provided to direct downwind populations out of the path of the fall-out.

Just what kind of shelter protection is

required? The answer depends upon how close to ground zero one locates the shelter since blast then becomes the criterion. Assuming, however, that the shelter is located beyond the range of primary blast, the radiation shielding requirements are as follows:

Reduction factorInches of concrete	10	50 11	100 13	1,000
Inches of packed soil	11	18	21	30

The relatively small thicknesses of concrete or earth shielding needed to reduce the incident radiation to one-hundredth of its topside value may surprise the layman. Exponential absorption of gamma radiation accounts for the fact that a foot and a half of hard packed soil can reduce an intensity of 2,500 r/hour to 50 r/hour. Thirty inches of soil cuts this intensity down to 2.5 r/hour which can be regarded as acceptable for survival in a shelter.

In addition to the external radiation hazard there is the enigma of ingested or inhaled radioactive debris. Judging from the brief reports issued by the Atomic Energy Commission on the medical histories of the Marshall Islanders exposed to fall-out, the internal radiation hazard may be less seri-ous than generally believed. However, data on the Japanese survivors (see J. Arnold's article, pp. 347-348) does not make for complacency on the significance of radioactive material taken into the body.

From the foregoing description it can be readily appreciated that fall-out presents civil defense with potentially greater perils than those of heat and blast. Blast can be readily felt as can heat and they both come in a flash. Radioactivity, on the other hand, cannot be felt and possesses all the terror of the unknown. It is something which evokes revulsion and helplessness--like a bubonic plague.

Having been already weighted down by the incubus of the immense primary effects of the superbomb, civil defense planners may well feel that they are condemned to a labor of a Sisyphus. Unless the challenge of the fall-out is met head-on, the very burden may kill civil defense in this country. Those who oppose the FCDA policy of evacuation may use fall-out as the excuse for rejecting the recommendation. They can (and with partial justification) point out that the mass removal of metropolitan populations to the suburbs or open country may be like jumping from the frying pan into the fire.

Civil defense must recokon with the hazards of fall-out, but it would be utterly disastrous if it abandoned its policy of evacua-tion at this time. No one is going to come up with a perfect civil defense plan. As long as we have such huge agglomerations of people on a few bits of territory there can be no perfect civil defense. There will always have to be the element of the calculated risk to civil defense just as there is for the soldier at the front line. What civil defense must do is to acknowledge certain risks in its planning.

First things must come first in any good civil defense plan. This means that one must deal with the certain primary effects of superweapons. The great circles of heat and blast effects for weapons in the 10 to 40 megaton range are simply too large to neglect. They are predictable whereas fall-out is not. Furthermore, it makes no sense whatsoever to plan for a secondary hazard if you fail to survive the primary effects of

the bomb.

The Federal Civil Defense Administration has assessed the true significance of the circles of damage from H-bombs and has boldly put forth an evacuation policy to deploy urbanites to the suburbs beyond the 12 to 14 mile radius of the city. This policy has yet to be implemented but cities are going ahead with their plans. Milwaukee, Washington, Seattle, and Detroit are a few that have reached an advanced state of planning.

Consideration of the fall-out ellipses must be made and the CD plan of each city modified accordingly. One thing is perfect-ly clear—evacuation even on present plans does provide a large measure of protection for people since distance is still the best defense against the bomb. Those who are deployed upwind or laterally will escape the lethal fall-out. In general, viewed as a problem in geometry, it is the area of the evacuation circles which is intersected by the fallout ellipse which requires special planning. It will be argued that since we have so many unkowns it is futile to plan. For example, the wind may be in a contrary direction. However, local data on upper air winds often show a pattern of prevailing winds which may indicate preferential evacuation in upwind directions. Moreover, when an alert comes civil defense directors can make an immediate prognostication of the probable fall-out area based on current weather data.

The alert is the great and vexing problem in evacuation. It is often pointed out that there may be no warning whatsoever. This is possible but it certainly does not apply to all cities. Moreover, it files in the face of probability. There may, in fact, be a long period of alert—a strategical alert of

days, weeks, or even months.
Dr. Vannevar Bush, in his testimony before the Riehlman subcommittee, pointed out that conventional warfare might precede nuclear warfare due to the initial respect which each nation might have for the other's nuclear capability. Such a period of tension would make possible gradual decentralization of urban populations in anticipation of a nuclear attack. Time would also be given, plus the incentive of imminent attack, to prepare peripheral shelters to accommodate evacuees.

Besides the strategical alert period accompanying Dr. Bush's concept, there is a shorter term alert which would be concommitant with Soviet aggression into zones to which we guaranteed military support. Should the Soviets strike in such an area they might well limit themselves to conventional weapons, and it would then be up to the President to issue the fateful ultimatum for "re-taliation in advance." Any such ultimatum would be, if sanity prevailed, accompanied by a nationwide evacuation order.

The announcement that a distant early warning line of radar posts is to be established in the far North provides hope that before long a 4-hour tactical alert will be assured for continental cities. Four hours is sufficient for most cities to deploy their populations to relatively safe sites provided evacuation plans are perfected and test drills are inaugurated.

Progress is being made in civil defense despite the vertiginous, almost exponential, rise in the hazards faced. The year 1954 may well mark the turning point in our civil defense activities. One very favorable index is that more and more top advisers in the Government are becoming serious about civil defense. More and more, it is becoming clear that the security of the home base is of paramount importance. In this security. civil defense must assume a high priority.

The Federal Civil Defense Administration must be permitted access to classified data about fall-out. Furthermore, the agency must be able to translate these data or sanitize" 4 them so that a realistic picture of the radioactive hazard can be given to the American people. Local communities should not be left to plan in the dark nor should they be put in the position of planning on the basis of newspaper reports.

In the final analysis the solution to civildefense problems will not come from Wash-It is in the local communities that they will find solution. The Federal Government can help with solid planning data, with technical assistance, and with financial support. But the real burden of the work must be shouldered by the people who reside in the cities. However, the new peril from radioactive fall-out is more than just a threat to civil defense—it is a peril to humanity.

1 See article by Dr. Harold A. Knapp, Jr., South Woodley Looks at the H-Bomb, Bulletin, 10 (Oct. 1954), 306-11.

² Originally estimated to be 5 megatons in power, this bomb has since been reestimated

as being 10 megatons.

*The shape of the elliptical areas will depend upon the nature of the winds aloft, The ellipses at 1, 3, and 6 hours may show some overlap.

New language used in the Pentagon to describe the process of removing sensitive data from a classified report.

Yalta

EXTENSION OF REMARKS OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. VORYS. Mr. Speaker, Yalta is a word that will live in infamy in his-On this 10th anniversary of the ill-fated meeting between Stalin, Franklin D. Roosevelt, and Winston S. Churchill, which started February 7 in 1945, we should remind ourselves of the tragic events that have occurred in the decade since that meeting during which the whole series of World War II agreements have been misinterpreted, ignored, or violated by the Soviets to enslave millions of free peoples.

Two years ago, in accordance with one of the first foreign-policy requests of President Eisenhower, I introduced House Joint Resolution 206, declaring that the United States reject any interpretations or applications of any international agreements or understandings made during the course of World War II, which have been perverted to bring about the subjection of free peoples; and proclaiming the hope that the peoples who have been subjected to the captivity of Soviet despotism shall again enjoy the right of self-determination within a framework which will sustain the peace: that they shall again have the right to choose the form of government under which they will live, and that sovereign rights of self-government shall be restored to them.

This resolution was unanimously reported by our committee, without amendment, but this denunciation of Soviet misinterpretation and violations of the Yalta agreement became involved in a partisan debate as to whether the Yalta agreements and other ill-considered wartime agreements could safely be repudiated in toto, and the House took no further action on the resolu-

In August 1953, however, the House had another opportunity to act in this regard. On August 1, I secured unanimous consent for consideration of House Concurrent Resolution 178, "expressing the hopes of the American people for the early reunification of Germany by free elections and for the achievement by the peoples of East Germany, Poland, Czechoslovakia, Rumania, Hungary, and other Communist-dominated countries of their basic human rights and free-

This was a combination of a number of resolutions by various Members of Congress. My own contribution was one sentence, "that the Congress commends and encourages the valiant struggle of these captive peoples for freedom."

This combination resolution passed the House without a single objection and was substituted by Senate Concurrent Resolution 36 by Mr. WATKINS, of Utah. The Senate concurred in the House amendment and thus this resolution represents a formal concurrent expression of the House and Senate on the results of Yalta.

This action, which took place during the closing days of the 1st session of the 82d Congress, has not received the attention it deserves. Many Members of Congress have introduced resolutions on this subject. Each such resolution causes encouragement to the captive peoples when it is introduced, and a measure of discouragement that it fails of final approval. I learned, from my experience with my own resolution, and from my efforts to resolve and adjust the differences in the series of resolutions which were combined in House Concurrent Resolution 178, how difficult it is to secure language which is satisfactory to many Members who may have a single purpose in view. Under the circumstances, I am proud to have had a part in putting through House Concurrent Resolution 178. I am proud that this resolution was unanimously approved by both the House and Senate and that it contains the sentence I inserted,

"that the Congress commends and encourages the valiant struggle of these

captive peoples for freedom."

On this somber 10th anniversary, the Polish nation, the prime victim of the Yalta deal, and the other nations victimized by Soviet imperalism, can take heart in knowing that this recent and unanimous condemnation and encouragement of their struggle for freedom stands unchanged as an official expression of Congress.

Tribute to the United States Forest Service

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, February 8, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a fine and informative article from the Oregonian of February 1, 1955, about the 50th anniversary of the United States Forest Service. The article is by Merlin Blais, the business and forestry editor of that publication.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EARLY CRITICISM BY PUBLIC OF FOREST SERV-ICE DIES DOWN AS CITIZENS BECOME MORE AWARE OF ITS ACHIEVEMENTS

(By MERLIN BLAIS)

When that fire-eating conservationist team, Teddy Roosevelt and Gifford Pinchot, started the United States Forest Service just 50 years ago, the Pacific Northwest was cool and suspicious toward the idea of bureaucrats 3,000 miles away running huge chunks of its wooded landscape.

A new Government agency to control more than 100 million acres of the Nations lands in forest preserves was a blow to the pioneering tradition, which encouraged citizens to take up public land at little cost. Foundations for many of the regions fortunes were being laid by the more daring speculators.

Conservation was widely understood to mean locking up of resources. And when Pinchot decided to meet the bureaucracy charge by decentralizing and shipping most of his staff permanently out to six regional offices, it didn't greatly help matter at first.

EDITORIAL WRITER CRITICAL

Portland's contingent arrived December 1, 1908, led by eager young graduates of then new eastern forestry schools, which knew virtually nothing of the Far West's magnificent tree stands and towering mountains.

An Oregonian editorial at the time described the newcomers as "callow youths rushing around throughout the Northwest carrying shiny briefcases and talking glibly about 'the field,' not even knowing what the term meant." It excorriated them as "minions of the Forest Service • • reeking of musk and insolence."

But the Nation's intentions were firm. The Northwest's citizenry was not so aware as easterners of the havoc left in the wake of the loggers who leap-frogged from Maine to Michigan and on west. And the West had its army of land locators who ranked Government foresters in the same class as moonshiners put revenue agents.

GOSPEL CONVERTS COUNTRY

The conservation gospel preached by Roosevelt and the first chief forester, Pinchot converted the country. Vast forests were in truth locked up-from private homesteading or purchase for \$2.50 or so an acre. Enemies of the preserves charged the Government with impoverishing the economy by barring their use.

But through the decades the Forest Service has been steadily bolstering proof that such was not the case. And by the same effort it has grown in regional stature and esteem. In recent years the agency's key place in management of timber, water resources, grasslands, and recreational areas has been accorded confidence of the general public.

Its golden anniversary Tuesday finds the Forest Service fully utilizing long experience in its administering 23,351,000 acres of Oregon and Washington countryside, more than one-fifth of the 2 States. Benefits to the region are in uncounted millions of dollars.

GREATEST GOOD GOAL

But the unfolding cornucopia has not resulted from any change in policy, the Forest Service insists. On February 1, 1905, Secretary of Agriculture "Tama Jim"

adjured the infant agency:
"All land is to be devoted to its most productive use for the permanent good of the whole people and not for the temporary individuals or companies benefit of local questions will be decided upon local grounds . . . where conflicting interests must be reconciled, the question will always greatest good of the greatest number in the long run." be decided from the standpoint of the

Fruits of this policy are abundantly evident today. In 1954 the 18 national forests of the 2 States comprising region 6 poured a record-breaking flow of 2,585,000,000 board feet of logs into sawmills, plywood and pulp plants and pole yards-nearly \$35 million

WILD GAME INCREASES

Their meadows and grasslands feed 85,000 cattle and horses and 175,000 sheep allowed by permits. Wild game has increased so greatly under the foresters' custodianship they now include an estimated 306,000 deer, 51,000 elk and 900 antelope. Mountain goats, once nearly exterminated, now number 5,000.

Game animals are an important localized resource. Forest Service and the States allow an annual "cropping" to balance game with available forage. Hunters in Oregon, as a major result, take out more than 100,000 deer a year.

Recreation, though unmeasured in dollars has become a big resource. Northwest forests annually lure more than 3 million people. These include an estimated 888,000 anglers on their streams and lakes, 300,000 hunters in their woods and fields. Improved camp and picnic areas number about 1,000.

Winter sports are growing phenomenally. Twenty-six locations developed for skiing and related sports lured an estimated 601,000 visitors in the 1953-54 season. Those on Mount Hood are the most widely enjoyed of all United States forests.

GRAZING DEVELOPS BITTERNESS

Five decades and more ago the picture was far different. The timber was virtually inaccessible; in 1909, earliest year recorded here, the cut amounted to only 10,391,000 feet in Oregon and 22,037,000 in Washington.

Stumpage prices were only a fraction of last year's average of \$19.73 per thousand of ponderosa pine and \$17.29 for Douglas fir.

Forty-five years ago the average price was only \$1.70, and it was still shy of \$3 in 1942.

But livestock grazing was heavier than grasslands could stand. Unrestricted by reg-

ulation, it grew until in 1918 there were 200,-000 cattle and horses and 1 million sheep on the national forests of the Northwest.

Some bitterness developed as the rangers endeavored to reduce grazing. Sheep have declined the most, due in part to a shortage of herders since the 1930's and fluctuations in meat and wool prices. Many abandoned sheep ranges have grown up to brush.

Cattle have been more stable. About 10 million acres are in the grazing classification.

WATER RESOURCES VITAL

Mining has never been strong in this region's forests, though accessibility has improved. Low grade of most ores and the general tough going for much of that industry are chiefly to blame. But the importance of the water resource has expanded steadily as population multiplied in the farm valleys and factory towns below.

The region's first Federal forest reserve, in fact, was the 142,080-acre Bull Run district set aside to protect Portland's domestic water President Benjamin Harrison signed the withdrawal order June 17, 1892, and Congress barred livestock from the area in 1904.

First general forest reserves were set up in 1893, a dozen years before the Government's embryonic policies evolved into a positive management system with transfer of the reserves from the Interior Department to Agriculture.

Harrison established a Cascade Range reserve taking in a huge area from Mount Hood south, and a Pacific reserve with Mount Rainier in Washington the pivot. Four years later Mount Rainer was singled out for a national park, and in 1902 Orater Lake.

Just 2 years after the Forest Service began its land boundaries became established at about what they are today, so far as Oregon and Washington are concerned.

Western opponents of the agency put through a law prohibiting new additions by Presidential proclamation. A few days be-fore signing the bill President Roosevelt issued 33 proclamations adding 15,645,000 acres to the forest reserves of the Nation. Two major programs since voted by Congress helped to build up the system to the present 152 national forests in 36 of the States, Alaska, and Puerto Rico-a grand total of 180 million acres-but little of the later growth was in the Northwest.

TIMBER BIG MONEYMAKER

Timber is the big moneymaker on the national forests, and is the reason they took in \$12 million more in 1953 than the \$64,-540,000 spent from appropriations. This region contributed more than two-fifths of the \$70,616,000 collected from timber.

Still these forests are furnishing a relatively small proportion of the total Oregon-Washington cut. In 1952 the 2 States har-vested about 14 billion feet of logs, and the national forests contributed less than 14

Pressure has been steadily increasing from industry to force heavier cutting, for these reserves contain about 210 billion feet of available merchantable timber by Forest Service's present reckoning. The agency expects it will be figured higher as new surveys are completed. This includes more than 40 percent of all remaining virgin Douglas-fir stands.

LOGGING GAINS HEAVILY

Logging has vastly increased since World War II, however. In 1925 the national forests contributed only 3 percent of the Northwest's log volume, and their cutting de-creased during the depression when it was agreed that Federal timber would be kept off the market as an aid to hard-hit private owners. By 1942 logging on the forests had more than doubled.

Just how much greater the cut will become will be subject to much pushing and pulling. The Forest Service, as do many private timber owners, calculates its allowable annual cut on a basis aimed at assuring a permanent or sustained yield. Its 1954 cut was only 5 percent short of the present annual allowable harvest.

FASTER CUTTING URGED

Industry critics urge a scrapping of this limitation, arguing that most of the forest timber is overripe and actually losing good wood to disease and insects at a serious rate. The sooner the old stands are used, the sooner new growth will start in their place, adding more supplies for future logging.

Some industry leaders have advocated sale of large chunks of the Federal forests to private operators to assure the best use of their resources. Presumably, this would leave still in Government hands the less productive areas and mountain tops.

United States foresters are willing to boost allowable cuts at least on the basis of new acreage yield figures, which reflect mostly a higher degree of utilization. But the major threat to a continuing rise in the harvest is the lagging roads program.

At present the 18 forests have 14,000 miles of main-line roads in condition for timber hauling. But if full cutting is to be reached and maintained, an additional 7,500 miles of access roads must be built by 1960, the agency estimates.

Here again another conflict has persisted over how much construction should be by the Government and how much by operators in connection with timber purchases. In 1953 operators built 673 miles of permanent roads and 664 miles of temporary roads, as against only 64 miles by Uncle Sam.

Smaller operators want more Government road building, because the size of timber tracts put out for competitive bidding is too great for them if they are designed to cover access-road work. They argue, too, the Treasury will benefit from higher subsequent timber prices if roads are already in.

Reforesting has made gains. The 18 forests contain some 500,000 acres of old burns and cutover lands, but appropriations are providing for planting of only 1,500 acres a year. Current logging takes care of its own replanting where it proves needed. Loggers pay from 15 cents to more than \$1 per 100 board-feet of logs into a stand improvement reserve.

Another critical need in the National Forests is recreational development. Foresters admit they are unable even to maintain facilities created by CCC crews in the depression thirties. Some camps have been closed and others are threatened by deterioration. But appropriations are lacking for the work.

Campgrounds should be increased from the present 1,000 to 2,100, and the mileage of roads serving them from 60 to about 130 miles, if the mounting tide of recreationists is to be served, the foresters estimate. Winter sports areas need more and better ski tows and shelters. The 900-mile Pacific Crest trail is one of America's best, and others are desirable. Eleven wildnerness and primitive areas have been set aside.

SMOKE JUMPER VITAL

Housekeeping is a vast chore on region 6 forests, which cover an area larger than Indiana. Fire, insects, and disease are the worst enemies, but progress has been made against some of these.

Most spectacular weapon against fire, which has been held to dwindling losses in recent years, is the smoke jumper. Weird in canvas suit and mask to ward off branches and brush, he carries a rope and knife to let himself down if he hangs up in a tree, and basic tools to clear fire breaks.

By leaping from a plane he can reach the most remote blaze within an hour or two after lookouts spot it. The Forest Service maintains one squad in the Illinois Valley in southern Oregon and another in the Chelan area of north central Washington. Each has 28 jumpers.

SIX PLANES IN REGION

Region 6 owns 6 planes, 4 capable of carrying and dropping men and supplies by chute.

Scattered along high points of the 18 forests are 376 lookouts, and in fire season the agency about doubles its regular 1,150 personnel.

Fire systems have greatly improved through the years. Short-wave radio, more roads, bulldozers, and pump and tank trucks on the fire lines have helped to beat back the menace. Important, too, is the steadily improving coordination among Federal, State, and private organizations in pooling efforts against fire.

TIMBER SALVAGE PUSHED

This cooperation has extended to the war on forest insects. To check a spruce budworm epidemic all joined in an aerial spraying campaign which has checked this tree killed on 3,250,000 acres. The job must continue on another 1 million acres.

The Forest Service has joined other owners in attempting to salvage 3,500,000,000 board feet of timber killed since 1951 by the Douglas fir bark beetle, but is lagging because of the road dearth. East of the Cascades sanitation logging has reduced losses from the western pine beetle.

Many of today's methods in the woods are results of research carried on by the Pacific Northwest forest and range experiment station. Its work began in 1912 on Wind River at Carson, Wash., but head-quarters moved to Portland in 1924.

Clear cutting of Douglas fir in patches is largely the result of the station's research. Low-humidity closings for loggers in fire season followed its development of a fire index system. Selection of trees for cutting in the pine forests on a basis of susceptibility to the pine beetle as well as diameter developed from its findings. A switch to hardier range grasses has resulted from its tests.

Its 50 technicians working on 6 field units, 11 experimental forests and 1 range plot are studying growth and yield of species, nursery practices, and logging methods as they affect range and wildlife conditions, streamflow and erosion.

New research, they are hoping, will improve tree crops as much as past research has helped with hybrid corn, grain, and vegetables.

Representative Pelly Supports Aircraft Carrier Program

EXTENSION OF REMARKS

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. TOLLEFSON. Mr. Speaker, I desire to place in the Record an editorial from the Seattle Post-Intelligencer of February 4, 1955, which is highly complimentary of my distinguished colleague, the Honorable Thomas Pelly, who so ably represents the First Congressional District of the State of Washington. His congressional activities in behalf of his district and the Nation have merited the respect of his constituents and the high regard of his colleagues. The editorial is timely and well learned. It follows:

LET'S GIVE A HAND

All unnoticed—and rather alone—Representative Thomas M. Pelly, of Washington State's First District, played an important role in the recent debate on the President's "Formosa Resolution."

Representative Pelly, in the name of seaport cammunities, stood up for the importance of the modern aircraft-carrier program of the Navy.

There has been a good deal of misunderstanding about the aircraft-carrier program. But the concept is simple enough.

And it is just this: all of us have been for strong air power. There is a type of air power which springs from land, and the kind of air power which springs from the sea.

The Reds are right now at the very serious business of nibbling away our land bases in the great Pacific. They are doing a very good job of it. You can bet that they will do better yet.

So that is where aircraft carriers come in.

Don't ever let the Navy-haters, and,
strangely, there are many such—transfer the
old argument against "battleship admirals"
to "carrier admirals." Have you any real
idea how big the Pacific is, in comparison
with the Atlantic?

If not, have a look at some maps, or a world globe.

It will give you a New Look about aircraft carriers. And while you are taking that look, think of this: if Red China gets Formosa she will use it as a springboard to the Philippines, just as the Japanese did.

During Congressman PELLT'S stanch argument for the carrier program a gentleman of the House—from Missouri, by the way—said he had heard that in the next world war an aircraft carrier "would not be afloat for more than 10 hours after war was declared."

That is a silly statement, but typical. The answer to it is that in the kind of a war the next "all-out war" is to be, those 10 hours could be important, indeed.

But Representative PELY had something to say, and could quote his authority. He quoted Gen. Omar Bradley: "The primary mission of the big carriers is shifting toward strategic air attack."

That's from an Army man. And it's all the Navy ever claimed about the big carriers. But Tom PELLY had other authorities behind him. American GI's.

hind him. American GI's.

He said: "I'm sure that none of these did anything but thank God for the overhead protection of carrier-based naval planes in the recent unhappy Korean police action."

The GI—the foot soldier—Tom Pelly said in Congress—was the real authority on the aircraft-carrier program.

We go with that. What's more we think people in cities like Bremerton and Seattle should give Tom Pelly—and the GI's of the next "police action"—a big assist.

Let's wind up and get the whole thing straight while we are at it. The Navy understands the Pacific as some politicians do not and never have.

As coastal and seafaring peoples—most of whose sons are in the Army rather than the

Navy—why don't we say so?
Why don't we help Tom Pelly out?

The Post-Intelligencer doesn't want war, any more than you do.

But it wants aircraft carriers, and enough of them.

Some of them would be built in Bremerton, yes. Probably more would be built in Boston, in Philadelphia, in Brooklyn, in Newport News.

Where they are built is of little moment now.

But they should be built. And if the gentlemen from Missouri—where Truman came from—if the man from Missouri does not understand that 10 hours has been the history of many a gallant ship after war is

declared—if he doesn't grasp that fact, where has he been?

There was talk a while back about unified military thinking. What happened to that? Sure, there must be air power. And that power includes the planes of our Air Force, the Army, the Navy, and the Marines.

A plane has to take off from something.

A plane has to take off from something. You may be sure that if it takes off from a carrier it will be a piece of the Pacific sea frontier which the Reds won't occupy tomorrow or next week.

Marie Theresa Connery Favors Family Allowances

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. LANE. Mr. Speaker, Marie Theresa Connery proudly bears a surname that is well known to many older Members of the House of Representatives.

One that is indelibly associated with the constructive and humanitarian legislation that was passed by the Congress during the peaceful revolution of the 1930's

Her father was William P. Connery, Jr., who served for many years the District which I now have the humble honor to represent. Billy Connery, tireless and true, was a valiant champion of progressive legislation. As the key member of the Committee on Education and Labor, he was the administration spokesman for the great reforms that were achieved during that era—that raised American labor to a standard of living and a dignity unparalleled in the history of this country or that of the world.

. Billy Connery died before his time, worn out by his uncompromising and successful struggle to bring a great measure of security to all Americans.

His brother, Lawrence J. Connery, succeeded him as Congressman from the Seventh Massachusetts District, and carried on with the same generous heart and unyielding devotion to the common welfare that is the outstanding trait of the Connery family. He, too, died in his prime, a martyr to public service.

Mrs. William P. Connery, Jr., with the mutuality of interest that blessed the happy years of her marriage, spent her widowhood in bringing help and cheer to the unfortunate, until she was forced to retire by a disabling illness.

And now her daughter, Marie Theresa Connery, who majored in social science at college, and is now employed in that capacity with the Welfare Department of Lynn, Mass., continues the benevolent spirit and accomplishments that distinguished her father, her mother, and her uncle.

Miss Connery points to the future and to the need for family allowances as a further step in progressive social legislation. She calls our attention to the following thought-provoking article by the Reverend John S. Cronin, S. S., that was published in the December 19, 1954,

issue of the Boston Pilot, which serves the very large Catholic population of the archdiocese of Boston.

The article follows:

FAMILY ECONOMIC PROBLEMS (Rev. John F. Cronin, S. S.)

(Eprroa's Note.—Monsignor Higgins has as guest columnist this week, Father Cronin, also an assistant director of the social action department, NCWC.)

Last week's column used several family social problems as illustrations of social action. This week we might well center our attention upon economic problems of the family as further illustrations of this basic point. The main economic problems for the family center around family income and expenses. Is the income of the main wage-earner adequate? Are there ways of cutting down costs, particularly family medical costs?

The facts involved are fairly clear. First we note average worker income. With fringe benefits included, average income before taxes is less than \$4,000 a year. Next we note that over half the working force of women are married, and a majority of these have minor children. Roughly speaking, about one-quarter of our families have working wives.

Inquiries as to why married women work, bring a variety of responses. But the majority cite inadequacy of total family income. That means that the husband is not bringing in enough to support the family according to accepted American living standards. In some cases, at least, children suffer various degrees of neglect because of lack of adequate parental care. The marriage itself is strained when a wife must carry the double burden of holding an outside job and managing things at home.

When a young wife continues to work, there is the temptation to postpone the children and thus frustrate natural desires for a large family. This temptation is sometimes strengthened by high costs of medical care, particularly maternity and pediatric treatment. Prohibitive costs for adequate housing may also enter into this picture.

CONSTRAINTS STILL FELT

Faced with these problems, our response has been partly in terms of individual action, partly a program of social action. The individual response has not been satisfactory. It consists of such doubtful measures as having the wife work outside the home, postponing the arrival of children, and living in overcrowded quarters. Generally speaking, these solutions bring many evils in their wake

The main social response involves union efforts to raise wages. These efforts have been successful, since wages have risen more rapidly than prices in the last 25 years. While the lion's share of the gains have gone to union workers, other wages have tended to follow the pattern. In addition to these steps, other measures such as public housing, limited-dividend private housing, prepayment health plans, union health plans, and the like have eased family pressures considerably.

But the fact that families still feel economic constraints shows that all these measures have not been enough. More work must be done to raise incomes, cut costs, or do both at the same time. What is more, methods previously used can be pushed only a few steps further in a short period of time. Longrun wage increases (without price rises to cancel them out) depend largely upon increased efficiency of production. Such increases have averaged about 2 percent a year. Average real wage gains beyond that level will be hard to secure.

THE FAMILY APPROACH

Accordingly, we should give thought to a different method of distribution of the increased national product. Instead of passing out these gains indiscriminately to workers and shareholders in accordance with existing patterns, we should give serious thought to a new, family-centered pattern of distribution. Under the present system, a rise in wages goes equally to married and unmarried workers, to families with many children and to childless homes. As a result, those who contribute least to society are best off financially.

The framework of an alternate pattern of distribution has been worked out in a score of countries that have one or another variety of family-allowance systems. By some method a pool of income is formed. From this pool, extra sums are given to workers in accord with the size of their families. It is obvious that such an approach offers quick relief for the economic problems of the family. If national income were to gain \$6 bit loin in a year, much of the gain today would go to 75 million workers and shareholders.

If, instead, this sum were distributed among 20 million families with children under 18, the average gain for these families would be roughly 3 times as great. This could make a considerable difference in family living standards in a short period of time. Thus far, Americans have been indifferent toward the family-allowance system. But now that large families are again fashionable, we might find it easier to get a response for such a movement.

This would make a good social-action project for Catholic family groups, women's organizations, and Catholics working with labor unions. But it will not be effective if we work exclusively within our own circles. We must find allies in other groups, equally concerned with the welfare of the family, and jointly strive to make the family a major center of American life and thought.

Federal Aid for Library Services

EXTENSION OF REMARKS

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1955

Mr. ELLIOTT. Mr. Speaker, the people of the Seventh Congressional District of Alabama are vitally interested in expanded library services. Just this past week, the Cullman Tribune, a newspaper published in Cullman County, Ala., in the Seventh District, commented on Fedor Alabama are vitally interested in exeral aid for library services. I ask unanimous consent to have it published in the Appendix of the RECORD:

FEDERAL AID FOR LIBRARY SERVICES

Federal help, without Federal control, is being proposed in the library services bill that is being sponsored jointly by Democrats and Republicans in both Houses of Congress.

The proposed Federal legislation for library services provide \$7½ million each year for a 5-year period. The State would have to match the Federal money when appropriated for this specified purpose. Full jurisdiction over the Federal aid would be granted the State library agencies if this legislation is approved by Congress.

Among national organizations favorable to the proposed Federal aid for library services are: National Congress of Parents and Teachers, American Home Economics Association, and the National Education Association. The granting of this Federal aid for library

The granting of this Federal aid for library services would provide more books for the traveling library now serving residents of Cullman and Winston Counties.

The Selective Service Act

EXTENSION OF REMARKS

HON, HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the Record, I include the following resolution on the Selective Service Act, adopted by the executive committee of the veterans' ticket committee of Essex County, N. J. With this important subject now being reexamined by the Congress, I know the Members will be interested in the viewpoint of this committee composed of veterans of military service:

REOLUTIONS TO CHANGE THE SELECTIVE SERVICE LAWS AND REGULATIONS

Whereas there have been volumes of printed matter and millions of words spoken on the question of juvenile delinquency, but for the most part, youth, their parents, teachers, the church, and the community are often blamed in one way or another and nowhere have we read or heard the indirect manner in which our National Government is included; and

Whereas it appears that few have given thought to the relationship between the selective service and the cause for juvenile delinquency, here are some of the facts:

All boys on reaching their 18th birthday must register with their respective draft boards. At age 18 the boy, for the most part, has graduated from high school and may ponder whether he should get a job, enter college, or wait until he is called into the Armed Forces.

Often he hesitates about going to college, feeling that he would prefer to wait until after he has completed his military obligation to his country rather than having his education interrupted.

Soon thereafter registration he receives a 1A classification card from his local draft board. Those boys who cannot, for one reason or another, go to college and want to get a job find it difficult to secure one because upon being informed that the boy is in 1A the employer refuses to employ him on the basis that he is not going to train the boy into a job only to have him enter military service soon thereafter. One can readily see what develops thereafter and how delinquency soon occurs in these youngsters, since he must wait between the age of 18 to 21 or 22 before he is called by his draft board to enter military service.

What can be done, one would ask? The answer is a simple one. Amend the selective service laws to provide that at age 18 and just as soon thereafter as can be arranged by the military, the boy would be inducted and sent to a military camp within his State or nearby. There is no need to pay transportation to send him across the continent. He must go through training at camp for a period of 90 days. There would be no exception, unless the boy is not physically capable of undergoing military training for 90 days, whether or not he plans to go to

college or get a job. After 90 days the boy would return home, to college if he so plans where he must enter the ROTC at his college; if there is no ROTC he must enter the National Guard in that location for the full 4 years, drilling 1 night each week and going to camp for 2 weeks in the summer with the National Guard. The boy who does not plan to go to college must enter the National Guard, drilling 1 night each week and going to camp for 2 weeks with the National Guard in the summer. After 4 years in the ROTC or National Guard, the boy would be placed in the inactive Reserve for 4 years, and unless an emergency occurs, he would be considered to have completed his military obligations.

Should any boy fail to live up to the obligation of the ROTC or National Guard he would be called by his draft board and inducted into the regular service for 2 years.

This plan would prevent the heartaches, the breaking up of homes, loss of business and other matters that exists now under the present law. For example, at present there are men who were discharged from the service and sent home. After years at home they married, entered business, had children, and so on, only to be called back into service be-cause the Armed Forces discharged them before they had completed the full 2 years. Upon being called back, they must complete, not the remainder of the time to make up 2 years but must start from scratch and serve full years. This is not exactly justice. The same is true of men whom the Army rejected at induction stations because of health reasons. These men return, start life in the normal manner again only, in many instances, after many years, to be reexamined and because the physical standards have been lowered are admitted and must serve

The question of filling the ranks of the Regular Services would be accomplished by making the armed services a career for men who wish to remain there by giving the pay and opportunities nearly comparable to industry, since industry has no difficulty in finding men for the most dangerous assignment anywhere at any time. There is no difficulty in finding policemen for the State or any given municipality, and since our soldiers are really policemen of the Nation there should be no difficulty in finding men if given the pay and treatment necessary.

The plan outlined as an amendment to

The plan outlined as an amendment to the draft laws would save the Government billions of dollars, would place the boy in a more home-like environment at the National Guard Armory. He would be with his classmates and should war come, which God forbid, the National Guard which has always been the first group to hold the lines until recruits can be organized, would be ready. The cost for additional armories would be a small sum compared with the saving that would come as the result of the adoption of this plan which would not interrupt any man's life while at the same time every ablebodied man, without exception, would have served his time without any special exemption to any special group of men because of their studies or occupations: Therefore, be it

Resolved, That upon the adoption of these resolutions that they be signed by the Chairman of the Committee on Resolutions, the general chairman and the executive secretary, that they be spread upon the minutes of the Essex County Veterans' Ticket Committee, that copies be sent to the Congressmen from New Jersey, the Governor, and the press.

EDWARD BARRY,
Chairman, Committee on Resolutions.
EDWARD SIMANDL,
General Chairman.
CARLOS V. GIROD,
Executive Secretary.

Negation of the Yalta Agreement

EXTENSION OF REMARKS

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1955

Mr. ZABLOCKI. Mr. Speaker, February 7, 1955, marked the 10th anniversary of the Yalta Conference which culminated in the controversial and widely criticized Yalta agreement.

On a number of separate occasions since my first election to Congress, I stated on this floor that I favor the negation of that agreement. I wish to reiterate and reaffirm that position today.

I believe that I have made it very plain that I have no sympathy for the extremist critics of the Yalta agreement, whose vociferous condemnations were founded in political expediency rather than in any sincere desire to repair the damage done by the pact. Nevertheless, it has been my steadfast contention that the agreement was shortsighted and, in the provision dealing with the eastern boundary of Poland, inconsistent with the traditional policies and principles of the American people. For these reasons, I had repeatedly urged that the negation of the entire Yalta agreement, which can be accomplished on valid grounds, be given favorable consideration.

There are several basic reasons for the negation of the Yalta agreement. In the first place, it is uncertain that the late President Roosevelt intended to enter into an agreement at Yalta which would be legally binding on the United States.

Secondly, there is no body of established precedents with respect to Executive agreements to show that any one of them is to be regarded as valid beyond the term in office of the Chief Executive who entered into it. In conjunction with this point, we should note that there is nothing in the Yalta agreement

as to its intended duration.

Thirdly, the Yalta agreement has been in effect nullified by the repeated violations of its terms on the part of the Soviet Union. This is perhaps the chief reason why we should negate the agreement.

The negation of the Yalta pact will not free Poland, any more than the absence of this agreement would have prevented Soviet occupation of that country. We must remember that at the time of the Yalta Conference the Soviet armies had already moved through Poland and were within 32 miles of Berlin. Even if the Yalta agreement had never materialized, it would probably have been necessary to start a new war in 1945 in order to free Poland of Soviet occupation. I need not add that the allies, led by the United States, were not in favor of such a course at the time. It was believed during that period that the restoration of independence to the Eastern European nations could be achieved gradually through peaceful

means. This belief, of course, had proved to be completely unjustified with

the passage of time.

The negation of the Yalta agreement would, however, give us a starting point for demanding the restoration of Poland's proper boundaries and Poland's return to the family of free nations.

If the persons who had clamored for the repudiation of the Yalta pact are sincere, I urge them to lend their efforts to the task of bringing about the negation of the agreement.

Postal Salary Increases

EXTENSION OF REMARKS

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. FINO. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statement of Andrew T. Walker, president, branch I, New York City, United National Association of Post Office Clerks, on postal salary hearings before the House Post Office and Civil Service Committee, on Monday, February 7, 1955:

Chairman Murray and members of the committee, for the purpose of the record, my name is Andrew T. Walker and I am the president of Branch 1, of the United National Association of Post Office Clerks. The branch I head is in New York City, the largest in the Nation and composed of over 8,500 postal clerks.

I have spent almost 50 years in the postal service and I have witnessed many trying times in the economic life of postal employees when the need arose for a deserving salary increase. The need was never greater than it is at this time for a fair and equitable salary increase. The record of the 83d Congress during which time untold pages of cestimony was taken down by this very same committee from postal representatives attesting to the need of an increase of salary. I respectfully refer you, gentlemen, that record for the situation has not grown brighter but definitely worsened.

Almost every concern in New York City having night work has enrolled among its employees postal clerks and many of other classifications. In many cases postal wives are compelled to go out into the labor market to find a job in order to supplement their husband's income. It is a crying shame when we find not just the junior postal clerks but senior clerks with over 20 years or more seeking such supplemental income from a part-time job after his postal tour of duty. Children of postal employees as a result are particularly the victims of the lack of parental care, and all because of an inadequate salary. New York City's garbage collectors get a higher rate of pay than the postal clerk.

I urge you gentlemen to give full consideration to a pay raise of not lower than 10 percent. If postal employees are to maintain their present feeling that "Civil Service is Public Service" then Congress should provide the means for loyal servants to have the wherewithal to bring up their families in the true American standards. A standard which calls for a fair measure of the necessities of life, an education of mind and heart that brings with it an appreciation of a religion and a faith in God. Such a training leads to good and healthy citizenry.

I also wish to convey to you, gentlemen, the mounting resentment among the em-ployees of the New York post office against pending reclassification of the postal service bill, H. R. 2987. From a pulse beat count of my own large group I say that this bill with its wide latitude of duty-assigning features represents the basis of true fear by all well-intended postal men and women. Postal employees want you Members of Congress to retain all such privileges such as grade fixing, duty definition and assignment, present job protection, protecting civil service by not permitting an executive depart-ment head from bringing in individuals from private life into any levels beneath those of a policy fixing nature. Down through the years postal men and women have been assured of job and grade protection because no such authority has ever assigned to the executive branch of the Government and that is as it should be and I hope you Members of Congress see fit to keep it so. It is a common belief among postal and Federal employees that when President Dwight D. Eisenhower vetoed the small Federal pay hike in 1954 he was misinformed. He said at that time, that he did so, because the pay measure was not accompanied by a postal rate increase bill. This reason is not now binding upon the Congress because the administration has already conceded to the fairness of enacting a pay increase bill on its own merit and not contingent upon a postage rate increase

A survey of postal employees in New York City highlights their reaction that President Elsenhower will not veto a 10 percent pay raise bill if passed by Congress without any tie-in legislation.

I thank you gentlemen for the courtesy of presenting this statement.

Universal Military Training and Service Act

EXTENSION OF REMARKS

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. HOLTZMAN. Mr. Speaker, no one regrets more deeply than I the need to continue and extend the Universal Military Training and Service Act. I regret the need for any legislation which will serve to take our young men out of their homes and schools. I regret the need to interrupt their lives and plans from the peaceful pursuit of their education and professions. But most of all, Mr. Speaker, I deeply regret that in this highly advanced age, society has not yet found the avenue to a lasting peace.

Much as I regret the need for this legislation, I am constrained to support it now as I did in our committee. As a matter of fact, I expressed grave doubts in committee as to the wisdom of the cut in our ground forces at this time, with the Communist threat looming larger and more serious every day, we must not, even in the slightest degree, lessen our defense effort or weaken our national security.

With our goal as peace, we must be so strong that no aggressor will dare to challenge us. We must never close the door to the conference room. We must, as we strengthen and fortify ourselves, proceed on the theory that peace is attainable and that war is not inevitable.

In supporting this legislation, I voice the hope and prayer that events prove it to have been unnecessary and that the safety of our country will never again require it.

President Cites Need for Reserve Militia

EXTENSION OF REMARKS

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. THORNBERRY. Mr. Speaker, a very important issue before the Congress as it considers strengthening our military manpower program is the need for Federal recognition of the State guard or the State militia.

I am happy that the President in his message placed emphasis upon the need for a State guard or a State militia to preserve order and prevent chaos in times of emergency when the National Guard has been called to active duty. I am happy, too, that a subcommittee headed by our colleague, Hon. Overton Brooks, of Louisiana, is now holding hearings on H. R. 2967 which includes Federal recognition of the State guard or the State militia.

On January 24, 1955, there appeared an editorial in the Austin-American of Austin, Tex., which was written by that newspaper's editorial writer, Mr. Raymond Brooks, which points out the important role the Texas State Guard Reserve Corps has had in the development of an active State guard in our State and emphasizes the need for the legislation now being considered by the subcommittee of the House Committee on Armed Services.

I call the attention of the membership of the House to this excellent editorial which is as follows:

PRESIDENT CITES NEED FOR RESERVE MILITIA
President Eisenhower, in his military manpower message to Congress, dealt with all
phases of recruitment, training. Active and
Reserve mobilization. He urged the building up of a powerful and Ready Reserve,
along with the more intensive training of a
smaller and more mobile active-duty Army.
He followed the traditional principle that
a trained and Ready Reserve, a nonprofessional citizen-soldier Reserve, is the backbone of American defense.

In the area of internal security and Reserve militia, President Eisenhower gave direct and emphatic approval to a policy in which Texas has taken the lead among the States, and which it now is urging for the critical tasks involved in potential disaster at home, or in war emergency conditions calling out combat troops.

That is the maintenance of State guards, Reserve militia cadres, made up of veterans, mostly with combat experience, organized and ready for instant call.

President Esenhower asked that Congress renew enabling legislation that lapsed after World War II, to permit States to maintain militia units which would replace the National Guard units when called to active duty

in an emergency.

The States are permitted, under the Constitution, to maintain militia forces. The enabling legislation would be provision for keeping such reserve forces organized, in training and making them eligible for uniforms, equipment, arms, and training facilities and programs.

Texas had an active State guard, created by State law, during and immediately after World War II. The National Guard was reconstituted after that war, as after World War I. Then, the legislature provided that the State guard should be retained permanent, as a reserve corps. That has been done.

More than 20,000 Texans, veterans of

More than 20,000 Texans, veterans of United States military service, have kept up their affiliation with it, and in many cases have continued volunteer training programs. The Texas State Guard Reserve Corps has built an outstanding communications network. It has served with the civil defense and disaster relief organization in many instances. It helps train ROTC units.

The State Guard Reserve Corps is com-

The State Guard Reserve Corps is composed of three brigades, plus detached units and a large number of security units throughout the State, and it has a provost marshal section, tied directly to the State, city, and county law authorities.

Texans took the lead last fall in organizing the National Association of State Guards, joined by 20 or more other States which also have kept intact their reserve militia cadres. Former Texas Congressman Lloyd M. Bent-

Former Texas Congressman Lloyd M. Bentsen, Sr., in the last Congress offered the bill to reinstate Federal authorization and recognition for the call of the reserve militia, or any of its units, into active service when the National Guard, or any parts of it, were recalled to Federal service. Like hundreds of other bills, it failed to get action.

Now the national association and a large number of States are supporting directly that phase of legislation within President Eisen-

hower's recommended program.

Brig. Gen. Allen D. Rooke, of Woodsboro,

Brig. Gen. Allen D. Rooke, of Woodsboro, brigade commander and deputy corps commander of the Texas State Guard Reserve Corps, is president of the national association, and Col. Donald W. Peacock, of San Antonio, its national adjutant.

Colonel Peacock, representing the adjutant general's department of Texas, and Col. Carl C. Hardin, Jr., legislative chairman of the national association, will join representatives of many other States in Washington early in February, to confer with the Department of Defense and with appropriate congressional committees, on the pending Federal legislation, and steps within the various States to activate the internal security and reserve militia programs outlined by the President.

A Great Christian

EXTENSION OF REMARKS

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. JUDD. Mr. Speaker, the death last week of Dr. John R. Mott marked the passing of one of the world's greatest leaders, the Christian religion has ever had. It was my privilege to know Dr. Mott personally and to have my mind stretched, horizons widened, and spirit uplifted by his world vision and his unconquerable faith.

Under leave to extend my remarks I include a tribute paid to Dr. Mott in the editorial columns of the Minneapolis Tribune:

A GREAT CHRISTIAN

Few men engaged in Christian work in modern times have had as great an impact over as long a period as John R. Mott, who died Monday at the age of 89.

More than any other individual, Dr. Mott gave direction and momentum to the Young Men's Christian Association movement in the United States and throughout the world.

During World War I he directed the raising of funds for the YWCA, the National Catholic Welfare Council, the Jewish Welfare Board, the Salvation Army, the War Camp Community Service, and the American Library Association as well as the worldwide activities of the YMCA for members of the Allied Armed Forces and prisoners of war. The world was Dr. Mott's parish from the

The world was Dr. Mott's parish from the time he graduated from Cornell University in 1888, until he was well into the eighties. Dr. Mott devoted his exceptional gifts as a speaker and organizer to interesting college students in Christian living and missionary effort.

During the 30 years in which he was chairman of the Student Volunteer Movement, 12,000 students went out to serve as educational, medical, industrial, rural, and evangelistic workers in all parts of the non-Christian world.

Dr. Mott's goal of "the world for Christ in one generation" was not acheived but the movement to which he gave his life pioneered in important phases of work for underdeveloped nations now being undertaken by the United States and the U. N.

For his distinguished services, Dr. Mott was honored with a Nobel peace prize in 1946 and the Prince Carl Medal. He was decorated by seven governments in addition to the Distinguished Service Medal given him by the United States. He had honorary degrees from many universities. His was a full life and countless people in many lands, living and dead, have had reason to be grateful that he lived it as he did.

The Rights of Parents in Education

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. ANFUSO. Mr. Speaker, Cardinal James Francis McIntyre, of Los Angeles, is lovingly remembered in New York for his fruitful labors as coadjutor archbishop. He was appointed to the Los Angeles See in 1948 and was created cardinal in 1952 by Pope Pius XII.

His eminence was present at a Holy Name Union breakfast in Los Angeles on January 23, 1955, and there delivered a a brief address on parents' rights in education. Highlights of his address were published in the Los Angeles Tidings. I am certain his views on the subject will be of great interest to many parents and, therefore, I am inserting this brief article into the Record.

Another speaker at the breakfast was Superior Court Judge John J. Ford, of Los Angeles, who is a past president of the Holy Name Society and a member of the board of trustees of the Catholic Welfare Bureau of that city. His address also touches on the subject of the rights of parents to educate their children. I am inserting his address in the Record, too, following the remarks of Cardinal McIntyre.

PARENTS' RIGHTS IN EDUCATION

Any attempt to force all American children to attend State-sponsored schools is Hitlerian and un-American, His Eminence James Francis Cardinal McIntyre said here Sunday.

Speaking before 1,200 men at the 19th annual Holy Name Union breakfast, the Cardinal charged that the Educational Policies Commission of the National Education Association had begun an open attack on the rights of parents in education.

Specific target of the attack, His Eminence said, is the United States Supreme Court's 1925 decision in the Oregon school case which declared unanimously that the rights of parents must prevail in education. It outlawed a proposal that all children be forced to attend public schools.

REAL INTENT REVEALED

"In our United States today there is prevalent a tendency to bring about the complete education of all children in public schools."

This was evident, the Cardinal said, in a booklet recently issued by the NEA's Educational Policies Commission.

"Now their real intent is revealed to the country. They are attempting to establish a common universal state education which will place every child in every place in a public school.

"'This was the policy of Hitler'," the Cardinal said.

"This is entirely contrary to the policy of our country. There is no freedom in this."

The NEA agency's booklet is titled "Public Education and the Future of America."

"The booklet exaggerates greatly the merits of public education and casts grave reflection on private education," His Eminence said.

"The booklet is historically wrong; it gives a false impression of education. It is un-American and its proposal is not the mind of the Founding Fathers or of our Constitution."

PROPOSALS THREATEN FREEDOM

The Cardinal emphasized that the Founding Fathers of the country were educated in private schools and that a long period of years passed between their education and the establishment of public schools.

Proposals of the NEA agency are a threat to liberty, the Cardinal said, and constitute a real problem in our time.

JUDGE FORD'S ADDRESS

Your Eminence, Mr. President, reverend fathers, and gentlemen of the Holy Name Society, many of you, I am sure, will recall the letter which Comdr. John J. Shea, of the United States Navy, wrote to his young son a short time before the commander lost his life in the Battle of the Solomons. The beauty of its expression of sincere adherence to religious and patriotic principles caused it to be published in newspapers and magazines the country over. In that letter the father counselled his son, "Be a good Catholic, and you can't help being a good American."

By your actions this morning you, as Holy Name men, have given glowing proof of your loyalty to the tenets of your religious faith. Underlying that devotion are principles derived from the eternal law of God to which you adhere and which assure your loyalty to your country in that sphere of your life in

which the state can justly require your obedience.

Such loyalty is in essence a submission to authority, for authority is the right to direct and command and, in turn, to obtain obedience. Therefore, we are concerned with the origin and nature of the authority which the state is entitled to exercise.

The family is a natural society because it is essential to the propagation of the race to the proper upbringing of children. But it is also necessary that man live in civil That society in the form of the state can provide in suitable measure those necessities, such as protection from harm, which would otherwise not be available to the individual or to the family group. Thus the state promotes the common welfare. affords to man the opportunity to reach the highest goal in material, intellectual and moral development. Certainly it is clear to all of us that only by such organization can man's rights be recognized and made fully effective and his liberty preserved. state, therefore, being necessary for man, must be part of the plan of God. Moreover, the state, once constituted, is a perfect society because it depends on no higher power than God alone.

But a State cannot maintain order and achieve its proper end unless it possesses authority. Authority being essential to the function of the State, its basis must be found in the natural law by which all reasonable beings participate in the eternal reason. Such authority is, therefore, from God.

Our next inquiry must be: Where has God placed such authority, by whom is it to be exercised, and to what limitations is it subject? In the language of one of our greatest statesmen is found the key to the answer. When Abraham Lincoln at Gettysburg spoke of "government of the people, by the people, for the people," he embodied in a few simple words the whole Christian philosophy of the nature of authority in the State.

The authority necessary for the proper conduct of the functions of civil society is first vested by God immediately in the people. Hence what we have is a government of the people. But obviously such authority cannot be exercised directly by the people for chaos would result. Consequently, the people transfer such authority to their representatives in the organization of the State. In the hands of such representatives are placed the reins of government. To guard against abuse or misuse of that authority, the people retain a measure of control over their representatives, such as is found in the practice of periodic elections.

Furthermore, the government must be for the people because the very purpose for which authority is exercised by the State is the achievement of the common good of human persons. It cannot be an absolute authority but rather one that recognizes and protects the God-given rights of man, for, as the great philosopher of our day, Maritain, so well states it, "If the human person is without rights, then rights and, consequently, authority exist nowhere."

Let us dwell for a moment on just one of those rights since it is a right which is so often the target of sniping attacks. I refer to the natural right of parents to educate their children. Since the upbringing of the child is primarily and essentially the right and the duty of the parents, certainly the education of the child-being that part of his rearing which relates to the training of his mindis primarily and essentially their right. As must be clear from what has earlier been said, the function of the State is only to supply those services which private endeavor does not or cannot provide. Accordingly, the rights of the State are limited. It has no absolute power as those who would treat the State as the source of its own authority—in effect making a god out of the

State and denying the dignity of man—would have us believe. The State cannot supersede the basic social group, the family, but can only supplement it. All other agencies interested in education must recognize the rights and duties of parents and serve only in the capacity of those to whom parents have delegated authority. Therefore, while the State has the right and the duty to demand of all its citizens a certain minimum education, it has no right to monopolize the field of education. This was so clearly pointed out by the Supreme Court of the United States 30 years ago that the language then used is worthy of frequent repetition. The Supreme Court said:

"The fundamental theory of liberty upon which all governments in this Union repose excludes any general power of the state to standardize its children by forcing them to accept instruction from public teachers only. The child is not the mere creature of the state; those who nuture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations."

The founders of our great Nation clearly understood that the State's authority has its roots in the natural law and must be exercised in harmony with its principles. Listen, for example, to the words of George Washington in his first inaugural address. He told his countrymen that "the propitious smiles of heaven can never be expected in a nation that disregards the eternal rules of order and right, which heaven itself has ordered."

We know, then, that the state is a society necessary for man if he is to lead a natural life as a creature. It safeguards and promotes man's temporal good. But man has a destiny beyond the temporal order. Let us, therefore, turn for the moment from the state and consider the church, a supernatural rather than a natural society. The mission of the church is to secure man's spiritual and eternal welfare. It is a perfect society because, like the state, it is sovereign in its own sphere and depends on no power other than God. In the exercise of its divine authority in the sphere set aside to it under the design of God, the church is entitled to the protection of the state and to be free from interference in matters relating to faith and morals. Since man's eternal welfare is more important than anything in the world, the authority of the state, which has as its ultimate aim the promotion of the common welfare, should be asserted in complete harmony with that of the church. Each-the church and the state-is necessary, for each adds something to man's development which the other does not have the power to give. As Christ himself commanded us, that which is Caesar's is to be rendered to Caesar, and that which belongs to God is to be rendered to God.

You may wonder why it is necessary to review principles which, I am sure, you all know and accept. The difficulty is that in the thought of so many persons throughout the world, and even in our own country, these principles have been twisted, denied or forgotten. Brute power without authority and, consequently, without the foundation of justice and law, has conquered much of the surface of the globe. Instead of a state cognizant of the dignity of the human being and striving for the protection of man's inalienable rights and for the promotion of the common welfare within the framework of the natural law, in some parts of the world governments have been estab-lished which have defied the state and gloried in contempt for the human person. spiritual issue is involved and we must be ever alert to insist upon the principles which underlie our Christian civilization for, as Christopher Dawson warned us many years ago, "Whenever the city of man sets itself up as an end in itself and becomes the center of a self-contained and self-regarding order, it becomes the natural enemy of the city of God."

Let us pray that we as Americans will ever keep in mind that the rational basis of our democracy is found in the truths of philosophy and religion. For our part, let us always keep before us those words of Lincoln—simple yet so full of meaning—"This Nation, under God."

United States "Dorchester Day"

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1955

Mr. RODINO. Mr. Speaker, there is a heroic story of the sea which has earned its right to be forever memorialized in the history of our country. It is a story valuable to the American tradition because it is a lesson in the essential unity of our people and their separate faiths-Catholic, Protestant, Jewish. It is a story of sublime sacrifice by men of religion who thus gave concrete, physical expression to their religious ideals. It is altogether a story so rich in human drama, so gripping on the imagination. and so colored by crisis and excitement at sea in time of war, that I ask the event be set down in the official calendar of American holidays. To me it is essentially a story of basic American solidar-

It is for these reasons that I have introduced into the first session of this, the 84th Congress of the United States. House Joint Resolution 77. It designates the 3d day of February in each year as Dorchester Day. In doing this we shall commemorate the sinking of the Army transport Dorchester by enemy action off the coast of Greenland on the day thus set apart. You will remember that was the tragedy at sea when four Army chaplains of different religious faiths lost their lives because-according to the reports of survivors-they pressed upon soldiers caught helpless on the sinking craft, their own lifebelts. They then perished together, linked arm in arm, in the high seas.

What the record does not and cannot show-because of the dreadful circumstances of the tragedy-is something I take the liberty to assume. I assume that when these four noble Americans-Catholic, Protestants, and Jew-went down into the ice and the water of that awful night, they uttered a common prayer in a joint plea to the God and Father of all men. It seems to me, Mr. Speaker, an act of incredible neglect that an event written in terms of grand tragedy, so meaningful for all future generations of Americans, should thus go undistinguished on the calendar of the days we honor. Therefore, I ask that this year this omission be corrected and that this House act favorably on my measure.

School Aid

EXTENSION OF REMARKS

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

. Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include a letter and tabulation from the United States Office of Education relative to the plight of the public schools in Carlisle, Pa., and other places.

I invite the attention of my colleagues, and particularly those colleagues who are members of the Committee on Education and Labor and the Appropriations Subcommittee dealing with the Office of Education, to this problem.

I hope, Mr. Speaker, that the Congress will amend the so-called Federal impact program so that Carlisle and these other school districts may receive the aid to which they are entitled.

DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE,
OFFICE OF EDUCATION,
Washington, D. C., February 4, 1955.
Hon. James M. Quigley,

House of Representatives.

Dear Congressman Quigley: This is in reference to your letter of February 3, 1955, requesting a list of the school districts which did not receive the maximum payment computed for them under Public Law 815, as amended by Public Law 246, because the school districts let contracts to construct school facilities between November 24, 1953, the first cutoff date for receipt of applications, and the final cutoff date of June 30,

You will note that a total of 27 school districts in 14 States failed to receive \$5,945,-109, because the school districts let contracts for construction of school facilities with local funds between the two cutoff dates. Of the total of 27 school districts listed, 18 had received no allotment under Public Law 815, and the other 9 had received part of their maximum payment.

These situations occur because of the following circumstances: Public Law 815 provides that the Office of Education shall compute a maximum payment for a school district based on the number of eligible federally connected children in each category times the rate. The maximum amount a school district may receive is the cost of constructing minimum school facilities for the unhoused children, but not to exceed the amount of the maximum payment. The act also provides that when the Comimissioner of Education determines that the funds that will be available for any fiscal year will not be sufficient to meet all of the requests on file he shall set a cutoff date or dates for receipt of applications to participate in any funds that may be avalable for that fiscal year. The act further provides that any contracts entered into by the school district for construction of school facilities as of the cutoff date or dates shall be counted as capacity available in determining the number of unhoused school children in the district.

A total of \$70 million was appropriated for the 1954 fiscal year for this program, and the Commissioner of Education believing that this would not be enough to approve all eligible applications on file, set a cutoff date as of November 24, 1953, for receipt of applications to participate in that \$70 million. A second and final cutoff date was established as of June 30, 1954. A number of school districts that had not submitted applications by the first cutoff date did submit applica-

tions by the second date. The funds available during the 1954 fiscal year were sufficient to make allotments to those school districts that had a priority index of a little over 20. Those school districts that did not receive allotments from the first appropriation were considered together with the new applicants in determining the priority as of the second cutoff date of June 30, This June 30, 1954, date was used in counting contracts let for construction of school facilities to determine the number of unhoused children for this group of new applicants and for the applicants that submitted applications by the first cutoff date, but were not high enough on the priority list to receive funds.

The school districts listed on the en-

closure all had submitted applications by the first cutoff date and had a maximum Federal allowance as shown in column 2. None of these school districts received funds under the first appropriation and the contracts which they let to construct school facilities with State and local funds between the first cutoff date of November 24, 1953, and the second cut-off date of June 30, 1954, reduced the maximum Federal allowance by the amount shown in column 4.

If there is any further information you desire regarding this matter please feel free to call on us.

Sincerely yours,

B. Alden Lillywhite,
Associate Director for Federally Affected Areas,

List of applicants under Public Law 815, as amended by sec. 246, who lost Federal funds because contracts for the construction of school facilities were let after Nov. 24, 1953, and on or before June 30, 1954 (col. 2 shows maximum funds for which applicants qualified, col. 3 shows funds approved, and col. 4 shows funds lost because of the above contracts)

American Legion Support of American Merchant Marine

> EXTENSION OF REMARKS OF

HON, HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. BONNER. Mr. Speaker, since World War II we have been letting our merchant marine, our vital maritime industries, deteriorate at an alarming rate. I am hopeful that in this Congress we will be able to arrest and reverse this dangerous trend.

Unquestionably, one of the reasons for this situation is a general lack of public understanding of the significance of the merchant marine and the intimate relationship it bears to the life and security of every American. Perhaps this is be-cause the physical presence of ships seems so remote to many of us as not to warrant more than a passing thought, for those who know from intimate experience the place of a strong merchant marine in our national security are its wholehearted supporters.

Mr. Speaker, under unanimous con-sent, I include in the Appendix of the RECORD a letter dated February 4, 1955, from Mr. Miles Kennedy, director, national legislative commission of the American Legion, and a copy of Resolution 499 adopted at the 1954 national convention setting forth the Legion's position with regard to a long-range merchant marine program.

The letter and resolutions follow:

THE AMERICAN LEGION. Washington, D. C., February 4, 1955. Hon. Herbert C. Bonner,

Chairman, House Committee on Merchant Marine and Fisheries, House Office Building,

Washington, D. C.
DEAR CONGRESSMAN BONNER: Referring to the hearings now being conducted by the House Committee on Merchant Marine and Pisheries relative to construction, conversion, and repair of ships, etc., I enclose copy of Resolution 499 adopted at the 1954 national convention of the American Legion, and setting forth our position on the long-range merchant marine program.

While we are not asking for an opportunity to be heard in person I would appreclate it if you would kindly have this letter and the attached resolution incorporated in the record of the hearings.

Thanking you for your courtesy, I am, Sincerely yours.

MILES D. KENNEDY, Director.

LONG-RANGE MERCHANT MARINE PROGRAM

Whereas modern seapower attack is making World War II merchant ships obsolete and the future requires a modern fleet of fast ships "in being" and ready at the instant of an overt nuclear explosion; and

Whereas the maintenance of an adequate merchant marine is sound national policy, absolutely essential to our national security and contributes substantially to our eco-

nomic welfare; and

Whereas past experience clearly demonstrates that reliance upon the merchant fleets of foreign nations not only is inadequate and costly but dangerous to our national security; and

Whereas the threat of intercontinental warfare to the security of the free world and widespread global commitments have indefinitely increased our need for added naval power and ocean transportation; and

Whereas the United States depends on foreign overseas sources for many strategic raw materials essential to our domestic industrial production and defense requirements;

Whereas maintaining of ship construction potential and providing the indispensable ready-for-action merchant minimum of ships as deemed necessary by the Department of Defense is dependent upon the continuous availability of shipyards, plant knowhow and a nucleus of skilled workers, dispersed along the coasts of the United States;

Whereas the Department of Commerce has recommended a stepped-up construction program of oceangoing vessels; and

Whereas the American Legion has long recognized that a strong American-flag merchant fleet is essential to the defensive strength of the Nation and to the prosperity of our country; Therefore be it

Resolved, That the American Legion reaffirms its 36-year support of a strong, privately owned and operated American merchant marine, and urges the adoption of such policies and procedures as will:

1. More fully implement the sound principles and procedures in the Merchant Marine Act of 1936.

2. Develop workable and consistent formulas for Government aid and liberal mortgage guaranties to encourage private investcapital to finance construction of

American ships.
3. Establish a long-range ship construction program to provide replacements and avoid block obsolescence of our aging merchant ships.

4. Restore our American coastwise fleet, the "hard core" of merchant shipping so that it will again be available for any emergency

5. Encourage intercoastal shipping by revising tolls on United States ships for passage through the Panama Canal to provide that such tolls should be adequate the costs actually attributable to the operation of the waterway but should not de-fray the overall cost of maintaining the Canal Zone.

6. Continue the statutory requirements that at least 50 percent of all cargoes financed directly or indirectly by the United States move on American flag vessels.
7. Reactivate the Merchant Marine Naval

Reserve as an effective component of the United States Naval Reserve.

8. Encourage construction repair and overhaul of ships by private industry.

9. Withdraw ships operated by Government agencies from services where private ships can provide adequate ocean transportation.

10. Seek to remove existing discriminatory practices of foreign nations against American shipping.

11. Maintain the United States Merchant Marine Academy at Kings Point, N. Y., as a permanent institution comparable to the service academies and to continue to encourage and support the maritime academies in Maine, Massachusetts, California, and New York.

Whereas the American Legion has adopted and intends to continue a program of direct action for a strong American merchant ma-

Whereas in order to implement the board and extensive information and educational campaign by the American Legion on behalf of a strong American merchant marine for national security: Now, therefore, be it

Resolved, That the director of the National Security Commission and the chairman of

the Merchant Marine Committee of the American Legion are hereby directed to continue to seek and obtain from all possible sources such information and assistance as will insure the effectiveness of the mandates of this convention concerning the American merchant marine; and to encourage public relations officers of the various departments of the American Legion to arrange meeting and forum discussions on maritime affairs and recommend that the department com-manders invite informed speakers on such subjects to appear before their annual department conventions; and, further, that the director and the chairman of the Merchant Marine Committee be, and are hereby authorized to participate in all hearings affecting said program; and be it further Resolved, That the American Legion at its

36th annual national convention, assembled in Washington, D. C., August 30-September 2, 1954, instructs the national headquarters of the American Legion to prepare and to conduct an extensive informational and educational program about the American merchant marine as "our fourth arm" of na-

tional security.

Tributes to Ambassador Warren Austin

EXTENSION OF REMARKS

HON. RALPH E. FLANDERS

OF VERMONT

IN THE SENATE OF THE UNITED STATES Tuesday, February 8, 1955

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the tributes given during, and newspaper reports on, the memorial dinner given Ambassador Warren Austin in Burlington, Vt., on January 30, 1955.

I was privileged to attend the dinner, in which so many persons from various parts of the country gave testimony in honor of the former Senator, who contributed so much in these Halls and in the United Nations.

The instance of this particular event was the announcement of a memorial forest in Israel, named in honor of the Ambassador, by virtue of which a plaque recording that tribute was presented to him by the Vermont Jewish community.

There being no objection, the tributes and articles were ordered to be printed in the RECORD, as follows:

[From the Burlington (Vt.) Free Press of January 31, 1955]

FAITH ONLY ROAD TO PEACE, SAYS AUSTIN AT TESTIMONIAL

Warren R. Austin, visibly moved by one glowing testimonial after another, accepted the tributes of world, National, State, and local dignitaries here yesterday for his "outlocal dignitaries here yesterday for his standing contribution to the cause of free-dom and democracy" and for his "glorious part in the historic drama of the restoration of Israel.'

The former United States Senator and Ambassador to the United Nations received the plaudits at a testimonial staged by the Vermont Jewish community and attended by some 650 persons at the synagogue center. Highlight was the presentation of a plaque citing Austin's accomplishments and marking the establishment of a Warren R. Austin Forest in Israel.

Austin received personal commendations from Ambassador Abba Eban of Israel, Senator Ralph Flanders, Gov. Joseph Johnson, Mayor J. Edward Moran, Rabbi Max Wall, program chairman, and Dr. Arthur Gladstone, president of the Vermont Jewish Council,

who presented the plaque.

And he was commended through letters and telegrams by President Elsenhower; Henry Cabot Lodge, Jr., present U. N. Am-bassador; Dag Hammarskjold, Secretary General of the U. N.; Cabinet members; leaders of House and Senate; former President Harry S. Truman; and many other former col-leagues in public life.

BARE PUBLIC APPEARANCE

Austin, making one of his rare public appearances, responded by speaking of the "tre-mendous, vital faith" which stimulated the Jews to establish a political state in the Holy Land.

"Such faith," Austin said, "was strong enough to carry them over when the time came to establish the promised land."

And, he said: "Faith is the only real way of arriving at the goal of world peace.
"I have that faith myself."

STANDING OVATION

The packed assembly gave him a standing ovation when he finished speaking.

The vigorous young Israeli diplomat said Austin was the father and pioneer of the American tradition in the work of the United

"He has served with strength and dignity admidst high issues of conflict and concilia-tion," Eban said. "But I venture to presume that as he looks back over that crowded record he will find no greater spiritual satisfaction than that of belonging to his historic role in assisting this small but immortal people to achieve its statehood, assume its sovereign rights and take its place after 2,000 anguished years in the family of free nations.

Governor Johnson said he brought the high pride of Vermont to the testimonial.

It is not that the State honors Austin," said the Governor, "but that it is Austin who honors the State."

Senator Flanders called Austin a man with an uncompromising refusal to compromise with evil and a desire to meet nations on a basis of living together.

HAS SERVED HIGH PURPOSES

Rabbi Wall said Austin, both in the U. N. and the Senate, has served the high purposes and best interests of our Nation and of the peoples of the world.

The rabbl said: "To this man, undeterred

by threats of reprisal and boycott, we owe a

debt of gratitude which can merely be ex-pressed but never paid."

And, referring to the Warren Austin Forest to be planted through the cooperation of the Jewish national fund, Wall said: "We have joined together and dedicated a living testimonial to this man * * * this forest will remind us of the many bonds and invaluable links between our country and Israel.'

The President said in a written message that he was happy to join the Jewish com-munities of the State in paying tribute to

Austin.

"For his dedicated service," wrote Eisenhower, "all who seek a just world peace are in his debt."

Most Rev. Edward F. Ryan, bishop of the Burlington diocese, pronounced the invocation. Bishop Vedder Van Dyck, of the Episcopal diocese of Vermont, gave the bene-

Others on the speakers' platform were Lt. Gov. Consuelo Northrop Bailey, Mrs. Austin, Rev. Barry Fontaine, diocesan chancellor; and Consul Reuven Dafni, of Israel.

TRIBUTE TO WARREN R. AUSTIN APPEARING ON PROGRAM OF TESTIMONIAL DINNER

THE WHITE HOUSE, Washington, January 10, 1955. I am happy to join with the Jewish com-munities of the State of Vermont in paying tribute to Warren R. Austin.

His outstanding ability and devotion to principle-evidenced in his career in the United States Senate—fitted him well for the difficult post of United States repre-sentative to the United Nations. For 7 years Ambassador Austin was a leader in the new organization's efforts to further international cooperation, and for this dedicated service all who seek a just world peace are in his debt. It is therefore gratifying to know of your expression of appreciation for his work and for his part in the United Nations action leading to the creation of the State of Israel.

To him I extend congratulations, and to all attending the meeting in his honor, I send warm good wishes.

Sincerely,

DWIGHT D. EISENHOWER.

I am certainly pleased and happy that you decided to honor my good friend, the Honorable Warren Austin. I know of no one who has made a greater contribution to his country than has Ambassador Austin. During his period of service in the United States Senate he was responsible for many acts of important legislation. Warren Austin's work as our chief delegate to the United Nations was an example of great skill and statesmanship.

Please express my congratulations to the Ambassador and tell him that I am very sorry I can't be present in person to shake

Sincerely yours,

HARRY S. TRUMAN.

TO WARREN R. AUSTIN

We the Jews of the State of Vermont, dedicate the Austin Forest in Israel to an American statesman who has consistently over many years embodied in his personal life and his political acts the authentic ideal and the loftiest aspirations of America.

We offer our profound respect and gratitude to one who has truly been our friend and neighbor and who, as such, has shown us what it means to live in the spirit humanity and of justice and to fight the good fight in all the causes of freedom and

The Austin Forest in the land and State of Israel will commemorate this noble spirit. Its everlasting greenness will bear permanent witness to the gratitude which the Jews of the Green Mountain State treasure forever in their hearts for one who in the councils of the United Nations raised his voice in crucial and formative days for the State of Israel. May he live long and see the verdure of the forest which bears his name. SAUL SPIRO,

Chairman, Warren R. Austin Testimonal.

UNITED STATES REPRESENTATIVE TO THE UNITED NATIONS.

The deep affection and regard with which the community holds Warren Austin is the finest tribute that any man can receive. Sincerely yours,

HENRY CAROT LODGE, Jr.

May God bless the guest of honor and all who honor him, and may His grace prosper the cause of human brotherhood.

ROBERT F. JOYCE, Auxiliary Bishop of Burlington.

It is gratifying to all the friends and admirers of Ambassador Austin that a forest will be planted in Israel in recognition of the outstanding public service of this great statesman and diplomat.

HERBERT H. LEHMAN, United States Schator.

It is a privilege for me to be given this opportunity to pay my personal respects to Warren R. Austin with whom I have served in the United States Senate and for whom I have always had the highest respect and admiration.

LEVERETT SALTONSTALL, United States Senator.

THE JEWISH AGENCY FOR PALESTINE, New York, N. Y.

It is with extreme pleasure that I convey my greetings to the testimonial being held in honor of Warren Austin. I recall most vividly the exciting days of consultation with this illustrious statesman in the United Nations and his unceasing efforts and unsparing devotion to the cause of Israel.

EMANUEL NEUMANN.

JEWISH NATIONAL FUND.

The project to plant a forest in Israel in honor of Ambassador Warren R. Austin is an act of poetic, albeit belated justice. men in America have evinced greater friendship for the Jewish people or have rendered greater service to the cause of Israel. .

MENDEL N. PISHER, Executive Director, Jewish National Fund. HARRIS J. LEVINE,
President, Jewish National Fund.

THE AMERICAN JEWISH COMMITTEE.

New York, N. Y. For you Vermonters, Senator Austin is, of course, the favorite son par excellence. But the fact is that in this choice of yours every good American throughout the land and regardless of political affiliation, enthusiastically concurs. Lawyer, legislator, diplomat, statesman, and guardian of America's unconquerable liberal tradition. Mr. Austin has long deserved the admiration of his countrymen and of America's friends throughout the world.

JACOB BLAUSTEIN, Honorary President.

SYNAGOGUE COUNCIL OF AMERICA, New York, N. Y.

Senator Austin possessed in abundance those qualities that have made New England famous, straightforwardness, love of democracy, justice, and fair play to all men. It is in the Biblical tradition that they have their root and it is in that tradition that America found its inspiration and Warren Austin his earliest instruction.

Rabbi Norman Salit, President.

> B'NAI B'RITH, Washington, D. C.

It gives me an enormous amount of pleasure to learn of the project that is being established in honor of a great American, Warren Austin. This testimonial on the part of the Jewish communities of Vermont is a flitting commemoration of the substantial assistance rendered by Mr. Austin to the people of Israel in the Halls of the United States Senate and the United Nations.

PHILIP M. KLUTZNICK, President.

ZIONIST ORGANIZATION OF AMERICA.

It gives me great pleasure to extend, on behalf of my fellow officers of the Zionist Organization of America and on my own behalf, warmest greetings to the testimonial which the Jewish community of Vermont is holding in honor of Warren R. Austin.

MORTIMER MAY,

President.

AMERICAN ZIONIST COUNCIL, New York, N. Y.

Warren Austin has earned a secure place in history and in the hearts of his countrymen. He is a living examplar of those great New England virtues which American Jews are happy to think derive their strength and vitality from the noble tradition which we share in common.

IRVING MILLER. Chairman. VERMONT JEWISH COUNCIL.

On behalf of the Vermont Jewish Council, I wish to tell you how pleased we are to participate in the expression of appreciation and honor of our esteemed friend, Warren R. Austin. Being so interested in the Jewish national fund, and having this past year seen at first hand their achievements in reforestation of the land of Israel, I know of no more appropriate way for Vermont Jewry to honor a man who did so much toward the realization of the Jewish State, than to create a Warren Austin Forest.

ARTHUR A. GLADSTON, M. D.,
President.

I greatly appreciate having the opportunity to join the many friends who will be meeting together on January 30, 1955, to honor one of America's most distinguished citizens, the Honorable Warren R. Austin. His outstanding record during the years he spent in the Senate, his pioneering work in the United Nations, as well as his lasting contributions toward the establishment of the State of Israel, are only a few of his many notable achievements.

This will be a memorable occasion, and I want to express my own personal gratitude to Warren Austin, whose life has been so full of service to others, and to wish for him the happiness and good health he so rightfully deserves in the years to come.

RICHARD NIXON.

WARREN R. AUSTIN TESTIMONIAL,
Burlington, Vt.

The Rabbinical Assembly of America considers it a great privilege to congratulate the Jewish communities of Vermont on the establishment of a forest in Israel in honor of Senator Warren R. Austin, noble representative of our beloved country in the councils of Government and in the United Nations. May it be an eternal reminder of the values which he espoused so eloquently and symbolized in his own person.

Rabbi Harry Halpern,
President.
Rabbi Wolfe Kelman,
Executive Secretary.

UNITED STATES SENATE.

The Jewish communities of Vermont are to be commended for paying this well-deserved honor to Ambassador Austin. His distinguished work in both the United States Senate and United Nations, and especially his work for the establishment of the State of Israel, command the respect of us all. I am happy to know that Vermonters of the Jewish faith are undertaking to accord him the honor he richly deserves.

GEORGE D. AIKEN.

JANUARY 4, 1955.

The magnificent contributions which Ambassador Austin has made to elevate the stature of the United Nations and advance the cause of world peace have ennobled our State and Nation. I hope that in the years ahead he will rejoice in seeing the seeds of international understanding which he has sown bring forth a world free from tyranny and armed strife.

WINSTON L. PROUTY, Member of Congress.

I am happy to join with you in saluting Ambassador Warren R. Austin on the occasion of the establishment by Vermont Jewry of the Austin Forest in Israel.

Ambassador Austin is among those American statesmen who have championed the State of Israel and who have seen in its establishment the setting up of an extension of the American democratic idea in the Middle East. Appreciating as he does the

Hebraic ideals that have helped fashion our American Republic, he has been motivated by the highest ideals in lending his valued support to the establishment and the promotion of the State of Israel. The Jewish communities of Vermont honor themselves in honoring this American whose New England Pilgrim and Puritan traditions are so close to those of our own coreligionists.

Sincerely yours,
Rabbi Barnett R. Brickner,
President, Central Conference
of American Rabbis.

Over a long span of years he has served his native State of Vermont, his country, and humanity at large. As a judge, as a United States Senator, and as his country's Ambassador to the United Nations, he has worked tirelessly. His wisdom, courage, and kindness have been invaluable assets in the quest for peace. I am grateful for this opportunity of paying tribute to a valued friend. Sincerely yours.

JOHN FOSTER DULLES.

New England Jewish National Fund. In behalf of the Jewish National Fund of New England, we wish to express our deep appreciation to you and your committee for honoring our distinguished friend, Ambassador Warren R. Austin, in this tribute by the Jewish community of Vermont. With his help and cooperation at the United Nations, the State of Israel was established.

FRED MONOSSON,
President.

THE BURLINGTON FREE PRESS,
Burlington, Vt.

A man of great talent, forceful in thought and expression, of deep convictions, with sincerity, warmth, and courage, Warren Austin has aroused our admiration especially for the whole-souled consecration that was embodied in his contribution to public service and to the cause of world peace. Mr. Austin made great sacrifices and never spared himself or thought of self in his urgent quest for sound and lasting international peace,

DAYD W. Hows.

The Significant Role of Farm and Rural Voters in the 1954 Oregon Election

EXTENSION OF REMARKS

HON, RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article from the Christian Science Monitor of December 10, 1954, by Malcolm Bauer, of Portland, who is the Oregon correspondent for that very informative and outstanding daily newspaper. The article indicates clearly the significant role played by farm and rural voters in the historic Oregon election of 1954.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON ELECTION ANALYZED: RURAL VOTE
ELECTED NEUBERGER

(By Malcolm Bauer)

SALEM, OREG.—Now that the United States Senate victory of Democratic RICHARD L. Neusercer over the GOP incumbent, Guy Cordon, has been confirmed officially by a statewide vote canvass, the sources of Mr. Neusercer's strength can be analyzed with more accuracy.

Consensus has been that Oregon Demo-

Consensus has been that Oregon Democrats' first Senate seat conquest in 40 years was due to but 2 factors: The support and political activity of organized labor in metropolitan Portland and the dissatisfaction of Oregon voters with the Eisenhower administration's natural-resources policies.

The importance of these points is confirmed by the vote canvass, but the precinct-by-precinct tally also reveals another significan fact: Mr. Neuberger ran unusually strong in farming areas.

NEUBERGER STRONG UPSTATE

In explaining reasons for his defeat to the editors of U. S. News & World Report, Senator Cordon said: "The final event was determined by a heavy Democratic majority in the city of Portland. I got a terrific majority outstate and that meant, of course, in the farming areas. I piled up my majority, but it wasn't enough to overtake his (Neubergers) Democratic majority in the city of Portland."

But official precinct totals, which were disclosed 2 weeks after Senator Cordon's statement, present a different picture. Mr. Neuberger's official margin was 2,462 votes, less than 1 each for the State's 2,499 precincts. His 16,788 majority out of the 198,556 votes cast in Multnomah County was by no means an overpowering one. He ran a stronger race in upstate counties than has any major Democratic candidate in years, and in some instances captured a majority in rural counties.

"If I had been told I would have no more of a majority than I won in Multnomah County," the Senator-elect told this writer, "I would have been sure I was sunk."

RUBAL VOTE WENT FOR DICK

Actually, the Neuberger upset can be credited in part to rural Oregon.

Biggest wheat-growing county in the State is Umatilla and that county, in which labor's influence is negligible, gave Mr. Neuberger a 7,251 to 6,632 majority. Neighboring Union, Baker, and Wallowa Counties are predominantly rural, and Mr. Neuberger won in all three. In these latter counties the private power versus public power issue, as represented in the Hells Canyon Dam controversy, was an important one.

It is significant that the wheatgrowers of Umatilla County went Democratic in 1954 after they had given Senator Cordon an overwhelming 7,348 to 3,623 margin in the general election of 1948.

In Lane County, which has thousands of small, diversified farms, Mr. Neuberger ran unexpectedly strong in rural precincts; and the Cordon margin in the county was less than 2,000 in a total of more than 45,000 votes cast in the county. In 1948, Senator Cordon won by nearly 2 to 1 over his Democratic opponent—22,916 to 12,757.

GRANGE FAVORS PUBLIC POWER

It is possible to attribute the Neuberger rural strength to a number of reasons, not all of them directly concerned with farm policy. The Oregon Grange, unlike the national parent body, is a strong advocate of public power, and that fact doubtless accounted for many Neuberger votes in farming areas.

The labor vote is firmly tied to the rural vote also in some counties, where union members who work in the woods or as fishermen, are also part-time farmers. Two such counties are Clatsop and Coos on the Oregon coast. Both gave majorities to Mr. Neuberger.

But whatever the reasons, the evidence of the canvass is clear. Many Oregon farmers and farm workers had a hand in putting Mr. NEUBERGER in the Senate and thereby clinching for the Democratic Party the narrow control of the upper house.

ONE HUNDRED AND THIRTY-EIGHT THOUSAND DOLLARS VERSUS ONE HUNDRED AND THREE THOUSAND DOLLARS

Another tardy record upset an early conception of the Neuberger-Cordon race: That the Republican candidate was possessed of an overpowering campaign chest. cial reports have disclosed that the Cordon campaign organizations spent a total of **238.000 as compared to \$103,000 for Neuberger organizations, far from as great a differential as had been anticipated. No Democratic candidate has ever had such strong financial backing in Oregon.

Thus it has been demonstrated that the Democratic Party in Oregon may henceforth be able to hold its own in the fund-raising department; although the size of the total expenditure in the Senate race-16 times the annual salary of a Senator—has been deplored by many Oregonians.

Restoration of the Windjammers

EXTENSION OF REMARKS

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. MILLER of California. Speaker, following are the second and third in the series of articles on the Alaska packers' fleet published by the Alameda Times-Star February 1 and 2, 1955.

These articles, written by Thad Spinola, tell the colorful history of the windjammers that plied the seas between San Francisco, Alameda, and Alaska during an illustrious era of the

[From the Alameda Times-Star of February 1, 1955]

SHIP, MAN PARALLEL LIVES—ALAMEDAN, QUEEN, BORN IN SAME CITY, RETIRE TO-GETHER

(By Thad Spinola)

There's nothing so strong as binds a man and ship together as a common love for the

And when John Rankine was born, his life's course was charter as sure as any merchantman's.

For, born in the same Scottish city as Rankine, was a handsome windjammer which he was to meet again on the other side of the world and on which he was to sail many a day until both man and ship should retire together in the same port.

The Star of Alaska was to come along 3 years after John was born. But both can claim the same birthplace. For the man was born in Glasgow on March 26, 1883, near the shipbuilding town on the Clyde; and the ship got her first taste of the tangy sea in January 1886, when she was launched from the ways of the C. Connell shipyard.

PATHS CROSS

As if drawn by the steady hand of a veteran navigator, the separate lives of the man and the ship were to meet again, but not until many years later.

Rankine, who now lives at 2115 Lincoln Avenue with his charming wife, is probably the last of the many men who sailed aboard the Star of Alaska, nee Balclutha, or better known as the Pacific Queen.

He was born to Mr. and Mrs. James Ran kine, he a proud and able shipwright. The family moved to San Francisco in 1888, where the elder Rankine became foreman of the Pacific Mail Docks.

Of a nature like his father, young Rankine soon tired of books and things prosaic and so signed aboard a windjammer as a cabin boy where he learned the rudiments of seamanship.

SAILS AS CARPENTER

It was not until 1905, when he was 22 years old, that he got his shipping papers and boarded, as carpenter, the Star of Alaska, his old friend from Glasgow.

The Star had made numerous voyages under the flag of other shipping firms. From Cardiff to San Francisco and back; from Swansea to San Francisco and return; to Antwerp, to London, and Calcutta, and Montevideo, the steel hull of the sleek windjammer slipped into many a foreign port carying coal and hides and many another item of water-borne commerce.
In 1899 she arrived in San Francisco for

the last time from England and was bought by three San Francisco firms for carrying grain from the rich San Joaquin Valley and lumber from the forests of Washington and Oregon.

In 1903, the San Francisco firm of Pope and Talbot chartered the Balclutha, as she was then known, for the season of salmon fishing in Alaska. In 1904 she was again chartered but 23 days after leaving, she was wrecked on the north end of Sitkinak Island.

It was then that the Alaska Packers Company purchased her for \$500 and rough repairs were made at Chip's Cove. She remained there throughout 1905, and in the spring of the following year a crew of repairmen with supplies and new gear was sent up from San Francisco.

Rankine was abroad the relief ship and lent his skilled hands in repairing the damage. Under the command of Capt. Nicholas Wagner she arrived in San Francisco August 7 and was laid up at the United Engineering Works for complete repairs.

[From the Alameda Times Star of February 2, 1955] SHIP IS RESTORED BY MUSEUM

(By Thad Spinola)

It is a hard fact for the oldtimers to admit, but the windjammers that worked the Alaska cannery run were not fitting ships for a family man to bend his life to, and when he was in his late twenty's, John Rankine left the sea for sounder sources of in-

For 24 years the Star of Alaska plied between San Francisco, Alameda, and Alaska, hauling for the salmon season. jammers were tied up 9 months out of the year and made the long, tedious voyages somewhat bedraggled and sea-torn.

Her best time from San Francisco to Chignik was in 1926, when she sailed from the Golden Gate on April 3 and arrived at the Alaskan port on the 17th, making the trip in 2 weeks. Her average day's run was 143 miles, and her average speed, 6 knots all the way.

The Star was the most consistent ship in the Star fleet, never taking over 32 days on the northward passage and the longest time she took coming home was 20 days in 1922 and 1923.

During all this time, Rankine had acquired wife, had served several hitches in the Navy and finally went to work at the Mare Island naval shipyard. He had also taken time out to fight in the Spanish-American War and had left the Navy with the rank of warrant officer.

END NEAR

But the end of the Star was near.

In 1929 only two of the original wind-jammers were left in the fleet. A year later, the Star of Holland was retired from the service, and the Star of Alaska made the last voyage alone to the far northern port.

Steamers, most efficient, faster and less costly, with their strange, bellowing blasts from their funnels, sounded the end of a great era. After being laid up for nearly 2 years, the Star of Alaska was sold to Frank Kissinger, a carnival promoter, for \$5000. On February 4, 1934, she set sail for Los

Angeles, arriving 10 days later. For a year she lay in Los Angeles harbor, during which time she appeared in several movies; includ-ing "Mutiny of the Bounty," "Souls at Sea" and others.

Kissinger saved the windjammer from the scrap heap many a time, and during World II union and other shipping officials prevented the Government from claiming her for scrap. She was the last full-rigged sailing ship to fly the American flag.

She ended her active years on the sloughs of Sausalito until she was bought by the San Prancisco Maritime Museum for \$25,000. The museum, in an unprecedented show of salesmanship, signed various shipping firms to donate repair work and material in restoring the old windjammer.

The Star of Alaska sometime this year will

again be that "right, tight and shipshape" vessel she was years ago. But will be forever moored in proposed Aquatic Park, as a reminder to future generations of a great, bygone age.

TO MUSEUM

But until then, she bears the name Pacific Queen, given her by her former owners. Tied up to the Moore Drydock Company yard at the foot of Paru Street in Alameda, the Queen doesn't have many visitors. But on Saturdays, droves of shippard men swarm over her decks and rigging, giving their time to the cause.

One of them is Rankine, employed by the museum as a carpenter and shipwright again, just as he was 50 years ago, and he can relate many a fact about the old ship.

"There are many times when I could have sued her for alienation of affections," his wife says with a smile, "and I remember many an evening alone at home."

The Los Angeles and Southern California Story of Record-Breaking Growth From 1945 to 1955-No. 1

EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. McDONOUGH. Mr. Speaker, the fabulous growth, expansion, and increase in population in Los Angeles and southern California between the years 1945 to 1955 as told in the midwinter issue of the Los Angeles Times is one of the most astounding examples of American enterprise and resourcefulness in the history of the Nation.

I am proud to have the privilege of representing in the Congress a section of the great empire known as southern California, and I include in my remarks the following article under the title "For the Past 10 Years We Have Opened the Door to 500 New Residents a Day":

FOR THE PAST 10 YEARS WE HAVE OPENED THE DOOR TO 500 NEW RESIDENTS A DAY

(By Charles Detoy, president, Los Angeles Chamber of Commerce)

If the entire population of Pittsburgh and Baltimore-1,755.000-were transported westward and settled within the Los Angeles metropolitan area, you would have a fair estimate of our population increase between January 1, 1945, and January 1, 1955.

The impact of this migration, averaging nearly 500 new residents a day for 10 years, makes even seasoned statisticians sit up and

take notice.

While the city's population climbed from 1,725,000 in 1945 to its present estimated 2,150,000, a 24.6 percent increase, Los Angeles County became the most populous county in the country, second in the world. The county jumped from 3,345,000 residents 10 years ago to 4,950,000 today, and hasn't stopped yet.

With a 50-percent rate of increase for the metropolitan area chalked up during the past decade, a population larger than that of Albany, capital of New York, has been added to this area each year. Certainly the problems inherent in this number of increased residents stagger the imagination and resources of any community. Only five United States cities—New York,

Chicago, Detroit, Philadelphia, and Los Angeles exceed the present 1,041,140 population of the San Gabriel Valley, which now accounts for more than a fifth of the county's population, according to figures com-piled by the Los Angeles Chamber of Commerce.

San Fernando Valley, starting with about 200,000 residents in 1945, now has more than 600,000 inhabitants, more than the population of Minneapolis or Buffalo.

Los Angeles, city, county, and metropolitan area, has met the challenge of fantastic growth with a creativity and resourcefulness characteristic of the Southland.

Los Angeles manufacturing gathered momentum with more than \$1,600 million capital investment in new plants and equipment for the 10-year period. As a result, value added by manufacture was doubled in that short time from \$2,052 million to \$4,623 million.

To house the burgeoning county builders added \$7,900 million worth of construction, including 700,000 new dwelling units-enough to house the entire population of the city of Philadelphia.

Although the mushrooming clusters of neat, trim California-styled homes which appear almost overnight in erstwhile orange groves, bean fields, and cabbage patches have become an occurrence of regularity in the lives of Angelenos, a glance at the comparative population figures of the decades dramatically highlights the story.
West Covins, a community of 1,600 in 1945,

experienced a 1,346-percent increase during the 10 years it took to emerge as a city of 23,300 inhabitants.

The birth of one community contributed a tremendous population influx. Lakewood, with its present estimated 58,000 inhabitants. more than Lexington, Ky.; Jackson, Miss.; or Orlando, Fla., became Los Angeles County's 46th incorporated city in April 1954. In 1945 Lakewood was virtually uninhabited wasteland.

Encino skyrocketed from 2.250 residents in 1945 to its present 16,900—a 651-percent increase, almost duplicated by the 620-percent increase recorded for Reseda, where the population grew from 7,550 to more than 54,000 today

As night follows day, booming retail sales followed the terrific influx of people to the Southland. With employment in manufacturing rising from less than 400,000 in 1946

to 630,000 today, the expanded payroll made itself evident in annual retail sales dollar volume reports—\$2,550,500,000 in 1945, more than \$6 billion estimated for 1954.

If recent population predictions come true, and California has a population of 16,225,000 by 1965-a 3,500,000 increase over the current estimate—the Los Angeles metropolitan area will have nearly 8 million people within its environs.

Despite the tremendous growth of industry in the area and the loss of farmland to the new crops of homes, Los Angeles County maintained its position as the leading agricultural county of the Nation, producing from its fertile soils \$2,200,000,000 of agricultural products during the worth fruitful decade.

From under its prolific soil came 915 mil-lion barrels of crude oil, more "black gold" than the entire 1952 output of the oil-rich Middle East or Venezuela.

The Los Angeles and Southern California Story of Record-Breaking Growth From 1945 to 1955-No. 2

> EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. McDONOUGH. Mr. Speaker, the following is a continuation of the Los Angeles and southern California story with special reference to building development under the title of "Eight Billion Dollar Decade":

EIGHT BILLION DOLLAR DECADE-THAT'S THE BUILDING RECORD LOS ANGELES METROPOLI-TAN AREA SET SINCE THE END OF WORLD WAR II

(By Charles C. Cohan)

The Los Angeles Metropolitan District (officially all Los Angeles and partly Orange Counties) has just rounded out its greatest 10 years, with a new and equally bright era dawning.

Here's a gauge of the progress. Building permits totaling \$8,259 million were issued in the district in that decade by the time the 1945-54 span was approaching its close. In that huge volume was a \$2,990,314,100 total of permits for constructions in the city of Los Angeles alone. In metropolitan area permits were some 690,000 for family dwelling units. New factories and plant expansions in Los Angeles County in that time totaled \$1,559,054,639 investment.

These figures are the statistical measure of a wonderful saga-one of the most remarkable chapters in the American story of development to top place in world history.

It is a saga of a continuing westward migration that long has astonished the world, of fulfilled desire of thousands of people for location, homeownership, and a part in aiding welfare and progress in this region of special charms. It is a mighty saga of the furtherance of free enterprise for the general benefit of region, State, and Nation.

It was 1945. World War II was drawing

to an end. Transition from wartime conditions to peacetime situation was beginning. The war years had seen a great upsurge of industrial expansion in this region, new factories and expanded facilities to meet wartime needs. Thousands of war workers had streamed into this area. Dwellings had to be built to meet the greatly increased housing demand-war-worker homes alone were authorized. Thousands of them were built in this metropolitan district. There had been tremendous activity-wartime activity. Then what of the postwar era dawning?

Rumors grew as they flew-fear-tinged guesses, predictions that there would be a sharp industrial slump, that thousands of workers would leave, that thousands of houses would stand empty making a lot of little ghost communities.

These things didn't happen, just as some of us said they wouldn't. There was no exodus. There was no industrial slump, There were no ghost towns. Very much the contrary was true.

Industry had wisely prepared to gear it-elf to peacetime needs. There were more self to peacetime needs. new factories built and plant expansions in Los Angeles County in the first 5 postwar years than in wartime. In those postwar years industry in this metropolitan region took wider strides toward becoming, as it now is, third in magnitude in the Nation. just back of the industrial position of New York and Chicago.

New residents came here from all directions. Population never ceased increasing in those years.

Postwar removal of the ban on any constructions but those essential to war and other important needs spurred great new building activity. There was a huge back-log of demand for dwellings. Many other kinds of building projects were needed to keep peacetime economy in balance and also to further cultural development.

There was a notable boost in realty market activity. Price levels for existent dwellings rose sharply-prices quickly were twofold, threefold what they were in the 1939-40 period. Wisely and effectively there was prevention of a wild, hysterical boom that might have brought a serious slump. However, there was no trend of return to anything like the 1939-40 levels and it doesn't look like there ever will be.

The vivid picture of great postwar development and progress has as a brilliant highlight the tremendous importance of subdivision formations throughout the region. There were created new communitiesthousands of homes on landscaped sites.

WHAT THE BOOM BROUGHT

Of houses built on subdivisions formed in 8 southern California counties since 1946 to late in 1954, about four-fifths (conservatively estimated) or about 371,200 were built in the Los Angeles metropolitan areaenough homes to supply housing for 371,000 families or around 1,300,000 men, women, and children. And, of course, in that same time thousands more dwellings were built on previously formed subdivisions and on scattered lots.

Strongly indicated is that the recently enacted National Housing Act signed by President Eisenhower will stimulate home building and home-improvement projects. That new widening of the way to homeowenrship is one of the phases of the strong building and realty activities and general progress here during the past 2 years that give impetus to continuance of very favorable trends in this new year and thereafter.

In the 556,380 building permits, totaling \$2,990,314,100, issued in Los Angeles (city) in the span from January 1, 1945, to the final third of 1954, there were 139,578, amounting to \$1,143,066,978, for single-family dwellings; 6,456 permits, \$73,990,583, for double dwellings, and 7,606 permits, \$333,-091,567, for apartment buildings.

Los Angeles has no slum or substandard housing conditions such as have been exposed in various other big cities of the Nabut a metropolis of the size of Los Angeles is certain to have some such problem and to be aware of the importance of prevention of that condition.

Anyhow, the Los Angeles housing rehabilitation program has brought excellent results. So has this city's housing conservation program. The first mentioned program, inaugurated in Los Angeles in July 1952 by the city's department of building and safety. had, as of last September 1, this record—8,274 units surveyed and 82,740 items corrected or in process of correction as result of 32,532 inspections. The other mentioned program is a preventive maintenance program to preclude spread of blight or slum conditions into new areas.

Los Angeles' position in the national building and realty activity picture is impressive.

The extent to which the Los Angeles building pace has, for years, outdistanced that of various other great American cities is not cited herein to decry the progress those other places have made, but to evidence the amazing advance of Los Angeles.

Here's what a report covering the first 8 months of 1954 discloses:

The \$277,147,363 worth of building permits issued in Los Angeles in that topped the combined totals of Chicago and Philadelphia by \$27,316,483 and went \$190,-778,587 ahead of the Detroit total.

The total for New York (comprising five boroughs or counties, including Brooklyn) was \$382,891.479. Also there's the pertinent fact that New York has to consider the building needs of a population of about 8 million while Los Angeles building is aimed at meeting the requirements of a population that now is about 2,100,000, making this city a strong claimant for position of third most populous city in the Nation. And, for the record, it may be remarked again that in the first quarter of 1953 the Los Angeles building permit valuation exceeded the New York amount by \$28,797,160.

A summary of the Los Angeles metropolitan region's progress in the last 10 years and its prospects for the next 10 would not be complete without mention of the everwidening flow of investment capital into this area from all directions. There was a tremendous volume of it in the past year.

All these facts and figures of this region's advance plus the increasing importance of its harbors as portals of commerce, its expanding greatness as a market center, and what the last 10 years-especially the later years of the decade-have seen accomplished and planned in facilities for cultural furtherance, tell why the Los Angeles metropolitan district has a story of amazing 10-year development for all the world to note.

The building record for the 1945-54 decade is indicated here.

Statistics were gathered as 1954 was approaching its close.

Metropolitan district:	
Valuation of all building permits	\$8, 259, 000, 000
Permits for family-dwell- ing units	some 690,000
In city of Los Angeles:	
Valuation for all building permits	2, 990, 314, 100
Permits for single-family dwelling units	139, 578
Valuation of single-fam- ily dwelling unit per- mits	1, 143, 066, 978
Permits for multiple dwell- ings	6, 456
Valuation of multiple dwelling permits	73, 990, 583
Permits for apartment buildings	7, 609
Valuation of apartment- building permits	333, 091, 567

Great Accomplishment When Labor and The Los Angeles and Southern California Management Cooperate

EXTENSION OF REMARKS

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. JUDD. Mr. Speaker, most newsstories and editorials concerning labor and management deal with strife and conflict. Sometimes we almost forget that in the overwhelming majority of labor-management relationships there is a real spirit of cooperation. Collective bargaining is a recognized principle in most cases and the sense of right and fair play on the side of both management and labor most often results in discussing calmly those grievances which are bound to come up and making decisions which are mutually beneficial.

In Minneapolis we have had for the last 15 years a labor-management record of which we are proud. One of the outstanding examples of what can be accomplished without strife when there is a sense of maturity and reasonableness in labor negotiations is the record of 14 years of labor peace at the Minneapolis-Honeywell Regulator Co. where the workers are represented by Teamsters' Local, No. 1145.

The following editorial from the Minneapolis Star of February 2, 1955, points up the accomplishment:

FOURTEEN YEARS OF LABOR PEACE

A pair of Minnesota industrial giants— 1 management and 1 labor—have successfully completed their 14th year of collective bargaining negotiations without a strike.

Minneapolis-Honeywell Regulator Minnesota's largest single employer with more than 12,000 employees (about 8,000 of them production workers), and Teamster Local 1145, Minnesota's largest single union local, are understandably proud of their accomplishment.

Spokesmen for both frankly explain that the record isn't a matter of "365 days of nothing but smiles for 14 years." There have been years when they "did some growling" at each other. Both quickly point out that the record has been achieved because both sides have matured in their relations toward each other.

What the two sides agree on is that avoiding a strike is a two-way street. The company, a spokesman said, has a responsibility to its stockholders as well as to its workers. The union, a spokesman said, recognizes its responsibility to its members but also recognizes that without a profit due to decent production and other factors, there would be no money for a raise.

Their bargaining achievement rates some unusual nationwide attention later this month. The American Management Association conference in Chicago has invited H. Skidmore Olsen, Honeywell director of personnel and industrial relations, and Robert I. Wishart, business agent for 1145, to tell how they have traveled the two-way

Story of Record-Breaking Growth From 1945 to 1955-No. 3

> EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. McDONOUGH. Mr. Speaker, the following is a continuation of the Los Angeles and southern California story with special reference to industrial development under the title of "Our Production Picture Unfolds":

OUR PRODUCTION PICTURE UNFOLDS-LOS AN-GELES IN THIRD PLACE NATIONALLY IN IN-DUSTRIAL GROWTH AND EXPANSION

(By F. Marion Banks)

The 10-year record of industrial growth, 1945-54, in Los Angeles County measured in capital dollars invested was \$1,661,090,000. Of the total \$552,900,000 or 33.2 percent was money invested in new business ventures or branch plant operations. The balance, \$1,108,190,000 or 66.8 percent, was invested in expansion and improvement of existing manufacturing facilities.

This investment in new and expanding facilities has brought to Los Angeles the distinction of being the third largest industrial and marketing center in the United States behind only New York and Chicago. Actually if Los Angeles continues to grow at its present rate and Chicago continues at its present rate then Los Angeles should surpass Chicago within the next decade and become the second largest industrial center in the United States.

Yes, the industrial growth of this area has been tremendous, but there has been a defi-nite reason behind it. Industry has developed and expanded here as population has grown to better serve the ever-increasing demands of a growing market. Plants have moved westward to this area and have grown with the market by trading on the differential between the cost of shipping in raw materials and cost of shipping in competitive finished products. In addition, the advantages of low-cost construction, fuel, and water, and power have made it comparatively easy to start a manufacturing operation

As a result, Los Angeles has developed a higher degree of diversification in industry and a greater number of small factories than is the case in other industrial areas in the Nation. This has meant an ever-increasing opportunity for eastern and midwestern firms to participate in the economic growth of the area by building branch plants here.

With the close of the war Los Angeles entered and is still in a period of growth that has seen an almost yearly change in the industrial picture in new and expanding manufacturing operations. In 1945 companies saw an opportunity to reach the growing market was established here to serve the war effort. The biggest leader to establish in this area was the automotive industries who after 4 years of war effort had a huge market for their products. Second in new industries were metal products, whose leaders saw an opportunity to place their products before the public.

For the year 1946 the motion-picture industry led in new plants with foodstuffs in second place. Plant expansion for 1946 was headed by the petroleum industry, which is

particularly significant inasmuch as this was the first postwar year when Los Angeles industry was presumed to be declining from peak war activity. Second in plant expan-

sion, again, was foodstuffs.

In 1947 the trend of new industry was to-ward metal products—induced, no doubt, by the advent of the great development of west coast steel production and the increased demand for west coast goods. The ever-grow-ing population in the Western States and the increasing national demand for California products brought foodstuffs up in second place again in the "new plant" investment category. Expansion of plants in 1947 had for its leader foodstuffs with metal products in second place.

The year of 1948 indicates a leveling influence in expansion and greater utilization of existing production facilities; that year metal products led the procession.

Building materials and supplies came into their own this year in second position to meet the unprecedented demand for housing, commercial and industrial growth.

The year 1949 brought a new entry into the field—chemicals, drugs, and paints—as the leader with metal products as second. Expansion capital again highlighted the petroleum products industry with metal products second.

Chemicals took the top spot for 1950 for new manufacturing establishments, a factor which is rapidly making Los Angeles County one of the Nation's most important chemical producing areas. The automotive industry was second in standing of new plants for that year, which keeps Los Angeles next to Detroit as producer of automobiles in the Nation. To meet the accelerated demand for new cars and trucks for the west coast markets the automotive industry also led in industrial expansion in 1950. In 1951, with the increased activity in

national defense, aviation led in new industries with chemicals and paints second. Petroleum and aviation were the leaders for

1951 for expanding operations.

Los Angeles in 1952 was chosen as the plant site for 2 large breweries, brought foodstuffs and beverages to the lead in new industries with chemicals and paints second. With the start of the Korean outbreak aviation and petroleum led in expan-sions to help supply our Armed Forces.

A new name in industrial leaders came to the forefront in 1953—electronics. This industry led in new units followed by foodstuffs and beverages, which also ranked first in expanding activities.

Last year, 1954, saw metal products as the leader in new industrial establishments with petroleum products in second place. electronics appeared with its application to guided missiles and atomic research to lead in expansions.

Thus we have seen industry in action during the past 10 years giving to Los Angeles a high place in the economy of the Nation. The next 10 years can be as big and even bigger as this area offers to those who are here and who have yet to come an opportunity for the future.

The Los Angeles and Southern California Story of Record-Breaking Growth From 1945 to 1955-No. 4

EXTENSION OF REMARKS

HON, GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. McDONOUGH. Mr. Speaker, the following is a continuation of the Los Angeles and southern California story with special reference to our economic expansion under the title of "Thrift and Savings in Billions":

THRIFT AND SAVINGS IN BILLIONS

(By Neill Davis, executive vice president, California Savings and Loan League)

Growth of California's savings and loan business has been so spectacular that the State is destined to occupy the No. 1 spot in the Nation in 1955.

During 1954, assets of California's savings associations passed the \$3-billion mark, the

largest gain of any State.

Brightest spot in the picture is southern California, where assets of these thrift and home-financing institutions now stand at an estimated \$2,680,170,000, up \$504,569,690 over the December 31, 1953, assets total for a 23 percent gain in a year's time.

Contrary to recessionary opinions voiced for 1954 year-end totals with respect to savings and home lending, savings associations have continued to up their figures in both

phases of operation.

An important facet of the business is its role in the home-financing picture. Savings institutions in southern California are currently making 37 percent of all home loans in the area and are the largest institutional home lenders. They are playing a stellar role in providing home-financing funds for established residents and for the thousands who enter southern California each month.

During 1954 savings associations in southern California made nearly 93,000 home loans, totaling an estimated 893,000,000. Charted in terms of growth, this means that the amount is up 12 percent or \$96,170,000 over the 1953 record. Total loans now held by these institutions number 346,000 and amount to \$2,284,986,000, which means a gain of \$449,192,116, or 24 percent, during the past 12 months.

In addition to financing homes for southern California's population, savings associations engage in another function-that of providing a safe place for the investment of the public's savings and giving investors the highest return on their money consistent with safety. Attesting to the high esteem the public places in this savings medium is the fact that nearly 848,000 southern Californians have invested \$2,178,446,000 of their savings in these institutions. This amount is a 27-percent gain over December 31, 1953, or \$457,796,437, dollarwise, according to estimates.

Savings and loan associations in southern California are practically all members of the Federfal Home Loan Bank System, which acts in a reserve credit capacity for these insti-tutions. In addition, savings accounts are insured up to \$10,000, providing another safety factor for investors.

Southern California associations are among the most modern and aggressive in the country and the largest concentration of new and beautiful office quarters is located here. In addition to the most up-to-date equipment and operating methods, savings associations also offer the best customer service available—with the same friendly attention given to the large or small investor or borrower.

While savings associations enjoy excellent public relations, they also enjoy excellent employee relations. Thousands of persons are employed by the business in southern California and associations are noted for their good employer-employee relationship. They excel in providing facilities such as recreation rooms, lunchrooms, and a myriad of employee benefits, such as health and life insurance and generous pension plans. Employees also are encouraged to attend courses offered by the American Savings & Loan Institute, educational arm of the industry. In most instances the tuition is paid for by the association.

Representing California's thrift and homefinancing business is the California Savings & Loan League, statewide trade organiza-tion of these 200 institutions. From a humble beginning back in 1890, the league has grown to the point where it enjoys nearly 100 percent membership among California associations. It has waged a steady battle to bring about legislation and operating methods which will be in the best interests of the public and the business itself.

Culmination of the league's work came in November, when the importance of the business in California was recognized in a proclamation signed by Mayor Norris Poulson designating a savings and loan week in Los Angeles. During the week of November 14, over 3,000 delegates from throughout the Nation gathered in Los Angeles for the combined conventions of the California and the United States Savings & Loan Leagues. At that time the industry was publicly commended for the important role it has played in the thrift and home-financing branches of the economy.

The Los Angeles and Southern California Story of Record-Breaking Growth From 1945 to 1955-No. 5

> EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. McDONOUGH. Mr. Speaker, the following is a continuation of the Los Angeles and southern California story with special reference to our world trade under the title of "World Commerce and Los Angeles-Long Beach Harbor Expansion":

World Commerce and Los Angeles-Long Beach Harbor Expansion—Los Angeles HARBOR'S GROWING POSTWAR DEVELOPMENT CLIMAXED BY RECORD YEAR IN 1954— 26,200,000 TONS OF CARGO

(By Charles Crawford)

Through the portals of Los Angeles Harbor and across the 120 improved docks of this \$150 million port there flowed during the past year more than 26,200,000 tons of cargo. It was the greatest shipping year in the harbor's nearly 100-year history and it climaxed a steady postwar growth destined to make the Pacific the future theater of world commerce

World trade through Los Angeles Harbor during the past decade has maintained a constantly increasing tempo to keep pace with industrial development of the Southland and to satisfy the demands of our growing population. During the postwar years more than \$25 million in improvements have been made on the 7,000 acres and 28-mile-long waterfront of Los Angeles Harbor.

Two of the world's finest passenger-cargo terminals, the \$8,500,000 Matson Line facility and a \$6,500,000 base for American President Lines, are among the many improvements. During the past year another \$3 million worth of expansion projects including widen-ing of terminal sheds and new facilities for world's greatest fishing fleet were started. More than 5,600 ships entered the Harbor area last year with 4,707 docking at Los Angeles Harbor piers and terminals. Cargo movement showed an increase of 1,437,413 tons over the previous year.

Scores of new ships and markets opened to trade activities during the year. Japanese shipping, showing a remarkable gain since end of World War II, jumped into first place among the more than 2,200 foreign-ship arrivals with 409 ships, supplanting Great Britain as the No. 1 foreign-flag operator. British ships slid to third place and Norwegian ships stayed in second place with 378. Liberian ships numbering 99 appeared in the

harbor for the first time.

numbering 209, Panamanian flagships Greek trade with 105 ships in port, reap-pearance for the first time in 13 years of German merchant vessels and appearance for first time in port of Yugoslav, Israel, Chinese, Swiss, and Irish ships gave emphasis to the booming world trade of the port. Another 65 Mexican ships calling at the port had an important part in the moving of \$43 million in exports and \$31 million in imports between southern California and northwest Mexico and Baja California.

Total export trade from the Los Angeles district during the first 6 months of 1954 jumped to \$215,045,698 compared to \$146,-824,082 in 1953, and imports totaled \$127,-059,185 against \$140,173,135, United States Department of Commerce figures revealed.

Oil imports of 47,141,393 barrels, exports of 76.917.367 barrels and bunker fuel supplied ships calling at the harbor totaling 24,282,850 barrels made up a postwar high movement of 148,341,610 barrels of petroleum through the harbor.

More than 600 commercial fishing vessels employing 3,000 fishermen brought 108,327 tons of fish to 11 port canneries and another 9 million pounds to fresh fish markets. Approximately 8,500 cannery workers, drawing an annual payroll of \$15 million, packed nearly 12 million cases of fish for distribution throughout the world.

A half dozen sport fishing landings and some 200 sport fishing boats took out 125,000 southland anglers who landed 461,472 deepsea fish, according to the California Department of Fish and Game.

Nineteen pleasure boat anchorages, 4 of them newly developed, accommodate approximately 3,800 pleasure craft representing a value of nearly \$20 million in Los Angeles Harbor and yachtsmen and their friends spend an estimated \$10 million per year on boating activities of which \$2 million is for boat maintenance alone.

Cotton and agricultural products top Los Angeles Harbor's export picture but manufactured articles are in second place, having thrust oil into third position as southern California's great industrial growth gains in Importance.

Oll-rich Long Beach Harbor, adjacent to the Los Angeles port, is rapidly coming into prominence. During the past 10 years Long Beach has spent \$33 million in port facilities to nearly double shipping facilities. Capital improvements now total \$51,978,208.

Long Beach Harbor Department has rung up \$171,553,915 in net oil revenues of which 20 percent goes into the port revenue fund. 30 percent into a reserve fund and 50 percent to the city of Long Beach.

New terminal facilities costing approximately \$2 million are under construction, contracts have been let for \$1,500,000 worth of new terminals and another \$3 million in improvements is planned.

Building of bridges across the Los Angeles River, maintenance and operation of the only floating bridge in southern California and of the huge lift span bridge across Cerritos Channel and the establishment of new freeways connecting Long Beach Harbor with the Greater Los Angeles area are all part of the Long Beach Department program.

Commerce in Long Beach Harbor totaled 5,600,000 tons in 1946 compared to 7,260,000 tons during the past year. Newsprint imports of 285,000 tons were listed as the top item for the port's incoming cargo with gypsum second with 273,000 tons and steel third with 265,000 tons.

The Los Angeles and Southern California Story of Record-Breaking Growth From 1945 to 1955-No. 6

EXTENSION OF REMARKS

OF

HON, GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. McDONOUGH. Mr. Speaker, the following is a continuation of the Los Angeles and southern California story with special reference to airplane manufacturing under the title of "Airpower Roars Back":

AIRPOWER ROARS BACK

(By Marvin Miles, Times aviation editor)

In Los Angeles-as in California and the Nation-aircraft is the largest, the dominant

manufacturing industry.

Plunging from the World War II high of 272,000 workers a little more than a decade ago, employee rolls dropped off to a scant 57,700 in 1948 during the postwar slump that saw destruction of the world's finest Air Force.

But then came Korea and the dawning realization that without adequate air power

this Nation cannot survive.

Today, with a solid 178,000 people and a plant area of nearly 30 million square feet, the aircraft and aircraft parts industry in the Los Angeles area is estimated to exceed by a substantial margin the value of the area's petroleum and natural gas production, the value of motion pictures produced or agricultural crops grown or tourist and conventioner moneys expended here.

From the standpoint of area employment. the aircraft industry has three times as many persons as the agriculture, forestry, fishing, mining, and petroleum industries combined. It has more workers than all contract construction, more than all organizations in transportation, communications, and public utilities, more than wholesale trade, more than the combined personnel totals in the fields of finance, insurance, and real estate in Los Angeles.

Today's aircraft employment represents about 28 percent of the total manufacturing employment and accounts for approximately percent of the manufacturing payrollwhich in 1954 was approximately \$880 million or nearly \$17 million a week.

Of vast economic importance to the area. these payrolls mean gainful employment for additional thousands of persons who sell the necessities of everyday personal life.

From \$17 million weekly, the United States Bureau of Census average buying habit formula indicates, purchases include \$3,-250,000 for groceries and meats, \$2,250,000 for automobiles, gasoline and motorcar servfor clothing, more than \$1,333,000 \$1,250,000 for personal services such as dry cleaning, laundry, beauty shops, etc., a similar amount for miscellaneous items and almost \$1 million for furniture and household

All of which, by chain reaction, contributes heavily to the area's economy and its ability to absorb and employ its rapidly growing population.

And behind these vital economic realities is the fact that the extreme complexity of today's aircraft and missiles requires that the predominant percentage of those employed in the industry must be well trained in particular skills-high-type workers who comprise an important community asset.

Productionwise the aviation picture has changed vastly from the World War II scene. The jet age is well underway. Missiles are coming into their own and atomic flight is deep into research stages.

Gone are most of the famed piston types that helped clear the skies over Europe and the Pacific, outmoded by advances in design and power, banished by the gargantuan, snarling thrust of the turbojet as the four" of the Los Angeles area-Douglas, Lockheed, North American, and Northrop-and Convair in San Diego probe deeper and deeper for better performance, greater speed, higher altitude, extended range, and heavier

Not only the five major plants, but factories like Hughes Aircraft and Aerojet and many smaller up-to-the-minute concerns such as AiResearch and the William R. Whittaker valve company contributed steadily to the screeching bellow of progress through

the sky.

Today's thriving industry was built from a low ebb that this Nation hopefully will never see again. It is perhaps best described by J. H. (Dutch) Kindelberger, board chairman of North American Aviation:

"Ten years ago the United States had the most powerful Air Force in the world. What happened? The answer is quite simple. took the peace seriously, virtually stopped our aircraft production, and all but scrapped The great air fleets our airpower. scourged the European skies and moved on to command the vast reaches of the Pacific were shot down overnight by our own overoptimism, our complacency, and our eagerness to put aside the sword in favor of the

The buildup sparked by the suddenness of Korea and the sharp realization that Russia, too, can build fighting jets has today leveled off into what will probably be a steady production program—unless America is again swept into a full-fledged war.

With a backlog of nearly \$4 billion, the major plants in this area are pursuing research and development along many lines and the secrets behind the locked doors of California aircraft laboratories southern would be startling to the layman if we could but know them now.

Foremost among these would be the missiles currently in design and production, deadly accurate supersonic weapons of all ranges, short, medium, intercontinental, and all types, ground-to-ground, such Northrop's Snark; ground-to-air, exemplified currently in the Douglas Nike; air-to-air types, such as the Hughes Falcon; air-to-ground—even subsurface (submarine) to air and air-to-subsurface. And one can read in military announcement of a missile the fact that it would not be announced unless something better and faster and harder hitting was in the offing.

Exemplifying the startling innovations of the year just past are the two VTO (vertical takeoff) fighters, vonCair's XFY-1 and Lockheed's XFV-1, both built for the Navy and announced in 1954. These unique aircraft, powered with turbine engines turning massive propellers, stand on their tails, climb straight up, and land-tail first-straight down. In the future, perhaps, they'll fly from the restricted decks of cargo ships or from postage-stamp mountain areas impossible for other aircraft.

Along with the continual striving for speed—with a top of 1,650 miles per hour achieved at nearby Edwards Air Force Base, and altitude, an estimated 90,000 feet, also at Edwards Air Force Base Flight Test Center—lightness has become a prerequisite for certain types exemplified in Chief Engineer Ed Heinemann's A4D hotrod Skyhawk bantam bomber, for Douglas El Segundo, and the Navy and Lockheed's forthcoming XF-104 United States Air Force fighter which, it is guessed, will have a top speed twice that of sound.

Developments and refinements of planes already developed were many during the year. North American's supersonic (level flight) F-100 Super Sabre was delivered to the first operational wing to have such aircraft at George Air Force Base near Victor-ville. Northrop's refined and superpowered F-89 Scorpion—most heavily armed United States interceptor—went on long-range guard duty in the Arctic. Convair's delta wing F-102 Air Force interceptor was testing at Edwards Air Force Base, with refinements under way. At the same time the San Diego company's delta wing bomber was taking shape and flight studies of its triangle wing Sea Dart water-ski jet fighter continued.

Douglas boosted the power of its recordholding (speed) F4D Skyray, Navy fighter, which should now be supersonic, and at the same time went into full-scale production on the swept-wing A3D Skywarrior attack plane, a twin jet that will be the Navy's heaviest carrier-based aircraft.

Lockheed flew its weight-lugging C-130 turbo-prop transport, demonstrated a new two-place jet trainer for military use, showed off a turbo-prop version of the Super Constellation (to be built for both the Navy and the Air Force) and also demonstrated the latest version of its radar-eyed early-warning adapation of the versatile transport.

Another Lockheed development was announced for the famed P2V Navy patrol bomber series, auxiliary jet engines for the ship's two conventional powerplants, along with an extended tail boom to carry additional submarine-detecting electronics gear.

And while these and other programs were being pushed in the bustling factories, engineers were delving deeper and deeper into the next major problem—the heat barrier. Unlike the sonic wall, which was a sharply defined single hurdle, the wall of heat has infinite depth—the faster planes and missiles fly the hotter they will become until plexiglass softens, metal warps, equipment fails and pilots scorch.

And what of air transportation? Dougias DC-7s, the fast turbo-compound engine transports, continued to pile up records for cross-country schedules in both speed and passenger loads. Lockheed Connies criss-crossed the Nation, Los Angeles Airways inaugurated the first of a series of passenger helicopter services between Los Angeles (International Airport) and Long Beach. Scandinavian Airlines System inaugurated transpolar service to Europe via the Copenhagen gateway, linking Los Angeles directly to continental capitals for the first time; Western Air Lines inaugurated "champagne flights" with "bubbly" and orchids for passengers.

But perhaps the best way to tell the transport story is to capsule the development of Los Angeles International Airport which now covers 3000 acres in the southwest corner of the city, with 1100 acres currently in use and the remaining acreage ready for final and ultimate expansion to three times the capacity of today's airport—even now one of the world's busiest transportation centers.

Since 1947, the first full year of airlane operation, the number of passengers has increased 123.30 percent to more than 2,754,728 for the year 1954. This figure is more than the entire population of Los Angeles. And by 1960 it is estimated 5 million passengers will clear the airport's runways.

Air freight and express show 193.32 percent gain in '54 over '47 and air mail volume has jumped 104.93 percent.

There are 12 air carriers: American Airlines, Bonanza Airlines, California Central Airlines, Compania Mexicana de Aviacion, Mercury Air Lines, Pan American World

Airways, Scandinavian Airlines System, Southwest Airways, Trans World Airlines, United Air Lines, Western Air Lines and Los Angeles Airways.

Operation of passenger, air mall and freight services is from buildings intended as temporary quarters until completion of the master airport with permanent passenger and air mail facilities west of Sepulveda Boulevard. Air freight will eventually occupy the present buildings and ramp area which has 26 plane loading positions. The permanent terminal will have a minimum of 40 loading positions plus helicopter loading areas.

As an industrial center, International Airport is unique. Located on it and within a half-mile radius are 110 industries employing more than 70,000 persons at a weekly payroll in excess of \$6 million. While aircraft manufacture and allied parts predominate, there is also a wide assortment of other industries, such as cosmetics, bathing suit, furniture, toy, food and other manufacturing centers.

Functionally, the airport is among the safest in the world. It conforms to a majority of the recommendations set forth by the President's Airport Commission, headed by Gen. Jimmy Doolittle. The main east-west runway system, 8,500 feet long, can be extended to 12,500 feet, when and if necessary. To the east, the city owns the half-mile approach zone. To the west, the approach zone extends to the Pacific Ocean.

Located here is every navigational aid—radar, instrument-landing system, high-intensity runway and slope-line approach lights. There are no obstructions, natural or manmade, over 500 feet high in an area of 300 square miles surrounding the airport. Cleared approaches combine with level terrain, favorable winds from the Pacific and navigational aids to earn the airport the highest rating as a safe and functional airport.

Financially speaking, the airport has also astounded the experts. It was the first and is still one of the very few airports which pay all operating expenses, set aside for depreciation, pay interest on outstanding bonds and show an annual profit.

Source of the airport's revenue dollar is as follows: Concessions, 49 cents; airlines, 24 cents; manufacturing companies, 22 cents; miscellaneous rentals, 9 cents; and miscellaneous, 2 cents.

Completion of the master airport by 1960 becomes an acute need in order to handle the vast volume of air commerce flowing into this area. The citizens of Los Angeles will be asked to advance the necessary money through a bond issue. Then the airport with its completed facilities and much greater earning capacity will repay the loan from revenues.

The Los Angeles and Southern California Story of Record-Breaking Growth From 1945 to 1955—No. 7

EXTENSION OF REMARKS

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. McDONOUGH. Mr. Speaker, the following is a continuation of the Los Angeles and southern California story with special reference to the development and expansion of electronics under the title of "Electronics, a Success Story":

ELECTRONICS: A SUCCESS STORY—IN A DECADE
SOUTHERN CALIFORNIA EMERGES NATION'S
MAJOR PRODUCER

(By E. P. Gertsch, president, West Coast Electric Manufacturers Association)

Probably no industry has ever seen the meteoric growth that has taken place in electronics—a growth so fast that the public's knowledge of the industry has not kept up with the development.

In 1940 the industry volume nationally

In 1940 the industry volume nationally was approximately \$700 million. In 1954 the volume was estimated at nearly 10 times that amount, or \$6.5 billion. Many think that the next 6 years should bring electronic industry volume to more than \$12 billion annually.

Southern California has become a major producer of electronic equipment, doing an estimated 17 to 20 percent of the industry's total dollar volume.

Development of the industry here was not by accident. There were pioneers in the electronic business early in the 1940s. They were small manufacturers who banded together to form the West Coast Electronic Manufacturers Association back in 1943. Collectively, they went to eastern points where purchasing was being done, and proved that southern California was the natural place for development of electronics in every phase. We had the climate to attract skilled engineers necessary for research and development. We had the educational institutions where further training could take place. We had the aircraft industry, one of the most important users of electronic apparatus. And most important, those pioneers of the forties had the will to do a Job for the national defense.

From that start has grown an industry which is one of southern California's greatest, with over 125 electronic-producing companies now participating in the expanded activities of the West Coast Electronic Manufacturers Association.

Few people really know what electronics is. Sure, it is radio and television and communications systems. But more than that, it is the key to national defense and becoming increasingly important. The guided missile could not be controlled without electronics. Our aircraft have reached such speeds that the human brain cannot work fast enough to fire the guns at the right time, so electronic gear sights the target and triggers the weapons.

Since possible enemies have the same kind of equipment we have, countermeasures are necessary to help us defend ourselvs by jamming enemy equipment. Radar in commercial as well as military aircraft protects everyone who rides a plane. Now we are operating business by means of electronic apparatus, solving difficult problems in minutes which would require hundreds of man-hours otherwise.

Automation is becoming an important phase of electronic development. Economists and industrial analysts conclude that in order to maintain the present rate of increase in living standards in this country, the output of goods and services per worker must increase approximately 33 percent between 1950 and 1960. Because the worker is already taxed to his limit in industry, this increase must come through the automation of production. Electronics plays the most important part in the automatic factory.

Electronically generated ultrasonic vibrations have been used to treat cancer in mice and mental disorders in humans in recent tests.

In southern California, members of the West Coast Electronic Manufacturers Association use 5,409,800 square feet of floor area and employ over 40,000 people. There probably is an additional 50 percent of area and personnel in electronics in this area, used by nonmembers of the association. Most of

these are divisions of our major aircraft

The electronics industry here has moved into adulthood in little more than a decade, and passed other sections of the country in volume by sizable margins. Now we have a major industry—free of smog-producing equipment—and tailored to the climate of the area as well as the dynamic industry growth which has taken place.

Kansas, the 34th Star

EXTENSION OF REMARKS

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. SCRIVNER. Mr. Speaker, on January 29, 1861, the 34th star was added to our flag, denoting the admission of the Territory of Kansas as a State in the Union.

In keeping with the birthday spirit, gave a radio talk over KCMO, Kansas City. Mo., the subject of which was Kansas.

That speech, substantially as given, follows:

Inasmuch as January 29 is the 94th birthday of the State of Kansas, a day that will celebrated all over the Nation, and especially at Topeka, it seems fitting and proper as a native Kansan, and as a Representative in Congress from Kansas, I should make Kansas the subject of my initial broad-

Did you ever notice what happens when you meet somebody from Texas? thing they do is start bragging about Texasit's Texas this—Texas that. Let's admit, right off of the bat, that Texas is a big State.

Now Texas does raise a lot of cattle, but that beef wouldn't be fit to eat if it wasn't fed on that fine blue stem grass of the Kansas Flint Hills, and if it wasn't finished off with Kansas-yes, Missouri-corn in Kansas and Missouri feed lots.

Take away the military installations in Texas—yes, and its oil wells—well, you guess

what would happen.

Kansas and Kansans have lots of things be proud of, and to rightfully boast about. We have even more right to brag than Texans, and we should do it every chance we get.

Kansas is roughly 200 miles wide and 400 long; a little better than 80,000 square That's about one-third the size of miles.

Texas.

In those 80,000 square miles, we have many natural resources, for which we claim no The Lord provided those. are there. There's lots of oil, although not as much as Texas. There's natural gas— and there's coal. Kansas is the greatest supplier of fuel and energy in the United States.

When you speak of gold, most of us think of Alaska, or perhaps, Crippie Creek, Colo., and gold means great wealth. We don't any gold in Kansas, but in mineral Kansas produces five times as much as Alaska with its gold, and our mineral production far exceeds the minerals produced in the reputedly mineral rich States of the Rocky Mountains.

Salt is a commonly accepted household item here, but in many countries I have visited it is a luxury selling for as much as \$10 a pound. Kansas has enough salt to last the entire world thousands of years.

In less spectacular quantities, Kansas produces lead, zinc, gypsum, clays, cement, chalk, helium, and an enviable amount of fine sand and gravel.

Far from being the drab, ugly, flat State many uninformed writers have pictured it, Kansas is full of scenic beauty, starting with the rolling hills and the valley of the I des Cygne on out to prehistoric grounds and the Rock Canyons of Ellsworth which vie, in beauty, with some of the highly advertised national parks.

The heart of America, the very center of the United States, Kansas is crossed and recrossed by 13 railroads, 4 of which are transcontinental lines. Several major airlines cross the State; and talking of flying, Kansas has more "flying farmers" than any State in the Union. Even though Texas is three times as big as Kansas, Kansas has far more miles of improved highways than Texas. In fact, Kansas is second, in the United States, in highway mileage.

Although visited by droughts at times, we are not as hard hit by them as many other States. Kansas is a commercial corn-growing State. Its output of soybeans is prodigious and everybody knows that Kansas grow one-fifth of all the wheat grown in this

country.

Kansas raises lots of high-grade beef, but what is not generally known is that turkey raising is a multi-million dollar business in Kansas, and that Kansas ranks among the top eight States in poultry and egg produc-

While 90 percent of our area is farms, Kansas is growing rapidly as an industrial More than 3,000 factories turn out thousands of various industrial items.

Much of the cement going into our new homes, highways, and buildings comes from Kansas plants like those at Bonner Springs, Iola, and Humboldt.

The automobile tire plant at Topeka and the huge oil refineries like the Phillips plant in Kansas City, Kans., keep the Nation's wheels of commerce turning.

Better crops are grown as the result of the chemical plants such as the Co-op plant at Lawrence, and Spencer, and Pittsburg.

Strange as it may seem and sound, during World War II, Kansas had 2 shipyards in operation, 1 at Leavenworth and 1, the Darby plant on Kaw Point in Kansas City, Kans. In these yards were built landing craft used in the beachhead operations at Omaha Beach. Anzio, and Iwo Jima.

In Kansas City, Kans., B-25 Mitchell bombers were turned out by the hundreds, while at Wichita, Boeing made the famous B-29. Today the Kansas City, Kans., plant is turning out F-84-F's and just recently Boeing, at Wichita, turned out its 1,000th B-47 jet bomber and is now producing the even bigger B-52.

At Sunflower, millions of pounds of explosives were produced, and at Parsons countless thousands of bombs were loaded and sent on

their way to bring victory.

Tell your Texas friends to come to Kansas and we'll show them the biggest grain elevator in the world-right in Kansas City, Kans.; the biggest natural cold storage cave at Bonner Springs; and down by Pleasanton they'll see the biggest electric shovel in the world which digs coal almost by the carload. Yes, we have big things in Kansas, too.

These are only a few of the industrial contributions Kansas makes in war or peace production so great that Kansas in dollar volume was 5th in the 48 in World War II.

With all of the vast production and the problems involved, Kansas had the best labor record of all, with little or no loss of time or war material from strikes.

Kansas has an amazingly interesting historical background. Even though we have no Alamo, our future was determined by hard-riding, hard-fighting men skilled in handling the six-guns and Sharp's rifles.

Our earliest recorded history goes back to Coronado's conquest in 1541-60 years before Pocahontas saved John Smith's neck.

Kansas is dotted with historical sites reminiscent of the gold rush, and the Santa Fe Trail, Indian wars, the Pony Express, border warfare, cow towns, along the Chisholm Trail, Dodge City, Abilene.

At the mouth of the Kaw, Lewis and Clark

started their famous expedition.

Close at home is the Shawnee Indian Mission. Osawatomie is the site of John Brown's cabin. Then, too, there is Trading Post, scene of ruffian border war, Lawrence, and Quantrill's raid, with the reciprocating raids into Missouri by Jayhawkers.

Council Grove was the site of Indian treaties. At Fort Scott we still have the old pre-Civil War barracks and blockhouse.

All of these are part of the great heritage of Kansas. However, the greatest asset of our State is its people.

Today the No. 1 Kansan is President Eisenhower-but we have had other great men. Charles Curtis, proud of his Indian blood, was Vice President. We have given the Nation outstanding men and women in all

fields of activity.

One of the long-time best sellers, "In His was written by Rev. Charles Sheldon.

The literary world recognizes such men as William Allen White and his son young Bill; yes, and John J. Ingalls, President pro tempore of the United States Senate and author of Ironquill. Albert T. Reid, Gene Howe, and Arthur Capper graced the news field, along with today's Ben Hibbs, of the Saturday Evening Post, and Ernest K. Lindley, and last but by no means least is the beloved Merle Thorpe.

In the broadcasting field a Kansan's voice is ranked best, John Cameron Swayze, and close behind him is a Kansas University

graduate, Richard Harkness.

Whenever one thinks of sports he thinks of Jess Willard, heavyweight champion, and the "Big Train" Walter Johnson in baseball, and the epitome of determination and grit, the great runner, Glenn Cunningham, and in more recent years the all-American football star, Ray Evans.

In the field of adventure two Kansas women are at the top of the list, Mrs. Osa Johnson, explorer, and Amelia Earhart, the lost aviatrix.

When it comes to beauty and grace Kansans can be proud of little Donna Attwood, star of Ice Capades.

Bradbury Thompson, of Topeka, art director of Madamoiselle and Living, was recently declared the art editor of the year.

Walter Beech in aviation history; George Washington Carver in science and racial progress; yes, ever so many others, including the top men in industry, science, and business throughout the Nation.

That Kansas should have produced such men is no accident. Their background, training, and surroundings were exceptional. Kansas is proud of its churches and schools. Despite the fact that Massachusetts has Harvard and Massachusetts Institute of Technology, Kansas, second in the United States, is far above the Bay State in literacy, and Kansas has the largest number of college students per thousand of any State in the

In all of our wars, Kansas has made big contributions. Missouri had her Pershing. Kansas had her Funston. Kansans have won all sorts of awards from the Congressional Medal on down. In World War I, Kansas had the smallest number of men rejected for military service—which demonstrates physical sturdiness of her sons. In World War II, with many Kansans having settled there, Oregon pushed us into second place. But with the coming of the Korean war, Kansas again had the fewest rejections. Texas has the audacity to brag of the hardiness of her menfolk

Kansas has the highest percentage of native-born residents of any of the States. And while we think of New York as a wealthy State, the per capita wealth of Kansas is greater than that of New York.

From what I have said you may well guess that I am proud of Kansas and proud to be a

Kansan, I am.

We have more than our share of good things—and fewer of the bad than many have claimed. We have had far fewer cyclones than many of the southern States, so stories about Kansas being a cyclone State are libelous. We have had our share of hard times, too. Our motto-Ad astra per aspira-"To the stars through difficulty" is particularly appropriate. Those courageous ancestors of ours, who left comforts behind, came to Kansas and carved out a great future for us, did face hardships and difficulties. Their courage, stamina, and faith brought them through. We, their children, can see the bright stars of the future.

With this great history, it is perfectly natural that on Kansas Day, Kansans should gather together and celebrate their State's

These Kansas Day celebrations were started nearly 75 years ago by about 100 men headed by a great threesome of newspaper fame, William Allen White, Ewing Herbert, and Charles Harger, the sole survivor of that famous trio.

For nearly fourscore years these meetings have taken place with the activities cen-

tered around Topeka.

Soon we will celebrate the 100th anniversary of Kansas statehood, just as we have celebrated the Territorial Centennial this past year.

That century has marked the development of God-given natural resources by resource-

ful courageous Kansans.

The story of that century is as gripping as fiction, as colorful as a modern-day western. The cast of characters is as varied as can be imagined: Indians and white men, saints and sinners, lawmakers and lawbreakers, laborers and financiers, teachers and preachers. Long-remembered names such as Billy the Kid, Bat Masterson, Kit Carson, Lincoln and Douglas and their great debates, Carrie Nation, Horace Greeley, Walt Mason, all left their mark as the story of Kansas unfolds.

The scenes were as varied as the characters; tepees and sodhouses, churches and saloons, courthouses and jails, factories and farms, battlefields, cradles, and graves.

The pages of that century of history are punctuated by spurting six guns, splattered With blood of border warfare, the Civil War, the Spanish-American War, two World Wars, and Korea.

That hundred years has served to try Kansas and Kansans. They have been tested; they've been found true, loyal, and courageous.

Here, indeed, and in fact, is the heart of America.

And in closing, may I read the product of the skilled pen of Charles Harger, what has been called the Kansan's Creed:

"We believe in Kansas, in the glory of her prairies, in the richness of her soil, in the beauty of her skies, and in the healthfulness

of her climate.

We believe in the Kansas people, in their aturdy faith, and abounding enthusiasm; in their patriotism and their fidelity to the good things of civilization; in their respect for law and their love of justice; in their courage and zeal; in their independence; and in their devotion to uplifting influences in education and religion.

"We believe in Kansas institutions; in the Kansas language and in Kansas ideals; in her uprightness in society; and in her demands that honor, sobriety, and respect be main-tained in public and private life; in her marvelous productiveness; and in her wonderful future."

Yes, I am a Kansan. I am proud of it. If you, too, are a Kansan, I trust that you join me in that pride. If you are not a Kansan, I hope you feel that this pride is justified.

The Church the Reds Silenced

EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. KLEIN. Mr. Speaker, I am happy to introduce in the RECORD an article by Brother Jerome J. Barnych, of the Order of St. Basil the Great. As will be seen, this deals with the suppression of the Ukrainian Catholic Church behind the Red curtain and is another indication of the fanaticism of the forces with which we must contend and that we cannot counter effectively, without a full knowledge of what is going on.

THE CHURCH THE REDS SILENCED-NINE YEARS OF MERCILESS PERSECUTION HAVE COM-PLETELY DESTROYED THE UKRAINIAN CATH-OLIC CHURCH

On December 15, 1952, Pope Pius XII, with his encyclical the Oriental Churches, broke once again the harsh silence that pervades the persecuted church behind the impenetrable Iron Curtain. This was the second time since 1945 that the Holy Father, guardian of truth and defender of the oppressed, turned his encyclical voice toward the suffering brethren of the eastern rites

The Pope requested that Catholics throughout the world unite in prayer for these afflicted souls who weep bitterly as they see their bishops put to death or dispersed * * * as they behold so many of their churches destined to profane uses or in squalid abandon; that the all-compassionate God grant them heroic fortitude in enduring their hardships and even martyrdom for the faith and that He put an end to this sad state of affairs.

These sympathetic and encouraging words of Christ's vicar met wide acclaim and humble gratitude from Ukrainian Catholics the

world over.

The Church of Silence, as the Holy Father appropriately calls, among others, the Ukrainian Catholic Church, has hardly known the word "peace." Ever since Ukraine reunited with the Holy See (1595), its land has become a battlefield of continual political and religious aggression of neighboring countries. The present Communist regime is merely pursuing the dreadful policy adopted by the Czars: complete annihilation

of Ukrainian Catholicism.

Why is the godless Kremlin so intent on wiping out the Catholic Church? Primarily, because communism is fundamentally atheistic; religious tolerance is absolutely foreign to Marxism. This many fail to realize. Communist ideology is the only admittedly set form of worship. Presently the Reds permit the Orthodox Church to function, but that is only after purging it with unprecedented inhumanity and infiltrating it with agents—the Secret Police, their own clerical products. Today the Orthodox Church is fully controlled by the Reds and is actually being used in promoting their grievous designs.

The Ukrainian Catholics fell the first victims of Communist persecution. Why? the 16th century, when Ukraine entered in

union with the Holy See, it retained its eastern liturgical rite, language, and customs. To this very day this fact is a living proof to the dissident Russian people that they too could achieve church unity with Rome without forfeiting any of the ancient ritual customs they cherish. Furthermore, the Czars forever sought to establish Moscow as the third Rome. And as long as the Ukrainians living under Czarist-rule remained faithful to Catholicism, Moscow's ambitious aspirations were utterly frustrate. Thus thousands of Catholic priests, monks, and laity were martyred for their blunt refusal to acknowledge the dissident Patriarch of Moscow. However 85 percent of the people were finally dragged into the schism "by force and fraud," as Pope Pius XII stated in his encyclical in 1945. The remaining millions of Catholics in Galicia held fast to their faith and thus constituted an insuperable barrier for realizing their covetous plan. Conseexistence, expansion, and inquently, the fluence of Ukrainian Catholicism was re-garded by the Holy See as the spark of hope that would bridge the gap between the Orthodox East and the true fold. Apropos of this fact Pope Urban VIII hopefully predicted: "Through you, my Ukrainians, I hope to convert the East."

However, what the white terror of imperialism futilely attempted for four centuries. the Red terror of communism has accomplished in a decade. Five million Ukrainian Catholics have fallen prey to the worst of Soviet persecutions; 10 bishops have been either ruthlessly martyred or condemned to forced labor in Siberia; 3,470 priests have been deported or imprisoned; 1,600 nuns were expelled from their convents; 195 monasteries, religious houses, were pillaged, confiscated, occupied by schismatics; 3,040 parishes, together with 4,440 churches and chapels, were closed or violently appropriated by the dissidents; about 10,000 Catholic schools have been converted into Red anti-

Catholic factories.

The Reds hurled their first overt attack at the Ukrainian Catholic Church in 1939. This lasted 22 months. The Commies classified religion as a lucrative business. Thus church property was heavily taxed. They grabbed control of the schools quickly. Priests were barred from visiting hospitals. But, much through the aid of nuns working incognito as nurses, the priests ministered the sacraments to the dying patients. Red authorities confiscated all presses, even private typewriters. Within this short period the Red secret police deported and murdered 250,000 Ukrainian Catholics from the Lviv diocese. Among these first victims of Red terror were 33 priests. The great metropolitan of Ukraine, Andrew Sheptytskyj, protested vehemently, but futilely. He wrote to the Vatican describing the persecution as a "direct application of the militant, atheistic principles adopted in Spain during the civil war.

The prospect of a dark and stormy future urged the aging prelate of Ukraine to warn his Catholic youth of the grave dangers to which it would be exposed. "Dear children," he wrote, "do me this favor: Copy this letter for yourselves and refer to it often. Remind others of its contents. * * * Beware of the * Beware of the sing against the holy faith. Remain loyal to the holy church. As betrayal of the native country, so betrayal of the church—our mother, who guides us from infancy till death lending her hand in all our needs, is a base crime. * * Most of all, dear children, I recommend you to receive the sacraments frequently." * *

"With this letter," the great metropolitan continues, "I bid you farewell, since I do not

know if God will permit me to labor and pray

for you much longer."

The Red armies returned to Ukraine in 1944. With the metropolitan dead, the Soviets were bent upon completely eliminating the church in Ukraine. At first they maintained a respectful attitude toward religion. Sermons were once more freely preached in churches; taxes on church property temporarily modified; Red officers and soldiers attended religious services. Purposely of course. But Catholic publications were strictly prohibited. Clerics were exempted from military service. They were considered unworthy to serve the Soviet Government. The real reason was the Reds didn't want priests sustaining religious beliefs and duties among the soldiers.

In the winter of 1944-45 the secret police began summoning the clergy for reeducational conferences. They would dishonor the church, the Holy Father, then cross-examine their pupils incessantly through the night. Brainwashing was in practice long before the Korean conflict.

April 11, 1945, brought the sudden arrest of five Ukrainian Catholic bishops. They were deported to Russia. Archbishop Joseph Slipyl, the new metropolitan, was one of the victims. He was condemned to 8 years of forced labor in Siberia. The Reds recently prolonged his imprisonment to 17 more years. German ex-prisoners returning from Siberia reported seeing His Excellency at work combing wool.

With the hierarchy arrested, the Soviets published an order prohibiting all religious ceremonies. Only state-registered priests were allowed to celebrate Mass. Then Red authorities began promoting a movement for the reunion of the Ukrainian Catholic Church with the dissident church. Refusal to collaborate spelled immediate arrest. Thus more than 500 priests were seized, in the street or at home, and deported. A rall-way worker relates that 1 night he saw 150 priests being transported from the district of Ternopil to Siberia. And an Armenian priest testified that 800 Ukrainian Catholic priests were with him in prison back in 1946. He escaped later on.

The Ukrainian Catholics in Red-occupied Poland met a similar fate. On September 21, 1945, Bishop Josaphat Kotsylovskyj was arrested by the NKVD. Later Bishop Lakota and the whole diocesan chapter were thrown into prison. The secret police tried to force them into renouncing their allegiance to Rome. They resorted to atrocious tortures and threats of death. But not one succumbed. Bishop Lakota is reportedly dead somewhere in Siberia. Bishop Katsylovskyj died in prison November 17, 1947. His last written words remarkably depict his loyal character: "In case of my arrest and deportation, I humbly beg to notify the Holy Father that I place before him my vow of fidelity and absolute devotion until my last breath, last beat of my heart, asking for his paternal blessing."

The subjugation of Ukrainian Catholics in Carpathian Ukraine was equally merciless. This stretch of land, as large as Massachusetts, boasted of over half a million Catholics of the eastern rite, 459 churches, and 354 priests. Today the diocese is in orthodox hands, and under Red subservience.

The Red Army entered the capital of Carpatho-Ukraine on October 27, 1944. Their purpose was to annihilate the Eastern-rite Church immediately. Soldiers pillaged the churches, burning the vestments and liturgical books. Later on, schismatic clergy, aided by the Soviet police, grabbed whole parishes from the Catholics. Many Catholic priests resisted this barbarity. They were arrested and shot. Hundreds of men and women were inhumanly massacred by the NKVD; others were deported. The people literally defended the churches with their bodies, falling in large numbers on the doorsteps while Red soldiers beat them with rifles and the dissidents stoned them.

Lintur, a stanch Communist and extreme atheist, traveled from town to town urging the Catholics to join the Orthodox Church. The people shouted back defiantly: "Give us bread." "Give us clothes," "Is this the freedom you offer."

The Soviets employed dire methods to force the newly consecrated bishop, Theodore Romza, into joining the Orthodox Church. But the young and energetic prelate replied firmly: "Suffering and death are preferable to betrayal of the church." So they began seeking among the influential clergy a possible renegade who would accept the episcopal ring of which they intended to deprive Bishop Romza. Interminably through the night the NKVD would importune, fatigue, and terrorize the priests. "Deport, torture, kill us," they cried, "but we won't betray our church." Many of the priests were cruelly martyred later on.

martyred later on.
On Assumption Day, 1947, 80,000 Catholics rallied in Mukachiy for their annual pilgrimage. Red soldiers blocked all the roads leading to the church. The pilgrims had to trudge through fields of mealy soil and wade through a river in order to reach the church. Many of the people had to journey on foot 2 and even 3 days. But they came in enormous processions. Banners of the Blessed Mother fluttered over their proud heads; and the whole countryside echoed with hymns in her honor. The Commies were utterly foiled.

Bishop Theodore knew the Reds were desperate about removing him. So the young prelate availed himself of every opportunity to inspire, strengthen and sustain the people. His unremitting zeal and devotion, trust in God captivated the orthodox. They began running to the church in large numbers.

On October 27, 1947, the bishop met his fate. The previous day he had consecrated a church and was now returning home. The horse-drawn carriage was riding along peacefully when suddenly an armored truck crashed into them. It was a premeditated attempt on his life. The horses were killed instantly; the occupants thrown from the shattered vehicle onto the road. Red soldiers alighted quickly from the truck; struck the helpless priests and bishop with their rifles; and sped on. The bishop lay in a ditch, unconscious. Blood trickled from his mangled teeth down his broken jaw. Late that evening he was taken to a hospital.

ning he was taken to a hospital.

Bishop Romza died 2 days later. cause of his death was diagnosed by specialists as a heart attack. Strangely though, prior to his sudden death, the Catholic nuns who attended the bishop were forcibly dis-charged. They declared his condition to charged. priests as improving. And an hour before this alleged heart attack some unknown person telephoned long-distance to the hos-pital, asking briefly: "Did the bishop die pital, asking briefly: "Did the lyet?" The building attendant, The surprised and terrified by the call, dropped the phone hospital immediately. left the doubt, Bishop Romza was poisoned by the substitute nurse. The sisters whom she replaced noticed her foreign dialect.

The following day Catholics and Orthodox alike thronged to the bishop's coffin in thousands. They touched his silent corpse with religious articles as if to have relics of the saintly martyr. His eyes glowed with a profound peace; his smile radiated heavenly sweetness—the glory of his martyrdom.

That evening the weeping, pastorless peo-

That evening the weeping, pastorless people lined the road for 20 miles. They wished to bid farewell to their pastor. However, the Reds had his coffin transported at midnight by train. Still thousands waited till he departed. "Now we are left as orphans," writes our witness, "but we are certain that in Heaven we have a (mighty) protector."

The Ukrainian Catholics living in Czechoslovakia enjoyed a measure of religious tolerance until January 1951. Then Bishop Paul Gojdich, OSBM, renown for his holiness, was condemned to life imprisonment. The charge: "Guilty of alleged espionage and treason to the People's Republic." The Commies trumped up these crimes to justify their act before world opinion. Actually the bishop bluntly refused to collaborate with the Red-infiltrated Orthodox Church. Later, Auxiliary Bishop Hopko was imprisoned without even a trial. Thus 321,000 Catholics of the eastern rite, with 311 priests, are now at the mercy of the Reds.

Though the Reds have wrought havoc upon Ukrainian Catholicism, desecrated countless churches and monasteries, deported and murdered bishops, thousands of priests, monks, and faithful, they cannot eradicate the faith from the hearts of the people. Escapees declared that the people travel long distances to visit Catholic priests who labor incognito as farmers, woodsmen, miners, and store clerks. They avoid all possible contact with the clergical renegades and puppet Orthodox clergy. As one wrote on a postcard to Rome recently: "We don't go to see George anymore, for George doesn't belong to us." "George" is an ancient Ukrainian cathedral in Lwiw. The dissidents seized it from the Catholic hierarchy.

The insatiable Kremlin, in its cruel and gory war against God and His church, has now turned its fury upon the Latin rite Catholics of Poland overtly. Communism, in its essence, is more than a mere political aggressor or warmonger. It preys ravenously on the whole Christian world and will strike at the proper moment.

Opposition to H. R. 1

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. LANE. Mr. Speaker, under permission to extend my remarks, I wish to include the text of my statement registering my opposition with the House Ways and Means Committee against H. R. 1, to extend the authority of the President to enter into trade agreements.

My statement follows:

Mr. Chairman, the case for the extension of reciprocal trade has one fatal weakness; it cannot explain away the harm that would be done to the American textile industry (in company with some other industries) by forcing it to compete in our domestic market, with foreign goods produced at a fraction of our labor costs.

The wage gap cannot be rationalized into balance.

And protection is stripped away from those of our industries that need it.

With their eyes on export opportunities for some industries, the supporters of Reciprocal Trade would sacrifice textiles, watchmaking, fishing, and other industries.

They would sell out our textile industry to Japan, giving up our self-sufficiency, and making us dependent upon other nations for the cloth we once manufactured ourselves just to provide extra export-markets for favored industries under the guise of international cooperation.

And what of the tens of thousands of Americans who would be added to the labor surplus existing in so many of our textile manufacturing communities?

Studies prove that these middle-aged unemployed are not absorbed by growth industries. Those few who do find other work, have to back down into jobs that barely pay the so-called minimum wage, better known as the starvation wage.

Our duty is toward our own people first even unto the least of them.

Not to give away a vital but hard-pressed industry just to promote international good will.

Gentlemen, I ask you not to dodge this

Look at the labor-surplus areas in the United States.

Observe how many of them are depressed textile communities.

Consider the inevitable damage you would inflict upon these communities by opening the gates to competing imports produced at one-half to one-tenth of the wages necessary to maintain the average American worker's standard of living.

And ask yourselves if there is any possible justification for doing this to the people of

our textile communities.

The gross hourly earnings of the textile industry in the United States range from a high of \$1.59 in Connecticut to a low of \$1.22 in Alabama and Georgia.

This disparity has brought real hardship

to New England textiles.

But if we have to contend with unlimited competition from low-cost imports, our situation will become hopeless.

On this the battling factions of the American textile industry join ranks in united opposition to reciprocal trade.

Reciprocity would be impossible. The traffic would be all one way—an intiles that would put most of our mills out of business and would add to the critical un-

employment prevailing in this industry. For the mills in Georgia and Alabama could not compete with the mills in Great Britain that pay only 45.5 cents per hour, or those in Japan whose labor costs are at the impossibly low level of only 11.9 cents

per hour. And if these fatal figures are not enough to convince you that reciprocal trade would be a death sentence for our textile industry, I put to you this further challenge: Why should we encourage imports of those manufactured goods that we are overproducing ourselves?

It would be just as senseless and inhuman to import agricultural commodities at half price or less to add to our own surpluses.

We from the textile areas demand the same consideration in our domestic market as that enjoyed by agriculture which has the protection of Government supports

We submit that it is grossly unfair and dangerous to coddle one industry and aban-

don another.

Those who beat the drums for free trade slide over the fact that we cannot compete With slave-labor products that are admitted to the American markets without abandoning our own progress and retreating to the 19th century.

They also ignore the fact that there is no such thing as unlimited competition.

We have laws on our own books to guarantee a minimum wage that is already considered to be inadequate.

That minimum will soon be raised and rightly so.

The extension of reciprocal trade would result in the cancellation of that law by indirection. It is a thinly disguised move, among other purposes, to increase Japanese textile exports to the United States at the expense of our own textile industry. It would drive mills and workers out of business, bringing back all the abuses of unfair competition.

Healthy trade depends upon the import of those products or materials that we need and the export of such goods as others want from

We cannot risk the delegation of arbitrary authority over such matters through the medium of a blank check.

Where it is clear that some industries will be hurt they must be given some protection in the national interest

We oppose extension of reciprocal trade as

being too large a grant of power.

The American textile industry needs sympathetic understanding and assistance from the Federal Government in place of the proposed legislation which threatens its survival.

Can Freedom Live With Internal Security?

EXTENSION OF REMARKS

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

JUDD. Mr. Speaker, every Mr. thoughtful citizen is deeply troubled about the serious problem posed in the above title. We must have security against disloyal or unreliable persons in the public service, in order to maintain our national independence and personal freedom. But we can lose that personal freedom in our very zeal to defend it, if our security measures are not most wisely devised and judiciously administered.

The most penetrating and sensible discussion of this problem that I have seen anywhere was given by former Senator Harry P. Cain, of Washington, now a member of the Federal Subversive Activities Control Board, at a Republican rally in Spokane, Wash., on January 15. Senator Cain has been a most courageous and valiant fighter against Communist subversion and smear tactics. No one can accuse him of softness, or naivete. That makes his analysis and proposals all the more worthy of the serious consideration I hope they will be given by our highest officials. Under leave to extend my remarks, I include Senator Cain's address:

CAN FREEDOM LIVE WITH INTERNAL SECURITY?

Mr. Chairman, through what I am aboutto say, I shall endeavor to adequately exthe keenness of my appreciation for your invitation and the joy I am receiving from being in your company. This is no small undertaking for it has been more than 2 years since last I was among you.

Robert Paine suggested that you might be interested in what I have been doing in these years and how I think the Nation

and the Republican Party are doing.

I can satisfy a portion of the suggestions in a single sentence. For the better part of 2 years I have been sitting, listening, and thinking.

In this period, I have been a member of a board of inquiry, referred to by the somber title, the Subversive Activities Control Board, which is a basic part of your Nation's developing internal security system. In this work, my four colleagues and myself endeavor to determine whether the Attorney General of the United States is absolutely correct in his allegations that listed organizations in our country are dominated, controlled, and directed by the Communist Party, U. S. A., or by foreign powers which seek the overthrow and ultimate destruction of the United States.

You read and hear very little about the labors of the Subversive Control Board for reasons which are clear and understandable. The Board itself makes every effort to be free of controversy and the Board looks to our high courts for statements of explanation when Board orders, requiring public registration by Communists and fellowtravelers, are made final.

It is encouraging that Communist leaders have repeatedly testified that the Communist Party, U. S. A., will be required to commit suicide should the Supreme Court finalize the Board's registration order against that organization.

A fuller discussion about the Board's procedures and substantial legislative authority can be provided in some future opportunity but not tonight. I ought, however, to make an observation. This segment of our internal security system does not suffer, aside from some complicated constitutional questions which are how before the courts, from public criticism or misunderstanding because the methods it employs are in support of the spirit of the Constitution and they provide equal fairness, objectivity, and due process to both parties in any case which is offered to us for adjudication. As a member of the Board, I speak for it in saying that we take nothing for granted nor do we assume that any individual or organization is guilty as charged until that result has been established to our own satisfaction on the public record.

I have a reasonable doubt that anyone evermore enjoyed his service in the United States Senate than I did. Its only con-ceivable drawback was an exaggerated emphasis on work of every possible kind rather than on an output of thought. I readily confess that I attempted to accomplish too much for too many people in too many direc-tions all at once. In attempting all of this, I lost sight of some fundamentals which have returned to focus during the past 2

Before reflecting on these fundamentals, I want to establish this attitude to be true. In my remarks there will not be, if I can help it, a single unreasonable, unsupportable, or destructive political reference. I am here as a proud Republican but I am speaking as one who feels that his basic allegiance is to his Nation rather than to the political party of his deliberate and considered choice. labor as a Republican from a hope to be of some small service to our Republic.

No one among us denies that the present is an age of peril. Were we in disagreement about this, we could reach agreement about

nothing.

Most of those in authority in each political party refer to the present and the years of our immediate future to be an intended period of peaceful coexistence with our en-It makes me much more alert and less gullible to think of these years as being coexistence with conflict. Call these years what you will, they will be demanding of us a national preparedness and readiness in the armed services, which will long continue the draft or some counterpart-on the farm and throughout industry—sufficient to call for hard sacrifices and participation by all of us.

This knowledge doesn't bother or perplex me. I accept it willingly. Like you, I am not living in the past or in the future. must contribute in some real measure to the age in which we live.

As between our material strength and that of the Soviet Union, I see no particular hazards or defeat in store for the United States. I can only believe as I do that our present leaders and those to come will pursue every intelligent avenue for reconciling our differences with the leaders of international communism short of war. I must remain convinced, as I am, that we shall prevail and survive through any war which may be forced on civilization. In this sense and as a citizen, I have no fear of the Soviet Union whatsoever.

My only major concern is with what we are to be when international communism's ambition for world domination has been defeated in one way or another. Will we or those who follow us be able to say after the conflict has run its course that through its years, even though they be a hundred, we Americans and our Government have maintained and left untarnished our self-respect?

Will we then be able to reassure the rest of the world that America remains a place in which the individual is free because his Government and those in authority in every

walk of life have been just?

As for myself, justice or equity and freedom or liberty are the two evidences of human progress and hope which distinguish representative governments and their peoples from those directed by tyrants, dictators, and despots. Other differences are only skin deep and hardly worth mentioning.

I want no victory over the godless forces of oppression which does not include the preservation of these assets without which a free people die and wither away.

Here we are confronted with the greatest challenge of our time. Now is when we must inquire about and make certain that in working to become victorious across the seas, we are permitting no domestic enemies or any acts of cowardice, short-sightedness, arrogance, or stupidity to assault or cripple our bastions of freedom here at home.

How often do you hear it said that because of our overwhelming fear of communism, we are blindly or blithely destroying the Constitution and the Bill of Rights? How often do you hear it said that muddle-headed if well-intentioned dreamers are so enamored of liberty in the abstract that we are doing too little or nothing meaningful in opposing the conspiracy which seeks to drive freedom from the earth?

I listen each day to those who frantically espouse each of these premises. In my judgment, neither contention is even remotely correct but there are far too many citizens who believe one or the other of these con-

tradictory courses to be true.

In our struggle to survive as free men and women, we must keep three elements in balance. They are justice, security, and freedom. It seems apparent to me that none of these elements can stand alone and that no two can operate successfully without the other.

In the years of our past, we have lived by the dictates of freedom and justice. We have known what they were and we have long taken their blessings for granted. We can't say as much about internal security. We have had only the most limited experience with it and that experience seldom touched the majority among our citizens as individuals.

In terms of time it is reasonable to say that our Nation didn't recognize the pressing need for an internal security system prior

to 1947, a mere 8 years ago.

Until the very recent past, there was an understandable reluctance to acknowledge or believe that some Americans, perhaps in considerable numbers, were seeking ways through which to overthrow our Government and destroy our free institutions. Many hard-headed patriots, as well as soft-headed ones, couldn't bring themselves to comprehend that some of our citizens were giving their allegiance to a foreign conspiracy which seeks to enslave us. This is America, they sald, and such things couldn't happen here. I don't know anyone who now refuses to admit that such evil things have happened The public record is replete with sad here. and damaging instances.

During the life of the 80th Congress, our Nation began to grapple with the realities of the postwar era. We were forced to agree that the Kremlin was our enemy because our extended hand of friendship had been cast aside times without number. We were required to admit that the masters of the Kremlin intended to carry out the preach-

ments of Nicolas Lenin exactly as Adolf Hitler attempted to satisfy every intention set forth in Mein Kampf. In both cases the visualized result was to be the same—a return to the Dark Ages.

I do not believe that this current and general understanding prevailed throughout the United States before you sent me to the Senate in late 1946. There were then as many or more who disbelieved it, or did not bother to think about it, as believed this evaluation to be true.

In any event, it was along about 1947 when citizens everywhere began to appreciate that a lasting freedom for the individual was somehow inseparably connected with our national security. From that time on, we have made haste, not always wisely, to perfect and operate a system of internal security which would enable us to remain free as individuals. There could be no other possible reason for such a system in a republic.

I think it a great pity that it took us so long to recognize the intentions and determinations of communism for what they are but I can serve no good purpose by blamadministrations of the past for their failures to specialize on contemporary history or to admit that evil-minded termites were boring from within or to agree that the Federal establishment included those who were traitors as well as the majority who were and are solidly patriotic. The legitimate purpose of this reference is to indicate the national status of our unawareness, unpreparedness, and inexperience when we began to fashion and tailor a system of internal security for the United States.

Before 1947, the Nation's No. 1 domestic security sentinel was the Federal Bureau of Investigation. But this extremely conscientious and splendid agency, which takes pride in being referred to as Uncle Sam's watchdog, expresses no opinions, grants no clearances, and makes no recommendations. The FBI gathers facts and information, that's all, and leaves an evaluation of these matters, a really difficult undertaking, and the action to be taken on them, if any, up to others.

What too often happened before 1947 was that many in authority perceived too little from the files of substance laid before them by the FBI. It goes without saying that if you can perceive too little, you can also perceive too much and I want to explore this side of the question before I am through.

To those of you who have thought that your Government has been soft on communism, I would urge a consideration of the following developments:

In March of 1947, our Nation departed from the more tranquil life and times of the past. A Government program was established to examine into the loyalty of those many individuals who serve the Federal establishment as employees.

This was followed by the Internal Security Act of 1950, which created the Subversive Activities Control Board and other domestic security activities. Then came the adoption of the Federal employees security program in April of 1953. As its predecessor loyalty program did, this program requires that every civilian employee or applicant for employment in the executive branch of the Government submit to an investigation for loyalty but it goes much further than loyalty and considers a number of other factors like excess drinking, sex perversion, and bad comwhich affect the Nation's security. In addition to these far-reaching measures, the last, or 83d Congress, stiffened up most of the statutes dealing with espionage, counterespionage, and sabotage. You may now, for example, be executed as a spy in peace-

When you add all of this to the Foreign Agents Registration Act, the Smith Act, various rulings by various Attorneys General, the continuing and vigilant activities of congressional investigative committees, and the investigative processes of the Civil Service Commission, you have in absolute fact today an internal-security system of practically all-inclusive dimensions. With the exception of wiretapping authority, would you establish much more were you an autocratic ruler in our land?

To those of you who have thought that your Government is so bewildered and frightened about communism as to annihilate the Bill of Rights and the Declaration of Independence at one fell swoop, I can offer these reassurances from our Nation's Chief Executive:

More than a year ago, when our present security system was but several months of age, the President said:

"In this country if someone accuses you, he must confront you; he cannot assassinate you or your character from behind without suffering the penalties an outraged citizenry will impose."

In his state of the Union message last week, Dwight Eisenhower said what I believe he means literally.

"We shall," said he, "ferret out Communist subversion while carefully preserving our traditions and the basic rights of our citizens."

To this point my effort has been to convince you that (a) the United States presently possesses an internal-security system which is as devastating and powerful in potential as any other such system to be found anywhere, and that (b) the authoritative declarations which constitute the foundation on which this system has been constructed are in support of our constitutional concepts and traditions. Please permit me to press each of these contentions just a little further.

On the pages of history we see at a glance that the manner in which a government handles the problem of internal security is a significant measuring rod for the freedom that its people hold.

Under the internal-security system imposed by the Soviet Union, freedom as we understand it is denied to the average Russian citizen. He lives in dread of the absolute surveillance and the unrelenting control of his conduct. That system is not for us, we say, but the system under which we operate shares a common purpose with the other. Both are designed to protect, to give stability to the form of government in each nation. I know that either system can be employed to serve the same ends—to keep citizens free or put them in chains.

What I must restate is that we have constructed, because of an imperative need which is recognized by all, a system which can, unless we make it operate in accordance with the assurances offered publicly by the President of our Republic, snuff out the lights of learning while making cowards and mental robots out of free men and women.

These assurances that justice will determine security decisions represent the only foundation strong enough to support a domestic security system for the United States. In no other fashion can we build a system we can trust or live with and any other system will shortly become identical with what we so rebel against in the Soviet Union and fought so hard against and vanquished so completely in Hitler's Germany.

Let us never forget that in an effort to keep our Nation secure at home, we have constructed an apparatus which can destroy us if we don't watch out.

When Dwight Eisenhower referred to an outraged citizenry, he was encouraging each one among you to cry out in indignation whenever you encounter or uncover an act of injustice to your fellowman.

The President has told all of us how the internal security machine is expected to work, but he must largely delegate to us, in and out of the Government, the energy,

vigilance, courage, and determination to make it work.

Since April of 1953, the Nation has been living with Executive Order 10450 which looks into the loyalty and security reliability of millions of our citizens who are employed by or seek now and in the future to be employed by the Federal Establishment. The cornerstone or guide within this order is that no individual shall be employed by or work for the Government unless his or her retention is clearly consistent with the national interest.

What have we learned out of this unique and new experience?

The most encouraging lession is an admission by many responsible persons in executive and legislative authority that we suffer most from a lack of experience with the security program we have created. I know but few who think the administration of the system has been adequate to the reasonable requirements of freedom. I know but few who believe the system is an adequate answer to the reasonable demands of internal security.

of internal security.

One takes heart from appreciating that changes are under study and improvements

in prospect.

We know that the system is under serious attack from many quarters. How much of this is generated by partisan politics or by the Communist inciters of trouble and confusion, I do not know. I was impressed on Wednesday of this week when the District of Columbia Bar Association publicly an-nounced that a special and continuing committee of its leading members has been established to provide legal representation for Government employees who become involved in security cases. This service will be provided without any cost whatsoever to those employees who are unable to obtain counsel of their own choosing or who are without funds to retain an attorney. not say that this bar association is strongly opposed to subversion and communism or that a majority of its hundreds of members probably are registered Republicans. It should be noted that the special committee was established with strong encouragement from the president of the American Bar Association and from many high officers within the administration of the Government.

To be impressed by this development is not sufficient. Never before in our history has it been thought necessary to provide protection from the outside, free of charge, for the individual against possible and unwarranted abuse and condemnation by his Government. If any steps will cause us to

stop and think-this is it.

The only thing of which I am certain is that thoughtful citizens throughout the country are sorely troubled by a lack of information concerning what is going on. I hope the day soon comes when their doubts can be resolved. I hope that Republican leaders will begin to acknowledge the criticisms more rapidly and move more swiftly in correcting mistakes in judgment or procedure when they occur.

My own considered view is that our security system has worked well and fairly on the average but that conspicuous and inexcusable examples to the contrary have occurred much too often. It isn't persuasive that we should be complimented, because we seldom err. Our Nation can't long tolerate a system which doesn't soon eliminate the possibility for errors which are disastrous to anyone like you or me when they arise. As I see it, some changes in both attitudes and procedures must be agreed to or the system will never work as the President intends that it shall operate.

Before listing some specific recommendations which I believe might add to the strength and resourcefulness of our beloved country. I want you to think about three instances in which our internal security apparatus has failed completely in one respect or another in its mission of balancing the requirements of freedom with the demands of security.

The first: The case of Wolf Ladejinsky has the more recently been in the public's eye. In reflecting on this sad matter, I speak as a part of that "outraged citizenry" to which Dwight Eisenhower made proper and pointed reference.

I am mindful that some impositions of governmental authority much higher than my own do not share my anxiety over the consequences I expect from the Ladejinsky question. My earnest hope is that they will consider a responsible citizen's point of view.

The Ladejinsky case points up practically every weakness which we can find or trace in our prevailing security system. It includes evidences of the shortsightedness, ruthlessness, smugness, and brutality of

bureaucracy at their worst.

Wolf Ladejinsky was naturalized a citizen in 1928. He became a public servant for the Government in 1935 and has been on the Federal payroll ever since. During these 20 years, his written record of service has been noted for its reliability and competence and for his intelligent contributions to our Nation's fight against international communism. Ladejinsky was a powerful fighter in the forces against oppression and slavery long before many among us were conscious of the problem. In his years of service, no supportable question against Ladejinsky's loyalty was ever raised.

Not many months ago, the Foreign Operations Administration sought to secure the services of Ladejinsky who was then under the Agricultural Department's control in Japan. This request was denied because the Agricultural Department stated that Ladejinsky was too invaluable to be replaced.

Subsequently, several new security officers were given assignments by the Agricultural Department. One assumed his duties in early December of last year. They discovered, what everybody knew, that Ladejinsky had worked for Amtorg, a Russian trading concern, through parts of 1929 and 1930 and that he had three sisters who assumedly remain alive today in Russia. Ladejinsky had so stated years ago when he first applied for Government service.

In years and months gone by these matters had been scrutinized carefully by the very strict security division of the State Department when Ladejinsky was on that payroll. This examination took into thoughtful consideration Ladejinsky's faithful years of employment.

The Agriculture Department was unimpressed by the State Department's voluminous file in the matter. Ladejinsky was declared by the Agriculture Department to be a security risk and its security officer announced that the three sisters whom he assumed were alive in Russia was cause sufficient to so stigmatize Mr. Ladejinsky. The brother of these Ladejinsky sisters doesn't know whether they are dead or alive. He has had no word from them or about them in over 8 years.

You have read that the FOA has announced its intention of sending Ladejinsky to the very same assignment for which his services were recently denied because he was said to be indispensable in Japan.

So far as I know, Wolf Ladejinsky has never been faced by any accuser nor has he been confronted with any charges. He became unwillingly a cause celebre because some eager beavers and Johnny-come-latelys in our necessary effort to keep America strong couldn't take the time to talk with him or to relate the points in question to 20 years of a man's private and public life. By such indifference and impetuousness can the good reputation of a good citizen be demolished.

Ladejinsky was saved, if that be the proper way to put it, but his Nation's reputation for the exercise of sound judgment and fair play suffered a real blow, not just here at home but all around the world in those quarters where we seek to merchandise our finest exportable product which is labeled justice.

Ladejinsky was saved because he had friends in high places who have known him intimately through the years, and because nameless outraged citizens cried aloud in

their indignation.

It isn't everyone who can call on a Douglas MacArthur, a Walter Judd, and members of both parties in both Houses of the Congress. Men and women of smaller reputations might only consider themselves caught in a trap without knowing where to turn for help or an opportunity to state their case.

I shed bitter tears for a political reason as well. The case of Wolf Ladejinsky hasn't been solved with finality. There has been no retraction or apology over his being labeled a security risk. Great agencies of our great Government proclaim the man's loyalty and need for his spiendid services. Another equally great department is silent and seemingly content to let a cloud on a citizen's

priceless reputation hang on.

You will hear more about Wolf Ladejinsky. Your political opponents will demand, with justification I cannot deny, that a full explanation of the circumstances and details be spread on the public record. This was our job to undertake. We were the ones who blundered. It was for us to explain the manner in which the injustice and contradiction occurred in order that you citizens would be reassured that no similar injustice would happen again. The measure of our collective and individual character is always determined by the way in which we admit our weaknesses and by the steps we take to correct them.

My own prayer is that the examination by the opposition will concern itself solely with facts and not with politics. In this case, we can be further and needlessly hurt regardless

of the approach employed.

The second: Victor Havris, of Detroit, was a master sergeant stationed in Europe in 1953. At the age of 32, he had 14 years of loyal service behind him. It was thought by someone that the young man's father had been a Communist. It was developed through a hearing conducted by an Air Force security board that Victor Havris at the age of 12 had been taken by his father, now dead, to some Communist Party meetings. There was no evidence or charge that young Havris was a Communist or a fellow traveler or that he had ever attended any Communist gathering since he was 12 years old.

Because of the disclosure that young Havris had been led by the hand of his father to a Communist meeting, he was declared to be a security risk and faced dismissal from

the Air Force.

This recommendation was overruled by a special board which was appointed to re-examine the case. A Democratic Congressman from Michigan was the one who prevailed upon the Air Force to delay and re-examine its dismissal decision.

This Congressman, whom I do not know, was an outraged citizen. He understood that the first intention of the Air Force was too much in keeping with the corruption of blood practice which the third article of our Constitution denies and which we so deplore in the Soviet Union. In this country, the crimes of the father are not to be visited on the children. A citizen must be judged on his own conduct and performance.

The third: Milo J. Radulovich was a first

licutenant in the Air Force who was not on active duty when questions about his being a security risk were raised in 1953. No doubt about his loyalty was intimated publicly. The case against Radulovich, who was a physics student at the University of Michigan under the GI bill of rights, was based on accusations that his father, John Radulovich, had

read pro-Communist publications and that his sister, Mrs. Margaret Fishman, marched as a picket in pro-Communist demonstrations.

For these reasons, ouster proceedings were initiated against Milo Radulovich. This in-tended action was concurred in by the board of three colonels who first heard the case and by every staff level until the question was laid before the Air Force Secretary.

Here the Air Force Secretary announced his faith in the American way by reversing the ouster decision, by removing the secu rity risk stigma, and by his declaration that we do not impose retribution on the family as is done so destructively in slave states everywhere. In the case of Radulovich there was a general assumption, short of the Air Force Secretary, that a person tempted be-cause of family ties must inevitably succumb to temptation; that any person subjected to pressure must inevitably weaken even if it requires him to betray his country.

Justice was slow in coming to Milo Radulovich and it remained for one man to grant My concern about Radulovich was the attitude of mind which gave birth to the

ouster proceedings.

When Milo Radulovich, age 26, heard that his reputation had been restored by the Air Force Secretary, he said, "It's just like having your future handed back to you. Just to say thanks isn't enough. I never expected it; I'm kind of bowled over.'

It's time that we begin to worry when a young American, age 26, expresses surprise that he was dealt with justly by his Govern-

I now offer to you some recommendations and suggestions which perhaps are durable and lasting in their value. In any event, they represent what I have been thinking about and puzzling over since last we met

(a) There is a pressing need for the adoption of some method which will guarantee that important or unreconcilable differences between heads of departments in the loyalty and/or internal-security fields will be ferred for decision to a higher authority.

No internal-security system can become effective, understandable, or reasonable unless its standards and the procedures for implementing them are national standards, not

departmental or bureau standards.
In the Ladejinsky affair, one standard was advanced by the State Department and the Foreign Operations Administration while a fundamentally contradictory standard was supported by the Agriculture Department. This incredible result bewildered employees throughout the Government and confused people within our country and all around the

Probably all of the harm to our Nation's pride, judgment, and reputation for fairness could have been avoided if the difference between the Departments had been resolved by a higher authority before any public announcement had been made.

If there isn't one national policy which is advocated and supported from the very top, there can't be any system or understanding or order at all.

The highest authority in question could be the Chief Executive or some high-ranking official to whom such a task is assigned or to a commission which certainly would include within it private citizens for whom the Nation has the fullest measure of respect and confidence in their characters and judgment. I dislike thinking that another den should be imposed on the President but thought should be given to the need.

(b) We must employ a more meticulous care in the selection of security officers. Because of the scope and newness of the prob-lem, some are assigned to judge others who are simply not qualified for these most difficult of all assignments.

Above all else, the Nation's need is for security personnel who can tell the difference between disloyalty and nonconformity; be-

tween treason and heresy.

Every Government worker must be loyal and reliable but there is no reason why they must be rigidly orthodox in their thinking. There is every reason to encourage the iconoclast as well as the conformist to serve the Republic on the public payroll you taxpayers support.

Whether in or out of Government, the orthodox mind, because of its strength and singleness of purpose, maintains and preserves progress, but the dreamer and non-conformist make progress. The oppor-tunity to be different, while being strictly loyal, is a climate we ought to take pains to develop.

I consider the security officer to be the cornerstone in our fight to remain strong and free. Any misfits or second-raters among them are more dangerous to our future than the subversives they endeavor to catch. These are the people who indict the innocent without reason and overlook the guilty for lack of knowledge, training, and experience.

Were I appointing a security officer, I would select no one whose background didn't include a sound and wide knowledge of the theoretical advance and practice of communism since the times of Karl Marx and this same individual would be required to have an equal knowledge and under-standing of our Constitution, its Bill of Rights, the movements which produced the Declaration of Independence, and the history of the United States.

Under Executive Order 10450, the function of a security hearing board is to conduct hearings on security cases and offer their decisions to the head of a given agency for him to accept or reject as he thinks best.

The members of these hearing boards are generally chosen from the top level of the administrative working force. The rather large number whom I know personally are conscientious, competent, and desirous of being fair.

Their liabilities are few but important. They have no tenure of office and they lack a feeling of independence because they are subordinates and subject to the directions of superiors. Another sizable fault is that a majority of them have had no previous experience with hearings and the kind of testimony with which these hearings deal.

These security hearing board members lay no claim to being professionals. started as rank amateurs and it will take time for some to learn their new business and longer for others. I can only recognize their inexperience to be a perplexing prob-I constantly wonder whether fessional hearing examiners could better keep the balance we seek between security and fustice?

(d) It might be advantageous to separate the personnel function from the function of internal security. It often happens that the job suitability interviewer or the processor of personnel forms is called upon to make at least a preliminary judgment on ques-

tions of loyalty and security.

As often as not these persons are trained only in the semiscience of relating an individual's qualifications to a given job which needs to be filled.

Why shouldn't the interviewer or processor pigeonhole an application which indicates that the applicant has been a member of organizations alleged to be subversive? These organizations may not be subversive or perhaps they weren't before they went of business years ago. No one is likely to encounter any future trouble by shelving a troublesome looking application. Many a personnel officer will react to security questions as he would to poison. He wants none of either.

Too much has been said about Government employment being a privilege and not a

Of course it's a privilege. labor the obvious? All an applicant is entitled to is a fair and impartial break. He or she does have that right to be judged competitively and fairly on their job quali-Their security status could be fications. judged subsequently by one who is an authority in that field.

We must be alert always to avoid procedures, forms, and attitudes which stimulate the advancement of mediocrity in any way within the Federal structure.

(e) We must increasingly learn to tailor security to the job. An individual may be unsuited for the strictness of security demanded by a particularly sensitive assign-This does not necessarily imply that the individual couldn't fill many other important assignments with credit to himself and the Government. Our operations and the living in the past never called for such an exercise of good judgment as does the present. If this were Russia, we wouldn't bother much about this exercise. Because we live in America, we must be bothered constantly.

(f) The basic criterion in Executive Order 10450 ought, I think, to be reexamined in the light of every development in the last 20 months

This criterion, that an accused applicant or employee must meet the test that his employment is "clearly consistent with the interest of the United States" would and does, where literally applied, constitute a burden which can hardly be borne by anyone. It almost makes the employee affirmatively prove that the national interest requires the retention or continuation of his serv-Who among us could do that?

I believe that the phrase "clearly consistent" has been the source of much of our trouble and that the cases previously referred to, and others like them, were insti-

gated by it.

"Clearly consistent" can easily be con-strued to mean without doubts, real or fancied, of any kind. It can be read to mean that pure hearsay or malicious gossip unsupported allegiations constitute doubts to be resolved in favor of the Gov-ernment. To my knowledge it has been so read.

Such an interpretation implies that a domestic system of absolute security is both desirable and possible. In point of logic and commonsense, it cannot be either possible or desirable.

Any system through which men and women are judged must provide the judges with room for judgment and discretion.

Instead of the rigidity of "clearly consistent" we might better work toward the latitudes included in language like this:

"No person should be dismissed or denied employment from the Federal Service as a security risk unless it is affirmatively found that his retention or employment is reasonably inconsistent with the national interest."

I am not suggesting that an established doubt should not be resolved in favor of the Government. It should be so resolved. What I am suggesting, and what our Nation ought to demand, is that the doubt about an individual be first established before it is resolved against him.

Let the Government judges assume their rightful responsibility for establishing their doubts about any individual to be valid and most of the fear and skepticism concerning our security system would disappear over

In expressing this conviction, I am thinking about you and what you are entitled to should you endeavor to join or remain within the Federal establishment.

(g) The general public has a tendency to consider loyalty and security as being one and the same thing. That doesn't follow. A loyal person can be a security risk and a

security risk can be truly loyal. Obviously, a disloval person is a risk.

We should, I believe, be more specific in our use of the term security risk.

Drunkards, perverts, drug users, gossipers and those who insist on keeping bad company may well be security risks while being loyal. We ought to make this distinction clear. When a person is fired as a risk, the reason for his being so considered ought to be stated.

A person who drinks too much can often recover from that indiscretion and build a new life if given a chance. The risk dismissed for being disloyal will remain disgraced for life.

again we should be trying to Here strengthen our Federal structure without unnecessarily destroying individuals in the

Espionage agents will be found among the disloyal. These are the ones we ought to try the hardest to discover. When we do, we ought to execute them. Risks who are otherwise loyal will not often be found in this category. We ought to treat them accordingly—without needless embarrassment or harassment.

You've been most indulgent to permit me to speak so long. There is yet more that could be constructively said but I thought tonight I could say no less. One further observation and I'm through.

The days of the present aren't easy or uncomplicated, yet several simple ideals and principles can't be misunderstood.

A whole clique of spies could hardly do as much damage to us as could our fallure as a government to have confidence in our people. Any government, to deserve to survive, must deserve the respect of its citizenry. A government is under no compulsion to be less than severe in punishing crimes against the state, but that government is under every compulsion to extend consideration and just treatment to every citizen. He or she must be treated as what they actually are—the fiber and substance from which a free nation derives its strength and purpose.

Some wise man in the early days of our beginning, perhaps it was Franklin, said: "I give you a Republic if you can keep it."
That's what I've tried to talk about, as a

citizen, tonight-how to keep it.

At Yalta, Poland Was Betrayed and Enslaved

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. LANE. Mr. Speaker, the time is February 7, 1955.

The American people are restive, fearful that another secret arrangement may be in process that will sanction Communist aggression and dishonor the principles by which we live.

Even as the blunders at Yalta deprived Poland of its independence, led to the enslavement of other peoples who trusted us, and opened the way to the spread of communism which now threatens the world.

Secret diplomacy continues to be the curse of international relations.

It is dictatorial by nature, considering itself superior to the common sense and character of the people.

In its preoccupation with convenience and expediency, it loses sight of moral values

Even in the United States today, for narrow partisan reasons, the true facts of Yalta are withheld from the people, while subtle negotiations are going on that will lead to the admission of Red China to the United Nations by the back door.

Appeasement on the installment plan. This will not fool the people.

We never endorsed the Yalta deal with Red Russia, and we will never approve of a Red China deal.

Communism must purge itself of every aggression committed against every other nation.

This is the policy of the American people, based on moral principles that we will never compromise or surrender.

In justice to the Polish people, first victims of the new appeasement, we denounce the furtive Yalta agreements.

Until those freedoms which have been betrayed are restored the freedom of the United States is in danger.

God grant us leadership with the courage to be right and honorable.

New Possibilities for the Coal Industry

EXTENSION OF REMARKS

OF HON, CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. ELLIOTT. Mr. Speaker, finding expanded markets for coal is one of the major problems faced by those of us who live in the major coal-producing areas of the United States. Certainly it is the major task facing Walker County, Ala., in the Seventh Congressional District of Alabama, which I represent here.

I was pleased to read on January 29 an editorial in the Birmingham (Ala.) News dealing with some of the possibilities scientists see in the future use of coal.

The editorial follows:

A SOUTHERN RESEARCH SCIENTIST POINTS OUT Possibilities in the Coal Industry

We in Birmingham, naturally, are specially interested in the condition of the coal industry and its future. The industry throughout the country has been experiencing difficulties, having lost many of its former markets and having been faced simultaneously with rising costs of production. In this district many mines in Jefferson and neighboring counties have been closed while others have been operating on reduced schedules.

While the industry, however, currently is in a somewhat depressed condition, many scientists and leaders in the field have predicted a bright future-in the next 10 to 25 years. Some of these possibilities have been pointed out in these columns. And in the current bulletin of the Southern Research Institute, Edward Lang, head of the chemical engineering section of the institute, usefully summarizes current developments in coal research programs.

Mr. Lang points out that whereas higher prices are anticipated in the near future for all other sources of energy, the price of coal is expected to remain fairly steady for the next 25 years.

"Therefore," he writes, "this period will see a shift back to coal as our basic fuel source. Coal will take over more of the generation of power except in locations where coal is unusually expensive and where atomic fuel can be used. Coal must start furnishing a portion of the liquid fuels before 1970, as petroleum prices rise. Coal will regain some of the market for domestic fuel and much of that for commercial and industrial fuels. The greatly increasing demand for chemicals will have to be supplied largely from coal."

There should be, the Southern Research scientist says, a slight increase in demand for coal this year and the demand should increase slowly until 1960-65. By then price increases in competitive fuels should make large increases in coal production necessary.

Mr. Lang lists some of the technological developments in the industry, including the interesting experiments being conducted at Gorgas in underground gasification.

He concludes that coal research programs indicate the tremendous effect that technology can have on the industry in the 10 or 15 critical years just ahead. If the industry weathers this period successfully, the longer-range picture looks very bright indeed. With sharply increasing demands for energy, paralleled by decreasing oil and gas reserves and higher prices for these fuels, coal should furnish an ever-increasing share of the requirements for electric power generation. Demand for coal will receive tremendous impetus also as coal becomes widely used as the raw material for synthetic liquid fuels and new chemicals. Thus this industry, which is on the sick list today, seems destined for a resounding recovery in the next quarter-century.

Last summer President Elsenhower appointed two committees to study coal troubles and make recommendations. committees were to have reported by December 1. We have not seen the reports but their contents should be interesting. And this month there is supposed to be a meeting in Washington of the governors of the major coal-producing States to discuss with their States' Members of Congress a legislative program to help the industry.

President Hoover Receives Silver Quill Award of National Business Publications, Inc.

> EXTENSION OF REMARKS OF

HON. CLARENCE J. BROWN

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD. I include excerpts from the proceedings of the state of the Nation dinner of National Business Publications, Inc., at Hotel Statler in Washington, D. C., on January 29, at which the Vice President of the United States presented the 1954 silver quill award of NBPhighest tribute of the Business Pressto former President Herbert Hoover for most distinguished services to business and industry through the leadership he has provided the planning, programand progress of the Commission on Organization of the Executive Branch of Government:

INTRODUCTORY REMARKS BY MASTER OF CERE-MONIES HARVEY CONOVER, PRESIDENT, CON-OVER-MAST PUBLICATIONS, INC., AND CHAIR-MAN OF THE BOARD, NATIONAL BUSINESS PUBLICATIONS, INC.

Permit me, please, just a few words about ourselves and our purposes.

ourselves and our purposes.

National Business Publications is an association of publishers of 171 technical, professional, industrial, scientific, merchandising, and marketing magazines.

Business publications perform a unique service to the economy. They facilitate the exchange of business education and industrial know-how. They stimulate our enterprise. They power the progress of our technology.

Business magazines are deliberately designed to serve the needs of the specialist who must keep abreast of the newest developments in his highly specialized field.

The history of business publishing paralleis the growth of business and industry in America. The result is that there are today fields of vital activity never dreamed of only a few years ago that are served by technical periodicals specializing in electronics, antibiotics, synthetics, atomics, and the like.

Millions of men and women in business and industry, after leaving college or trade school, must stay in touch with quick-changing know-how in such areas as virus vaccines, supersonic flight, automaton and nuclear propulsion. This they do almost exclusively through the business press.

The same is true of other millions in merchandising and distribution—the advertising agencies, buying syndicates, supermarkets, and chain stores—each teeming with new terms and techniques. As business and industry has specialized, so has the individual.

Among our principles of practice, which are found on the back cover of your program, there is one that pledges active allegiance to the American economic system. And therein lies our reason for being here tonight.

Sound business decisions are essential to the continued prosperity of our enlightened economy. Business magazines are dedicated to the enduring service of providing the knowledge that is necessary for those sound decisions

That is why we seek each year to present our silver-quill award to that person who has best epitomized those things for which we stand and in which we serve. The silver quill of NBP, like the organization that awards it, is synonymous with consecrated service to business and industry and to the Government that guarantees our freedom of enterprise.

We come now to a proud moment for the Business Press—the presentation of its silver-quill award by Vice President Nixon to Ex-President Hoover. There were, of course, numerous outstanding persons considered by the selection committee. But, when the name of Herbert Hoover was made known, all others faded away and there was, really, only one candidate for the 1954 award.

Not only because of his distinguished services to business and industry--through the leadership that he has provided the planning, programing and progress of the Commission on Organization of the Executive Branch of the Government-but because we remember and salute him tonight as the first President of the United States to recognize far-reaching values of business publications; as the first President to welcome Business Press correspondents to the White House; as the first President and Cabinet officer to personally encourage wider acceptance of business magazines for adult education and exchange of technological know-how; as the Secretary of Commerce who helped organize the first Washington conference of business magazine editors.

As has been underscored by many messages of commendation to this dinner, it is we who are honored, beyond measure, in having the privilege of honoring so great an American.

Since silver-quill tradition calls for last year's recipient serving as chairman of the selection committee, Vice President Nixon graciously and characteristically agreed to act as committee chairman and to be with us again tonight to present the silver quill to his fellow Californian, who is and remains the grandest Republican of them all. Mr. Vice President, the Business Press is and always will be honored by your presence, which denotes your friendship, and we are delighted to have you here, as our good friend, to make the presentation, at this time, to so great a lifelong friend of the Business Press.

REMARKS OF VICE PRESIDENT NIXON IN PRE-SENTING THE NBP SILVER QUILL AWARD TO FORMER PRESIDENT HOOVER

Vice President Nixon. Mr. Chairman, President Hoover, distinguished guests, and ladies and gentlemen, it was a proud moment for me a year ago to be the recipient of the silver quill award, but tonight it is an even greater honor to present that award to one of those rare individuals who lives to hear the verdict of history on his career.

Ladies and gentlemen, I proudly present the 1954 silver quill award to a man recognized throughout the world as one of the truly great men of the century, President Herbert Hoover.

REMARKS OF HERBERT HOOVER AFTER RECEIVING THE SILVER QUILL AWARD

Your committee mentioned my association with the publishers and editors of the National Business Press of many years ago, I still reflect with great pleasure upon the monthly dinners which we held while I was Secretary of Commerce and the yeoman service which you did in furthering our legitimate efforts at that time. And again I met with you and received your warm support while I was in the White House.

WHAT HAPPENED TO OUR GOVERNMENT SINCE THEN?

In the 23 years since those days, as the result of our financial medicines for social and economic ills, plus hot and cold wars, our machinery of Government has expanded with a speed greater than any government since Cheops built his sunboat.

Certainly we have moved into a region of higher dimensional mathematics and the decimal point is being constantly pushed around by the ciphers.

Out of this sudden growth there have come a mass of problems in Government. As you know, 6 years ago, I was appointed to head up the job of finding some roads through this labyrinth which would lead to reduction in the cost of Government. We made substantial progress, but we lost ground again with the Korean war and rearmament. And now again the Congress and the President have drafted me for that job.

In this Commission we are dealing with problems in Government which require more comprehensive investigation than Members of the Congress with their many other responsibilities can undertake. And we are dealing with problems beyond the ability of any one executive official to solve because they stretch over many different agencies and require much legislative action.

It is my conviction, and it was borne out by the results of the first Commission, that exhaustive examination of the facts and national experience leads to irrefutable conclusions. My aspiration is that from these conclusions we can set up further courageous, commonsense standards, methods, and policies by which the service of the Government can be more efficient and savings made for the taxpayer.

Some people will dislike these deductions. At least I get comfort out of the fact that old reformers never die. They get thrown out.

Some of these problems are complicated puzzles. In case you are skeptical, I may give you a few samples.

I may tell you that today the Federal Government has 104 agencies engaged in the business of lending, guaranteeing, and insurance, involving the Government in these kind of financial operations to over \$250 billion, and this does not include either the national debt or social security. As you may not know what a billion is, I may explain that it is a thousand million.

I might also mention that we have accumulated surplus and obsolete real and personal property which cost about \$30 billion. They require a multitude of warehouses which cost millions for rent and operation.

The Congress specifically instructed us to look into the Federal Government's "business enterprises which compete with the citizen." So far as we know about some 1,500 of them, great and small. In this case the competing

citizen has the puzzle. We have recently completed the first part of a report on paperwork in the Govern-That does not sound like much. would understand it better if it were called the birth control of Federal documents. gist of this report is that aside from hundreds of tons of printed matter, the Federal Government circulates about 25 billion pieces of paper each year at a cost of about four thousand million dollars to prepare them, send them out, and file them. Some 18 billion of these are forms-mostly questionnaires by which the Federal Government discovers your inner life. That is where you get the puzzle. Our recommended methods of saving \$250 million is perhaps peanuts as Government expenditures go these days.

The second part of this report, which is not yet completed, will be of more interest to you because we are trying to find out about how much it costs you to reply to Government inquiries by way of clerical services, lawyers, accountants, and loss of sleep. We have reason to believe that with the cooperation of the departments, industry, and the Congress, we can save you some worry by some simplifications of the puzzles. But do not forget that the Government must know a lot about your business if it is to operate efficiently and also collect taxes.

I could go on for hours on these ills, but I will not disturb your dreams further. There are 26 more of them.

It is a certainty that if the present Commission is to secure its reforms, it will again need the help of the business publications and the press generally. We are preparing midnight hours of work for you.

But the American people need not dwell altogether on troubles. There are huge blessings in progress.

The last few years have seen advances in science and technology which amounts to a revolution of expanded productivity.

Few realize how great an increase in productivity has come to us in these very few years. Today we have about 12 million adults out of our working force of 65 million, who are doing wholly nonproductive work. They are the Government officials, the Armed Forces, and those at work making and transporting supplies for the Government. Yet despite all this load our increase in productivity has enabled us to carry this burden with all its taxes and at the same time maintain the standard of living that we had before we entered these forests of trouble.

And if we maintain free minds, free spirits, and direct our steps aright, still new horizons and new frontiers will open to us. New inventions and new applications of old knowledge will come to us daily, and our burdens be steadily less hard to bear.

Another War To Stay Out Of

EXTENSION OF REMARKS

HON, STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. UDALL. Mr. Speaker, the Members of this body continue to be gravely concerned about the Formosa crisis. The situation in that troubled area is no less fraught with danger as a result of the passage of the resolution submitted to Congress by the President.

In order that we may have access to the best thinking available in our struggle with the problems arising from the Formosa situation, I am presenting today a sober, forceful editorial entitled "Another War To Stay Out Of," which appeared last Sunday in the highly respected St. Louis Post-Dispatch. Perhaps few of us will concur wholly with this editorial, but one can safely say it does reflect many of the fears, hopes, and judgment held by Members of this body:

ANOTHER WAR TO STAY OUT OF

Eight months ago, when some military leaders in the United States were all for getting this country involved in the Indochina war, the Post-Dispatch described that tragic, draining conflict as a war to stay out of. We think the time has now come to describe the Chinese civil war in the same plain terms. The Chinese war also is a war to stay out of.

The danger of becoming involved in the Chinese civil war is all the greater now that Chiang Kai-shek has decided that he wants to evacuate the Tachen Islands and needs the help of the United States in doing so. The President has ordered the 7th Fleet to fulfill Chiang's request and this means that our vessels are going into Chinese coastal waters in which te civil war is being waged.

If the Chinese Communists allow the evacuation to proceed peaceably there should be no harm to our ships or aircraft or the personnel on them. But if fighting breaks out in the redeployment, this country could easily be the victim of an inflammatory incident and thus drawn into the long struggle between the two Chinas.

This hazardous development follows in the train of the President's special message and overwhelming passage in Congress of the resolution of authority for which he asked. In his message Mr. Eisenhower said that while he did not suggest enlargement of our "defensive obligations beyond Formosa and the Pescadores," he believed "the danger of armed attack directed against that area compels us to take into account closely related localities."

This special message and the act of Congress in passing the Richards-George resolution implementing it have had two contradictory results.

One result is to further the cause of peace. Peace is furthered to the extent that the message served as a clear warning that the United States will defend Formosa as part of a far eastern protective chain, including Japan, Okinawa, and the Philippines, against communism's spread.

HOW FAR ARE WE TO GO?

But there is also the opposite result. The message and the resolution added to the uncertainties that already existed about the Far East. Thus they increased the risk of war. This increased risk arises from the fact that the message and the resolution went beyond the defense of Formosa and the Pescadores and, in a vague way, referred to

closely "related" areas. These last three words were widely interpreted to include not only the Nationalist-held Tachen Islands and the Quemoy and Matsu Islands groups, but also areas of concentration of Communist troops, war planes and ships on the mainland.

Some Members of Congress read this as an indication that the Eisenhower administration might be considering "preventive war" against the Chinese Communists. These Senators and Representatives wondered whether the request for the resolution was in part designed to obtain the approval of Congress in advance for a possible strike that the military might consider necessary against the Chinese mainland.

President Eisenhower was quick to recognize the gravity of these concerns. While the resolution was under debate in the Senate, he sought to reassure Congress and the country by saying that he alone would make any decision to use our forces beyond the defense of Formosa.

These pledges were reassuring insofar as the President's course was concerned, but they did not remove all the areas of doubt. In fact Mr. Elsenhower himself confirmed the existence of this uncertainty at his latest press conference, on Wednesday. He said in effect that the United States would use its forces to protect Formosa and the Pescadores. He then declined to answer as to Quemoy and Matsu.

UNCERTAIN POLICY AS TO QUEMOY

The President and his staff have access to military intelligence that properly is denied to the rest of us. It may be that he has good reason for keeping silent at this time on the United States intentions concerning these small coastal islands that are both geographically and historically part of mainland China.

The appearance at least is different. The appearance is that this silence with respect to Quemoy and Matsu is a continuation of what Secretary Dulles described some months ago as a policy of keeping the other side guessing.

If this is all the policy there is on Quemoy and Matsu, then it happens that the people of the United States and their friends in the free world are kept guessing no less than our possible enemies. From this confusion and doubt arises the continuing fear of an unnecessary involvement of the United States in the Far East.

Let us assume that the situation in the Chinese civil war is as it appears to be. Then Chiang's Nationalist soldiers on Formosa cannot by themselves ever hope to invade the Chinese mainland. Neither can Mao Tsetung's Communist forces, however much the Peiping propagandists bluster, now or in the immediate future, attack and capture Formosa. If this is the situation, and there are sound reasons to believe it is, then a United States policy of noninvolvement in the Chinese civil war takes form.

The first element in this policy of non-involvement is not to be maneuvered into losing one or more vessels of the 7th Fleet, or supporting aircraft, and their personnel, while Chiang's evacuation of the Tachens proceeds.

DANGER IN THE DEFENSE TREATY

Chiang Kai-shek was our ally in World War II and that is reason enough to sympathize with him in his concern for his men on islands that lie so close to the Communist mainland. We may hope that he will get his personnel and equipment off the Tachens, but not at the price of involving this country in war.

The second element in this policy of noninvolvement is to be careful not to become caught up in the still more dangerous zones of Quemoy and Matsu just off the mainland.

The speculation that the United States might help redeploy Chiang's troops from the Tachens in order to strengthen his forces on Quemoy and Matsu envisions a maneuver that is doubly dangerous. In such a ferrying operation, a United States naval vessel would run the risk of being destroyed at the Tachens, at Quemoy or Matsu or anywhere en route between them.

The third major element in a policy of noninvolvement, so the Post-Dispatch believes, is rejection by the Senate of the mutual-defense treaty between the United States and Chiang.

This proposed treaty, which Secretary of State Dulles signed last December 2, was ratified unanimously by Chiang's refugee assembly January 14. It is pending in the Senate committee, where it carries strong endorsement by the President.

We are fully aware of the arguments for ratifying this treaty. Approval by the Senate would bolster the morale of Chiang and his troops. Conversely disapproval would seriously embarrass them in the eyes of their Communist enemies.

These considerations of morale are important. However, they are not the only considerations. If the United States becomes a treaty partner with Chiang he is our colleague for better or worse. In view of his regime's record of corruption on the mainland and brutality on Formosa, he might deliberately provoke a military aggression that would involve our forces.

There is some protection for us in the provision that either party can, on a year's notice, abrogate the treaty. But long before abrogation could take effect, an act of war might occur.

A letter exchange, filed with the treaty, states that neither side is obligated to give military assistance if military action is taken without prior consultation between the parties. We might be reassured by this were the other signatory not Chiang. But we do not trust him and we do not think that the President or the American people should trust him. Chiang's opposition at this moment to a cease-fire is warning not to join with him in a mutual-defense treaty.

BETWEEN IMPERFECT ALTERNATIVES

The choice is between imperfect alternatives and we think it is the wiser, sounder course to take the alternative that is more likely to turn out better for the United States and the free world.

Therefore we propose:

First, that while the United States should not in any way weaken its warning to Communist China to keep hands off Formosa and the Pescadores, this country make it a strict policy not to run risks, in the waters of the coastal islands, likely to involve the United States in war.

Second, that the possibility of achieving a cease-fire be explored to the fullest notwithstanding the denunciations of a truce by Chiang and the rejection by Chou En-lai, Chinese Communist diplomat, of a U. N. cease-fire conference, except on extreme terms that Chiang could not accept. Inside the U. N. or on the outside, through some such grouping as the British Commonwealth States which met at Colombo, Ceylon, the search for a fair cease-fire formula must go on.

Third, that plans be undertaken for an eventual solution of the problem of Formosa as an international responsibility. This might take the form of a U. N. trusteeship. It might evolve as an international protectorate under the watchful eyes of the nations of southeast Asia which recently concluded a defense pact for their part of the world similar to NATO for the Atlantic area.

This might well mean that the United States would be forced to send troops to Formosa to participate in an international army. But by some means Formosa's integrity must be secured for the Formosan people either through the U. N. or other international agency. If the prospect does not look

too bright, we must not forget that the U. N. stopped military aggression in Korea.

PROBLEM OF CHIANG'S TROOPS

Fourth, that the difficult question of the disposition of Chiang's troops (in the event of a cease-fire and the securing of Formosa) be approached as a matter similar to the problem of the prisoner exchange following the Korean war. Some of Chiang's troops doubtless would be glad to return to the mainland and their homes and families if they had the opportunity. Others could not return without being killed.

Fifth, that a climate be developed which would enable the free world to place trust in pledges from the Communist side—something not now possible. This would require the observance by the Communists of the truce in Korea. It would require the freeing of American and other U. N. personnel now held in prison. It would require full respect by the Communists for the integrity of the remaining free areas of Indochina and observance of a cease-fire in the Chinese civil war if a truce should be worked out.

Conceivably these steps, if taken in fully demonstrated good faith, could lead to the eventual admission of the Peiping government to the U. N. as the government-in-fact of China. The very thought of Communist China at the U. N. is repugnant to Americans who have been outraged repeatedly by

Red Chinese inhumanity.

Yet admission of the Chinese Communist government to the U. N. would be no more than recognition of a geographical reality that can be seen from looking at the map. It would not mean approval of the inhumane acts of Red China any more than the presence of the Soviet Union at the U. N. means our indorsement of the Kremlin and its totalitarian rule.

UPSETTING TO SENATOR KNOWLAND

Admission of the Peiping Government to the U. N. would come, if it ever came, only after a demonstration that Red China had learned the meaning of peaceful coexistence. No less a person than John Foster Dulles himself made a statement last March of the terms under which Red China might conceivably enter the U. N.

Some of these proposals will be anathema to Chiang. Some of them will bring outcries from Senator Knowland, of California, who has been Chiang's chief apologist in the Senate for nearly 10 years. Admittedly they run the risk of sharpening the foreign policy division within the President's party in Congress. This is regrettable, but it is a congress that the Eisenhower administration must face sooner or later.

No American citizen who cares for the future of his country wants the Communist areas of the world to spread further. He does not want appeasement. He does not want a Munich in the Far East. And he is ready if necessary to fight to keep Communist aggressors from taking over vital areas that could be used as stepping stones.

Neither does the citizen want a hydrogen bomb in his backyard as the result of some wholly unnecessary incident. And the unguarded trigger that might put that bomb in his backyard is thousands of miles away in the Far East.

PRESSURES ON THE PRESIDENT

The pressures on President Eisenhower for deeper involvement are tremendous. They come from his highest military leader, Admiral Radford, Chairman of the Joint Chiefs of Staff, and other officers of high rank. To his great credit, the President has resisted these pressures up to now.

A year ago the President said the free nations should do what they can to "work out a practical way of getting along" in the world. In this new crisis that still must be our goal.

The President needs the benefit of public opinion to enable him to resist the continuing pressures for involvement. He needs more than ever the country's help in working out that practical way of "getting along."

What this country may be required to do in connection with an eventual defense of Formosa, no one can fortell. But the Chinese civil war, as it swirls about the small coastal islands—the Tachens, Quemoy, and Matsu—is another war to stay out of.

What America Can Learn From Asian Students

EXTENSION OF REMARKS

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. KLEIN. Mr. Speaker, the Honorable Chester Bowles, former United States Ambassador to India, and an old friend for whom I have great respect and admiration, has written for the Institute for International Education about what America can learn from the Asian students. The increasing importance of our relations with Asia points up the significance of such thinking as Mr. Bowles expresses. What he says seems to me to deserve wide reading and reflection:

WHAT AMERICA CAN LEARN FROM THE ASIAN STUDENTS

(By Chester Bowles)

The 1,800 students from India who are now studying in America, and hundreds more from other Asian nations, have paid us the compliment of coming to our country to obtain their education, so that they may return to participate more effectively in the building of their new nations.

I would like to pay them a compliment by suggesting that they have a great deal to teach America. During their stay I earnestly hope they will share with us not only their knowledge of Asia, but also the faith in American democracy which brought them here.

Many Aslan students with whom I have talked have expressed their surprise at the ignorance of even well-educated Americans on the history and culture of Asia. I am afraid that they are only too right. Of the 50 or more universities and colleges which I have visited in the last year, only one—West Point—had a standard, well-attended undergraduate course in Asian history. For most Americans in primary and secondary schools as well as in college, world history has been the history of the Greco-Roman-European world, perhaps beginning with the Egyptians. These narrow dimensions no longer encompass our world, and we have a lot of homework to do.

Asian students can contribute enormously if they will help to introduce us to broader horizons with particular emphasis on the awakening new world of the East.

Not only do we need to know something about the old and significant history of such civilizations as India, and such religions as Hinduism, Mohammedanism, and Buddhism, but we need to know the exciting events of this century. If we are to talk persuasively with dynamic modern Asia, we must know the story of the independence struggle in new nations like Indonesia and Burma, and the stories of such men as Gandhi. We need to understand why a social revolution is

impelling Asia now to demand land reforms and economic development.

When we know some of the facts of Asian poverty, when we know about the half of Nehru's adult life that he spent in British prisons, then we will see why independence, reforms, and development are not just problems that take priority but passions that brook no delay.

There is another way, fundamental to today's complex world, in which these young visitors from abroad can help us. Many Asian students have told me that they are impressed with the fears that grip America today and with our rather negative and narrow reaction to the problems which confront free men everywhere.

America, they point out, was built, not out of fear, but out of faith. Our public school system, or community life, our labor organizations, our TVA's and our churches are living expressions of America's faith in the concept of expanding freedom and opportunity for all men.

Why then, they ask, do you seem to lose touch with this great positive American concept that has created so much for your own people and which has so much to offer the whole free world?

Most thoughtful Americans will agree that this question is pertinent. Nevertheless, Asians, anxious to know the real America, should seek to understand the incredible strain and pressures to which we have been subjected in the last few years.

When the war was over we anxiously sought the friendship and goodwill of all peoples including the Russians who had fought so valiantly in the struggle against the Nazis.

For generations we had felt close to the Chinese, thousands of whom were educated in American unievrsties. In the postwar years we wanted not a cold war or a bleak coexistence, but friendship, understanding, and an opportunity to work with all people towards a better world.

The harsh realities of the postwar world hit us with unexpected and brutal force. Instead of the constructive comradeship of friends, allies, and former enemies working constructively through the United Nations, we found ourselves faced with the bitter, unrelenting antagonism of the Communist movement, bent on overruning Europe and eventually Asia and the world.

In 1950 as we debated the question of Communist China's recognition, the United Nations was suddenly faced with aggression in Korea and eventually an all-out attack by the Chinese armies. In the following years 33,000 young Americans were killed, and there was scarcely a town in America that did not again feel the impact of war.

In the confusion and uncertainties of the last few years we have, as most Americans must agree, placed too much faith in military power alone, while neglecting the great basic strengths of our democratic tradition. We have often been forgetful of our own struggle against colonialism, and in the interest of military expediency we have seemed willing to prop up decrepit colonial regimes in Asia and Africa.

Ironically, Asian students who come to America are sometimes more conscious than we of the fundamental American democratic concepts which for generations have inspired the freedom movements throughout the world. If they will seek sympathetically to understand our own hopes and fears for the future, they can bring a fresh, clear perspective about America's great potential influence and strength which may help to restore our own sense of values and to regain for us greater confidence in ourselves and the freedoms on which our Nation has been built.

Jefferson, Jackson, Lincoln, Wilson, and Franklin Roosevelt are names which are known and revered by every thoughful, educated Asian. If these great men of the American past could sit around a table today with such Asian leaders as Soekarno, U Nu, Nehru, and Magsaysay, they would, I be-lieve, share much the same viewpoint and the same hopes for the future.

The language with which America is capable of speaking to the world is a universal language which can arouse the people in remote villages, in the crowded cities of Tokyo, Bangkok, and Calcutta, in the universities and government offices. It is a language with which Asian students, who in some ways have been forced to come to grips more closely than we with the realities of mankind's struggle for survival in a complex and tortured world, are fully familiar,

While we improve our Voice of Americaby putting it on the side of Asian freedom and reform as well as against Asian communism-we should listen also to the Asian voices to America. When Asian students come here or when Asian leaders speak to us in their own parliaments and in the United Nations, we should listen to them, disagree with them, if we must, but listen. They

have much to teach us.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any execu-tive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commis-sioner in Congress there shall also be furnished (and shall not be transferable), copies of the daily RECORD, of which I shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUS-TRATIONS, MAPS, DIAGRAMS.-No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is

respectfully invited:

1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the Congressional Record, in 71/2 -point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks .- If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.-The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided. That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committ

8. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the Congressional Record Appendix the full report or print of any committee or subcommittee when said report or print has been

previously printed.

10. Official reporters.—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. Illustrations.—Pursuant to section 182b, title 44, United States Code (as shown above). requests for authority to insert an illustration the Record should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. Corrections .- The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Appendix

American Foreign Policy

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, February 9, 1955

Mr. WILEY. Mr. President, last week it was my privilege to address an all-university convocation of students at the University of Cincinnati on the subject of American foreign policy.

I send to the desk now the text of my speech, and ask unanimous consent that it be printed in the Appendix of the Recogn

There being no objection, the address was ordered to be printed in the Record, as follows;

American Foreign Policy and the Problem of Communism

(Address by Senator Alexander Whey, Senate Committee on Foreign Relations, at all-university convocation of students, University of Cincinnati, February 4, 1955)

I am delighted to have the opportunity to address this distinguished and learned audience. I always regard it an honor to address an academic group of this kind. It is a special honor to appear before such an audience in this great State which has given our Nation one of its foremost families: I speak of the Tafts of Ohio.

THE RESOLUTION ON FORMOSA

I speak to you at a critical juncture in the affairs of this Nation. Last week the United States Congress with only 6 dissenting votes authorized the President of the United States to use our Armed Forces to Protect the islands of Formosa and the Pescadores from possible attack by Communist China. The facts are relatively simple, but the possible consequences are great.

Every competent military man I have talked with in recent years including General MacArthur, General Marshall, General Bradley, General Wedemeyer, Admiral Radford, Admiral Carney, and General Ridgwey, to name but a few, agree that if Formosa were to fall into unfriendly hands it would seriously jeopardize the security interests of this Nation. Our great base at Okinawa would be flanked. Attack on the Philippine Republic would be threatened. Japan would be exposed to Communist military threat. And the whole of southeast Asia might eventually be in danger of falling like a ripe plum into the maw of communism.

It was the purpose of President Elsenhower, supported by a nearly unanimous Congress, to draw a line, to make it clear to Communist China that this Nation felt that its self-preservation would be endangered by further Communist expansion in the western Pacific.

Wars have resulted in the past from misjudgments as to when a Nation believes its vital interests are endangered. The resolution passed last week will make it crystal clear to Communist China that we believe our vital interests would be endangered if Formosa and the Pescadores are threatened by military force

by military force.

In order to understand the need for this action, I propose to review with you tonight the threat to freemen which is posed by communism and then to examine what we are doing about it internally and externally. I then will consider some of the attitudes which we as Americans must cultivate and develop so that we may be true to the heritage of freedom to which we are heir.

POSSIBILITY OF A CEASE-FIRE

First, however, let me refer briefly to the possibility of a cease-fire in the Formosa area. The resolution which the Congress passed contains a very significant provision. It provides that the authority granted the President is to expire when the peace and security of the area are assured by, and I quote. "International conditions created by action of the United Nations or otherwise."

Last Monday the Security Council of the United Nations met to begin discussion of some method to bring hostilities in the Formosa area to an end. It will be necessary, if these negotiations are to be successful, for Communist China to participate. Indeed, the charter requires that parties to disputes considered by the United Nations are not to be excluded.

During the past few days, a good many people have indicated their fear that if Communist China participates in negotia-tions for a cease-fire, this will be the first step toward admitting Communist China to the United Nations. I cannot share these fears. Our negotiations through the United Nations are designed to stop the fighting, because as long as shooting is going on in this area there is a very real danger that hostilities may spread. I am confident that our negotiators at the United Nations, led by former Senator Henry Cabot Lodge, under the guidance of President Eisenhower, will not be parties to any cease-fire arrangement which would involve a surrender of the basic principles for which we stand. I am not nearly as fearful of what might happen as the result of negotiations in the United Nations to bring about a cease-fire, as I am fearful of possible consequences of failure to stop the shooting. It seems essential to me that if the American people, through their representatives in Congress, have been willing to give President Eisenhower broad authority to use our Armed Forces to protect Formosa, we must also be willing to rely on his good sense and ability to negotiate a cease-fire without imperiling our vital in-

EXPANSION OF COMMUNISM

For many of us communism is nothing new. We have been living with it for a long time—since 1918, to be exact. We have watched it grow in four decades from a small band of Petrograd revolutionaries led by Lenin to a force enveloping some 800 million people and extending over 14½ million square miles of the earth's surface. Little did we realize in 1918 that communism would today be so extensive and so menacing a threat to our free civilization.

Soviet territorial aggrandizement, which began with the conquest of Russia herself, has continued with unrelenting drive. Much of Eastern Europe is under Soviet control. And in the Far East, communism has enveloped China, North Korea, and North Viet-

nam, while in other areas of Asia and the Western Pacific communism has mounted strong forces of infiltration and envelopment.

NATURE OF COMMUNISM, THE PEOBLEM OF OUR TIME.

Fundamentally, communism is hostile to everything we stand for. It is hostile to democracy; to our economic system; and to our religious and cultural values. It seeks to destroy the humane ideals inherent in democratic doctrine. It thrives on the miseries of mankind. Its gospel is one of hatred, fear, and distrust. It is nourished by poverty, disharmony, and discord. A dangerous force inspired by false messianic hopes, communism teaches deceit, treachery, and terrorism and seeks totality of conquest in the realm of both the physical and the spirtual. Its methods are criminal; its philosophy is godless; its way of life is a way of death for mankind. Communism professes to give man a paradise on earth; but instead it gives man only the chains of slavery, an eternity of human bondage.

The threat of communism is the problem we Americans must face today. There is no easy solution. There is no panacea; no patent cure. There is no escape to isolationism.

ent cure. There is no escape to isolationism. I am reminded of a cartoon appearing in a New York magazine a few years ago. It depicted a rather rotund, middle-class gentleman of 50, reclining in a comfortable hammock suspended between two trees behind his comfortable suburban home. In his one hand he had a drink and in the other a newspaper. This man could have been a happy man relaxing there on a delightful summer's day. But obviously he was not, for he remarked, in a note of resigned exasperation: "What a great world this would be if it weren't for the Russians."

We cannot wish away our troubles. We have to face up to the great challenge of our day. I am happy to say that we have, and we shall continue to do so. We must, because our own lives, the life of our Nation, and even the life of western civilization depend on it.

AMERICAN APPROACH TO THE PROBLEM OF COMMUNISM: INTERNAL

The American approach to the problem of communism has been a dual approach. It has been internal and external; and necessarily so, because rarely if ever is foreign policy something separate and distinct from domestic affairs. In the realm of domestic affairs we have met the Communist menace in a variety of ways. We have taken steps to preserve the internal security of our Nation against Communist subversion. We have met the internal Communist problem by the continued maintenance of a free, vigorous, expanding, and prosperous economy.

I want to emphasize particularly the importance of this factor. Basic to the whole structure of our foreign policy is the economic strength of our Nation. It is upon the economic foundation of our Nation that there has been built a foreign policy the main features of which have required vast outlays of capital and goods in foreign aid and vast expenditures for national defense. Were it not for the strength, vitality and expansiveness of our economy it would not have been possible to sustain the global political commitments which we have assumed.

A final factor in the domestic aspects of our effort to meet the problem of communism is the dedication and resolution of our great President, Dwight D. Eisenhower, to maintain the high standard of progress achieved by America in the past decades. Communism is nourished by poverty and misery—the twin cancers which can destroy a vigorous and free society. But so long as we are motivated by the desire to insure freedom from want for all of our citizens we have little to fear from domestic communism.

AMERICAN APPROACH TO THE PROBLEM OF COMMUNISM; EXTERNAL

In the external aspects of our approach to the Communist problem we must continue to be guided by basic principles which to my mind are vital to the ultimate success of our

foreign policy.

In the first place, it should always be our fixed policy to secure and maintain world peace. That is basic to our action last week regarding Formosa. To be sure, world peace is a difficult goal to achieve; but we must never diminish our zeal or falter in our resolve to accomplish that ojbective, whatever the obstacles. We are not a warlike people; we are a peace-loving people who have only engaged in wars of self defense and then only after grave provocation.

We have demonstrated our interest in world peace by our participation in the United Nations. There are many who would find flaws in the United Nations. It is my conviction that the United Nations is a vital instrumentality for world peace—if the members would only use it. The fault lies with the member states and not with the

United Nations.

Personally, I am proud of our role in helping to build the United Nations and in supporting it. It is the best instrument through which we may seek to fulfill our policy of

assuring world peace.

In the second place, our foreign policy must continue to be based upon a global concept. Our interests and our commitments are global. So are the interests and commitments of our Communist adversaries. This means we must keep ourselves constantly in a position to give the uncommitted people of this earth a chance to contrast the Communist way of life with the free way of life.

The third principle for the success of our foreign policy is the continued emphasis upon collective security. We cannot go it alone in any vigorous effort to checkmate Communist expansion. Basic to our foreign policy is the support of our allies, in NATO, ANZUS, SEATO, and the other pacts of collective security such as the Rio Pact. We must maintain the strength and vitality of this network of engagements, bearing in mind in all diplomatic conduct the need for solidarity among our friends.

Bipartisanship, or nonpartisanship as I call it, is another principle that must be maintained if we are to be successful in our foreign policy. I do not mean that there should be no criticism of foreign policy. On the contrary, when criticism is warranted and where it will be constructive, it should be made without hesitation. Our democracy thrives on the free interplay of Ideas so that out of the clash of conflicting views carried on in statesmanlike debate the most reasonable course of action will emerge.

It is the duty, indeed, the moral obligation, of every legislator, whatever his party, to voice dissent when in his conscience a given policy is open to criticism. If criticism is to be made, however, it ought to be constructive, state-manlike, and patriotically inspired. In the realm of foreign affairs there is no room for irresponsible charges, demagogic exhortations, and petty carping that exploits the fears of a people, sows discord, and creates doubt where there should be courage, unity and confidence.

UNITY IS NECESSARY

I have said time and again that partisan politics should stop at the water's edge. The eyes of the politician should not be fixed upon the next election but rather upon the next generation. I would like to say emphatically that I am confident that the American people have nothing to fear on this score. I feel sure President Eisenhower and Secretary Dulles will establish and maintain a system of real and meaningful consultation with both parties on major issues that arise in the conduct of our foreign policy.

The passage of the resolution on Formosa demonstrated once again this kind of solidarity. Many people, I know, argued that President Elsenhower already possessed ample authority under the Constitution to use our Armed Forces in defense of Formosa and the Pescadores without the consent of the Congress.

But that was not the real issue. The real issue was whether the President and the Congress would join hands and display the kind of unity that gives weight and substance to American policy. The Senate vote of 85 to 3—together with a similarly heavy House vote—let the Communists know in no uncertain terms exactly how America feels about the defense of Formosa.

A STRONG MILITARY ESTABLISHMENT

In addition to the guiding principles of foreign policy which I have mentioned it is necessary that we continue to maintain a strong military establishment if we are to succeed in our struggle against communism. Military and foreign policy are inextricably interrelated; they cannot be separated; they must be designed to work in concert with one another. More than ever before the success of American foreign policy without power is meaningless.

The world today is divided into armed camps, and however much we may wish to ignore the realities of tension and struggle, we cannot do so. Our diplomatic commitments are many; they are far reaching; they are global in scope. To support these commitments we must maintain a strong defense structure. Our commitments must square with the realities of our national interest; our military establishment must be maintained in proper proportion to the extension of our political commitments.

Thus, we must continue to maintain a strong Navy, Air Force, and Army, however great the personal sacrifice for each one of us. We must have a trained and ready Reserve upon which to draw in time of emergency. We must maintain a strong continental-defense system. In this day of Abombs, H-bombs, intercontinental ballistic missiles, and supersonic air speed we cannot quibble about cost of such a defense. The stake is great; it my well be our national existence.

We ought never to forget that the countries of the Communist bloc have a standing armed force of over 11 million men, with a great manpower potential held in reserve. We ought never to forget that Soviet Russia has a first-rate air force with intercontinental bombers. We ought never to forget that Soviet Russia has a navy second only to the United States Navy. We ought never to forget that Soviet Russia, too, has weapons of mass destruction. We must be on our guard; we must be vigilant.

I have often said—and I repeat now—that if our foreign policy is to be respected, our Armed Forces must be kept in balance with our security commitments throughout the world. I wonder, therefore, whether we are not making a serious mistake by reducing our Armed Forces at the very time we are taking on additional commitments in the Pacific.

A final factor in the determination of the external aspects of our approach to the Communist problem is the vital need to maintain limited amounts of foreign economic aid, especially in the Far East. Much can

be done, especially in underdeveloped areas, through programs of technical assistance to build the elements of resistance to Communist aggression. We must have military bases abroad—no one doubts that; but we must also seek bases in the hearts of men. That we can do at least in one way by carrying on—yes, even extending—our program of technical assistance.

SOME REQUIREMENTS FOR EFFECTIVE FOREIGN RELATIONS

Such is the problem facing us today, and such are the ways of facing up to this problem. This is indeed a time of trouble for all of us. The demands upon all of us are far greater than ever before in our national history. What, then, are some of the requirements for carrying on effective foreign relations?

In the first place, we must be mindful of the innate prejudices that we ourselves have and also the prejudices that foreign people have toward us. Knowing these prejudices we must counteract them with reason, and thus seck to establish a better bond of rela-It is well known that foreign folk, especially Europeans, think that we are a headstrong, impulsive, and sometimes irresponsible people. We are an energetic, optimistic, confident people—that we shall never deny. Unfortunately our critics abroad not differentiate between official frrespon-Unfortunately our critics abroad do sibility and individual irresponsibility. often are they led to believe that the irresponsible comment of one American represents the true attitude of the American people and even the Government and administration itself. The press, foreign and domestic, thrives on news especially of an irregular and sensational nature. And more often than not the minority-even individual-opinion is represented as being the prevailing thought, which is in fact far from the truth.

Our friends abroad must realize that despite some outward manifestations of excitability, we Americans are at bottom a conservative people. We are not precipitate in our actions. Rather we are cautious, generally slow to anger, and sometimes even slow to act. Certainly in our relations with the Soviet Union we have displayed a remarkable, if not heroic, amount of self-restraint.

AMERICAN EXPERIENCE AND RESPONSIBILITY

Some of our friends abroad also believe that in matters of foreign affairs we are inexperienced—a child with a new and dangerous toy. Perhaps, if centuries of diplomatic
history are to be the criterion, we are indeed
inexperienced. The older powers of the
world have lived with their problems for a
long time. For us, it has not been so long.
However, it seems to me that experience in
foreign affairs is measured not by time but
by action. With this as a criterion I believe
we can conclude that we are not without
experience in diplomacy.

Since 1898, America has been an active participant upon the state of world affairs. During that period we have matured and our diplomatic abilities have sharpened. We have played a role in the great diplomatic crises of the century; we have adjusted ourselves to the demands of our national interests and responsibility. We have produced outstanding diplomats, many of whom stand in the forefront of the world's greatest. But more important, it seems to me, the American people have been willing to accept the responsibility of world leadership which has been thrust upon them. Experience should be equated with knowledge and maturity. Certainly the realization of our new role in world affairs and the acceptance of it are truly marks of great maturity.

Undoubtedly, one of the gravest misconceptions colonial peoples have about us concerns colonialism. There is a misconception in Asia that we support colonialism. The

very existence of this misconception is a measure of the success of Communist propaganda. America does not sustain colonial-Our Secretary of State has made this abundantly clear by such statements as: ' do not seek to perpetuate western colonial-ism": and "The United States will never fight for colonialism." We ourselves are a former colonial people. We threw off the bonds of colonialism over 175 years ago. The underlying concept of our democracy is the right of self-determination of people. These are facts, I believe, that the Asians must be helped to understand because this is the true spirit of America. Moreover, we must help them see that the attitude of the Communists on the colonial question is a contradiction: On the one hand they denounce imperialism and colonialism; and yet communism is-the greatest force of imperialism and colonialism in modern times.

THE NEED FOR SELF-EXAMINATION

Americans, too, have innate prejudices that must be overcome in our relations with people in foreign lands. We must be tolerant of those unlike ourselves. Deep in the American consciousness is a trace of antiforeignism which has been nourished by the effects of our historic concept of "no entangling alliances." We must accept foreign folk on their own terms and not expect from them the same customs, likes and dislikes, beliefs and standards of behavior as ourselves. We are all brothers under the Fatherhood of God. Fortunately, as a Nation derived from numerous nationalities, we have demonstrated that we know the secret of how different peoples can get along together.

Clearly associated with the cultivation of a proper attitude toward other peoples is the need for self-examination—that is, to see ourselves as others see us. If we want peoples in foreign lands to respect our way of life and to be influenced by it, we must do all in our power to be an example before the world. Self-criticism is in many ways a noble practice; but it is still a nobler virtue to practice what one preaches.

Perhaps one of the great fears of our foreign friends is the fear that America will withdraw into herself, donning the cloak of isolation and rejecting the role of world leadership. Certainly among us there is sometimes a longing to return to the less turbulent days of the 19th and early 20th centuries. Life was peaceful, relatively easygoing and uncomplicated then. But the fears that there will rise a neoisolationism as manifested in the fortress-of-America concept are groundless. Americans have accepted their role of world leadership—perhaps the greatest diplomatic revolution of modern times. We have set our hand to the plow, and we shall never turn back

PATIENCE IS NECESSARY

A second requirement for the success of our foreign relations especially today is the need for patience and forbearance. We are an energetic people; we are a dynamic, vigorous people who are used to seeking quick results from our work. We have never known what it is to wait patiently in an atmosphere highly charged with emotion. In foreign affairs especially we must display a type of Galilean forbearance never before demanded of us. We must always bear in mind the larger problem rather than the purely localized one. We must take the large view; weigh the consequences; and above all else, we must be patient.

Diplomacy, it has been said, is the art of letting the other fellow have your way. It is the art of achieving in a realistic world what is possible and practicable. Seldom does the diplomat obtain solutions in an absolute sense. Solutions, such as they are, come only after painstaking negotiations, and with many disappointments, setbacks,

and frustrations. And then these negotiations may well result in something far less than the original objective. If this were a perfect world, solutions would be as we desired them. But the world is far from perfect. Patience is, therefore, highly important, especially in a democracy where public opinion determines so much the course of diplomacy. Patience and forbearance are not necessarily elements of weakness. There can be and there often is courage in patience; resolution in forbearance; and wisdom in self-restraint.

AN INFORMED PUBLIC

Then, my friends, to maintain an effective foreign policy there is the need for informed opinion. In the conduct of foreign relations and in the laying down of policy there is no substitute for clarity of thought, soundness of judgment, intelligence, and knowledge. Knowledge dispels fear, combats irresponsibility, sobers the excited and the impatient, and lights the path before us. In our Government, in the executive departments, and in Congress we must always have well-trained, intelligent people, informed in the complexities of world affairs and capable of coping with the many problems that arise from them.

And among our people there must be an informed public opinion. This is very important. It was William Henry Seward, a founder of the Republican Party and one of our greatest Secretaries of State, who said, "The policy of the United States is not a creature of the Government, but it is an inspiration of the people."

Our foreign policy is an inspiration of the people. It behooves us, therefore, to have an informed public opinion; for the quality of our foreign policy can rise no higher than the level of our people, their inteiligence, their interests, and their willingness to participate in world affairs. We must have a citizenry aware of the pitfalls in foreign affairs; conscious of our own limitations; and fully cognizant of the depth and breadth of our problems in the world.

Here I want to emphasize the importance of our instruments of communications in relation to foreign affairs. The responsibility of our newspapers, magazines, learned periodicals, and especially the radio and television media is considerable in the formation of an informed opinion. In a democracy a responsible press and a public-minded radio-television network play a role of inestimable value in contributing to the success of foreign policy.

The greatest source of an informed public is, however, our educational system. Destroy our schools, close our universities, exile our teachers and professors, interdict communication of knowledge, and our great Nation would disintegrate and perish. Conversely, if we are to fulfill our destiny as a great nation, if we are to have an informed public and able leadership; and if we are to have a sound structure of government, we must have a vigorous and expanding educational system. Our Nation depends on it; our Government depends on it; the free world depends on it.

It is axiomatic to say that our schools, colleges, and universities give us our future leaders. But the obligations and duties of our educational institutions go beyond that because they are beacons of enlightenment for our Nation as a whole. They are the real foundations of an intelligent public opinion upon which the direction of our foreign policy depends so much.

THE DANGERS OF COEXISTENCE

Let me illustrate one point. Today we hear Moscow sounding the soft and gentle chords of peaceful coexistence. That message has attracted much attention throughout the world and well it should because it

comes from the world's principal aggressor and because it might appear to some to promise what the world desires most: Peace. However, if we analyze this theme carefully in the light of past experience and present world conditions; if we analyze this theme in terms of communistic philosophy, we can only come to the conclusion that peaceful coexistence is purely a ruse, a clever propaganda device intended to disarm the vigilant, to undermine the vitality and destroy the cohesion of the anti-Communist world. It is not peaceful coexistence the Soviets want; it is peaceful infiltration.

Let it never be forgotten that the present rulers of Moscow are not only the heirs but they are the students, the coworkers of Stalin. It was they who labored with Stalin to make the Soviet Union what it is today, and with some minor exceptions the course of their policy and their ultimate objective are no different from Stalin's.

This theme of peaceful coexistence cannot be combated with guns, warships, alrelanes, A-bombs, or H-bombs. It can only be combated with knowledge; knowledge of the Soviet Union; knowledge of the strategy and tactics of communism; knowledge of world affairs today within the context of the East-West power struggle.

THE NEED FOR FAITH AND CONFIDENCE

The final factor in determining the requirements for effective foreign relations is the need for faith and confidence. I believe that one of the greatest cohesive forces in a democracy is faith and confidence. To the working of a democratic system of government faith and confidence are fundamental; for they establish a bond of affection without which there can be no unity of purpose, nor can there be efficient government, marked national progress or success in foreign relations. In a democracy we must put into practice the simple doctrine of Master to love thy neighbor. Upon this simple but monumental doctrine rests the requirements for success in a democracy. If ever our Republic shall come upon unhappy times, it will be because we have lost our faith and lost our confidence. Fear of our neighbor, distrust of our own abilities, suspicion of those who govern us, disbellef in a Supreme Being—they are the heresies that lead to destruction. If they consumed us, they could destroy the foundation of our Nation.

We must have faith in our President. We must rely upon his good judgment as Chief Executive and as representative of all the people. We must have faith and confidence in our elected representatives in Congress. We must likewise have faith and confidence in our Government as a whole, our leaders in defense and diplomacy, our men and women in the Foreign Service, and our leaders in State and local government.

Most of all we must have faith and con-

Most of all we must have faith and confidence in our neighbors, and faith and confidence in ourselves. We are by nature an optimistic people and in our zeal we must guard against the excesses of exaggerated self-confidence. Our limitations we must know; and in all our actions we must be guided by a sense of high moral purpose and also by a reverence for reason.

America is a nation whose roots are embedded in the 18th century age of reason. Its roots are likewise embedded in the rich religious traditions of the Old World. Our forefathers were men born into these traditions, and we are their children. Let us find inspiration and guidance in their moral outlook; let us find inspiration and guidance in their reverance for reason; for with reason as our guide and their moral virtue as our inspiration, we shall never fear for the future. And with faith and confidence in ourselves and in our national destiny, we shall meet successfully all challenges, however great and from whatever quarter.

Address by Hon. John W. Bricker, of Ohio, Before Edison Pioneers

EXTENSION OF REMARKS

HON, JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES
Wednesday, February 9, 1955

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by the Senator from Ohio [Mr. PRICKER] before the Edison Pioneers, in New York City on February 5, 1955, in observance of the 108th anniversary of Thomas A. Edison's birth.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EDISON, SON OF OHIO

(Address by Senator John W. Bricker before the Edison Pioneers, New York, N. Y., February 5, 1955)

It is a real pleasure for me to join with the Edison Pioneers in observing the 103th anniversary of Thomas A. Edison's birth. With Mr. Edison's birthday being February 11 and Abraham Lincoln's the day following, we are naturally led to compare the influences shaping the lives of these two great Americans.

Thomas A. Edison was born at Milan, Ohlo, on February 11, 1847. Although Edison, like Lincoln, belongs to the ages, Ohloans take special pride in the fact that his formative years were spent in the Buckeye State. Having had Edison, we in Ohlo understand the sentiment which leads the people of Illinois to describe their State as the "Land of Lincoln."

No generation is an island unto itself. Edmund Burke developed the best definition on the nature of civilized society when he said:

"As the ends of such a partnership cannot be obtained in many generations, it becomes a partnership not only between those who are living, but between those who are dead, and those who are to be born."

And so, we cannot know all about Lincoln or Edison or anyone else if we merely begin our study at the date of birth. All men are molded to some degree by local civil, political, and cultural traditions. One of the most important factors in the development of those traditions in the Northwest Territory was the ordinance of 1787.

The Northwest Ordinance was passed by the Conferederate Congress on July 13, 1787, almost 2 years before ratification of the Constitution. Provision was made for representative government whenever a prospective State should have 5,000 male inhabitants. This farsighted legislation provided for the admission of States into the Union on an equal footing with the Original States whenever any State should reach a population of 60,000. Article II of the Northwest Ordinance recognized many fundamental rights which were not in the original Constitution but added later as the Bill of Rights. Slavery in the Northwest Territory was prohibited. Article III of the Northwest Ordinance provided: "Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged."

A frontier territory divorced from tradition or run as a dependent colony from Washington could not have produced so soon after statehood such men as Lincoln and Edison. Today the Articles of Confedera-

tion and the Confederate Congress are commonly presented as horrible examples of political impotence. Yet I venture to suggest that no Congress under the Constitution has enacted into law a more beneficent piece of legislation than the Northwest Ordinance.

Neither Lincoln nor Edison had much formal schooling. This is a fact which the taxpayers of today must view with ever-increasing amazement. No responsible person, of course, advocates going back to the little red schoolhouse. We all recognize the need for more and better schools. There is no point in laboring the obvious. But regardless of the excellence of our educational plant and even if illiteracy is completely abolished, modern education will have falled unless it produces a few men of the stature of Lincoln and Edison. Who can set a price on the value of their services to the Nation?

Though formal education did not appeal to Edison, he was not anti-intellectual. At the age of 11, for example, he had read such books as Gibbon's Decline and Fall of the Roman Empire. I suspect that not many of the current crop of 11-year-olds have tasted such intellectual fare.

Mr. Edison's recognition of the value of education was evidenced in ways too numerous to mention. He was unyielding in his insistence on concentrated thought. Framed on his laboratory wall was this quotation from Sir Joshua Reynolds: "There is no expedient to which man will not resort to avoid the real labor of thinking."

Commenting on this quotation, Edison said: "Thinking is the hardest thing in the world for those to do who have not formed the habit."

In the scientific world the mind has many mansions. Thomas Edison was primarily an inventor rather than a discoverer. Curiously enough, it was Abraham Lincoln who best explained the difference between discovery and invention. In a lyceum lecture delivered in 1860, Mr. Lincoln said: "All creation is a mine, and every man a miner. In the beginning the mine was unopened and the miner stood naked and knowledgeless upon it. * * Man is not the only animal that labors, but he is the only one that improves his workmanship."

And then Lincoln remarked how strange it was that the discovery of steam power preceded by 2,000 years its useful application.

Eleven hundred patents resulted from Mr. Edison's research in applied science. It has been said that he kept the path to the Patent Office hot with his footsteps. For me to enumerate for the Edison Pioneers his more important inventions would indeed be carrying coals to Newcastle.

We can recall with profit, however, the principal ingredients of Mr. Edison's astounding success. We might start with the three qualities which Mr. Edison on his 67th birthday cited as the secret of his success. These qualities, said Edison, were a will to work, imagination, and ambition.

A will to work marked Edison's life from boyhood. Unquestionably the industry and ingenuity of his father set the example. Samuel Edison had developed a successful business making shingles in Milan, Ohio. But when the railroad linking Toledo and Buffalo through Norwalk and Sandusky doomed Milan as a world port, Samuel Edison moved on to Port Huron. Similarly, Thomas Edison never hesitated to move to greener economic pastures.

Certainly no teen-age boy ever had more entrepreneurial experience than young Edison. After his remarkable boyhood experience he could never have had any illusions about the ability of government to produce wealth. A socialistic government, as Edison knew, could redistribute wealth but not create it. And, it may be added a socialistic economy will never produce an Edison.

Thomas Edison's imagination is to me the most fascinating aspect of his personality.

Mr. Edison himself gave us a good insight on the quality of his imagination with this story:

"Have you seen that big electric engine on the New York Central Railroad—how the power is coupled to the wheels? No? I'll tell you a story about it to show what happens to any of us when we get in a rut from knowing too much about the difficulties. Those engineers had finished the engine, all but one detail. They couldn't think of a proper way to get the power down to the wheels. That silly problem has bothered engineers all over the world. You will see if you look in how many different ways they have solved it. Well, those engineers were stuck, all in a rut. They had looked at the thing so long and knew so much about it that they couldn't see it. So they posted a notice. Five hundred dollars to anyone who could make a working suggestion. Weeks passed. Still nobody could think of a way to couple the power to the wheels.

weeks passed. Sim hobody todal think of a way to couple the power to the wheels. "One day a boy from the drafting room stopped at the chief engineer's desk and made a little scrawl of a pencil sketch. 'I don't know anything about it,' he said, 'but would this work?' The engineer looked at it and said he believed it might—and it did. You will see it working the next time you leave the Grand Central Terminal. That boy wasn't in a rut. He didn't know what the difficulties were. He just looked at the thing."

And so, Edison approached all problems with an open mind, taking nothing for granted. This does not mean, however, that Edison's inventions sprung from some spontaneous mental combustion. Edison, as you know, defined genius as 2 percent inspiration and 98 percent perspiration.

About 12 years ago the Supreme Court of the United States held that an invention within the meaning of the patent laws must be the result of a "flash of genius." This "flash of genius" test for inventions was a judicial aberration which the Congress later corrected. The most telling argument against the "flash of genius" test was that few, if any, of Thomas Edison's inventions would have been patentable. Almost as important as Edison's inventions was his method of inventing. Instead of waiting for genius to flash, he experimented endlessly, at first alone and later with a staff of competent men with whom he worked in a well-equipped laboratory.

equipped laboratory.

The intensity of Edison's ambition accounts for his almost superhuman energy.

He was not interested in money except as a means to an end. That end he described as follows:

"My desire to do everything within my power to further free the people from drudgery, and create the largest possible measure of happiness and prosperity."

It is most fitting and proper that we acknowledge each year about this time the priceless gifts resulting from Mr. Edison's fertile imagination and his indefatigable labors. America is prone, however, to accept Mr. Edison's contributions without recognizing any corresponding obligation. Unless we recognize those obligations, Mr. Edison's marvelous inventions will contribute not to happiness but to despair.

Consider, for example, the highways to knowledge and understanding opened by invention of the incandescent lamp. However, the value of Edison's greatest invention depends finally on the way we use it. Today, we can hardly imagine how difficult it was to reach before Edison gave his light to the world. Nevertheless, many of the contemporaries of Lincoln and Edison read the Bible and other great literature by candlelight. It was not uncommon to read aloud in the intimacy of the family circle. When parents today read Mickey Spillane and their children read horror comics, they depreciate Edison's great gift.

Mr. Edison was well aware of the degrading uses to which his inventions could be put. He was one of the first to protest sex and "white slave" motion pictures. He said on one occasion: "Those we make here can be witnessed by any child. If white slave pictures are to be made, I will let the other fellow make them."

We can handle the problem of obscenity without undue difficulty. However, the vul-garity and the mediocrity present in so many forms of communication is producing a mass culture which increasing numbers of thoughtful Americans view with alarm and

dismay.

More than any man in history, Edison succeeded in freeing the people from drudgery. At the same time, however, he created a problem of leisure which Americans have not yet solved. Edison's inventions did not give They merely created the opportunity for leisure. And we cannot solve the problem of leisure without a clear understanding of what the word means.

Leisure is not mere idleness. It is not the insatiable pursuit of new sensations nor a state of voluptuous sloth. No Communist understands true leisure. It is either regarded as the luxurious idleness of privileged classes, or as Karl Marx described the leisure of Communist society wherein all men would "hunt in the morning, fish in the afternoon, and make love in the eve-As Mr. Russell Kirk explains in his book, A Program for Conservatives:

"If true leisure, as distinguished from the boredom of idleness, is to be restored to the mass of men, we must relate our opportunities for leisure to the ends of life that men have pursued since time out of mind. We must remember that the Christian idea of leisure is expressed in the holy day. We must remind ourselves that a chief practical object of leisure is self-improvement, or emulation of the highest types of humanity. We must relate our leisure hours to the concerns of family, the welfare of our children, and the improvement of our homes. We ought to recall that one form of leisure is to turn from our accustomed work to another sort of work, equally productive, but less monotonous and employing individual skills."

Without the inventions of Mr. Edison most men would still be chained to their work for so long as to make true leisure impossible. But if mankind does not employ the time made available by Edison and others in meaningful leisure, it will sink into a boredom more oppressive than tyranny.

Mr. Edison had political convictions. He did not, however, trade on his reputation as a great scientist to influence public opinion on foreign or defense policy or on other political matters outside his field of special competence. In that, of course, he was not like some present-day scientists. I do not recall, for example, that he broadcast to the Nation advice on how to rewrite the immigration laws. He had none of the egotism which leads some scientists to equate scientific wisdom and wisdom in all the other affairs of life. Perhaps he knew the story about the French butcher who became involved in litigation, and not knowing any lawyer in Paris, called on each one, finally selecting the fattest to represent him.

Also unlike many scientists, Thomas Edison set up no opposition between science and religion. Edison said, for example: "Too many people have a microscopic idea of the Creator. If they would study His wonderful works as I have spent my life in doing, in the natural laws of the universe; if they would but look, they would have a much broader idea of the Great Engineer and His divine power."

We all know in a general way what happens when we snap the light switch at home. We do not know as much about the force

of electromagnetism as Mr. Edison. But in the last analysis neither Mr. Edison nor anyone else has known precisely what that force is.

All of you know the Negro spiritual:

"Ezekiel saw the wheel Way up in the middle of the air. Little wheel run by faith, Big wheel run by the grace of God, Way up in the middle of the air."

The late Garet Garrett in his book, The American Omen, observed with reference to this Negro spiritual:

"Here, besides the rare aesthetic perception to make poetical use of a mechanical image, is a profound truth. Every wheel we have is a wheel within a wheel.

wheel that runs does run by faith, though you take it to be only the faith implicit among us that the big cosmic wheel will run true and not fail. And what makes the big wheel run at all nobody knows.

So long as we retain our faith in that big cosmic wheel directed by a divine providence, the contributions of Edison and other great men of science will facilitate man's progress toward enlightenment. Without such faith the contributions of science will accelerate the speed of progress toward barbarism. In deciding between religious faith and secular knowledge as the ultimate value in life, we will fulfill or repudiate our obligation to Thomas A. Edison.

The Right-To-Work Law a Threat to America

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 9, 1955

Mr. LEHMAN. Mr. President, in recent months Americans have read many statements, often contradictory, by the President, the Secretary of Labor, and others directly involved in labor-management relations, concerning the socalled right-to-work laws which effectively prohibit various forms of union security agreements.

I have recently received a very interesting message which was issued last month by the Association of Catholic Trade Unionists. I commend this message to every Member of Congress who is interested in stable labor-management relations, and I ask unanimous consent to have this 1954 message of the Association of Catholic Trade Unionists inserted in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE RIGHT-TO-WORK LAW: THREAT TO AMERICA

(Statement by the Association of Catholic Trade Unionists, New York, N. Y., January

The following is the 1954 message of the Association of Catholic Trade Unionists for the New Year:

Sound legislative policy will ever take into account the realities of that area of activity it seeks to direct through law. It is, therefore, unfortunate that there is today so much evidence of flagrant disregard for the facts of labor-management relations in America whenever certain misnamed right-to-work

laws are passed in several of the States. The existence of these laws is a serious setback in the pattern of progress toward peaceful labor relations in the United States.

I. THE RIGHT-TO-WORK LAWS AND NATIONAL LABOR POLICY

One of the cornerstones of peaceful industrial relations is a uniform national labor policy. In accord with this, America had progressed slowly and painfully toward accepting the idea of a national labor relations policy until it finally came to some realiza-tion in the Wagner Act of 1935.

The next decade saw the broad growth of American labor, but the unnatural shifts in the national economy from peacetime to wartime conditions, and then again to reconversion, were not without their effect upon labor. Among other factors, the strains upon labor-management relations, which in peacetime might have been eased by sensible action on both sides, were heightened by the necessity of certain restrictions on both labor and capital management. With the end of the war, the reaction against labor's strong place on the national scene was able to create a powerful movement for radically modifying the national labor relations policy by the passage of the Taft-Hartley Act in

One of the chief provisions of the Taft-Hartley Act is that it relinquishes jurisdiction over the regulation of union security in those States and territories which have enacted more restrictive union-security legislation. As a result, the various States are free to outlaw the union shop, which many have done on the pretense of defending a man's right to work. The first effect of this provision of the Taft-Hartley Act is that it shatters the uniform pattern of collective bargaining by allowing unions to be treated differently within every State and territory of America. This is not without producing an effect upon the whole national economy, since it leaves the way open for an immediate radical variation in the wage scale of workers of different areas in the Nation.

While the right-to-work laws are passed within the various States on the principle that it is the individual State's right to determine the restrictions to be put upon unions, we are overwhelmed by the broad picture which is fast coming into focus. Whereas the supporters of the right-to-work laws oppose a national labor relations policy under Federal law, the right-to-work law movement has already assumed such national proportions that the Secretary of Labor found it necessary on December 7, 1954, to voice his opposition to a recently formed National Committee for Right-to-Work Laws.

Complex and geographically extended though it may be, there can be no denying the fact that our national economy has its own uniform identity, upon the character of which any one of innumerable and variable factors can have a profound effect. Capitalmanagement long ago accepted the idea of one national economy, and contributed towards its stabilization by developing, under governmental authority, the concepts of corporate and other forms of ownership association dependent upon widespread markets for the national investment basis of corporate business. It is reasonable, therefore, to expect that American labor so important a factor in the national economy, should also be regarded as properly the object of a single and uniform national public policy which recognizes as the foundation of the trade union the right of free association for the common good and the collorary right to those measures necessary for the securtly of that association.

Employers who are sincere in their desire to respect the rights of the workingman have learned that the enormous complexity of modern business and industry makes personal dealings impossible. The collective nature of corporate enterprise and its inherent interests, together with the equally collective nature of the society and interests into which a man enters when he exercises his right to work by taking a job—all combine to produce the necessity, on the practical level alone, for labor as well as business to organize. It is equally necessary that Government take these facts into consideration when passing upon public labor relations policy.

At present there are 17 States which have this so-called right-to-work legislation on their books, 5 other States having since repealed their so-called right-to-work laws, and similar right-to-work laws are pending in at least 6 more of the United States. The laws themselves vary to some extent in content and presentation, though many of them are carbon copies of each other. all directed, however, toward one pointelimination of the union shop. Now, the actual experience of the American labor movement has been that where some form of the union shop is not guaranteed in the contract, there is little or no chance for the union to attain that stable unity and security which is altogether necessary on the practical level if an association of workingmen is to be enabled to operate for the common good.

The bitter experience of the American workingman is that where he cannot stand in organized solidarity with his fellow workers, his further right to a just living family wage is rarely recognized, if at all. The labor movement in America has been the greatest factor in raising the standard of living of the wage-earner, in helping the individual worker to attain that level of decent living which befits his human dignity-and which, therefore, by wholesome sharing in the material goods of this world, enables him to freely exercise his mind and will in the true purpose of his life here on earth, namely the worship and love of Almighty God.

It is not the American worker who has been bleating so loudly about the need to protect a man's right to work. The new expounders of the right-to-work are those who would have the worker stand alone before them in his request to exercise that right—where they can dictate the conditions of that work—conditions which in the past have brought untold misery and hardship to the workingman.

II. THE RIGHT-TO-WORK LAWS AND THE MORAL LAW

Because we are speaking here of human rights, we must ask ourselves how the right-to-work laws are to be viewed in the light of the moral law. Endowed with truly glorious human freedom by his Creator, a man has many rights and is free to exercise them. But the very number and quality of those rights demand that his freedom to exercise them be directed towards constructing a harmony in his life among all his human rights both personal and social.

Concerned as they are with this matter, we invite the supporters of those laws to scrutinize all the implications of the right to work. The right to work, as every human right, is not absolute but restricted. The right to work is restricted by the duty of the worker to respect all the rights of his fellow workers. One of these other rights is the right to organize into free associations with each other for the common good. This is a basic right of every man which has been emphasized by the Holy Fathers, especially since the time of Pope Lco XIII, whenever they have spoken of the workingman.

This right to organize includes the right to those means necessary for the security of the organizations operating for the common good. Practical experience has shown us in this country that the union shop is one of the most effective means of attaining security in the trade-union movement. Without

it, the labor union cannot devote its full time to working for the benefit of the members but must dissipate its energies in an unending struggle for its very existence.

Furthermore, there are many Catholic moralists who find in the teachings of the Popes and the precepts of the natural law a general obligation arising from man's nature to organize with his fellow man for the common good. This can, in fact, require a man in certain circumstances to join or organize a labor union.

(Although we speak of a right to work, we must recognize that a man can as often have the duty to work, both in the interests of his family's welfare, and in the interests of the common good of society. Equally important when discussing the right to work is the no less real duty on the part of those in a position to do so to provide a man with work!

Nor in speaking of the right to work and its commitment rights and duties can we pass over the fact that the union shop in the hands of racketeering or Communist labor leaders is harmful to both the workers and the employer. However, this does not destroy the labor movement's right to a union shop for the right of a worker to organize a union carries with it the grave obligation to see to it that his union operates for the common good and this common good demands respect for both the workers' and employers' rights.

It is the duty of employers and of the State to recognize the important significance of labor unions and the necessity of recognizing the rights and duties of workers in reference to the common good by positive and intelligent attitudes on their own part,

Nor are all these rights and duties of workers to be indiscriminately considered. The papal encyclicals have never tired of prompting both management and labor toward that organized cooperation which is the natural and desirable development of organization within their own respective ranks. The collective bargaining process is the keystone on which this cooperation must build itself in our present society. To deny to labor the opportunity to organize and bargain collectively is, therefore, disruptive of any possible harmony in industrial relations.

The right-to-work laws, by their elimination of the union shop—which is labor's basic element of secure organization—open the way for that spirit of class warfare which is inevitably fomented when men think of themselves as disassociated from the common good and interests of their fellow men.

Only respect and support for the rights and duties of labor and capital-management can give rise to peaceful cooperation in society. Those who strive to separate and classify the members of society, i. e., those who support either communism or extreme individualism, must necessarily, therefore, both strive for conditions under which class warfare is inevitable—for they both err in believing that that society is best in which moral responsibility does not exist.

The hidden attack on the social responsibilities of the worker which is embodied in the current right-to-work laws must be recognized as one more instance of that secularism in human affairs which the Catholic Church has always condemned and continues to vociferously condemn.

III. RIGHT-TO-WORK LAWS AND THE FAMILY

Unfortunately, these laws are a result of our inheritance of that destruction of community life which makes the individual free worker a microcosmic society—"a man unto himself"—and which thereby threatens even the sanctity of the focal point of all society—the family.

For, by undermining the security of his association with his fellow men, these laws prevent the worker from carrying out his obligations to the common good and thus

blur his conscience in those matters pertaining even to his own and his family's spiritual and temporal welfare. The subterfuge of defending the right to work cannot stand up in the face of practical experience and in the light of the real implications of a man's right to work.

IV. CONCLUSION

We ask, therefore that the right-to-work laws be reconsidered in the light of their effect upon the real meaning of the right to work and its relation to a man's other rights. We submit, furthermore, that any effort to oppose these right-to-work laws will be completely ineffective if it is not directed to-ward establishing a sound national industrial relations policy.

A Toast to Kansas

EXTENSION OF REMARKS

HON, ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES
Wednesday, February 9, 1955

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address entitled "A Toast to Kansas," delivered by Hall Smith, Jr., at the annual Kansas Day dinner on January 29, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A TOAST TO KANSAS DELIVERED BY HALL SMITH, JR., AT THE ANNUAL KANSAS DAY DINNER, JANUARY 29, 1955

Thank you, Mr. Josserand, Governor Hall, distinguished guests, my fellow Kansans, from its birth, Kansas has enjoyed a distinctiveness of character accorded no other State in the Union. The passage of the organic act that brought her into existence rekindled the smoldering fires of national To preserve the political equilibdiscord. rium of the Union it had been the policy of the Congress, from the first, to admit States in pairs, one free State for one slave State. The South had exhausted territory for expansion. The only territory available for annexation at the time was the Midwest Plains territory. The North and South made a compromise and the Kansas-Nebraska bill was passed. Kansas was to become the migratory goal for the South and Nebraska for the North. Proslave forces were fast to capitalize on the bill, and obtained control of Kansas rapidly. However, the people of Kansas were against any form of inequality and a conflict arose as the inhabitants of Kansas territory asserted their endowed rights. Irritation grew as the events of the time evidenced. Proslavery forces fired 50 cannon shots into, and then burned the Eldridge Hotel in Lawrence, which was then free State headquarters. A midnight massacre of five proslavery men on the Pottawatomle, and other such incidents earned this territory its name of "Bleeding Kansas." As the determined inhabitants became organized and began their quest for self-government, or rule by the majority, the slave element withdrew to a more healthy locale. While not being one of the Original Thirteen States, Kansas has had the privilege to first fight for her convictions and recognition for what she was, and in the victorious outcome be awarded admission to the Union in 1861, 94 years ago today. This was, indeed, a tribute to the character of the people of Kansas then as now.

It is my privilege, here tonight, to deliver the traditional toast to Kansas, which I propose to do in words not my own, but rather those of Gordon Martin, who so eloquently expressed what I am sure is the sentiment of all of us, when he said:
"You ask me, What is Kansas?

"And I reply, Kansas is all things to her sons and daughters.

"Kansas is the lilting call of the meadowlark wafted across a meadow where a rockcradled creek beckons sheep to water; the shrill whistle of the Bobwhite, a bird dog frozen on point, and the silence-shattering explosion of a shotgun.

'Kansas is the smell of moist earth in springtime, the puffing labor of a farmer's tractor, and the cheery call of a driver to his

willing horses.

"Kansas is the redbud of the Elk River Valley, the rocky glens of Atchison, and the sandhills of Kearny County. "Kansas is the mass of wheat that rolls

for miles like a golden ocean under the driving, growing rays of a summer sun, the sweat-soaked shirt of a harvest hand who pauses for a cooling drink from the waterbarrel.

"Kansas is the frosty morning when frisky animals welcome the bite of the late Oc-tober air, the swirl of snow which beats against windows while a family gathers around the hearth.

"Kansas is the oil derrick silhouetted against the blue of a boundless sky, the ruddy sunset on glowing rails sweeping ever westward, and the mesh of gears in the machines of industry.

"Kansas is appreciation for the public schoolhouse as the first great hope of a liv-ing democracy, the swelling roar of 'Rock Chalk, Jayhawk, K. U.' booming down from Mount Oread.

"Kansas is the stubborn belief in moderation and the reluctance to depart from innate conservatism, but having chosen new ways, seizes upon them with a zest to know the truth.

"Kansas is the guts to fight drought and pestilence and all adversity with a will to win.

"Kansas is the political fight that asks no quarter and gives none, the reason why the mayor of the town declares that on his main street are the most solid citizens of the Nation, the reason why the weatherman says his elements demand and breed a vigorous people.

"Kansas is the return of the native who has wandered far and comes home with full heart to the earthy strength of his forebears.

You ask me, What is Kansas?

"Why, Kansas is all things, and more, as she goes onward, sometimes inching, sometimes marching, sometimes rushing, but moving, always moving, toward a greater dawn tomorrow."

The Senate Must Be Alert To Prevent Unemployment

EXTENSION OF REMARKS

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Wednesday, February 9, 1955

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain data taken from the January 1955 Economic Report of the President, various quotations from the Employment Act of 1946, and some conclusions drawn from those data and quotations.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

The data given in the Economic Report by the President are as follows:

Year	Total employ- ment 1	Gross national produc- tion 3	Produc- tion per employed worker 1
1929 1948 1953	Millions 49. 4 62. 9 67. 3	Billions \$104.4 257.3 364.9	\$2, 110 4, 090 5, 415

¹ Table D-16, p. 153, ² Table D-1, p. 137, ³ The figure in this column is derived from the preceding columns.

Source: Economic Report of the President, January

The years shown above were prosperous years. Even 1953 was a good year before the Republican administration decided to slam on the brakes and almost threw us through the windshield.

The figures for these 3 prosperous years draw attention to the fact that, while the number of workers grew, their production grew even faster. The amount of money that had to be spent in order to keep each of these workers on the job grew with amazing speed. In 5 years, from 1948 to 1953, it jumped by \$1,325 per worker.

This growth in production per worker continues. If we were to achieve full employment in 1955, the average worker's production would probably run approximately \$5,860, nearly \$450 greater than his produc-

tion 2 years ago.

However, this increase in production would take place only if the buying power in the pockets of our people and investments by our business firms and spending by Government kept up with this astonishing growth in production.

This is not likely to happen unless this Congress decides to make it happen. My understanding is that while spending by consumers is expected to increase a little, no one expects the increase to be enough to push total spending to the necessary level in view of the drop in investment by business and in Government spending. ever, I can only guess at this, because the Economic Report sent us by the President tells us nothing about this, perhaps the most crucial single fact in the economic picture.

The result may well be that there will not be full-time jobs for all those who are able, willing, and seeking work. Millions of American homes may again feel the blight of having the breadwinner laid off. Additional hundreds of small-business men may close their doors. Small farmers may continue to feel the pinch as their incomes fall. And the goods and services that ought to be forthcoming to raise living standards for American people are likely to be choked off at the source.

In Michigan, the memory of 1954 is kept alive by the fear of what lies ahead in 1955.

Even before the auto shutdowns in late 1954, approximately 215,000 people were out of work in Michigan, with 135,000 of them in Detroit alone. The fact that the automobile industry is today borrowing jobs from the future, and that the debt will probably be paid this fall, may be the basis for something approaching disaster in Michigan be-

fore the year is over.

We cannot blame this economic failure on nature or on any other force beyond our control. The blame lies with those people in high places who refuse to plan for full production, who may even prefer that we have something less than full employment and full production.

The laws of this country place the responsibility for this situation on the President of the United States. Public Law 304, the Employment Act of 1946, declares that "it is the continuing policy and responsi-bility of the Federal Government to use all practicable means * * * to coordinate and use all its plans, functions, and resources for the purpose of creating and maintaining * * conditions under which there will be afforded useful employment opportunities, including self-employment for those able, willing, and seeking work, and to promote maximum employment, production, and purchasing power."

The act declares further, "The President shall transmit to the Congress . . gram for carrying out [this policy] together with such recommendations for legislation as he may deem necessary or desirable."

If the Senate has yet received from the President the kind of program and recom-mendations which I believe were contemplated by this act, and which would give this body the material we need, to reach the goal of full employment, I have not been able to discover it.

As a matter of fact, his economic report is silent on some of the points where it ought to be most useful. It leaves out some of the most important information that this Congress ought to have to work with.

I am sure that the Joint Committee on the Economic Report, under the chairmanship of the able and distinguished Senator from Illinois, Senator Paul Douglas, will do whatever is possible to remedy the failure of the administration to do what the act requires and the country needs. I hope that when the committee makes its recommendations, this body will be alert to do what must be done, and do it quickly, if 1955 is not to be another year of inexcusable unemployment, underproduction, and hardship for many people.

A Model for United States Propaganda

EXTENSION OF REMARKS OF

HON, H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Wednesday, February 9, 1955

Mr. SMITH of New Jersey. Mr. President, in my travels through various parts of the world I have frequently gone into the libraries which are maintained by the United States Information Service. and I have been impressed by the large numbers of persons in those areas who use the libraries.

In the New York Times magazine section for last Sunday, February 6, 1955, there was published an article entitled "A Model for United States Propaganda." written by Peggy Durdin, who is the wife of Tillman Durdin, chief correspondent of the New York Times in southeast Asia. Under the title of the article appeared the following sentence:

A striking instance of how democracy can win friends and influence people is the American Library in Burma.

Mr. President, the article is a very stimulating one and makes an important contribution, it seems to me, to our thinking about an important aspect of our foreign and. I ask unanimous consent that the article be printed in full in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A MODEL FOR UNITED STATES PROPAGANDA—
A STRIKING INSTANCE OF HOW DEMOCRACY
CAN WIN FRIENDS AND INFLUENCE PEOPLE
IS THE AMERICAN LIBRARY IN BURMA—"IT
EXEMPLIFIES THE KIND OF AID ASIA REALLY
WELCOMES"

(By Peggy Durdin)

RANGOON.—Aside from her gold-domed pagodas and Buddhist temples, the most popular place in all Burma is a simple American library which might have been whisked overnight on a magic carpet to Asia from any town or city between Maine and California. A huge, light-filled, book-lined room on the ground floor of a British bank in Rangoon, it radiates friendliness, informality, and cheerful service in the best American tradition. Without fuss or fanfare, it has made thousands of friends for the United States in a part of the world where people sutomatically suspect and distrust the motives of the West and where the Communists' chief propaganda line is anti-Americanism.

Regarded by Washington as the most successful library the United States Information Agency has established anywhere abroad, it exemplifies the kind of aid which Asian countries really welcome. It benefits the community and is a part of it—and so is not an obvious device to sell a "bill of goods."

Every American who pays taxes for foreign aid can be proud of the way this United States institution has helped the young government of Burma-independent only since 1948-cope with Communist Insurrection and build a stable country, probably the most hopeful one in southeast Asia today. Since Burma's own Communists are in armed rebellion, since it shares a long border with resurgent China, which has historically been aggressive westward, and since a Pieping-directed embassy in Rangoon actively conspires among the local Chinese community, Burmese leaders have not needed forced feeding of propaganda from Americans understand and fight communism. What they have desperately needed—and what the American library has consistently supplied— is information and help in setting up an administration and service so effective the people would not become discontented and readily swallow the lies and promises of the Communists.

The library reaches not only officials but private citizens of all ages in every part of Burma. More than 1,300 Burmese come every day to this busy establishment. Men and women in gay sarongs pore over the racks of magazines, take notes from technical volumes, browse through the biography and fiction or, if they cannot read English, look at the brightly illustrated books in the children's annex. Pretty Burmese attendants decked with bits of glittering jewelry break with Asian custom by giving rich and poor, ragged and elegant, the same courteous attention. The patrons range from dirty little barefoot urchine, who sleep on the sidewalk at night, to dignified Buddhist monks and the highest officials of the Burmese Government.

The library's books travel by river boat, by plane, and on the backs of human porters through and into Communist-held territory, across thousands of miles of jungle and mountains. Burmese read them eagerly in an umbrella cooperative in Bassein, a school in Mandalay, a prisoner's reading room in Myitkyina, an army officers' club in Akyab, and a youth league in Moulmein. A doctor who has to perform a complicated new operation, a merchant who wants to make "sparklers," and a landowner who plans to set up a model village on his property, turn for help to the American library.

The father of a Communist university student borrowed a standard economics text-book, studied it and passed it on to his son. They discussed it together. When he returned the book the man said, "This book

gave my son the true facts. He is no longer a Communist."

A teacher in a remote Burmese village wrote the librarian, "We owe you thousands of thanks. Long live America and democracy." Another reader offered to teach Burmese to the library's American staff members free of charge in token of his gratitude.

The Burmese, official and civilian, appreciate the library because they so desperately needed it. Before the war, when Burma was a British colony, libraries were regarded as special preserves for scholars—small, gloomy places where books were hidden in a back closet or, at best, locked behind glass panes where no one could finger them.

During the 4-year period of Japanese occupation and the Pacific war, fighting and Allied bombing destroyed most of the libraries and very few books were printed or imported. At the war's end, bookstores were virtually empty and many schools had not a single textbook. Cut off from contact with the rest of the world for so long, lacking the magazines, newspapers, radio, television and newsreels that Americans take for granted, Burmese of every age in thousands of little villages were book hungry.

Then, before the country was rehabilitated, Burma got her independence. Almost immediately the country's future was jeopardized by large-scale armed rebellion, both Communist and non-Communist (and not yet wiped out completely though no longer strong enough to wreck the state). At the same time, the Burmese were faced with the tremendous tasks of rebuilding their badly damaged cities, roads and railways and setting up the entire machinery of governcentral and local administrations, tax and education systems, public health, public works ,police and defense forces. In the capital city of Rangoon and all over the rest Burma, patriotic young people, full of

ministrative experience to guide them. It was at this critical stage of Burma's development, when many of its friends wondered whether it would disintegrate into chaos, that the United States Information Agency appointed Zelma Graham to transform the little American reading room in Rangoon into a real library. A friendly, level-headed Pennsylvanian in her early forties, unmistakably and even typically American, the widow of a Baptist missionary in Burma, she had joined Dr. Scagrave's famous medical unit after Pearl Harbor and was evacuated to India just ahead of the Japanese.

enthusiasm and hope, started new jobs without much technical know-how or ad-

Then she worked for the American Army and Government in India, North Burma, West China, and Thailand. When she got the Rangoon job, she took a quick librarian's course at Columbia University and arrived in Burma when the country, like all newly independent ex-colonial Asian nations, was full of suspicions and resentments of the West.

Mrs. Graham immediately inaugurated a lending service and began to harass Washington for books. She got them; she always gets them. She set up a few simple lines of policy, as American as pumpkin pie. First of all, she produced the first physically attractive library in all Burmese history; it has gay curtains, spacious tables, comfortable chairs, and lots of space and light. The next great innovation was that books were placed on open shelves and everyone was encouraged to enjoy the hitherto unlieard-of luxury of browsing through them.

Then she trained her staff of Americans, Burmese, Indians, Chinese, and Pakistanis to disregard the demands of "face" and treat a shy, threadbare little cierk and the Chief Justice of Burma with exactly the same smiling courtesy. She made a rule, quickly recognized all over Burma, that the library would never refuse a single reasonable request for help. Her own little office is open

to everyone; if the book or information wanted is not available, she gets it from Washington, by cable if the need is urgent.

Perhaps most important of all, the library was and is designed, in solid American tradition, to be of service to the community and country, not as a propaganda device. When the sensitive and suspicious Burmese realized that propaganda was not going to be rammed down their throats, they began to throng to the American library.

Over and over again, Burmese officials, faced with new and knotty problems, have come to the library for guidance. Frequently they ask for everything the United States is doing in this field.

They want help on public water supply, low-cost housing, the architectural design of schools and gymnasiums for hot climates, census taking, improved farming techniques, character education for children, 4-H Clubs, traffic control in civil aviation, tax systems, and the training of naval cadets. The police use American books on prison reform, the FBI, juvenile delinquency, police training and methods. (One officer asked for "the American way to cutch a spy.")

When a young Government official from Burma's Far Northeast wrote in, "I am a public-relations officer for this State, but I don't know what it is. Can you tell me?" Mrs. Graham sent him the appropriate book.

The importance of adequate transportation and communications in good administration—and in fighting rebellion—is obvious. Officials of the Government-owned Burma rallways say they could not have operated without the library. Their own technical collection destroyed during the war, rebuilt and destroyed a second time by insurgents, they draft their training material from American texts. The chief engineer circulates a history of American rallroads among his staff, "to give my men a vision of what we can accomplish."

Material from the American library helped the Burmese Parliament decide to support the U.N. action on Korea in 1950. The Government constantly asks for information on the United Nations, American foreign policy, and democracy. The commission entrusted with the vital task of writing school texts for Burma has been using American schoolbooks for reference.

Thousands of individuals write or come in for specific information unavailable anywhere else in the country. "What is the Pentagon?" "Where can I locate world freight rates?" "Where can one get artificial limbs for children?"

Special loan collections of books go all over Burma to schools, to reading rooms of the Armed Forces and Government, to youth hostels and all kinds of student organizations, to a Buddhist training school for monks and to the influential Buddhist monasteries.

The books are read in little family clubs of 20 or 30 members and in community reading centers. Sometimes all the members of one of these village reading rooms pile into buses to visit the Rangoon library; several hundred Burmese—including babies slung across their mothers' hips and white-haired old grandfathers—will then spend a fascinated hour touring the library much as Americans tour the Louvre in Paris.

A member of Parliament from the far

A member of Parliament from the far Chin Hills in western Burma always takes books back with him by air when he returns to his constituency. Porters meet his plane and carry the boxes of reading material on their backs for 5 days to the various little schools in his area.

One day four stately, saffron-robed Buddhist monks walked into the library to "look at this place we have been hearing about." They explained that some of the pupils in their monastery school had told the unlikely story that everyone, even children, could come in and sit and read or take out books,

and they wanted to know whether this could actually be true. After looking around the main library and the children's annex, one of the monks said to a Burmese attendant. "America must feel really friendly to the Burmese, to give them such a good library anyone can use without paying anything."

Zelma Graham opened the children's sec-

tion-the first public library for young people in Burma's history-in early 1949, when the only equipment in many Rongoon schools was broken slate and chalk, and the few children's books available in Burma were printed on cheap, flimsy paper without any illustrations or pictures.

After the first few days, not one of the everal hundred volumes ever touched the library shelves; at least six children waited

for every book returned by a borrower. In those first few months, some books were re-covered half a dozen times. Today there are thousands of books for the 14,000 mem-

bers of the children's annex.

An important virtue of the library is that it helps to break down the barriers of nationality, religion and economic standing that separate Burmese children in their school and play. Rich or poor, Hindu, Christian, or Buddhist, they all come together in the American library. Gathered around the li-brarian will be a 12-year-old boy in a faded, threadbare sarong carrying a fat Burma cheroot; a dainty little Indian belle with black painted eyes and diamonds in her nose; a 10-year-old child with a baby slung over one slender hip; a rich little Burmese with gold earrings and buttons and flowers in her hair, and escorted by an "ayah"; a little Chinese Boy Scout in khaki; a Sikh youngster with a magnificent turban.

At the low tables, together with the youngsters, are a scattering of young men in their late teens or early 20's who are just learning English. Frequently one or two big Bud-dhist monks who can't read English at all sit among the children, their shaven heads bent intently over colored illustrations of great cities, strange animals, foreign countries,

farms, trains, and airplanes.

There is always an orderly queue of chil-dren waiting to take out books. Burmese boys and girls are not used to standing in line for things, particularly if they have money and social standing. The librarians explained to them that this was the custom in the United States. Now the children themselves tell new members, "You must stand in line. This is the way we do it in the American library."

"My son tells me he has to wait in line to get books in your library," a government official said with a frown one day to Mrs.

Graham.

Yes, he does. Everyone does," she said. "He tells me he has to stand in the same line with the servants' children."

"Yes," she answered. "It's the same line for everyone."

"Well," he said finally, with a grin, "my son seems to like it. So I guess it must be

all right." The children greatly enjoy other activities

of the library which are seldom included in their school curriculum: a weekly newspaper (the only one for young people in all Burma); exhibits of things they make themselves, like model boats and houses; singing, story telling, and play with blocks, clay, and cravons.

When Mrs. Graham tried to cut the music period from twice to once a week, a committee of Burmese about 2 feet high presented themselves before her desk and said politely but firmly in their best English: demand music, please. We demand not stop music class."

Though most of them are Buddhists, the children love to sing carols and start asking for them months before Christmas. Only once did a slight hitch arise in the music hour-the singing of "Scotland's burning;

fire! fire! fire!" had to be discontinued because of the old Burmese superstition that the prophecies of children and fools come

One important way in which the whole library contributes to Burmese-American friendship and indirectly counters Communist propaganda is that it gives the ordinary Burmese a chance to get acquainted, on his own initiative, with the real United States. Burmese ideas of America come chiefly from Communist literature and the poorer Hollywood movies.

As a result, they tend to think of the United States as a nation of selfish, wealthy moneygrubbers who cannot possibly underor sympathize with the simple people and the problems of an underdeveloped Asian country. From the library's special exhibits, books, and weekly educational films the Burmese build for themselves a much more accurate picture, one they accept because it has not been forced on them.

After watching movies on American life, people ask such questions as, "Why don't Americans lose face when they do their own housework, carry their own packages and drive their own car?" "How do communities finance all these things that Americans seem to get free?" and "What causes the high standard of living in your country?"

In addition to helping interpret America, the library itself has become a model for similar Burmese institutions; it gives short training courses to Burmese librarians and has aided the University of Rangoon and other key organizations in building up and organizing their own book collections.

No one will ever be able to measure finally the help this library has given government and individuals in Burma, the understand ing of America it has spread, or the goodwill it has created by giving good and friendly service in a simple, unassuming fashion, Selling democracy over the world is perhaps, after all, not so different from selling a car to an American. Doubtless the salesman's patter is important. But what matters in the long run—and what this American library gives-is performance.

Why the Delay on Judgeships?

EXTENSION OF REMARKS

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Wednesday, February 9, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Why the Delay on Judgeships?" which was published in the Bismarck Tribune of December 18, 1954.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY THE DELAY ON JUDGESHIPS?

For reasons unbeknown to the public, two Federal district judgeships in North Dakota are continuing unfilled.

Senator Langer, of North Dakota, charged this week that the American Bar Association was the source of opposition to the nomination of the 2 men apparently slated for ap-pointment to the 2 judgeships. They are Clifford Jansonius, of Bismarck,

and Ronald N. Davies, of Grand Forks.

Meanwhile, the backlog of Federal court work continues to pile up in North Dakota. Meanwhile, also, the former Federal district judge in North Dakota, Charles J. Vogel, of Fargo, continues on a temporary basis to handle court work in this district despite his elevation to the eighth circuit court of appeals.

Insofar as is publicly known. Dakota opposition, political or otherwise, to the appointment of at least Jansonius has been expressed. If there is opposition to the Bismarck lawyer in this State, no one has stated it publicly.

On the contrary, Senator Langer, leader of one Republican faction in the State, has indicated he is pressing for nomination of both Jansonius and Davies. Senator Young, affiliated with the other faction, has indicated that both nominations suit him. GOP National Committeeman Milton Rue, of Bismarck has endorsed both. This is almost as unanimous as political backing for appointments like this could be. It is unlikely that more unanimity could be attained with other nominees.

It should not be necessary to prolong this impasse. If Jansonius and Davies are nominated, they will almost certainly be confirmed by the Senate. If they are to be nominated, why not get on with it and have the two posts filled? If they are not to be nominated, why not bring the reasons for it—and the source of it—out from behind the bushes and let the public have a look at it?

Federal judgeships, like all public offices, elective and appointive, are the people's business and not the private property of the American Bar Association or of politicians. The continuing delay in this matter, with no precise public explanation of the reason for it, is becoming embarrassing. What's behind it? An explanation, and action, are

Our Kansas Birthday

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES Wednesday, February 9, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Mother Kansas, 94, Hale and Hearty," by Rolla A. Clymer, editor of the El Dorado Times, El Dorado, Kans.

Last year Kansas celebrated its territorial centennial, and we are looking forward to 1961, when we will celebrate our State centennial

We, as Kansans, have a great heritage and are indebted to those who have gone before and given us these great opportunities that we have, not only in Kansas, but in the Nation.

This article on her 94th birthday describes this youngster—which has grown to maturity-and gives us encouragement for great hopes in the future.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MOTHER KANSAS, 94. HALE AND HEARTY (Rolla A. Clymer, El Dorado Times)

Mother Kansas now attains the age of 94. At this age, she is hale and hearty-and probably never felt better. Last year, she celebrated her first centennial—that of Territorial status-and within a few more years will have attained the first full century of statehood.

During the centennial period, Mother Kansas and all her numerous brood re called her early years when pioneers first broke the sod and laid firm foundations for what was to come. There were tales of anguish and suffering, and also talk of the joyous and lusty spirit that sparked these ancient wonder workers. Kansas looked backward for a time-which was valuable experience-and paid proper meed of gratitude to the comparative few who wrought so well when this State was young.

Now that centennial mood has passedand Kansas, according to her wont, is looking ahead. Having accomplished so much in less than a hundred years, she confidently feels that she can achieve greatly and on perhaps a magnificent scale in the days to come. Essentially a creature of action, Kansas ponders well her stock of resources before she moves.

Today, she views her vast agricultural domain and finds its various components in sound and substantial condition-barring temporary moods-for enormous gains in coming food production. She considers her rich stores of petroleum and gas, the ceaseless output of her mines, and the coming of a flood of industry-many of these employing materials from an agricultural base. Her manufactures are increasing every year in wide variety, and she is expanding rapidly in the fields of aviation and transportation. Her surface is netted with highway linksand none of her towns and villages today is remote from any other.

Mother Kansas' people are ingenious and,

in the main, prosperous and happy. Few of them are excessively rich and few are painfully poor. Schools and churches and worthy institutions of many sorts stud her plains. Kansas is moving to bring all her children a greater degree of happiness of comfort and care for whatever they lack. Her leaders plan that she may have a full hand in the civilization being reared all around and that in its consummation she may bring to bear the force of her spirit and conscience.

Mother Kansas at 94 is a charming character-wise bustlingly busy and of happy and neighborly mien. Her sons and daughters, at this natal time, should accord her the solemn and appreciative salute she so richly deserves.

Employment Problem of the Aging and Aged

EXTENSION OF REMARKS

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Tuesday, February 8, 1955

Mr. POTTER. Mr. President, the problem of employment faced by the aging and the aged is a national one; yet it varies somewhat from place to place. The situation with regard to these unfortunate men and women in my own State, and particularly those in Detroit, my State's largest city, has been excellently reported in the Detroit Times in a series of articles by Jack Crellin, that newspaper's labor editor. The series brought into clear focus the need for action on this vital problem. Mr. Crellin's searching survey cited specific cases.

I should like to call these articles to the attention of the Senate, especially in connection with my recent introduction of S. 693, in which I was joined by 55 Members of this body, providing for the establishment of a United States Commission on the Aging and Aged.

I ask unanimous consent to have printed in the Appendix of the RECORD this newspaper series, which graphically demonstrates the necessity for prompt consideration of the proposal.

I have been advised by the Government Printing Office that the newspaper articles slightly exceed the two printed pages allowed under the rule, and that the cost of printing them in the RECORD will be \$294. Notwithstanding the cost, I ask unanimous consent that the articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the REC-ORD, as follows:

[From the Detroit Times of January 23, 1955] "Too OLD AT 45." IT'S HEARD DAILY BY JOB SEEKERS

(By Jack Crellin)

(EDITOR'S NOTE.-This is the first of a series of seven articles by Jack Crellin, Detroit Times labor editor, on the problems facing a man of 45 or older who finds himself out work. Crellin has consulted numerous sources in an effort to weigh-from all angles-the problem which is a very real one in Detroit.)

The stocky, gray-haired man in the windbreaker shuffled slowly away from the employment office.

Passing the long line of job seekers, he twisted the bill of his cap far down over his eyes to hide tears of frustration.

It was the fourth time that day he had been turned down in his quest for a job.

Above the chatter and stomping of restless feet of those about him, he could hear but one refrain:
"Too old. Too old."

He had never regarded himself as old until recent weeks.

THE INS AND OUTS AT 50

Sure, he was 50. So were a lot of other guys, guys working inside that very plant.

He was strong, wasn't he? Still in good

physical shape after 25 years on the assemline.

His fingers toyed with the few coins in his pockets. If he spent them for coffee and doughnuts he wouldn't have enough for carfare. Shucks, he'd show them. and walk the 5 miles home without even being short of breath.

Far out on the edge of town in a smart suburban community another man paced nervously back and forth in the living room of his luxurious home. His back was erect, his waist trim. Only a few flecks of gray peeped through his shock of black hair.

He, too, was looking for a job.

Let out as an executive because of reorganization of the firm he helped to build, he had been idle for almost a year.

WAITS IN VAIN FOR HIS CALL

After writing scores of letters to prospective employers and listing his name with innumerable employment agencies, he had nothing to do but wait for the postman to come or the telephone to ring.

True, he had received many replies to inquiries. Couched in diplomatic but firm language, the letters stated his application would be given every consideration; but the cold, hard facts were that he was too old.

Too old at 48.

Unlike his counterpart at the plant gates, this man's problems were not financial. They were mental. He had to have something to do, despite the fact he might be able to live comfortably for several years on the balance in his bank account.

Exaggeration of conditions?

Not at all. It's happening every day in Detroit.

These are the men whom Labor Secretary James P. Mitchell was talking about when he warned the Nation the other day that half its adult population may be jobless 20 years unless prejudices against older from now workers are overcome.

Mitchell said the number of persons 45 and older is steadily increasing and that by 1975 they will constitute half the adult population.

Declared Mitchell:
"If our economy is to continue its high rate of production and not suffer the pangs of mass unemployment, our older workers must be given equal status in the competitive job market.

"If we are to maintain a skilled work force for the defense of the Nation, our older workers must be allowed to keep their skills up to date and not grow rusty from inactivity.

Mitchell charged that employers and labor unions too often set up barriers against hiring older workers, without due regard to

their skills and maturity.

He said he planned to call a conference of employers shortly to find out what to do about the problem.

Meantime, the Detroit Times set out to find the facts, particularly in the Detroit

Does the problem exist here? If so, what are its proportions? What do the men affected have to say? What about the employers' attitude? Labor unions?

Government agencies? What are the possible solutions?

In the accompanying series of articles, all available facts will be presented.

To get them, the Detroit Times interviewed

men at employment offices, business executives, labor leaders, and spokesmen for various Government agencies.

[From the Detroit Times of January 24, 1955] THIRTY-FOUR THOUSAND OLDSTERS HUNT FOR WORK

(By Jack Crellin)

(This is article two of a series)

The problem of the older man-or womanfinding employment is a very real one in the Detroit area, as in every other industrial community.

According to O. K. Fjetland, director of employment services for the Michigan Employment Security Commission, as of December 15, the commission knew of at least 20.838 persons 45 years of age or older registered with the agency who were seeking employment.

These were the ones who needed a source of income to keep them going.

But since not all the unemployed register with the commission, Fjetland estimated the actual number of older persons unemployed at closer to 34,000.

His records show that 13,613 men between the ages of 45 and 64 were out of work and seeking jobs and in addition there were 3,086 in the 65 or over group in the same predicament.

OLDSTERS 25 PERCENT OF UNEMPLOYED

Surprisingly, there were 3,856 women between 45 and 64 seeking work and 284 above the age of 65.

Thus, the total unemployed in the age group of 45 and over represented almost 25 percent of the 85,000 unemployed in the Detroit area as of December 15.

Fjetland recognizes the problem. As he explains:

I'm 62. If I went out of here tomorrow I don't know where I would look for a job. Sure I could go to my friends-men I have known for years. I know they would be sympathetic, but they wouldn't hire me."

In recent years he has seen the percentage of older workers unemployed mount steadily.

One of the chief factors contributing to this rise, particularly in industry, he points out, has been the merger of firms here. This has resulted in older employees, ordinarily protected by seniority, being dismissed with no place to go.

PREFER YOUTH

What happens when such mergers occur? Fjetland is realistic:

The employees start looking elsewhere for

"What would you do if you were a prospective employer approached by two men, one 55 and the other 30, with similar qualifications? You would undoubtedly hire the younger man.

"The preference in hiring is for people who are younger, who have more years of

service to offer a company."

Fjetland pointed out the large bulk of those between 45 and 65 unemployed here at present are either semiskilled or unskilled workers. However, among the 13,612 there were 3,417 skilled employees.

UNDER 45

Competing against this group, according to the latest unemployment figures, were 32,922 in the desirable age group of between 21 and 44 of whom 5,485 were in the skilled classification.

Fjetland said a majority of the orders for employers received by the commission are for workers under 45. He added:

We do have some open orders but when we refer two men of different ages with like qualifications we find the younger one invariably gets the job."

Fjetland is somewhat puzzled by this atti-tude of employers, although he realizes they are operating on a businesslike basis. He

"Insofar as I know the employer does not pay a penalty either because of pensions or insurance when he hires the older man. The insurance premium is based on the accident

GOOD WORKERS

"Statistics show-and several studies have been made-the older worker is no more prone to accidents than the younger man, if he is in good physical condition.

"Records will prove the absentee rate among older men is no greater than that

among younger employees.

"Every analysis indicates the older worker will contribute a good day's work, again pro-

win contribute a good day's work, again providing he is in good physical shape."

Some employers do hire older workers,
Fjetland says. He explained:

"They'll hire an older man if he's got
what they want, but they prefer the younger
worker."

INDIVIDUAL TASK

Fjetland said he knows of two major concerns in the Detroit area who, recognizing the unemployment problem, have restricted hiring to their own geographical area.
"They won't even take a man who lives

across town, and they are hiring older per-

The commission has not been idle in seeking placement of older persons. It has a section which deals exclusively with the problem.

Fjetland explained, however, the placement of such workers requires an approach on the individual rather than the group basis. He said:

"If you asked an employer to hire older employees on a group basis he would just shake his head.

"When an order comes in and we find the man best suited is between 45 and 64 we call the employer and try to sell the individual to him solely on his capabilities."

NO ANSWER

Fietland said that while inmigration of workers continues here it is not so great as it has been.

What about complaints that men who have lived and worked here most of their lives are being shoved aside and younger outsiders being hired?

Said Fjetland:
"That brings up a question I wish some one would answer:

"What would you do if you were an em-ployer approached by three men looking for

"One man was 21, looking for a start in life, the other was 35, married, the father of 2 children and buying a home, and the third was 48, his children grown but his house not paid for and in desperate need of a job, which would you hire?"

Fjetland refused to answer his own ques-

His solution to the entire problem: "Provide enough job opportunities so that everyone who wants to can work."

[From the Detroit Times of January 25, 1955] EMPLOYERS DENY ANTIAGE POLICY

(By Jack Crellin)

(This is the third article in a series)

Do employers discriminate against the older man seeking work?

Virtually all deny it.

They say they pick their employees solely on the basis of qualifications for the particular job.

In Detroit, spokesmen for the automotive Big Three-Chrysler, Ford, and General Motors—insist they have set no arbitrary age limits on prospective employees.

Says Mel B. Lindquist, general industrial relations manager of the Ford Motor Co.:

"The Ford Motor Co. has no policy of any kind against hiring of older employees. Every applicant for employment is considered solely on the basis of his qualifications and of our need for persons with those qualifications."

STRICTLY ON QUALIFICATIONS

A spokesman for General Motors Corp. flatly denied the existence of any established policy opposing the hiring of older persons. Chrysler likewise said it makes its selections of employees strictly on the basis of their qualifications, irrespective of age.

One Chrysler spokesman said:
"As a matter of fact, we have found in most instances the older, more experienced men make better workers because they have come up through the school of hard knocks.

'We find, too, because of their responsibilities, they are steadier than the younger employees.'

GUIDED BY JOB SPECIFICATIONS

Wayne Stettbacher, general manager of the Employees Association of Detroit, which represents a cross-section of Detroit industries, said that insofar as he knew none of the companies in this area had a fixed policy on age limitations.

He pointed out, however, that personnel the men who do the hiring-are guided by specifications outlined by the foreman of a particular department where manpower is needed.

Said Stettbacher:
"The foreman tells the employment manager what he expects. He isn't interested in the sociological problems.

"The foreman is held to a certain measure of efficiency. He has to keep unit costs down in terms of output. If he were not held accountable for unit costs, he could afford to take all comers.

"Many foremen take the view the older man is not as adaptable to changing conditions. They know they have to have a flexible work force, and the younger man gives them that flexibility."

Stettbacher recognizes the problem of the

older man. He knows it exists in Detroit

One of the reasons, he says, is the condition of the labor market. He explained:

"The employer wants the best the labor market can offer him. He's buying time, He doesn't want to take an inferior product.

If labor supply is tight, he'll tolerate the less efficient worker out of necessity.

One thing it evident. The attitude of the corporations certainly is not one of callous indifference. They would like to see everybody in Detroit, who is able and willing, on the job.

AWARE OF PLIGHT

Edward L. Cushman, director of industrial relations of American Motors, is acutely aware of the plight many Hudson workers found themselves in when Hudson and Nash merged.

He says:

"We are doing everything possible to try and get work in the Hudson plant and recall the men. We notified the union almost 6 months in advance of the merger and made arrangements with the Michigan Employment Security Commission to help the men get other jobs. The MESC gave us some genuine assistance."

SEEK DEFENSE WORK

Cushman said American Motors is pushing hard to get more defense work into the Hudson plant, where work is already in progress on two different aircraft contracts as well as the manufacture of engines for Hudson Hornets.

Assuming that employers want the best employee they can get at prevailing rates, it would appear utter foolishness on their part arbitrarily to turn down a man because of his age.

Almost every responsible survey shows that older workers are as good as, or better than, younger employees.

One such survey conducted by the University of Illinois dealt with employees 60 and over.

AS GOOD OR BETTER

Supervisors in 20 companies were asked what they thought of 1,025 workers in their 60's and 70's with reference to overall performance, absenteeism, dependability, work quality, amount of output, and ability to get along with others.

The results were startling.

In overall performance, 16 percent of the older workers were rated as excellent, 32 percent very good, 36 percent good, 15 percent

fair, and only 1 percent poor.

As for absenteeism, 70 percent were said to be absent less often that younger workers, 23 percent about the same, and 7 percent more often.

MORE DEPENDABLE

On dependability, 50 percent were judged more dependable than younger employees and 6 percent were said to be less depend-

More than 75 percent had production records equal to or higher than those of younger workers.

Evaluators of the survey cautioned against taking the results to mean that age in itself brings greater efficiency.

The survey was selective to the extent that workers rated were persons with motivation to keep working, with good capabilities, and with fitness enough to survive dismissal at an advanced age.

NEED YOUNGER MEN

There was no inference in the findings that older persons should be hired in preference to young ones.

The evaluators noted that employers still need younger persons to give long years of service and to get ready to replace senior workers when they do retire.

[From the Detroit Times of January 26, 1955]

PLANT TRANSFERS RUIN OLDSTERS

(By Jack Crellin)

(This is the fourth article in a series)

Ever wonder what happens to an older employee—one between 45 and 64 years oldwhen a company goes out of business or moves elsewhere?

Such things have happened in Detroit. Remember Kaiser-Fraser, Bohn Aluminum, Murray Body, Hudson Motorcar Co.?

Joss Chatwin, president of Hudson Local 154, UAW-CIO, where approximately 13,000 were laid off last fall when Hudson merged with Nash to become American Motors Corp., said he thought he could supply some of the answers.

FIVE THOUSAND VICTIMS AT ONCE

Chatwin had no difficulting rounding up some of the older men. He estimated that close to 5,000 of the 13,000 idled are 45 years or older.

Many of them haven't been able to find other employment.

Their unemployment benefits are running

They have found they are too old to work and too young to die or retire.

But let a few of them tell their stories: Walter Checque, 57, worked in the same

factory 21 years He prides himself that he can do just about anything around an automobile plant. His particular line is in the paint and polishing departments.

TELLS OF HUNT FOR JOB

It was last October 28 Walter was handed a pink slip notifying him of:

Permanent layoff due to transfer of auto-

mobile production." Those few typewritten words shattered any

hopes he had been nurturing that the layoff might only be temporary. He applied for unemployment compensa-

tion, is still drawing \$32 a week.

Says Checque, who owns his home at 17162 Omira:

"I started looking for another job. First went to a couple of warehouses. They I went to a couple of warehouses. They told me they didn't need anybody. I hung around and watched them hiring younger

Then I went to a manufacturing plant.

Same story.

"Believe me, it's the age that gets you. They just won't give a guy my age a job. I want to work. I could tackle any job they gave me."

EIGHT YEARS TO PENSION

Checque must wait almost 8 years before

he is eligible for a pension.

"Right now the unemployment check is just paying the grocery bills. I have to cash a bond every now and then to pay other bills. When there's no more coming in, I suppose I'll have to sell my house."
Wilson Sipe is 62. He lives at 16409

Owen, East Detroit, and worked for Hudson He has 3 years to wait before being eligible for a pension.

SEES IT WORK

But Sipe isn't thinking about a pension.

He wants to work. He says:
"Right after I was laid off I went to see my brother, a foreman at another auto plant, and asked him to try to get me a job as a

welder.
"He did everything he could, but he told me they wouldn't hire me because my age was against me.

"Then I answered a company's ad for a gas welder. The guy took one look at me and told me they filled the position the day before. I noticed the same ad kept running for 2 weeks after I was there.

"I guess I'll just have to keep looking until I find something. I'm a handyman, can do just about anything."

FATHER OF FOUR

Sipe is the father of four grown children. He owns his home.

Earl Manning, 64, worked for the company 25 years in the paint shop, on general repair and in supervision.

He's looking forward to retirement next November. Because his wife will be eligible for social security at the same time, he estimates he will retire on between \$170 and \$200 a month.

Meantime, he's got to continue rent payments of \$71 a month out of unemployment benefits of \$31 a week.

"JUST TOO OLD"

Says Manning: "I've looked for jobs. They tell me I'm just too old to hire. One plant I went to they turned me down and then hired two men I broke in at Hudson."

Joe Castelnuovo, 59, of 16250 Liberal, has worked at the same place off and on since 1920. He worked there steadily for 13 years up until November.

He owns his home and has three grown children, all married.

ALL IN PATTERN

Sald Joe: "You can tell the way they look at you when you go to these other plants. They just shake their heads. They won't even let you fill out an application."

Joe is a tall, muscular man who smokes

He flexes his hands and declares:

"I can put in a good day's work alongside any man.

These are the stories of only a few of the men. The others follow the same pattern.

At least 70 percent of those interviewed own their homes, have been residents of Detroit from 20 to 30 years.

THREE SUICIDES

How desperate are these men? Chatwin shrugs his shoulders:

"I can tell you that at least three have committed suicide since being laid off.

There may be others.

"Wives of the men call me at home. Some of them are hysterical. They want the union to do something about getting their husbands jobs.

There isn't much we can do. Right now we are in the process of trying to work out an agreement between Nash Local 72, UAW. in Kenosha, and American Motors Corps so the seniority of the workers here and Kenosha can be integrated."

Chatwin said a substantial number of Hudson employees have indicated their willingness to move to Kenosha if arrangements can be made.

THEIR HOMETOWN

He continued:

"A lot of these older men have their roots here. This is their hometown.

"We don't want to interfere with manage ment's right to hire whom it pleases, but I think if a man lives and pays his taxes here he should be given preference over an outsider. Something has got to be done."

William Hinson, local financial secretary, said some older workers already are faced with the threat of loss of their homes.

[From the Detroit Times of January 27. 19551

WHITE COLLARS CAST ASIDE, TOO (By Jack Crellin)

(This is the fifth article in a series)

What about the white-collar man or the executive who at 45 suddenly finds himself out of a job?

The answers came from two sources.

Dave Russell, 53, a white-collar worker, had been active all his adult life.

When he wasn't busy earning a living, Dave devoted his time to voluntary work with the Boy Scouts, American Legion, and numerous civic activities.

Happily married, owner of his home at 5306 Cooper, the father of two children, he was looking forward to the golden years of retirement.

NOT WORRIED BY JOB LOSS

But last March Dave was forced to make an adjustment which has left him disillusioned and bitter.

The steel company where he was employed as a time-study man had to lay him off because of a lack of demand for its products.

At the time, Dave, a slightly built, intense man, was not concerned. He had been let go from other jobs and always managed to find a new one.

He applied for unemployment compensation, began making the rounds of prospective employers.

Days and weeks rolled by.

AGE AN IMPORTANT FACTOR

Personnel men interviewed him, discussed his qualifications, and nodded approval. They said he would undoubtedly be hearing from them. He never did.

Dave was proud of his experience in his particular field, and of his work record. His

last job paid him \$600 a month.

Says Dave: "Just to make sure I was not passing any bets, I registered at a second office of the unemployment compensation commission and put applications in at two private employment agencies. I was sure I would score.

Gradually he realized his age was an important factor in his inability to land a 1oh

He said:

"I would spend from 1 to 2 hours filling out a form at an employment office, go in for an interview, and find the man was primarily interested in only one thing-the place where I listed my age. The interview usually ended in less than a minute."

Then it happened.

One personnel manager picked up my application and told me right to my face was too old. I grabbed the application out of his hands, tore it up, and threw the scraps on the floor."

He recalls another occasion when he answered an advertisement for a man of his qualifications:

"I sat in that office from 8 o'clock in the morning until 3 p. m. I didn't even dare go out for lunch for fear of losing my place. Then when I was called in I was told they were sorry, but they were looking for a man 30 to 35 years of age.

"A displaced person, a man who couldn't

even speak good English, was hired.

"Don't misunderstand me. I didn't be-grudge him getting the job. While we were waiting to be interviewed he told me about the tough time he was having trying to support his wife and four small children."

STARTED OWN FIRM

But Dave is not the type to take things lving down.

He took some of his savings and started a small company specializing in fire prevention.

His plans for the future?

"Things aren't going too well right now, but in the near future, if business continues to pick up, I'm going to do some hiring—all men over 40."

We asked D. R. Murrell, managing director of the Forty Plus Club, Inc., about men of the executive type who are over 45.

NONE GOT JOBS

Murrell tilted back in his chair in the sparsely furnished club headquarters at 501 Park and laughed.

"Are you kidding? Last year was the worst we have ever had. We didn't place a single member."

The club was established in 1937 to assist men of the executive type who have passed the 40-year mark to find positions. Its membership is limited to those who earned \$5,000 or more a year. Not a staggering sum by today's standards.

Among the men for whom the club has been seeking jobs are two former presidents of Michigan concerns, vice presidents, in-dustrial-relations directors, treasurers, controllers, engineers, and economists.

The club sends a monthly bulletin to top officials of 3,000 employing concerns in 33 States. The bulletin lists the type of men available, their training, experience, and the kind of position they desire.

Murrell reached in his desk drawer and

withdrew a sheet of paper.

"This is a letter we received from one Detroit employer who contacted us in his search for a controller. We sent him files on eight men. Two were 47 years old, one was 48, two were 51 and three were 58. The answer is typical of the letters we receive."

The employer's reply stated in part:

Unfortunately, at the present time I feel that all of the potential employees are a little too old for our company. Forty-five is really the top age. I would, however, be very pleased to have you keep in touch with us as I think you are doing a magnificent job with motivations of great quality."

MAKES MORE NOW

Murrell exhibits little patience with this attitude.

"If we had a war I know what the answer would be. We couldn't find men fast enough for them. During World War II we placed 1,200 and could have placed that many more if they were available."

Murrell cites a couple of examples as proof of what he considers short sightedness on the part of employers in their hiring and

retirement programs,

"One large Detroit concern, I won't mention any names, forced their chief engineer to retire because he was 65. The man went out and set himself up as a consultant with

a minimum fee of \$100 a day.

"Know who his best customer is? The company that retired him. He received more in fees from them last year than he earned annually while on their payroll."

Another man of 64 was unable to find a job in Detroit although he worked here most of his life. He, too, was an engineer.

Said Murrell:

"We finally got him on with a large eastern concern which didn't consider age a factor. His starting pay was \$7,500. Today he's making twice that."

"Not too many of them have financial problems. But every one of them knows that you can't loaf and get away with it. They know if they don't keep their minds active they must deteriorate."

PENSIONS COSTLY

There are several things which work against the older man obtaining employ-

ment, Murrell says.

Among these are the pension and insurance factors. Most companies maintain insurance on their executives and as a man gets older the premiums go up. Pensions for this type of employee also prove more costly, Murrell said.

He was quick to add, however, that men seeking employment through the club, for the most part, are willing to waive both insurance and pensions.

Murrell thinks the solution may lie in some type of employment legislation which would prohibit discrimination against the older men.

[From the Detroit Times of January 28, 1955] PENSION PLANS STYMIE HIRING

(By Jack Crellin)

(This is the sixth article in a series)

The problem of the older person obtaining employment is not a new one.

The Forty Plus Club, Inc., mentioned earlier in this series, was founded back 1937.

At the same time the trade union movement, having established a firm foothold in industry of the Nation, pressed for a solution.

Labor leaders recognized the difficulties older men were encountering in either getting or holding a job. So did employers. PREMIUM PUT ON LENGTH OF SERVICE

Out of this mutual understanding developed seniority agreements placing a premium on length of service with a company in retaining a job at the time of layoffs due to production cutbacks.

This worked out fine for the older employee so long as his company continued to op-Few foresaw present day shutdowns due to mergers or lack of business.

Then World War II came along and the problem ceased to exist. There were jobs

available for everybody.

Changing conditions have brought about the present situation.

While there are more jobs available than prior to World War II, the labor market also has expanded.

Furthermore, the seniority agreements which had been initiated by union leaders and which, at first, looked like ideal security for workers, turned out in too many instances to boomerang to their disadvantage.

LOSES NEARLY ALL

For example, a man has achieved, say, 15 years seniority, working steadily for the ABC company.

Should it shut down for an extended period he might have a chance to work for the XYZ company temporarily, but that automatically would cancel his seniority with the ABC company, and in the event he returned there when they reopened he would have to start all over again building up seniority.

Labor statistics show that every year 800,-000 more persons are added to the labor market. Not all of these have been absorbed. Competition for jobs increases daily.

PENSION ANGLE

Wayne Stettbacher, general manager of the Employers Association of Detroit, says that employers can afford to be more selective.

One factor, says Stettbacher, operating against the older worker is that the younger man may be more desirable due to the cost of pensions and other fringe benefits.

He pointed out that when a company hires an older man it has that much less time to build up the individual's pension credits. Insurance rates, based on experience, also go up, Stettbacher said.

In this connection many workers argue the unions are most at fault for the plight of older workers. They say the high pressure union insistence during negotiation, for pension and fringe benefits, make it extremely difficult for employers to hire men over 45.

However Walter Reuther, UAW-CIO president, argues that industrial-type pensions, such as his union has negotiated with automobile manufacturers, in no way could be considered a barrier to hiring an older man.

"NO PENALTIES"

Said Reuther: "Economic-wise, there are no penalties. If a man 45 or 50 moves from one auto company to another, it doesn't cost the second company 1 cent more. The company's contribution remains the same regardless of age."

What the individual in such a case does is lose his pension credits with his previous employer. The union hopes to change that.

The auto worker's pension plan is based on his length of employment with a particular company at the time of retirement. He receives approximately \$1.75 a month in benefits for each year of service.

GROUP RATES SET

As for insurance, Reuther argues that rates are based on the average age for an entire group and that only a microscopic change would result because of the hiring of a few older employes.

He said the union had been trying for years to persuade employers in this area to give job preference to persons with homes here who have been laid off at other plants.

He is opposed to what he says is the practice of some Detroit companies of enticing workers here from elsewhere in the Nation

while men willing and able to work are still unemployed.

[From the Detroit Times of January 29, 1955] OLDER WORKERS MUST BE HIRED

(By Jack Crellin)

(This is the final article in a series)

What is the solution to the problem of the worker over 45 obtaining employment?

The simplest would be full employment. Walter Reuther, UAW and CIO president, advocates full employment as the only an-

His views are shared by the Forty Plus Club, the Employers Association of Detroit, and the Michigan Employment Service.

But since there are not enough jobs for everybody in the country today, other courses must be followed.

Secretary of Labor James P. Mitchell, who is championing the cause of the older worker, set up a departmental committee to tackle the problem.

SIX-POINT PROGRAM RECOMMENDED

The committee recommended that Mitchell propose to labor and management the following six-point program:

That workers be selected for employment and training on the basis of ability and qualifications for the job, regardless of age.

That workers reaching retirement age be enabled to continue working, if they desire and are able to do satisfactory work

That sound labor standards, including health and safety measures and equal pay for comparable work, be maintained in order to increase the employment opportunities of older workers.

That inquiries and studies be conducted into the major reasons for existing limitations on jobs and job opportunities, and that the validity of these reasons be evaluated.

That a program of services to older workers. including counseling, selective placement, individualized job development, training, and community cooperation be developed through the State employment security agencies and other public and private agencies.

That consideration be given to the estab-

lishment of systematic programs designed to assist older workers who are eligible and willing to retire to make appropriate plans for the productive use of their time so transition from employment to retirement does not bring undue psychological, social, and economic shock to the individual.

PRODUCE AS WELL

In a recent article for a national magazine, Mitchell blasted several of the myths about the older employee.

Answering claims that older employees result in increased production costs, pointed to a Department of Labor survey which showed older workers produced just as much and sometimes more than the younger workers.

also cited a survey by the National Association of Manufacturers, made in 1951 and covering 3,000 companies employing more than 3 million people.

The survey revealed 93 percent of the reporting companies felt that workers 45 and over were equal or superior in performance to younger workers.

WITCHES' TALES

Mitchell labeled as "witches' tales" claims that older workers are injured more frequently than younger employees.

He said a study of 17,800 workers in a ariety of manufacturing industries, made by the Bureau of Labor Statistics, showed the opposite was true

In the matter of job attendance, Mitchell said a BLS study of 16,500 men in 109 manufacturing industries showed older workers had a 20-percent better attendance record than younger employees.

According to Mitchell, part of the answer to the objection to older men is found in the fact that most companies have a career policy of promoting from within.

These companies argue that if they let the older men remain on the job there will be no positions for the younger men.

TISE OLD RATE

To refute these arguments, Mitchell cited the fact that only four decades ago the average life expectancy of an urban worker was 46.6 years. Today, it is 68.5 years.

The 40-year-old man today has approximately 25 years of productive labor ahead of him.

But, said Mitchell, many industries still base employment practices on an obsolete life-expectancy rate.

Mitchell warned if the country failed in efforts to help older workers it could expect increasing pressure for retirement at earlier

Mitchell has a solution: Hire the older worker and make a profit from his pro-

duction.

American Legion's Legislative Recommendations for 1955

EXTENSION OF REMARKS OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. TEAGUE of Texas. Mr. Speaker. on February 8, 1955, Mr. Seaborn P. Collins, national commander of the American Legion, appeared before the Committee on Veterans" Affairs to present the recommendations of that organization as they pertain to veterans. In order that other Members may have an opportunity to examine Mr. Collins' statement, it is included for the RECORD:

STATEMENT OF SEABORN P. COLLINS, NATIONAL COMMANDER, THE AMERICAN LEGION, BEFORE VETERANS' AFFAIRS COMMITTEE, HOUSE OF REPRESENTATIVES, FEBRUARY 8, 1955

Mr. Chairman and members the appearance of our representatives before your com-mittee continues one of the most satisfactory relationships with the Congress that has existed down through the years. May I say, as national commander, that the thanks of our organization are due the members of this commmittee, and the committee, for the undeviating attention given to the problems of the disabled war veterans, and for the privilege of this appearance before you. May we also welcome the new members of the committee.

We join with you in expressing our thanks before God that, for the first time in years, there is no shooting war bringing new problems and more war disabled to your atten-It is our devout wish that this period may be continued. We hope for a return of the period when reasonable nations, like reasonable men, with a common objective, in the presence of facts, may find it possible

to reach a solution of their differences, without resort to war, either hot or cold.

The continued absence of war may permit the Congress to approach the question of benefits and services for veterans with quiet and earnest consideration of all the factors involved. The years since 1949 have been those in which there have been continued efforts to change, to eliminate, to weaken, or to distort the form and substance of Federal legislation dealing with veterans. During this period your committee has retained its steadfast support for such laws and such legislation, keeping always in mind the fact

that the benefits and services provided by the Congress, were in return for services performed for a grateful Nation by those called to military service in time of war.

In our opinion it is significant that many actions have been taken, officially and other-wise, to demean the position of the veteran in the life of America today. Efforts to curtail and combine benefits and services for veterans, or to submerge such benefits in other programs, have been initiated and are continuing. This has occurred, and is occurring, during a period of expanding economy, when wages and benefits in the Nation are on the increase, and when the Federal Government is giving additional pay and added fringe benefits to the civilian employees and other segments of those groups depending upon the Federal Government for their livelihood. We believe the veteran should be restored to, and maintained in, a position of honor, as a special class of citizen (made so by the Federal Government), and we are convinced your committee will concur in the attainment of such a goal.

From the chairman of your committee we have received a request for a reply to certain matters currently engaging your attention. Let me give at least a preliminary reply to those questions as a first order of business.

1. The amended 10-P-10: The calm appraisal of our American Legion department service officers is that this new form has been received and used with a minimum of announced dissatisfaction. Our representatives in the field have discussed this matter with VA hospital managers. There has been no decrease in the number of those applying for VA medical and hospital care. We submit that this is an indication of the sincerity and the true eligibility of those making use of this privilege. Only a small number of cases have come to light where the application has been withdrawn when those seeking hospital care have faced the questions having relationship to their financial and economic status. Generally speaking, the new procedure has worked well.

2. The President's Executive order of January 1 terminating the period of emergency insofar as such an emergency relates to vet erans' benefits and services changes the situation since this question from you was proposed. I think you should know that, prior to the issuance of this Presidential order, I expressed, in person to the President, my thoughts as to the desirability of issuing such an order. You may know that the American Legion has acted to declare eligibility for membership in the American Legion ended as of the date of the Korean armistice. July 27, 1953. Legislation to permit the amedment of our constitution will be sought in the 84th Congress. Since ours is an organization of war veterans, we believe our status and that of war benefits and services should be maintained on that basis

Your chairman subsequently has asked our opinion of legislation he has introduced to continue certain educational benefits for veterans beyond the January 31, 1955, cutoff date for those in service prior to that time.

Insofar as the purposes of this question are answered by the bill introduced by your chairman (H. R. 587) you already have an answer from the testimony of our staff on the hearings conducted relative to the bill. Approval of the bill was recommended in that testimony.

With relation to other phases of veterans' benefits and services eliminated or reduced to peacetime status by the Presidential order, I think you should recall that our national rehabilitation commission will have meetings here in Washington beginning February 28. Discussion of such items is the first order of business on the agenda for such meetings.

To the extent that the impression has gone out that the peacetime veteran benefits and services have been abandoned. I think there should be a reappraisal of the considerable body of such benefits that remains. The list of such benefits as comby the Veterans' Administration and distributed in an information release February 1 should command respect and attention

3. There is being submitted a supporting statement in the matter of VA budgetary needs for major alterations, improvements, and repairs. This report reflects the judgment of our field representatives who have conducted a special survey of the hospitals to arrive at their position. In general it is believed the question of property management and maintenance in the VA is a part of the larger question of how the Government views this question. There does not appear to be an effective general Federal policy in the matter of caring for the items of maintenance, improvements, obsolescence, depreciation, and related questions. Whether the Congress is ready to adopt a general policy and appropriate the funds to maintain VA facilities in line with modern usage and economy of operation is a broad question. There is no doubt in our minds that, since there appears to be a limit on the number of hospital beds to be provided fo rthe disabled veteran, it is imperative that those beds in existence, and the facilities housing them, shall be replaced where necessary and modernized in other cases. The lack of consistent attention to the problem magnifies the size and cost of the problem. The sooner some decision is given by the Congress the better it will be for the maintenance of those facilities dealing with the care of the disabled veteran. Whether the amount needed for this purpose, at this time, is in line with the VA estimate of \$800 million or some other figure, the fact may not be gainsaid that further delay is not the answer that should be given.

4. The home-loan-guaranty program and the direct-loan program, created to give the veteran in money short areas something more than a fishing license, were designed to permit the veteran to overcome a part of the economic displacement brought about as a result of his participation in war. While the national conventions of the American Legion are silent on the question here raised, it is apparent that, as you have stated the question, our organization would be in favor of equalizing the disparity existing between the town and country veteran in the guaranty program. In the average case the veteran interested in earning an agricultural livelihood will want to purchase farm real estate along with a farm home.

With reference to amending the directloan program, on the subject of farm and farmhouse purchase, we feel that consideration should be given to the \$10,000 maximum as such maximum relates to existing farm prices for one-family units, and the additional need of the veteran for funds to secure equipment, supplies, and working capital in the period immediately following purchase.

Pending appropriate action by our governing bodies on the question raised, the American Legion is interested in studying specific legislation proposed to remedy the situation. The staff in our economic commission, which has American Legion jurisdiction of the loanguaranty program and collateral legislation, has considered the legislation already introduced or proposed on this subject. You may be sure that our views on such legislation will be made in reference to specific legislation at the will of your committee.

5. Scholarship assistance program: national conventions have not taken action that is directly in point on this question. In general, the question of education in the American Legion is handled by our Americanism and child-welfare commissions. On the subject of education of orphans of veterans limited programs have been handled by the Armed Services Committees in Congress in previous years. Our child-welfare commission is secking amendatory socialsecurity legislation to extend children's survivor benefits beyond the age of 18 when such children are continuing their educational programs; the same commission is approaching State legislative bodies in the arch for additional scholarship benefits. While we do not have specific authority to appear on scholarship legislation within the jurisdiction of this committee, we should like to present a cautionary viewpoint. We feel that legislation which broadens the field of benefits and services beyond those granted the veteran directly might have a tendency to weaken the existing structure of benefit and services to veterans. In a period when existing veterans' legislation is under attack in areas not within the jurisdiction of this committee, we are reluctant to advocate broadening the field with new programs.

THE AMERICAN LEGION PROGRAM

We come now to the matter of our legislative program prepared on the basis of action by our national convention and our national executive committee. The staff of our rehabilitation commission has prepared bills for presentation through the aegis of Members of the Congress. You will appreciate that in my presentation there is not time to enter into a detailed discussion of such proposals. With your continued indulgence I should like to stress the importance of some of these proposals. If 1 or 2 do not lie within the province of this committee, they nevertheless deal with subjects that have your interest and concern.

ADEQUACY OF FUNDS FOR VA OPERATIONS

The department of Texas is the sponsor of a resolution (No. 473) recording opposition to any limitation in money supply which would result in inadequacy of services and benefits to veterans, their dependents, and survivors of those who have died.

In testifying before the President's Committee on Veterans' Medical Services 5 years ago we stated:

"Certainly the work of the Veterans' Administration as given it by Congress is sufficiently important to call for and justify a permanent policy of understanding on the part of the Administrator of Veterans' Affairs, the Budget Bureau, and Congress as to the amount of money needed and the number of people required to do their business."

As this committee knows, the inpatient care program provided for in the appropriations for fiscal 1955 is based on the assumption that the Veterans' Administration will maintain a total of 127,570 beneficiaries in VA hospitals, non-VA hospitals, and domiciliaries.

The VA Chief Medical Director has stated to our national rehabilitation commission that present planning indicates that this program can be accomplished within the amounts of the present appropriations. We, nevertheless, wish to call the attention of this committee to 1 or 2 matters which may make this accomplishment much more difficult.

After the appropriation act was passed (June 24, 1954), three other laws were enacted which called for additional funds. One of them is Public Law 613, 83d Congress, which increased the maximum amount of Federal aid to State homes for the care of each VA beneficiary housed there, from \$500 to \$700 per year. Supplemental funds to cover this increase may be needed. We do not feel that the Veterans' Administration should skimp on other programs to make up this difference.

Also, there is Public Law 598, 83d Congress, the Federal Employees Group Life Insurance Act. This also calls for additional funds to enable the agency to meet its share of the new insurance program. The estimated cost this year is between \$1,-200,000 and \$1,500,000. The agency is required to absorb this additional cost with-

out supplemental funds. That means other services and programs may have to be restricted somewhat to meet this additional obligation. We are advised that the additional cost is contemplated in the figures for fiscal 1956.

A third law which passed after the budget was set up is No. 763, 83d Congress, popularly referred to as the fringe benefits law. This brings about the transfer of certain custodial and protective positions to general services classification, with consequent increase in pay. There are also adjustments as to overtime work, incentive awards, and other miscellaneous items. Although the additional cost to the Veterans' Administration this current year may be nominal, again the agency is required to absorb the increase in its already established budget.

Shortly after the close of the first quarter of the current fiscal year there were presented to the Administrator of Veterans' Affairs by the director of the national rehabilitation commission excerpts of reports from our national field representatives. These reports contained observations of how certain erans' Administration hospitals were faring under the current budget. Full and detailed reports on each one had been filed previously. This summary was a reminder to the Veterans' Administration on how the functioning of these hospitals appeared to representatives of veterans privileged to make periodic visits to the institutions. Briefly, the composite of these reports is to the effect that hospitals had pared down to the bone in cutting operating expenses and in still trying to maintain their individual average daily patient load on a high plane of medical quality and efficiency.

In response to that presentation the Administrator stated that a review of the first quarter of fiscal 1955 operations had been completed. As a result of this review certain adjustments in primary-fund allocations in certain hospitals were being made. He stated further that the current budget required that certain economies be effected, that every effort was being made to accomplish them; at the same time he expressed his intention that these economies would not be effected at a sacrifice in the quality of medical care for eligible veterans.

The American Legion has testified before congressional committees as to its advocacy of efficient and economical operation of the VA enterprise. Yet we feel deeply that the importance of all the programs fully justifies a meeting of the minds and an understanding on the part of those who are placed in charge of them, including the VA, the top budgetary agency of the Government, and Congress, as to what is adequate for conduct of the business. The thoroughgoing scrutiny, analysis, and appraisal of requirements made by the agency itself and by the Budget Bureau, starting sometimes months before the budgetary period to be covered, and based as it is upon experience and firsthand observation, should afford Congress and all committees interested sound basis upon which to compute the appropriations needed. The American Legion would like to see this procedure accomplished without acrimony on the part of representatives of the groups involved (Appropriations Committee, VA, Bureau of the Budget) and in ample time before the beginning of the budgetary period to be covered.

This appearance before your committee presents a good opportunity to thank those members who have gone before other committees of the Congress dealing with veterans' appropriations. Such action on the part of your committee members has served not alone to provide strong assistance in securing more nearly adequate appropriations, but also in dealing with the practice that we deplore, i. e., in lessening the desire to legislate in the field of veterans' affairs through the medium of riders to the appropriation bills.

VETERANS' HOSPITALIZATION PROGRAM

The American Legion is deeply grateful to this committee for the resolution it passed in March 1954 and for its abiding alertness to the operation of this important program. The national convention approved an outstanding resolution (No. 494) sponsored by the Department of Iowa expressing again the stand of our organization in support of this committee and Congress in maintaining this program.

We have no special legislation to propose in this field. We are continuing our surveys among hospitalized veterans to ascertain their views and status as to how they came to the VA hospital. Our findings are the same as when we started these surveys, over 2 years ago. We find no basis for the charge that the privilege of hospitalization is being abused.

COMPENSATION AND PENSION

We repeat our recommendation and have prepared a bill which, if enacted, would put into effect and reestablish a monthly compensation rate for disabilities evaluated 10 to 49 percent so that amounts payable in that bracket will bear the same ratio to the amount for total disability as the degree of disability bears to total disability (Res. 311). In other words, the American Legion strongly advocates that the differential between the basis for evaluating disabilities 50 percent or more and those less than 50 percent be eliminated. As you know, came about through section 1 of Public 356, 82d Congress (May 23, 1952) when rates for disabilities evaluated 10 to 49 percent were increased by 5 percent, and those rated 50 to 100 percent were increased by 15 percent. Our position would restore a basis for award which we regard as equitable and which was in effect from the days of World War I up to July 1, 1952.

While this is an equalization that we are advocating, we realize that this would mean an increase, however delayed, for those rated less than 50 percent disabled. We think it is appropriate to remind the members of this committee that, at a time when pay relief is being given civilian workers, members of the Armed Forces, and other groups, on the part of the Government, the conditions of those who are living on fixed income, in whole or in part, is more severe for the partially disabled than for those in position to work without the disadvantages of decompensating disabilities.

WIDOW'S PENSION

Here we seek legislation that will exclude the payments made by widows and children for the last illness and burial of a veteran from the annual income computation for death-pension purposes (Res. 32). Our service officers have observed and assisted in a great many cases where the surviving widow failed to qualify for the modest death pension provided because she was not permitted to exclude the amounts she had to pay for expenses connected with the last illness and death of her husband from the computation of her annual income.

In this came field we advocate that present laws be amended so as to provide the same basis for award of death pension to surviving widows and orphans of veterans of World War II and the Korean conflict as now established for survivors of deceased World War I veterans (Res. 129). At present, widows of World War II and Korean conflict veterans are required to prove the existence of a service-connected disability at time of the veteran's death for which compensation would be payable if 10 percent or more, whereas the widow of a World War I veteran does not have to establish such disability on the part of her husband.

INSURANCE

We wish to advise this committee that the American Legion maintains an insurance advisory board. All resolutions pertaining to the various forms of Government life insurance and indemnity available to veterans and inservice personnel originating in our organization are passed upon by this board and by our national rehabilitation commission. Pending before your committee are several comprehensive and technical bills embodying the several resolutions in this field which have been considered by the advisory board and approved by either the national convention or the national executive committee.

Experts on the staff of the national rehabilitation commission will be prepared to appear before this committee and explain in detail the basis and effect of the various proposals.

EDUCATION

The department of Massachusetts is the sponsor of a resolution (No. 34) which was approved and which has been translated into a bill soon to be before this committee for consideration. This bill seeks to afford education and training under title II of the Servicemen's Readjustment Act of 1944 in the cases of certain seriously disabled veterans notwithstanding the time limitations of such act. Section 1 of the bill would authorize the Administrator to afford this veteran a reasonable period of time to initiate a course of education under part VIII following recovery from a physical or mental disability which was determined by the Administrator to have prevented the veteran from timely initiation of such a course.

Section 2 of the bill would enable this veteran to take full advantage of his earned eligibility and complete the course initiated under authority conferred by section 1 not-withstanding the time limitation of July 25,

1956 otherwise applicable.

In this field our staff has expressed our support of the bill introduced by the chairman which would continue the accrual educational rights for the veterans of the Korean conflict period who were in service prior to February 1, 1955, notwithstanding the termination date of January 31, 1955 established by Presidential Executive order.

CONCLUSION

In the past there have been occasions when veterans' affairs have come to the attention of congressional committees other than yours. At times some advantage has accrued to the veteran, or to his surviving relatives. At the same time some other right has been taken from the great body of the veteran population.

Executive and legislative committees were active during the period of the 83d Congress in giving separate study to various benefits provided not alone for veterans but for other groups of beneficiaries. We applaud the desire of such committees to correct certain inadequacies and deficiencies and to explore the possibility of securing simplification of the methods of making the award of benefits. We are hopeful that all Members of Congress, including the members of your committee, will study the results of such studies as legislation is prepared in the 84th Congress dealing with such benefits. are hopeful that the Congress will not, in considering such legislation, let the zeal of those who are striving for dollar efficiency subordinate the purposes for which the benefit programs were established by the Congress in the first place. There is little comfort for the disabled veteran in the testimony of the General Accounting Office Counsel who said that all benefit programs should, and would, be consolidated under social security.

The Commission on Organization of the Executive Branch of the Government is making its reports to Congress. There are several areas in this field dealing with veterans' benefits. If past practice is followed, then other committees of Congress may handle some of these questions. In this field, as in the matter of reports from the Commission on Intergovernmental Relations, we are hope-

ful that your committee members will take an active interest.

Our legislative director, Mr. Miles D. Kennedy, has informed you that supplemental statements will be filed along with my statement giving more detailed and technical comment on some phases of the legislation in which the American Legion is interested. In the future, as in the past, we shall appreciate, and we thank you now, for the opportunities your committee has provided us to make known our opinions in the matter of veterans' affairs.

SUPPLEMENTAL STATEMENT OF SEABORN P. COLLINS, NATIONAL COMMANDER, THE AMERICAN LEGION, BEFORE THE HOUSE VETERANS' AFFAIRS COMMITTEE REGARDING THE LOAN GUARANTY PROGRAM, FEBRUARY 8, 1955

This supplemental statement is submitted for the purpose of discussing the issues placed before the American Legion by your chairman in his letter to me of December 14, 1954, concerning the operation of the Veterans' Administration's guaranty and direct loan programs as it relates to certain differences existing between veterans purchasing residential property and those purchasing farm real estate to be used as a home,

A review of the evolution of the GI loan program, as it is popularly referred to, reveals that the present application of the program's provisions discriminate to a certain extent against the veteran purchasing farm real

estate for use as a home.

Before referring specifically to the major existing differences, it might be well to define certain terms used. These definitions are based upon information received from the Veterans' Administration. They are reflected in the Veterans' Administration's administrative decisions on this subject.

A house which is to be used as a home is defined as a residential dwelling if the occupant derives his income from a salarled position, or from self-employment (other than farming any land adjacent to the house); a house used as a home is a farmhouse if the occupant derives his income from farming the adjacent land. Thus a residential dwelling may be physically located in the country. The nature of the dwelling is determined primarily by use rather than location.

With the foregoing as background, these are the major discrepancies in the program, as I see them. First, the Administrator of Veterans' Affairs will guarantee a loan for the purchase, construction, alteration, or repair of a residential dwelling to the extent of 60 percent of the principal amount, or \$7,500, whichever is less. However, the Administrator will guarantee a loan for the purpose of purchasing or constructing farmhouse to the extent of 50 percent of the principal amount, or \$4,000, whichever is less. In connection with the direct-loan phase of the program, a veteran, if otherwise entitled, can obtain a loan for the purchase or construction of a residential dwelling, but the veteran who is interested in a farmhouse may obtain a direct loan only for the purpose of constructing a farmhouse, but not for the purpose of purchasing an existing one. Hence, in both the guaranty and direct-loan phase of the program we have a situation wherein the veteran interested in securing a farmhouse is not afforded the same assistance given to the veteran seeking to purchase a residential dwelling.

There are also 1 or 2 minor discrepancies existing which I feel should be mentioned. The veteran owning a residential dwelling, if otherwise qualified, may obtain a guaranteed loan for the purpose of altering or repairing the home, but such is not the case of the farmhouse owner. Finally, both the farm and urban veteran may use part of the proceeds of a loan to release the building site from a prior lien. While this is a simple task in the case of a residential dwelling building

lot, it sometimes is quite difficult to adequately separate the farmhouse building site from the rest of the farm.

As this committee has been informed previously, the American Legion has no mandates dealing specifically with any of the above-mentioned problems. However, it is my opinion that any legislation which would eliminate any of these discrepancies would be received favorably by our organization.

It is my opinion that the evening up, so to speak, of the benefits and assistance afforded to both the urban and rural veteran, under both the guaranty and direct-loan phases of the program, would benefit the veteran, yet would not adversely affect any of the other interests intimately connected with the program, since, in all transactions, either the private lending institution or the Veterans' Administration have every opportunity to determine the business propriety of each individual transaction.

Department of Defense Procurement Policies

EXTENSION OF REMARKS

HON, CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1955

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the Record, I wish to enclose the following resolution adopted by the CIO executive board, which I was requested to bring to the attention of the membership of this body:

RESOLUTION OF CIO EXECUTIVE BOARD CALL-ING FOR CONGRESSIONAL INVESTIGATION OF THE POLICY OF PROCUREMENT AGENCIES OF THE DEPARTMENT OF DEFENSE IN STRIKE SITUATIONS

The United Automobile Workers and the United Steelworkers are presently engaged in bitter struggles for union recognition and economic justice for their members at the Kohler Co. and Buffalo Arms, Inc. These two companies are viciously antiunion and will stop at nothing, including flagrant violations of law, in their efforts to undermine and destroy unionism at their plants.

Unfortunately the procurement agencies of the Federal Government have been giving vital aid and comfort to these employers in their campaigns to break the union. This is a matter of gravest concern which requires prompt and effective remedial action.

The UAW strike at Kohler began April 5, 1954, when the company refused to offer an adequate wage increase and insisted on elimination of a contract clause calling for arbitration of discharges and layoffs. The company's attitude was bluntly stated by its chief negotiator when he said the company intends to teach the union a lesson and that we went through a bitter strike in 1934 which brought us 20 years of labor peace and we hope to get 20 more years of peace out of this strike. Although the union accepted a suggestion by the governor for arbitration of the contract dispute, the company has steadfastly refused to arbitrate.

Herbert Kohler, company president, in proceedings before the Wisconsin Employment Relations Board, admitted that the company had a store of clubs left over from the 1934 dispute and that it had purchased more clubs, guns, and tear gas. Possession of such munitions is illegal under Wisconsin

On April 12, 1954, the NLRB unanimously found that the company had engaged in

acts of interference, restraint, and coercion in violation of the National Labor Relations Act, as amended. However, the company has refused to comply with the Board's order to cease and correct these unfair-labor practices.

Additional charges of unfair-labor practices, including refusal to bargain in good faith and intimidation, were filed with the NLRB by the union in July 1954. The General Counsel of the Board recognized the merit of the union's charges and has issued a complaint against the company. The complaint is now awaiting hearing.

Despite the existence of a strike at the plant and the company's refusal to comply with an order of the National Labor Relations Board and its commission of new unfair labor practices, the Department of the Army in November 1954 awarded a \$2 million contract for the manufacture of shell casings to the company. The company immediately seized upon this contract as a vindication of its position and it relied upon the contract to stimulate a back-to-work movement by means of letters to its employees and newspaper advertisements.

Wittingly or unwittingly, this procurement agency of the Defense Department thus became a full-fledged partner of the company in the company's campaign to break the strike and the union, in the face of a determination by another arm of the Federal Government that the company is in violation

of Federal law.

The Department of the Army has played a similarly unjustified role in the Buffalo Arms situation. The steelworkers went on strike against this company in June 1954 to protest the failure of the company to bargain with the union following the union's certification as exclusive collective bargaining representative by the NLRB. Charges were filled with the NLRB by the union and the NLRB trial examiner sustained the union's charges in September. Among other things, he ordered the employer to bargain with the union. The trial examiner's findings and conclusions were adopted by the Board in November and the Board also ordered the company to bargain with the union.

The company has refused to comply with these orders. Nevertheless, the company has been favored by the Department of the Army with defense contracts throughout this period in which the union has been on strike and the company has been in violation of Federal law as determined by the NLRB.

The position of the Department of the Army is that it may not even consider the fact that a company is in violation of NLRB rulings in determining whether to award a contract to the company. In a letter to the steelworkers, Assistant Secretary of the Army F. H. Higgins stated: "Procuring agencies may not refuse to award a contract to a firm because that firm is refusing to comply with an NLRB order to cease and desist from an unfair labor practice. Thus, the Department of the Army is precluded from considering a contractor's status under the National Labor Relations Act in the award or administration of contracts."

This position of the Department of the Army raises grave problems bearing on our national labor policy. A situation in which openly antiunion employers who breach the Federal law are rewarded by Federal contracts and are thus aided and abetted in their efforts to break strikes and destroy unions is completely intolerable.

Now, therefore, be it resolved, the CIO executive board condemns the policy of the Department of the Army in awarding contracts to companies which are on strike and have been found by the NLRB to be in violation of Federal law.

We urge Congress to institute a prompt and thorough investigation of this policy of procurement agencies of the Defense Department and to rectify this intolerable situation by legislation, if necessary.

We commend the members of the UAW and the USA at the Kohler and Buffalo Arms Companies for their valiant and self-sacrificing actions against their union-busting employers. We pledge our sister unions and their members at these plants our full support in their just struggle for union recognition and decent contracts.

Special Competence

EXTENSION OF REMARKS

HON, JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES
Wednesday, February 9, 1955

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the Record an editorial entitled "Special Competence," published in the Washington Post of February 8, 1955; also a letter addressed to the editor, signed by the Senator from Ohio [Mr. Bricker].

There being no objection, the editorial and letter were ordered to be printed in the Record, as follows:

[From the Washington Post of February 8, 1955]

SPECIAL COMPETENCE

Senator John W. Bricker, a man who has specialized in politics for most of his adult life, espoused a somewhat puzzling doctrine in a speech on Saturday commemorating Thomas A. Edison's birthday. Without naming any names, he roundly criticized some present-day scientists who talk publicly about political matters that are outside their fields of special competence. This criticism, although an anomalous one in a self-governing society committed to the idea that political wisdom is most likely to be derived from full and free discussion by all its members, is rather widely held these days—and especially in regard to men of learning in the physical sciences.

Those who subscribe to this criticism like to think of nuclear physicists, for example, as innocent, unworldly, cloistered fellows puttering about in ivy-covered laboratories and perfecting atomic bombs without a care in the world as to what more practical men like Senator BRICKER may choose to do with them. But the truth is that those who probe the mysteries of nature are prone to think about them—sometimes with a heavy sense of responsibility. And perhaps they ought to be pardoned if they wonder whether political science is so far advanced as to know definitively how best to deal with the discoveries of physical science.

Senator BRICKER may have been quite justified in decilining to equate scientific wisdom and wisdom in all the other affairs of life. No doubt there are foolish scientists just as there are foolish politicians. But it does not follow that men of science ought to keep silent about their convictions or that what they say may not be instinct with a reflection and understanding not common among men who do not share their special knowledge.

The Senator went on to tell his audience that, if mankind did not employ the time made available by the inventions of Mr. Edison and others in meaningful leisure, leisure would sink into a boredom more oppressive than tyranny. This strikes us as a pregnant observation. But his listeners must have wondered what there was in Mr. BRICKER'S experience and training that gave him the authority to utter it. "Leisure" is not a subject on which we should expect

any Senator to claim any special competence. Perhaps, however, it would be best to weigh Mr. BRICKER's opinions, and the opinions of other men as well, on their own merits.

UNITED STATES SENATE,
Washington, D. C., February 9, 1955.
The EDITOR,

Washington Post and Times Herald,

DEAR SIR: Your editorial, Special Competence (February 8, 1955), states that I "roundly criticized" in a recent address scientists "who talk publicly about political matters that are outside their fields of 'special competence.'"

You say this is "a somewhat puzzling doctrine." Puzzling? It is rather a reactionary doctrine—a doctrine of gag that I oppose as much as you. In my speech commemorating Edison's birthday, I advanced no such doctrine; nor did I utter the criticism which

is the basis of your editorial.

As urged in your editorial, all opinions should be weighed "on their own merits." Too often, however, political opinions are weighed primarily on the basis of fame acquired in a totally unrelated field of endeavor. I praised Mr. Edison for refusing to "trade on his reputation as a great scientist" to win public acceptance of his opinions on complex political issues. In this, I said, Edison "was not like some present-day scientists."

Edison's work habits are a matter of common knowledge. Accordingly, I did not think it necessary or proper to spell out in a commemorative address that the political opinions which Mr. Edison was reluctant to broadcast were not derived from independent study or from serious reflection. Not having the full text of my remarks, and relying no doubt on a misleading story in the New York Sunday Times (February 6, 1955) captioned "BRICKER Decries Scientists' Talk," I can understand how you could draw in good faith unfavorable inferences from my remarks.

I appreciate your editorial comment on the problem of leisure. On that subject I disavow any "special competence," perhaps at the risk of a New York Times story under the heading "BRICKER Declares Self Incompetent." The problem of leisure, however, is that of every man and one which each individual must solve in his own way.

I am placing in the Congressional Record a copy of this letter, your editorial, and my speech on Edison.

Sincerely yours,

JOHN BRICKER, (Copies to editor, New York Times; editor, the Boston Daily Globe.)

Our Prayers Could Change the World

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES
Wednesday, February 9, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Our Prayers Could Change the World," written by Stanley High.

This article appeared in the February issue of the Reader's Digest. St. Paul writes in the Gospel, "The effectual fervent prayer of a righteous man availeth much." It occurs to me that in this confused and uncertain period in our Nation's history, we might well give serious

thought to prayer, which has played such an important part in the history of our Nation.

There are many instances, both in our public and in our personal life, where prayer has definitely directed the course.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR PRAYERS COULD CHANGE THE WORLD (By Stanley High)

How can the average American, the average citizen of any free nation, help win the struggle to save freedom and achieve a just and lasting peace?

The answer to this universal question now comes from the weighty testimony of many distinguished men. It is this: A lasting peace can be achieved only through the rediscovery of the free world's spiritual re-sources, the reviving among free peoples of a dynamic religious faith.

"Peace cannot be left to the diplomat and the soldier," says President Eisenhower. "It desperately needs the transforming power that comes from men and women, the world over, responding to their highest allegiances and to their best motives. The cause of peace needs God."

'The West has erred," says the historian Arnold J. Toynbee, "because it has chosen to fight communism with communism's own materialist weapons. As long as the battle is fought on these terms, the Communists will keep on winning. Western democracy must base its appeal on more than freedom, more than prosperity; it must base its appeal on religion. Only in this way can de-mocracy turn the tables on the Communist assailants. The grace of God might bring about this miracle."

Charles Malik, Lebanese Ambassador to the United States and an Arab spokesman in the United Nations, says, "Nothing is more ridiculous than those who say 'fight communism' and then concentrate on the economic and social alone. The real challenge is intellectual and spiritual. What is needed is a positive message, something humble, outreaching, touching the hearts of men, touching their need for understanding, providing hope. How can such a message be given reality save by multitudes of ordinary men and women stirred and exalted by religious faith?"

Is there a way whereby religion's power to shape events can be made effective? ident Eisenhower believes there is. He set it forth before the Assembly of the World

Council of Churches:

"How can we help strike this spark of dedication in receptive hearts around the earth? By personal prayer by hundreds upon hundreds of millions. The goal should be hundreds of millions. nothing short of inviting every single person in every single country who believes in a Supreme Being to join in this mighty, in-tense act of faith. If this mass dedication launched an unending campaign for peace, supported by prayer, I am certain wondrous results would ensue."

This conviction of the President is backed up by the judgment of other Americans who. in times of great crisis, acknowledged their faith in prayer. When, in 1787, the threat of failure loomed over the Constitutional Convention, Benjamin Franklin called for

daily prayers:

"I have lived, sir, a long time; and the longer I live, the more convincing proofs I see that God governs in the affairs of men. We have been assured, sir, in the Sacred Writings, that 'except the Lord build the house, they labor in vain that build it." firmly believe this; and I also believe that, without His concurring aid, we shall succeed in this political building no better than the builders of Babel."

With the fate of the Union at stake in his decisions, Abraham Lincoln said: "I talk to God. My mind seems relieved when I do and a way is suggested. I should be a self-conceited blockhead if I should hope to get along without the wisdom that comes from God and not from man."

If each of us set aside some time every day to pray fervently for a just and lasting peace, is it likely that wondrous results

would ensue?

For the answer to this question do not look to those who are skepical of prayer and ignorant of praying. The opinions on prayer of such men, says Dr. George A. Buttrick, are like those of tone-deaf men judging music. Here, as in any field of knowledge, we should turn to experts: men who speak of prayer from their own observation and ex-

"If prayers were not answered," says Dr. Buttrick in his book Prayer, "praying would long since have vanished in man's despair and pain."

"If praying did not produce results," said late Rufus Jones, renowned Quaker philosopher, "it would soon be weeded out of the human race. It would shrivel like the functionless organ."

In these times it is not prayer which has failed, but we who have failed to pray. Dr. Alexis Carrel believed that prayer is our greatest source of power. "But," he added,

"it is miserably underdeveloped."

God does not "force His assistance on us," says Father James Keller, founder of the Christophers. "He leaves us free to take it or leave it. The key to the door is given in Jesus' words: 'Ask,' 'seek,' 'knock.'

"It is as clear, as simple as the story of

the small boy struggling, mightily, to a heavy stone. He couldn't budge it. I pening to pass by, his father asked, 'Are you using all your strength?' 'Yes, I am,' said the boy impatiently. 'I don't think you are,' said the father. 'You haven't asked me to help.'

"The road to a just and lasting peace has

some mighty big stones in it."
"Some years ago," says Dr. Norman Vincent Peale, "the scientist Steinmetz prophesied the time would come when we would take prayer into our laboratories and release tremendous power. Countless men and women today, in the laboratories of their own lives, are proving what prayer can do. A hard core of thoroughly dedicated prayer-scientists, focusing spiritual power on men and events, could loose a redeeming, creating force in the world which no evil host, not even the Communists, could stand against. I believe there are tens of thousands of people around the world ready to join in the fellowship and adventure of such an experiment."

"We will never rid the world of war," says evangelist Billy Graham, "until we ourselves are rid of iniquity. What does God say? From whence come wars and fightings among you * * * come they not from your lusts? What has God promised? 'When a man's ways please the Lord, he maketh even his

enemies to be at peace with him."

"Is there any doubt," asks Dr. Rheinhold Niebuhr, that "our dedication would influence the policies of nations? The task of overcoming pride and arrogance, which assall every nation and are an obstacle to peace, is a religious one. Greater humility and patience in our dealings with other na tions must begin with a deeper humility and patience in us, as individuals. Granted we deal with an unscrupulous foe. Yet, how better than by the spirit born of our prayers purposes, the sincerity of our desire for peace?" can we convince him of the honesty of our

From our dedication through prayer we could expect a unity for peace among the world's peoples made vastly stronger because its source was spiritual, not merely military and material. Father Keller quotes the conclusion of Napoleon as he looked back from St. Helena on the ruins of his conquests: "There are two world powers, the sword and the spirit. The spirit has always vanquished the sword."

"Faith has indeed moved mountains," says President Eisenhower. "Ours is a time when great things must again be dared in faith." Millions profess that belief. Will we ac-

cept the challenge?

Quemoy and Formosa

EXTENSION OF REMARKS OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES Wednesday, February 9, 1955

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Quemoy and Formosa," which was published in the January 27, 1955, issue of the Manchester Guardian Weekly.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

QUEMOY AND FORMOSA

The ambiguities of President Eisenhower's special message to Congress on Formosa are deplorable. The message is so clumsily constructed that it appears to contain a veiled threat of American attack upon the Chinese mainland. It says that the United States must be prepared to "take appropriate military action" against "any concentration of Chinese Communist forces obviously undertaken to facilitate attack upon Formosa." It says this after citing the shelling of Quemoy in September as part of "a series of provocative political and military actions establishing a pattern of aggressive purpose." Communist purpose, it says, is the conquest of Formosa. Quemoy is described as "one of the natural approaches to Formosa." It suggests that American obligations should not be enlarged beyond Formosa and the Pescadores, but adds that "unhappily" the United States must take into account "closely related localities" and actions which "might determine the failure or success" of an attack upon Formosa. Since Quemoy is a "natural approach" to Formosa it is presumably a "closely related locality." concentrations of shipping at Foochow or Amoy and concentrations of aircraft at nearby mainland airfields may be regarded as "undertaken to facilitate attack upon Forthey are presumably the concentramosa." tions against which American forces must be ready to "take appropriate military action." Thus the message can be read as threatening an American attack upon the mainland. That may or may not have been President Elsenhower's intention-it probably was not-but it is the effect. It gives apparent credibility to some of the Communist propaganda claiming that the United States is planning an attack upon China. It is a gross blunder.

The damaging effect of these phrases cannot be undone by saying that their aim is no more than to assure the security of Formosa and the Pescadores. The threat to the mainland and the implicit American commitment to defend Quemoy remain. It does not help to declaim about "the free world's stake in a free Formosa." Nine-tenths of the free

world has grave doubts about the kind of freedom provided by Chiang's regime (even if it has graver doubts about the Com-Nor does it help to speak of the munists). loss of Formosa as "breaching the island chain" which constitutes the "geographical backbone" of American security, for Okinawa and the Philippines complete that chain without Formosa (even if the chain is re-garded as essential). And none of these things justifies a belligerent threat or will help toward the kind of peacemaking which President Eisenhower seems to have wanted. Even the offer of American military assistance for the "redeployment" of Chiang's troops, conceived at first as a means of withdrawing them without provoking further fighting, has been so phrased that it may be read as meaning that those troops may merely be consolidated in better positions near the mainland. The wretched tragedy is that this American initiative, intended to promote a settlement, is going to have the opposite effect. The damage caused by Monday's message will be hard to undo.

Is Dispersal Obsolete?-Part I

EXTENSION OF REMARKS

HON, RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. BOLLING. Mr. Speaker, in connection with House Concurrent Resolution 66, which provides for a joint committee to study the feasibility of industrial and urban dispersal as a means of defense against H-bomb attack, there follows part I of an article by Donald Monson which appeared in the December issue of Bulletin of the Atomic Scientists:

IS DISPERSAL OBSOLETE? (By Donald Monson)

Since 1945 the Bulletin has called for dispersal—that is, defense through decentralization—as the only real protection against nuclear weapons. In this it has been joined by most city planners, who have also held that space is the only effective "before the fact" defense against the A-bomb. In 1953 project East River, in the sections on the reduction of urban vulnerability, presented two dispersion alternatives:

(a) The direction of all new urban construction away from congested central areas to their outer fringes an' suburbs in lowdensity continuous development.

(b) The prevention of the metropolitan core's further spread by directing new construction into small, widely spaced satellite towns, coupled with the breaking up of the central city into a number of smaller towns separated by broad open firebreaks containing escape highways, parks, etc.

Just as these ideas were beginning to be understood, the H-bomb upset the public and defense authorities alike. In this rapid advance in destructive techniques, defense by any system of dispersal has been seriously questioned. Prof. Hornell Hart came to the conclusion that dispersion was obsolete and was essentially like matching a sleeping tortoise against a racing automobile.

Four new developments have been discussed in the public press which bring into question the effectiveness of urban dispersal:

(a) The increased power of the H-bomb, alleged by AEC Chairman Strauss as now

capable of knocking out "any" metropolitan complex.

(b) The radioactive fallout accompanying an H-bomb explosion, which is said to extend well beyond the area of blast and heat.

(c) The alleged accuracy of interconti-

nental ballistic and guided missiles.

(d) The rumored C-bomb, whose lethal

(d) The rumored C-bomb, whose lethal radioactivity would endanger not only metropolitan areas but, in the more lurid reports, "wipe life as we know it from the earth."

The maximum implications of the above four items, taken together, leave little hope of using present city planning practices to achieve a demonstrably greater measure of safety under attack. City planners cannot be blamed for throwing up their hands and going back to their profession along the less awesome, preatomic lines. They are unable to deal with the threats posed by the new weapons because there is no information generally available. The Effects of Atomic Weapons, based on the Hiroshima and Nagasaki explosions, has not yet been brought up to date by the AEC. The writer, therefore, offers the following discussion, incomplete as it may be, on the basis of such unclassified data as was available to him from published sources, supplemented by unpublished data supplied by Ralph Lapp.

THE BLAST AND HEAT EFFECTS OF THE H-BOMB

The Civil Defense Administration has classified possible blast damage from nuclear attack into the following four damage zones:

Zone A: Complete destruction of all structures:

Zone B: All structures severely damaged; if repairable, must be vacated for repairs; Zone C: All structures moderately or se-

Zone C: All structures moderately or severely damaged; if repairable, must be vacated for repairs;

Zone D: Buildings apt to be moderately or lightly damaged; need not be vacated for repairs.

It is assumed that in a dispersal program new construction would be far enough from probable ground zero to fall into Zone D. As a bomb will not necessarily fall in the geographic center of the built-up area, point zero, for dispersal planning purposes, should be assumed to be anywhere on the rough circumferential line bordering the more-orless solidly built-up area of the central metropolitan city and its contiguous suburbs. Knapp 2 estimated that a 20-megaton bomb (the size of the April 1954 Pacific test) would extend the outer edge of zone C, insofar as blast damage is concerned, to a distance of about 15 miles from point zero. If the bomb is increased to the limit of the chart at 45 megatons, the distance would be about 20 miles. Increasing the curve by crude projjection to 100 megatons (assuming that the scaling laws hold), the distance would be about 25 miles, the curve seemingly becoming asymptotic at that point.

A related factor bearing upon the required open space between a new satellite town and the edge of the builtup area of the old metropolitan center, or between satellites, is the effect of the heat wave. Knapp puts the maximum safety level of thermal intensity at three calories per square centimeter. A 50-megaton bomb, he estimates, would exceed this amount only within the 20-mile limit on a very clear day—any haze in the atmosphere shortening the distance. Since the blast effects would carry the C-zone damage slightly further, it would appear that the thermal effects of the bomb are contained within the probable blast damage area and hence may be disregarded in determining the minimum dispersal distance between urban developments.

RADIOACTIVE FALLOUT

The enormous megatonnage of the H-bomb introduced a new factor into the catalog of the lethal effects of nuclear weapons: the impregnation with radioactivity of the dis-

lodged and volatilized material from the earth's surface below the exploding bomb, the particles of which are then carried for greater or lesser distances by air currents and then fall out over an area of considerable extent.

Lapp points out that the lethal effects of direct radiation from high megatonnage bomb bursts are contained within the primary damage zones of the heat and blast effects. The same is true of the lethal effects of the radioactivity in the cloud of steam resulting from a bomb bursting in, or near the surface of, a body of salt water. In the Bikini lagoon this steam bath is reported to have contaminated an egg-shaped area about 3 miles in length, well within the blast damage zone, and so may be discounted.

The fallout is a far more serious matter, Lapp points out that the extent and degree of radioactivity of the fallout depend on several factors: the power and composition of the bomb, height of the explosion, velocity and direction of the wind, and composition of the debris. The worst problems occur when bombs of high megatonnage are set off close to the earth's surface. These factors make it more difficult to set up definite rules for citing satellite towns to avoid the lethal effects of the fallout than in the case of blast and heat.

The fallout will, however, normally occur downwind and will be scattered by the combined effects of the surface winds and the characteristic 40-to-60 knot winds of the stratosphere. Because of the weight of the subsurface particles, half the debris can be expected to fall within the first 24 hours after the explosion, with the maximum activity in the first 3 hours. During this period the surface winds will govern the bulk of the fallout. The finer particles will be carried upward longer and farther by the upper air currents and will be distributed by both stratospheric and surface winds. Because of the rapid decay in radioactivity of most of the fission products, the major danger is in the first hours after the blast.

Since radioactivity is essentially a weapon against human beings rather than structures, relatively simple shelters covered by a few feet of packed earth seem to offer fair chances of surviving the lethal effects of fall-out, provided that the shelter is not infiltrated by air-borne radioactive particles, that a covered reserve of drinking water is at hand, and that people stay in the shelter long enough for the level of radioactivity to recede to tolerable amounts.

Meteorologists in the Civil Defense Administration should be able to supply city planners with charts, showing prevailing wind directions for all our metropolitan target areas and the sectors of the region most likely to be covered by the fallout shadow. In most areas it will be quite pos-sible to site satellite towns outside this shadow. As dispersal progresses, it may be necessary in some areas to locate new towns in the direction of the shadow either be-cause the wind is not prevalently in one direction or because the population is so large that not enough sites exist elsewhere. Even in this latter event, it seems advisable that no town should be located within the radioactive shadow at a distance less than 50 miles from ground zero. Planners will have to decide, in each metropolitan region, what relative weights can be safely assigned to (1) the new town's distance from the builtup area; (2) the estimated amount of time between the bomb burst and the arrival of the radioactive cloud; (3) the shelter program; (4) the length of time people can be expected to stay in the shelters; (5) the period during which the town may be contaminated; and (6) the evacuation of the people as soon as it is safe for them to leave the shelters.

Radioactivity resulting from atomic explosions may also, it has been said, be raised on a global basis to the point of affecting human genetics. Serious as this may be, it does not affect the question of dispersal directly and so is not considered here.

INTERCONTINENTAL BALLISTIC AND GUIDED MISSILES

Senator Stuart Symington, in a speech delivered on the Senate floor July 21, 1954, suggested that "within a few years it will be possible to deliver atomic and hydrogen weapons by long-range, intercontinental ballistic missiles * * * so precisely that any error in accuracy can be measured, not in miles, but in hundreds of yards."

If this is true, any kind of dispersion short of spreading the entire population evenly through the whole country will not be of much help. One thing, however, is certain: It is a great deal easier to hit an urban agglomeration of the size of one of our present great metropolitan cities than a series of small towns scattered at random in the land-scape. To destroy small satellite cities at long range, missiles would have to be of almost incredible accuracy or be guided by electronic devices which in turn would be subject to defensive measures.

THE COBALT BOMB

One of the more alarming possibilities in the advance toward the development of absolute weapons is the alleged theory that by substituting a cobait shell for the usual metal casing of the H-bomb, a weapon can be made which is capable of endangering whole nations, continents, and—say the more imaginative—the whole world. The writer has no way of evaluating this possibility, though it does not appear to be taken too seriously by the scientists.

HOW FAR IS FAR ENOUGH?

Summarizing the discussion so far, it is found that a rough distance of 20 miles from the edge of an existing metropolitan built-up area or between new towns is enough to insure reasonable safety for a satellite town, providing it is not located within the radioactive shadow. Taking as a basis Lapp's estimate of the area likely to be affected within the first few hours after a blast, such a new satellite town ought perhaps to be at least 50 miles from the built-up area. These distances represent compromises which would permit new construction to be located within our metropolitan regions and at the same time would minimize the danger of their being too severely damaged by future intercontinental guided or ballistic missiles.

In most metropolitan areas the problem of siting the first half-dozen satellite cities would not be too difficult. The New York metropolitan region in this respect presents the most difficult problem. There, any extensive dispersal on satellite principles—or any other, for that matter—on a scale set by the H-bomb might well necessitate a total reduction of the area's population and migration on a considerable scale outside the normally defined metropolitan area.

IS THERE TIME FOR DISPERSAL TO BE EFFECTIVE?

Even though they grant that satellite dispersion has theoretical validity, a number of writers have dismissed it as a practical defense measure on the grounds that there is not enough time for it to become effective. Discounting dispersion because of the time available fails to give proper consideration to a number of factors:

- (a) It does not recognize that the Soviets will not necessarily attack as soon as they have the wherewithal to do so.
- (b) It fails to differentiate between the two theories of dispersion.
- (c) It does not distinguish whether the purpose of the first steps in dispersion is a civil-defense measure intended merely to

cut down the number of civilian casualties or a means to insure that the economy can survive the shock of an all-out attack.

(d) It assumes that because absolute security is virtually unattainable relative security is of little value.

CAPABILITY DOES NOT NECESSARILY MEAN INTENTION

The year 1957 in Professor Hart's analysis is indicative of when the U. S. S. R. can strike, not when she may or will strike.5 For the purposes of this article, it is enough to that there are two schools of thought suggesting a delay in a Russian attack: The first is advanced by many economic and political observers and holds that as long as-the Soviets can advance their influence short of general war, they will not start world war III as they have no need to do so; the second is advanced by the proponents of a greater strategic Air Force, who hold that the ability of the United States to inflict massive retaliation on the Soviet homeland will deter the Communist dictatorship from risking world war III. As dispersion is not a substitute for either economic aid to our allies or an adequate strategic Air Force backed by high levels of weapon research and other suitable military defense measures, it is enough to point out that facing up to the situation and doing our best in all fields, strengthens the hope of an uneasy truce which may last for many years.

SCATTER VERSUS NUCLEATED SATELLITES

The fact that there are two distinct theories of dispersal—one which simply seeks to spread out the population at a lower density, another which locates industry and population in small satellite towns located at predetermined points in the metropolitan region—is not yet well understood. Dispersion as a simple reduction in density is based on the theory that the fewer people and the less industry per given unit of area, the lower the number of casualties and the less the property damage which will occur under any given bomb.

This is true as far as it goes, the chief attraction of this system being that it requires the least divergence from business as usual, the least change in the way we build and rebuild our metropolitan centers. However, this method also has severe inherent weaknesses, the chief of which is that it extends even further the unbroken developed area of our large cities—thus making them even bigger targets and at the same time even less efficient in their functioning than they are today.

Dispersion by acceleration of the flight to the contiguous suburbs only aggravates the long-recognized problems of the metropolitan city and its suburban area.

But the case against dispersion by scatteras-usual-only-more-so does not rest only on on the aggravation of old metropolitan problems. A general A- and H-bomb strike against the main population centers of the country would disrupt their present transport and communication grids, cause general fuel shortages, create shortages of skilled and general labor, and generate enormous demands for relief and rehabilitation. Scatter dispersion would make this situation worse in that the more the population is spread out, the more it will have to depend upon a high per-capita expenditure of transport and services to keep producing. The very de-mands and shortages resulting from a general air attack may well isolate a high percentage of the scattered population, making them of little value for continued production or relief work.

The satellite town system of dispersal is in sharp contrast to the above in that it meets the problems of the metropolitan area and does not add to them. Should the core of the area be knocked out, the satellite would

Footnotes at end of speech.

remain intact as a productive urban entity. A metropolitan region having a number of satellite towns would interconnect them with power, transport, and communication grids so that it would be virtually impossible to break contact between any two for more than a very short time.

THE PROBLEM OF SELECTIVE DISPERSAL

Another misconception as to the role of dispersion is found in its failure to define objectives. The Bulletin has pointed out editorially that the basic problem here is not a matter of reducing casualties-important as that may be but rather a question of insuring that the Nation will not be put out of action by an all-out attack. Dispersal by satellite towns is peculiarly adapted to this end. At the present time an appalling concentration of production, storage, and administration lies in the centers of a relatively few metropolitan areas. The extent tively few metropolitan areas. The extent of the damage which it is possible for an enemy to inflict on the Nation by striking at these concentrations is bad enough, but the resultant disorganization of the country may well decide the outcome of a war. It is this additional problem which a program of satellite dispersal can mitigate and which is the proper first objective of a planned dispersal program.

The nucleation of selected new construction into small satellite cities so as to minimize the need of expensive transport and other public facilities in case of attack is the positive aspect of such a program. a metropolitan center is destroyed, there will be an urgent need to conserve drastically all remaining transport, fuel, manpower, and supplies of all kinds. Having our population thinly scattered over great areas will contribute to the aggravation of the breakdown in case of attack. The negative aspect of the satellite dispersal program, therefore, becomes the prevention of the continuous spread of the central metropolis and contiguous suburbs, both for the sake of efficiency in a postattack period and to prevent the central area from becoming a more attractive target.

At first glance it might seem that dispersal by scatter would spread the population over a greater area than dispersion of the same population in small cities and thus give a greater measure of protection. Since missiles would presumably be aimed at the centers of the metropolitan areas, the problem is to keep any additional development from taking place at their peripheries, which are normally well within the H-bomb's danger area. Planless dispersion inevitably results in building, first, close to the periphery of the existing urban area, and then, as the density adjacent to the old builtup area rises, moving outward. This is inherent in our present way of building suburban developments, since the average builder cannot tie up his capital in land for long periods and must attach his project to some existing town which can supply him with public utilities. The net result is that, though any single unit of area in the metropolitan sprawl may have a lower density than a corresponding area in a satellite town, the bulk the scattered dispersed population would be in greater danger than in new towns because they would be living in areas which were extensions of the primary target area.

ADSOLUTE VERSUS RELATIVE SAFETY

Finally, there is the argument that there is no use in starting a program of dispersal because even at best it could not prevent a large number of casualties. A realistic appraisal of the time we may have in which to disperse must also, of course, recognize that war could come before a pattern of small cities emerges in many of our large metropolitan areas. This does not mean, however, that the effort should not be made to build as many satellite cities as time permits. As was stated above, the first purpose

Footnotes at end of speech.

of these new satellites is not just to save the lives of the lucky persons dispersed from the old city, but to pull out of the metropolis in ever-increasing volume the industry and workers which are necessary to the Nation's defense in case of war. Thus the industries in the first satellites would be selected and their management and workers given incentives to move to the new town. The cost of such incentives would properly be a national defense expenditure. As time goes on it would become increasingly difficult for an enemy to knock out our industrial plant; the bombing of our large cities would become less and less attractive to an aggressor.

Is Dispersal Obsolete?-Part II

EXTENSION OF REMARKS

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1955

Mr. BOLLING. Mr. Speaker, in connection with House Concurrent Resolution 66, which provides for a joint committee to study the feasibility of industrial and urban dispersal as a means of defense against H-bomb attack, there follows part II of an article by Donald Monson which appeared in the December issue of Bulletin of the Atomic Scientists:

DISPERSION AND THE METROPOLITAN AREA—THE REGIONAL PATTERN

The distances required by the H-bomb make the present halfhearted attempts at dispersion futile. Planners are in general agreement on the form a metropolitan region ought to take to meet the problem of dispersion. As project East River put it, "a central core and satellite pattern for metropolitan areas [have been] long recommended by professional city planners. * * • Existing metropolitan areas conform rather crudely to this pattern. Both classical statements in city planning and recent and progressive master plans for major metropoli describe a similar arrangement. This theory of metropolitan structure has never been seriously challenged." *

The application of the safe distances presented earlier in this article would not destroy the validity of this pattern, but to make this classical concept of the metropolitan city the basis of a national defense program for dispersal, means solving the problems in a field of government most marked by confusion and disorganization—the metropolitan region. This is the heart of the difficulty.

THE SATELLITE IN THE REGION

Robert E. Merriam, writing in the Bulletin's issue on decentralization and speaking as an alderman of the city of Chicago, was skeptical of dispersion because it was not advanced as a part of a solution of the greater problem of metropolitan govern-ment. "In the Chicago area, for example." In the Chicago area, for example," wrote Merriam, "there are an estimated 1,600 units of local government, many of them with important governmental func-tions. The horrible spectacle of some suburban communities in this area in 1950 refusing to cooperate even in the planning for civilian defense, the haggling over water supply, the perpetual fight over garbage dumps, the never-ending problem of indus-trial plant location, and the nightmare of seven major governments operating within the city of Chicago, all are symptoms of one of the gravest problems American democracy faces today. * * * To meet successfully all the growing problems of modern urban living, including the threat of atomic attack, requires a reorganization of the metropolitan complexes into some rational governmental, social, and economic patterns. The overlap-ping, duplicating, wasteful, inefficient sys-tem of governmental organization must be simplified." 1

Mayor Joseph Clark, of Philadelphia, speaking to the recent annual convention of the American Society of Planning Officials, suggested that a Delaware Valley authority would be an ideal framework within which to tackle the multitudinous problems of urbanization in the three States containing the Philadelphia metropolitan region. Such an authority, the mayor added, could more effectively handle the regional problems now spawning a series of ad hoc bodies working without adequate coordination.

Meanwhile, in the absence of a functioning regional authority in the Philadelphia area, we have seen in the last few years the location of a new major steel plant, Fairless, 7½ miles from the border of Philadelphia and just across the river from Trenton, N. a city already having a population of 128,000. The working force of the new plant is concentrated in the new communities of Fairless Hills and Levittown, where new homes for 16,000 persons were built in 1950 and 1951 alone. This new plant and the now towns indicate that rapid construction of a planned system of satellite towns is wholly feasible ven under our present mortgage and building practices. But in the absence of metro-politan direction and a program of planned dispersion based on knowledge of modern weapons, the towns were, unfortunately built between the plant and the builtup areas of Philadelphia. If the present trends continue, a few years will find that the net result of this dispersion was only to con-nect, with a solid mass of development, the existing Philadelphia area with the smaller concentration of Trenton.

NEED FOR FEDERAL LEADERSHIP

To break this impasse in metropolitan regional development, Federal leadership in the interests of national defense is needed. The central cities have long complained that they are being suffocated by their suburbs, by the flight of industry, the loss of their tax base; but only in a few cases in the last decades—notably Atlanta, Ga., and Toronto, Ontario—have any big cities managed to extend their boundaries and thus control the development of their metropolitan regions.

Many of our big metropolitan areas lie in more than one State and to expect them or the States to meet the problem unassisted is hopeless; even where the area is in one State, solutions are tied to the problem of political rivalries between farm and urban areas, the farm legislators siding with the

suburbs in questions involving their submission to regional controls.

The Federal Government has been increasingly concerned with urban affairs. The Bulletin has repeatedly carried articles by various authors listing the Federal powers and agencies which are already at hand and can be used to implement a dispersal policy. What is needed is coordination of these various programs to initiate an urban satellite dispersal program on a metropolitan basis.

The present Federal policy does not do this. In the industrial field, tax-incentive programs have given but a perfunctory nod to dispersal requirements, even on the merest scatter basis. The concentration of defense contracts with General Motors has not helped spread the base of industrial power, whether or not it may have reduced the national budget unbalance. The Federal housing programs, with their present emphasis on redevelopment and rehabilitation, largely ignore defense and dispersion considerations; highway programs are primarily directed toward relieving peacetime congestion. The budget ought to be balanced, our cities need rehabilitation, congestion should be relieved—but these measures can and should be coordinated with a metropolitan defense program through planned satellite dispersion.

CAN WE AFFORD DISPERSAL?

One of the arguments frequently heard against a dispersal program is that it is expensive and would mean that the national defense effort would suffer in other directions were such a program energetically followed. This is true, at least partially, of dispersion by scatter, which would be costly in terms of the public utilities and service facilities widespread low-density development requires; it is not true of a planned metropolitan dispersal program which, over a period of years, merely directs all new construction into a series of planned satellite towns. Such a program involves no abortive investments; what is built will be in the course of the normal growth of our cities. We will spend these sums anyway, even without metropolitan planning, and we may well spend them less efficiently. The role of of the National Government, charged as it is with responsibility for the national defense, is to break the Gordian knot of metropolitan disorder so that these normal investments in the Nation's growth can be made consistent with the demands of the country's security. In this light the question may well be asked whether we can afford not to disperse.

Adm. Ben Moreell, chairman of the Jones & Laughlin Steel Corp., recently analyzed the vulnerability of our iron and steel industry before the chief executives group of the American Iron and Steel Institute and properly termed the movement of industry to outlying sites as "progressive dispersion." He did not advocate the immediate wholesale dispersion of the iron and steel industry, but stated that within a realistic plan, as replacement of existing capacity becomes necessary at a rate of, say, 3 percent a year, one-quarter of the country's total capacity could be dispersed within 8 years. Admiral Moreell reported the estimated cost of such a 25-percent dispersal of plant facilities as \$9.236,000,000, with an additional \$2,500,000-000 required if all employees were also housed in the new towns.

Between 1940 and 1950, the total population increase in the 12 largest metropolitan centers of the United States was over 6,500,-000 persons. Of this increase, 4,700,000 were in suburban districts. If a policy of directing the suburban growth of these 12 areas alone into properly dispersed satellite towns had been instituted at the beginning of World

War II, almost a hundred complete new towns of 50,000 persons each would now have the necessary open space around them which alone can give any real protection against nuclear attack.

Joint estimates of the Labor and Commerce Departments forecast a new construction level of \$36 billion in the current year. This figure, taken with Admiral Moreell's estimate, for dispersing a quarter of the country's steel and fron ingot capacity, of about \$12 billion in 8 years, indicates that the problem is not so much to increase the rate of new construction as it is to direct such construction in the interests of national defense.

CONCLUSION

In conclusion, then, it seems reasonable on the basis of the evidence so far available that urban dispersal on a metropolitan system of satellite towns is still valid as a defense measure. The upper limits of the power of the new weapons have been delineated with sufficient precision so that if we build our new towns in any metropolitan region, about 20 miles from the edge of the buildup area of the old city and from one another, and a greater distance downwind, our new satellites will be relatively safe. Building such a series of new towns around each of our big cities is essentially the problem of metropolitan government, whose solution requires Federal leadership-leadership which already has most of its necessary tools at hand, and which does not necessarily mean greater national expenditures but rather the guiding of normal investment in the extension and redevelopment of our cities to give maximum efficiency and security.

The metropolitan pattern outlined above does not take urban life away from the sun and air and seek to protect it in some impregnable fortress deep in the bowel of the earth; it is the best way we know how to build our cities had there never been an atomic bomb. If the catastrophic threat of the new weapons forces us to build our cities in this way, then there will have been a silver lining to the grim cloud genius has released from the scientific bottle.

Abraham Lincoln

EXTENSION OF REMARKS

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. REES of Kansas. Mr. Speaker, the Honorable Homer Hoch, a former Member of the House from the congressional district I represent, delivered a tribute to Abraham Lincoln. This tribute was delivered more than 20 years

ago. It is a timely statement and one, I believe, the Members of the House and others who take the Congressional Record will be glad to read.

There is no new thing to be said of Lincoln. Nor is there a new thing to be said of the mountains or the sea or the stars. The mountains ever tower in solemn majesty above the drifting clouds, the mysterious sea ever sobs upon the shore, and the silent stars ever keep holy vigil above a tired world-but to mountain and sea and star men turn forever in unwearied homage. And thus was Lincoln. For he was mountain in grandeur of soul, he was sea in deep undervoice of sadness and mystery, he was star in steadfast purity of purpose and of service. And he abides. With the name of Lincoln tears are called from old men's eyes, and with the name of Lincoln childhood learns to lisp a patriot's devotion. And there is no new thing to be said of him-what need, for such as he. But while the Republic stands on whose altar he laid his great mind and heart, while liberty is cherished, while civic virtue and service and sacrifice are honored in the earth, the name of Lincoln will be spoken in undying love by the sons of men.

Address by Judge Learned Hand on Liberty and the Rights of Man, and Review of Published Papers and Addresses by Judge Hand

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Wednesday, February 9, 1955

Mr. LEHMAN. Mr. President, on Saturday night, January 29, the great American jurist, one of the modern glants of the law, the beloved Judge Learned Hand, of New York, received the annual human rights award of the American Jewish Committee. On that occasion, Judge Hand delivered a moving and compelling speech on the subject of liberty and the rights of man. I ask unanimous consent that his penetrating address be printed in the Appendix of the Record.

There has recently been compiled in a book the papers and addresses of Judge Hand, together with an introduction and notes by an eminent American journalist, Mr. Irving Dilliard. The title of the collection in its published form is "The Spirit of Liberty."

Recently there appeared in the noted British publication, The Economist, a review of this book. That review, written by a Mr. Hamish Hamilton, in itself makes fascinating reading, constituting, as it does a British recognition of the great contribution made by Judge Hand to the thought and literature of freedom.

I ask unanimous consent that the review entitled "A Great American Humanist," be printed in the Appendix of the Record, following the text of Judge Hand's speech before the American Jewish Committee.

There being no objection, the address and review were ordered to be printed in the RECORD, as follows:

A FANFARE FOR PROMETHEUS

(Full text of address by Judge Learned Hand at the 48th annual meeting dinner of the American Jewish Committee, Hotel Roosevelt, New York City, Saturday night, January 29, 1955)

Mr. Chairman, ladies, and gentlemen, I should have to be more than human, if was not staggered by the terms in which your president announced to me that you proposed to single me out for this unique evidence of your regard. In what I have to say I shall not try to justify him; rather I am going to suggest that you join me in asking what we mean by those "principles of civil liberties and human rights," of which he credits me with being a votary. You will agree, will you not, that we cannot go far in that inquiry until we have achieved some notion of what we mean by liberty; and that has always proved a hard concept to The natural, though naive, opinion is that it means no more than that each individual shall be allowed to pursue his own desires without let or hindrance; and that, although it is true that this is practically impossible, still it does remain the goal, approach to which measures our suc-Why then is not a beehive or an anthill a perfect example of a free society? Surely you have been a curious and amused watcher beside one of these. In and out of their crowded pueblo the denizens pass in great number, each bent upon his own urgent mission, quite oblivious of all the rest except as he must bend his path to avoid them. It is a scene of strenuous purposeful endeavor in which each appears to be, and no doubt in fact is, accomplishing his own purpose; and yet he is at the same time accomplishing the purpose of the group as a whole. As I have gazed at it, the sentence from the collect of the Episcopal prayerbook has come to me: "Whose service is perfect freedom."

Why is it then that we so positively rebel against the hive and the hill as a specimen Why is it that such protoof a free society? types of totalitarianism arouse our deepest hostility? Unhappily it is not because they cannot be realized; or, at least, because they cannot be approached, for a substantial period. Who can be sure that such appalling forecasts as Aldous Huxley's Brave New World, or Orwell's 1984 are not prophetic? Indeed, there have often been near approaches to such an order. Germany, at the end of 1940, was probably not far removed from one; and who of us knows that there are not countless persons, today living within the boundaries of Russia, and perhaps of China, who are not willing partners, accepting as their personal aspirations the official definitions of the good, the true, and the beautiful? Indeed, there have been, and still are, in our own United States, large and powerful groups who, if we are to judge their purposes by their conduct, see treason in all dissidence, and would welcome an era in which all of us should think, feel, and live in consonance with duly prescribed patterns. Human nature is malleable, especially if you can indoctrinate the disciple with indefectible principles before anyone else reaches him. (I fancy that the Janissaries were as fervent Mohammedans as the authentic Turks.) Indeed, we hear from those who are entitled to an opinion that at times the abject confessions, made in Russia by victims who know that they are already marked for slaughter, are not wrung from them by torture or threats against their families. Rather they come from partisans, so obsessed with the faith that, when they are told that the occasion calls for scapegoats and that they have been selected, recognize and assent to the propriety of the demand and cooperate in its satisfaction. It is as though, when the right time comes, the drones agreed to their extinction in the interest of the hive.

Nor need we be surprised that men so often embrace almost any doctrines, if they are proclaimed with a voice of absolute assurance. In a universe that we do not understand, but with which we must in one way or another somehow manage to deal, and aware of the conflicting desires that clamorously beset us, between which we must choose and which we must therefore manage to weigh, we turn in our bewilderment to those who tell us that they have found a path out of the thickets, and possess the scales by which to appraise our needs. Over and over again such prophets succeed in converting us to unquestioning acceptance; there is scarcely a monstrous belief that has not had its day and its passionate adherents. so eager are we for safe footholds in our dubious course. How certain is any one of us that he too might not be content to follow any fantastic creed, if he was satisfied that nothing would ever wake him from the dream? And, indeed, if there were nothing to wake him, how should he distinguish its articles from the authentic dictates of verity? Remember, too, that it is by no means clear that we are happier in the faith we do profess than we should be under the spell of an orthodoxy that was safe against all heresy. Cruel and savage as orthodoxies have always proved to be, the faithful seem able to convince themselves that the heretics. as they continue to crop up, get nothing worse than their due, and to rest with an easy conscience.

In any event my thesis is that the best answer to such systems is not so much in their immoral quality-immoral though they be-as in the fact that they are inherently unstable, because they are at war with our only trustworthy way of living in accord with the facts. For I submit that it is only by trial and error, by insistent scrutiny, and by readiness to reexamine presently accredited conclusions that we have risen, so far as in fact we have risen, from our brutish ancestors; and I believe that in our loyalty to these habits lies our only chance, merely of progress, but even of survival. They were not indeed a part of our aboriginal endowment: Man, as he emerged, was not prodigally equipped to master the infinite diversity of his environment. Obviously, enough of us did manage to get through; but it has been a statistical survival, for the individual's native powers of adjustment are by no means enough for his personal safety, any more than are those of other creatures. The precipitate of our experience is far from absolute verity; and our exasperated resentment at all dissent is a sure index of our doubts. Take, for instance, our constant recourse to the word "subversive" as a touchstone of impermissible deviation from accepted canons.

All discussion, all debate, all dissidence tends to question, and in consequence to upset, existing convictions; that is precisely its purpose and its justification. He is, indeed, a "subversive" who disputes those precepts that I most treasure and seeks to persuade me to substitute his own. He may have no shadow of desire to resort to anything but persuasion; he may be of those to whom any forcible sanction of conformity is anathema; yet it remains true that he is trying to bring about my apostasy, and I hate him just in proportion as I fear his success. Contrast this protective resentment with the assumption that lies at the base of our whole system that the best chance for truth to emerge is a fair field for all ideas. Nothing, I submit, more completely betrays our latent dis-loyalty to this premise to all that we pretend to believe, than the increasingly common resort to this and other question-begging Their imprecision comforts us by enabling us to suppress arguments that disturb our complacency, and yet to continue to congratulate ourselves on keeping the faith as we have received it from the Founding Heretics have been hateful from the be-ginning of recorded time; they have been ostracized, exiled, tortured, maimed, and butchered; but it has generally proved impossible to smother them; and when it has not, the society that has succeeded has al-ways declined. Facades of authority, how-ever imposing, do not survive after it has appeared that they rest upon the sands of human conjecture and compromise. And so, if I am to say what are "the principles of civil liberties and human rights," I answer that they lie in habits, customs—conventions, if you will—that tolerate dissent, and can live without irrefragible certainties; that are ready to overhaul existing assumptions; that recognize that we never see save through a glass, darkly; and that at long last we shall succeed only so far as we continue to under-"the intolerable labor of thought"that most distasteful of all our activities. If such a habit and such a temper pervade a society, it will not need institutions to protect its civil liberties and human rights; so far as they do not, I venture to doubt how far anything else can protect them, whether it be bills of rights, or courts that must in the name of interpretation read their meaning into them.

This may seem to you a bleak and cheerless conclusion, too alien to our nature to be practical. "We must live from day to -you will say-"to live is to act, and to act is to choose and decide. How can we carry on at all without some principles, some patterns to meet the conflicts in which each day involves us?" Indeed, we cannot, nor am I suggesting that we should try; but I am suggesting that it makes a vital difference-the vital difference-whether we deem our principles and our patterns to be eternal verities, rather than the best postulates so far attainable. Was it not Holmes who said: "The highest courage is to stake everything on a premise that you know tomorrow's evidence may disprove?" "Ah"—you will reply—"there's the rub. That may be "Ah"-you the highest courage, but how many have it? You are hopelessly wrong, if you assume the general prevalence of such a virtue; ordinary men must be given more than conjectures, if they are to face grave dangers." But do you really believe that? Do you not see about you every day and everywhere the pre-Not alone on the battlefield; cise opposite? but in the forest, the desert and the plain; in the mountains, at sea, on the playing field, even in the laboratory and the factory, yes (do not laugh) at the card table and the racetrack, men are forever putting it "upon the touch to win or lose it all." Without some smack of uncertainty and danger, to most of us the world would be a tepid, pallid show. Surely, like me, you have all felt something of this, when you have looked on those pathetic attempts to depict in paint or stone the delights of Paradise. I own that the torments of Hell never fail to horrify me; not even the glee of the demons in charge is an adequate relief, though the artist has generally been successful in giving veracious impression of the gusto with which they discharge their duties. But when I turn to the Congregation of the Blessed, I cannot avoid a sense of anticlimax; strive as I may, the social atmosphere seems a bit forced; and I recall those very irrever-ent verses of Lowes Dickinson:

"Burning at first no doubt would be worse, But time the impression would soften, While those who are bored with praising the

Lord, Would be more bored with praising him

By some happy fortuity man is a projector, a designer, a builder, a craftsman; it is among his most dependable joys to impose upon the flux that passes before him some mark of himself, aware though he always must be of the odds against him. His reward is not so much in the work as in its making; not so

much in the prize as in the race. We may win when we lose, if we have done what we can: for by so doing we have made real at least some part of that finished product in whose fabrication we are most concernedourselves. And if at the end some friendly critic shall pass by and say: "My friend, how good a job do you really think you have made of it all?", we can answer: "I know as well as you that it is not of high quality; but I did put into it whatever I had, and that was the game I started out to play." It is still in the lap of the gods whether a society can succeed, based on civil liberties and human rights, conceived as I have tried to describe them; but of one thing at least we may be sure: the alternatives that have so far appeared, have been immeasurably worse; and so, whatever the outcome, I submit to you that we must press along. Borrowing from Epictetus, let us say to ourselves: "Since we are men, we will play the part of a man"; and how can I better end than by recalling to you the concluding passage of Prometheus Unbound?

"To suffer woes which Hope thinks infinite;
To forgive wrongs darker than death or
night;

To defy Power, which seems omnipotent: To love, and bear; to hope till Hope creates From its own wreck the thing it contemplates;

Neither to change, nor falter, nor repent; This, like thy glory, Titan, is to be Good, great and joyous, beautiful and free; This is alone Life, Joy, Empire and Victory."

[From the Economist of January 22, 1955] A GREAT AMERICAN HUMANIST

Certain clichés used by the English in thinking about Americans are so widespread that they can virtually be called the settled English view of the American people. One such is the conviction that the mass mind has reached a further stage of development in the United States than anywhere else. country par excellence of the common man has such standardized interests, amusements, activities, prejudices and fears that if you know one, you know them all. Moreover, the type that is produced is not, culturally, of a very high order. Technology and gad-gets have swallowed up the higher things of life and the result, to quote the best loved cliché of all, is a society which has passed from barbarism to decadence without any intervening phase of civilization. Naturally, these prejudices were triumphantly confirmed during the McCarthy era when the junior Senator from Wisconsin not only appeared to be a symbol of barbarism or cadence (or both) but excluded most other Americans from the world's attention.

It is a pity that those who repeat the catchphrases most confidently are least likely to read the collection of papers and addresses of that great American jurist, Judge Learned Hand, now published together under the title of "The Spirit of Liberty." There they would find a personality, a style, and a view of life as far removed from the common, trivial, and the undercivilized mass mind as it is conceivable for a man to be. It is not simply a matter of urbanity and wit-as lively and on occasion as irreverent in his ninth decade as in this third—although the direction of that wit, toward modesty and selfdepreciation, against pomposity and platitude, is in itself an essential element in the wise philosophy of Learned Hand. The contradiction to the great clichés about Amer-ica lies above all in the passionate concern for the freedom, the untrammeled idiosyncrasy of each individual mind that pervades virtually every page of this book. Learned Hand seeks freedom in the ultimate sense of each man being free to discover his own nature and to develop himself not as a unit in mass society but as an unpredictable, unjudgeable, unclassifiable human being who is known only to himself and can be

measured only by himself. Now this kind of liberty demands the utmost forbearance from everyone, for among man's dearest occupa-tions is undoubtedly that of "making friends and influencing people"—attempting to mold others in his own image, squeezing neighbors into the social conformity of mass reactions and mass ideas. Yet while this process may give comfort, it does not give freedom. As Judge Learned Hand suggests:

"The spirit of liberty is the spirit that is not too sure that it is right; the spirit of liberty is the spirit which seeks to understand the minds of other men and women; the spirit of liberty is the spirit which weighs their interests alongside its own without bias; the spirit of liberty remembers that not a sparrow falls to earth unheeded; the spirit of liberty is the spirit of Him who, near 2,000 years ago, taught mankind that lesson that it has never learnt but never quite forgotten: that there may be a kingdom where the least shall be heard and considered side by side with the greatest."

As these words suggest, freedom is not, however, the unfettered pursuit of individual preference. The freedom Judge Hand prizes is far from the freedom to concentrate solely on trivial pursuits or material success. "There is no democracy in human values, however each may cry for an equal vote. It is the business of the soul to impose her own order upon the clamorous rout." His own dedication is to such supposedly un-American activities as the arts, philosophy, the study of history, the cult of the curious mind, the practice of great moral fealties. But these things are not worth much unless the individual soul comes to them of herself "to establish a hierarchy appropriate to the demands of her own nature." It is the sec-It is the second-hand, the glibly accepted, the mass-conditioned that is the enemy of freedom. Men must be themselves or they will not be free.

It is not surprising that such a vision of liberty-so far removed from the accepted notion of America's uniform thought and conditioned social behavior—has conse-quences far beyond the personal sphere. Since its realization is inconceivable save tolerant-and decent-society, Judge Hand's voice has been raised probably more eloquently than any other in the free world to denounce the evils of the McCarthvismevils which occur certainly not only in America but in any society where the doctrinaire and the ideologue are ready to beat in the heads of those who will not be their brothers. It is not only to Americans that these words might be addressed.

"Risk for risk, for myself I would rather take my chance that some traitors will escape detection than spread abroad a spirit of general suspicion and distrust which accepts rumor and gossip in place of undismayed and unintimidated inquiry. I believe that that community is already in process of dissolution where each man begins to eye his neighbor as a possible enemy * * * where orthodoxy chokes freedom of dissent, where faith in the eventual supremacy of reason has become so timid that we dare not enter our convictions in the open lists, to win or lose '

This is the great tradition of western civilization, but in a stream of thought which western civilization has often lacked, to its appalling cost. The skeptical Erasmus, the tolerant Montaigne, the magnanimous Lincoln, each working against the grain of hard intolerance in his own age, come to mind in the reading of Judge Hand's papers, and it is to this select company of wise and charitable men that his contemporaries will assign him. As for the clichémongers, they can at least reflect that the society which produced McCarthy has also formed, advanced, and honored the most eloquent exponent of liberty and tolerance living in our day.

FHA Insurance

EXTENSION OF REMARKS OF

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. MULTER. Mr. Speaker, the House Banking and Currency Committee started hearings on February 9, 1955. on a request from the administration to increase by \$1 1/2 billion the FHA authorization with which to insure loans for dwellings and dwelling improvements.

The following open letter to our President is, indeed, apropos. It appeared in the January 1955 issue of House and Home Magazine.

One need not agree with all that is said there to conclude that serious problems in housing are crying for solution.

[From House and Home of January 1955]

AN OPEN LETTER TO THE PRESIDENT OF THE UNITED STATES ON BEHALF OF THE HOME-BUILDING INDUSTRY

DEAR MR. PRESIDENT: Now that the election is over, we urge, advise, and entreat you to find out for yourself what today's true situation is in housing and the housing agencieswhat needs to be done, what needs to be Your present easy money policies are

booming homebuilding as never before, so concern for our industry's profits today is no part of the reason we urge you to take a closer look at what has been or is being done with your implied approval.

just think you would be surprised and troubled by what that closer look would show you.

We think you would be troubled by the many unfairnesses manifest in both FHA investigations, troubled by the half-truths, and even bold untruths given official utterance, troubled by the politics that are being played, troubled by the general confu-sion in housing that is now hidden behind the easy money boom, troubled by the way this confusion and lack of direction is now frustrating the program you had previously endorsed for housing progress.

And we think it is high time someone spoke up honestly and clearly in defense of our industry and helped you find out what is going on.

Nobody doubts even for an instant your own high purposes in housing as in every other field, but you deserve and need better advice on housing than you have been getting these past 9 months.

Little of this advice has been constructive. Much has been bad, and some has been dangerous for your administration.

Some of this bad advice must have come from men who are themselves uninformed on housing and do not understand the very complex partnership of Government and business through FHA that changed homebuilding from a backward handicraft to a dynamic industry and made it a mainstay of national prosperity-all at no cost to the taxpayers.

But most of the bad advice must have come from men whose primary interest in housing is political rather than social and economic-advisers who care less about helping you find better solutions for our many remaining housing problems than they care about shouting up an old scandal for partisan advantage.

We endorse and support your basic concept of government by delegating responsi-bility to able lieutenants and then relying on their guidance.

We only wish you would put your faith in just such strong and well-informed lieutenants in the field of housing, too.

Your administration got off to a wonderful start in housing because you picked your first housing advisers from the outstanding leaders of our industry—architects, builders, lenders, realtors, suppliers, and spokesmen for the public-interest groups most deeply concerned with better homes. These men helped you develop a fine new middle-ofthe-road program of housing progress and reform—a program to save the taxpayers billions of dollars, a program to bring hous-ing policy back in line with changing housing needs, a program to raise housing standards and build more quality homes, a pro-gram to reverse the spread of blight.

Who persuaded you to turn away from these informed counselors?

In difficult times like this it is worse than

confusing not to know who is calling the

Who were the men from other departments and agencies who moved in on housing last April? Who forced the hand of the Administrator to whom titular authority for housing had been given? Who were the members of your fateful five-man housing committee? Is this committee still in charge?

No doubt these new advisers told you they were driving out corruption, restoring faith in the Government services, cleaning up abuses, and enforcing long-needed moral

But if you wish to get at the truth quickly. you might do well to insist on a straight

answer to these four questions:

Question No. 1: Has the FHA purge raised the standard of public service as you hoped?
You will find the answer is "No." The purge has driven more good men than bad out of FHA, eliminated more livewires than deadwood. The headline-hunting methods used to expose a few malefactors have so discredited, dishonored, and demoralized the agency that able and devoted public servants are quitting faster than FHA can replace them. You were fortunate, indeed, Norman Mason was willing to accept the post of FHA Commissioner under such difficult circumstances, but did you know that for 8 months he has found it impossible to get a good permanent man to fill even the No. 1 job on his staff? Too few people realize the enormous handicaps under which he is trying to rebuild the FHA organization and

Question No. 2: Has the attack on FHA

won the respect of men who know?
Once again the answer is "No."

restore its morale.

the housing industry there is hardly a leader who does not believe the purge is more political than moral. It was not a Democrat but the Republican president of a big New York bank who explained angrily that FHA was the best of all the New Deal agencies, so the Republicans felt they had to do something to discredit it.

Everyone agrees that corruption must be rooted out of Government and malefactors must be brought to justice. But 'no one familiar with the great public service FHA performed over 20 years in raising housing standards and enabling millions of families to buy better homes will believe it was nec-essary to shame its entire staff to expose a few men who had fallen for temptation.

Question No. 3: Are the probes and purges furthering your own housing program?

Once again the answer is "No." Only the most debatable feature of the new housing law is really working-the extreme liberalization of insured and guaranteed mortgage credit put into effect at the peak of a building boom. The more constructive ideas and reforms you sponsored are being largely nullified, partly by some of the mistaken restrictions tacked onto your program as a result of the scandal headlines, partly because Congress declined to let FHA spend enough of its own income to handle its new assignments, partly because the purges have so terrorized the agency around which your housing program was built, that it is afraid

to assume responsibility.

Question No. 4: Has the probe brought a salutary reform in the use of Federal mort-

gage credit?

Once again the answer is "No." partisans have noisily locked the door through which 608 builders mortgaged out 6 years ago,1 but what if anything did they do to halt equally questionable happenings in 1954—happenings which are worrying every responsible leader of our industry?

Today the housing shortage which may have justified section 608 is long past; yet your administration is now guaranteeing not 90 percent but 100 percent loans on houses selling for nearly twice the 608 limit. How can this fail to inflate prices and focus buyer interest on easy terms rather than quality and longtime value? What greater temp-tation could be offered to take a big profit out of the mortgage money? Why do you think as much as \$300 is being bld to induce veterans to buy a \$12,900 house for nothing down?

We realize that you are already carrying tremendous responsibilities at home and abroad, responsibilities for war and peace, responsibilities for world trade and world prosperity. We realize that you must delegate many decisions, and so we hesitate to ask your special attention to the problems of our industry.

But here are four more reasons why we believe homebuilding should have your care-

ful consideration at this time:

1. Homebuliding is far too important to be left a political football: There is no other industry so dynamic, no other industry that can do as much to sustain the prosperity which is so essential to the success of your administration. There is no other industry which touches so closely the lives of so many millions of families, no other industry whose full production is so necessary if we are to raise our American standard of living.

2. There is no industry in which the Federal Government is so deeply involved, except perhaps, agriculture: Twenty-two years ago Fortune called housing the industry capitalism forgot, a disgrace to our freeenterprise economy. The partnership with Government first proposed by President Hoover and realized under Presidents Roosevelt and Truman has brought the industrial revolution to homebuilding and raised housing standards from coast to coast.

3. Your party has walked into a dangerous political position in housing:

The Republicans have lost control of the Senate and House investigating commit-

¹ This magazine is no apologist for everything that went on under sec. 608. years ago this month we called it a program of public risk for private profit and ex-plained in detail how a builder of reasonable acumen could take up to 12 percent cash out of his Government-insured loan. Except for filling in some names, all the recent headlines have revealed very little that Senator Capehart could not have read in Architectural Forum for January 1950. For that matter, they have revealed little that Senator Long did not warn the Senate to expect when he vainly urged the Senate to provide safeguards against mortgaging out back in 1948.

But sec. 608 was always recognized as an emergency measure to meet an explo-sive war-born shortage of rental housing for returning veterans; furthermore, the 608 program included a price ceiling of \$8,100 per unit and at least in theory set a loan ceiling of 90 percent of estimated cost.

tees—the sounding board for scandal that Walter Lippmann called the biggest prize at stake in last November's election. You could have real trouble if the Democrats decide it is their turn to make political hay of what your administration let happen in home finance in 1954.

Until the muckraking started last spring Republicans and Democrats had worked together for 20 years on a bipartisan housing program, and even last summer the Democrats gave you good support on the Housing Act which could have been-and still can be made—one of the outstanding legislative achievements of your administration. After what has happened in the past 9 months no one less than yourself can hope to reestablish that bipartisan collaboration in housing before it is too late.

4. There is still a tremendous need of constructive leadership in housing. Here are just a few of the major problems within homebuilding which merit your personal

How to get politics out of FHA and FHA permanently out of politics, just as everyone agrees the Federal Reserve should be kept out of politics.

How to reduce the Government's vast con-

tingent liability for mortgages.

How to reconcile the needless conflict between conventional and insured lending so that each can make its best contribution to help all Americans have better Would the English plan of insuring only the risk portion of the loan be better as well as cheaper than our system of charging too low a premium on the risk portion and too high a premium on the balance?

How to help the FHA Commissioner in his single-handed crusade to modernize his agency's appraisal attitudes and find a better solution to the problem of standards.

How to bring enough more money into the mortgage market to make the new Housing Act work.

How to reconcile the FHA and VA lending programs and stop VA abuses.

For these and many other constructive steps your interest and guidance are urgently needed.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when

recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable). copies of the daily RECORD, of which I shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity pur-chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

EXTENSION OF REMARKS

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES
- Monday, January 31, 1955

Mr. METCALF. Mr. Speaker, one of the most effective weapons being used by the Russians in the cold war they are conducting against the United States, of which the palace revolution resulting in the overthrow of Malenkov is but an incident, is their cultural offensive which pictures us as a nation of materialistic barbarians. The U. S. S. R. is spending hundreds of millions of dollars a year on this drive alone and has done so for a long time.

Former Congressman Jacob K. Javits made the telling point before a special subcommittee of the House Education and Labor Committee in June 1954, that if "we do not want to fight the Russians with the atom bomb, then we have got to defeat their efforts to have communism take over the world with two other weapons—economic and cultural. We are not doing nearly what we should on the economic field, and many of us are working on that, but in the cultural field we have not even touched it."

Under the able chairmanship of the gentleman from Louisiana, James H. Morrison, a special subcommittee of the Committee on the District of Columbia of the House of Representatives, has begun hearings on several bills which would advance the cultural status of the Nation's Capital vis-a-vis other world capitals creating a Federal commission to formulate plans for the construction in the District of Columbia of a civic auditorium, including an Inaugural Hall of Presidents and a music, fine arts, and mass communications center.

Bills on the subject which are identical, similar, or related have been introduced by the gentleman from Louisiana. JAMES H. MORRISON; the gentleman from Pennsylvania, CARROLL D. KEARNS; the gentleman from New York, EMANUEL CELLER; the gentleman from New Jersey, Frank Thompson, Jr.; the gentle-man from Pennsylvania, George M. RHODES; the gentleman from Minnesota, Roy W. WIER: the gentleman from Connecticut, ALBERT P. MORANO; the gentleman from Minnesota, John A. BLATNIK; the gentleman from New York, ADAM C. POWELL, JR.; the gentleman from Arkansas, OREN HARRIS; the gentleman from New Hampshire, CHES-TER E. MERROW; the gentleman from New Jersey, HARRISON A. WILLIAMS, JR.; and myself.

One of the most telling statements in support of these bills was presented on behalf of the Congress of Industria' Organizations by former Congressman Thomas A. Burke, of Ohio, presently chief of congressional liaison for the CIO. Mr. Burke pointed out that ours is the only great nation of the world today which is not actively subsidizing the fine arts at home. This is somewhat ironic, he goes on to say, since, for many years we have been actively subsidizing the fine arts abroad, and he gives several examples of this. This statement is also included here.

This presentation of the concrete steps that are being taken to give the lie to the expensive propaganda efforts of the U. S. S. R. would not be complete without mention of the President's special fund for United States cultural representation abroad, a report on which was submitted to the Congress on January 12, 1955, by Dr. J. L. Morrill, Chairman, United States Advisory Commission on Educational Exchange of the Department of State. An excerpt from the report—House Document No. 67, 84th Congress, 1st session—is included here also: STATEMENT OF THOMAS H. BURKE, CHEF OF

CONGRESSIONAL LIAISON, CONGRESS OF IN-DUSTRIAL ORGANIZATIONS, BEFORE THE HOUSE DISTRICT COMMITTEE, IN SUPPORT OF BILLS CREATING A FEDERAL COMMISSION TO FOR-MULATE PLANS FOR THE CONSTRUCTION OF A FINE ARTS CENTER IN THE DISTRICT OF COLUMBIA, TUESDAY, FEBRUARY 8, 1955

The CIO is delighted once again to appear in support of the proposal before this committee in H. R. 1825, introduced by Representative Morrison, Democrat, of Louisiana, and in identical measures sponsored by Representatives BLATNIK, Democrat, of Minnesota; Celler, Democrat, of New York; Mercalf, Democrat, of Montana; Morano, Republican, of Connecticut; Rhodes, Democrat, of Pennsylvania; Thompson, Democrat, of New Jersey, and Wier, Democrat, of Minnesota.

Our support for this legislation is not new. We have testified before previous Congresses in support of similar proposals, and, I might add, in support of measures which would go far beyond the action proposed in this pending legislation in support of a Federal program of aid to the fine arts.

Therefore, today we not only give our wholehearted support to this matter, but would urge upon this committee that it is a step long overdue. We would also like the record to show that, while we give our unqualified support to H. R. 1825 as far as it goes, we are convinced that a much broader program of Federal activities in the field of the fine arts is needed. This statement is made, of course, with the full realization that this broader program is not properly the responsibility of this committee, or properly within the scope of the legislation it is considering.

The present measure, which would create a Federal commission to formulate plans for the construction in the Nation's Capital of a civic auditorium with connected facilities making it a center for music and the fine arts, is a logical first step toward helping to over-

come a serious cultural lag. This deficiency today is proving to be a serious handicap to this country as it competes with the Soviet Union in the cold war.

Ours is the only great Nation of the world which is not actively subsidizing the fine arts at home. This is somewhat ironic. We have for many years been actively subsidizing the fine arts abroad. For example, quoting from the hearings on Federal Grants for Fine Arts Programs before the House Labor Subcommittee last June, page 111, Curt Schiffeler, president of the National Opera Guild of Washington, D. C., said:

"We are particularly interested in the creation of an opera house or art center and we sincerely hope that during the next Congress, we are able to get sufficient funds from Congress to begin the building of such an edifice, so sadly needed in our Capital. It seems almost wicked, when in the past few years we have spent some of our Marshall-plan money in rebuilding and rejuvenating six opera houses in Europe and here in our city, which is the most dynamic Capital in the world, today, we are lacking such a cultural facility."

In the same hearings, page 113, George Szell, conductor of the Cleveland Orchestra, is quoted with regard to the financial assistance which our country was giving to the Berliner Philharmonic Building, as follows:

"Surely if the money of United States taxpayers is being used to rebuild the home of the Berlin Philharmonic Orchestra, there cannot be any valid argument against this kind of money being used to help and support our own organizations."

While we have been rendering such assistance abroad, the fine arts in this country have clearly suffered. Since the current cold war is in large part a struggle for men's minds, the Soviet Union has throughout this period won a decided advantage from the deficiency of our fine arts program. Even as I am speaking, Russian artists and entertainers traveling abroad under large subsidies from their government are picturing the United States as a Nation of barbarians. At the same time the Soviet Union is sending the best of its ballet troupes and other artists abroad to picture Russia as the artist's dream of a Garden of Eden.

President Eisenhower has underscored the importance of stepping up our fine-arts program in his state of the Union message. On the more practical level of day-to-day government, Judge Learned Hand has emphasized that "An education which includes the humanities is essential to political wisdom."

As an organization which represents the working men and women of America, the CIO knows that the people of the United States have a deep and sincere appreciation of music, art, literature, and other cultural activities. We have constantly supported all efforts on a local level to maintain city art museums and civic operas, orchestras, and dramatic groups. To us it seems a national disgrace that the richest and one of the most culturally articulate nations of the world has not yet provided a national opera house and fine arts center in the Nation's Capital.

We know, however, the forces of narrow self-interest which have blocked all efforts to build such a center in the past. Former President Truman, in a speech reported in the Washington Evening Star of September 26, 1952, named these lobbyists against such legislation. According to the Star:

"In urging an auditorium and opera house, Mr. Truman recalled that as a Senator he had twice helped to push through the Senate legislation providing such a building. But he said the bills had been 'murdered in the House' by the efforts of lobbyists acting for cities around Washington. "They didn't appreciate the fact that Washington was to be the capital of the world, the President said. He said he had seen showplaces in Mexico City, Paris, and Rio de Janeiro, and he remarked: "There isn't a reason in the world why Washington shouldn't have a place where the greatest symphony in the world can play for the public."

In January of 1953 when President Eisen-hower was inaugurated, the people of our

Capital city suffered the humiliation of not being able to hold the Inaugural Ball in a proper manner. Because there was no auditorium adequate to the needs of the occasion, three separate buildings had to be used. Commenting upon the lack of facilities, Richard L. Coe, drama critic of the Washington Post and Times Herald, said in his col-

umn of January 21, 1953:

"These things could be handled in the municipal buildings, such as those possessed by San Francisco or St. Louis, or the National War Memorial Theater and Opera House, envisioned by Representatives Howell and Kearns. But future snafus are inevitable so long as the Capital of the Western World lacks the proper facilities."

The need for such a center is clear. equally clear that the need is not only that of the city of Washington, but it is a need of the Nation as a whole. The people of the United States are entitled to a national center for the fine arts in Washington. They will not permit the narrow, selfish interests of a few nearby chambers of commerce to deny the Nation this birthright. We urge immediate adoption of H. R. 1825.

LETTER OF SUPMITTAL

DEPARTMENT OF STATE, THE UNITED STATES ADVISORY COMMISSION ON EDUCATIONAL EXCHANGE, January 12, 1955.

The Honorable SAM RAYBURN,

Speaker of the House of Representatives. Sm: The United States Advisory Commission on Educational Exchange submits herewith its 13th semiannual report on the educational exchange activities conducted under the United States Information and Educational Exchange Act of 1948 (Public Law 402, 80th Cong.) from July 1 to December 31, 1954.

This report fulfills the requirements of section 603 of the above-mentioned act, which states that this statutory Commission shall transmit "to the Congress a semiannual report of all programs and activities carried on under authority of this act, including appraisals, where feasible, as to the effectiveness of the programs and such recommendations as shall have been made * * * to the Secretary of State for effectuating the purposes and objectives of this act and the action taken to carry out such recommendations."

The membership of this Commission is as follows:

J. L. Morrill, Chairman. Arthur H. Edens, Vice Chairman. Rufus H. Fitzgerald, member. Arthur A. Hauck, member. Anna L. Rose Hawkes, member.

A duplicate copy of this report is being furnished to the Senate.

Very truly yours,

J. L. MORRILL, Chairman, United States Advisory Commission on Educational Exchange.

(Enclosure: Advisory Commission's 13th Semiannual Report to the Congress.)

III. THE PRESIDENT'S SPECIAL FUND FOR UNITED STATES CULTURAL REPRESENTATION ABROAD

At its meeting, on October 4, 1954, the Department informed the Commission of the special \$5 million fund which had recently been appropriated by the Congress at the request of the President for his use to meet unusual circumstances arising in the international field. This fund is to be used (1) to increase United States participation, mostly through private industry in inter-national trade fairs, and (2) to encourage outstanding American cultural and artistic groups to visit abroad.

The President has appointed the Secretary of State to Chair a Cabinet committee to assist him in making effective use of this fund in spreading world knowledge of American progress in the performing arts through the democratic system of free enterprise. The President designated Mr. Theodore A. Strei-bert, Director of the United States Information Agency (USIA), as executive agent of

this Committee.

Two subcommittees, one under the chairmanship of the Under Secretary of Commerce and the other under the Assistant Secretary of State for Public Affairs, have been ap-pointed to provide general supervision and policy guidance over the two aspects of this special fund. The Department of Commerce Subcommittee is concerned exclusively with the participation by the United States in international trade fairs abroad. The Department of State Subcommittee, which is made up of representatives of USIA, the Bureau of the Budget, Foreign Operations Administration (FOA), Operations Coordinating Board (OCB), and Central Intelligence Agency (CIA), in addition to those from the State Department, is concerned with the cultural presentation abroad.

The Department of State is concerned with cultural presentations abroad of American performing artists, and the International Educational Exchange Service has been designated as the element of the Government responsible for the actual administra-

tion of this part of the program.

The International Educational Exchange Service presented to the Commission its detailed plans for administering the portion of the program concerned with cultural presentations abroad for review and comments. Attention was called to the proposed operating principles, developed by the Department of State and approved by the interagency subcommittee to provide guidance in the administration of this program. Briefly, these basic operating principles provide that-

1. To the maximum extent possible, all details should be conducted through private channels. Similarly, all domestic aspects of the program should be handled by private, nonprofit organizations under contract to

the Department.

2. Priority will be given to professional and amateur presentations of dramatic productions, musical comedies, operas, ballet productions, concert groups and individual singers, dancers and concert artists, and sports groups.

3. Financial assistance will be given only to performances abroad by such American individuals or groups as are generally recognized to be of the highest distinction in

their fields.

4. The selection of individuals and groups to be assisted should be determined in consultation with groups of private citizens who are generally recognized by the public as authoritative in the appropriate field.

5. Funds be used principally for the purpose of underwriting the cost of a free flow of certain professional and amateur performances through normal commercial channels to regular paying audiences by providing international transportation and by insuring the performers against potential losses, and to extend the travel of performers into areas not usually considered commercially feasible but which could fill a need for mak ing an effective cultural impact upon selected local communities.

6. Only projects of urgency in priority fields and areas, as indicated by comments, reports, or requests from Foreign Service

posts be considered for support.

7. Appropriate consideration should be given, especially in the fields of drama and music to the presentation by American performers of works by American writers and composers, and that normally assistance be given only to individuals and groups of American citizenship.

8. Appropriate clearances be obtained in connection with public relations and security problems involved in selecting individuals to

participate in this program.

In accordance with the provisions of the Department's policy, as set forth above, the American National Theater Academy (ANTA), a recognized private agency with competence in this field, was selected as the contracting agency to assist the Department in carrying out this project. A contract has been signed with ANTA, which has set up three panels (music, theater, and the ballet). composed of the most eminent and competent people in those professions, to advise ANTA, as an agent, in determining what artistic productions have the merit necesmeet the President's requirement sary to standards.

The Commission expressed its approval of this expanded program in international cultural exchanges and commended the Department of State for its proposed general administration of such a program through the auspices of a nongovernmental organization.

The Commission, moreover, unanimously approved a proposal, formulated by the Department, to be submitted to a leading private foundation for larger and continuing support of this program, supplementing governmental assistance.

Paying for the Mail

EXTENSION OF REMARKS OF

HON. JOSEPH F. HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. HOLT. Mr. Speaker, I should like to call the attention of my colleagues to the following editorial from the Washington Post and Times Herald dated January 29, 1955:

PAYING FOR THE MAIL

Postmaster General Summerfield has made a better case for raising the first-class post-age rate than President Eisenhower did in his recent message. Mr. Summerfield points to a virtual doubling of postal costs since the 3-cent letter rate was established 22 years ago. Overdue wage increases recommended to Congress will add to the estimated \$324 million postal deficit for 1955 unless they are offset by rate increases. A new firstclass rate of 4 cents for the first ounce and 3 cents for each additional ounce would bring in an estimated \$237 million more, and well warranted increases in second- and third-class rates would further reduce the

Recently this newspaper raised a question about whether first-class mail was not actually paying its way. The answer is that although first-class service under present rates has not incurred an out-of-pocket deficit, it fails to carry its fair share of postal costs. First-class mail in 1954 accounted for 51.9 percent of the total pieces handled (and with expedited service) but brought in only 39.3 percent of total revenue. In 1954 the cost of handling the average piece of first-class mail was 3.12 cents, as contrasted with 1.89 cents in 1932. The absence of an actual deficit at the 3-cent rate is explained by the fact that some pieces carry more than mini-

mum postage.

With costs continuing to increase, obviously an adjustment is necessary. At 4 cents the letter rate still will be a bargain. Apparently the same factors of cost, however, rule out hopes for restoration of two-a-day residential delivery. It is doubtful whether this concession to convenience would justify the \$80 million annual expense while the general postal deficit re-

What is to be hoped is that Congress will take a constructive and nonpolitical view of the need to raise postal rates. The American people are adult enough to understand that their lawmakers only kid them by keeping postal rates artificially low and making up the difference through taxation. Congress could spare itself the embarrassment of these periodic haggles by accompanying the increases with authorization for a permanent independent commission to decide on future rates.

Federal School Aid Limited

EXTENSION OF REMARKS

HON. VERA BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mrs. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following column by Doris Fleeson entitled "Federal School Aid Limited," which appeared in yesterday's Washington Evening Star:

FEDERAL SCHOOL AID LIMITED—PROGRAM ASKS MILLIONS, BUT BILLIONS ARE NEZDED; CAN PRESIDENT SEE ITS EMERGENCY PROPORTIONS? (By Doris Fleeson)

President Eisenhower's school aid program does not represent a serious attempt to deal with the national emergency in education.

It is little more than a letter of condolence to the localities and school authorities which are struggling against an enormous and growing shortage of classrooms.

The President's own Commissioner of Education, Samuel Brownell, has placed the current need at 370,000 classrooms. Federal cost estimates indicate that the job well done would cost more than \$12 billion.

The President has suggested only \$200 million in direct aid for 3 years, which is about \$65 million a year. Even if all went well and exactly as planned, it would build only a few thousand of the missing class-rooms.

School authorities are equally skeptical about the proposed plans to help school districts and States. Twenty States are said to have constitutional debt limits which will prevent any new borrowing. In both Maine and Wisconsin, the courts have declared school construction authorities unconstitutional.

The school experts say also that it would be at least a year before any results would show from the Eisenhower plan. Meanwhile, school enrollment is going up at a rate of more than a million a year. This year it is 30.8 million—up 22 percent over 1950.

The President's philosophical approach provokes as much gloom in school circles as

his practical suggestions. As they see it, he has dealt with what they regard as the gravest internal crisis in this democracy in the spirit of a Lady Bountiful who restricts her gifts to the worthy poor.

The reference is to the President's ban

The reference is to the President's ban on outright grants except to communities too poor to build their own schools. There will be no States and few communities willing to take the pauper's oath on this or any other proposition. Actually, many of the wealthiest States which spend proportionately the largest share of their revenues on education are among the most hard-pressed.

The idea that some parts of this country should publicly admit to their poverty and throw themselves on the mercy of richer States or the Federal Government seems to have appeal in many quarters. It emerges regularly at the annual conference of the State Governors and as regularly the overwhelming majority of the Governors turn the cold shoulder.

This quarrel is basic. The original architects of the welfare state—most of which the President has accepted, at least, in theory—believe in prompt and ample Federal action to meet national social emergencies like that confronting the schools. From their point of view the President's approach in the new message looks back—way back.

Perhaps one trouble with the present special school problem is that Washington draws to it for the most part the successful, the well-to-do, and the more mature citizens. Their children are not victims of the present cruel classroom shortage and, as a French philosopher said, one bears with equanimity the misfortunes of others.

Reciprocal Trade and Residual Cil Shipments to the United States and Canada

EXTENSION OF REMARKS

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following resolution adopted by the Brotherhood of Railroad Trainmen at their quadrennial convention in Miami Beach, Fla., September 22, 1954, on the subject of Reciprocal Trade and Residual Oil Shipments to the United States and Canada:

Whereas the Brotherhood of Railroad Trainmen has long been on record favoring such international trade relationships as are mutually advantageous; and

We are firmly committed to that approach toward international trade which strengthens the ties binding friendly nations, seeking thereby to promote the common defense against antidemocratic forces; and

We recognize the need of the United States and Canada for many raw materials and certain finished goods to maintain our industries and promote our standards of living; yet

We note the existence of a situation that does none of these things, namely, the movement to our shores of residual oil, which is shipped to us by certain large oil corporations at large profit to them; and

This is done because residual oil is a surplus commodity in these foreign countries where its production is by underpaid workers, a product of cheap labor whose uneconomic production costs make it possible for

residual oil to displace coal produced in the United States and Canada by union labor paid a living wage and moved by union railroad labor from the mines to the centers of industry; and

This situation has made many thousands of workers both in mines and on the railroads unemployed at times when other jobs are not available; and

This is a national disaster: Now, therefore,

Resolved by the Brotherhood of Railroad Trainmen, That this convention deplores the shipment of residual oil under these conditions, and seeks its removal from reciprocal trade agreements. To this end, a copy of this resolution shall be sent to the President of the United States, the Secretaries of State, Commerce, and Labor, both Houses of Congress for transmission to their appropriate committees, and to the Prime Minister of Canada, the Minister of Trade and Commerce of Canada, and to the President of the United Mine Workers of America.

The Folly of Low Tariffs

EXTENSION OF REMARKS

HON, DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. REED of New York. Mr. Speaker, I am opposed to H. R. 1, a bill designed to open the American market further to products made by cheap foreign labor.

Mr. Speaker, in order to maintain prosperity on our farms and in our factories and to maintain our standard of living, which is at once both the pride and the envy of the world, we must maintain reasonable tariffs to protect our industries and our workers from the competition of cheap foreign labor. I am as convinced of this as I am that to open our markets to a flood of low-cost foreign goods spells economic disaster to our Nation.

This deep-seated conviction of mine was not reached hastily. It is not the result of theoretical reasoning. Nor is it based on some nebulous economic hypothesis. It is the conclusion of experience.

If there were only one lesson which history had taught us since the founding of the Republic, it would be this—that tariff protection has brought us prosperity and that low tariffs have always left economic disaster in their wake.

Mr. Speaker, let us consider for a few moments the history of our Nation. Let us see how the raising and lowering of our tariffs over the years has had its impact on the economy and prosperity of the country. Let us listen with an attentive ear to what the great men of another generation, Democrat and Republican alike, have had to say concerning this historic issue.

After the war with England and the ratification of the treaty of Ghent, President Madison sent a special message to Congress in which he cautioned against destroying our commerce in the framing of a new tariff law. He urged consideration for our industrial enterprises, and had his Secretary of the Treasury, Alexander J. Dallas, make an estimate of

what amount of reduction would be safe. He made it plain that the protective feature of our tariff system was to be cautiously preserved. Contrary to his recommendations, the duties contained in the new tariff law were low and the economic progress of the infant Republic was checked.

Let me offer the testimony of a great Democrat. In the third volume of his History of the American Republic, Woodrow Wilson says on this early phase of a low-tariff policy:

It was manifestly injurious to every young industry that a flood of English imports should continue to pour into the country at the open ports. The remedy was a protective tariff.

Commenting on the results of the Tariff Act of 1816, Senator Tom H. Benton, of Missouri, a southern Democrat, declared:

No price for property, no sales except those of the sheriff and the marshall; no employment for industry; no demand for labor; no sale for the products of the farmer. Distress was the universal cry of the people.

In similar vein, Henry Clay had this to sav:

If one desires to find the 7 years of greatest adversity in this country since the adoption of the Constitution, let him examine the 7 years before 1824.

Even Thomas Jefferson, living in retirment at Monticello, wrote to Silliam Simpson and spoke of the grave danger of tariff duties so low that British merchants could override them.

What was done following the period of distress caused by the low Tariff Act of 1816? In 1818, 1824, and 1828, protective measures were enacted. Industrial progress was so substantial that Daniel Webster surrendered his freetrade theories in the face of the overwhelming physical facts and was forever afterward a stanch protectionist. Moreover, Andrew Jackson also testified to the benefits derived from the higher duties under the act of 1824 in these words:

Our country presents on every side marks of prosperity unequaled perhaps in any portion of the world.

A compromise bill to pacify the freetrade element, the exporters of cotton, which act was introduced by Henry Clay, became law on March 2, 1833. What happened? Foreign commerce rode over these reduced duties and calamity followed; 1837 was the year of the first great American depression. Distress followed until duties were again advanced to the protection point.

This disaster caused by the compromise act, reducing duties on imports, was repaired by a tariff bill in 1842, which carried duties high enough to encourage American industries. Under this tariff act in the 4 years between 1842 and 1846, the country entirely recovered from the depression.

Let me call as a witness to the effect of the increase on duties under the Tariff Act of 1942, the Honorable John M. Berrin, United States Senator from Georgia. He declared:

The credit of the Government was prostrate and has been redeemed. The Treasury was empty, it is now replenished. The commerce and navigation of the country

have increased. Its agricultural condition has improved.

Next came the election in 1844. The election of Polk called for reduction in import duties. As a result, the Democratic Congress reduced tariffs under the Tariff Act of 1846.

The country was prosperous when the so-called Walker tariff bill became a law. The evidence of this is recorded in President Polk's message to Congress in that same year, which reads as follows:

Abundance has crowned the toil of the husbandman, and labor in all its branches is receiving an ample reward. * * The progress of our country in her career of greatness, not only in the vast extension of our territorial limits and the rapid increase of our population, but in resources and wealth, and in the happy conditions of our people, is without an example in the history of nations.

Three physical events staved off the evil day of this low Tariff Act of 1846. The Mexican War, discovery of gold in California, and the Crimean struggle in Europe which involved Great Britain, France, Germany, and Turkey.

The day of doom to American industry, labor, and agriculture came when peace

When peace came to the Old World the vessels which had been employed in supplying strength for each battling nation were released and the importers' flag flew through our open ports. American markets were flooded with cheap wares from abroad, and the political sin of a low tariff brought its inevitable disaster.

As usual, the free traders, refusing to profit by past experience, closed their eyes and ears to facts and logic and instead of meeting the problem by protection, forced a further reduction in tariffs in 1857.

Let a Democrat describe what followed. President Buchanan in his message to Congress in 1858 said:

With all the elements of national wealth in abundance our manufacturers were suspended, our useful public enterprises were arrested, and thousands of laborers were deprived of employment and reduced to want. Universal distress prevailed among the commercial manufacturing and mechanical classes.

A financial crisis swept the country. The depression of 1857 in many ways exceeded in violence that of 1837. After the low tariffs had been in operation for 3 years, President Buchanan, on December 4, 1869, said, regarding the widespread disaster:

Indeed all hope seems to have deserted the minds of men.

This indisputable evidence of the devastating result to the country under a low-tariff policy was recorded not only when President Buchanan went out of office in 1861; but also, to look ahead for a few years, when Grover Cleveland went out of office in 1897, and when Woodrow Wilson went out of office in 1921.

Horace Greeley has left his testimony as to one of these devastation periods in these words:

The 3 years of low duties, as in two former periods of relatively free trade, had been years of general depression, of numerous bankruptcies, of labor widely destitute of

employment, of enormous and harassing commercial indebtedness abroad and of stagnation in improvements at home. Protection has proven beneficial to all the American people.

Mr. Speaker, there is no doubt but that during the 14 years prior to the Civil War when the party in power made no effort to safeguard enterprise of an industrial nature in this country, the fatal and unavoidable consequence was that few competitive mills or factories were built and labor and agriculture suffered.

This surrender to foreign influence and interest came to an end when the Morrill Tariff Act of 1861 restored the American protective tariff policy. Industry and agriculture were immediately rejuvenated. Under the protective tariff the Nation had expanded tremendously, and, by 1872, was nearing the crest of a new era of prosperity. However, the country had still not learned the lesson of bitter experience. Again there was agitation for lower tariffs, and in the act of 1872 very substantial reductions were made. Again the Nation entered into a period of depression marked by the panic of 1873.

There was some upward adjustment of tariffs by the act of 1883, although, however, on the whole, no important changes were made until 1890.

In 1890 Congress passed the so-called McKinley tariff, intended to stimulate further development of agriculture and industry. The result was an average rate of duty of about 49 percent during the 3 fiscal years 1892–94. President Harrison said in December 1892, relative to the Nation's economic condition:

There never has been a time in our history when work was so abundant or wages were so high, whether measured by the currency in which they are paid or by their own power to supply the necessities and comforts of life.

When Grover Cleveland was returned to office in 1893, he immediately began to work for lower tariffs. Little wonder then that uncertainty and pessimism spread throughout the country, culminating in the financial panic of 1893. But still the lesson had not been learned. The freetraders remained blind to the teachings of history. President Cleveland epitomized this refusal to face the facts when he said:

With plenteous crops, with abundant promises of remuneration production and manufacture, with unusual invitations to safe investment and with satisfactory assurance to business enterprise, suddenly financial distress and fear have sprung up on every side. * * Values supposed to be fixed are fast becoming conjectural and loss and failure have invaded every branch of business.

The political campaign of 1890 was waged almost solely on the issue of free silver, but following the election of William McKinley as President, steps were immediately taken for returning our tariffs to protective standards. The Dingley Tariff Act, passed in 1897, provided a general increase in rates, and the country was quickly brought back to health, strength, and prosperity.

Following a split in the Republican Party, Woodrow Wilson was elected President in 1912, and once again the agitation for tariff reduction began. In 1913 the Underwood Tariff Act, adding many items to the free list, was enacted.

It is interesting in the light of the present low-tariff trade-agreement policy to listen to the prophecy made by Jonathan P. Dolliver during the debate on the Wilson measure. He said:

I, for one, am not discouraged even if Congress should enact this into law because I know that the people of the United States, having learned their lesson in the midst of broken fortunes and impoverished industries, will come back speedily to the historic standards of American commonsense.

Another prominent Democrat, commenting on the bill, said:

The disregard of experience, the closing of our eyes to truths chiseled on the walls of time, forever send us to the mourner's bench, sinners against political wisdom.

Mr. Speaker, it does, indeed, appear to have been our unhappy fate over the years—and apparently is still our fate today—to ignore those lessons of history for which we have paid so dearly.

The Democratic Party conducted a rebellion against reason and experience when it lowered the tariff rates in 1913. The country had been prosperous, but what were the consequences by the middle of 1914? Four million people walked the streets of America in idleness; industry was in distress; business lay prostrate; want had its foot inside the door of every home. It was a repetition of the same old free-trade tragedy.

Of course, the World War intervened and raised a wall of protection around the United States as high as the Embargo Act employed by Thomas Jefferson. War orders from Europe poured in like a torrent; imports declined; exports boomed. The day of reckoning was postponed.

However, the low Tariff Act of 1913 was on the statute books when war ceased. Let me quote from a Democrat as to what followed:

But after the World War was over, after the vessels of the Old World were released from their burdens to fly the shippers' flag, after Europe caught up in production and had something to sell, England with her surplus lying in warehouses, Australia with an abundance of wool, South America with cheap meats, and the Far East with vegetable oils, all turned to the land of gold, to America, and commenced dumping their wares upon our shores. * * A situation was immediately brought about which beggars description—ruin run riot from the Atlantic seaboard to the Pacific coast.

And then he said:

This could not have happened with a protective policy in effect.

He refers to the situation of the cattlemen in these dramatic words:

Stockmen, rich and powerful one day, found themselves almost the next without credit and without equity in their vast herds roaming the broad prairies and thousands of hills. The work of years wasted, the earnings of the hazardous task of a midnight guard riding by running steers when the deadly lightning played upon their barns, were scattered in the winds of tariff heresy.

The cattle industry suffered in particular. Every cattleman knows that when the First World War was over the foreign accumulated supply of wool and

beef came into our ports, overwhelmed the domestic markets, and one of the most flourishing industries of America was laid waste. That was under a low tariff bill. It was then that the Argentine began to send boat loads of frozen carcasses into New York and other American ports below the cost of production on the ranges of the Southwest. Also be it remembered that a cattle raiser of the Argentine can put his cattle upon the consuming markets of this country for less shipping rate than the producers of the South and West.

The negotiations for an Argentine trade agreement is temporarily suspended, but negotiations can be resumed. If it is, are the cattlemen of the United States again to be subjected to the same character of competition as they were under the tariff bill of 1913? It must not be forgotten that it was under the low tariff of 1913 that the cattlemen of Texas and New Mexico, and Arizona, and Wyoming, and other producing States saw their market glutted, paralyzed, and their credit destroyed in 1920.

The flood of imports which followed the war led to the Emergency Act of May 1921, which increased duties on agricultural commodities, and provided against unfair methods of competition, especially dumping. A qualified embargo was placed upon dyes and certain other chemicals. In 1922 the Fordney-McCumber Tariff Act was passed again providing protection to American industry. What did the Fordney-McCumber law do? It produced more revenue the first year of its operation than any tariff law that ever existed in this country. opened up factories. It put 5 million idle men back on the payrolls of America. It made purchasers and consumers for the farmers.

The Fordney-McCumber law went into operation in September 1922. By the time it had been in operation 12 months the sheep and wool industry showed complete recovery and agricultural conditions in the South had made notable gains. The cotton and peanut producers of Texas, Mississippi, Alabama, Arkansas. Georgia, Tennessee, Virginia, and the Carolinas were enjoying unparalleled prosperity. It was in May 1923, following the passage of this law that a commission of southern governors came to Washington and told President Harding that their States were doing well since a duty had been placed on vegetable oils and urged that the existing schedule be retained.

The postwar decade, 1920 to 1930, was one of great national prosperity and expansion. In 1930 the Smoot-Hawley Act was enacted containing a complete general tariff revision. Of course, the world-wide financial and economic depression had already commenced to spread to the United States from foreign areas by June 1930, when the act was passed. As a result, there is no statistical basis for estimating its effect upon the foreign commerce of this country since during the period 1930 to 1933 price of practically all commodities in the world collapsed and international trade was completely disorganized.

From 1934 on the trade agreements authority has been in effect. During this period the country has been in the depths of depression or engaged in war or busy rebuilding the war-torn economies of the rest of the world. There is, thus, little basis for estimating the effect on the economy of the present tariff program. Of course, one of the most tragic aspects of our pre-World War II trade was our tremendous shipments of war materials to Japan. Millions of tons of scrap metals were shipped from the United States to Japan during that period. The free traders insisted at that time that we were increasing the chances for peace by bolstering Japan's economy. On December 7, 1941, this folly was rewarded. Pearl Harbor was our first dividend on our investment in peace. Once again the lesson had to be learned—this time in the blood of American boys.

Mr. Speaker, once more we are approaching the fateful crossroad. The world is again in arms. The Soviet menace stretches from the banks of the Elbe to the shores of the Pacific. We are asked to delegate to the Executive even broader powers to lower our tariffs—once more in the name of peace and prosperity.

I wish to quote from a speech made by our beloved ex-President Herbert Hoover on his 80th birthday at West Branch, Iowa, the place of his birth. On this occasion Mr. Hoover, among other things, said:

In our foreign relations there are great dangers and also vital safeguards to freemen. During the last war we witnessed a special encroachment of the Executive upon the legislative branch. This has been through a new type of commitment of the United States to other nations. I am not going to argue legalisms—

Said Mr. Hoover-

for they do not go to the center of the issue. The real issue is in whether the President, through declaration or implication or by appeasement or by acquiescence, or by joint statement with foreign officials, can commit the American people to foreign nations without the specific consent of the elected representatives of the people.

Continuing, Mr. Hoover said:

There has been a grievous list of such commitments. They include international agreements which shackle our economy by limiting a free market. But more terrible were such executive agreements as our recognition of Soviet Russia which opened the floodgates for a torrent of traitors. Our tacit alliance with Soviet Russia spread communism over the earth. Our acquiescence in the annexation by Russia of the Baltic States at Moscow and the partition of Poland at Tehran extinguished the liberties of tens of millions of people.

Said Mr. Hoover-

Worse still-

was the appeasement and surrender at Yalta of 10 nations to slavery. And there was the secret agreement with respect to China which set in train the communization of Mongolla, North Korea, and all of China. These unrestrained Presidential actions have resulted in a shrinking of human freedom over the whole world.

From these actions came the jeopardies of the cold war. As a byproduct these actions have shrunk our freedoms by crushing taxes, huge defense costs, inflation, and compulsory military service.

We must make such misuse of power forever impossible. And let me say I have no fears of this evil from President Eisenhower. but he will not always be President.

Mr. Speaker, I, too, have the greatest confidence in President Eisenhower and his use of such powers as are granted to him by Congress; but in the light of what has been done by other Presidents in the use of executive power without reference to the people's representatives, the fact must not be ignored that President Eisenhower will not always be our Chief Executive.

Mr. Speaker, it is a fine thing to be concerned for our friends abroad, to wish to raise their standards of living, to strengthen the economies of the rest of the world. But, Mr. Speaker, in so doing let us not forget the United States. Unless our own economy is strong and our own people prosperous, the free world will indeed be in a hopeless plight.

Mr. Speaker, let us learn the lessons of experience before it is forever too late.

About Farm Prices: Congress Should Act Ouickly

EXTENSION OF REMARKS

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following editorial from the Progressive Farmer of February 1955:

ABOUT FARM PRICES: CONGRESS SHOULD ACT QUICKLY

To our Senators and Representatives From the Southern States:

DEAR FRIENDS: As the 84th Congress gets underway, what is the very first major economic subject that should have your atten-

Unquestionably, in our opinion, it is the serious situation caused by low farm prices and the worsened situation that exists because of (1) the relatively low prices the farmer gets for what he sells and (2) the relatively high prices he must pay for what he buys.

Nor is this a case where we are simply giving you somebody's opinion, theory, hear say, or belief. Please study on this page an authoritative chart based on the official figures of the United States Department of Agriculture itself. As compared with the official 1910-14 base, prices received by farmers now stand at only 239 percent, while prices paid (including interest, taxes, and hired labor) are 279 percent. And while the overall farm parity ratio on December 15, 1953, was 91 percent, by December 16, 1954, it had dropped to 86 percent.

In view of this bad and worsening situation, can you Senators and Representatives, chosen from primarily rural States, afford to look on with complacency? Or can you afford to be unconcerned if you turned to the recent 1955 forecast issue of one of America's leading publications concerned with economic trends, the U.S. News & World Report, and noted on page 67 a table headed—"The Climb in Real Income."

(Average weekly pay, after Federal taxes, with adjustments for increases in living costs since 1950, first year of Korean war.)

Then followed a table prepared after long and careful study by economic experts. shows net weekly earnings or weekly buying power of 20 leading classes of employed people in the United States in 1950, 1954, and their estimated income for 1955. Here are figures for one dozen of the most important of these 20 occupations.

	Buying power in 1950	Buying power in 1954	Estimated 1955 buy- ing power
A verage factory worker	\$57.19	\$59.70	\$61.37
Auto worker	69, 01	71.54	72.84
Steelworker	64.18	68, 14	71. 32
Soft-coal miner	66, 44	66. 84	69. 26
Machinery-manufacturing			
employee	63, 92	67.15	67.82
Farm-implement worker	61.61	64.36	65, 50
Railroad worker	58. 16	62.27	64.41
Schoolteacher	56, 63	61, 28	64. 25
Federal employee	60.74	60.87	63.60
Textile worker	48.22	45, 59	46.62
Clothing worker	43.02	41.91	43, 03
Farm owner	42.10	39. 52	37.24

What are the 2 most remarkable things developed by these statistics about 20 different occupations?

1. For all 20 occupations, income increased from 1953 to 1954--with only 3 exceptions, the former being 1.

2. For all 20 occupations, income is expected to increase in 1955, with only 1 exception. What is that one? Again the farmer.

And why is the farmer suffering? Is it because he is less industrious, less efficient? Is he falling down on his job of feeding and clothing America? Not at all. On the contrary, all this is happening when the American farmer is reaching a degree of efficiency unprecedented in his own occupation-and hardly equalled by workers in any of the other occupations in America. In 1910, 1 farm worker produced only enough farm products for himself and 6 others; in 1953, enough for himself and 17 others. In other words, in 1910 it took 35 Americans out of each 100 to produce crops and livestock to and clothe America; in 1930, only 25; in 1945, only 18; and in 1954, only 14.

Under such conditions, is it not high time for all five agencies that might do something about this matter to hear "the firebell at night," and do something about it? And what five agencies do we mean? Here is our list:

- 1. The President of the United States
- The United States Senate
- 3. The House of Representatives. 4. Our farm organizations-Farm Bureau,
- Grange, and Farmers Union,

5. The Secretary of Agriculture.

We are not passing on the justice of their complaint, but many farmers now say thisthat many to whom they looked for help have seemed more concerned about reducing price safeguards for farmers than about checking this terrible price-squeeze that is bringing trouble to nearly all small farmers and many large farmers as well. And right here we might add two other agencies that farmers are watching-and have a right to watch-with real concern and purposefulness. What are these two?

Here they are:

6. The Democratic Party.

7. The Republican Party.

What did the Republican presidential nominee of 1952, and present President of the United States, say about farm prices in 1952? Let's see:

At Brookings, S. Dak., on October 4, he at Brookings, S. Dak., on October 4, he said: "The Republican Party is pledged to the sustaining of the 90 percent parity price support and it is pledged even more than that to helping the farmer obtain his full parity, 100 percent parity, with the guaranty in the price supports of 90."

At Kasson, Minn., on September 6, he said: "As provided in the Republican platform, the nonperishable crops so important to the diversified farmer—crops such as oats, bar-ley, rye, and soybeans—should be given the same protection as available to the major cash crops."

Not only did the Republican nominee say these things, but the Democratic nominee said: "The Republican nominee has climbed on my platform." The Democrats promised in 1952—and again in 1954, "We'll do better by farmers than the Republicans have ever done."

Well, now the Democrats have Congress and the Republicans have the administration and farmers are ready to hold both parties responsible for what they do or fail

to do right now—in 1955.

The National Planning Association has already predicted that unemployment will rise this year and thereafter "unless Gov-ernment and industry act to increase con-sumer buying power and industrial production." What terribly disappoints us is that the President is trying "to increase consumer buying power" only by increasing hourly wages for labor, while proposing nothing im-portant about the more desperately needed increase in consumer purchasing on American farms.

Vice President Thomas Kennedy, of the United Mine Workers of America, Urges Realization of the Fact That the Devastating Effects of Reciprocal Trade Agreements on the Coal, Railroad, Chemical, and Allied Industries Reveal That the Slogan "You Buy Our Goods and We'll Buy Yours" Is Wishful Thinking and Not Supported by Actual Experience

> EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. VAN ZANDT. Mr. Speaker, the following statement by Vice President Thomas Kennedy, recently delivered before the House Ways and Means Committee, contains some of the sound objections against the unregulated flood of foreign products that are destroying the jobs of American wage earners:

STATEMENT OF THOMAS KENNEDY, VICE PRESI-DENT, UNITED MINE WORKERS OF AMERICA, IN RE H. R. 1, BEFORE THE COMMITTEE ON WAYS AND MEANS OF THE HOUSE OF REPRE-SENTATIVES

My name is Thomas Kennedy, vice president of the United Mine Workers of America. I live at Hazleton, Pa., and represent the United Mine Workers of America with respect to this legislation.

The meat of this bill is contained in section (A) starting on page 2, as follows:

The President is authorized:

"(A) To enter into foreign-trade agreements with foreign governments or instrumentalities thereof containing provisions with respect to international trade, including provisions relating to tariffs, to mostfavored-nation standards and other standards of nondiscriminatory treatment affecting such trade, to quantitative import and export restrictions, to customs formalities, and to other matters relating to such trade designed to promote the purpose of this section similar to any of the foregoing: Provided, That, except as authorized by subparagraph (B) of this paragraph, no such provision shall be given effect in the United States in a manner inconsistent with existing legislation of the United States."

I am not a lawyer, but I know a little about legislation and it seems to me after reading this section of the bill that Congress is giving to the President greater powers than have ever been given to any previous President; in fact, it is my thought that Congress is really abdicating and delegating to the President, legislative authority on this subject, which inherently belongs to Congress itself. Whenever we clothe the executive branch of the Government with authority to legislate, we are, in my opinion, getting away from the fundamentals of our form of government, and in my judgment, if this bill is enacted, the State Department will run the show from here on in with no regard for our own economic problems affected by international trade. From my personal experience I know of no department of Government which knows less about economic affairs in the United States than the State Department.

When the first reciprocal trade agreement was made back in 1934, I was one of a committee that met with Secretary of State Cordell Hull with reference to an agreement then under consideration with Venezuela. We talked about the repercussions on the coal industry that would be brought about by the importation and dumping of oil from Venezuela. With all due respect to Secretary Hull, who was an able and honest man, we could not interest him in any of the economic phases of trade agreements. His only concern seemed to be one of preventing wars and preserving peace in the world, and he repeatedly told us that these trade agreements would prevent wars. Well, they did not prevent wars. World War II blew up in our face and the world ever since has been in turmoil and trouble bordering upon war.

Our Government is now approaching the subject matter of reciprocal trade relations in the belief that by building up industries and production throughout the world we will be staying the hand of communism and prevent wars. Another purpose the propo-nents of this bill have in mind is virtually free trade. As one who has attended many international meetings of labor throughout Europe, it is my judgment that we have failed in this enterprise of stemming the tide of communism not only in Europe, but in Asia and in the Latin American countries.

We are told that if we buy foreign goods it will give those countries from which we buy. American dollars to purchase our goods. But this is not the way it works, because these countries shop around Europe and buy in the cheapest markets. With our dollars, France, Italy, Belgium, and the Scandinavian countries have been buying Polish coal. Belgium recently concluded a sales agree-ment direct with Russia to buy coal and other commodities. England has also purchased coal from some of the countries hind the Iron Curtain. These facts certainly sweep away the slogan "You buy our goods, and we will buy yours." It should better read, you take our goods, give us your dollars, and we will buy where we please in the cheapest countries, even though the goods we buy may be subsidized by governments.

Wage rates, wage standards and conditions of the workers in foreign countries are evidently never taken into consideration by governments in arranging trade agree-ments—to illustrate briefly: This Congress in the last session and in many previous sessions was told by the President of the United States, by the State Department, and Army engineers that the building of the St. Lawrence seaway and the building of power projects on the St. Lawrence River would aid in American employment and greater productivity in American industry and would result in greater trade between Canada and the United States. I was in Canada in the early part of October of last year and read a news release in one of the Canadian papers to the effect that the first contract for steel in connection with these projects was let, and the steel was not from the United States nor from Canada, but from Dortmund in Western Germany, where at this moment the Federal Government of Western Germany has in effect an import licensing system which pre-vents the importation of foreign goods or commodities where they would compete with like products and commodities of Western

Under the Schuman plan, in effect in 5 or 6 countries on the Continent as affecting coal and steel, that authority recently borrowed \$100 million, which was underwritten by our Government. I was recently at meetings in Paris and London and discussed this matter with delegates from some of the countries affected, and found out that very little of this is being used to improve wage and condition standards in the mining industry. The first \$25 million is to be used for building miners' homes and for transferring miners from high-cost areas to low-cost Creeping communism has not been stopped-and I know whereof I speak. seems to me that we are attempting to build up industry in foreign countries at the expense of our own industry in the United States-especially the coal industry.

I wish to call particular attention to the dumping of residual oil on the eastern seaboard, most of which comes from Venezuela-not a Communist dictatorship, but a military dictatorship, which from the standpoint of freedom and justice is as bad as a Communist dictatorship. Residual oil last year displaced over 30 million tons of American coal. We had in the American coal-mining industry in the month of December 1954 over 143,000 persons unemployed, with thousands of others working part time. If the dumping of residual oil were stopped and placed upon a quota basis, it would mean about 3 weeks extra work for the coal-mining industry. It has been pretty well established as public policy that the dumping of commodities on our shores is wrong and in violation of every concept of fairness and equity and yet the practice continues merrily along its way. I repeat, we are in favor of a quota system being applied to residual oil in much the same way as most of these countries prevent the importation of American goods and commoditles by a quota system.

Our State Department, which handles most of our international trade and other problems, and as they would continue to do under this bill as I have indicated, is not concerned with the economics in this matter at all. They want to bring about the prevention of wars and the preservation of peace, a very laudable objective, but they are evidently not concerned with the fact that our industries and our people should have our own interests first protected because the peace of the world, in my judgment, depends upon the strength and the greatness of our own country, and this can-not be accomplished by ruining the basic coal industry which, in the event of war, must be depended upon for energy not only in our own country, but also those of our allies. Surely with all of the statesman-ship in this Congress and this committee, we can find a better way to provide full employment and stabilization of our own industries and aid in stabilizing industries of other countries.

Unemployment in the coal industry in the United States affects many other industries adversely. This is also true of the chemical industry of the United States—much of it being based upon the byproducts of coal. District No. 50 of the United Mine Workers of America represents most of the

unionized employees in the chemical industry and is the largest labor organization in the chemical industry.
In 1953 there were 608 manufacturers of

synthetic organic chemicals in the United States with a total production for that year of about 29.1 billion pounds. Total sales in 1953 (less tars and crudes) were \$4 billion approximately 20 percent of the \$19,800,-000,000 sales for all chemical and allied products in 1953.

The coal and chemical industries are interrelated and as coal is an indispensable source of power, it, is also an indispensable raw material source of the synthetic organic chemical industry. The importation or chemical produced by cheap labor affects the employment opportunities and standard The importation or of living of the chemical workers directly and, in turn, the coal miners also. It does not stop there. It affects the employment opportunities and the living standards of employees in the vast number of industries where chemicals form an important part of the finished product.

To briefly illustrate this point—coal is often called the black diamond. The analogy obtains not only because both consist of carbon but because from both we get a rainbow of colors, one from the effect of light and the other from the action of various chemicals. If we follow through the manifold chemical and engineering changes that transform coal by the action of many other chemicals into literally a thousand chemicals which in turn throws a protective mantle over many another industry and, of equal importance, over a wise and prudent scheme of national preparednes and defense.

For example, \$1 worth of such chemicals makes salable \$100 worth of other products. Thus, \$60 million to \$70 million worth of such chemicals help mightily in the disposal and sale of \$6 to \$7 billion worth of other products entering our modern technical civilization.

To that extent companies in the chemical industry are thus customers and competitors of one another. Chemicals provide the essential ingredients that enter into the manufacture and sales of the countless multitude of other industrial products. similar extent employees in all of these industries are adversely affected, some directly, and others in the manner of a chain reaction by the impact of imports of chemicals produced by foreign countries by substantially cheaper labor and costs.

Last year, the total imports of chemical and allied products was about \$259 million. This is a 142-percent increase over the value of such imports in 1949.

Our tariffs on imports are now the lowest in relation to the value of imports of all the countries of the world.

The ratio of customs collected to the value of imports of the principal countries on the European Continent, as compared with the United States, is as follows:

Ratio of customs collected to value of imports

8	oundry.		
	United Kingdom	25.6	
	France	10.6	
	Italy	8.4	
	Germany	5.8	į
	United States	5. 1	

Now let us compare wage rates in the chemical industry of the above European countries with those in the United States, as follows:

Country	Average hourly rate	Average rate, including fringe benefits	
Italy Germany France England United States	\$0. 29 .33 .37 .53 1. 98	\$0. 52 . 50 . 58 . 65 2. 50	

Some people may argue that the higher productivity per man-hour or man-day in the United States should overcome or offset this disparity in wage rates, but the differ-

ence is too great.

It is true that the American worker in the chemical industry produced from 2½ to 5 times as many tons of chemicals per man-hour or man-day as his European counterpret. That vastly superior productivity is not enough to overcome the wage cost alone. It must also be taken into account our own present tariff disadvantage plus the ease and facility with which other governments may adjust the value of their currencies in relation to the value of our own to further enhance the advantage of their chemicals and other products in our market.

In addition to maintaining employment opportunities at American standards for the present number of workers in our labor force in the United States, there are about 1,600,000 young men and women coming of age each year. As our population continues to increase, the number of young men and women coming of age will be increasing pro-

portionately.

The number of new additions to our labor forces in the United States is now running about 500,000 per year. As our net population increases, the number of additions to our labor force will also increase propor-

These new additions to our labor force as well as the sixty-five-odd million in our present labor force must find employment opportunities, at American standards of wages and incomes, in our own expanding indus-

trial economy.

A brief word about preparedness or national defense: We are now and have been making vast expenditures for national defense. While we are doing this, it would be folly for the United States to adopt a policy authorizing a further reduction in tariffs that would tend to disable our domestic economy and particularly our synthetic organic chemical production markets, chemical research and, in turn, the employment opportunities of our people.

No important segment of our chemical nor of our coal-mining industry can be put in mothballs and then taken out in full

bloom in case of emergency.

Chemical research cannot be put in mothballs to be taken out in case of emergency. Even the tortoise would win that kind of

an industrial production race.

The skilled labor that is so vital to the operation and processing of chemical production and coal mining cannot be diverted to other work or idleness and then recalled in case of emergency—that time and technical know-how is only lost forever.

The military preparedness of our Nation and the nations of the world associated with us depends upon the live, active, operating scientific technical know-how to more than offset the numerically superior forces that can be arrayed against us.

Our security is in our economic health—that should be our first consideration.

Proponents of H. R. 1 are evidently not sure that the proposed bill will accomplish the result of putting more people to work in the United States because they offer to support legislation introduced to provide for industries and unemployed persons attached to those industries which may be adversely affected to be cared for by increased unemployment compensation, old-age pensions, and help for these industries. If reciprocal trade is what they claim it to be, why the need for such legislation?—and I might propound this question: Where are we going to move deplaced persons where they can find employment when practically every industry in the Nation is now affected by unemployment and part-time work?

Industrial plants, for instance those built in Scranton by the people, are only operating on a part-time basis due to the fact that they cannot get contracts from the Government because General Motors, the Chrysler Corp. and others are getting all of the work. How does Congress propose to solve this problem?

I personally suggested to a conference in Pittsburgh several years ago that unemployment compensation payments should be made for the full period of unemployment and not for 26 weeks as is now prescribed by law. I would further suggest that eligibility for pensions should be fixed at 60 years of age, if a person is unemployed. Regardless of this bill or any other bill, it should be done as a general relief proposition which I think is equitable and just under the circumstances.

The coal industry is basic to the security of this Nation and basic to the extent of supplying coal to other nations. It seems to me an overall proposition that H. R. 1 is not going to solve the problem, and it might be better for all concerned, if we put some teeth in the present tariff and trade relations program and speed it up. We could then require this agency (Tariff Commission) to make reports to Congress on trade agreements or tariff adjustments before they become operative. In this way Congress would be preserving its rights under the Constitution with respect to tariffs, reciprocal trade or any other matter relating thereto.

As given to the committee this statement deals particularly in relation to coal and its allied chemical industries. Other industries related to coal are also affected such as steel, lumber, explosives, machinery, and railroads, and I hope that my statement will be given the consideration that is due it before this committee and the Congress.

Puerto Rico-America's Exhibit A

EXTENSION OF REMARKS

HON. A. FERNÓS-ISERN

RESIDENT COMMISSIONER FROM PUERTO RICO IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1955

Mr. FERNÓS-ISERN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the Congressional Record, I am happy to call attention to an article published in This Week magazine with the Sunday edition of leading newspapers in a number of American cities on Sunday, January 30, 1955.

This article entitled "Puerto Rico: America's Exhibit A" tells how the island commonwealth which gets no point-4 funds for itself is showing students from 79 nations the best way to use theirs.

I am sure that all who read it will find this article by Henry La Cossitt valuably informative:

PUERTO RICO: AMERICA'S EXHIBIT A

Octavio Alzona is a captain in the Army of the Republic of the Philippines. He is attached to what is known as the Economic Development Corps which, since 1951, has been charged with the resettlement of exrebel Hukbalahaps who has surrendered after being promised safe conduct and land.

Resettlement, however, has proved to be a vexatious problem for which the government was not entirely prepared. So Captain Alzona was sent to, of all places, Puerto Rico, where I met him in an office of the Puerto Rican Department of State on Fortaleza Street in San Juan.

Captain Alzona was there because of a project that is proving to be one of the most effective international public-relations programs the United States ever had. That the idea originated in Puerto Rico, not in Washington does not detract from its value.

Washington, does not detract from its value. Captain Alzona was a guest of Harold Stassen's Foreign Operations Administration. He was one of some 1,500 students who, over the past 4 years, have been sent by 79 nations to see how Puerto Rico, in partnership with the United States, does it. He was studying Puerto Rican rural resettlement and related activities under what is known as the technical cooperation program, a joint operation of the United States and Puerto Rico. "What I learn here," Captain Alzona told me, "we can apply at home."

This is precisely what Puerto Rican Governor Luis Muñoz Marín, a Georgetown University alumnus, had in mind in the summer of 1949 when he went to Washington to suggest the program to President Truman. It was his idea that Puerto Rico—poor, underdeveloped, overpopulated, underresourced, struggling to raise its standard of living and achieve economic balance—could serve as a working model for point-4 applicants, most of which would be suffering from one or another—or all—of these iils.

Puerto Rico is part of the American political system and receives grants-in-aid in the manner of the several States, as well as other Federal financial help. Thus it is not eligible for point-4 aid as such, but the principle is the same, as President agreed. In 1950 the Puerto Rican Legislature appropriated \$50,000 to set up an office in San Juan and Washington then formally designated the island as a point-4 training center. The program has been operating ever since the bipartisan support, with the Interior Department acting as coordinator for FOA and the Puerto Rican Department of State. It is under the direction of an alumnus of the University of Texas and Columbia, Dr. Artura Morales Carrion, Under Secretary in Puerto Rico's State Department.

PARALLELS WITH INDIA

Applicants ask for point 4 funds for projects in almost every field: economic, political, or social. In each of these, Puerto Rico has an example of solid achievement.

Somebody has said that it is an emotional compulsion below the Rio Grande to have a case against the United States. This may be true—but 35 people from information offices in Latin American nations went home last March after 5 months study of community education, astonished at Puerto Rican gains.

Some students come from the colonies of other nations. Puerto Rico was once a colony itself and is now a free associated state, or commonwealth, and the students want, among other things, to see how this transition was accomplished. Among them, for example, was A. L. Adu, an administrator of the Africanization program of the Gold Coast, which is moving toward autonomy.

Indian students, of whom there have been more than expected, all remark on the similarities between Puerto Rico and India, despite the enormous difference in size. Both, they point out, were former colonies; both are poor and underdeveloped and overpopulated. One Indian, Junreivat Chinda, said the island's success or failure "is of first importance to millions living in underdeveloped areas throughout the world."

Western Hemisphere colonies also send students and it is a curious fact that most complaints against the program come from these. Many come for industrial education and attend the mammoth Metropolitan Vocational School at San Juan. Some say the school does not measure up to what Stassen's FOA said it was. The complaints are sifted and evaluated and the condition corrected, if possible.

Many colonials also come to observe selfhelp housing activities, a thing Captain Alzona studied for possible application in the Hukbalahap resettlement. These work out

something like this:

The jibaros, or people of the rural areas, are resettled on government land in communities in order that electrification, water facilities, and other government services, impossible to apply to scattered homes, may be brought to them. In the new community area they draw lots for their 300-squaremeter homesites. Then they build the houses themselves, with the help of their neighbors. The government furnishes the materials, which cost \$300, or which the owner is required to pay half, \$15 down with 10 years to pay the balance, with the government furnishing the pouring machine or block cutter free.

Now comes community education. This does not mean the actual teaching of skills—although help in this is furnished if absolutely necessary—or even help in organizing the community. It is, rather, an effort to instill into the people of the 1,200 defined rural communities of Puerto Rico the idea that by working together, as did the American pioneers, they can achieve wonders.

ROADS AND BRIDGES

Community education has worked particularly well in places where neither the government nor the people themselves could afford to buy what was needed. In Barrio la Yuca, high in the mountains, 450 citizens built a schoolhouse out of timber and materials of the neighborhood with but little help from the government expert.

In another case, a rural community built a bridge out of an old truck chassis and used the sand from the little river itself in pouring the concrete. In still another instance a rural community made a road. This was to get their products—tobacco and pineapples—to market and so a doctor could get through in emergencies.

Such activities are fascinating to people from nations faced with similar problems. One of these is U Sein Hla, of the Burmese National Housing Development Board. In his case, there is the necessity of building 3,000 rural communities in Burma and what he saw in Puerto Rico can, he says, be applied in his nation.

THREE-YEAR RENEWAL

Under a new agreement reached with Puerto Rico last summer, FOA is extending the program for another 3 years, or until 1957. By its terms FOA will supply up to \$1.323.000—an amount Puerto Rico will match with cash and services—for the training of 1,800 point 4 students. This is 800 percent more than was spent in the previous 3 years but, as somebody has observed, technical cooperation pays for itself by teaching fund-saving efficiency.

The 1.800 new students will study a country that in 13 years has increased its net income by 300 percent, its production by 302 percent, its wages and salaries by 358 percent, its agricultural production by 172 percent. They will study a government that uses public funds freely for public welfare, but which has, through shrewd tax procedures, encouraged private enterprise and brought in 300 new industries where there were practically none before.

They will find out how Puerto Rico eliminated malaria, brought hookworm and other parasitic diseases under control, reduced tuberculosis and venereal disease and dropped its annual death rate from 18.4 to 8.1 per 1,000 or below that of the continental United States.

Muñoz-Marin told me this: "We have done all these things in a democratic way and that gives us a sense of pride in accomplishment that we like to pass along to other poor notions so that they may have the same

thing. In the modern world it is the struggle for the mind that is important."

Director Carrion puts it this way: "We show them what the poor of the world can do when they have courage. In the world struggle the poor and underdeveloped countries are going to have the last word."

He could be right.

United States Market and Wages in Peril

EXTENSION OF REMARKS

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mrs. KEE. Mr. Speaker, in connection with the hearings on H. R. 1, the Reciprocal Trade Agreements Extension Act, which were held recently before the House Ways and Means Committee, I should like to insert in the Record the following article by Ira E. Bennett entitled "United States Market and Wages in Peril," which appeared in the National Republic for February 1955:

UNITED STATES MARKET AND WAGES IN PERIL (By Ira E. Bennett)

The plan of domestic and foreign enthusiasts to open the United States to imports produced by cheap labor is now resumed with extraordinary vigor. It is encouraged by the President in his recent state of the Union message asking Congress for certain delegation of authority over tariffs. Oftensibly the request is only for authority to reduce duties by not more than 15 percent during a period of 3 years. Unfortunately, however, the proposed reciprocal tradeagreement legislation could pave the way for tariffmaking by the Executive instead of by Congress.

"Trade, not aid," is a misleading phrase that has been invented by foreign political leaders to camouflage their plans All kinds of ture the American market. arguments are used to convince Americans that they should liberalize world trade by giving foreign countries access to our market. It is urged that Americans are not only destined to risk bankruptcy by excessive handouts to impoverished foreign countries, but are stupid in failing to share their market with those countries, to the infinite benefit of all, and to the benefit of world peace. Free trade, they say, or an arrangement as near free trade as possible, would be in fact an assurance of the success of peaceful coexistence with Soviet bloc countries. by sharing the world's poverty, it is said, Americans would avoid the danger of atomic annihilation.

The foreign leaders who so kindly outline America's duty to itself and the world do not go so far as to suggest that the United States market should be opened to the Communist enemy. No, let the enemy wait. Let free nations exploit the American market.

These foreign political philanthropists do not explain how the high standard of American wages would be maintained if our market should be filled with imports produced by cheaply paid foreign labor. They meet this question by denying that our market would be flooded. They ask only for reciprocal agreements for the importation of commodities that would not compete with domestic products. American wages, they say, would not be affected.

To every objection to the giveaway of the American market these overseas gentlemen have a ready answer. It is all polite, patient,

and convincing—but Americans are slow to understand.

Some years ago, when the great hybrid-corn philosopher Henry Wallace was spokes-man for world trade reciprocity, he told Congress that foreign goods should be freely admitted, and that if any American producer could not meet the foreign competition he should close up shop. He cited several industries, including toymaking, that should give place to superior foreign competitors. What he said seemed like insanity to some of the legislators, but it was not; it was sound reason and conclusive logic, assuming that all countries should have access to all markets on equal terms in the name of world welfare and peace.

world welfare and peace.

The American market, however, is the richest free-trade area in the world. It now sustains many countries. The markets of those countries are beggarly in comparison with the trade between Michigan and Illinois, for example. If England could have the fruits of trade in the Mississippi Valley it could turn away from its slide into socialism-communism and put on airs again. France, verging on collapse and living on Yankee handouts, would be rich if she could take over the profits of the American auto-

mobile and airplane industries.

Aside from the chaos that would follow the disturbance of the American wage scale by excessive cheap-labor imports—a chaos of unforeseeable injury to American society—the chief factor of alarm in and out of Congress is the conversion of millions of citizens to the delusions of world government, and the idea that the United States is bound, somehow, to assert its leadership of all nations at any cost. The extension of this crackpot ideology to the economic field, involving the dissipation of America's wealth and sources of wealth, and lowering its working people to the level of serfs and peons, is actually the core of the project to destroy tariff protection. It is a plan to tariff-making to the White House as part of the plan to wield world power.

Protection of American workers, farmers, and small industries, against the competition of pauper and coolie labor is a cardinal principle of domestic policy. It has enabled the people of this country to develop its vast extent and immense resources, so that the United States now stands foremost among all nations. This was the dream of its founder; but his warning against foreign entanglements, if not soon heeded, may explain the ultimate ruin of the country and

serve as its epitaph.

These observations are forced upon one when even a quick glance is cast over the drift of events since the two world wars. In 1920, the people rejected the movement to merge the country into an international arrangement in which Americans would no longer control their own Government and By 1945, the people seemingly approved of an arrangement whereby they relinquished part of their independence. Since that time misfortune has been the rule. It is no longer a matter of universal protest when the Constitution is violated. Economic conditions, including high wages, seem to have made many of the people in-different to what is happening. The drift different to what is happening. to socialism and internationalism is not only tolerated, but often applauded.

Every step toward socialism is a step away from the system that has made America great—the system of individual and private enterprise. This way of life is endangered by the threat of opening American markets to foreign competitors whenever the Executive thinks it sees a possible bargain. Interference with the delicate balance by which industry manages to flourish in spite of paying the highest wages in the world might easily ruin a private enterprise whose founders were not mere theorists, but hardheaded pioneers and business geniuses. Government

bureaucracy cannot furnish the ability to create a great industry like the automobile or airplane industry, but it can easily ruin it.

Nearly 200 years ago Americans agreed that the true role of Government is to serve as an umpire and guardian of the integrity of private liberty and enterprise. Every man was to be free to exercise his talents and capitalize upon his own energy, always protected against injustice by his Government. Under this rule Congress enacted the first law it ever made, which was a tariff act for revenue and protection. Thereupon Americans were encouraged to go out and conquer the wilderness. The European vultures of trade, hovering on the coast, hoping to swoop down and devour American wealth, were barred out by a vigilant Government. Every dollar earned belonged to the man who earned it by labor or investment or management.

Private enterprise, protected by Government, was made a rule of life in the United States according to the inspired Declaration of Independence, which held that man is endowed by his Creator with the right to life, liberty, and the pursuit of happiness. What is meant by "pursuit of happiness," if it is not the right to enjoy work best fitted to a man, by the man best fitted to excel in it, to accumulate wealth and leisure, to sit under his own vine and fig tree, and at sundown to drift quietly to sleep with his

Protection and liberty have encouraged every American genius and private enterprise to develop the wealth inherent in the United States. It is a vast country, to be sure, but not as large as the Soviet Union, China, Canada, Brazil, or British Africa. Yet it produces more wealth than all other nations combined. Why? Because Americans are among its products—Americans who know how to work, invent, explore, experiment, organize, ploneer, and cooperate, in liberty.

Mix these Americans with other tribes and we don't know what the mixture would be-but it would not be a product to be

proud of.

Imagination, daring, teamwork, liberty—these are the elements of Americanism which are attacked by theorists who would open the American market.

The American Federation of Labor boasts that it has 10 million members. The CIO other organized labor groups number additional millions. These are all free men, protected in their liberty as they perform the teamwork that keeps America at the head of nations. Unorganized workers, not in unions, make up the bulk of the population. All of them, all equal under law, are entitled to protection by their Government. One of them invented the telephone, and all mankind is now in instant communication. Another invented electric light, and now American liberty enlightens the world. An American, inventing the automobile, revolutionized human transport. Two brothers, Americans, have given humanity the ability to fly around the world. Americans invented motion pictures, perfected radio, and developed television. Innumerable minor inventions by Americans have been a blessing to workers everywhere.

Are not these gifts to mankind a con-tribution worth more than the American market itself? What would foreign nations gain if they should gorge themselves upon America's present wealth and forfeit the advantages that come from the American system of free enterprise?

Americans pride themselves upon being shrewd traders-and they are. But they are often swindled by crooked foreign governments and traders. President Eisenhower appeals to American capital to go abroad to help develop backward countries. But American capital has been stung too often to be attracted by lures of foreign profits. Its profits are confiscated by various sub-

terfuges; its foreign workers are worthless; it is overtaxed; its cannot employ American workers or American methods.

Experience in reciprocal trade agreements is not satisfactory. The negotiators may think they are making a good bargain on The negotiators may but something usually crops up each side, to disappoint our side. The agreement with Venezuela, for instance, is making ghost towns in West Virginia by destroying the market for bituminous coal and substituting residual oil from Venezuela-oil that has been worked over for its good qualities and then shipped to this country for crude fuel. Enormous quantities of this stuff have supplanted coal in Northeastern sections of this country, robbing coal miners of their liveli-hood. Did the American negotiators foresee this fraud upon West Virginia? they were blind. The facts regarding this trade agreement and its evil effects will be revealed during the debate over the pending bill. They will show that nobody can be sure of the operation of trade agreements. They strike innocent parties with unexpected losses and injustice. They disturb labor relations and thus instigate domestic strife and unemployment.

America has been and is still giving more than its share to the uplift of the world. It is willing to do more, whenever the aid it gives shows proof of the betterment of nations. But America should be its own judge of its policy. Foreigners do not know what is best for the United States, and have no sense of responsibility to it. The readiness of leading foreign governments to trade with the world's enemy proves that they do not know what is best for them. How then, can they be expected to know what is best for the United States? They sound the shibboleth of peaceful coexistence, but what they actually favor is appeaseful coexistence with the Reds and coexploitation of Amer-

ica's wealth.

Communist China

EXTENSION OF REMARKS OF

HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. HALEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a telegram from the Sunshine Post of the Veterans of Foreign Wars, of Sarasota, Fla., relative to Communist China and my remarks on that subject.

The members of the Sarasota Veterans of Foreign Wars post met on February 1 and considered the news reports of the United Nations' invitation to Communist China to send delegates to the United Nations in New York to discuss a cease fire between the Communist and Nationalist Chinese Governments. After a thorough discussion and debate, the members of the Sunshine Post voted unanimously to send me, their Representative, a telegram vigorously protesting the passage through this country of Communist China officials while our servicemen are being illegally held by that government .

This highly patriotic organization has raised the significant point that by allowing Communist China officials to enter the United States, for any reason, we could be leaving ourselves liable for

Therefore, I further complications. have asked permission to include herewith their telegram so that you may know their thoughts on this problem. The telegram follows:

Hon. JAMES A. HALEY, Member of Congress, House of Representatives,

Washington, D. C .: News dispatches state officials of Red China are being invited to the United Nations to discuss the Formosa situation. The membership of Sunshine Post, No. 3233, Veterans Foreign Wars, Sarasota, Fla., in meeting assembled February 1, 1955, unanimously urge that you arise on the floor of the House of Representatives and vigorously protest the passage through this country of any and all officials of Red China while our Armed Forces personnel are held imprisoned in Red China contrary to treaty agreements. Red China is not a part of the U. N. and Red China officials have no right of ingress to the United States or egress therefrom. Nor does the U. N. have the right to govern our passports to its nonmembers.

SUNSHINE POST VFW.

Director and Assistant Directors of Locomotive Inspection

EXTENSION OF REMARKS OF

HON. JAMES I. DOLLIVER

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum issued by the Interstate Commerce Commission:

MEMORANDUM TO HEADS OF OFFICES AND BUREAUS, ALL FIELD PERSONNEL

INTERSTATE COMMERCE COMMISSION, Washington, D. C., February 1, 1955.

In the last 2 weeks, reports published in at least three nationally circulated publications have contained inaccurate statements concerning this Commission's attitude to-ward the appointment of the Director and Assistant Directors of Locomotive Inspection, and the field locomotive inspectors, and alleging the Commission is "putting politics ahead of railroad safety." We believe it is important that all employees of the Commission, and particularly the field safety inspectors, know the truth.

One year ago, Commission representatives appeared before a congressional committee to recommend that the positions of Director and Assistant Directors of Locomotive Inspection be placed under the civil-service system.

Since enactment of the Locomotive Inspection Act in 1911, these three positions have been filled by presidential appointment, with the advice and consent of the Senate. Except for the 11 Commissioners, all other positions in the Commission are filled under the civil-service system. We are not advo-cating any change in this whatsoever, either for Washington headquarters personnel or for the field personnel. The Commission wants all ICC employees, without exception, to be placed or retained under the civil-service system.

The Commission has always taken pride in its contribution to railroad safety. A major role in this contribution has been and is being layed by the field inspectors, and the improvement in the railroads' safety record over the years is the best possible evidence

that their work is being performed well. Yet it has been alleged that, insofar as locomotive inspectors are concerned, "inspection morale is at a low ebb" and, therefore, railroad accidents due to locomotive failures have more than doubled. This is entirely incorrect.

For your information, here are the latest accident figures for steam locomotives and locomotive units other than steam, as reported by the Director of Locomotive Inspection in his annual report to the Commission:

1. Accidents and casualties caused by failure of some part of the steam locomotive, including boiler, or tender:

	Year ended June 30, 1954	Year ended June 30, 1953
Number of accidents	32	59
Number of persons killed	1	12
Number of persons injured	39	62

2. Accidents and casualties caused by failure of some part or appurtenance of locomotive units other than steam:

	Year ended June 30, 1954	Year ended June 30, 1953
Number of accidents Number of persons killed Number of persons injured	73 2 263	75

In both tables, the total number of accidents declined. In the second table, there is a marked increase in the number of persons injured, accounted for not by a doubling of the number of accidents, but by a single accident in which 189 persons were injured. As you may recall, this accident involved the derailment of 2 locomotive units and 11 passenger cars because of a false flange on a slid flat driving wheel resulting from a seized traction motor pinion bearing on a diesel-electric locomotive

An accident in which so many persons are injured is, of course, tragic and deplorable. It is completely inaccurate, however, to cite it as evidence that our inspection work has failed, or that the quality of that work has deteriorated. The decline in the number of accidents plainly contradicts such an alle-

For the future, there is now before the Congress a budget for the fiscal year beginning next July 1 which calls for the same expenditure \$709,500—for locomotive inspection work as is provided in the current budget. The new budget also provides for precisely the same number of positions— 100—as are provided for in the current budget.

Please be assured that the Commission is well aware of the importance of its duties in the field of railroad safety. It has no inten-tion of playing politics in this field or in any other.

Actually, the Commission is gratified that its railroad safety work has accomplished so much toward the greater safety of the general public and of railroad employees. It is also gratified that this picture continues to show improvement.

I should like to take this opportunity to commend our locomotive and other field safety inspectors for maintaining high standards of performance in their public service, and to urge them to guard against any relaxation of these standards. marked degree, the safety of railroad employees and the general public is in your hands, and I am confident those hands are as capable as they have ever been in the history of this vital work.

RICHARD F. MITCHELL,

Chairman.

General of the Army Douglas MacArthur

EXTENSION OF REMARKS OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. GROSS. Mr. Speaker, General of the Army Douglas MacArthur, who has devoted his entire life to the service of his country, recently celebrated his 75th birthday. In this connection, I call attention to the following editorial from the January 28, 1955, edition of the Traer (Iowa) Star-Clipper, which has three times been selected by the National Editorial Association as America's best weekly newspaper:

General of the Army Douglas MacArthur was 75 years old Wednesday. His birth dates are usualy observed on a strictly businessas-usual routine. This time he made an exception. Accompanied by his wife and son Arthur, he went to Los Angeles for public ceremonies of dedication of a city park named for him, and the unveiling of a new

MacArthur statue.

One of the unforgettable experiences of the Star-Clipper editor was seeing and hear-ing General MacArthur at the Republican National Convention in 1952 in Chicago, and the electrifying effect on the capacity crowd in the International Amphitheater at the first sight of the general as he was escorted down the center aisle. It was like an electric spark touching off an explosion. For an hour and a quarter he eloquently blistered the Truman administration, and the cheers were nearly deafening.

The best published report on that event, we thought, was the comment by the novelist, Louis Bromfield, who wrote: "General MacArthur has a natural flair for the dramatic, and cannot avoid giving a great performance. It is quite possible that he could read a telephone directory with electrifying effect. He is a man whose dignity could

never possibly be questioned."

We would like to have been in Los Angeles Wednesday, and we hope the speech is televised nationally. Like Herbert Hoover, General MacArthur is a master of the English language, and expert in the right words to fit every situation. His speeches are not the work of any ghost writer.

One of the most cruel and unnecessary acts of a President of the United States, in our opinion, was that of Truman in firing Douglas MacArthur as supreme commander in the Far East. The consequences of that ill-advised action are being felt more and more in the growing crisis involving the United States in Asia. Every general who followed MacArthur as head of the U. N. armies in Korea had much the same experiences and criticisms as he did of the inept handling of the war by petty bureau-crats in Washington. We stand to lose all of Asia to the Communists largely because our State Department was at all times afraid to attempt anything that might bring Russla into the war more actively. The United Nations, and particularly the British, entered the Korean war as a U. N. enterprise against their better judgment, and ported it grudgingly, not with the idea of trying to win it, but only to get out under the easiest terms offered by the Reds.

MacArthur got in bad with most of these people because he believed there was an opportunity to win, and he was forbidden to use it. The pressure on Truman to get rid of MacArthur was strong, not only from the One Worlders in our State Department, but also from U. N. officials and British and

French leaders. Although the United States furnished 90 percent of the U. N. military forces and virtually all of the money and supplies for the Korean war, the politicians managing it seldom made a move without consulting the foreigners. That policy has not changed much today. We seem to depend on the U. N. and Britain to tell us what to do next.

MacArthur's record as administrator of occupied Japan, where he had been allowed great freedom of action, had been praised in practically all quarters. His successful postwar handling of the Japanese was in great contrast to the blundering of the Allies in the early postwar German occupation

policies.

In the U. N. police action in Korea, Mac-Arthur found the Truman administration and U. N. officials often arrayed against him in policy matters. He chafed at the hit because of the many restrictions he was working under. He often had to wait months for the Washington politicians to talk things over with the U. N. and Britain, and make important decisions. Strategic and tactical planning of the war was stymied by the indecisions. A powerful foe was permitted to throw all it had against his forces, but the general was not allowed to strike back with all the power at his command. For example, he had great superior advantage in our airpower, but was forbidden to use it to destroy Communist bases just across the border in Manchuria. The Chinese Reds were receiving some air support from Russia, and their supply of manpower was apparently inexhaustible. MacArthur com-plained that under the restrictions there was no chance of ending the long stalemate. The U. N. pattern of war in Korea was a little like a football game in which our foes had the full range of the field while our forces had to stop at the 50-yard line. Nearly every move had to be submitted to an inept and inert U. N., which was not always in session.

When the U. N. finally met, it decided there was no longer any hope of unifying Korea or of driving the Communists out of North Korea. In a series of informal meetings, the decision was made to deny MacArthur authority to bomb Manchuria bases supplying the Red armies, or to furnish him more troops. He was directed to hold the line at the 38th parallel, while the U. N. continued efforts for peace.

Truman's decision to fire MacArthur apparently was made after the general, in a letter to the Republican floor leader of the House, Joseph Martin, stated that Chinese Nationalist troops on Formosa should be permitted to attack the Chinese mainland and take some of the pressure off of the U. N. troops in Korea. The Chinese Nationalist leader, Chiang Kai-shek, had been proposing for months to open up a second front against Red China in support of U. N. forces in Korea. Chiang claimed to have nearly 500,000 troops ready for combat, and enough shipping transport 350,000 across the Formosan straits to attack the thinly armed China coast. Chiang is reported to have asked Washington only for guns, ammunition, oil and gasoline, and claimed that he could handle the invasion of China alone. MacArthur urged that he be permitted to do so. The Truman administration replied, "Nix." The United States Seventh Fleet was ordered by the President to defend Formosa against attack by the Reds and also to defend Red China from attack by Chiang.

A nationally syndicated newspaper columnist, a day or two after Truman fired Mac-Arthur, spoke the sentiments of many mil-lions of American people when he wrote with high indignation:

"The architects of the Constitution were brave men, willing to go to any lengths to uphold the dignity of Americans and free-men everywhere. Mr. Truman used it to humiliate a brave American. Does Mr. Tru-man have in his Cabinet or in his personal entourage anyone to compare with Mac-If he does, won't he bring them forth? A Nation would be grateful.

"Does Mr. Truman place himself in the same class as General MacArthur? Does he think he is the equal in stature of the general he humbled behind the official seal of the United States? If he does, he'll have a hard time proving it. I suppose he knows as much law as does MacArthur and I would give him the edge in knowledge of political machines, including the Pendergast one, but, outside of that, my bet rides with the

general. 'One of the things that turned my stomach-and it isn't easily turned-was a paragraph from the Presidential communique to MacArthur. I quote it: 'You are authorized to have issued such orders as are necessary to complete desired travel to such place as A second lieutenant gets you may select.' that sort of order when he is being moved from Fort Riley to Fort Knox. So help me, a private in the infantry gets almost as nice a note. A gracious thing to do to a man who has given so much to his country. I say flatly that a paragraph like that eneral MacArthur proves the signer a petty. little, ill-tempered man—not a gentleman as the world knows a gentleman. I think a man who would do that is a risk to a great Nation and from here on out we should a little more careful of our ballot.

"General MacArthur, in the message that fired him, was told that he couldn't fit in with the policies of the United Nations.

What honest man would?

"The United Nations is talk, more talk, and then a little more talk. There isn't a member who could break down a gun of any caliber and put it together and then use it.

"The United Nations told MacArthur to fight. He did. And what has the United Nations done? So little that you have to laugh when you read of United Nations troops making an attack, or falling back, when all the time you know that the troops are Americans, that the bullets are American, and that the gas for the planes and tanks and trucks is American.

"MacArthur just isn't a phony. This is a country of phonies right now. Five per-centers, lobbyists, hustlers, cheaters, bums, lightweights-you finish it. The greatest

concentration is in Washington.
"The Government has no power to hurt a Greasy Thumb Guzik, but it does have the power to hurt a MacArthur.

"Let us all hope and pray that the good

Lord will let us live until 1952."

The columnist quoted above was hoping, as were many of us, that the 1952 elections and a Republican victory would bring changes in the policies of our Government, by the election of a President and a Congress that would be pro-American, and that there would be a return to constitutional government. A great many changes were promised. Not many have been forthcoming.

MacArthur is described by intimate friends as a general who never wanted to retire, and still awaits a call back to duty that has never With our country facing a great crisis today, and a mountain of defense problems, it is tragic that the services of General MacArthur are not being utilized in any way for our military defense.

The reason General MacArthur, though needed, is being shunned and ignored is that he still "doesn't fit" in the policies of the United Nations. And in Washington, the interests of the United Nations still have high priority over those of the United States. Since the Eisenhower administration has adopted the foreign policies of the Truman-Acheson administration, anyone who places our own country first really has no place to go, and that even goes for a great American like Douglas MacArthur.

Since the above was written we note a press dispatch from Washington which says that our Third District Congressman, H. R. GROSS, has addressed a letter to President Eisenhower urging that General MacArthur be recalled to active duty for service in connection with the Far East crisis. Representative Gross' letter said, in part:

"In this uncertain and grave situation, I call your attention to the presence in our midst of a great American, a great military strategist and commander, a man of vast and unquestioned knowledge of Asia and the workings of the oriental mind-Gen. Doug-

las MacArthur.

'I urge you with all sincerity at my command to immediately recall from retirement General MacArthur and utilize to the fullest extent in this growing crisis the abilities he has so well demonstrated."

He urged that "disagreements of the past be set aside," and that neither MacArthur nor any other commander of United States military forces be fettered with the shackles of a politically divided United Nations command as in Korea."

It is not likely that Mr. Gross' advice to the President will be heeded, but we commend him for offering it.

Gaoss commended the President for his message to Congress Monday requesting congressional approval of the use of military forces in defense of Formosa and the Pesca dores Islands. He said he was confident that the American people approve the President's action seeking congressional backing for any action that may be required. Mr. Eisenhower must be given credit for at least asking Congress for authority to intervene in another war in the Far East-a departure from the example of his predecessor, Mr. Truman, who started a "police action" in Korea without consulting the legislators, who, under the United States Constitution, are given the power to declare wars.

John C. Hazzard

EXTENSION OF REMARKS OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. McDOWELL. Mr. Speaker, it is with a heartfelt sense of personal loss and with deep regret that I announce the death of John C. Hazzard who passed

away on January 29, 1955. Among the many positions held by Mr. Hazzard were the following: chairman, Public Service Commission, State of Delaware; sales manager for Warner Co., Wilmington, Del.; Democratic National Committeeman for the State of Delaware; past chairman of the State Park Commission for the State of Delaware; and Democratic candidate for Congress in 1934. Mr. Hazzard was a distinguished citizen of the State of Delaware who attained much success in business and governmental affairs.

A recognized leader among men he was a devoted and loyal servant of the State of Delaware and of the Nation. His contributions to better government were many and he performed his duties in his many positions of trust with a zeal and faithfulness.

Of his many fine personal attributes, his capacity to get along with others and the practical way in which he got things done were outstanding. He was possessed of a keen sense of humor and a friendliness that were ever present in his associations with people of all walks of life. My State and I have suffered a great loss and my warmest sympathy goes out to his family and many friends in this time of deep sorrow.

John C. Hazzard was truly a fine American, loyal Delawarean, and worthy

friend.

A Historic Congregation Is on the March

EXTENSION OF REMARKS

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. BENNETT of Florida. Mr. Speaker, recently, in my home town, Jacksonville, Fla., the Union Congregational Church made the decision to move from the congested downtown locality where it had devoutly worshiped for many years and to locate its new church building in a growing suburban area. On the occasion of the last service in the old structure my good friend, Dr. Richard K. Morton, the able pastor of the congregation, delivered a thought-provoking sermon, part of which I include here for the benefit of others than those for whom the words were first spoken:

(Psalm 26: 8: "Lord, I have loved the habitation of Thy house, and the place where

Thine honour dwelleth.")

God guided lovingling and wisely those loyal and enterprising folk who formed the first fellowship, in 1875, which took the name, Union Congregational Church.

These walls became hallowed and sanctified by the devotion of those who built and those who served. A building became a temple. A structure created by the hand of man spoke to nearly two generations about our blessings at the hand of God.

Through these doors have come many, young and old, seeking, inquiring, hoping, yearning. They have sometimes come in joy, sometimes in sorrow. They have sometimes come in faith, sometimes in doubt. But as tears were shed, words of compassion said, and ministeries of love poured out, these

walls have become a temple.

We and many before us have justly loved this place, which became for us a chosen place of worship. We who have known what was involved in making a structure into a sanctuary should thus be the first to recognize that God is ready to dwell with the human heart wherever it may be. He is placed on no one fixed site. He is a God who can and does move. As we have loved these familiar walls, we must remind ourselves that love of God must not be confined to associations familiar to one location, one type of building, one form of symbolism. .

Among the early Hebrews the Lord was believed to dwell in the tents of the faithful or to be present in the ark or the tabernacle. The ark was most reverently carried about, even into battle, and great was the consternation if it was captured or damaged

in any way.

"Lead on, O King Eternal, our day of march has come!" In this slightly changed version of words from a great hymn, let us find a way to make this cherished house of worship something which cannot remain fixed or a thing of stones and bricks and wood, but must ever be on the march, in the hearts of men, proclaiming the day of the Lord and the unsearchable riches of Christ and His redeeming gospel.

We have set up habits and ways we are loath to change. But change is often the gateway to new strength, new joy, and new discipleship.

These walls have become a temple not to be revered, for itself, forever—but to signify a great spiritual power within the fellowship making use of it. This temple was never built to keep something inside—but to pour something outside. It was never designed to be an unaging shelter, but to proclaim an unaging word. * *

These walls have indeed to us become a temple, but one which is not an end in itself, but a symbol and a means to promote a great service in the Master's name. As it is reduced to dust and is seen no more, we shall thank God that it did exist, and that it did send us forth to build more nobly and to serve more faithfully.

The Indians Are Going to Town

EXTENSION OF REMARKS

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. BERRY. Mr. Speaker, I call attention to a significant article in the Reader's Digest for January 1955 entitled "The Indians Are Going to Town," by O. K. and Marjorie Armstrong. Mr. Armstrong will be remembered by many of our colleagues as a Member of the 82d Congress from Missouri, and one who was greatly interested in proposals for improving the lot of our Indian citizens.

This article deals with the whole program of relocating in productive jobs all Indians who desire to leave their home reservations and areas and find greater economic opportunity elsewhere. I personally feel that it is a program worthy of the support of the Congress and of citizens of all races.

I wish to commend the authors for their presentation of this matter, so timely and of such great importance to the Indians, our original Americans.

The article follows:

"Sixth floor—Indian Bureau. All Indians off," sang out the elevator operator at 608 South Dearborn Street, Chicago. In an aside to us he said, "They all go to the same place."

Off stepped a young Indian couple, the man wearing a red shirt and jeans with a beit of silver circles; she in a print dress with an enormous turquoise necklace. She carried a tiny baby on one arm and was leading a toddler. They were followed by a tall Indian in cowboy boots.

All were plainly ill at ease and smiled their appreciation when we volunteered to show them to the Indian Relocation Office. In the reception room a neatly dressed young Indian woman spoke to the couple in their own Navaho tongue, calling their names, Hola and Ula Sunrise. Delighted, they responded to her welcome. Then she turned inquiringly to the tall man.

"Me—I'm Charley Gray Fox, a Sioux from Rosebud, S. Dak.," he announced with a grin. During the next hour three other Indians arrived—a Cheyenne from Montana, a Creek from Oklahoma, and another Navaho from Window Rock, Ariz. All had been picked by officials at their reservations to begin a new life in the big city and had suitable homes and jobs waiting for them through the efforts of Kurt Dreifuss, director of the relocation office, and his staff.

"Why did you leave your reservation?" we asked Charley Gray Fox.

"Me—I'm tired of little odd jobs around Rosebud. I want a regular pay check." "What job will you take?"

He held up his huge bronzed hands, "Anything I can do with these. I like to work with my hands. Mechanics—anything. Just so I'm building something."

We asked the Sunrises why they came to Chicago. The young husband waved expressively toward his baby and the toddler peep-

ing from behind the mother.
"Too many Navahos—not enough to eat,"
he answered.

The American Indians are on the warpath again. "Operation relocation," begun in 1952 under former Commissioner of Indian Affairs Dillon Myer, is developing into a major activity of the Indian Bureau under present Commissioner Glenn L. Emmons, Its purpose is to give a helping hand to Indians who want to leave the reservations to find employment. Some 6,200 of the estimated 245,000 Indians on reservations had been resettled by late 1954 (of whom 2,500 are workers in good jobs) via relocation centers established in Chicago, Denver, Los Angeles, and Oakland. Additional centers are being considered for Seattle, St. Louis, and Kansas City.

"At long last," says Commissioner Emmons, "we are doing more than keeping the Indian on relief. We are helping him to help himself."

For several weeks last summer we visited reservations—westward from the Dakotas to Oregon, thence southward through California, then east to the great Navaho, Hopi, Apache, Pueblo, and other southwestern areas. Everywhere we saw the tragedy of these twin evils—overpopulation in proportion to resources and underemployment for men and women anxious to work

When Kit Carson herded the Navahos into their huge barren tract in 1868 there were only 7,800 of them. Today there are 71,000. The grazing lands and other resources won't adequately support more than half this population.

In South Dakota the Indian population has grown from 21,000 in 1930 to 30,000 to-day—and this is about the proportion of increase in all Indian areas.

A few tribes receive good incomes from their reservations, such as the Kiamaths in Oregon from timber and the Arapaho in Wyoming from oil and gas. But the majority of reservations are little better than country slums. Not more than 20 percent of the Crow Indians of Montana or the Shoshoni-Bannocks in Idaho make a living from their own use of reservation lands. Of the 1,700 families on the Pine Ridge Reservation in South Dakota, only 200 are self-supporting.

We asked Charles F. Miller, chief of the Indian Bureau's Relocation Branch: "Why haven't more Indians left for better jobs on their own?"

"Suppose you had never been very far from home," he responded. "Suppose your land and money were held in trust by the Government, and you feared discrimination because of your race if you ventured outside. Suppose maybe you had difficulty speaking English. Wouldn't you hesitate to buck a big city looking for work? Well, that's the situation for many reservation Indians."

Success of the relocation program, Mr. Miller feels, is due to three important things: Careful selection of applicants, fitting the

Indian to the right job, and adjusting him and his family to the new community.

On each reservation a relocation officer

On each reservation a relocation officer makes contact with those who show an interest in resettling. An applicant must be 18 years old or more, in good health, and of satisfactory reputation. His fare is paid to the relocation center of his choice, and the center pays his living expenses until he receives his first full paycheck. He is told plainly that he will be expected to stand on his own feet after he gets the job.

At the relocation office, expert interviewers discuss his experience, ability, and interests, take him to visit plants and places of business where jobs are available, help him choose. Housing is found for him—and his family, if he has one. Employees of the relocation office follow through with help on getting the children into school, how to shop at department stores and supermarkets. A minister or priest of the family's faith may call and add his words of welcome.

Several big industrial firms give the relocatees on-the-job training. Many of the Indians attend night school, and the Indian Bureau is now emphasizing manual and vocational training on the reservations.

Why the big cities for Indian workers? Why not small towns near home? Relocation officers give three reasons:

First, unhappily, the greatest discrimination against Indians exists in non-Indian communities near the reservations. But in big cities Indians are readily accepted into school, church, and community life.

Second, there are more job possibilities in the cities. Mary Nan Gamble, director of the Los Angeles Relocation Office, pointed out: "Every sort of industry, big and little, is located here. We have 1,000 contacts with potential employers in our files, and 375 have already accepted Indian workers. We hope to double those figures in another year."

Third reason is suitability of Indians for industrial occupations. Says Brice Lay, relocation director at Oakland: "With proper training, an Indian can learn to do almost anything skillfully. Our underemployed Indians constitute the most needless waste of human resources in America. For these people the relocation program comes as a rainbow of hope."

From many Indians working at their jobs, and from their employers, we learned how bright that rainbow can be. The Stewart-Warner Corp. in Chicago has employed about 30 relocatees. "Indians make good workers," Burt Muldoon, personnel director, told us. "We start them at \$1.40 per hour, and after a year many have reached \$1.80. Our machines work fast, but nothing is too fast for a well-trained Indian."

Because of the good record made by several Indian employees, the Boeing Airplane Co. in Seattle plans to hire more Indians when that city's relocation office opens. North American Aviation, Los Angeles, has employed 200 resettled Indians, finds them particularly skillful at cutting, shaping, and riveting sheet metal. "They are intelligent, industrious people," J. M. Wright, employment supervisor, declared. "We plan to continue participating in this program."

Employers are discovering how adept Indian women are as stenographers and machine operators. (About one-fourth of all relocated workers are women.) Betty Koester, personnel director of Swimwear, Inc., a plant in Los Angeles which makes women's swim suits and beach towels, walked with us down long rows of sewing machines. Of the 200 employes, 32 were relocated Indian girls, "Navahos, Pueblos, Utes—we like them all," she said. "They are neat, diligent, and skillful."

Relocation has a strong appeal to younger Indians. The largest group of relocatees is composed of former GI's from 28 to 33 years old, married, with 1 or 2 children. With quiet earnestness, Benny Bearskin, a Win-

nebago whom we met in Chicago, expressed sentiments we heard echoed by many other young Indians: "They've kept the old folks as museum pieces, through ignorance and idleness, but we young Indians are going to free ourselves by education and work. can be good Americans, making a decent living, and still keep our Indian culture."

Visiting the Indians, we saw a normal and happy integration into the community. Several were buying their own homes. There were schoolbooks for children of parents who never went beyond the third grade in reservation schools. There were radios and television sets.

Indian centers in Chicago and Los Angeles provide a club house with reading kitchen for refreshments, and recre ation hall. They are usually open day and evening, and every Indian in town is invited to come in and get acquainted with members of all the tribes represented in the city. The Chicago All-Tribes American Indian Center sponsors a baseball team, appropriately called the Braves. Its news sheet, Tom Tom Echoes, keeps all tribes informed of Indian doings. Teen-age parties are lively affairs. Hearts are never lonely at the Indian enter. Many romances blossom. In Chicago the center's chieftain is Ted center.

White, whose father was Sloux and mother Winnebago Benny Bearskin helps him with dances and pageants. "We do what the Government can't do—we make them feel at home," White told us.

Not all relocatees are readily adjusted. About 30 percent go back to the reservations-mostly because of homesickness. But after seeing the folks an increasing number leave home a second time. Steady work and regular pay have a strong pull. Those who return usually bring a list of names of relatives (meaning good friends) whom they want relocated pronto.

Average cost of relocating an Indian worker in all areas is about \$200. "The best investment the Indian Bureau ever made, both in money and in human values," Mr. Miller calls it. He showed us reports on Indians who had worked at their new jobs for a year or longer. Selecting five Indian families, he found it had cost the American taxpayers only \$1,156 for relocation expenses, while from their combined incomes of about \$15,000 during their first year they had paid income taxes totaling \$1,418.

Among the Indians relocated by George T. Barrett when he was area relocation director at Billings, Mont., were John Houle and his wife of the Cree tribe. Later Mrs. Houle wrote these words of appreciation:

"We are working and finding friends among those we once feared. The things we work for are ours. We can pass them on to our children. By the work of our hands and the understanding of our hearts we have won back our birthright."

As the relocation program progresses, the existing reservations can better support those Indians who desire to live close to the soil on farm or ranch. The others can find their places in new homes and chosen occupations, and the stream of a truly noble race, so long dammed by tradition and prejudice, will strengthen the current of American life.

Seattle-Honolulu Airline Service

EXTENSION OF REMARKS OF

HON. DON MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. MAGNUSON. Mr. Speaker, an editorial in yesterday's Washington Post leave to extend my remarks in the REC-

and Times Herald makes a point which I wish to call to the attention of my colleagues.

That point is the dangers inherent in the overriding by the White House of the considered judgments of regulatory agencies on problems which those agencies were constituted to decide.

In this instance, the White House changed its mind after being convinced, apparently, of the error of its original decision, and happily so. But this emphasizes that snap judgments should not be substituted for the considered determinations of experts in the subject at hand.

The final decision to permit Northwest Airlines to continue its Seattle-Honolulu service, as the Civil Aeronautics Board had recommended, was the correct one, and I am pleased that it came out as it did

The editorial to which I referred fol-

REVERSE PROPELLER

Pressure on the White House has again produced a change in aviation policy, this time in the reversal of President Eisenhower's decision to cancel Northwest Airlines' route from Seattle to Honolulu. In this instance the protests seem to have been justified, and President deserves credit for the tacit acknowledgment that he made a mistake. But why, then, did he upset the recommendation of the Civil Aeronautics Board in the first place? The CAB had unanimously recommended that Northwest's authority for the Seattle-Honolulu operation be continued and that the parallel route of Pan American World Airways be canceled. Now both routes are to continue, at least temporarily.

Quite apart from questions of economics, there are two things very wrong with this picture. In the first place, if the present decision is a right one, then the President did not investigate the situation very thoroughly when he undertook, apparently on the advice of Commerce Secretary Weeks, to over-rule the CAB. In the second place, the manner of the reversal leaves the clear implication that the White House can be deflected from its purposes by pressure. There was evidence of this in the earlier withdrawal of a prospective nominee for the CAB after the White House was deluged with organized protests.

Now, protests and pressures are an inevitable part of the democratic system. What is bad is to permit them to become a substitute for independent judgment. Even though the reversal in this case may have been proper, the whole zigzag performance leaves international aviation in confusion and constitutes an open invitation for con-tenders henceforth to run to the White House. This is what inevitably happens when the President and his advisers attempt to take on themselves regulatory functions which in the absence of compelling reason, ought to be left with the agencies established to perform them.

Echo From a Recession

EXTENSION OF REMARKS OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. YOUNGER. Mr. Speaker, under

ORD, I wish to include the following editorial from the New York Daily News entitled "Echo From a Recession," which appeared Wednesday, February 2, 1955. accompanied by a cartoon drawing of President Eisenhower:

ECHO FROM A RECESSION

Interesting news almost always comes from the annual meetings of the American Federation of Labor's executive council in luxurious Miami Beach, Fla. The 1955 session, which began yesterday, has already yielded one unusually interesting item.

This one is from the A. F. of L.'s staff of economists, and concerns what happened to the American working man and woman in 1954, which a lot of labor leaders and Democratic politicians insisted on calling a recession year.

According to the A. F. of L. economists, United States workers did better with the money they made in 1954 than in any other year since World War II.

It wasn't that they got huge raises in ay. They didn't.

What happened was that the money the workers made was real money—meaning its purchasing power stayed put. The dough they earned in former years since the war looked bigger and bigger, but bought less and less. Inflation was steadily eating away the dollar's buying power.

Inflation has now been stopped, the A. F. of L. research experts concede, and we have stable money-about the most valuable single

asset any nation can have.

And who halted inflation? So far as we know, this A. F. of L. report doesn't identify the person or persons who brought this enormous boon to the American people. supply that information by noting that it was a certain Republican administration in Washington, heading up in the mystery man whose picture appears herewith, and you can have one guess as to who the gentleman is.

Lithuanian Independence: A Tribute to a Nation

EXTENSION OF REMARKS OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. PATTERSON. Mr. Speaker, on this occasion I wish to say that any nation that has withstood for more than a century and a quarter continued foreign domination and oppression from a ruthless and tyrannical neighbor and still survive certainly deserves the praise of mankind. Such praise Lithuania deserves; for in spite of the fact that Lithuania has been occupied and ruthlessly dominated by Imperial Russia and Soviet Russia for periods totaling over 125 years this nation still lives.

In many respects the Lithuanian people today are ruled by a far more ruthless master than in the days prior to the foundation of the Lithuanian nationality was relegated to an inferior status in the days of Czarist Russia; but the suppression exercised by the Czar might well be termed moderate when compared to the suppression imposed by the Soviet.

In this 20th century our language has taken on a new word-genocide-which means the willful destruction of a nation

and a people. Genocide is the longrange objective of the Soviet rules; it is to destroy the Lithuanian nation. Deportations of thousands of Lithuanian people and the resettlement of Russians and other Soviet peoples in Lithuania have thus far done much to change the ethnic character not only of that country but also of the other Baltic States-Latvia and Estonia. As part of its scheme of communization Soviet Russia has laid down a plan calculated to eradicate the Lithuanian national consciousness. Along with their plan to destroy the idea of Lithuanian nationality, the Communist are seeking to remold this once free and happy country in the image of the Soviet state.

That Lithuania is going through an epoch of great trial goes without saying. But the Lithuanian nation is a virile nation. It is a nation with a glorious historical past and a sense of national destiny for the future. It is a nation which has survived other oppressions and shall survive this one.

On this occasion commemorating the 37th anniversary of Lithuanian independence the message of America is a message of hope that one day the Lithuanian people shall fulfill their national destiny and that they shall again enjoy the natural right of every nation to be free, as they once were, so that they can once more resume their tasks of development and progress, and pursue the happiness they once enjoyed as a free and independent people.

Butter for Servicemen

EXTENSION OF REMARKS OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. LAIRD. Mr. Speaker, in January 1953 I requested a report from the Quartermaster General's office and found to my amazement that the Army purchased in January 1953 over 3 million pounds of oleomargarine and only 1 million pounds of butter. I successfully offered amendments to the Agricultural Act of 1954 to correct this unfortunate situation which had developed over a period of 4 or 5 years. I am happy to report that as a result of my inquiry over 2 years ago and as a result of my amendments which were adopted last year, progress has been made in putting butter on the tables of the men and women in the Armed Forces. The report which I received from the Quartermaster General's office as of February 2, 1955, is as follows:

Prior to 1953 the Army purchased both butter and margarine for Army and Air Force use depending upon local troop preference. In 1953 pursuant to an agreement with the Commodity Credit Corporation the Quartermaster Corps, Department of the Army,

which is responsible for the central purchase of subsistence for the armed services, began obtaining Commodity Credit Corporation butter for troop issue for the Army and Air Force in lieu of margarine. This butter was for both domestic and overseas requirements, with the exception of those areas lacking refrigeration facilities where canned margarine was issued, because a suitable canned butter was not available. Since the Department of the Navy is prohibited by law from using oleomargarine for troop feeding, it did not participate in the use of surplus butter procured under the 1953 agreement. Normal military requirements for butter for all services continued to be met by the purchase of butter in the United States on the open market except for some overseas requirements. However, since October 31, 1954, pursuant to an agreement between the Quartermaster General and the Commodity Credit Corporation, under the authority of Public Law 690, 83d Congress (the Agricultural Act of 1954), butter, in addition to the quantities usually procured in the normal channels of trade, is being obtained from the Commodity Credit Corporation, without reimbursement for use by the Army, Air Force, Navy, and Marine Corps.

Although substantial quantities of butter were procured in the United States for overseas use, the European and Far East Commands were purchasing a portion of their resale and troop issue requirements of butter in their respective areas when readily available, pursuant to authorization granted under the provisions of the Department of Defense Appropriation Act, which permitted the purchase of perishable foods from overseas sources by establishments located outside the United States for the use of personnel attached thereto. About October 1, 1954, instructions were issued to those commands to discontinue, upon completion of existing contracts, the procurement of butter from foreign sources for troop issue in their areas. Overseas commands now are permitted to purchase butter from local sources only for resale to authorized commissary patrons. Since October 1, 1954, butter has been obtained from the Commodity Credit Corporation at world market prices for troop issue in Europe and the Far East.

Purchases of butter and margarine by the Quartermaster Corps for the armed services during 1953 and 1954 were as follows:

BUTTER

Sources	Calendar year 1953	Calendar year 1954
Domestic oven market Domestic CCC Overseus	Pounds 27, 500, 000 1 15, 000, 000 13, 240, 000	Pounds 32, 400, 000 2 22, 000, 000 10, 160, 000

¹ purchased in lieu of margarine for supply to Army and Air Force troops in continental United States and

and Air Force troops in continental United States and overseas.

Figure includes 18,400,000 pounds obtained in lieu of margarline prior to November 1954 and 3,600,000 pounds purchased at world market prices for troop issue in Europe and the Far East in lieu of forcign purchases. Although complete figures are not yet available for butter received from CCC under Public Law 690, 834 Cong., it is estimated that during the period Nov. 1, 1954, through Jan. 24, 1955, 10,400,000 pounds (not included in this figure) have been so obtained.

MARGARINE

Source	Calendar year 1953	Calendar year 1954
Domestic open market	Pounds 19, 600, 000	Pounds 2, 700, 000

¹ This quantity represents purchases by brand name for sale to authorized commissary patrons. No pur chases were made for troop issue purposes.

The Growth of San Mateo County

EXTENSION OF REMARKS OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the San Mateo Times of February 5, about the growth of San Mateo County. which is the Ninth Congressional District of California. We are particularly proud of the growth of our community in population, but more especially are we proud of the per capita income increase which has occurred since 1940.

The article follows:

COUNTY'S POPULATION GROWTH LEADS STATE From 1940 to 1950 the population of San Mateo County more than doubled. As of July 1954, it had grown to 321,900, an increase of 37 percent since 1950 or more than twice the rate of growth experienced else-where in the State, the research department of California State Chamber of Commerce reported today.

In its recently published Economic Survey of California and Its Counties-1954, the State chamber noted that individual incomes of San Mateo County residents showed a 499 percent increase between 1940 and 1952, rising from \$96,163,000 to \$576,009,000. capita incomes had risen by 158 percent from \$844 in 1940 to \$2,174 in 1952, and were considerably above the per capita figure for the State. Median incomes were the highest, according to census data, for any county in California.

STATEWIDE SURVEY

San Mateo is one of the State's 58 counties covered individually in the chamber's 300page survey published every 4 years by the State of California. The data, collected and compiled by the chamber, will be used by marketing and business research agencies, management consulting, factory locating services, libraries, and information services throughout the country. Information on each county includes population, incomes, manufacturing, mining, business, agriculture, resources, and trends.

In an effort to give a comprehensive picture of each county in the State, the survey includes a brief account of each county's history, topography, climate, and tourist attractions. Uniform tables on economic data also afford quick and easy comparison for each county.

ENCROACHMENT ON FARMS

In its report the chamber had this to say about the rapidly growing county of San Mateo:

"Urbanization and industrialization has encroached greatly upon farm areas in the county. Number of farms, land in farms, and potential cropland, all have declined. Land in crops dropped from 48,000 acres in 1940 to 32,000 in 1953. Agriculture, how-ever, remains an important part of the county's economy. Total value of production rose from \$7,723,811 in 1940 to \$16,242,-216 in 1953. Largest relative decline in the period was in dairy products with a drop in the number of milk cows from 13,575 to 6.849.

"Due to its adjacency to metropolitan centers, San Mateo's agriculture is dominated by specialty crops. Most important are flowers and nursery stock, valued in 1953 at \$6,855,435. About half were grown outdoors on 1,313 acres, the remainder under glass on an area of 3,011,017 square feet. Truck crops are second in importance with a 1953 valuation of \$4,431,651."

Hand in hand with the rapid increase in San Mateo's population is its industrialization. Factory payrolls jumped 204 percent during the 6-year period from 1947 to 1953, compared with an increase of 109 percent for the State. Employment rose from 8,577 in the third quarter of 1947 to 18,667 during the same months of 1953, a 118-percent increase—more than 2½ times that experienced in the State.

Employment and payrolls of the electrical machinery industry show it to be the most important in the county. During the third quarter of 1952, 22 establishments employed an average of 4,064 persons and its annual payrolls exceeded \$18 million, or 25 percent of the county's total manufacturing payrolls in 1952. The electronics branch of the industry dominated the field.

According to the State chamber, Belmont is the most rapidly growing community in the county, followed by Menlo Park. Other rapidly growing communities are south San Francisco and Daly City in the northern extreme, San Mateo in the center, and Redwood City at the southern end.

Wage-Payment Law for the District of Columbia

EXTENSION OF REMARKS

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. PATTERSON. Mr. Speaker, today I introduced a bill in Congress to regulate the payment and collection of wages in the District of Columbia similar to the labor laws of Connecticut.

I am amazed to find that Washington, D. C., has no wage-payment law. I am offering my bill to fill this vacuum. My bill is solely designed to afford the wage-earners of the Nation's Capital the same degree of protection now enjoyed by workers in the more progressive States like Connecticut.

As a member of the House District of Columbia Committee it is my duty to give legislative attention to correcting glaring inequities in the laws of this Federal city where the citizens are denied the right to vote on their own laws. Members of Congress who are assigned to the District of Columbia Committees have this responsibility in addition to looking after the best interests of their own States and the Nation.

My wage-payment bill if enacted will not materially affect the responsible business establishments of Washington, but is directed specifically at the fly-by-night afterhours bottle clubs and irresponsible subcontractors that pull up and leave without properly settling with their dismissed workers.

I am advised by the Minimum Wage and Industrial Safety Board that this Board can enforce a statute along the lines of my bill at a very small additional cost to their regular operations, and would be of assistance in the enforcement of minimum-wage laws in the District of Columbia.

The language and the principles incorporated in my bill were initially adopted by a committee of State labor commissioners, with the endorsements of the United States Department of Labor, the International Association of Governmental Labor Officials, the National Conference of Labor Legislation, and the American Federation of Labor.

The purpose of my bill is to require regular payment of wages at least semimonthly in Washington, D. C., and to assist employees in collecting valid claims for wages due. Where, however, by custom or contract, an employer has been accustomed to paying employees at least monthly he may continue to do so.

My bill further provides that wages shall be regularly paid in cash or by check; it provides for payment of wages in the event of discharge, voluntary quitting, or in consequence of a labor dispute, and specifies the method of payment in the event of a dispute concerning the amount of wages due.

The Minimum Wage and Industrial Safety Board of the District of Columbia would be authorized to represent employees in the collection of wages due them and unpaid.

Forty-six States now have comparable legislation; only Delaware, Florida, and the District of Columbia are without a wage-payment law.

About two-thirds of the States, including Connecticut, require prompt payment of wages to discharged employees.

Almost half of the States, including Connecticut, give similar protection to workers who quit.

Also, my bill provides that willful violations of the act are subject to punishment as misdemeanors, and liquidated damages, not to exceed the amount of unpaid wages, are provided as a means of enforcing the act.

A similar bill was passed by the Senate last year, but Congress adjourned before the House took action.

A comparable bill is now pending before the Senate District of Columbia Committee.

Centennials of the Opening of the Pacific Overland Mail

EXTENSION OF REMARKS

HON, GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the text of a resolution passed on January 17, 1955, by the California State Legislature, relative to the observance of the centennials of the opening of the Pacific overland mail. The text of the resolution follows:

Assembly Joint Resolution 3

Joint resolution relative to the observance of the centennials of the opening of the Pacific overland mail

Whereas by act of Congress, dated March 3, 1857, the Postmaster General of the United States was, for the first time, authorized to contract for the conveyance overland, from the Mississippi River to San Francisco, Calif., of all letter mail; and

Whereas until that time the conveyance of letter mail to the Pacific coast had been by the long, slow, arduous ocean route fraught with danger from storm and sea and totally dependent upon the vagaries of the wind; and

Whereas the opening of service upon the overland route authorized by Congress was the culminating event of a series of events of prime importance not only to the development of the West and California, but also to the development of the United States; and

Whereas centennialy celebrations of these events should be fittingly observed throughout the length and breadth of the Nation for from the modest. "four horse coaches, or spring wagons suitable for the conveyance of passengers, as well as the safety and security of the mails," required by the act, have developed our modern systems of communications which bind the east and west into one great Nation; and

Whereas the American Association for State and Local History has undertaken the national sponsorship of centennials and has established regional committees to plan such centennials; and

Whereas a regional committee has been set up in California which is known as the California Committee, Overland Mall Centennials, 1957-58: Now, therefore, be it

nials, 1957-58: Now, therefore, be it

Resolved by the Assembly and the Senate
of the State of California (jointly), That the
Legislature of the State of California respect
fully memorializes the President and the
Congress of the United States to take appropriate action to insure the cooperation of
the Federal Government in the celebration
of the centennials of the Opening of the
Pacific Overland Mail; and be it further

Resolved, That the Legislature of the State of California respectfully urges that all State and local governmental units; public schools; civic, patriotic, and historical societies; and all agencies of communication do participate wholeheartedly in the observance of the celebration of the centennials of the Opening of the Pacific Overland Mall by cooperating fully with the California Committee, Overland Mail Centennials, 1957–58, in commemorating the acts, the accomplishments, and the memories of those sturdy pioneers who engineered the beginnings of overland communication between the Atlantic and Pacific coasts; and be it further

Resolved, That the Legislature of the State

of California does hereby commend the American Association for State and Local History for its action in undertaking on a national scale the sponsorship for the centennial observances of the Opening of the Pacific Overland Mail; and be it further

Resolved, That the Legislature of the State of California does hereby respectfully request that the Governor of the State of California transmit copies of this resolution to the President and Vice President of the United States; to the Speaker of the House; to the Scnators and Representatives of the State of California in Congress; to the governors of the several States and Territories: to the board of supervisors of each California county; to the mayor of each incorporated city; to the titular head of the American Association for State and Local History, American Historical Association, Pacific Coast Branch of the American Historical Association, California Historical Society, Historical Society of Southern California, Conference of California Historical Societies, California History Foundation, Native Sons of the Golden West.

Native Daughters of the Golden West, National Committee for the Overland Mall Centennials, and California Committee for the Overland Mail Centennials.

Some Reminiscences of Abraham Lincoln by Distinguished Americans Who Personally Knew Him

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. DOYLE. Mr. Speaker, by unanimous consent, heretofore granted me, I have the privilege and honor of making these few remarks about Abraham Lincoln-he it is who has been my idol and example in American political life ever since I was a young elementary schoolboy and my schoolteacher in the fifth grade frequently cracked my knuckles with a heavy wooden ruler because she would frequently catch me making a drawing of Abe Lincoln's birthplace cabin when I should, in her judgment, have been studying my les-

This coming Saturday, February 12, 1955, is again the birthday of this former Member of this House of Representatives-he having been born February 12,

In making these few remarks, Mr. Speaker, on this occasion, I am again doing what I have had the privilege of doing each of my 8 previous years as a Member of this great legislative body. On this present occasion I am doing something which I have not done on any other occasion; to wit, I will quote from comments about Abraham Lincoln as set forth in one of the very valuable books in my Lincoln library-Reminiscences of Abraham Lincoln by Distinguished Men of His Time-collected and edited by Allen Thorndike Rice, editor of the North American Review.

These incidents which I set forth will prove of different and unique interest and inspiration to all of us, I hope, because they were published fairly soon after the untimely assassination of Mr. Lincoln and were by distinguished men who knew him personally.

Gen. Benjamin F. Butler, ex-Governor of Massachusetts:

I first saw Lincoln in 1840, making a speech in that memorable campaign in the city hall at Lowell; and not again till I was more than 21 years older, when I called on him at the White House to make acknowledgments for my appointment as major general. When he handed me the commission, with some kindly words of compliment, I replied, "I do not know whether I ought to accept this. I received my orders to pre-pare my brigade to march to Washington while trying a cause to a jury. I stated the fact to the court and asked that the case might be continued, which was at once consented to, and I left to come here the second morning after, my business in utter confusion." He said: "I guess we both wish we were back trying cases," with a quizzical

look upon his countenance. I said: "Besides, Mr. President, you may not be aware that I was the Breckinridge candidate for governor in my State in the last campaign, and did all I could to prevent your tion." "All the better," he said, "I "I hope your example will bring many of the same sort with you." "But, I answered, I do not know that I can support the measures of your administration, Mr. President." not care whether you do or not," was his reply, "if you will fight for the country." "I will take the commission and loyally serve while I may, and bring it back to you when frank; but tell me wherein you think my administration wrong before you resign, sald. "Report to General Scott."

Hon. Schulyer Colfax, ex-Vice President of the United States:

Finally, there was a very flagrant case of a soldier who, in the crisis of a battle, demoralized his regiment by his cowardice, throwing down his gun and hiding behind the friendly stump. When tried for his cowardice there was no defense. The courtmartial, in examining his antecedents, found that he had neither father or mother living, nor wife nor child; that he was unfit to wear the loyal uniform, and that he was a thief who stole continually from his com-rades. "Here," said Judge Holt, "is a case which comes exactly within your require-ments. He does not deny his guilt; he will better serve the country dead than living, as he has no relations to mourn him, and he is not fit to be in the ranks of patriots, at any rate." Mr. Lincoln's refuge of excuse was all swept away. Judge Holt expected, of course, that he would write "approved" on the paper; but the President, running his long fingers through his hair, as he so often used to do when in anxious thought, replied, "Well, after all, Judge, I

think I must put this with my leg cases."
"Leg cases," said Judge Holt with a frown at this supposed levity of the President in a case of life and death. "What do you mean

by leg cases, sir?"

"Why, why," replied Mr. Lincoln, "do you see those papers crowded into those pigeon-holes? They are the cases that you call by that long title, 'Cowardice in the face of the enemy,' but I call them, for short, my 'leg cases.' But I put it to you, and I leave it for you to decide for yourself, if Almighty God gives a man a cowardly pair of legs, how can he help their running away with him?"

Hon. George S. Bautwell, ex-Secretary of the Treasury:

Mr. Bancroft gave voice to the considerate judgment of mankind when, in conver-sation, he said, "Beyond question, General Washington, intellectually, is the first of Americans." If this statement be open to question, the question springs from the limitation, for beyond doubt Washington is the first of Americans. His preeminence, his greatness, appear in the fact that his faculties and powers were so fully developed, so evenly adjusted and nicely balanced, that in all the various and difficult duties of military and civil life he never for an instant failed to meet the demand which his position and the attendant circumstances made upon him. This was the opinion of his contemporaries. His preeminence was felt and recognized by the leaders of the savage tribes of America, by the most sagacious statesmen and wisest observers in foreign lands, and by all of his countrymen who were able to escape the influence of passion and to consider passing events in the light of pure reason.

It is the glory of Washington that he was the first great military chief who did not exhibit the military spirit; and in this he has given to his country an example and a rule of the highest value. The problem of republics is to develop military capacity without fostering the military spirit. This Washington did in himself, and this also his has done. The zeal of the young men of the Republic to enter the military service for the defense of the Union, and the satisfaction with which they accepted peace and returned to the employments of peace, all in obedience to the example of Washington, are his highest praise.

With this estimate, not an unusual nor an exaggerated estimate, I venture to claim for Abraham Lincoln the place next to Washington, whether we have regard to private character, to intellectual qualities, to public services, or to the weight of obligation laid upon the country and upon mankind. Between Washington and Lincoln there were two full generations of men; but, of them all, I see not one who can be com-

pared with either.

Submitting this opinion, in advance of all evidence, I proceed to deal with those qualities, opportunities, characteristics, services on which Lincoln's claim rests for the broad and most enduring fame of which I have spoken. We are attracted naturally by the career of a man who has passed from the humblest condition in early life to stations of honor nad fame in maturer years. With Lincoln this space was the broadest possible in civilized life. His childhood was spent in a cabin upon a mud floor, and his youth and early manhood were checkered with more than the usual share of vicissitudes and disappointments. The chief blessing of his early life was his step-mother, Sally Bush, who, by her affectionate treatment and wise conduct, did much to elevate the character of the class of women to which she belonged. His opportunities for training in the schools were few, and his hours of study were limited. The books that he could obtain were read and re-read, and a grammar and geometry were his constant companions for a time; but his means of education bore no logical relation to the position he finally reached as a thinker, writer, and speaker.

Of all the self-made men of America, Lincoln owed least to books, schools, and society. Washington owed much to these, and all his self-assertion, which was con-siderable, in society, in the Army, and in civil affairs, was the assertion of a trained man. Lincoln asserted nothing but his capacity, when it was his duty to decide what was wise and what was right. He claimed nothing for himself, in his personal character, in the nature of deference to others, and too little, perhaps, for the great office he held. The schools create nothing: they only bring out what is; but as long as the mass of mankind think otherwise, trained person like Lincoln has an immense advantage over the scholar in the contest for immortality. In this particular, how-ever, the instincts of men have a large share of wisdom in them. When we speak of human greatness we mean natural, innate faculty and power. We distinguish the gift of God from the culture of the schools. The unlearned give the schools too much credit in the work of developing power and forming character; the learned, perhaps, give them too little. But whether judged by the learned or the unlearned, Lincoln is the most commanding figure in the ranks of self-made men which America has yet produced.

Mr. Lincoln possessed the almost divine

faculty of interpreting the will of the people without any expression by them. often hear of the influence of the atmosphere of Washington upon the public men resid-It never affected him. He was of all men most independent of locality and social influences. He was wholly self-contained in all that concerned his opinions upon public questions and in all his judgments of the popular will. Conditions being given, he could anticipate the popular will and conduct. When the proceedings of the convention of dissenting Republicans, which assembled at Cleveland in 1864, were mentioned to him and his opinion sought, he told the story of two fresh Irishmen who attempted to find a tree toad that they heard in the forest, and how, after a fruitless hunt, one of them consoled himself and his companion with the expression, "An' faith, it was nothing but a noise."

Mr. Speaker, I wish to again do that which I have often frequently done in this great legislative body, which is to urge that each and every one of my colleagues and any who may read these humble remarks by me, and these reminiscences by these former great American citizens, visit as many of the landmarks, statues, and memorials of Abraham Lincoln-and former Lincoln dwelling places—as possible. Also, I urge that if any of you do so you take your children and young people in your families and in your family connections with you. For instance, go to New Salem, Ill. Go to Hodgensville, Ky. Go to Springfield, III. Go to the old Ford Theater here in the Nation's Capital. Go to the Lincoln Memorial here at the Nation's Capital.

Subsidies Became Our Lifeblood—The Remedies Now Appearing

EXTENSION OF REMARKS

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1955

Mr. GWINN. Mr. Speaker, some time ago the Government took by force private property by taxation and gave big gobs of it to the beef cattlemen. In effect, beef became the public property of the Government. More and more people went into raising beef for Government subsidies. Surpluses of cattle increased. Prices to the consumers were fixed high by the Government, in spite of increasing surpluses.

BEEF REVOLTS

Suddenly the people quit eating beef. They struck. Just as suddenly the sturdy big-hatted ranchers woke up to the fact that they were raising socialized beef for Government, a most unrealiable political customer. They had lost their real dependable customers, the American people. So the cattlemen took a vote and threw out Government price supports and control of their business. chose the hard road of winning back their customers in a free beef market. That meant lower prices, but increased beef consumption from 62 to 76 pounds per capita-an alltime record. Congress was not smart enough to stop subsidies, but the cattlemen were.

POTATOES GAIN FREEDOM

The potato growers were corrupted for years by Government checks totaling \$478 million. They, too, delivered their potatoes to the Government instead of the consumers. Suddenly the taxpayers were shocked to see the Government paying farmers for potatoes with taxpayers' money, then burning the potatoes

to make them scarce to keep the prices high. To make it worse, after destroying the potatoes on one side of the road, the Government bought potatoes from Canada to feed the people on the other side. Year after year Congress could not stop it. The growers themselves did stop it. Potatoes won their freedom from Government. And tough as freedom is, potatoes would not go back into socialism, viz, management, ownership, and control by the Government.

PEOPLE REJECT GOVERNMENT HOUSING TOO

In the same way the Government has been insisting on taking by force of taxation uncountable millions of private property and building publicly owned Government houses. It rents them at half rent, exempt from taxation. Here again uncountable millions of taxes must be paid by private property owners which Government tenants should but do not pay. They are exempt.

Of course, Government expects tenants to vote right in return for such favors. A very narrow majority in Congress has been insisting lately on forcing public houses onto the people in spite of the fact that the people do not want them. Generally wherever the people vote they throw out Government housing, keep their own money at home and build their own houses. Constitutional amendments are proposed to stop this sort of Government business.

SCHOOLBOYS UNDERSTAND BUT CONGRESS
DOES NOT

Now come the people of Tennessee telling the true story of TVA, the first and most highly touted of American socialistic experiments. It is turning out very badly for Tennessee. For Tennessee has become totally dependent upon Government for electric power and appropriations from Congress. It is falling behind the other 10 Southeastern States in production and distribution. That is because the other States are not dependent on what Congress may or may not do. The other States make and pay for their own electric power and depend on themselves. Tennessee has found by bitter experience that business firms will not move into their State where electric power depends on Congress money by force from far-distant States. What's more, Congress is finding it more and more impossible to buy votes in Tennessee by charging the cost to Massachusetts, New York, Illinois, and other States. Even the little schoolboys now define TVA as "a river that flows through 7 States and drains 41." They were drained again in 1954 for the 22d year. TVA will be coming up to the public trough again in 1955. The total take to date by TVA is about \$2 billion-all from taxpayers. That will help heat Tennessee houses with electricity, though Tennesseans have plenty of coal in their backyards which they could use. They could also use oil like other people." But it is cheaper to use electricity so long as taxpayers in other States can be socked to provide it. But Tennessee knows that no scheme to buy votes as crazy and incredible as TVA can last. This administration has already given fair warning. So Mr. Robert M. Metcalf, Jr., vice president of Guaranty Mortgage & Trust Co.,

of Memphis, Tenn., comes up with this remedy. He proposed a new and greater TVA in Spotlight for the Nation.

He suggests that the power-generating facilities of TVA be sold to the people in the area which it serves. This would result in relief for the taxpayers of the remainder of the Nation and at the same time give to the people of the TVA reservation exclusive control over the agency upon which they are completely dependent for their power. Perhaps even more important than these immediate tangible gains, is the fact that such a sale would represent a reversal of the largest, most clear-cut Socialist step the United States has ever taken.

I have been criticized for characterizing TVA as socialistic. However, my opinion conforms with that of the authorities. The Chattanooga (Tenn.) Times of February 15, 1934, quotes Norman Thomas as saying:

The TVA is the only genuinely socialistic act (in the New Deal)—a flower in the midst of weeds.

Of course, TVA has never been officially represented as being the first Socialist experiment undertaken in the United States. But it is common knowledge that the Public Utility League pressed for passage of TVA legislation all through the 1920's. It was finally passed in the early days of the New Deal as conversation, flood control, and navigation legislation.

Since that time about \$2 billion of capital has been invested in and used to finance TVA. Only \$101.1 million has been repaid and that merely represents a credit on the books. The 1954 appropriation to TVA was \$188,546,000, which is about the average of congressonal advances that have been made in recent years. Thus, in a single year, Congress appropriated \$87 million more than TVA was credited for repayments during its entire life of 23 years.

Except for a low rate of interest paid on about \$55 million worth of bonds which were bought by the United States Treasury, TVA has paid no interest on the capital advances made to it. It has been estimated that, if TVA repaid the Federal Government for the interest costs alone of Federal moneys spent through TVA, the bills from TVA to its customers would have to be increased over \$40 million a year.

TVA pays no Federal taxes at all. Therefore, it does not contribute a dime of its proper share in our national defense. It pays nothing toward the salaries of the Congress and the President. In 1954 the Consolidated Edison Co., of New York, paid \$113,442,477 in State and Federal taxes, or about 24.4 percent of its revenues. TVA, in 1954, paid \$3,578,668 in lieu of State taxes, or 2.7 percent of its revenues.

From the foregoing it is clear that about 24 cents out of every dollar of power bills paid by customers of private utility companies is used in part to pay the costs, the taxes, the interest, and the capital of TVA, which it should pay for but does not.

The TVA is so weak and totally dependent on what Congress will do that it cannot build new power facilities to meet the growing demand for power; it cannot pay interest or principal; the payment of proper taxes alone would sink the TVA ship. In a debate on the floor of the Senate—1939—Senator George W. Norris, of Nebraska, the author of the TVA legislation, had this to say:

A proposal from a great association of Tennessee says, in effect, "Let the TVA property be subject to taxation the same as everybody else's property." * * If we go to that extreme, Senators, you can see that the TVA would be out of business in 3 months.

For 20 years Congress indulged itself in a kind of vote-getting game, sometimes under the lash of a President, to redistribute the wealth. They indulged in doing good with other people's money without too much disturbance to conscience. If conscience were disturbed, alleged national defense relieved it.

But by now each group getting the benefits of the redistribution are running head on into each other or running out of benefits. Indeed the mess, which Congress came into power 2 years ago to clean up, has smeared the faces of those who have quite diligently wrestled with it.

WHICH SUBSIDY TO KNOCK OUT FIRST

If there are critics of the failure of Congress to reverse the New Deal trend and reduce taxes much more, let them answer these questions. Which particular group feeding in the public trough would they knock out first? Which subsidy law would they repeal to start with? They must be repealed one at a time. That is, which group's vote would they risk losing first? The attempt has been made.

CORN ATTACKS PEANUTS

In the last session of Congress the Illinois delegation in Congress representing corn attacked peanuts. Corn having been for nearly 20 years in the public trough and feeling quite secure said in effect: "Now what basic rights have peanuts to put their feet in this trough?" "Why the country would never miss them if we never raised another peanut. They are indigestible anyway.' And corn called for a vote of all the others to throw peanuts out. Whereupon peanuts furiously counterattacked with most devastating effect. They said, "Why of all those feeding in this trough that have grown sleek and fat and should be thrown out, it's corn. Above all others it should fall on its knees and ask forgiveness for its sins in the well of this House." So little peanuts, who really had no case at all shamed corn and scared the others so that the vote was 228 to 170 to keep peanuts in. After the fight it appeared that peanuts might get nearly as much subsidy as corn got for keeping itself padlocked in cribs so as to make itself look scarce and high priced.

APPLES TAKE INTEREST

After that vote in which peanuts did so well, apples were heard tumbling all over themselves out in the Halls of Congress. They said, "Why sure enough we are just as basic as any of the rest. Besides we can be kept by freezing. What's more basic than an apple a day keeping

the doctor away?" In the distance you could hear groups without number organizing the votes. So every seat in the House may be endangered unless the Member votes to give each new group theirs for no good reason except that all the others are getting theirs. When I asked a friend on the floor if this would ever stop, he answered "No; it will go on forever." Of course it must go on forever unless an overall reversal and total stoppage is devised. For if corn subsidies are lawful, the steer, the cow, the pig, and chicken that eats corn must be subsidized. And so it must go on and on without end until it is all stopped.

GOVERNMENT SUBSTITUTE FOR GOD

Does not history prove that when government controls the economic laws of food, it controls the moral laws of people surrounding food? If government owns your house, and rents it to you, it will tell you how to live in it. You may commit one sin or have one illegitimate child in government housing but not two. This is the rule in the housing authority book of morals in Houston, Tex. You are free to vote, of course, but if you vote against the party that provided your house you may expect to move. And so all dependents on government power loans, health, houses, fruits of fields and forest must do the will of government and not of God. Government pretends to be a substitute for God. The remedy is to reject the idea utterly.

CONGRESS NEEDS HELP OF THE STATES

The people of the United States have witnessed two decades of unprecedented assumption of governmental power, confiscation of private property by taxation, inflation, and debts. As the Government has grown in power and property the individual has been correspondingly reduced in property and weakened in his power to manage his own affairs.

The January 25, 1955, issue of Look magazine concludes that these conditions are here to stay, regardless of which political party wins. This is so because each party tries to be elected by promeising to exercise the unlimited power of government to tax and spend and borrow to satisfy special interest groups in return for their votes. Indeed, this is in itself a fatal blow to the two-party system and makes the one-party or monolithic state inevitable. It makes no sense to have two candidates each with the same idea.

Resistance to the trend has been wholly ineffectual. The economic groups affected either use the Government's power for their special advantage or seek exemption from it in return for votes. Presidents and Congresses will not do anything about this situation because as long as they have unlimited power they will use it to satisfy these groups. It should be obvious, therefore, that unlimited government is absurd.

The remedy can be found in this paraphrase of Edmund Burke:

When government acquires unlimited power, good men must associate; else they will fall, 1 by 1, an unpitied sacrifice in a contemptible struggle.

And so, united action of good men has become apparent and necessary. This

effort must be made in and by the States. As parties to the original contract, they must come forward to redefine, clarify, and reaffirm the limitations of that contract.

The President's Health Plan

EXTENSION OF REMARKS

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following editorial which appeared in the February 3, 1955, edition of the New York Times:

THE PRESIDENT'S HEALTH PLAN

In his latest message to Congress President Eisenhower has forthrightly declared the health of the American people to be a proper national concern. The proposals he makes also show that he believes the Federal Government should accept a large measure of responsibility for the protection and improvement of our physical and mental wellbeing. The degree to which the Federal Government should assume this burden is subject to debate; but the basic principle is sound and the American people are insistent on action by whatever Government agencies are best fitted to help solve the health problems that bedevil them.

The message also shows the President's recognition of what some of these problems are. He rightly rates meeting the cost of medical care at the top of the list. Few of us have avoided the financial crisis—even catastrophe—of a major accident or illness and the strain of continuing smaller disabilities. But the adequacy of medical care is also crucially important. The President has recognized the necessity of trained personnel—now in critically short supply—and of adequate physical facilities: hospitals, clinics, nursing homes, and their equipment—now far from adequate in quality, quantity and geographical distribution.

The President has, rightly we believe, accepted insurance as the best method of meeting the costs of medical care. Also, he probably reflects the opinion of most Americans in saying that it should be furnished by private and voluntary agencies. But we doubt whether insurance can, or should, be limited only to those high-cost risks which may be beyond the capacity of the individual to bear. The experience of leading health insurance plans has disclosed the cumulative economic effects of smaller illnesses, each one of which might be met by itself, and also the saving in expense and energy that flow from early diagnosis of what may seem at first only minor ailments.

As a means to the goal at which we should aim, the President's renewed proposal for Federal reinsurance of existing health plans-rejected by Congress last year—is far from adequate. In the first place, reinsurance does not add a penny to the working capital needed by insurance agencies to organize or to increase the number of their subscribers and the scope of the coverage after they get going. Nor does it help to reduce the prices they have to charge for the protection they give. Essentially, reinsurance is merely a help to the agencies in meeting exceptional demands for benefit payments. At best it is a temporary sid to them—which they have eventually to pay for through reinsurance premiums. Furthermore, testimony at last year's hearings on the Federal reinsurance

bill showed no enthusiasm for it on the part of the agencies themselves. Finally, reinsur-ance offers no help to the 60 million people in the United States who now have no protection at all through existing insurance agencies.

The least the Federal Government should do, we believe, is provide loans to nonprofit especially those which offer full agenciescoverage through groups of doctors working together-so they can organize and operate

more effectively.

The President does recommend direct grants to the States to meet costs of medical care for the 5 million people who can't afford to pay for it; but, all in all, his plan does not seem to recognize that unless private agencles rapidly extend their coverage, both of risks and population, the new latent surge toward compulsory Government insurance will eventually be hard to stem.

On two other important counts the President's message falls short of what the Nation's health situation so urgently de-mands. While he recognized the necessity for more trained personnel he mentioned only nurses-for whose training he recommended grants to State agencies and an expansion of the traineeship program of the Public Health Service. This proposal completely neglects the crying need for more and better doctors. The medical schools of the country are desperately short of funds. Whether the Federal Government should directly help support them is debatable. Certainly the foundations, whose generous grants put the leading schools on their feet in the first place, might well take the lead now in coming to their rescue. But, failing that, some ways might be found for Federal money to be made available without dangerous political controls.

Finally, the President's plan fails to deal effectively with the needs of medical re-search—the foundation on which all therapy depends. In his health message last year he warned the country of the rising threat of heart disease and cancer, and urged strengthening the National Institutes of Health in the Public Health Service, which are carrying on a specially vigorous research attack on these menaces, both directly and through grants to other agencies. This year the message urged more increasing research on air and water pollution but did not mention heart disease and cancer. Furthermore, the Federal budget which he has presented provides less than 10 percent more next year than this for the Institutes' work. Nor did the President say anything about what the Federal Government might do to further medical research by outside agencies, either public or private.

We Must Help Our Underpaid Postal and Federal Employees Now

EXTENSION OF REMARKS

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. DOLLINGER. Mr. Speaker, the following is my statement of February 1, 1955, to the chairman and members of the Committee on Post Office and Civil

On January 5, 1955, I introduced H. R. 274, which provides for an increase in pay of \$1,000 per annum for postal workers.

Last year, when the postal and Federal employees pay increase bill came before us, although the increase was inadequate, I

voted for the measure because it was the best that we could get at that time. It was grave disappointment to me and a serious blow to the employees when the President vetoed the measure, for a pay raise was long overdue and they were entitled to it.

Postal and Federal employees are many ears behind in catching up with the cost of living. They cannot meet their obligations or give their families adequate care or support on their present pay. They suffer hard-

ships and anxiety.

Living costs continue to rise, the tax burden is being shifted more and more to the shoulders of the low- and middle-income families, and there is no reason why the Federal Government should not provide its postal and Federal employees with a justified wage increase so that they can enjoy a decent

standard of living.

Postal workers, who have always been un-derpaid, need a raise of at least \$1,000 per Likewise, the other Federal employees vear. need the same help. This sum would bring their pay only to the level of pay they would receive from private industry for similar effort on their part. If we wish to maintain the efficiency of our postal service, then we must recognize the necessity of providing adequate pay for faithful and competent work, and this also applies to all Federal service.

It is our duty to grant this increase in pay without further delay. I trust that your committee will take prompt and favorable action so that Congress may have the opportunity to vote on the necessary legislation in the very near future.

Selling Milk

EXTENSION OF REMARKS

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Marshfield News-Herald of January 31, 1955, one of the leading daily newspapers in Wisconsin. The editorial is as follows:

SELLING MILK

Wisconsin farmers and other representatives of the State's dairy industry will be pleased to note that the board of regents of the University of Wisconsin have approved the installation of 10 coin-operated milk vending machines in university buildings, with 10 more to be installed later.

The expected sale of 3,000 containers of milk each day by this means is not, of course, of any tremendous benefit to the dairy industry. The College of Agriculture dairy herd will supply it and it will be as a drop in the bucket to Madison's milk busi-

What counts is that the presence of these vendors in the university buildings will serve as a demonstration of the State's interest in its great product and as one of the finest advertisements the dairy industry can dis-

Wisconsin's facilities for the production of top quality milk and dairy products are unexcelled, and its dairy output reflects the fact. But Wisconsin people cannot possibly use its dairy production any more than the Southern States can use up their cotton or

the Plains States their wheat.

Since we must find out-of-State markets for the output of our 150,000 dairy farms, it also devolves upon us to demonstrate our

regard for our own product by making generous use of it ourselves. Our per capita consumption of milk, which is so readily available to us, should far exceed that of any

We should be promoting dairy products all of the time, and one of the ways to do it is to make pure milk easily obtainable in all of our colleges and schools where young people assemble. By fostering a liking for milk among them we not only help to keep them healthy, we also build up a convincing corps of milk promoters.

The Great Game of Politics

EXTENSION OF REMARKS OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following column, written by Frank R. Kent, entitled "The Great Game of Politics," which appeared in the Baltimore Sun Sunday morning, January 23, 1955:

THE GREAT GAME OF POLITICS (By Frank R. Kent)

Washington, January 22.—The present Democratic strategy is in conflict with one of the soundest statements of the party's oldest, most regular, most generous, and distinguished member, Bernard M. Baruch. A good many years ago Mr. Baruch, in a speech be-fore the War College in Washington, made a comment that has been widely printed, often quoted, and never disputed. "Every man," quoted, and never disputed. "Every man," said Mr. Baruch, "has a right to his own opinion, but no man has a right to be wrong in his facts."

Yet in two outstanding instances the Democratic National Committee has violated this indisputable Baruch axiom. One is in the matter of the Dixon-Yates contract. Mr. Stephen Mitchell, former chairman of the National Committee, started this controversy off with the dirty insinuation that President Eisenhower had espoused this contract be-cause one of its beneficiaries would be Bobby Jones, an old friend of Mr. Eisenhower, and a very small stockholder in the Dixon-Yates After Mr. Eisenhower spoke Mr. Mitchell hastily retreated from this position and his contemptible innuendo has not been repeated. However, the Dixon-Yates opposition, inspired by the Democratic committee, has continued to distort and misrepresent the facts to an extraordinary degree. It completely avoids the only real issue in the fight which is the large one between the advocates of expanded public power operation and ownership and those who do not believe in that expansion.

The other instance in which the Democratic committee, now headed by Mr. Paul Butler, is proceeding in disregard of the facts is in the organized and vicious attack upon Vice President RICHARD NIXON, who was, perhaps, the most effective Republican campaigner in the 1954 campaign. The charge against Mr. Nixon is that he had indicted the whole Democratic Party as "the party the whole Democratic Party as the party of treason." It turns out that Mr. Nixon did no such thing. It was Senator Mc-Carrhy who used that phrase—not Mr. Nixon. It turns out that Mr. Nixon at no time accused the Democratic Party as a whole although he did accuse the preceding Demo-cratic administrations as "being soft" toward Communists and having failed to prevent communistic infiltration in the State

Department.

It is not possible for anyone with any regard for the truth to question the correctness of Mr. Nixon's statement on these mat-Certainly, no one now doubts that if it had not been for Mr. Nixon, then a member of the House Committee on Un-American Activities. Alger Hiss would never have been indicted or convicted. With equal certainty, under the Truman administration, treatmen of the FBI revealed facts about the late Harry Dexter White and the evidence of his treachery to the United States constituted an inexcusable laxity or stupidity, or collusion—or all three. At no time has the Demo-cratic committee attempted to deal with these matters on a realistic basis.

On the contrary, apparently it has elected to disregard the facts and factual denials and continue to repeat its reckless charges as though they had been substantiated inas thought and standard and sta through sheer noise and repetition, to make their charges against Mr. Nixon and the Dixon-Yates affair stick, regardless of the facts. It hardly seems that they can be successful. One hesitates, of course, to disregard the great power of skillful mass propaganda. Nevertheless, to make a case as false as that against Mr. Nixon and as utterly destitute of honesty as that against the Dixon-Yates contract stand up is to concede that truth is of no avail and the way to succeed is to bear false witness.

Of course, it is foolish to predict what a Congress as evenly divided as the present one, and as fully saturated with presidential politics, will do. However, it does seem safe to say that if tactics so clearly founded on fiction and so overwhelmingly flavored with partisanship can really pay, then two rather unpleasant things will be established: (1) that the obvious philosophy of former Chair man Mitchell and his successor, Chairman Butler, that it is better to be clever than to be right, is sound; (2) that Mr. Baruch's idea that "every man has a right to his own opinion, but no man has a right to be wrong in his facts" makes him just (to use one of his favorite expressions) an "old china egg" who does not know what he is talking about. Definitely, the record refutes that.

How Montana Farmers Get Cheaper

EXTENSION OF REMARKS OF

HON. ORVIN B. FJARE

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. FJARE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Paul Friggens in the western edition of the Farm Journal. The article is entitled "How Montana Farmers Get Cheaper Water" and will be of interest to all of the Members of the House interested in irrigation projects. It follows:

HOW MONTANA FARMERS GET CHEAPER WATER (By Paul Friggens)

For \$2 or \$3 per acre, Montana is developing some of the cheapest water farmers can

They're pioneering small, State-built irrigation projects that could be the answer to low-cost irrigation in your State, too.

These State-built projects don't compete with Federal programs. They're small or medium sized, and only a few bring in new land. Most of them provide extra water for farmers who are already irrigating-drought insurance to stabilize Montana's agriculture.

They cost considerably less than public projects, too. "We built some for what it would cost the Federal Government just to investigate a big project," says the water conservation board.

Montana's projects are financed by a new and simple plan—with no liens on the land. Ordinarily, farmers form irrigation districts, which saddle every acre with the full project

Not so in Montana. You just pay for your own water—you're not liable for your neighbor's.

The State builds the project. On some, farmers dollar-match; on others, they provide labor. Once built, the farmers take over and run the project pretty much on their own. They pay back the State on a long-term basis—something like REA.

Other States are getting interested in the Montana plan. Recently I visited a string of projects that are commencing to make a real projects that are commenced by impact on the State's economy.

project, a private system that never got

enough water, and finally went broke. Farmers put up \$30,000, and the State \$35,000, to build a rock-brush dam and bigger canals. It paid off:

From the abandoned land, Big Horn farmers harvested a whole trainload of sugar in one season.

These Big Horn farmers repay only \$1.50 per acre-foot construction charges for 30 years. There's no operation and maintenance charge; they keep up the dams and ditches themselves. "When there's trouble we just hustle a crew and fix it," says director and water-user Ed Verhelst.

Inspired by the Big Horn success, neighboring, burned-out wheat farmers organized the Hysham Water Users Association, and petitioned the State to build a \$500,000 project to pump-irrigate 7,500 acres with water from the Yellowstone River.

Today 54 members are growing 20-ton sugar beets, 5-ton alfalfa, are dairying, and running three steers per acre on irrigated Their water costs \$2.50 per acrefoot-\$871/2 for repaying the loan, and \$1.62 for pumping and maintenance.

"Few years ago, we were going broke trying to grow wheat," says Harold Zent, president of the Hysham Water Users Association. "Nobody's selling us out now."

Zent estimates that the project has already doubled the county's taxable valua-tion. He pointed out Hysham's new \$235,000 county high school. "We're sprouting new homes and stores, too."

Hysham is a good place to see how a typical project operates. A farmer-elected, five-man board runs the show. The mainproject operates. tain the system, levy, and collect all water charges, and send the State its repayment. The State keeps hands off, except to give technical advice, O. K. the budget, and bill the users.

"We like it this way," says Zent.

"But the big thing," water-user Ray Kimball told me, "is that I'm not mortgaged for my water; not obligated for the other fellow. I've got a chance to make it on my own. That district idea has wrecked many farmers."

The Montana Water Conservation Board now has engineered and constructed 173 projects, some smaller, some larger than Big Horn-Tullock and Hysham. Total investment is about \$17 million to irrigate 386,000 acres.

A good chunk of this is Federal money, which started Montana on the projects back

in the drought-and-depression thirties. But finding that the idea paid, Montana-with only 600,000 people-has been spending about \$1 million per year ever since.

Seeking to stabilize its dryland agriculture, Montana first planned these projects back in the twenties. But it lacked financing. With the drought-depression years and first PWA grants, Montana was ready with a

"We want irrigation insurance against another drought," Montanans told Washington.

Frank Cooney, then Governor, called a special session of the legislature in 1934. It created a water-conservation board, with powers to appropriate any unused waters in Montana.

Cooney appointed some of Montana's top irrigation men to the first board, including Rancher D. P. Fabrick, who is a member of the present board, along with Gov. J. Hugo Aronson, C. H. Raymond, Hamilton banker; Max Mathews, Billings REA manager; and Fred Buck, State engineer.

Today, you can see dramatic proof of what the program has done in the 170-mile Musselshell Valley.

The drought in the thirties hit the Musselshell hard. Farmers went broke. "The economy collapsed completely," says Board Member Fabrick, "simply because the farmers didn't have a dependable supply of water."

With about \$2 million PWA and State funds, engineers built a chain of 3 reservoirs, to supplement irrigation on 60,000 acres, and thus stabilize the entire Musselshell waters'ed. Now, it's cow country again.

"Grow 10 tons of feed where we used to raise 1," ranchers told me. Cost of their drought insurance, between \$1.50 and \$3 per acre.

Here are water costs on some other Montana projects (per acre-foot, including both construction and operation and mainte-nance): Rock Creek, \$1.15; Willow Creek, \$0.95; Flint Creek, \$1.20; Ruby River, \$0.71; Tongue River, \$1.40; Deadman's Basin, \$0.95; Vigilante Canal, \$1.44; and Broadwater-Missouri, \$1.28.

The Broadwater-Missouri project is bringing in the biggest chunk of new land under the Montana setup. Financed with \$1 million PWA-State funds also, it was finished just before World War II.

Townsend, Mont., business people estimate that this project has tripled county income. "Been paying a lot of income taxes I never paid before," says pioneer settler Guy Kircher.

These small projects have their problemsupkeep, water loss, drainage—the same as every irrigation setup. But I found farmers overwhelmingly favorable.

"Best thing that's happened to Montana," is how O. P. Balgord, of Lavina, summed it up.

The Montana Water Board often serves the entire rural community. The board has also engineered and build—at a substantial saving-12,000 miles of REA lines.

Recently it's been coming to the rescue of small towns short of water. Conrad, Mont. was desperate for water, but had already spent up to its legal debt limit. So the State water board built a 12-mile lake supply line, and sold the town its water on a monthly contract. Conrad paid up its old debts, and will soon pay for the pipeline. The board is doing the same for other hardpressed Montana towns.

The State water board has a project backlog. "We aren't promoting, and we don't have money to throw around," says veteran Water Board Secretary Robert Kelly. "We just find out what farmers need, and build it to pay out. Every project stands on its own."

Congress Urged by Unions To Protect Railroad Safety

EXTENSION OF REMARKS

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. STAGGERS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from Labor of February 12, 1955:

CONGRESS URGED BY UNIONS TO PROTECT RAIL-ROAD SAFETY—ACTION ALSO ASKED TO BLOCK "SPOILS POLITICS" SCHEME—OFFOSE CON-PIRMATION OF HALL AS INSPECTION CHIEF IN COMMERCE COMMISSION

Standard railroad labor organizations this week pressed an all-out battle against injection of "spoils politics" into the operations of the Interstate Commerce Commission and against renewed attempts to undermine safety on the railroads.

The Railway Labor Executives' Association, speaking for the chiefs of 19 unions with over a million members on the "Iron horse," prepared to take the crucial fight to the Halls of Congress.

Keynoting this struggle is a three-point program adopted unanimously by the association:

1. The unions emphatically oppose, as they did in the past, proposals to lump together funds for the Commission's Bureau of Locomotive Inspection with those of the Bureau of Safety and Service. Such scheme, the unions contend, would destroy the long-standing independence of the Bureau of Locomotive Inspection, which was set up by a separate law. Also, it would greatly weaken the adequacy of the inspection.

OPPOSE CONSOLIDATION

2. The unions also vigorously oppose any legislation which would force a consolidation of the bureaus under one head. This, like the lump-sum scheme, would nullify the Locomotive Inspection Act and "strike at the heart of safety on the rails," the unions maintain.

3. In addition, these unions unitedly oppose Senate confirmation of John H. Hall to serve as Director of the Bureau of Locomotive Inspection on grounds that he is a political appointee and without adequate background or competence for this vital safety post.

These actions come on the heels of a denunciation by rail labor spokesmen a fortnight ago of an extraordinary proposal made by the ICC to Congress.

"We recommend," the Commission said,

"We recommend," the Commission said, "that the Locomotive Inspection Act be amended so as to eliminate the provisions relating to the appointment of the Director and Assistant Directors of Locomotive Inspection and the detailed requirements relating to the employment of inspectors."

SEE PERIL TO SAFETY

This would, the unions fear, open the door wide to appointment of "political hacks," thus imperiling safety on the rails. Also, it would apparently wipe out existing requirements that the Bureau's supervisory officials be selected on the basis of practical knowledge and experience. Hitherto the top officials have been chosen on the basis of promotion from the ranks.

To protect the present setup, which has functioned well, the unions affiliated with the RLEA stressed that "seniority and qualification constitute a sound basis for promotion within the Bureau consistent with the public interest."

Also, they adopted a declaration urging that appointments in the Bureau of Locomotive Inspection "shall be made without respect to political affiliation of any applicant," and only from among applicants "who have qualified by training and experience" and who "have successfully passed the competitive civil-service examination."

QUALIFICATIONS STRESSED

Finally, they stressed also that appointments to the positions of Director and Assistant Directors shall be made from among those who have qualified and served as inspectors of the Bureau.

"Technical and administrative qualifications to fill these positions shall be the determining factors, together with seniority within the Bureau," the unions added.

In line with those yardsticks, the unions are opposing confirmation of the existing appointee to the Director's post—John Hall, a former engineer from San Francisco, who had never served on the Bureau's staff, nor ever even taken an examination for an inspector's job in the Bureau.

President Eisenhower at first had followed tradition in filling the post. Last year he named Charles H. Grossman as Bureau Director. Grossman was senior inspector in the Bureau, having been with it since 1918. Grossman was to succeed Director Edward H. Davidson, who retired.

REVERSAL ON GROSSMAN

In the meantime, Grossman testified against a bill introduced by Senator John H. Bricker, Republican, of Ohio, then chairman of the Senate Interstate Commerce Committee, which would undermine the independence of the Bureau of Locomotive Inspection.

Presto! Grossman's name was then withdrawn by the White House—and that of Hall, never before heard of in connection with rail safety, was substituted. Hall is now serving in the post by interim appointment, but he has not been confirmed by the Senate.

The RLEA explained it unanimously opposes Hall's confirmation: First, because he has absolutely no qualifications for the post; and, secondly, because his appointment violated the practice followed since the Bureau was established 44 years ago of selecting the Director from among qualified senior persons on the staff.

Dumping of Trash Along Our Public Highways

EXTENSION OF REMARKS

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. AVERY. Mr. Speaker, I have received a letter from a high school student in my district to urge more rigid enforcement of the law that prohibits dumping of trash along our public highways. Although this is a rather unusual accident, it does point up the fact that the public feels little pride or responsibility in observing Federal or State statutes that prohibit the promiscuous scattering of trash and litter along our system of public roads.

This careless practice is highly objectionable from a standpoint of safety, health, and beauty.

The letter follows:

BERN, KANS., February 4, 1955.

Dear Mr. Avery: I am a 16-year-old high-school junior. Just last week I lost the dearest friend and closest companion I ever had or ever hope to have. He was my 6-year-old saddle horse, Buddy. I loved him more than anything else. The reason I am writing is because my Buddy was killed as a result of trash-dumping along roads. There is a ditch leading away from the road. A broken beer bottle was washed down the ditch into our pasture. Last Sunday it was snowy and slick. Buddy jumped the ditch, just as he had done so many times before. As he hit the other side, one hind foot slipped and was slashed by the broken beer bottle. It severed some arteries and though he tried to get home, he never made it. Daddy found him at the top of a hill. He had bled to death.

I don't know if the pleas of one person can do it, but won't you please try to make someone enforce the laws concerning trash-dumping along roads. It is too late to bring my Buddy back and maybe something like that will never happen again, but it has happened once and I think that is once too often. Why should my daddy and myself pay (in heartache) for someone else's ignorance? Again I plead with you to make someone enforce the laws concerning trash-dumping along roads.

Sincerely and hopefully, LENIS PLATTNER.

Statement of National Commander of AMVETS

EXTENSION OF REMARKS

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks, I wish to include the statement of Rufus H. Wilson, national commander of AMVETS, before the Committee on Veterans' Affairs. House of Representatives, on February 9, 1955. As a member of the Veterans' Affairs Committee, I feel that this statement warrants the attention of the Members of Congress. In addition, I have particular pleasure in presenting it, not only because I am aware of Mr. Wilson's ability and am happy to know that it has been recognized by the AMVETS, but because Mr. Wilson is one of my constituents from the Highland Park area of Michigan's 13th Congressional District.

The statement follows:

STATEMENT OF RUFUS H. WILSON, NATIONAL COMMANDER OF AMVETS, BEFORE THE COM-MITTEE ON VETERANS' AFFAIRS, HOUSE OF REPRESENTATIVES, ON AMVETS 1955 LEGIS-LATIVE PROGRAM, FEBRUARY 9, 1955

Mr. Chairman and members of the committee, AMVETS appreciate the opportunity to appear today to present the highlights of our legislative recommendations for the first session of the 84th Congress.

Having served as national legislative director of AMVETS for several years prior to my election as national commander, I have some knowledge of the fine work being performed by this committee and its very capable staff. Your objective attitude toward veteran problems merits our sincere thanks. We are confident that your continued care-

ful study, nonpartisan action, and constructive criticism on all matters affecting veterans will preserve and strengthen the great rehabilitation program provided by the people of this Nation to their veterans.

We desire to submit for the record a digest of resolutions on veterans' affairs adopted in August of 1954 by the 10th annual national convention of AMVETS. We also desire to submit a digest of resolutions adopted by the AMVETS national executive committee at their meeting on December 11 and 12, 1954, and then speak briefly on certain matters of current interest to all veterans.

PRESIDENTIAL COMMISSION

As you know, the President has appointed a Commission on Veterans' Pensions to make a comprehensive study of the "structure, scope and administration of laws pertaining to pension, compensation, and related non-medical benefits for veterans and their dependents."

AMVETS have never been afraid of studies or investigations per se. In fact, we have always welcomed them, hoping for an everimproving, sound, equitable structure of veteran benefits in complete consonance with our Nation's obligation to its veterans.

History, however, gives us cause for some concern. We have seen some well-meaning commissions foredoomed to fallure because of the simple fact that technical matters were entrusted to nontechnicians and because economy became more important than equity.

Because of our apprehension on this score, we recently asked the Chief Executive to appoint members of this committee and representatives of organized veterans to the new Commission. Although we have received no word as to whether or not the President will accept our recommendations, we have received assurances from the White House that this committee will be consulted as the first order of business of the Commission. We are also advised that veterans' organizations, the House Select Committee on Survivor Benefits, and the Senate committees responsible for veterans' legislation will also be consulted. These assurances are most encouraging.

Legislative recommendations stemming this study will undoubtedly be referred to this committee. We will not pre-judge them. Our objectives are relatively simple. Perhaps, however, they bear repeat-ing. We desire to maintain compensation as the self-evident backbone of the VA benefit structure. We desire to maintain a VA pension system as being both necessary and equitable. If it is determined that there is redtape, confusion, overlapping laws, or inequalities, we desire to eliminate them. And we desire to maintain the structure of veterans' benefits as a separate and distinct entity, simplified and strengthened perhaps, but still identified as a program for and their dependents. Any recommenda-tions made that fall into the pattern of these basic objectives will receive our unwavering support. No other objectives would appear to us to be consistent with our very reason for being. We trust that the objectives of the Commission will be in the same vein. We trust also that the tremendous influence of this committee will be exerted in this di-

CHAIRMAN'S LETTER

On December 14 of last year, Mr. Chairman, I received a communication from you suggesting that this committee would find it most helpful if I would discuss AMVETS position on five specific subjects. It is to these subjects that we now address ourselves.

EFFECT OF AMENDED P-10

In our effort to assist your committee in the evaluation of the effect of the amended VA Form 10-P-10 now being used in connection with the hospitalization of veterans

for the treatment of non-service-connected disabilities, we asked 25 AMVET national service officers to study this question and report upon it.

They were unanimous in their reports that the amended P-10 had in no way curtalled the volume of non-service-connected hospital admissions, but that it had served as a deterrent, keeping many of those who could well afford to pay for hospital treatment from seeking admission to VA facilities for the treatment of non-service-connected conditions.

We have always maintained that abuses in this program have been relatively few. This is corroborated in summing up the reports of our field people. One service officer in particular reports that out of 13,000 applicants for non-service-connected hospitalization, less than 12 have been denied because of either a VA determination or their own admission that they could afford to pay.

Because the ability-to-pay requirement was not spotlighted or featured prior to the inauguration of the addendum. I believe we can logically assume that this small group would very possibly have been admitted to the hospital. It, therefore, seems obvious to us that the addendum has served as a deterrent. It seems equally obvious that the cases of abuse are relatively few in comparison to the total number of applicants. The primary concern to be drawn from the P-10 addendum is that it has effectively answered false criticism of this veterans' benefit.

AMVETS subscribe wholeheartedly to the theory that veterans should be treated in VA hospitals for non-service-connected conditions provided they cannot assume the cost of hospitalization and a bed is available. We urge this committee to continue to support this basic philosophy also. To protect integrity of the thousands of veterans rightfully entitled to this benefit, however, we suggest that the inspection authorized by House Resolution 63 include a further study of the nature and extent of abuses in this program. If it is determined that abuses are still prevalent, AMVETS will support any sound recommendation for their elimination just as we supported and recommended the addendum to the P-10.

TERMINATION OF WARTIME BENEFITS

At a meeting of the national executive committee of AMVETS on December 11 and 12, a resolution calling for the termination of the broad wartime benefit program was adopted. This same resolution, recognizing the continuing need for an above normal complement of personnel in the Armed Forces, recommended that a limited benefit program be established to serve those men and women who will be needed by our armed services to fulfill defense requirements. We desire to submit for the record the complete text of this resolution.

The Presidential proclamation of January 1, 1955, has accomplished the intent of the first portion of our mandate. We are now concerned with the second portion.

In any benefit program for those entering service after February 1 of this year, first consideration should be given to an education and training program patterned in some fashion after title II of the Servicemen's Readjustment Assistance Act of 1952.

The availability of such a benefit for personnel entering service after February 1 should serve as a stimulus to enlistments. In addition, the benefit to the Nation of such an educational program has already been demonstrated by the results of the World War II education and training program. It has been recorded that the income level of those who have taken advantage of this program has been raised to a point where they are now paying an extra billion dollars a year in income taxes to the United States.

To meet the immediate financial needs of dischargees, we recommend the continuation

of mustering-out pay. It is our considered opinion that this benefit assists immeasurably in effecting the transition from military to civilian life and should be made available to servicemen without regard to the circumstances of service. We also recommend that unemployment compensation similar to that paid under title 4. Public Law 550, be made available to the group serving after February 1, 1955.

HOSPITAL CONSTRUCTION AND REPAIR

Undoubtedly, the most pressing need in the hospital and domiciliary repair or reno-vation program is the replacement of the cantonment-type hospital or domiciliary home. These facilities were constructed as temporary structures. After many, many years of occupancy they are now obsolete. It is becoming increasingly costly to maintain these structures in a state of repair. This horizontal-type hospital does not lend itself easily to efficiency of operation or administrative economies. Because of the widespread distribution of wards and the many miles of corridors, the serving of food creates a special problem. No less important is the fact that this type of installation poses certain handicapping problems in connection with surgical operations. The surgical suites are for the most part poorly located, making it necessary to transport patients over miles of rough, uneven corridors and ramps following major surgery.

If the Government is to receive 100 cents value of every dollar spent in the Veterans' Administration medical program, it is vitally necessary that the construction, renovation, and repair of older hospital and domiciliary facilities be accelerated. Modernization and replacement of facilities and equipment will promote greater efficiency and economy of operation. The difference, in many instances, between the chronic long-term illness and the short-term illness is the availability of modern medical and therapeutic facilities.

LOAN GUARANTY PROGRAM

In 1950 the Congress recognized an inequity in the Loan Guaranty Program be-tween veterans located in areas where private capital was readily available and those located in areas where such financing was not easily obtained, by enacting legislation authorizing the Veterans' Administration to make direct housing loans to veterans in areas where guaranteed private mortgages were not available. A further inequity was created, however, by the failure to extend this direct loan program to those veterans desiring to purchase a farm residence in areas where private capital was not available. In the same legislation which created the direct loan program, the VA guaranty on home loans was increased from \$4,000 to \$7,500, while the guaranty for farm residential loans was and is only \$4,000.

We recommend that this committee approve at an early date legislation that will extend eligibility for direct loans to those veterans who wish to purchase a farm residence in areas where private capital is not available. We further recommend that the amount of VA guaranty for farm residential loans be increased from its present \$4,000 maximum to \$7,500.

FEDERAL SCHOLARSHIP PROGRAM

AMVETS have long recognized the desirability of a scholarship program for the children of certain ex-servicemen. Because we have feit that such a program was warranted, we ourselves have taken some steps in this direction. Our National Service Foundation has sought to bridge a small part of the gap in its own AMVET memorial scholarship program which annually awards 6 \$2,000 4-year college scholarships to high-school seniors whose fathers lost their lives or became permanently and totally disabled as the result of military service during World

War II or the Korean conflict. Such a program sponsored by the Federal Government on a broader scale would provide a brighter future for those youngsters whose fathers' sacrifices have prejudiced their own educational opportunities. We urge this committee to hold early hearings on this subject.

LEGISLATION BY APPROPRIATION

AMVETS continue to be concerned by the tendency of the Congress to legislate on appropriation bills. As this legislative body enters the period where consideration of appropriations for Government departments and agencies will consume a great deal of your time, we respectfully call your attention to this serious problem. We repeat that & matters little that honorable objectives have been sought in this manner. matters not that good moves are sometimes made through this medium. Legislative riders on appropriation bills do not properly resolve important matters of policy. important is that the long, hard battle for legitimate veterans' benefits can be lost in a moment through this process. We respectfully petition this committee to continue its opposition to this method of circumvention of its jurisdiction.

CONCLUSION

In this, my first public appearance before the newly organized Committee on Veterans' Affairs, I desire to reaffirm that AMVETS is dedicated to promoting the welfare of the veteran and his dependents. We recognize in our deliberations that what is good for the Nation is good for the veteran. We are neither partisan nor political and in keeping faith with our responsibilities as citizens of the Nation, we shall always be actively concerned for those who have served our country well.

We welcome the opportunity to appear before this committee from time to time to express our views on veterans' problems. As you embark upon your duties in this year of uncertainty, we wish you well. We pray that you may be blessed with the wisdom and foresight necessary to plot the best course for the millions of veterans and their dependents whom you serve. We pledge to you our cooperation and objective thinking in arriving at our mutual objectives.

DIGEST OF RESOLUTIONS ON VETERANS AFFAIRS ADOPTED BY AMVETS 10TH ANNUAL NA-TIONAL CONVENTION, MIAMI BEACH, FLA., AUGUST 25-29, 1954

1. Resolved, That AMVETS are first of all Americans and must view all legislation primarily as citizens of this Nation and secondarily as members of a group of veterans.

2. Resolved, That any legislation specifical-

Resolved, That any legislation specincally benefiting AMVETS as veterans must be primarily viewed for its effect on the Nation as a whole.

3. Resolved, That AMVETS remain loyal to themselves as veterans by seeking to strengthen services rendered to all veterans and that we try to further the legitimate ends of this group of proven good citizens, that they may continue to make their individual maximum contribution to the continued progress of the United States of America.

4. Resolved, That we commend the Veterans' Administration for its diligence in proceeding with the reorganization plan.

5. Resolved, That we particularly commend the Administrator, Mr. Harvey V. Higley, for his brilliant leadership.

ley, for his brilliant leadership.
6. Resolved, That we again call upon the Veterans' Administration to continue its efforts to strengthen itself as a one-stop agency for all veterans and their dependents.

7. Resolved, That AMVETS oppose actively any efforts to split and dismember the Veterans' Administration and use all the efforts of the AMVETS organization to maintain the VA as an intact and central functioning agency.

. 8. Resolved, That an amendment be made to section 5 of Public Law 23 and section 621 of the National Service Life Insurance Act, to provide a period of 2 years in lieu of the present 120 days.

9. Resolved, That Public Law 23 be amended to allow veterans the privilege of purchasing United States Government life insurance or National Service life insurance within 2 years following the date of enactment carrying out this provision.

10. Resolved, That existing veterans' insurance laws be amended to abolish those provisions which allow the existence of a service-connected disability to be a bar to reinstatement of Government insurance.

11. Resolved, That we recommend legislation to delete from the incontestability provision of the National Service Life Insurance Act the words "except by fraud" and substitute therefor "except by fraud discovered by the VA within the first 2 years from the date of Issuing or converting a National Service Life Insurance policy, or within 5 years from the date of reinstating a National Service Life Insurance policy."

12. Resolved, That we recommend legislation which would "toll the statute" under section 620 of the National Service Life Insurance Act as to mentally incompetent yeterans on whose behalf life-insurance pro-

tection is desirable.

13. Resolved, That the Congress of the United States be strongly petitioned to provide an adequate increase in pay to Federal employees, with the provision that any pay action voted by the Congress be supported by supplemental appropriation sufficient to prevent reductions in force.

14. Resolved, That Congress enact legislation prohibiting the employment of enlisted military or naval personnel on major over-haul, repair, or maintenance of naval vessels or military equipment performed within the continental United States; and further that no enlisted military or naval personnel be assigned to work ordinarily performed by civilian workers, except for training purposes, and consistent with military or naval requirements.

15. Resolved, That the Congress of the United States enact legislation coordinating, under one central governmental agency, the different agency pay systems for "ungraded" or "wage board" employees, so that all such employees in a given or established work area receive the same rate of pay for the same work performed.

16. Resolved, That the Civil Service Commission be requested to review the classification standards for medical X-ray technicians in the Veterans' Administration.

17. Resolved, That the Congress of the United States be strongly urged to retain the present retirement system for Federal employees.

18. Resolved, That AMVETS support the Civil Service Commission in its request for adequate funds for the satisfactory execution of all of its assigned and delegated authorities and responsibilities basic to veterans' rights, benefits, and privileges.

19. Resolved, That the AMVETS view with approval the United States Civil Service Commission's program for counseling veterans in Federal employment opportunities and their rights and benefits under the Veterans Preference Act of 1944. We urge the continuance of the veterans' counseling program with adequate appropriation from Congress to support fully this program.

20. Resolved, That AMVETS oppose any and all attempts to weaken or reduce the privileges and benefits afforded to veterans by either the Veterans Preference Act of 1944 or by other pertinent statutes.

21. Resolved, That AMVETS initiate and support legislation to provide a penalty for the knowing or willful violation of the Veterans Preference Act of 1944 as presently amended.

22. Resolved, That AMVETS initiate and support legislation that will strengthen the merit system in all governmental agencies,

23. Resolved, That AMVETS seek legislation to provide that the Retirement Act of 1930 as amended, be further amended to permit the voluntary retirement with no reduction in pension compensation for all Federal employees completing 30 years of creditable service.

24. Resolved, That the United States Senate be urged to establish a Veterans Affairs Committee.

25. Resolved, That we recommend the decentralization of death claims involving compensation and pension from the VA district office level to the regional office level.

26. Resolved, That we recommend equalization of death benefits for widows of World War II and Korean conflict veterans comparable to benefits paid to widows of World War I veterans.

27. Resolved, That we recommend that veterans be permitted 1 year from the date of award to submit evidence of entitlement to benefits under Public Law 877 as amended.

28. Resolved, That we recommend an amendment to existing legislation whereby retired veterans must waive part of their retirement pay to receive out-patient care by the Veterans' Administration.

29. Resolved, That AMVETS study and propose amendments to the Code of Millitary Justice calling for uniform procedures governing discharges from all branches of the armed services.

30. Resolved, That we recommend that the Veterans' Administration reinstate the traveling Board of Veterans' Appeals, and further, that supervisors of the claims division visit each regional office at least once each year.

31. Resolved, That we recommend that any planned policy or regulation to eliminate presumptive service connection be opposed.

32. Resolved, That we recommend the enactment of legislation by amendments to part I. Veterans Regulation IA, as amended, providing for a 2-year presumptive period for psychosis.

33. Resolved, That we recommend that the Veterans' Administration revise the present rating schedule so that it will include all current considerations for disability evaluation, and that we support any necessary action to bring a newly consolidated rating schedule into use; preferably one of the loose-leaf variety.

loose-leaf variety.

34. Resolved, That AMVETS go on record favoring that the Federal Government initiate a scholarship-assistance program for the children of veterans who died in service or are service-connected totally disabled, to overcome the loss of educational opportunities occasioned by their parents' sacrifices during a national emergency or war while preserving our democratic way of life.

35. Resolved, That AMVETS propose a definite delineation between wartime and peacetime benefits by the establishment of a specific cutoff date for entitlement to educational benefits under Public Law 550. 36. Resolved, That we call upon Congress

36. Resolved. That we call upon Congress to study the advisability of establishing an educational program for youth who are drafted during peacetime.

37. Resolved, That we oppose any plan reverting to the former practice under Public Law 346 of direct tuition payments by the Veterans Administration to educational institutions or training establishments.

38. Resolved, That AMVETS continue to actively support all programs which would bring about improved educational opportunities for all.

39. Resolved, That AMVETS request adequate funds to be appropriated by the Federal Government to continue promotion of the apprenticeship and on-the-job training programs that have been carried on cooperatively by our State and National Governments within our industries.

40. Resolved. That all posts in our State and national departments again approve and actually participate in the observance of National Employ the Physically Handicapped

Week.
41. Resolved, That AMVETS request that additional funds be appropriated by Congress to staff the Bureau of Veterans Reemployment Rights, so that veterans may have their reinstatement, seniority and promotion

rights sustained.
42. Resolved, That AMVETS recommend that section 409 of Public Law 550 be amended to provide for the termination of unemployment benefits to the individual veteran, but not for the discontinuance of the program, and recommend that such an amendment provide that no compensation be paid under title 4 of Public Law 550 for any week commencing 3 years after the veteran's last date of discharge or the date of enactment of this amendment, whichever is the later, provided that a veteran pursuing a training program under title 2 of Public Law 550 or Public Law 894 may receive compensation during 1 year after such training period.

43. Resolved, That AMVETS endorse the

employment security program, the three employment services and related activities.

44. Resolved, That AMVETS request the United States Employment Service and its affiliated State employment services to continue the policy of extending preferential treatment to disabled veterans and priority in referral of all job openings to qualified

45. Resolved, That AMVETS will use every effort within its power to assure adequate appropriations for the effective operation of the Bureau of Employment Security, the Veterans Employment Service and the State

employment security agencies.

46. Resolved, That AMVETS go on record as being actively opposed to the indulgence of the policymaking body of the American Medical Association in activities intended to deprive veterans of benefits to which they

are justly entitled.

47. Resolved, That AMVETS advocate through congressional legislation that veterans honorably discharged from service be granted the right to complete dental treatment once for each and every tooth which is or becomes defective and is established as being service-connected.

48. Resolved, That in the interest of all veterans we recommend that the doctors' draft be amended so as to exclude the drafting of medical doctors serving full time with the Veterans' Administration in such cases

as the VA requests a deferment.

49. Resolved, That we request that Deans' committees be continued, broadened, better financed, and encouraged as a means toward improving the quality of medical care given to veterans.

50. Resolved, That AMVETS support legislation that will result in financing adequate VA medical services in keeping with the request of the VA for their medical program.

51. Resolved, That AMVETS commend the Chief Medical Director of the Veterans' Administration for his leadership and contribution to rendering outstanding medical care to the veterans of this Nation.

52. Resolved, That AMVETS support legislation that would reestablish the maximum rate of interest on GI home loans at 4 percent.

53. Resolved, That the loan guaranty program of the Veterans' Administration be recognized as a completely separate program and that it be kept entirely separate from any other governmental housing, financing, and lending programs.

54. Resolved, That a set of requirements and specifications be established for the loan guaranty program.

55. Resolved, That the term of the loanguaranty program be extended for the vet-erans of World War II and the Korean con-

flict for 2 additional years.
56. Resolved, That AMVETS recommend and urge that the FHA extend and enlarge the Federal housing program to include provision for the construction of Wherrytype housing in critical and isolated areas, such as at radar, airbase, and any aircraft sites.

57. Resolved, That AMVETS, through its national publications and through other public information sources, educate all veterans to the dangers of the actions of unscrupulous persons who urge the exercise of GI home-loan privileges for the use and benefit of others than the veteran in acquiring homes

58. Resolved, That AMVETS go on record as recommending the increase of title I. FHA repair and modernization program, to \$3,000

and 5 years in which to pay.

59. Resolved, That we reaffirm our stand on the military training of our Nation's youth to the end that the young men of this country be adequately prepared for service in the Armed Forces in time of war, just as they are prepared for civilian life through the educational institutions of the United States. We recommend, therefore, favorable consideration of the national security training program.

60. Resolved, That we contend that the operation of the Selective Service Act should not be diminished and that priority for those called into service should be from those who have not previously served in the Armed Forces of their country. It is urged that the Selective Service Act be reenacted before its expiration date, June 30, 1955, and as reenacted be strictly enforced and that de-ferments be granted only under the most unusual circumstances.

61. Resolved, That we support the World Veterans Federation in its effort to make policies and programs known before the United Nations, governments of nations involved and war veterans everywhere.

62. Resolved. That we urge that representatives of the Nation's veterans organizations be designated on a revolving basis as members of the National Committee of UNESCO, affiliated with the United Nations specialized agency responsible for world cooperation in the education, scientific, and cultural

RESOLUTIONS ADOPTED BY AMVETS NATIONAL EXECUTIVE COMMITTEE, DECEMBER 11-12, 1954, WASHINGTON, D. C.

1. Resolved, That AMVETS recommend to the Congress that a definite cutoff date be established for the broad wartime veterans' benefits programs.

2. Resolved, That simultaneously with the discontinuance of the above programs a limited benefit program be established to serve those men and women who will be needed by our armed services to fulfill our defense requirements.

3. Resolved, That AMVETS urge the Congress to explore the advisability of amend-ing section 232 of Public Law 550, 82d Congress so that the periodic reductions will be delayed during the 1st year of training and that they begin upon completion of the first 4 months of the 2d year of training.

4. Resolved, That AMVETS request an amendment to existing legislation that will extend the direct-loan program to make eligible for such loans veterans desiring to purchase a farm residence.

5. Resolved, That in areas where private capital is available that the amount of guaranty for farm residential loans be increased from the present \$4,000 maximum to \$7,500 The Agricultural Situation Today in the United States and in Washington

> EXTENSION OF REMARKS OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955.

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by me at the vocational seminar of the National Council of Churches of Christ in the United States of America, Thursday, February 10, 1955:

Mr. Chairman, members of the National Council of Churches in America, it is with a deep sense of humility and gratitude that I address this respected organization today. You have honored the people of the Ninth District of Minnesota by inviting me to speak to you on the subject of farm problems as I see them. These problems we have had with us, to a lesser or greater degree, since time began. But I am happy to know that our churches and our Christian leaders in the last few years have begun to be gravely concerned and to take an active interest in our problems also. Christ, too, was not only concerned with spiritual food but also with that food which sustained our bodies. In the Old Testament God provided manna for His people walking in the wilderness. It seems to have taken us a long time to understand and to work out from that premise that the two kinds of food, the spiritual and material, are very closely related.

Our storage program is almost as old a the Bible itself. It was the wisdom of Joseph that saved his people from famine and starvation, even to the extent of sharing food with others outside his own tribes. Our missionaries now, too, help and supervise the production of crops and foodstuffs as part of their spiritual welfare programs.

We have tried to solve our problems through many and varied ways over a pe-riod of years, but none of them have succeeded all the way. Many times we have had drives for increased sales, notably in the 1890's, 1920's, and now. We have an advertising program, the cost of which has been deducted from the price the farmers get, the farmer absorbing the burden rather than passing it on to the consumer. Secretary Benson gave dairymen I year to conduct the sales campaign, but it was utterly unsuccessful. No piecemeal solution will work here. It is an overall long-range planned program that will come the nearest to preserving our rural way of life.

We must be concerned with agriculture to prevent a complete breakdown of that part of our economy. The great depression is burned into our memories by the 25-cent wheat and 5-cent cotton, the loss of farms through foreclosure, and the great swirling black clouds of dust that blotted out the sun and the hope of a crop for another year. With it came grasshoppers. I lived on my parents' farm in North Dakota at the time grasshoppers stopped for lunch. When they took off again, our crops went with them.

During the 10 years after World War I, more than 450,000 farmers lost their farms because they couldn't make enough money to pay off their loans. Two hundred thousand farmers became tenants, because they were unable to buy their farms.

You may remember the name of Milo Reno who organized the Iowa farmers into the Farm Holiday Association. They blocked roads, tipped over milk trucks, and refused

to let food into Sioux City until the cost of production had been obtained. One elderly Iowa farmer told a reporter, "They say blocking the highway is illegal. I says, 'Seems to me there was a tea party in Boston that was illegal too.' Friends this is the desperation we want to avoid for a free and secure people.

Most of our forefathers were subsidized by homesteads. The desire to settle land, to populate it, and to keep it productive, is still with us. Our farmers are 13.6 percent of the population of the United States but have only 6 percent of the income. Official Government figures show that from 1919 to 1922 all farm prices dropped 40 percent. At the same time if the flexible theory is correct, we should have seen a definite drop in the production of farm commodities. Despite the 40-percent drop, farm production went up 1 percent; from 1930 to 1932 farm prices went down 57 percent but farm production went up 4 percent; 1936 to 1939 farm prices dropped 17 percent, but production went up 18 percent. As a Nation we must be concerned with a fair standard of living for all of our people including the farmer.

First. Let me develop the needs of agriculture as I see them from the experience in the Ninth District of Minnesota.

I have found that to start farming today one needs capital outlay of from \$20,000 to \$40,000. Our farming is now a highly specialized occupation. When I lived on the farm, it meant getting up at 5 o'clock in the morning to help with the milking before For my husband it meant that after breakfast, he got the machinery ready to do whatever was necessary and urgent for that day. It could be plowing, cultivating, harvesting, threshing, or hauling hay in winter. Much of the time, the weather was below zero. If there was a breakdown of machinery, it meant he had to go to town for repairs and parts, another time-consuming venture. Often our work was hindered by weather, too much of the wrong kind, and lack of the kind that would bring our crops through. Farming on the family-type farm is not a seasonal job. It has to be a yearround tob to have some income.

We were constantly tied down. We couldn't take a week or two for a vacation. We couldn't afford \$150 a month for a farmhand. Our margin was too narrow between price and cost.

Did you know that the cost of a two-plow tractor at today's prices would have financed the production expenses on an average United States farm in 1910 for 3½ years? I have found that in terms of current dollars, today's farm production expenses are about 6 times those of the 1910 to 1914 period. Today that means that the price of a plow equals the expense of running an average farm only 6 months.

As farmers, we are dependent, to a large extent, on the rest of the economy. only real benefit we derive nowadays from living on the farm is the milk we drink and the eggs we eat. We have meat in the lockers and some of us still have gardens. For this the farmer pays about half in the cost of its production. Let us measure this against the higher taxes we have because of proved roads, school and public buildings, and the increased costs of farming. Rising costs and falling prices have brought the farmer at the end of 1953 to the smallest share of the national income on record. The average person living on the farm has less than half the income of the average nonfarm individual. Though taxes are high, Government outlays for agriculture, however, represent such a small percent of the total Federal expenditure that the average taxpayer would scarcely notice the difference even if all Government farm programs were abolished. In fact, the income tax alone that farmers paid, when receiving parity, nearly covered the total cost of the farm program. Of the budget dollars in 1954, 17 cents was allotted to the cost of running the Government, providing all the services to labor, industry, agriculture, including health, education, welfare programs, and the development of natural resources.

Second. We must be concerned with the standard of living our rural population has. Forty years ago, farmers produced most of own power, raised most of their own fuel, and depended mainly on farm-produced fertilizer. As we can see, most of the material for production came from the farm. Before the midthirties, farmers could reduce their purchases from industry without a serious loss in production. But today farmers cannot produce without material from These must be paid for in cash. industry. Today farmers are producing more with less labor and little more land, because petroleum and electrically driven machines are more efficiently performing the work once done by men and animals. As late as 1935 there were only 1 million tractors on farms. Today we have 4 million. In 1935 we had about 900,000 trucks; now we have 2,280,000. At that time there were 120,000 milking machines; now there are 655,000. Farmers use each year 7 million tons of finished steel, more than the quantity that goes into a year's output of passenger cars. Farmers are big consumers, buyers of tremendous amounts of goods.

In other materials produced by industry and labor, farmers use 50 million tons of chemical material, 16½ billion gallons of crude oil, more than is used by any other industry. Today farmers are using 320 million pounds of raw rubber, enough rubber to make tires for 6 million cars. Our farmers use 15 billion kilowatt-hours of electric power, which is enough to supply Chicago, Detroit, Baltimore, and Houston for 1 year.

We have come to the crossroads where the American farmer is concerned. If we are to preserve farming as a way of life, if we are to be concerned with their standard of living, if we are to keep them from being driven off their land by a flexible price-support program, which, in a few years, is no support program at all, then we will have to include in the prices farmers receive for their products the cost of production, like the other groups of economy in our Nation.

Parity is the measuring stick for the farmer, the cost of products he has to buy as measured against the money he receives for what he has to sell. He must receive 100-percent parity to cover the cost of seed, operating expenses, and the labor to maintain his living standard. Cost of production has never gone below 60-percent parity, and has often been as high as 80- to 85-percent parity. At 100-percent parity, roughly speaking, the farmer may maintain his standard of living comparable to the average wage earner. At present, a farmer can put money into the bank only if he receives 108- to 109-percent parity.

Wealth must be produced from the grassroots up, not the top down. Wealth must percolate up from the bottom, not trickle down from the top.

Third. We must be concerned that as an intelligent and progressive people that we maintain a progressive standard of living for our whole Nation.

The population of the United States has increased 68 percent since 1910. Our farm production has increased about the same amount during the same period but with most of the increase coming in the last 15 years. Population has caught up with production, so now our problem lies in distribution.

People who lack proper diets number among the 60 percent that make less than \$4,000 a year. Folks above this figure buy just about all the food they want and need. As the incomes go lower, the consumption of healthful foods go with it, so that finally protective foods reach the vanishing point. The Paley Commission gave a conservative estimate that we will need 40 percent more food and fiber by 1975 to adequately feed and clothe our people. This increase will have to come from our family-type farms.

Our largest overall problem lies in distribution. America must grow to be prosperous. With the growth of America comes more jobs, more income, more consumption of food and fiber.

We are at the beginning of a new era. We must go forward with our abundance, the creation of which grows from the bottom up. We need a steady climb up the economic ladder, a ladder that was itself on the rise. We cannot let it skid any further. Holding the ladder firmly in place is our Government. With the advent of World War II, as the noted economist, Stuart Chase, expressed it, came the advent of a new regulator on the flow of our economic resources. Where Wall Street previously controlled a volume of money which directly affected our country. sometimes used for our good, sometimes to our detriment, now the Federal spending and Federal regulation have firm control of the ladder's legs to guard the destiny of our economy. Principals of Government help have been accepted by every segment of our people. Perhaps business was one of the first to accept help. When industry needed help or protection, a tariff was used to prevent smothering competition. We also have trade regulation to maintain fair practices. We have established minimum wage laws. These are accepted patterns in complicated society. Where problems grow so large that individuals cannot cope with them, we must solve those problems with Government help.

Therefore parity prices now mean even prices in troublesome times with the added advantages of plenty. Parity simply means justice, fairness. I want parity for the farmer, too. We must not sacrifice the farmer and his family when he is nailed against high costs of production over which he has no control.

I do not propose to know everything and all of the solutions. However, I do know the practices that have proved themselves should be used, not reversed, not forsaken. In the terms of progress we must explore the new avenues which we have not used. We need at least 90 percent parity until another solution takes over. Let us promote adequate diets for the 15 million people on public assistance and the unemployed. Let all our schools have lunch programs to help equalize opportunity for healthy minds to learn. Food for international aid should be used in such a way that it will be welcome and not revolting to needy people.

Friends, we can develop our farm life to take its rightful place in our standard of living and to maintain it as a most satisfying way of life.

This is a crucial problem affecting us—our stake—yours and mine. Conditions for the first tobacco grower, who settled in Virginia, creased his troubled brow to be solved by his thought and imagination, just like we must wipe the crease of hardship from our farmer's brow today. Our son tugs into his uniform of service for our protection. When he leaves our Armed Forces, opportunity must be available for him and all others to choose as he pleases. Whether he wishes a drygoods store in Brooklyn, or a \$30,000 farm in Minnesota, the choice to a fair standard of living is right for us all. The glitter of opportunity has always been the gem of America.

Passive Defense for Atomic War-Part I

EXTENSION OF REMARKS

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. BOLLING. Mr. Speaker, in connection with House Congressional Resolution 66 which provides for a joint committee to study the feasibility of industrial and urban dispersal as a means of defense against H-bomb attack, there follows part I of a paper by Klaus Knorr on Passive Defense for Atomic War which was published by the Center of International Studies, Princeton University:

INTRODUCTION

(Note.—The author is indebted to his colleagues William W. Kaufmann and Roger Hillsman, who, in numerous discussions, helped him to clarify some of the issues presented in this paper. He also benefited from a conversation with Ansley J. Coale. They are not responsible, of course, for the views presented.)

In view of the uncertainties surrounding the use of A- and H-bombs in any future war, the bearing of these weapons on a realistic foreign and defense policy is necessarily controversial. These uncertainties not only baffle the nonofficial outsider, but also must weigh heavily on those admitted to the inner sanctum of classified information. The implications of these new weapons are so tremendous in their consequences that they should be allowed to challenge our ingenuity without restraint if we are to make the best preparation for surviving in the age of new technology and old international conflict.

To the outsider unfamiliar with official knowledge and deliberation, it is puzzling to see the merits and demerits of alternative policies discussed within extremely limited circles, with the majority of the interested public condemned to the sidelines by de-liberate exclusion from official calculations. It is equally puzzling to find official policy on airpower committed to a rather one-sided emphasis on the offensive arm with a corresponding neglect of air defense.1 On the basis of public knowledge 1-and on most assumptions, this knowledge should suffice for the purpose at hand—the official orientation seems debatable and, possibly, illogical and dangerous. Leaving aside the important question of providing for waging peripheral hostilities, limited in theater of operations, in the use of weapons, or in both, and concentrating on the problem of a major and unlimited war, a strong case can be made for preparing defenses against air attack. There is active defense, which comprises warning and interception of air attacks, and civilian defense, which is concerned with emergency measures toward minimizing casualties in the event of air raids. There is passive defense, designed to diminish vulnerability by changing the nature or location of industrial and urban targets, thus making them less susceptible to bomb damage.

THE OFFICIAL DOCTRINE ON AIRPOWER

The official American doctrine on airpower—which, with slight modifications, also informs British policy—assigns an overwhelming proportion of resources available for airpower to the strategic air force. A strong Strategic Air Command (SAC) is to endow the United States with the capacity for instant and massive destruction of Soviet

cities and industries. A powerful force of intercontinental bombers, plenty of fission and fusion bombs, a farflung string of air bases, and the certainty that this capacity will be exerted in the event of major warall these factors combined are to deter aggression from getting started. As Secretary Dulles pointed out, the heart of our defense problem is how to deter attack. "This, we believe, requires that a potential aggressor be left in no doubt that he would be certain to suffer damage outweighing any possible gains from aggression. The free world must make imaginative use of the deterrent capabilities of these new weapons. * * * Properused, they can produce defensive power able to retaliate at once and effectively against any aggression." Similarly, British Air Marshal Slessor professes the belief that "the continued existence of atomic weapons gives us an almost certain chance of preventing another world war. * * * America's safety lies in the prevention * * * of war, just as does ours." * It is an integral part of this policy that air defense, both active and passive, receive a great deal less atten-tion than nurturing and preserving offensive strength, except insofar as active defense is needed for protecting the ability to mount a massive retaliatory blow.

Whatever merits this doctrine could claim so long as the United States enjoyed a monopoly of, or decisive lead in, the development of atomic bombs, it remains the mainstay of policy even now, when this monopoly has ceased and any persisting American superiority in weapons is diminishing and may well diminish further or disappear altogether in the course of time.

IS RETALIATORY CAPACITY SURE TO DETER?

The extreme emphasis on the big deterrent is sound under three conditions. First, it is unquestionably sound if the big Sunday punch will actually deter major aggression. But can this effect be taken for granted, even though its achievement is likely? Air Marshal Slessor, for example, thinks that the existence of atomic weapons will give us "an almost certain chance of preventing another world war." But "almost certain" falls short of certain, and even his qualified prediction may be fallible. He does concede moreover, that atomic weapons will be used 'in the unlikely event of another great war. If we cannot expect the possession of the Sunday punch to deter with certainty, then it is doubtful wisdom to stake everything on this one card, for if the card turns out to be high enough, the consequences will be frightful. The deterrent weapon may not deter because a possible aggressor—the U. S. S. R., for instance—decides on peace or war according to cost calculations which are not necessarily identical with those that seem reasonable from the viewpoint of American goals and preferences. Soviet leaders may, for example, put a lower value on avoiding the casualties which they must expect to suffer in unrestricted warfare than American leaders put on the lives of their own people. With an assortment of objectives different from ours, the Soviet elite may also foresee greater gains from unlimited war, at any particular time, than we would anticipate. Furthermore, the big deterrent may fail to deter because we slide, more or less unwittingly, into atomic warfare. A trigger-happy or desperate commander, or anxiety not to sustain the first nuclear blow on the homeland, might turn a more limited form of war into one of unrestricted air at-

If the strategy of the big deterrent should prove mistaken—that is, if a major war involving nuclear air attacks should be precipitated by the other side, then the United States could presumably retaliate in kind. While it would give us satisfaction to chastise the aggressor, we might still be defeated and, even in the best of circumstances, be burdened with a degree of destruction that spelled the end of the American way of life with finality for tens of millions of casualties, and for the survivors as well for a long time to come.

Furthermore, we shall be severely limited in our freedom of action if we cannot be sure that our capacity to retaliate will deter aggression, for a determined aggressor could then blackmail us ad infinitum, provided he were less loath than we are to unleash the full fury of nuclear bombs. Air Marshal Slessor is correct when he observes that "nothing would be more dangerous than to give the impression to a potential aggressor that we should not use them [atomic bombs] in the event of aggression." §

It is difficult to see how we can feel sure that SAC's Sunday punch will prevent largescale war from occurring and, if we cannot, the one-sided concentration of air power in a powerful SAC is a risky policy.

IS AIR DEFENSE TECHNICALLY IMPOSSIBLE?

The second condition under which this stress on offensive prowess is sound involves the impracticability of mounting any effective air defense because defense is physically unfeasible.

It may be true that effective air defense, both active and passive, is indeed technically impossible and that unlimited resort to fission and fusion bombs will literally wipe out civilization. This possibility suggests the well-known image of two scorpions confined in a bottle, each able to kill the other only at the cost of being killed himself. So far as public knowledge goes, this condition does not now prevail. We have been told that H-bombs can be made with an explosive power about 1,000 times as large as the A-bomb dropped on Hiroshima, and that this bomb can inflict destruction up to a radius of some 10 miles, or over an area of about 300 square miles. We have also been told that, given a sufficient supply of A-bombs, the manufacture of H-bombs is relatively cheap. These are dreadful dimensions. Yet since bombs must be delivered, and delivery is not as yet cheap, they do not suggest the likelihood that life in a country nearly 3 million square miles can be obliterated with ease.

Senator Symington has stressed that intercontinental ballistic missiles are sure to be available in the not too remote future; that there is no present defense against them, once they are launched, for they do not depend on electronic guidance and hence cannot be diverted from their course by electronic jamming; that accuracy in delivering these weapons will become less and less important; and that target dispersal will no longer offer a solution to the problem of defense." It is possible that radioactive vapor will threaten the lives of populations not directly killed by enemy bombs. The question is whether this stage has been reached or will be reached soon. And in making such predictions, it must not be ignored that, whatever the awful destructiveness of the bombs and however cheap they may be, the ingenuity which invented them, although only by dint of tremendous effort, may also, if urgently turned in this direction, improve our capacity for destroying bomb carriers. That such a development is not now in sight does not offer conclusive proof of technical infeasibility.

CONCEPTS OF EFFECTIVE DEFENSE

Even should defense be technically possible, its effective establishment might call for installations, equipment, trained manpower, and a dispersal over space and underground on a scale that would entail economic suicide and bring down civilized life in any case. Without access to all the information, the outsider can make no judg-

^{&#}x27; Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

ment on this matter. However, gross concentration on an offensive striking force would be debatable, and perhaps wrong, should defensive preparation be neither physically impossible nor suicidal economically. It is on this assumption that the following arguments rest.

Conclusions about the merits of building up effective defensive strength hinge in large measure, of course, on concepts of what constitutes effective defense. The concept which appears to dominate a great deal of the current debate on the subject is of the all-or-nothing variety. To be effective, air defense must, according to this school of thought, prevent all but minor destruction of Hfe and property. Defense tends to be regarded as ineffective if it is reasonable to expect a huge outlay on air defense merely to reduce casualties from a hypothetical 40 million to a hypothetical 20 million, and the destruction of our productive capacity from a hypothetical 50 to a hypothetical 35 per-The discussion of active air defense, designed to intercept hostile aircraft or missiles, exhibits this disposition. Air Marshal Slessor, for example, argues that an attrition rate on attacking bombers of from 5 to 10 percent was effective over time under the conditions of the last World War, but that this rate is appallingly inadequate in view of the awesome destructiveness of single nuclear bomb. In his view, the kill rate must approach 100 percent to make active air defense effective." The United States Air Force has announced publicly that a kill rate of no more than 20 to 30 percent could be counted on under recent conditions, and it is the conclusion of many experts that this state of affairs renders active air defense impotent.

Whether one expects 20 or 40 million victims, depending upon more or less defensive capacity, a horrible mauling is implied in either case. But is it actually an equal mauling? Is the hypothetical difference of 20 million survivors really negligible, when another 20 million are doomed to perish? this is our response, then we are saying in effect that either the deterrent weapon works to prevent war, implying our firm resolve to use this weapon in an eventuality, or—if it fails to deter—we think ourselves lost and might as well throw in the sponge in any And this amounts to saying that the additional 20 million survivors, who could have been saved by defensive measures, would in that event proceed to commit mass suicide or submit to a worse fate than death. While it is, of course, repulsive to consider these contingencies, is it wise to refuse to face the

In the following, this issue is faced on the assumption, already stated, that an atomic assault on the United States will not snuff out all life with one murderous blow; on the further assumptions that a majority of Americans will in fact survive such an attack and that the size of this majority can be increased appreciably by appropriate defense action; and on the final assumption that, when the chips are down, Americans will rather fight than surrender, and rather live than commit suicide. All of these assumptions can be questioned. But they cannot be dropped before they are proved wrong or extremely farfetched. Moreover, even if the pessimists are right and a majority of the population cannot expect to survive, the question remains whether it is not worthwhile to increase the number of survivors. provided the increase can be of appreciable

HOW MUCH CAN WE AFFORD FOR AIR DEFENSE?

The official doctrine on airpower could also claim strong support under a third condition: If an adequate provision for an effective air defense would be so costly as to wreck the economy. It has been argued that we

cannot afford to maintain both offensive and defensive power, that there is some immovable ceiling on what we can spend on defense, that our expenditures are bumping against this ceiling now, and that—because deterrent force holds out great hope of averting major war altogether—we must allocate to SAC nearly all we can afford apart from outlays on conventional armed forces.

This condition is almost certainly a figment of the imagination. Unhappily, there is no general agreement on any criterion which will permit rational decision on what is or is not too expensive. The argument is usually in terms of undermining or wrecking the economy without any definition of these terms or of precisely how these effects would result from various levels of investment in passive air defense. Only reference to quantitative factors can afford a basis for enlightenment.

As will be argued below, a great deal can be done to lessen American vulnerability to hostile air attack without increasing current defense budget by more than a fifth or even less. It makes no sense to say that the United States cannot sustain such a rise in defense outlays without subjecting the economy to unbearable strain. This country has spent a great deal more than these amounts in wartime and has done so with a thriving and expanding economy. This is perhaps not entirely relevant, since the Nation will be averse to putting up with the sacrifices of a perpetual emergency. Yet, according to a sober study, sponsored by the National Planning Association, the United States could appreciably add to its defense budget without sapping its economic strength. Defense spending rising gradually above current levels at a rate of \$10 billion a year by 1956 would-given a normal growth of the economy-neither interfere with further economic expansion nor prevent a continuing rise of civilian consumption. It would permit some tax reductions and not necessitate comprehensive direct controls over spending. A larger increase by \$20 billion per annum would still permit per capita consumption to rise moderately and net investments to increase, provided the labor force were somewhat expanded and the average workweek somewhat lengthened; and this could be achieved by only continuing 1953 rates of taxation or their equivalent.

If defensive capacity can be improved appreciably by expenditures within these ranges, then there is no reasonable economic argument against doing so; and the question of whether or not to make these outlays can and should be decided primarily on military and political grounds. This is not to pretend that, excepting expenditures made under conditions of unemployment, defense could be bolstered without sacrifice in terms of somewhat lower levels of investment and/or consumption than could be maintained otherwise; and there is therefore good reason to keep military preparation to the minimum consistent with safety. The range of these sacrifices, however, is so moderate that they seem a small insurance premium when viewed against the horrendous scale of destruction which atomic warfare is likely to inflict. Atomic weapons do not belong to a dream world. They are part of a very real world which Americans, and especially Americans, inhabit.

ACTIVE AND PASSIVE AIR DEFENSE

There is a good deal that can and should be done in the area of civil defense by way of providing air-raid shelters, emergency reception centers for evacuated persons, fire-fighting and medical facilities, relief of congested traffic arteries, and many other emergency facilities of this kind. There is a great deal more that can be done to set up an effective warning and interception system. Some of these tasks are already being

undertaken, although on a scale which those in charge regard as far too stingy. These measures of air defense would doubtless be very costly in absolute amounts, especially since changes in the technology of offensive and defensive means and operations may cause a high rate of obsolescence. Yet, relative to the strength of the American economy, and relative also to the additional margin of protection that these measures can afford m—even if this protection is far from 100 percent—they are likely to be reasonably cheap. Would an outlay of, say, \$4 billion a year for such preparations be too expensive? Do not both a false conception of economy and a psychological impediment to considering the full consequences of weak defenses paralyze sound planning in this realm?

Important as such defense preparations are, they should not be allowed to blind us to the opportunities for exploiting one great asset which the United States, unlike its European allies, posseses in abundance: There are, moreover, good reasons for expecting that the costs of utilizing this asset are relatively small compared with the costs of active and passive civil air defense, which require large outlays on installations useless for anything but their specific purpose and highly trained manpower to man them. For a nation endowed with the advantage of ample space, the first objective of passive air defense must be in the direction of maintaining as large a proportion of the population as possible outside obvious and highly concentrated target areas. Being the abundant resource, space is relatively cheap; and over a wide range of locations for pro duction and residence, the disadvantage of one over the other must be relatively mar-

¹This neglect of air defense also marks most private discussion. For a notable exception, see J. Robert Oppenheimer, Atomic Weapons and American Policy, Foreign Affairs, XXXI (1953), pp. 525-535.

fairs, XXXI (1953), pp. 525-535.

This memorandum is written without benefit of any classified material. The author has been told that there are a few studies which present a point of view similar to that taken here, but these documents are not available to the public.

'It is unimaginable, for obvious reasons, that the United States should plan to start an atomic preventive war. Nor would doing so make sense now that the Soviet Union may be able to retaliate instantly and in kind. Why should we want to initiate hostilities which are bound to lay waste to our cities and fatally cripple the economic capacity of this country? If this were a possible strategy, moreover, it would most likely be a possible strategy for the Kremlin as well, and to concede this is to shatter the doctrine of deterrence.

Passive Defense for Atomic War-Part II

EXTENSION OF REMARKS

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. BOLLING. Mr. Speaker, in connection with House Concurrent Resolution 66, which provides for a joint committee to study the feasibility of industrial and urban dispersal as a means of defense against H-bomb attack, there follows part II of a paper by Klaus Knorr on Passive Defense for Atomic War which was published by the Center of International Studies, Princeton University:

PARTIAL PASSIVE DEFENSE IS NOT TOO COSTLY

Following the development of the A-bomb, some serious thought was indeed given to the possibility of dispersal. Yet this idea was quickly dismissed by most students as unrealistic, on the grounds that disassembling our great urban and industrial centers would surely be of prohibitive cost, ruinous to the economy, and scarcely feasible politically. These conclusions were justified. But consideration of the case for extreme dispersal did, unfortunately, do an injustice to the cause of far more limited and gradual dispersal, which, although falling far short of giving complete protection, might still save millions of lives and a corresponding quantity of productive assets. Merely to ask whether the existing capital facilities should be moved or abandoned was a loaded question to which there could be only a negative answer.

There is a different order of question that could have been raised then and deserves to be raised now. The United States has a rapidly growing population and is constantly rebuilding and adding to its capital assets Residential housing, office building and plant, merchandising and transportation facilities, public utilities, etc. From 1945 to 1953, the population grew by no fewer than 20 million. Marriages have been averaging over 10 per annum per 1,000 of population. The output of electricity has risen from 23.5 billion kilowatt-hours per month in 1948 to 36.8 billion a month in 1953. Housing starts (nonfarm only) have amounted to 8.2 million units from 1946 to 1953. residential construction, but excluding public investment, gross domestic investment has run to about \$354 billion from 1946 to 1953. Of this, \$80 billion has been for new business construction, not counting equip-ment. Would it have been unreasonable or too costly to have caused this rebuilding and growth to have taken place in a somewhat more dispersed fashion than it did? And would it be unreasonable or too costly to cause some spatial redirection of maintenance and growth in the future?

The fact is that, in this respect, the United States has been benefiting during the postwar years from some spontaneous and gratuitous dispersal, as is evidenced by establishment of numerous new plants outside the traditional metropolitan and industrial agglomerations, the rapid economic de-velopment of the South, the continued expansion of the West, and the remarkable push of urban populations toward the suburbs. There are good reasons for this relative deconcentration. In a wealthy country, further industrial development means in general a rising ratio of value added to the raw material, and this makes location near the sources of raw maerials less compelling than before. Production also is becoming less dependent on coal, and the increasing use of electric power and natural gas means a shift to fuels which are available in many localities that cannot be cheaply provided with coal. The trend visible in many large corporations toward diversifying their output and granting a high degree of autonomy to individual production units facilitates industrial dispersal. So does the sensitivity of many businesses to seeking out areas of relatively cheap labor and land and low taxa-In a wealthy economy which characteristically sees service industries grow faster than manufacturing or primary production, there is also a strong incentive to locate production in or near markets. Once some key industries establish new plants in a new area, it will become profitable for others, especially subsidiary industries, to follow suit; and any influx of labor will attract the construction industry, merchandising and other service trades, and such manufacturing production as benefits from close proximity to markets. Any sizable relocation of production is likely to have multiple effects in attracting population.

What is required for a sensible policy of dispersal is to supply a marginal stimulus and thus strengthen the spontaneous trends which are already operating and which will come to operate as facilities in new areas expand. If dispersal is encouraged at the margin, where on all other considerations not much of an incentive is needed to tip the balance in favor of one location rather than another, then the expense of giving such encouragement cannot be prohibitive. There may be numerous instances, once dispersal gets underway, where it is cheaper, from a strictly economic point of view, to provide houses, schools, utilities, and roads in areas of relatively sparse population than in the big urban centers. It is possible that, if the public has become more keenly aware of the horrible specter of modern war, many workers and entrepreneurs will let considerations influence their choice of where to work and live; and, once this happens, it becomes profitable for other businesses to follow. Once the problem is grasped, provision of tax incentives—some tax deterrent to putting up new facilities in specified areas of congestion, and perhaps some incentives for choosing locations in specified areas of lesser concentration-may suffice to give considerable impetus to practicable dispersal of people and property.14 The required tax incentive may be obtained by allowing a more or less rapid writeoff of new construction; and this technique could be applied to relatively few key industries instead of to all businesses or industries.

Another suggestion has been to set up a compulsory scheme of war damage insurance with premiums varied according to risks. For newly growing towns, it will be cheaper than in old established ones to provide ample traffic facilities; for houses about to be constructed, it may be worth exploring whether solid cellars, affording protection against blast damage near the periphery of a bomb explosion, would not be feasible at a relatively modest cost; and there are, no doubt, other protective techniques that are more easily applied in new structures and towns than in the old urban centers.

Thus, some dispersal could result from simply helping citizens to make locative decisions which reflect the contingency of nuclear warfare, and individuals themselves would, in that event, bear the presumably small cost of choosing, at the margin, one locality rather than another. Employment of other techniques, such as tax or insurance schemes, need not cost the Government anything, or will cost it only little, since tax or premium concessions could be made to offest tax or premium penalties; so that the costs, again presumably modest, would devolve upon individual businesses or citizens. If, and to the extent that, dispersal would add to the Nation's transportation bill, the expense would also fall largely on private

citizens; and these costs should be low so long as only a moderate push toward increased dispersal is in question.

But the Government has opportunities for promoting decentralization by direct expenditures. If desired, it could subsidize certain protective measures, such as the building of cellars adequate to afford some safety at the periphery of bomb bursts. It could disperse public enterprises, such as arsenals, and participate vigorously in the construction of irrigation systems, power facilities, highways, and other assets for the purpose of influencing the geographic distribution of an expanding economy and population.

So far as a substantial but practicable program for dispersal requires Government expenditures, there is a further point to the problem of costs. These expenditures would represent real costs in an economy operating full-employment level. There would be additional and highly undesirable effects if these expenditures were injected into an economy subject to strong inflationary pressures. On the other hand, the real costs would be small or nil when these expenditures were made at a time of unemployment or economic stagnation, for they would set to work resources which would produce nothing otherwise. It cannot be demonstrated that the recession which the United States has been experiencing since the middle of 1953 has been induced by the cut in defense expenditures and its anticipation, but it is not unlikely that this retrenchment fed whatever deflationary factors were at work at the time. What is important is that this business activity has cost the United States more than \$20 billion of goods and services that would have been produced if the preceding expansionary trend had not been interrupted. There are times when the economy is depressed or stagnating, during which a program for passive air defense could be pursued at zero or slight real costs. such a time, expenditures of this kind would strengthen rather than weaken the economy. This is not to suggest that such a program should await times of economic slack for its implementation. It deserves a priority which does not tolerate deferment. But since the program is a long-range one, there are opportunities when it can be stepped up at low cost.

The costs of thus paring our vulnerability to enemy air attacks are not, of course, entirely economic. One cost would certainly be the abandonment by some people of psychological income which is peculiarly available in large metropolitan areas and which they happen to cherish. Another cost would be the requirement that people accept the burden of thinking out the implications of possible atomic warfare, and the Government insist on their doing so. A third cost item would be a somewhat increased measure of government interference in the location of production and residence. Finally, dispersal might well affect, in some cases, the relative position of different States in the Union and, on this account, raise awkward problems and political resistance to which a feasible program would have to make reasonable adjustments. These are heavy drawbacks. But they may be worth accepting in view of the greater protection to be afforded in time of war.

A scheme for dispersal may be practical and fairly inexpensive and yet fail to be worth undertaking if it costs a would-be aggressor even less to add to his offensive strength. Little would be gained, for example, if it cost the U.S. S. R. fewer resources to double its capacity to deliver bombs on American targets than it cost us to double the number of targets through dispersal. It is doubtful, unfortunately, that such a comparative calculation could be made with any pretense to accuracy or that it would not quickly become out of date if it could be made for present conditions. The chief fac-

Footnotes at end of speech.

Footnotes at end of speech.

tors involved-the offensive air power of a possible enemy and our active defense—are highly variable in terms of technology, the actual production of facilities, and the skill of the military services. If all these considerations are taken into account, the prospects are likely to indicate that dispersal is a

reasonable insurance policy.

On the basis of the assumptions made, there seems to be a persuasive case for giving the problem of passive defense an expeditious and generous airing. A substantial program-though not a program to protect everyone—seems feasible and inexpensive. What is involved is not the abandonment of the large urban centers, but that they grow less than they otherwise would, and some promotion of medium-sized cities of between 30,000 and 100,000 inhabitants, still large enough to provide manpower for manufacturing enterprises of economic scale even when they are not located on the periphery of metropolitan centers. What is also involved is a gradual rather than immediate diminution of vulnerability.

Psychological and Political Impediments

If the above analysis is reasonable on the basis of the assumptions that have been set forth, then it is curious and astonishing that passive air defense has been neglected in the United States. Three reasons may chiefly account for this neglect. In contrast to the economic argument, they are rarely mentioned in public discussion and cannot he measured in their impact

1. Conceivably, American policy for air defense lacks overall balance because passive defense would fall largely outside the province of the military. Therefore, so far as the Pentagon determines defense policy, this institutional obstacle might well prejudice the case for reducing United States vulnerability. Since defense funds never seem large enough, the inclination of the military to emphasize their own activities is certainly understandable, and the corrective to be applied is a compensatory intrusion of civilian government.

2. Consideration of passive air defense may also suffer from an emotional block. Among military and civilians alike, there is a widespread preference for contemplating offensive as against defensive operations, a belittling of defense-mindedness, which is easily shrugged off as Maginot-line mentality, and an irrational faith that, somehow, "It can't happen here," an abiding conviction that this country is not really violable."

This wishful faith in the ultimate safety

of the United States is held, inconsistently enough, even by people who are-in a separate cerebral compartment, so to speak-fully cognizant of the danger actually confront-ing the country. It is a faith, therefore, which will not readily retreat before the disagreeable tenor of rational expectation. On the other hand, considerations of defense, in addition to mobilizing offensive strength, do not in the least imply softness or lack of viability. They are the outcome of a rational attitude not at all incompatible with a bold and firm posture. Maginot-line mentality, finally, is not to be equated with the attitude of discovering that combination of defensive as well as offensive strategies which will maximize military strength from available resources. It denotes rather a onesided preoccupation with putting all reli-ance on a single strategy. It is possible that excessive concentration on the Sunday punch represents Maginot line mentality in its true

3. There is also the grave question of whether those in the Government who possess full knowledge of the potentialities of nuclear war dare to draw the general public into their confidence. They may hesitate to do so on two grounds. Supposing that the general public does desire to receive full

clarification of its involvement in the atomic age. Those in charge of official policy, as well as those aspiring to the responsibilities of office, may fear that an informed public will fall victim to at least a temporary case of severe jitters and thus circumscribe still more than is already the case, the available room for maneuver in foreign affairs. If, on the other hand, the public is reluctant to face enlightenment, they may suspect that a government placing the burden of knowledge upon it will not be a popular government, especially when it becomes clear that what the government can do to protect the nation is in any event limited. Among a frustrated and resentful part of the electorate, the desire to find scapegoats might repudiation of those who insist on revealing the awful consequences of major

The first fear-if it holds sway in high quarters-may or may not be justified. But it can hardly be argued seriously that the power and foreign policy of the United States best served over the longer run by not assisting the general public to realize the facts of life in the atomic age; for the shock of realization may come at a critical time and then undermine the very foundations on which American foreign policy was built.

Government inaction is more pardonable if it is the second fear which prevents political leaders from pushing an unwilling public into an awareness of the predicament democratic society, it is the business of leaders to seek, rather than jeopardize, public support. Yet it is far from certain that more than a small proportion of the citizenry would, in fact, react with hostility to being informed of the choices open to it. In order to minimize the risk and overcome public reluctance to face the issue, the undertaking should be put on a nonpartisan basis and enlist sensitive opinion leaders from all groups. Information is only the first step in such an attempt and must be followed by an effort to arouse concern about the dangers of nuclear weapons and assist in evaluating alternative courses of action. To do this, and to minimize the shock of recognizing the terrifying implications of the situation, it is necessary to suggest programs by which the danger can be lessened appreciably.18

So far, the majority of the general public has apparently chosen to ignore the consequences to themselves of atomic warfare. even though the subject has received a great deal of attention in press and radio, and even though the public shares a fairly high expectancy of large-scale war. In part, peo-ple justify this inconsistency by assuming either that the Nation's military forces will, in fact, prevent heavy damage to the cities, or that, in this matter, the individual is helpless and must leave it to Washington to find a solution. Probably it is fear which, among the larger public, accounts for the fact that the problem is more or less suppressed.19

No large-scale preparations for air de-fense—active or passive—can be undertaken without strong public support. Reluctance to secure this support forecloses the possibility of a balanced strategy. Provided defense is technically feasible, it will be political impracticability, rather than economic cost, which actually militates against a rational consideration of defense.

ADDED STRENGTH FROM LESSENED VULNERABILITY

Assuming that SAC cannot certainly prevent full-fledged atomic war and that a worthwhile measure of effective air defense, especially passive defense, is both techni-cally possible and economically supportable, the doctrine on air power currently in vogue contains a serious fallacy. Over a wide range of military considerations, it is clearly useful to distinguish the defensive arm from offensive capability. When overall strategy

Footnotes at end of speech.

is at issue, however, this distinction can be carried to excessive lengths and become productive of faulty inferences. From this broad point of view, offensive air power and air defense are surely integral parts of one capability, military air power. Our military literature reveals that American strategists are seriously concerned both with Russia's active air defense, which must affect our ability to deliver bombs on selected targets, and with Russia's passive air defense, which must affect her vulnerability to our retalia-We assume that their air power rests on several foundations. What holds true of the Soviet Union as an air power must hold true also of the United States.

By reducing, over time, the vulnerability of the United States to the atomic weapons of an aggressor, passive as well as active air defense would not merely save lives and property—it would also confer on us several other advantages. By reducing the offensive power of an aggressor, it would force him to consider allotting more scarce resources to an expansion of his bomb stockpiles and trucking facilities. By making our own country less violable by air attack, such a balanced program would diminish the aggressor's ability to intimidate us or to defeat us if he precipitates war. This means that our capacity to use our offensive power is enhanced, for our willingness to use this power is not independent of our own vulnerability. Defensive preparations would demonstrate to any would-be aggressor that the United States is neither given to delusion nor bluffing, but that it means business. If these expectations are correct, then a strengthening of defense might, by discouraging attack. increase the likelihood that we shall be spared disaster.

It is also possible that nuclear attacks would start a war, but not finish it. Increased defensive capacity, in these circumstances, could enable us to mobilize resources for the more conventional types of military action which might ensue. Nor is this Nation only interested in preventing war if possible, in winning it if unlimited war is precipitated by an aggressor. It is also interested in reconstruction thereafter. If defense against air raids can save life and property, it can also increase our capacity for recuperation.

In conclusion, once we have built up our strategic striking force, there must come a marginal point at which our total air power would gain more from allocating a relatively larger, rather than a relatively smaller, proportion of available resources to expanding defensive, rather than offensive, facilities. No doubt, it will be difficult to settle even approximately on the most efficient distribution of resources-difficult particularly in view of continuous technological and military changes; but the principle is sound and its recognition would promise a healthy consideration of defensive efforts. The United States could have more confidence in its Sunday punch if it were associated with some capacity to absorb punishment.

"The United States initiated such a dispersal program under the Truman administration, but it was confined to key defense plants and has since been reduced to an extremely minor operation.

Extending Universal Military Training and Service Act

SPEECH

OF

HON. FRED MARSHALL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 3005) to further amend the Universal Military Training and Service Act by extending the authority to induct certain individuals, and to extend the benefits under the Dependents Assistance Act to July 1, 1959.

Mr. VINSON. Mr. Chairman, will the gentleman yield?

Mr. MARSHALL. I yield to the gen-

tleman from Georgia.

Mr. VINSON. So the issue can be clear before the Committee, the gentleman is making it applicable only to educational deferments that a man can be drafted over 26 years of age?

Mr. MARSHALL. What I am saving is that except for those who have been deferred for educational, research, or study purposes, all others between 26 and 35 would be exempted.

This is a comparatively simple amend-We have been faced with a ment. rather odd situation which was mentioned on the floor earlier today. The Army has lowered its mental requirements and its physical requirements, and one of the things that that has brought about has been the induction of people who were previously exempt from in-duction. That has brought these people into the service at a later period in their lives and it has created uncertainty among the local boards because they do not know exactly what to do in connection with some of these people. They have no way they can find to exempt them and, therefore, they induct them. They induct them into the service and the Army as a rule does not want them. They do not want them because their years of service are certainly limited and their ability to take the rigors of training is somewhat limited. We had an odd thing happen. I know of one young man, 29 years of age, who was inducted in my district. He has a crushed ankle and a silver spike in that ankle. He was inducted at the age of 29 years. The Army doctors examined him and they immediately said he is subject to limited service. All I am doing by this amendment is to exempt those who have previously been deferred for hardship reasons or for any other of a number of reasons, and to permanently exempt those between the age of 26 and 35 who are presently subject to induction. I am making an exception. I am

saying that those who are granted deferments to complete their education or to engage in research or to engage in the numerous other things that some of these people were exempt for in the way of education will not be deferred, and they are subject to induction into the Army to complete their period of service as I justly think they should be. That was the obligation of the contract that they entered into. Then I again want to repeat, this merely exempts those who at the age of 26 to 35 are available for induction. I am granting permanent deferment to those men. I think that is the thing that local boards desire, and I think it is the thing that local communities desire. I cannot for the life of me see any purpose in inducting that group of men into the armed services. The testimony before the committee itself said that this past year this group only made up 6 percent of the number inducted. That 6 percent includes people who were previously deferred to get their education and to get their training and for research and other purposes. It seems to me this would be a good and fair way to handle this problem. I hope that the chairman of the committee who is such an outstanding American and who so thoroughly understands these things agrees with me. I am sure he would agree with me if he understood fully what I am trying to say. I am sure he must understand what I am talking about. I am sure he wants a strong armed services. I am sure he wants one of the best armed services we can possibly get. I am sure we are going to get a better and a more vigilant and a more useful Armed Force and get a better training program, if my amendment is accepted.

Mr. Chairman, I do hope that the gentleman from Georgia accepts my amendment and I am glad now to yield to the distinguished chairman of the committee.

Mr. VINSON. I thank the gentleman for the compliments, but I am sorry to say that notwithstanding I have to disagree with you because what you accomplish will, as I mentioned today, free these people from induction. As I said, there are 17,000 occupational deferments. Under your amendment, every-one of those 17,000 men would go free of liability for induction if they reached the age of 26. Under the law today they are liable to age 35. The only people your amendment will hold are those engaged in research, educational work or studies. But so far as all occupational deferments are concerned, if they are still deferred when they reach 26 years of age, you turn them loose and they will have served the country at no time and yet have received constant deferments because of their occupation. Do you think that is fair?

Mr. MARSHALL. Mr. Chairman, I have a high regard for the gentleman from Georgia, but I must disagree with you to the extent that you use the word 'occupational deferment."

Mr. VINSON. Well, that is what it is. Mr. MARSHALL. I would almost be inclined to agree with you to an extent if you were to say it were a hardship

deferment, but I believe there has been ample testimony before your committee in favor of this younger group. I believe someone testified before your committee saying that if your present policies were carried out in connection with the age limits before you would get a group at the present rate of induction that is needed for the armed services, some of the men would be 90 years of age before they would have a chance to serve their country.

Is that right? That is before your

committee, is it not?

Mr. VINSON. I am sorry to say I could not follow the gentleman on that. But go ahead and make your statement.

Mr. MARSHALL. Mr. Chairman, may I ask this? Are there not ample people in the age limits below 26 to fill all of the requirements this country is going to have?

Mr. VINSON. What the gentleman is driving at is to have this burden fall exclusively almost on the shoulders of the younger group each year as they come in, and let out those in the over 26-year group. Now it is not fair. These other people owe an obligation as well as the 18-year-old boys.

Mr. MARSHALL. I think my amend-

ment is fair.

Mr. VINSON. I hope this amendment is voted down. I think the committee understands the purport of it.

Cheerful Information for Small Business

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD the following release issued by the National Federation of Independent Business, Inc., under date of February 6, 1955:

The announcement of Herbert Brownell, Jr., Attorney General, that the Department of Justice has filed notice of appeal to the United States Supreme Court to overrule the decision of the lower court in dismissing Government charges of monopolistic and restraint-of-trade practices against Du Pont, General Motors, U. S. Rubber empire was halled by George J. Burger, vice president, National Federation of Independent Business, as a forward step by the Antitrust Divi-sion of the Department of Justice to put "real teeth" in the enforcement of the anti-

He continued that the Federation has made continued demands since the decision was made by the lower court that the Department of Justice appeal the decision-that if the lower court action was allowed to stand, with no further action taken by the Government, all business, both small and large, would believe that the "lip service" action that has prevailed for nearly 40 years in the enforcement of antitrust laws was still continuing.

Burger concluded that the present head of the Antitrust Division. Judge Stanley Barnes, due to his vigorous action in the enforcement of the antitrust laws, has convinced small business that at last they see real relief for them from those in industry who looked upon the antitrust laws as "dead-letter laws."

The Dixon-Yates Contract

EXTENSION OF REMARKS

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. BOW. Mr. Speaker, there have been many misrepresentations of the facts in the much-discussed Dixon-Yates contract during the past few months. This discussion and the resultant confusion brought by the charges and halftruths have left many people uncertain about what the true facts in the case really are. There is sufficient confusion that I feel some effort must be made to bring the real facts on the controversy to the attention of my colleagues and the people of this Nation. I would like therefore to explain and discuss this important project at this time. The following questions and answers bring out many of the issues that have been clouded by the recurrent misrepresentations. Some of the facts I have obtained for this purpose, Mr. Speaker, are from an informational bulletin published January 25, 1955, by the News and Information and Natural Resources Departments of the United States Chamber of Com-

1. WHAT IS THE DIXON-YATES CONTRACT?

The Dixon-Yates contract is an agreement between the Atomic Energy Commission and the Mississippi Valley Generating Co. under which the company will provide 600,000 kilowatts of electric power needed by the Commission. The Mississippi Valley Generating Co. was formed specifically for this purpose by Middle South Utilities, Inc., whose president is Edgar H. Dixon, and the Southern Co., whose board chairman is Eugene A. Vates.

The contract stipulates that 500,000 kilowatts to be provided by the newly formed utility will replace power being supplied by the Tennessee Valley Authority (TVA) to the Commission's atomic-energy plant at Paducah, Ky., while the remaining 100,000 kilowatts will represent additional power for the Commission's plant at Oak Ridge, Tenn. The 500,000 kilowatts of TVA power thus released will become available to regular TVA consumers in the Memphis area where there is a growing shortage of electric power.

The Mississippi Valley Co. proposes to build a generating plant at West Memphis, Ark., at a total cost of \$107.250,000, all of it to be provided by private sources. For technical reasons, the power generated by the company will be delivered to TVA at Memphis, which in turn will deliver an equal amount of power to the Atomic Energy Commission's plants.

2. IS THERE AND PRECEDENT FOR THE DIXON-YATES CONTRACT?

Yes. The Atomic Energy Commission signed similar contracts with other private companies to supply power for AEC facilities at Paducah, Ky., and Portsmouth, Ohio. Neither of these projects caused any controversy.

3. WHY HAS THE DIXON-YATES CONTRACT STIERED UP SO MUCH CONTROVERSY?

Chiefly because some persons see the contract with private firms as an attack on the Tennessee Valley Authority, a Government agency, whose officials wanted to supply the power needed by the Atomic Energy Commission. Opponents of the contract argue that it is a first step toward permitting pri-

vate power firms to take over TVA's power operations.

However, President Elsenhower has said that nobody in his administration has any intention of destroying or damaging TVA or of diminishing its effectiveness in any way. He has also said there is nothing in the Dixon-Yates contract to raise by a single cent the price TVA power customers must

The contract does not diminish TVA's production of power. It simply makes unnecessary, for the time being, an increase in TVA's facilities at taxpayers' expense. Actually, the contract provides that the 600,000 kilowatts to be produced by the Mississippi Valley Generating Co. will be distributed by TVA. Thus a huge additional block of power becomes available to TVA.

4. WHY DID THE GOVERNMENT SELECT A PRIVATE FIRM TO PRODUCE THE ELECTRIC POWER NEEDED BY THE ATOMIC ENERGY COMMISSION'S PLANTS?

The only alternative to the Dixon-Yates plan was construction of a steam generating plant by TVA at Fulton, Tenn., costing taxpayers \$100 million. Even before the Dixon-Yates issue arose, Congress three times had rejected a proposal by TVA to build the Fulton plant. There seemed to be a strong belief on Capitol Hill that in building steam plants to generate power, TVA was going beyond its professed original purpose of improving navigation in the Tennessee River and preventing floods. Production of electric power was to have been only incidental to these objectives.

The Dixon-Yates plan revived the question of how far TVA should be permitted to go in producing power which competed directly with private enterprise. It also raised an even more vital question: Why should residents of the Tennessee Valley area enjoy privileges not shared by citizens in other parts of the country?

President Eisenhower summed up this question last November in a letter on the Dixon-Yates contract to Representative W. STERLING COLE, then chairman of the Joint Congressional Committee on Atomic Energy. The President said:

"It seems to me that all arguments for the construction by the Federal Government of the additional steam plants ignore this one and very important truth: If the Federal Government assumes responsibility in perpetuity for providing the TVA with all the power it can accept, generated by any means whatsoever, it has a similar responsibility with respect to every other area and region and corner of the United States of America. * *

"The directive to the AEC to make arrangements for the purchase of private power—either directly or by finding a new private source to replace available TVA power—was designed to allow time for a thorough examination of this whole vast field, without hurting the citizens of the valley."

5. DOES THE DIXON-VATES CONTRACT GUARANTEE A PROFIT TO THE POWER COMPANIES?

No. The contract permits a theoretical profit of 9 percent on the \$5,500,000 which Middle South Utilities and the Southern Co. will raise by selling stock in the Mississippi Valley Generating Co. (Average return on equity capital is close to 10 percent for all United States private utilities.) In the heat of the Dixon-Yates controversy this was widely mistaken for a guaranty of 9-percent profit on the entire investment. If costs go too high, it is entirely possible for the companies to take a loss.

If costs are kept within the original estimate of \$107,250,000 total investment in the Mississippi Co. (all but the \$5,500,000 to be supplied by banks), the rate of return on the \$107,250,000 will be from 3.75 to 4 percent. This compares with the approximately 6 percent which regulated electric companies normally are allowed to earn. In-

terest charges on the borrowed capital, as well as stockholders' dividends, must be paid out of this return.

6. WHAT ADVANTAGES TO THE GOVERNMENT DOES THE DIXON-YATES CONTRACT PROVIDE?

The principal advantage is an immediate saving of \$100 million, which taxpayers would have to provide were the powerplant to be built by TVA. In addition, Mississippi Valley Generating Co., which will operate the plant, will pay Federal, State, and local taxes. TVA pays no Federal income tax, and only token State and local taxes on its power operations. Thus Federal, State, and local governments will benefit along with Federal taxpayers.

The Atomic Energy Commission has estimated that the rates it will pay for power under Dixon-Yates contract will be lower than those provided in any present AEC power contract, when allowance is made for taxes the company will pay.

Finally, AEC can take over the plant at any time within 3 years after the contract becomes effective, and can cancel the contract during the construction period, or on 3 years' notice after the plant is completed. The company, however, cannot cancel. The contract is essentially a fixed-cost, not a cost-plus, agreement. Before it was signed (in November 1954) the contract was examined and reexamined by many Government agencies, including the AEC, the Bureau of the Budget, the General Accounting Office, the Federal Power Commission, and the Joint Congressional Committee on Atomic Energy.

7. WHAT IS THE BASIC ISSUE INVOLVED IN THE DIXON-YATES CONTROVERSY?

The basic issue is public against private power. It is a political issue. At the same time, there are many sincere people on both sides of the fence. Public power advocates believe that electric power created by Federal dams should be sold to private consumers by the Government. They argue that water, unlike man-made products, is a natural resource belonging to all the people, and its benefits, including electric power, should be distributed by the National Government. They go further and argue that hydroelectric power (water power) should be supplemented by power created by steam generators. In other words, they want the Government to go into the power business in competition with private firms. They say that consumers benefit because Federal power is cheaper than private power.

Private power advocates say that Federal power is cheaper only because Government powerplants pay no Federal taxes, and not all of them make even token payments in lieu of State and local taxes. TVA, unlike other Government power agencies, can borrow capital from the Treasury without interest. Thus, the taxpayers actually pay the difference in cost between public and private power. Private power firms, on the other hand, not only pay taxes but also provide their own capital without recourse to public funds.

Before the recent tremendous growth of the private power industry, public power advocates also argued that Government should go into the power business because private firms were unable to provide facilities for such huge projects as the Tennessee Valley Authority. This argument is heard less often today. The administration, in advancing its policy of partnership in development of natural resources, states frankly that "Government can't do it all."

8. WHAT IS THE ADMINISTRATION'S PARTNERSHIP POLICY?

The policy holds that our natural resources can be most wisely developed by emphasizing Federal cooperation with State, local, and private interests.

Douglas McKay, Secretary of the Interior, says this policy fully recognizes Federal re-

sponsibility for resource development. At the same time, Secretary McKay states that the task of resource development is too vast to be carried out by the Federal Government alone. Those who contend otherwise, he asserts, are either misinformed "or attempt-

ing to mislead the public."

As an example of the partnership policy, Secretary McKay recently cited the plans for development of the Columbia River Basin. Here States, local government agencies, and private companies are ready to spend an estimated \$2 billion for development and control of water resources.

With respect to development of electric power, the partnership policy simply means that the Federal Government does not assume that it has exclusive rights or responsibility for the construction of dams or the generation, transmission, and sale of electric energy in any area, basin, or region.

President Eisenhower has said: avoid extremes. We shall neither withdraw from the power field nor federalize all electric generators in the United States. * Where local enterprise can shoulder the burden, it will be encouraged. * * * But where local action cannot or should not fully meet the need, we shall have Federal action."

9. DOES THE LIXON-YATES CONTRACT FIT INTO PARTNERSHIP POLICY

The offer of private utilities to build Yes. a powerplant to meet Government needs was in direct response to President Eisenhower's challenge to local groups, public and private, to share in large governmental projects. With the Atomic Energy Commission re-

quiring more and more electric power from TVA, power supply in the Memphis area was becoming critically short. Tennessee Valley Authority was seeking \$100 million to build a steam plant to provide the power needed by AEC. Since the private utilities were able to satisfy AEC that they could provide the needed power, no reason was seen for allowing a Government agency to build the plant at taxpayers' expense.

Suspension of Import Duties on Scrap Metal

EXTENSION OF REMARKS OF

HON, JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. PATTERSON. Mr. Speaker, today I introduced a bill to suspend the import duties on all metal scrap in order to insure an adequate supply of essential raw materials for Connecticut industries and to reduce the amount of strategic metals now going to Russia, China, and other nations in the Soviet

My bill continuing the suspension of import duties on metal scrap is only one step in the direction of protecting our industrial economy, but it is a vital step. In the 80th Congress, I was the original sponsor of legislation to take the duties off copper imports badly needed by Connecticut's great copper and brass industries. I am gratified that each succeeding Congress has voted the continued suspension of taxes on imported copper. I need hardly add that I will continue the fight to get essentials for Connecticut's industries. There is much to be done yet.

In connection with the present bill I wish to explain that scrap metal is an essential raw material, the processing of which provides work for Connecticut labor. It should be permitted to enter the United States free of duty or import tax as an essential raw material.

The tonnage of scrap metal imported is very small when compared with United States production and consumption of such metals, but this small tonnage is very important to the welfare of the waste materials industry.

Imports of lead scrap and zinc scrap are principally from Canada and other countries in the Western Hemisphere which are good customers for articles produced in Connecticut. Every ton of scrap metal imported reduces the drain on our natural resources, and insures a stable market for domestic scrap and in preventing temporary shortages of metal scrap with the accompanying excessive variations in price due to the sudden jump in the London market.

I, therefore, recommend to Congress that legislation be enacted to provide for the suspension of import duties and import taxes on all metal scrap for the fiscal year ending June 30, 1956. I feel confident that Congress will see the need for such legislation in view of the critical world situation today.

Importations of Frozen Tuna From Japan

EXTENSION OF REMARKS OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

WILSON of California. Mr. Speaker, the tuna industry of California has been hard hit by increasing importations of frozen tuna from Japan. There is currently no tariff on tuna in frozen form, and the resultant flood of imports has had a serious effect on our domestic producers of this popular American food-stuff. Our long-range fishing fleet is rapidly declining in numbers, and unless some relief is forthcoming, we may well see American consumers entirely dependent on foreign producers of tuna.

A clear-thinking spokesman of the fishing fleet, Mr. Harold Cary, general manager of the American Tunaboat Association of San Diego, in my district, recently summarized the position of the industry in regard to current trade negotiations

I include his remarks in the RECORD. JAPANESE-UNITED STATES TRADE AGREEMENT HEARINGS

The United States Government is preparing to negotiate a trade agreement with Japan. In that agreement the United States is preparing concessions to Japan on a large number of products, on which a list was published. The published list includes frozen tuna, tuna canned in oil, and tuna canned in brine. The concessions granted by the United States usually take the form of a reduction in the tariff or duty rate charged by the United States on imports into the United States.

Before actual negotiations begin with Japan the United States Government allows interested persons or groups to appear before a committee known as the Committee for Reciprocity Information and before the United States Tariff Commission to state why they believe a concession should or should be granted to Japan.

Once negotiations with Japan are under-taken the United States Government, through the executive branch, would have the authority to cut the duty on tuna canned in oil from 45 percent to 221/2 percent, and to cut the duty on tuna canned in brine from 12½ percent to 6½ percent. A different situation presents itself in regard to frozen tuna. There is presently no duty on frozen tuna. Therefore a question arises as to what concessions the United States could grant to Japan on this item. The negotiators could act to bind the present duty rate through negotiation of a trade agreement with Japan. This means, in its simplest practical terms, that the United States Government would be agreeing with Japan that there would be no duty rate or quota imposed on the product, frozen tuna, in the future.

An action to bind the duty rate at zero on frozen tuna would be, in essence, a statement to the world at large and to the Japanese tuna industry in particular, that the tuna-producing industry of the United States (the boat owners and fishermen) is completely dispensable.

The association appeared before both the committee and the Commission on December 20, taking the position that the United States Government should take no action to bind the present zero duty rate. In addi-tion, it was pointed out that no change should be made in the canned-tuna duty

THE BASIS OF THE ASSOCIATION'S POSITION

It is a fundamental of United States trade policy that foreign trade be encouraged, but not at the risk of injury to domestic industry, labor, or agriculture. The Trade Agreements Act itself lists certain ways by which injury may be measured. If there is a decline in the domestic production, prices, wages, or profits of an industry, there is evidence of injury. If there is an increase in actual imports or an increase in relative imports, there is evidence of injury. If there is a decline in the proportion of the domestic market supplied by the domestic producer. there is evidence of injury.

A part of the association's presentation was to use these means of measurement to show what has happened to the United States producer. The following figures are taken from the statement submitted to the committee and to the Commission:

1. Domestic production: The following figures illustrate the trend of production by the total domestic fleet, including the baitboats, purse seiners, and albacore boats:

	Pounds
1948	331, 624, 000
1949	335, 680, 000
1950	392, 273, 000
1951	319, 748, 000
1952	324, 914, 000
1953	1318, 000, 000
1954	1 322, 000, 000

1 Estimated.

From the foregoing it will be seen that there has been a decline in domestic production.

2. Prices: There has been a decline in the price structure for raw fish. A comparison made between 1948 and the end of 1954 shows an overall decline of 14.4 percent in the prices paid for yellowfin and skipjack tuna.

During this same period the costs of boat operation have risen. There is no item of expense in the conduct of the fishing business which has lessened during this period. The expenses of operation for a trip, which include provisions, fuel, and foreign licenses, in addition to fishing gear, have all increased. In addition, the boat owners' costs for the repair and maintenance of their vessels, the insurance on the vessels, and the replacement of major components have all likewise increased.

3. Profits: There has been a decline in profits from boat operations resulting from declines in price and declines in volume of production. A measurement may be made of this by placing the profits for 1948 on the basis of an index of 100 and measuring subsequent years on the basis of data received to date, as follows:

1948	100.00
1949	86. 79
1950	87. 67
1951	38.39
1952	-00.6
1953	-16.00

4. Wages and employment: There has been a decline in wages paid to fishermen on a share basis and in employment of fishermen. A survey of wages has been made and placed on an index basis, as follows:

1948	100.0
1949	93.3
1950	92.8
1951	71.4
1952	170.0
1953	170.0
1954	180.0

¹ An estimate.

The loss of a number of vessels from the southern California fleet, particularly in the bait-boat fleet, but also affecting the purse-seine fleet, has cost many hundreds of jobs. It is estimated that the decline in employment in the bait-boat fleet alone approximates 500 persons in the past 3 years.

5. Increase in actual imports: Frozen-tuna figures show amazing increases in imports into the United States. The following figures are given on the basis of pounds of round weight:

1948	9, 143, 000
1949	20, 606, 000
1950	56, 712, 000
1951	62, 085, 000
1952	69, 003, 000
1953	95, 038, 000
1954	1110, 759, 000

¹ Jan. 1 to Oct. 31 only.

From the foregoing it can be seen that the imports have increased over 12 times in a period of 6 years, even though that rate of increase is measured on the basis that the last year is given only for a 10-month period.

The subject of the trade-agreement hearings was whether or not a trade agreement should be negotiated with Japan. Japan's participation in sales of frozen tuna to the United States is, of course, of major interest. The following are the figures from Japan, the principal supplier:

	Pounds	Percent of total
1048	2, 392, 000 2, 839, 000 25, 369, 000 35, 727, 000 50, 985, 000 77, 112, 000	20. 2 13. 8 44. 7 56. 7 73. 9 81. 1

¹ Jan. 1-Oct. 31 only.

From the foregoing analysis the pattern of import supply has each year tended to become more fixed in Japan, principal supplying country, with the total percentage of frozen imports increasing steadily from 13.8 percent in 1949 to 81.2 percent in 1954 for the first 10 months.

There have also been significant changes in the types of tuna imported from Japan.

Prior to 1954 the overwhelming majority of this tuna was albacore. In 1954 for the first 10 months albacore represented 51,054,000 pounds, or 56.8 percent, while yellowfin and skipjack totaled 38,847,000, or 43.2 percent.

While the brief of the association was directed chiefly to the item, fresh and frozen tuna, the following figures on tuna canned in oil and in brine are of importance and illustrate another great increase:

P	ounds of
proce	ssed weight
1948	8, 302, 000
1949	4, 584, 000
1950	36, 790, 000
1951	12,970,000
1952	23, 321, 000
1953	34, 593, 000
1954 1	24, 438, 000

Jan. 1-Sept. 30 only.

Japan has become the leading supplier of canned tuna, increasing her percentage of the imports from 7.8 percent in 1948 to 93.6 percent in 1953.

6. Relative imports:

One way of measuring the rate of imports is to take the amount imported and compare it, percentagewise, with the amount produced by the domestic producers. The following percentage tabulation shows the percent which imports bear to the total amount produced by domestic producers:

P	ercent
1948	2.76
1949	6.14
1950	14.46
1951	19.42
1952	21.24
1953	29.83
1954 1	39.10

¹ Jan. 1-Oct. 31 only.

Therefore, there has been a sharp increase in the amount of imports relative to domestic production.

Proportion of the domestic market supplied by the domestic producer:

There has been a decrease in the proportion of the domestic market supplied by the domestic producer. Taking into account production of canned tuna from imported frozen fish and considering that as foreign production, and adding to that the importation of tuna and tuna-like fish already processed and canned, this is the condition with respect to the percentage of the market filled by domestically produced fish:

Domestic producers' percentage of the market

1948	91.4
1949	85.3
1950	67.4
1951	70.9
1952	66.0
1953	59.9
1954 1	55.9

² Jan. 1-Sept. 30 only.

Meanwhile, the percentage of the total United States market represented by importations from Japan of tuna in all forms has increased as follows:

	CICCIER
1948	1.3
1949	2.6
1950	20.3
1951	15.5
1952	23.2
1953	30.9
1954 1	32.4

Jan. 1-Sept. 30 only.

8. Other considerations:

The change in the number of producing units (in the case of the fishing industry the increase or decrease in the size of the ficet) is also an important measurement of the trends of a business. If a fleet is expanding it illustrates that venture capital is

available and people are willing to make the venture. If the fleet is declining it appears that there is an excess of caution in the investment of funds. The following figures exhibit the decline in size of the domestic bait-boat fleet:

	Vessels	Capacity
Dec. 31, 1951	210 191 180 168	Tons 44, 300 42, 470 40, 535 37, 915

Since the end of 1951 the fleet has declined to the extent of 42 vessels through casualties and transfers. Of the 32 vessels lost through various types of casualties during this period only 2 have been replaced, and these have only very recently joined the fleet. Twelve vessels have transferred their operations to other areas.

The purse seine fleet in the meantime has shown a decline, as evidenced by the fact that, in 1948, 102 vessels took out Mexican fishing licenses, while, in 1954, only 67 ves-

sels used such licenses.

The foregoing figures are significant and indicative of a trend. They become far more significant when they are compared with what has happened in the Japanese fleet of tuna-skipjack vessels similar in size (from 50 tons carrying capacity and upward). For the 30 months, from January 1, 1952, to June 30, 1954, the following increases have taken place:

	Japanese vessels	Gross ton- nage
Dec. 31, 1951	272 202 332 388	40, 714 47, 623 63, 122 78, 684

The statement of the association before the committee and the Commission contained a considerable amount of additional information, plus a number of reasons why the United States Government should not take action to bind the present duty-free status of fresh and frozen tuna.

Income Tax Deduction for College Tuition

EXTENSION OF REMARKS

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. PATTERSON. Mr. Speaker, today I introduced a bill in Congress to amend the Internal Revenue Code of 1954 to provide, in the case of individual taxpayers, a deduction equal to 30 percent of amounts paid as tuition for college or university students.

The purpose of my bill is to afford a higher educational opportunity to many young men and women who might otherwise be denied the benefit of a college education that opens the door to successful careers in all walks of life. This is accomplished by easing the tax burden on the parent or benefactor who pays the tuition fees for college students. The taxpayer receives a 30-percent deduction of amounts paid for tuitions. Not only

does this provide tax relief for low-income families struggling to send their children to college but offers an incentive to higher-income benefactors to cut their income tax by sending talented and deserving young persons to college.

From the national standpoint, the proposed legislation I am now offering will materially assist in providing a future supply of trained leadership and technical skill. In his budget message, President Eisenhower stressed the need for highly qualified scientists. Furthermore, today there is a pressing need for engineers and technologists in the rapidly expanding field of new industries and commerce. There is always the need to fill the vacancies in the older professions in this great Nation of free enterprise.

According to a recent survey conducted by the Commission on Human Resources and Advanced Training, only about 51 percent of the highest talented high-school graduates are currently enrolling in college. My tax relief proposal for education is especially designed to aid that 49 percent denied the privilege of educational advancement. The cornerstone of our Republic is our system of free enterprise, and there is no higher aspiration of free enterprise than pursuit of education.

Friendship Drive

EXTENSION OF REMARKS

HON. AUGUSTINE B. KELLEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, I was pleased to read in the Wall Street Journal of February 4 an article by Mr. William Henry Chamberlin entitled "Friendship Drive," and with permission to extend my remarks in the Record, I include this article. I hope the readers of the Congressional Record will peruse this carefuly, for it contains a viewpoint many of us seem to have forgotten.

FRIENDSHIP DRIVE—SOVIET OFFICIALS TRY TO REGAIN SOME OF THE CONFIDENCE THE UNITED STATES UNCRITICALLY GAVE THEM DURING THE WAR

(By William Henry Chamberlin)

During the war it was almost worth an American's reputation as a loyal citizen to voice distaste for Communist methods of rule in Russia or to express distrust as to the use which the Soviet Government would make of the immense power which it was clearly building up.

Today, despite such possibly ominous signs as a new emphasis on heavy industry for arms production, the Soviets are trying to recreate some of that wartime confidence. They do not now, it is true, have the same amount of gratuitous help in this country they had then, but they are trying.

In those not-so-long-ago days, the most influential and publicized press and radio commentators went out of their way to read sermons on how the Soviet Union had been wronged and misunderstood and how hope for a brave new world after the war was linked to trust in Stalin's benevolent intentions toward the whole human race. It was not only the publications of red and pink tint that enjoyed a field day. Pro-Soviet

propaganda of the most inaccurate and undiscriminating kind found it way into normally conservative publications.

In this connection, the American Committee for Cultural Freedom has recently published an interesting little pamphlet by Paul Willen, entitled "Who Collaborated With Russia?" This work is not complete and one may take exception to some of its conclusions. The author seems inclined to let off the Roosevelt administration too easily and to accept, in retrospect, this phenomenon of collaboration somewhat too fatalistically.

DOUBTS NOT ENCOURAGED

Still, there is enough authentic data in the pamphlet to make some faces in very respectable editorial rooms distinctly red. That was a time when State Department officials who refused to swim with the tide and retained their doubts about the grand design of Soviet foreign policy found it advisable, for the sake of their careers, to be very cautious about being seen in public with persons of known anti-Communist views.

The theory of trusting Stalin and hoping for the best became the leitmotiv of American foreign policy and led to Teheran, to Yalta, to Potsdam—and ultimately to a cold war that is being fought under far less favorable conditions than would have prevalled if healthy distrust of Soviet ultimate intentions had been cherished even when American-Soviet military collaboration was considered a practical necessity by both countries.

The current effort to recreate this atmosphere of trusting confidence began after the death of Stalin. Soviet diplomats are coming out of their isolated towers of grim seclusion, inviting conversations with non-Communist diplomats and journalists and saying, in effect: "We really want to be friends. Why do you distrust us?"

saying, in elect. We really want to be friends. Why do you distrust us?"

Since human memory is short, it may be worthwhile to recall briefly a few valid reasons for distrust of what seems to be a carefully rehearsed and stage-managed Soviet friendship and confidence offensive.

First, there is the theory on which the Soviet state was set up. This was implacable hostility between the Soviet Union and the non-Communist world. As Lenin put it: "It is inconceivable that the Soviet Republic should continue to exist for a long time side by side with imperialist states. Uultimately one or the other must conquer. Meanwhile a number of terrible clashes between the Soviet Republic and the bourgeois states are inevitable."

It may be suggested that all revolutions start out with frothy language and tend to settle down with the passing of time. If it were only a case of a theoretical belief of Communists that their system would outlast ours, as a result of immutable laws of history, we could take this in our stride and leave the verdict to the future.

Unfortunately, the Soviet Communists, from the very beginning, felt a strong urge to give history a helping hand. So they built up throughout the world an enormous fifth column, composed of local Communist parties which are completely subservient to Moscow and faithfully follow every zig and zag of the tortuous Soviet foreign policy.

THE DIFFICULT NEIGHBOR

Partly by this device, practiced on a scale without parallel in history, partly by outright force, partly by capitalizing on the social and economic chaos which World War II brought to many parts of the world, Soviet communism in less than 40 years has become an enormous imperial power, controlling the destinies of one-third of the population of the world.

Such an empire would have been a formidable neighbor in the best of circumstances. With its rulers committed to militarization at home and expansion abroad this empire becomes a very difficult neighbor. It is, moreover, a regime that has always practiced Lenin's maxim: "It is necessary to use any ruse, cunning, unlawful method, evasion, concealment of truth."

One of the silliest of the wartime legends represented Stalin as a basically likable character, a little rough and blunt perhaps, but a man whose word could always be relied on. The truth is that Stalin was one of the most devious and cunning of politicians, with a record for breaking treaties and promises that Hitler perhaps equalled, but did not surpass. Stalin built his empire by fraud as much as by force, concluding treaties of friendship and nonaggression with neighboring states which he took over at the first convenient opportunity.

There are two other characteristics of the Soviet regime which are scarcely compatible with an attitude of cordial confidence on the part of the outside world. The Soviet government recognizes no control on its actions except that of equal or superior force. There is no recorded case when it has accepted arbitration as a means of settling a dispute with some other state.

HOODWINKING THE PEOPLE

And the Soviet population is so shut off from normal contacts with the outside world—despite recent surface relaxations, and newspapers are not freely sold, contacts between Russians and foreigners are few and restricted—that it can be hood-winked into regarding an act of aggression as an act of self-defense.

There is not much danger the American people will respond to the present Soviet offensive by succumbing to another wave of uncritical adulation, though unhappily the same cannot be said of all non-Communist countries. But the friendship offensive is at least a reminder that until and unless the basic characteristics of Soviet rule are changed, a wary skepticism about Soviet words unsupported by Soviet deeds will continue to be a sign of elementary common sense.

Michigan State College Founders' Day

EXTENSION OF REMARKS

HON. VICTOR A. KNOX

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. KNOX. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial from the Menominee Herald-Leader pertaining to the centennial awards which Michigan State College will present at its Founders' Day program on February 12. Among the 27 to receive these rewards are two outstanding citizens of the Upper Peninsula of Michigan, and who are very deserving of the honors which will be bestowed upon them.

Michigan State College will honor 27 persons with centennial awards at its Founders' Day program February 12. Among them are two men from the Upper Peninsula, George A. Osborn, publisher of the Sault Ste. Marie Evening News, and George E. Bishop, secretary-manager of the Upper Peninsula Development Bureau. Both men have served the Upper Peninsula and Michigan well and are deserving of the honors which Michigan State, marking its hundredth year, will confer on them.

Osborn has devoted himself for years to helping peninsula progress. He has served on the board of Houghton Tech, on the Mackinac Straits Bridge Authority, on the International Bridge Authority, on countless commissions and committees in his profession of journalism and in civic affairs. He is very apt to be found present wherever there is a gathering to plan a major Upper Peninsula promotion. An indefatigable traveler and planner, he has made his Soo News a reflection of its publisher's personality—clean, helpful, and orderly.

George Bishop, the executive officer of the Upper Peninsula Development Bureau for more than 30 years, has rallied and united Upper Peninsula promotional forces again and again. He would deserve honor for the resolution and persistence which he has brought to his work if it had not been accomplished as much as it has, and it has done much. He has been a valuable educa-tional force in the peninsula, teaching patiently (he used to be a school teacher) cooperation is the way to achievement, uniting the peninsula in projects for its common good, preaching a love of this northern land, its iron ranges and great forests, its lake deeps and rushing streams, and especially of its people.

Had the Upper Peninsula itself nominated two eminent citizens for citation by Michigan State College at its centennial celebration it could not have done better than the college itself has done in the selection of George Osborn and George Bishop.

Health Reinsurance

EXTENSION OF REMARKS OF

HON. RICHARD H. POFF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, February 8, 1955

Mr. POFF. Mr. Speaker, pursuant to permission to extend my remarks in the RECORD, I quote herewith an editorial which appeared in the February 1, 1955, issue of the Daily Advance, a newspaper published daily in the city of Lynchburg, Va.:

WELFARE SHOT IN THE ARM

The President's dissertation to the Congress on reinsurance of private health in-surance plans is an interesting message. It is rather glowing in its concern for the health of the people and in specifying how vital that is to the Nation. But it is a shot in the arm for all the welfare state programs and proposals of the New Deal and Fair Deal to which the Republicans were so opposed, and to which conservative Democrats who really elected Mr. Eisenhower, were opposed.

The bureaucracy necessary to carry out such a program as the one he now has presented to the Congress means more people in Government to exercise paternalistic su-pervision of those not in Government. It is another blow against individualism, the self-sufficiency of the individual which is at the same time his evidence of growth

into the best kind of citizen.

The health program is apparently, to pin it down, a substitution for socialized medicine. It is another form of paying medical costs, with the Government in a considerable degree guaranteeing those costs, so that in extremely numerous cases the Government will be paying part or even all costs.

This is so far from what all of us have

been taught about strength through doing it yourself, exercising your muscles if you want to be strong-to put it in its simplest form-that it is hard to swallow.

That it will have considerable support is certain. And this will come from both parties. And it will be widespread in the land and will come from unexpected sources. States burdened with welfare costs, care of the mentally and physically ill, with all the increasing difficulty in meeting these costs, will see in this program Federal funds to ease the State or locality burden. And this is the result of the tax system, where Federal taxes take so large a part that State and locality cannot find revenue to do what they would prefer to do instead of channeleverything through Washington.

The cost is set casually at \$100 million—as a beginning. But every time a program is instituted which does this it grows, eventually is added to the debt, from the beginning increases the centralization of government, of power, of control, and diminishes the strength of every political subdivision in its role and initiative. And the initiative and individual dignity and strength of the citizen.

This is done by men who are not social, not political philosophers but politicians. Sole blame and burden of it lies not on the President but on advisers and the forces influencing these advisers. For it seems now that it does not matter who the President or which the party—the welfare state grows. And there still are many Americans who prefer, and who will insist, that it is better for man to earn his way, better to contrive his own systems outside of government for tak-ing care of human welfare except in cases of unavoidable indigency.

There is at each level of government a legitimate place for concern with human welfare, but when it takes the form of subsidy for which all pay, and in which all are ultimately also to be benefactors, it is moving toward a situation about which no man can be informed, for it is largely a process of taking out of one pocket, passing it through government hands, returning less to the other pocket after costs of government processing, until the time comes when both

pockets will be empty.

One man's utopia can be another man's poison. In theory, that is, for the utopia remains, ultimately, a dream.

What Is Just Parity Percentage?

EXTENSION OF REMARKS OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the February 1955 issue of the Progressive Farmer:

WHAT IS JUST PARITY PERCENTAGE?

More and more a radically new attitude toward this whole problem of parity seems absolutely necessary if farmers are ever to get out of the terrible financial squeeze in which they are now caught. Somehow or other our city people and the city press (aided, alas, by some in our own Depart-ment of Agriculture and some agricultural leaders) have spread abroad the notion that full 100-percent parity prices would mean inexcusable prosperity for farmers—a sort of "all this and heaven, too" situation where farmers would be carried to the skies on flowery beds of ease. This is not only not true, but it is the absolute reverse of truth as proved by these demonstrated statistical

facts which the Progressive Farmer has more than once mentioned:

1. In 1949 farm prices stood at 99 percent of parity, and yet the average net income per farm person was only one-half that of the average nonfarm person.

2. In 1951 farm prices were 107 percent of parity, and yet the average net income of farm workers and industrial workers compared as follows: For farm workers, \$1,718;

for industrial workers, \$3,416.

Plainly, therefore, 100-percent parity will not give farmers real prosperity, but only a fairly decent income. They should never be content with anything less than 100 percent. On products for which any variable price-support formula is set up it should be at 85 to 95 percent of parity-not 75 to And where farmers are willing to provide their own production control and reduce their acreages or other production factors In order to make production fit expected demand, then we believe price supports should be guaranteed at 95 percent of parity instead of the 90 percent which has proved unequal to the task of giving farmers the decent income to which their efficiency entitles them. To restore 90-percent price supports may be all that is expedient as to this Congress, but who can say farmers do not honestly earn the definitely larger percentages just suggested?

Devastating Effect of Foreign Competition

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. REED of New York. Mr. Speaker, we have furnished foreign nations with billions of our taxpayers' money. furnished them with the blood of our fine American boys, and now we are asked to surrender our payrolls-in other words, the jobs of our American workers. to further benefit foreign countries. Is there to be no stop to this raid on the economy of the United States? I can answer that question by saying that with such legislation as H. R. 1, the Reciprocal Trade Agreements Act, there will be no end to it.

The pending Japanese Treaty is another example where it is proposed to open our market to their low labor products, and drive many of our industries into bankruptcy.

Under leave to extend, I am including an article which appeared in the Olean (N. Y.) Times-Herald on February 7, 1955:

BICYCLE-MAKING BUSINESS IN NEW YORK IS MENACED

In an editorial one evening last week, this newspaper, in speaking of the grave situation that had arisen concerning the migration of industry from New York State, men-tioned the removal of a big carpet-manufacturing concern from Amsterdam, N. Y., to a location in another State in which it could operate more profitably.

This, as it happens, was one of Amsterdam's largest industries—maybe its largest and the payroll of 1,700 workers will be lost to the community.

And what will that mean in terms of cold dollars and cents?

Well, let us figure the average weekly wage conservatively at \$40. It was probably considerably higher.

At \$40, the weekly payroll would be \$68,000; and this would mean an annual payroll of \$3,536,000.

All of us can understand just what the loss of such an industry and payroll will mean to Amsterdam.

This concern, however, found it desirable to move elsewhere purely for domestic rea-

What many of us may not have realized is that some of the State's industries are falling by the wayside because of cheaper foreign importations.

Take the bicycle industry, for instance. In Little Falls is the plant of the H. P.

Snyder Manufacturing Co.

The Snyder people make bicycles. They make good bicycles. But there are foreign bicycle makers who also make good bicycles; and because they can turn them out cheaper, they can be imported into this country and undersell the Snyder concern and other American bicycle manufacturers.

British bicycles, for instance, can be placed on the docks here at \$21, even after paying the duty, when it costs \$29 to make the same product in Little Falls.

Well, what's the solution? Increase the

duty on foreign-made bicycles?

That is the conviction of Assemblyman Leo A. Lawrence, of Herkimer, who has introduced a resolution in the legislature in which both the assembly and senate are urged to memorialize Congress to provide tariff pro-

The comment of the assemblyman may be

noted:

"We've seen Amsterdam lose a big industry," he observes, "and we don't want the same thing to happen in Little Falls."

Nor does anyone else. It's time to get right down to brass tacks, isn't it?

A Letter From a Coal Miner's Wife

EXTENSION OF REMARKS OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to insert a letter from one of my constituents a coal miner's wife-whose name, of necessity, I have omitted-which speaks for itself in bringing to the fore the seriousness of the emergency in which our coal industry finds itself today:

DEAR CONGRESSMAN KELLEY: Oh, I am so puzzled and downhearted over the situation that I don't even know how to write this letter. But I will try my best and do hope you try your best to understand.

It is about the coal mines. Do you really understand that this situation is getting worse by the days? More layoffs are taking place right now. It is pitiful to see some of the miners' families. I have a neighbor that is out of work almost a year and a half. A family of five. Really pitiful. I tried my best to help them out, especially with clothing. I can't anymore. Who will help me ing. I can't anymore. Who will help me and my children? Most men from Mount Pleasant work at Leisenring 3, Collier, and Bridgeport. More layoffs at Leis; three, and more to come next week. Why? they are bringing new machines in and the men are told, "We don't need you." Those poor men stand their looking at their two

hands. Yes, their hands can do the work; they are willing and able to work. But they would rather see the man out of work and let the machine do it. Is it fair for children to go hungry because of a new machine?

Answer this for me please. How can one manage on a check at \$30 a week? A family of five. My family. Our eats, electricity, gas, water, coal, insurance, our clothes, how? possible. And a house payment. Yes, we are struggling to build a home for the children. We now live in our foundation. Well the old saying, "A coal miner is just a rat under the ground, so a miner's family should live down in the ground also."

I had a neighbor visiting me Monday evening. Her husband, a millworker. She hurt "Oh, we don't need coal my feelings terribly. any more. Everything is gas and oil nowadays. You just ask my husband. They use gas at their plant. We have an oil furnace. I think John L. Lewis is a fake." That is what she said. A coal miner is always laughed at. All I can do at times like this is turn around and go into tears. My husband wants to work. Someone, somewhere won't let those men work. So many articles I have read, "Brighter future for coal indus-Is it true or is it propaganda? Just the big shots have work and good incomes. Not the poor man. Not even a chance.

My oldest child will be out of school this May. A boy. Is there any future for him? Is there anywhere he could start looking for a job? So many times he says, "Mom, wait till I'm out of school. I'll work and help so we can build up." Oh that dear child. Does he know? Where should he look for work? If you, dear Mr. Kelley, have any idea please, oh please let me know. Let him and others have some kind of a future. Mr. KELLEY would it pay to write personally to Mr. Lewis about these conditions? These machines in the mines that are taking our men's jobs away? Please let me know.

I will fight and not stop until something is done. My children cannot go hungry. The Government buys up so much surplus articles; why can't it buy up some surplus coal and have our men working? Help me and I will help others by passing on the

word.

Loads of luck to our Congressman, and may God bless you.

JUST A MINER'S WIFE.

Congressional Salaries

EXTENSION OF REMARKS OF

HON. BRADY GENTRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. GENTRY. Mr. Speaker, a bill has been reported to the House which would raise congressional salaries from \$15,000 to \$25,000.

I oppose this legislation on two grounds. The first is that the present salary will suffice, or should be made to suffice, at least until Congress is willing to stop voting appropriations that, even with our very high taxes, prevent our Government from living within its income and result in more borrowing and more debt. The Treasury will have to borrow the money to pay any increase in salary we vote ourselves, and the taxpayers will have to pay interest on it for generations. My second objection to this legislation is that the granting ourselves of this large increase in salary on the recommendation of the President would unconsciously, if not consciously, make us more responsive to pressure groups which will insist on the passage of the remainder of the President's recommendations, much of which cannot be afforded by our people because of its great cost

Of all salaried and wage-earning people in America, 90 percent get less than \$5,000 per year and less than 1 out of each 450 receives as much as the \$15,000 already paid Congressmen. A Member of Congress, however, actually receives more than \$15,000. Congressmen passed a law 9 years ago giving themselves retirement at 62 with 6 or more years' service. The retirement age was later lowered to 60. Retirement pay is \$200 per month after 6 years' service, \$400 per month after 14 years' service, and \$700 per month after 26 years' service. These payments last for life. If the pay raise passes, retirement payments will increase in proportion to the raise in salary.

One-half of the funds necessary to meet these retirement payments are contributed by Congressmen during their service, the other half being contributed by the taxpayers. Members also receive certain traveling expenses. In addition, Congressmen, under the duties of their office, may travel extensively, not only throughout the United States, but throughout the world. This is a privilege which, by reason of circumstances, is denied most of the people of our country. In addition to the \$600 income exemption given all taxpayers, Congressmen passed a law giving themselves an additional \$3,000 exemption upon showing expenses of that amount while living in Washington. The Government, under a law passed by Congress, also gives each Member of Congress life insurance of \$5,000. free of any cost.

There are those who say the salary here should be large enough to make one resist temptation, while some say it should be large in order that others than the rich can afford to come here. An answer to the first would seem to be that only honest people should be sent here and that honest men do not yield to temptation. Since it is contended that the salary here has not been sufficient for several years now, the charge that this condition makes it possible for only rich men to serve here seems completely disproved by the fact that only a handful of the present Members are men of even moderate means. It is entirely likely that larger salaries would result in more men of wealth trying to come to Congress, instead of fewer.

Members of Congress should be paid reasonable salaries, of course. Is not \$15,000, with all the added considerations, a reasonable salary? And, is it not true that a man who loves public service and devotes his time to the discharge of the duties of his office will find that a reasonable salary is sufficient for his normal mode of living? One of the great compensations in occupying any place of public trust is the satisfaction of having served your country in a position that gives a mesaure of public recognition. The office of a Representative in the United States Congress is such a position, one that is honored in the estimation of the American people.

Under all the circumstances would it not be fair for this proposed legislation to be deferred until after the next election? Then, the position of every candidate for Congress next year can be made known on this issue and the people themselves can decide it. If that is not acceptable, would it not be only fair to at least defer passing it until late in next year's session in order that the people of the Nation may, in effect, pass judgment on it soon thereafter?

The President's state of the Union message which recommended that congressional salaries be raised, also made other recommendations which would require additional expenditures of more than \$25 billion. While there will be many urging congressmen to pass the particular recommendations in which they are interested, most of these recommendations should be rejected. This is true because their passage, at a time when the Treasury is absolutely bare, can only result in the Government taking and spending more of the people's savings, thereby further increasing an already dangerous public debt.

The combined debt today of the Federal Government, State and local governments, businesses, and individuals, is more than \$650 billion. It amounts to \$16,000 for each American family. This debt has tripled during the last 15 years. It has increased by one-third in the last 5 years. Even more alarming is the fact that both individual debts and State debts have actually doubled within 5 years. The Federal debt alone is \$280 billion.

Our taxes today are so high that a person on a salary of \$250 per month must pay an income tax of \$422 per year. If one makes \$300 per month, the income tax is \$541. These do not include social-security payments. This illustrates the severity of present-day taxes and argues strongly against our increasing them for our own benefit.

If we now give ourselves a large salary increase, will not that action make it less likely that we will resist those who will so strongly insist that we pass all others of the President's recommendations just as we did his recommendation concerning ourselves? If we do that, when will we ever have the responsible fiscal policy which has been promised and which is so vitally needed here in Washington? When will we, if ever, lighten the tax load that so heavily burdens the American people?

Yalta

EXTENSION OF REMARKS

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. REUSS. Mr. Speaker, it is the 10th anniversary of the Yalta Conference, at which Russia promised free elections to Poland, Czechoslovakia, and the other lands now behind the Iron Curtain.

In the 10 years that have passed, we have seen this solemnly pledged word betrayed again and again. The gallant people of Poland and the other countries of Eastern Europe groan under a totalitarian regime.

"The mills of the gods grind slowly, but they grind exceeding fine." Just as surely as the daylight follows the darkness, as truth and justice ultimately prevail over deceit and wickedness, the time will come when the people of Poland and the other enslaved lands will once again breathe the air of freedom. The United States will never forget its goal of free elections for the unhappy people of Eastern Europe.

Struggle Inside Kremlin

EXTENSION OF REMARKS

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. DAWSON of Utah. Mr. Speaker, the events of the past week in the Kremlin may have taken some of us by surprise. However, those among us who had read the January 21, 1955, issue of U. S. News & World Report were in possession of a good deal of information as to what the shift in power in the Kremlin portends.

For those Members who may not have read the magazine's interview with former Soviet spy, Nikolai E. Khakhlov, I recommend his article to their attention. He predicted with astonishing accuracy the events of the past week and his analysis of what these events portend should receive careful consideration. The U. S. News & World Report deserves commendation for its diligent pursuit of the news and its meaning—particularly in this instance.

Mr. Speaker, I am submitting for the RECORD the editor's note that accompanies the article entitled "Executioners' Shots Reveal New Struggle Inside Kremlin":

EDITOR'S NOTE.—There's an important new change in Soviet policy that increases the danger of war. Another struggle for power is developing inside the Kremlin: It's Malenkov versus Khrushchev.

Authority for these statements is a man who until less than a year ago was a captain in the Soviet Intelligence Service, Nikolai E. Khokhlov. To get the inside story of what is going on in the Soviet Union, U. S. News & World Report invited Mr. Khokhlov to its conference room. In the interview that follows, he tells what is behind the current struggle in Russia—and why it is dangerous to the West.

Nikolai E. Khokhlov spent 13 years in the Soviet Intelligence Service. He joined it at the age of 19, was a spy behind German lines in World War II. After the war he performed special missions in Rumania and Western Europe, rose to captain.

In 1954, Mr. Khokhlov was assigned to supervise the assassination of an anti-Communist Russian leader in Frankfurt, Germany. Disillusioned by communism—and

encouraged by his wife—he foiled the plot and joined the anti-Communists. He is now in the United States. Efforts to rescue his wife and child failed and they remain in Russia, their fate unknown.

The Distressed Coal Industry

EXTENSION OF REMARKS

HON, ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1955

Mr. BYRD. Mr. Speaker, an audience of leading statesman, diplomats, and industrialists was in attendance at the Silver Quill Award Dinner in this city a week ago last Saturday.

One of the highlights of this occasion was the novel way in which various spokesmen presented information on their respective industries and governmental activities. This information was elicited through questions such as that asked of L. C. Campbell, president of the National Coal Association, and vice president of Eastern Gas and Fuel Associates, some of whose mining operations are in my district. His response was in answer to this question:

If coal is the sick industry that it is reported to be, will you as the man responsible for the coal development at Eastern Gas and Fuel Associates, as well as president of the National Coal Association, tell us what steps are being taken by producers to bolster the future security of your industry, which is of course tied to the security of the Nation?

Under leave to extend my remarks, I am including his answer in the RECORD. I should like also to associate myself with the views herein expressed in respect to prevailing conditions in many of our coal-mining communities. I want to emphasize Mr. Campbell's comment regarding the fact that a single plant which closes down sometimes takes the jobs of as many as 800 miners. On an average, the number of human beings thus directly affected is in the neighborhood of four or five thousand. Yes; besides those 800 men are the women and children who are automatically deprived of many of the actual necessities of life once the breadwinner's income is removed. It is true that, for a short time, unemployment benefit payments provide a part of the food and clothing which every normal family requires, but when those benefits are exhausted these persons must depend entirely upon surplus food commodities for subsistence. Today if you should walk into many of the schools in the mining communities of West Virginia, you would meet numerous children who left their homes this morning without an adequate breakfast. By this time, they will have participated in the free lunch program, but by nightfall they will again sit down to a meal that is sadly lacking in the nourishment necessary for proper growth. Many of those children are improperly clothed, and there is little chance that they will obtain new coats or dresses or suits or shoes so long as current conditions persist.

Mr. Campbell stated very precisely that it is dangerous from a defense standpoint to take for granted that a crippled industry can respond to the demands that would come about in a national emergency. I believe that none among us could ignore coal's place in the national security if only this statement from Mr. Campbell's address were observed and considered:

A ton of coal per ton of steel—a pound of coal per kilowatt-hour of electricity—there you have the lifeblood of America's industrial might today and tomorrow.

Mr. Speaker, Congress is empowered with the authority to alleviate at least a portion of the distress that has enveloped coal communities. It can return employment to many thousands of our miners and make it possible for the families of these men to again assume the God-given right to adequate food and clothing if it will enact legislation to provide a 10-percent quota limitation on foreign residual and crude oil shipped into this country. In the last paragraph of the Campbell statement, he mentioned that most of his audience had never seen a coal miner. As a person who was brought up in a coal-miner's home, I would like to assure you that the story of poverty that has come to coal communities is not an exaggeration. I lived in a coal-mining town when foreign residual oil began to trickle into the fuel markets of the east coast. As this inflow increased in intensity, mine after mine was forced to cut back production, and the "no work tomorrow" sign began to haunt more and more mining families. As the imports reached flood stage, jobs were wiped out completely, and today throughout West Virginia there is ample evidence of the dire consequence of the policies which have permitted these imports to plague the coal industry. I believe that the present predicament of our mining families is the most compelling testimony for need of a quota restriction on oil imports

Following is the text of Mr. Campbell's statement:

STATEMENT OF Mr. L. C. CAMPBELL, BEFORE THE SILVER QUILL BANQUET OF THE NATIONAL BUSINESS PUBLICATIONS, INC., ON JANUARY 29, 1955

Question: If coal is the sick industry that it is reported to be, will you, as the man responsible for the coal development at Eastern Gas and Fuel Associates, as well as president of the National Coal Association, tell us what steps are being taken by producers to bolster the future security of your industry, which is of course tied to the security of the Nation?

Mr. Chairman, may I say that coal is not necessarily a sick industry, but rather that its economic health is seriously impaired. This is evidenced by the fact that whereas 95 percent of the Nation's power and fuel needs at one time were supplied by coal, today coal accounts for about 45 percent, petroleum and natural gas supply 25 percent each, and the balance is supplied by water power.

Production of 630 million tons of coal in 1947 has declined to less than 400 million tons in 1954. Manpower of more than 600,-000 has declined to slightly over 200,000 in 1954. One hundred thousand miners went off the payrolls in that year alone. These jobless miners have thus become our displaced persons in the United States. This is a brief sketch of the gradual dismantling of

the great basic coal mining industry on which the industrial might of America was built.

There exists a tremendous conflict of the energy supply available from coal, oll, natural gas, and electricity. The attrition of the coal mining industry still goes on. The tragedy of displaced workmen stalks every coal field in the country. Whole communities see their only source of livelihood wiped out. Plant after plant is closed down. The dismantling of a single plant frequently takes the jobs of as many as 800 miners.

Despite factors contributing to the present situation, including competition from domestic as well as imported fuel, coal producers have invested millions on millions of dollars to improve mining methods and the quality of the product. Mechanization and modernization of mining plants and methods have increased the man-day output from 4½ tons per man-day 20 years ago to more than 9 tons per man-day in 1954, and 10 tons per man-day is in sight. This compares with a little over 1 ton per man-day in European mining. The effect has been to lower the price of the product at the mine to an average of \$4.82 a ton in 1954, in spite of wage increases which have taken place in all industry over a period of years.

Reliable estimates place the demand for coal in an all-out emergency mobilization at 650 to 700 million tons annually. To reach that figure in a given year the industry must have a minimum year-to-year production of 500 million tons. The 1954 production was more than 100 million tons below the safe level.

American coal producers have never yet failed to meet the challenge for necessary coal in every national emergency. The Nation should not take for granted that a crippled industry can again thus respond unless an adequate going industry, properly manned and equipped, is available for the expansion in this mechanical mining age. The Nation's welfare and security demand that the industry be given proper scrutiny by the Government to the end that appropriate policy changes be effected, so that the coal industry's own efforts to meet the challenge of not only emergency but normal requirements may no longer be impeded by factors beyond its control.

A ton of coal per ton of steel—a pound of coal per kilowatt-hour of electricity—there you have the life-blood of America's industrial might today and tomorrow. The challenge is for all of us to do our part to keep it flowing.

Most of you have never seen a coal miner. I appreciate the opportunity to be here as one who has spent 30 interesting years in the industry and express my appreciation to the business publications which have contributed so much to our American story on industry, and especially to the group who speak for coal.

Edison the Philosopher

EXTENSION OF REMARKS

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. ADDONIZIO. Mr. Speaker, I know that the Members will read with pleasure and profit the following thoughtful address entitled "Edison the Philosopher," delivered by Mr. George E. Stringfellow, long-time business associate of the late Thomas Alva Edison,

before the Kiwanis Club of New York City on February 9, 1955.

Mr. Stringfellow is a director and senior vice president of Thomas A. Edison, Inc., West Orange, and a director of Thomas A. Edison of Canada, Ltd., and Thomas A. Edison Ltd., Scotland.

Mr. Stringfellow is also director of Mine Safety Appliances Co., Pittsburgh, Pa.; member of the board of directors of the American Mining Congress, Washington, D. C.; member of the American Iron and Steel Institute and the American Institute of Mining and Metallurgical Engineers, New York City; member of the board of directors of Indiana Technical College, Fort Wayne, Ind.; and member of the board of governors, American Foundation of Religion and Psychiatry, New York City.

His heavy business responsibilities have not prevented Mr. Stringfellow from taking a highly active interest in numerous civic and humanitarian organizations. He served two terms as president of the Kiwanis Club of New York City and two terms as president of the Chamber of Commerce and Civics of the Oranges and Maplewood. He is an honorary member of the New Jersey Medical Society; was awarded the certificate of service by the Rotary Club of Orange, N. J.; was cited as the outstanding citizen of the Oranges and Maplewood; was cited by the Brotherhood Committee of Christians and Jews for bringing about a better understanding among the three religious sects.

Mr. Stringfellow is a member of the Imperial Divan of the Shrine of North America; president and director of the New Jersey Taxpayers Association; member of the board of directors and executive committee of the American Cancer Society. He was the founder and first president of the New Jersey division of the society, and the recipient of the American Cancer Society award. He is also former chairman of the New Jersey Republican Finance Committee.

Among the numerous honors that Mr. Stringfellow's impressive achievements have won for him are honorary degrees of doctor of laws from South Jersey Law School and Upsala College; doctor of fine arts from Ithaca College; doctor of humanities from Indiana Technical College; and a citation of merit award from the New Jersey Association of Business Schools.

As the foregoing sketch indicates, Mr. Stringfellow possesses the same noble qualities that characterized the great Edison. He has truly followed Mr. Edison's advice, which he quoted in his address yesterday:

Be courageous. * * * History repeats itself again and again. Be as brave as your fathers before you. Have faith. Go forward.

His inspiring speech on Edison the Philosopher reads in full:

Address of George E. Stringfellow, Senior Vice President, Thomas A. Edison, Inc., West Orange, N. J., Long-Time Business Associate of the Late Thomas Alva Edison, and President, New Jersey Taxpayers Association, Before the Kiwanis Club of New York City, February 9, 1955

EDISON THE PHILOSOPHER

When I mentioned the fact that I was going to speak to the members of this club

about Thomas Alva Edison, I was asked whether it is possible to say anything more about that great man that has not already been said. But, when anyone studies the life and the contributions to civilization of so great a man as Edison, one soon realizes that hundreds of talks would not exhaust the subject.

the subject.

Edison is most often identified as the greatest inventor that ever lived. In a nationwide newspaper poll he was voted 1 of the 4 great Americans of all time. Among the innumerable fascinating facets of his life that one could talk about. I have chosen on this occasion to look at the one that shows him to have been a great philosopher—a man with an intense love of wisdom, concerned with the science that investigates the facts and principles of reality, and, in Edison's case, seeks to convert them to the service of his fellow men.

Like all great philosophers, Edison had the ability to turn misfortune to advantage. You know much about his success. Let me tell you something about his failures, for it is mainly from their failures and what they did in the face of their troubles that we learn most about the great men of history.

Edison insisted that he could not have succeeded without the lessons of his misfortunes and failures. In fact he emphasized that even his deafness, from which he never recovered, was a great asset. "My deafness has not been a handicap but a help to me," said Edison. "From the very start, after the earache pain ceased, deafness probably drove me to reading." He was in his energy, courage, and sincerity, even thankful for the necessity of adapting his experiments to his affliction. He attributed at least two important developments to that necessity—the telephone as civilization knows it and the phonograph.

"In experimenting on the telephone," Edison explained, "I had to improve the transmitter so I could hear. This made the telephone commercially practical, as Bell's magneto telephone receiver was too weak to be used as a transmitter commercially.

"It was the same with the phonograph. The great defect of that instrument was the rendering of the overtones in the music and the hissing consonants in speech. I worked a year, 20 hours a day, Sundays and all, to get the word 'specie' perfectly recorded. When this was done I knew that everything else could be recorded."

Edison had the philosopher's unquenchable thirst for knowledge. Although his formal education ended in the fourth grade, he had read and absorbed far more worthwhile books than the average college graduate, not just on technical subjects, but on history, literature, art, philosophy, and music.

The great inventor was not discouraged by his meager education and by what he believed to be his limited knowledge of anything. He worked that much harder to overcome his shortcoming, so that it wasn't so much what he knew that helped him, but what he tried to know, and what he did with what he knew.

Edison knew that freedom and progress for an individual or a nation does not mean "I do not have to work." He knew the future belongs to those who prepare for it. He knew the commonest form of opportunity is harder work and better work. When he was declared to be a genius, in true Edison philosophy he coined the famous adage, "Genius is I percent inspiration and 99 percent perspiration."

Among the distinguishing characteristics of any philosopher is the patient, persevering search for truth, and Edison possessed that drive to an unlimited extent. At one time, after he and his associates had conducted thousands of experiments on a certain project without solving the problem,

one of his fellow workers expressed discouragement and disguest over having falled to find out anything. "But," said Edison, "we learned something. We learned for a certainty that we can't do it that way, and that we will have to try some other way." And in his patience, he tried again and again until he found what he was searching for.

In inventing the incandescent lamp, it took 361 days of trial-and-error experiments, constant watchfulness, and everlasting faith to produce the satisfactory glow in the lamp. And then the real work started, for the lamp was only a fraction of what Edison needed if the light was to be useful on streets, in homes, in workplaces, and if the thousands of future tasks of electricity were to be born. He had to develop an entire generating and distributing system, including the invention and construction of glant dynamos, conduits, power lines, wires, insulators, sockets, meters, fuses—everything.

But that was one of his successes. I spoke of failure a few minutes ago. This is what

About 11 years after the first success of his electric light, Edison set out to devise a system of mining and milling low-grade Iron ore that would be economically sound. He was convinced that the country's known deposits of iron ore were disappearing. Through tremendous effort and enormous expenditure Edison invented and put into operation a revolutionary method of reclaiming iron ore. It was called the magnetic ore separator. Then the unexpected happened. New and immensely rich iron-ore deposits were discovered, making Edison's refining method unnecessary and costly.

Looking back on this period, Edison said:
"For a good many years I worried about my
payroll; didn't know how I was always going
to meet it. My trouble had been that I always had too much ambition and tried to do
things that were financially too big for me.
If I had not had so much ambition and had
not tried to do so many things, I probably
would have been happier, but less useful."
Yes, and it would have been a darker world
for us if it hadn't been for his ambition and
his desire to advance the welfare of mankind.

Probably the final measure of every philosopher is the degree to which he has changed the thinking of the world. In the case of Thomas Alva Edison consider the effect there has been on humanity's entire outlook because of his vital contributions. When man can command abundant light by pressing a button; can go faster from place to place with the aid of electrical motor power systems and batteries; can hear the music of the ages and words of statesmen; can view living history, drama, and current events with no trouble or even inconvenience—when man can do those things—the world has surely attained a new era.

Understanding, light, warmth, joy, and a higher living standard—all this we owe to Edison. But with a full measure of friend-liness and good will, Edison expressed gratitude to those who saw him through—his associates and his financial backers. He credited the American free-opportunity system as an essential factor in what he was able to do for all mankind.

He pointed out that it was cooperation, vitality, and risk-taking willingness of American business enterprise that sustained him and brought his results within reach of all. It was this American opportunity for enterprise that left him free to develop his wonderful talents of invention and development. It ran the risk and supplied the vast capital needed to translate his inventions into tools for human advancement, and made them available to the average people, at a low cost to all. In other words, American enterprise encouraged and promoted the dreams of a humanitarian, the skill of a genius and the wisdom of a philosopher for the benefit of humanity.

Under the American system of free enterprise, more good things have happened to us than to men and women any place in the world. And the great days of America are by no means done. We have only touched the border of our achievement. If you and I did not believe this, we would not believe in America. Let us heed the wisdom of Edison's last message to the American people: "Be courageous * * * History repeats itself again and again. Be as brave as your fathers before you. Have faith. Go forward."

February 10

American Participation in World Trade Fairs

EXTENSION OF REMARKS

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mr. PATTERSON. Mr. Speaker, I wish to extend my sincere congratulations to the Honorable Sinclair Weeks, United States Secretary of Commerce, for his forthright action in establishing the new Office of International Trade Fairs in the Commerce Department and appointing Mr. Roy F. Williams, Boston industrialist, to direct the new organization set up to promote American foreign trade expansion.

Soviet Russia has been grabbing the spotlight in all the world trade fairs. This is an integral part of the Soviets' aggressive program to exploit the world markets in a vicious campaign of economic warfare.

It is gratifying that Secretary Weeks is taking forthright action to put America to the forefront in the race to win the world markets.

It is my understanding that Secretary Weeks has no intention to compete with Russia in purely propaganda assaults, but to win sales contracts by attractively presenting superior American-made products and by superior American merchandising know-how.

The Russian Government has budgeted vast funds to build the most magnificent pavilions stocked with the biggest display of exhibits at these world trade fairs. How much the Russians have grabbed in the way of sales contracts is a debatable question. But we do know the Communist traders are making inroads in the world markets strategically designed to undercut American exports and thus create unemployment in the United States. This is the same old pattern of Soviet trade before World War II when the Soviet dumping program depressed the world market.

Secretary Weeks' projected program is the first time America has seriously sought to participate in the world-trade fairs except by small-scale representations. Historically speaking, these trade fairs are long-established trade marts in Europe extending back to the early middle ages. In the days of Charlemagne the annual trade fairs were great festival occasions where the East met West over the bargaining counter. Today West meets East but not to barter with the rich merchants of the East with their rare perfumes, spices, and silks. Today a ruthless politico-economic power, producing with slave-labor, prepares to dump cheap commodities on the world market in a shrewd exchange for the raw materials and implements of war.

In order to avoid misunderstandings about these world-trade fairs, please permit me to explain that these world fairs are not operated for the entertainment of the general public nor for the benefit of sightseeing tourists.

Admission to these trade fairs is by official invitation only. Invitations are generally limited to big buyers in the world markets, industrialists, scientists, engineers, labor leaders, diplomatists, and high political leaders.

The big-scale operations of these world-trade fairs may be pictured by just one example, namely, the 1954 International Samples Fair at Milan, Italy, where 12,336 exhibitors displayed 900,-000 samples and 84,213 foreign buyers representing 109 nationalities, inspected the displays in the colorful, flag-draped pavilions of all the leading exporting nations of the world. And the forthcoming International Trade Fair at Paris will be the world's biggest affair of its kind. America will be represented by a central exhibit entitled "Main Street, U. S. A." depicting the fuller, better life that is possible with American-made products.

These world-trade fairs are the cheapest and most effective advertising methods ever devised. Here sellers meet buyers from the far corners of the earth and are afforded the opportunity of getting acquainted and dealing directly. I am going to urge the Atomic Energy Commission within bounds of security to design an exhibit portraying the peaceful use of atomic energy to be entered in the Paris fair beginning May 14 of this year.

Another exhibit at the Paris Fair will be a four-sectional exhibit of a New England manufacturing town, showing a home, a school, and a farm, and a factory. A large-scale model of a typical New England house will have a full-scale furnished kitchen, diningroom, and livingroom in which life-size models of residents are placed. Many labor-saving household devices will make it clear how well we live in New England under our great system of free enterprise. This is one of many American exhibits for the Paris Fair.

There is keen competition among businessmen for the limited space in the American pavilion. I hope to see Connecticut's skilled techniques and high-quality products displayed at all the world trade fairs during the coming months.

I will be glad to help get proposed Connecticut exhibits entered in the limited American space available. I will be happy to cooperate with Connecticut industry and labor in promoting our State's foreign-trade expansion by soliciting the Commerce Department for our equitable share of recognition in the activities

programed by the new Office of International Trade Fairs.

I offer the following information relative to dates and places of the world-trade fairs selected by the Commerce Department for United States participation:

The international spring fair at Frankfort, Germany, to be held March 6-10 is the first European fair selected under the 1955 program. Over the 200 American industrial products—from an eggbeater to a tractor—will be exhibited by American companies at the central exhibit.

Protection of Domestic Industries

EXTENSION OF REMARKS

HON, ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1955

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to insert a statement which I made before the House Committee on Ways and Means on January 31, 1955. My statement was made during the hearings on H. R. 1, and I emphasized to the members of the committee the imperative need for protection of domestic industries such as the coal, chemical, glass, and railroad industries. Thousands of our fellow Americans who formerly worked in these in-

tection of domestic industries such as the coal, chemical, glass, and railroad industries. Thousands of our fellow Americans who formerly worked in these industries have lost their jobs, but there are thousands of other workers still employed who will be thrown out of work unless adequate safeguards are provided against foreign competition. Not only should we be concerned about unemployment in these fields, but we also must remember that these industries are our first line of defense. If they suffer, we suffer; and if they perish, we perish. The statement follows:

STATEMENT OF CONGRESSMAN ROBERT C. BYRD BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS, JANUARY 31, 1955

Mr. Chairman and members of the committee:

We are again faced with a crisis in world events—a crisis which could plunge us overnight into a world conflict for actual survival. Pray God this does not happen. But if it does, I am seriously disturbed over the grave danger to our country if we fail to recognize and halt the serious disintegration and deterioration of one of our basic and most important resurces.

I refer, of course, to the coal industry.

When World War II broke out, there was an immediate demand for vast new amounts of energy to run our tremendous war production effort. Tanks, guns, planes, and all the other equipment of a modern fighting force had to come rolling out of our converted factories at rates unprecedented in world's history.

Total energy demands, excluding motor fuels, rose 19 percent in 1942 and 32 percent in 1944. Most of this new energy source had to be supplied by coal.

Submarines practically halted the import of petroleum products because the Nazis were in almost undisputed possession of the waters along the entire Atlantic coast during the early months of the war. An official publication of the United States Department of

the Interior states: "From the Caribbean to Cape Race, no spot was safe * * * From then on, until the last year of the war, tanker deliveries were an insignificant factor in supplying the oil needs of the east coast."

We have all read accounts of Russia's new, modern submarine force. There can be no question that it is far superior to the one with which Germany was able to almost entirely halt oil deliveries from abroad. Thus, we must accept the fact that foreign petroleum will not be available to us in case of a new war.

It would seem only the part of wisdom and prudence, then, that we look carefully at our domestic resources for fuel and energy, and make certain that they will again be able to meet a new emergency as they did in 1942.

Unfortunately, there is every reason to fear that they will not, unless immediate steps are taken by this Congress.

In recent years of an expanding economy and new levels of prosperity and production for almost every other industry in America, the coal industry has sunk to critical levels of low production and disintegration.

Production of bituminous coal, which is the major industry of my own State of West Virginia, fell from a high of 613 million tons in 1947 to less than 400 million last year

Employment in the mines has been cut in half, dropping from 400,000 men 6 years ago to no more than 200,000 now. Gentlemen, this state of affairs should be cause for grave concern for every one of us. We cannot afford to sit idly by and watch the destruction of the livelihood of thousands of our fellow Americans, and at the same time the weakening of our productive capacity for national defense to the critical point.

The demand for bituminous coal and lignite rose from 461 million tons in 1940 to 620 million in 1944. I am told by competent authority that the demand to run our expanded industrial machine in case of a new war would be much greater.

Leaders in the coal industry estimate that an annual peacetime production of 500 million tons would be necessary to keep the industry at a level from which it could rapidly expend to meet such war demands. Yet last year, the Bureau of Mines estimates, we produced only 390 million tons.

Throughout the coal fields of my State, and of Pennsylvania, Kentucky, and all the other great producers, are idle tipples, idle railroad cars, deserted shafts, and mine after mine closed down. During the past 3 years, at least 150 commercial mines have closed in the State of West Virginia, idling thousands of miners. Add to these the thousands who depend on coal for a livelihood—railroad workers, storekeepers, service station owners, and a host of others, and we begin to get some picture of a real depression in coal producing areas.

But the best picture. Mr. Chairman, could be gotten by the committee itself were it to delegate a subcommittee to visit these forsaken and miserable people who have long since despaired of a return to full employment in the only occupation they have ever known. In view of the seriousness of the problem as it affects coal producing communities, in the light of depressed conditions in the chemical, glass, pottery, and other industries; and because of the profound controversy which centers around H. R. 1, onthe-spot hearings would seem advisable, desirable, and necessary.

Mr. Chairman, I live in the Beckley area of

Mr. Chairman, I live in the Beckley area of West Virginia, and in that area alone, the percentage of total employment as represented by mining has declined 43 percent from that of 1 year ago. Practically all of the unemployed are men who are over 45 years of age, with none other than mining experience, a fact which in many instances precludes them from finding employment

elsewhere. A recent report shows 3,500 persons a month exhausting their unemployment benefit payments in my State, and many individuals passed this point of exhausted benefits months ago.

On January 1 of this year, 223,847 people in West Virginia were depending upon Government surplus food commodities for survival, and the figure is increasing at the rate of 10,000 each 2 weeks, I have been informed. School lunch programs have been seriously affected in these mining areas, as more and more children of unemployed workers are forced to depend upon free school lunches. Many requests are being received by teachers for clothing to keep children warm. The situation, in many instances, is desperate, to say the least.

Mr. Chairman, throughout many months, T and other Members of Congress have offered evidence of rising unemployment, hunger, and destitution in coal-producing States Our arguments have gone for naught. If the attitude we have met continues to prevail, I assume that to offer further evidence would be "Love's labor lost." Some may say that the difficulties confronting these people are so provincial as to be excluded from consideration in a program devoted to international-trade policies, but there are other aspects of the damaging impact of foreign residual which cannot be looked upon as sectional problems. Coal mining and railroading are as essential to the conduct of a mobilization program as are aircraft industries, munitions works, and shipbuilding. Coal mines and railroads cannot survive under a system which demands that they operate like a stop-and-go traffic light—on again, off again, on again, gone again. The caution light is now burning and, unless the rail and coal industries are given consideration in the immediate future, the red light may be on when this Nation's security is in jeopardy and these great basic industries are called upon once more to deliver the goods.

Large among the factors which have contributed to the deciline of coal sales in the United States is the importation of cheap, residual oil from Venezuela and the Netherlands West Indies. This oil, a residue remaining after crude has been refined and lighter oils, gasoline, and the like taken off, was formerly treated as a waste product and dumped into the ocean. Now, however, it is "dumped" on the east coast of the United States, and is playing a large part in wrecking America's coal industry. Total imports in 1954 were over 131 million barrels, totaling 32 million tons coal equivalent residual refined from foreign crudes, giving a total entry of heavy fuel oil amounting to 47 million tons coal equivalent.

Some may say that about 17 million tons coal equivalent is needed to satisfy the preferred uses of the oil for ship bunkering and other noncompetitive purposes. However, the current domestic-origin residual supply on the East coast is at a rate of 17 million tons coal equivalent, enough to satisfy the preferred uses. The 47-million-ton figure broadly measures the residual oil available from foreign sources after preferred-use demands have been met. This figure is representative, it is believed, of the overall impact of foreign-origin residual fuel oil upon the coal industry.

On the basis of this figure, what has been the effect upon the coal and rail industries?

The loss in sales to coal producers exceeds \$225 million, and the loss in freight revenues to the railroads accounts for an additional \$180 million—a combined total of over \$400 million.

If one considers only the direct residual oil imports annually running to 32 million tons coal equivalent, the figures are still very disturbing. This amount represents a loss in coal industry sales of \$153 million annually, a loss in miners' wages of \$74 million, a freight revenue loss of \$90 million, and a loss of \$40 million in wages to railroad employees. Over and above this is a continuing uncertainty facing coal and railroad management in programing of capacity, financing, development of reserves, research, and the like.

Mr. Chairman, too long have we flirted

Mr. Chairman, too long have we flirted with national disaster by failing to give domestic industries an opportunity to regain some of the vigor needed in a mobilization period. Can we afford to delay longer? The answer is best spoken in the word of Poe's ghastly, grim, and ancient raven—"Nevermore"

Several Members have introduced a measure which would limit the importation of foreign residual to not more than 10 percent of the domestic demand during the corresponding calendar quarter of the preceding

year.

This is not a drastic restriction of such imports, but it would provide a real benefit to the American coal and railroad industries and thousands of unemployed workers.

Total domestic demand for residual in 1954 is estimated at about 565 million barrels, while imports of residual totaled approximately 131 million. Under the suggested 10-percent quota, 57 million barrels would be allowed.

This protection would be a major step in restoring the coal industry to a level of production which would enable it to meet the demands of any new war emergency.

demands of any new war emergency.

We simply cannot dare to let our most basic fuel supply deteriorate. It takes a ton of coal to make every ton of steel we produce for war or peace. It takes almost a pound of coal to produce a kilowatt of electric power. Coal is essential in the production of thousands of vital drugs and chemicals, and for other uses so varied and widespread it would take pages to list them.

Too long have our domestic industries sought relief in vain. The coal industry, the glass and chemical industries, and many others must be protected by placing adequate safeguards, in the form of amendments, in H. R. 1.

Let us prepare while there is yet time, lest, like the five foolish virgins, America be found wanting in her most critical hour.

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and I at the Capitol.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a,

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid int. the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodle is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

Appendix

Lincoln Day Address by Hon. George H. Bender, of Ohio

EXTENSION OF REMARKS

HON. FREDERICK G. PAYNE

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent that the text of the address delivered by the distinguished Senator from Ohio [Mr. BENDER] at the Lincoln Day meeting in Portsmouth, Ohio, may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am very happy to be here this evening. Anyone who has ever gone through a statewide election campaign can never forget it.

And when you have gone through a campaign, an unofficial count, an official countand then a recount-never seems too short. I am most grateful to you for your help

during the difficult weeks before, and after, November. You may be sure that I shall work my hardest to show my gratitude. We Republicans have good reason to ob-

serve our Lincoln Day tradition every year. It serves to remind us of many fundamental truths. First, and perhaps most important, is the reminder that crises are nothing new to the American people. There is no war more shattering to a nation than a civil war. Lincoln led us through the valley of the shadow of death to a new understanding of the Union. Division and disunity have become unthinkable in our country since his We may differ, we may disagree violently, but we shall never again divide.

There are other reminders, too, in the Lincoln story. We have almost forgotten that the War Between the States was also a time of international tension. We had enemies overseas in the 1860's. They were ready to do everything in their power to disrupt the Federal Union. They encouraged rebellion and hoped for American weakness. With civil war raging, they planted a foreign em-peror upon the soil of Mexico. This fantastic episode in our continent's history has faded from sight, but it was a major threat to our peace and security then. Foreign problems are nothing new to our people. We have met them and we have overcome them be-We shall do it again.

I think of still another lesson from the Lincoln legend. No man in the pages of history was ever a more direct example of Micah's Biblical injunction: "Do justice, love mercy, and walk humbly with Lincoln never strayed far from these guides to human conduct. He showed in his life that men can achieve greatness without vio-lence, without injustice, and without ar-

We know all these things. I emphasize them because there is a strong similarity between our own times and the troubled days of the 19th century. There is a strong sim-

ilarity between the man who leads our coun-

try today and Lincoln.

President Dwight D. Eisenhower is a great man. He is a humble, God-fearing man.

There are people who disagree with him. There were many who disagreed with Abe Lincoln. That is as it should be. There is room for honest division of opinion on the policies and the program of any President. But there can be no disagreement on the absolute integrity, the single-minded devotion, and the firm determination of President Eisenhower.

This is the 166th year of our Republic. We are just beginning the second century of the Republican Party. Our country's greatness is just beginning.

The times are difficult. When were they

ever otherwise?

I am an optimist. In the midst of our trials, I look to the future with confidence. There are some people who have little faith in the future of our country. They call themselves Democrats. During the difficult years of the 1930's, these Democrats told us to plow under our crops, to destroy the little pigs, and throw in the towel. America was through. Some new form of socialism was

going to sweep the land.

Last year, these same Cassandras were out in full cry, scaring up a depression which never occurred, looking for the age of darkness under every burned-out electric-light bulb. They closed their eyes to the real wave of the future, the tremendous new age which is almost here.

In the last few weeks, I read the report of the Atomic Energy Commission. They have a tiny atomic device, only a few inches square, which can generate the same amount of cancer treatment as \$20 million worth of radium. They have a new atomic plant which will preserve food for as long years without a trace of spoilage. I don't know if you will like this one, but they say they can turn out women's stockings that will never wear out. We know that atomic energy will drive ships, fly planes, heat cities, and do almost everything we can think of except find a place to park our car.

Maybe there won't be too many cars. The next generation may be flying the family plane exactly the same way we have been driving the family auto. You can sit down and start thinking of the most incredible You can sit down new inventions you can imagine. Somebody already has it on a drafting board. We have come to take these things for granted.

I don't think we ever should. Look back with me for a moment into this whole amazing period. How did our side win the atomic race? Before World War II, German scientists were as far advanced as our ownperhaps further advanced. Yet, somehow, thanks to the policies of Hitler and Mussolini, the greatest minds of Italy and Germany and Central Europe were driven to our country at the most critical moment of modern history. Enrico Fermi, possibly the master mind of all the great minds in atomic physics, came to America because of his wife. Albert Einstein and Niels Bohr fled from Europe because they could not breathe in the stifling atmosphere of fear and hatred. These were not accidents. were the hand of destiny. The outcome of World War II might have been far different without this divine intervention.

Abraham Lincoln was always aware of God's presence in human affairs. One time a delegation of northern clergymen came to see him in the White House. One of them said, "I pray that the Lord will always be on our side." Lincoln looked up and said, "I would like to modify that prayer.

Let us pray that we shall always be on the Lord's side."

Our President today is the same kind of man. He is a fighter who prays for guidance. We need it today. Let there be no mistake about the facts before us. The administration in Washington has not created the problems we must solve. We have inherited them. They were the legacy of those New Dealers who dealt the cards from marked deck under the table at Yalta. No one has yet analyzed fully the significance of that infamous conference. It was a sellout of China. Personal, secret agreements were entered into by Mr. Roosevelt, by Stalin and Churchill. Roosevelt approved all of Russia's encroachments upon China. He approved Russia's claim to preeminence in Manchuria. In 1951 Dean Acheson admitted to a Senate committee that the Government of China knew nothing of this secret agreement.

At this same conference, we sanctioned the occupation of North Korea by the Communists. These were the two big decisions at Yalta. They have been the root of all They have been the root of all the problems in Asia ever since. Because of Yalta, we found ourselves fighting an undeclared war in Korea.

Because of Yalta, we find ourselves in a desperate dilemma today in the Straits of

Formosa.

This is by no means all of the story. made other deals, unknown to the American people, involving all of Europe. Poland was not turned over to the Communists by action of the Polish people. A few men sitting around a table made the decision. They did not consult with the leadership of the countries involved. They did not even consult with the leadership of our American Congress, much less the full membership.
When Roosevelt reported to Congress on March 1, 1945, after the Yalta meeting, he said that the formula for the future of Poland was "agreed to by Russia, by Britain, and by me."

The decisions on East Germany, turning over the great industrial centers of Silesia, Saxony, and Bohemia to the Soviet Union, were made by a few individuals. They were not produced by bipartisan agreements or by partisan consultation with one

party.

Lenin once wrote that communism would conquer Europe in a bypass through They are trying; they have seized China; they have seized Korea. Now they have taken the northern part of Indochina. The battle for Formosa is already on. Let us not deceive ourselves or permit others to

Some people ask why we are concerned. They say that we should not be fighting in a Chinese civil war. This is not a civil war. It is a war between international communism and the free world. There can be no misunderstanding of this fundamental

Formosa in the hands of Red China would be exacty what President Eisenhower de-scribed—a dagger thrust into the heart of the Pacific.

For half a century our lines of defense have been committed to the Philipine Islands. We saw how our own country could be endangered in 1941. An air attack based from Japan came within a hair's breadth of destroying our Pacific Fleet at Pearl Harbor. That destruction would have opened the whole of our Pacific coast to the threat of invasion.

Thanks to President Eisenhower, we are far stronger today than we were in 1941. We have learned the realities of life the hard

Our country wants peace. We know that in a new war there will be no victors. Albert Einstein has said that he does not know all the weapons which could be used in world war III. But he does know the kind which will be used in world war IV. They will be bows and arrows.

This terrible paradox confronts us today. We have arrived at a moment when we can look forward to a new era of tremendous human progress-at exactly the same moment when we have discovered the means of wiping mankind from the face of the earth. Our scientists are frightened at the Frankenstein they have created. They us that the "fall-out" of atomic radiation from a hydrogen bomb can impair life for hundreds of miles away from the spot where the bomb hits. What sane men will risk war with this knowledge?

These are the serious facts of life today. The next 25 years will be filled with crises. When we analyze them, they always come down to the same basic issue. Each one represents the fight of the State to own our Communism says, "Give me your birthright, and I will feed your stomach. Let the state run your life for you."

In America the Republican Party is still fighting for the rights of the individual. We know what happens when governments take over the responsibilities of the people. They surrender their birthright of freedom for a mess of pottage. In our day we have seen how this works. Here in our own coun-try the Democratic Party is offering us the same bait. Turn to Washington for every-thing you need. We will take care of you. All we want in return is your vote, your taxes, and your soul.

The Republican Party has never followed this theme. We fight the belief that there is some magic in a mysterious thing called the state. We object to the theory that the people of this country are members to be manipulated for political purposes, like pup-We believe in pets dangling from a string. free men, living in a free economy, leading

a free world.

Look back at the record of our service. From 1860 until 1900 only one Democrat was elected President. In that span of time our population grew from 23 million to 76 million. Our railroads crossed the continent.

American unearthed the treasures of our natural resources. They developed mines; they poured out a never-ending stream of inventive genius. America became a world power. It was an unmatched period in his-tory. All that has happened since that time has been an extension of this magnificent effort.

Republican leadership, Republican foresight made the system of free enterprise a symbol of creative skill. They made free enterprise a living force throughout the

When he came to the crucial questions, he understood how America had become great back in 1860. "We are a great empire. We are 80 years old," he said. "We stand at once the wonder and the admiration of the whole world, and we must inquire what it is that has given us so much prosperity, and we shall understand that to give up one thing, our free government, would be to give up all fu-ture prosperity. This cause it is that every man can make himself. It has been said that such a race of prosperity has been run nowhere else."

That is the story. The words are just as true as they were when Abraham Lincoln said them. The only way to improve our condition is to increase our business by investing more money and making more jobs for more people. If we kill the goose there can be no eggs. We are not going to kill our geese, and there are going to be enough eggs

for everybody.

I think that we have made long strides forward in the past 2 years in Washington. Lincoln would have approved our efforts. He was a man who abhorred violence and bloodshed but he was not afraid to use all the power at his command to fight for what he believed right.

He enjoyed peace and quiet, but he fought one of the flercest wars ever fought for prin-

ciples-not power.

In our own time, too, Americans have been called upon to perform repugnant tasks. We have done them well. I like to think in terms of parallels. History does not ever really repeat itself. We like to interpret it in terms of the past, so that it has meaning

and continuity.

President Eisenhower, like Abe Lincoln, stepped into the White House after years of Democratic supremacy. He too has been forced to clean the stables. In the very short space of 2 years, people have forgotten what we endured before. This is a tribute to our Republican administration. The stale odor has gone and a fresh spirit moves into Wash-

No one can tell us what the future will bring. A few months ago, President Eisenhower used a neutron wand in Denver, Colo., to break ground in Pennsylvania for the first commercial plant powered by atomic energy. The first atomic battery has already been manufactured. Think of what a small atomic generator in your home would be able to do. All of your heat, light, and fuel will be provided for as long as you can foresee. Ealt water will be converted to fresh in quantitles sufficient to feed the deserts into life.

Those are some of the miracles before us tomorrow, if only we have the courage and the wit to overcome the problems that plague us today. Here in our country, we have the technical know-how, the scientific skills, the manpower necessary to realize these

Political parties and their programs have played a tremendous part in the develop-ment of our Republic. The Republican Party has always stood for stability. We do not believe in the quick shortcuts, or in the planned utopias of the New Deal intellec-

The WPA, the PWA, the CCC, and all the rest of the alphabetical agencies never achieved security, or stability or prosperity. They were emergency measures designed for the moment only. When they ended, we were as badly off as we were when they began.

We Republicans differ from the Democrats in much of our outlook.

In the field of public spending, there is a basic difference between Republicans and Democrats. The Democrats like inflation. Republicans abhor it.

We have seen what happens when money declines in purchasing power. Every man and woman who plans ahead and saves for the future knows that he has been cheated when our dollar is worth only 35 cents.

The Republican Party does not believe in controls. We want to keep the system of free enterprise which built this country. The Democrats are split into two groups on this vital issue. Many of them are con-servatives. They want to keep the system. But the leadership of the Democratic Party today has been captured by the leftwing group whigh does not like our system. are the Americans for Democratic Action, the professional labor leaders who are using the Democratic Party as a handy vehicle. They want to turn the Democrats into a party patterned after the British Labor Party. No matter how loudly they protest, this is the record of the Democratic Party. It is one thing in the North and another in the South. It is one kind of party when it calls on Harry Truman.

It is quite another when it calls on Adlai Stevenson.

Let me call your attention to still another major difference between the two parties. In the field of taxation, the Democrats are trying one of the greatest feats of magic ever conceived. They have suddenly discovered that taxpayers are voters. For 20 years, no Democratic Congress ever thought of a tax cut.

Suddenly, when the Republicans come up with a real cut for everybody, they decide that we didn't cut enough. But, interestingly enough, although they criticize us for cutting down on taxes more heavily. some of them are demanding bigger mili-

tary spending.

I think the American people know what we want. We want consistency. We want firmness. We want a prosperous economy. We do not want to walk through the world with a chip on our shoulder. But we don't want anyone to think we're afraid to fight for our beliefs.

We have a President who is committed to these principles. He does not compromise with them. He has made them clear not only to us but also to those who challenge us.

I admire his courage. I regard him as a great man. Some folks have been asking me if I think he will seek reelection in 1956.

Back in 1864, a reporter asker President Lincoln the same question. He did not want to answer, so he told him this story of an old friend back in Springfield, Ill.

It seems that a very mild-mannered little preacher came to see him one day to rent a hall for a series of lectures. "You can't rent any hall in this town," he was told, "until we know who you are and what you propose to preach about." The preacher looked at him and said, "My subject shall be the Second Coming of Our Lord." "Then you're wasting your time. If the Lord has been to this town once he knows better than to come back a second time."

Mr. Lincoln did choose to come back a second time. And you know there were peo-ple who opposed his renomination. Some of them were Republicans and they held a convention in Cleveland. They wanted to nom-inate General Fremont. The convention was a complete fizzle. Only about 400 people attended, and when President Lincoln heard about it he called for his Bible and opened it to the First Book of Samuel, chapter 22, and he read it out loud: "And everyone that was in distress, and everyone that was in debt, and everyone that was discon-tended," he read, "gathered themselves unto him, and he became a captain over them, and there were with him about 400 persons."

I don't think any opponent to Dwight D. Eisenhower would do any better.

Address by Hon. Thomas C. Hennings, Jr., of Missouri, Before Lawvers Association of St. Louis

> EXTENSION OF REMARKS OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. HENNINGS. Mr. President, recently it was my privilege to address the Lawyers Association of St. Louis, Mo., on the occasion of the 20th anniversary of its founding. My speech was devoted to the problem of establishing proper standards for the conduct of congressional investigations. I ask unanimous consent

to insert in the Appendix of the Con-GRESSTONAL RECORD the text of that speech.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Address by United States Senator Thomas C. Hennings, Jr., of Missouri, Before the Lawyers Association of St. Louis, December 3, 1954

Mr. Susman, distinguished guests, ladles and gentlemen, I am greatly honored to be invited to address you on this occasion as part of the 20th anniversary celebration of the Lawyers Association of St. Louis. In the 20 years since the formation of this distinguished society of lawyers on April 24, 1934, you have achieved a record of which you may be justifiably proud. To review the list of the many accomplishments of the Lawyers Association of St. Louis, would, I think, consume the better part of the time which you have so graciously allotted me. Moreover, most of you well know the record, having shared in these achievements.

We have had the pleasure of participating this evening in ceremonies honoring the service of past presidents of this association, among whom I have had some of my closest associations and friendships in my practice at the St. Louis bar. These 19 past presidents, together with Bernard Susman, your present presiding officer, would constitute a distinguished bar anywhere in the land or wherever Anglo-Saxon jurisprudence is a shield and a bulwark. Beyond this, the Lawyers Association of St. Louis has numbered among its members many of our State's leading lawyers. In short, this a society in which any lawyer or counselor-atlaw is very proud to claim the honor of membership.

This evening I am going to talk about something we all recognize and believe deeply—the importance to our country and our civilization of an independent and fearless bar and incorruptible judiciary as the foundation of constitutional democracy. With this theme in mind, I think it fitting that I repeat tonight the preamble of the constitution of the Lawyers Association. As you know, it reads: "To promote the study of law as a science and its practice as a learned profession; to defend the courts, their officers, and the administration of justice: to maintain the honor, dignity and worthy traditions of the profession of law; to encourage general improvements of conditions among lawyers in the practice of their profession; and to secure reasonable reforms and improvements of law and procedure." In these words, the Lawyers Association has set for itself high standards and worthy objectives. In the past, you have fulfilled these standards and met these objectives. I am confident that in the trying years ahead, you shall continue, as an association and as individuals, to make these precepts dynamic and vital.

I think we can take it as axiomatic, and especially so among lawyers, that liberty of person and security of property cannot be said to exist without impartial justice, adequate juridicial defense and proper representation.

For Anglo-Saxon lawyers almost from the 13th century, it has been a tradition that to provide a fair trial and an adequate defense for one accused of crime is the highest dignity to which the law can attain. As stated by Thomas Erskine on the 18th of December, 1792, in his defense of Thomas Paine then being tried, in absentia, for libel and sedition, "If I were to ask you gentlemen of the lury what is the choicest flower that grows upon the tree of English liberty, you would answer security under the law. If I were to ask the whole people of England the return they look for at the hands of government, from the burdens under which they bend to

support it. I should still be answered, security under the laws; or, in other words, an impartial administration of justice." Erskine, you will remember, later to become Lord Chancellor, was, at the time of his defense of Thomas Paine, the foremost advocate in England and, even though only 42, had already made a fortune at the bar handling civil as well as criminal matters, and had behind him a distinguished record of successfully defending in a hostile atmosphere many persons accused of crime.

But, to have liberty of person and security of property based on the impartial adminis-tration of justice we must have stable and orderly government. Indispensable ingredients for justice are an independent and incorruptible judiciary and an informed and fearless advocacy. We lawyers often bear the brunt of heavy criticism for being conservative, for resisting change, and for defending the status quo. Our basic conservatism is tradition and our heritage. It flows naturally from our knowledge of history. from our intimate acquaintance with legal institutions, and from our deepfelt realiza-tion that liberty and security are, at best, precarious. Our training and our traditions at the bar insist that, in spite of calumny that may be heaped upon us, we must do everything within the law to preserve our ancient rights, including the right of one accused of crime, however helious, to receive an adequate defense.

Lately, in this country, we have been witness to certain reprehensible tendencies toward disorderly government. To you, my friends, who have been trained in and daily practice the orderly procedures of our law courts, to you I do not have to expand in great detail concerning the tendencies to which I have alluded. You are all aware that some congressional committees have tended with increasing tempo to go beyond the restraints dictated by orderly procedures.

Congressional investigations have been the subject of increasing concern among thoughtful people for two reasons. First, in some instances they have amounted to unconstitutional attacks on the authority and prerogatives of the executive. And second, they have failed, in some cases, to provide due process of law.

Insofar as unlawful attacks upon the executive branch are concerned, it seems to me that we must look to the President to provide the proper checks and balances by asserting his authority. Members of the Congress can assist him by speaking out, as they have done in recent attacks on his authority. Insofar as congressional committees have falled to provide due process of law in their investigations, the Congress, and the Congress alone, has full responsibility.

To the charge that some congressional committees have, at times, used star-chamber methods and have denied due process of law by refusing to persons whose integrity or loyalty are impugned the right to present evidence, to be represented by counsel, and to cross-examine adverse witnesses, we have heard the argument that these investigations are being conducted to get the facts. To the charge that some committees have, at times, conducted inquisitorial investigations on the premise that one is presumed guilty until proven innocent, we have heard the reply that such investigations are not juditrials to which "due process" applies. And we hear repeatedly, in answer to these charges, that these investigations are conducted to expose Communists and that, therefore, the niceties of fair procedure are irrelevant.

This last-mentioned defense, of course, calls to mind a basic doctrine of the Communists—that "the end justifies the means." It is this concept which threatens the core of our personal liberties—the liberties for which our Republic was founded. We have

been shocked with the thoughtless comments of those who assert: "I don't like the methods, but I approve of the end result." As lawyers, we know that there can be no liberty without due process of law.

We have also heard the argument that to compel congressional investigating committees to meet the minimum standards of due process would add unduly to the burden of these committees, that it would be timeconsuming and would impede the work of the committee in getting at the facts. In this connection, we may recall that one of the reasons set forth for the establishment the court of Star Chamber in 1487 was that the convictions by the regular courts of justice were so slow as to enable felons to break the peace with impunity. In fact, statute 3, Henry VII, chapter I, creating the court of star chamber, provided that the body should punish misdoers "as they should and ought to be punished if they were thereof convicted after the due order of the law.

In considering what standards should govern the conduct of congressional investigations, we should bear in mind that congressional investigations or hearings, in general, fall into 2 fairly distinct types; I is what I would term the legislative hearing, the other I would call an inquisitorial hearing. It is the latter about which we are disturbed. The procedures that are quite appropriate for the legislative hearings are not appropriate for the other type. One of our principal difficulties with inquisitorial investigations, I think, stems largely from our fallure, until very recently, to note the basic difference between the two types of hearings and our consequent fallure to apply different rules to them.

In legislative hearings the purpose is to develop concise and adequate information in order to formulate intelligent legislative policy. Such hearings often involve the wisdom of actions that Government officials have taken and invariably explore questions of governmental policy and the administration of particular programs. Such hearings seldom, however, explore the integrity or loyalty of individuals and the committees holding such hearings have not had to concern themselves with the problem of providing persons under attack with an adequate opportunity to defend themselves. When the problem presents itself, however, I think committees ought to give it special attention.

In the case of inquisitorial investigations to ferret out disloyalty or dishonesty, the purpose is, or at least it should be, to supplement the extensive investigative machinery at work in the executive branch and to provide information on which to base legislation, that is, to strengthen our laws dealing with crime and corruption generally, and, in particular, with acts and conspiracies against national security.

national security.

The inquisitorial investigations have affronted our standards of fair play and fair hearing. They have at times caused irreparable damage to loyal and innocent persons. However, even for persons who may not be honest or loyal, there must be fair hearings in the legislative branch as well as in the courts. We cannot have one code of procedure for innocent people and another code of procedure for guilty people. The abuses that have been practiced in congressional inquisitorial hearings must be brought to an end as quickly as possible.

to an end as quickly as possible.

In coping with this problem, it would be well for us to bear in mind that no Senator or Representative of the Federal Legislature has any power to investigate on his own beyond that enjoyed by every citizen. The same is also true of congressional committees. They hold their powers at the pleasure of the Senate or the House acting as a body. They have only the power which the Senate or the House delegates to them. And, likewise, subcommittees, whether they consist of one or more members, may enjoy power

only as it is delegated from the parent committee. The Senate and the House may at any time take away the powers given to a

committee.

What I have just said is, of course, a simtruth that is obvious to everybody. think, however, that many persons, includ-ing Members of the Congress, have at times overlooked these basic facts. From these facts we may conclude that it is within the power of the Senate and the House of Representatives, respectively, to deal with abuses of its committees or its own Members. With this in mind, a good many Members of the Congress in both Houses have introduced measures that would establish mandatory codes of fair procedure for committees. I, myself, have been a cosponsor of one or more already introduced in the Senate.

While some changes are apparently needed in the rules governing investigative committees, the problem with which we have recently been confronted in the Congress, cannot, in the end, be reached by rules. It is a matter which, in its basic elements, involves moral standards, self-restraint and ideals of fair play. Can any of you imagine the kind of scenes which we have so recently witnessed occurring in a court of law? It is offensive to us. It is unthinkable. And while for obvious reasons, the rules of procedure governing the conduct of cases in our law courts cannot be carried over into legislative matters, it is our duty to be ever vigilant and to have one eye on the traditions and the standards of our law courts as a guide to orderly procedure and fair conduct in legislative matters.

Our present day difficulties with congressional investigations would not have reached the present point of crisis if Russian Communist conspiracy and treachery were not

abroad in the world.

The convictions of Klaus Fuchs, in England, and of the Rosenbergs and others here for espionage in connection with atomic secrets; the conviction of the top Communist leaders in this country; the charges of Whit-taker Chambers and Elizabeth Bentley leading to the conviction of Hiss and Remington-these dramatic events together with other developments including the seeking of refuge in the fifth amendment by many witnesses before various congressional committees, set the stage for abuses of committee The point I am making is that without the Communist conspiracy, congressional committees would not have had occasion to take on the inquisitorial aspects which I have just discussed.

In this era of the hydrogen bomb-in this period of neither peace nor war so aptly called the cold war-all loyal Americans are concerned about our national security and bitter against traitors. Some loyal citizens have even become hysterical and stand ready to pillory those who insist on orderly demo cratic government, on the preservation of constitutional rights, and on lawful procedures even in the exposure and conviction

of traitors.

In this period of tenseness, lawyers have a reat opportunity and an equal responsibility to lend a steady hand to the course of public affairs and to bring the full pressure of their wisdom and sound judgment to bear against disorderly and illegal extremes.

So far, we have come through this period fairly well and with reasonable dignity, but, at times. I have felt that the atmosphere of public affairs was in danger of being permanently polluted by fear, intolerance, and hysteria. During this period, altogether loyal and usually restrained Americans have felt impelled to employ such epithets as "witch hunt" and "book burning" to describe some of the excesses.

In pondering our present problems, I have searched for a period of history which, while not on all fours with our own-no two periods are ever identical-would contain some - of the elements of tension and world unrest that we are now experiencing. I wanted to consider what fearless advocates did to meet the crises of their times. My thoughts turned to the events in England and France, during the French Revolution, beginning with the fall of the Bastille on the 14th of July 1789. Conservative Englishmen, in that day, viewed the atrocities committed by the Paris Commune with its Committee of Surveillance and its mob rule with a horror and a fear even as great as that with which we view the conspiracies and the treachery of the men in the Kremlin. The French revolutionists, it is true, did have many sympathizers among the British people, and even distinguished defenders in the House Commons, such as Charles James Fox, the great Whig leader. On the other hand, we will recall that it was Fox's former friend and colleague, Edmund Burke, who after his dramatic appearance in the House of Commons dressed in the blue and buff of revolutionary America to defend our War of Independence, was now so shaken by the terror in Paris, that he wrote and published his historic philippic against the French, Reflections on the French Revolution. You will remember that this bitter controversy ended the long association and friendship of these two great titans of the Whig Party.

William Pitt, the Younger, then Prime Minister of England, decided that Thomas Paine should be indicted for libel and sedition against the Crown for having written part II of his famous essay The Rights of Man as an answer to Burke. In November of 1792, the trial of Paine was commenced before the Court of King's Bench. Paine was at the time in Paris, having been elected a member of the National Convention, and he was tried in absentia, the laws of England at that time permitting the trial of criminal without their presence before defendants the court. Friends of Paine urged Thomas Erskine to take Paine's case. Erskine, at the height of his career as England's ablest advocate, was faced with a hard decision. Should he provide, for Thomas Paine charged, in effect, with treason against the British Crown the best defense possible in England-not just an ordinary defense which Paine might otherwise get-but a defense in the hands of this master of the English juries, or should be heed the cautious warnings of his friends not to be identified with this defendant who was anathema to British conservatism and respectability? As you all know, Erskine took Paine's brief and stood before the King's judges while his client, as a member of the French Revolutionary Government, remained safely beyond the reach of the court. You will also remember Erskine's magnificent address to the hostile jury in the face of what he knew was certain defeat for his client.

This case was soon followed by the trial of John Frost, a London solicitor of great eminence and respectability who was pronounced guilty of sedition on the evidence of a copy of The Rights of Man found in the pocket of his greatcoat. This case Erskine likewise took in the face of an almost

certain verdict of guilty.

Erskine, intrepid advocate that he was, continued to act as counsel for persons accused of sedition and in December 1793 won an acquittal before a jury for the owners of the Morning Chronicle. Soon after, Erskine successfully defended Thomas Walker, of Manchester, who likewise had fallen victim to an oppressive zeal to prosecute anyone who dared to question Government policy. there were many others. This period came to be known as England's reign of terror. But in the end, fearless, resolute British advocacy won through. As you know, Erskine on April 7, 1806, became Lord Chancellor of England and took as his motto for his peerage

My friends, I have dwelt at some length on the history of Lord Erskine not so much because he was an exception to the ruleI think he was not. He merely took his place among the many before and after him who have maintained the highest tradition of the British and the American Bar. You and I can cite cases much closer to hand if there were need to do so. I think, however, I have illustrated my point.

As lawyers in this great democracy we

have a public trust and a responsibility that falls more heavily on us, perhaps, than on any other group of our citizens-to cherish our independence of judgment, to champion just causes without fear or timidity, to remain vigilant against any inroads upon our basic freedom of person and security of property, and to defend with all our vigor the principles of justice under a government of laws and not of men.

As members of the Lawyers Association of St. Louis, I am confident there will be no shrinking from this obligation, true to the high standards and noble traditions of this great organization, we will meet this continuing challenge with courage and

with honor.

Lincoln Day Address by Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. BEALL, Mr. President, I ask unanimous consent to have printed in the Appendix of today's Record the text of an address delivered by the senior Senator from Pennsylvania [Mr. MAR-TIN] on February 10, 1955. The occasion was a Lincoln Day dinner in Hagerstown, Md., given by the Washington County Republican State Central Committee.

There being no objection, the address was ordered to be printed in the RECORD.

as follows:

Address by Senator Martin of Pennsylvania

I am sincerely grateful for the privilege of addressing this splendid meeting of true Americans and loyal Republicans.

It is an honor and a real pleasure to come to the Free State of Maryland and to join you in tribute to one of the greatest of all Americans—the first Republican President of the United States-Abraham Lincoln.

First, let me tell you that in the Keystone State of Pennsylvania we have the highest admiration of our fine Maryland neighbors.

We know how much of the spirit of America has gone into the building of your great State.

We share your pride in its glorious history and its steadfast record of loyalty and patriotic sacrifice.

Like Pennsylvania, Maryland is the home of many faiths and creeds living in tolerance and good will. One of the great landmarks in religious liberty was the Maryland Toleration Act, passed by the Provincial Assembly more than 300 years ago.

It was the first law in the American Colonies granting freedom of worship everyone who professed belief in the Chris-

tain faith.

In my own State we are proud that the same principle of religious liberty was established by William Penn in founding the Commonwealth of Pennsylvania.

I am happy to be here tonight to tell you of my high regard for my distinguished friends and colleagues—John Marshall ButLER and GLENN BEALL. They are both great Americans and great Republicans.

Both served their country with honor and distinction as soldiers in time of war. Both serve their State and Nation with the highest degree of statesmanship in these days of troubled peace.

I am proud to tell you that the State of Maryland is represented in the Senate of the United States by two forceful, vigorous, fighting American patriots who battle with tireless energy to protect the American system of government and the American way

I want to make special mention also of your distinguished Republican Congressman, DEWITT HYDE, and to offer my praise for his able, courageous, and patriotic service.

He came to the House of Representatives in the 83d Congress with a valuable background of legislative experience in the general assembly as a member of the house and of the State senate.

The people of the Sixth Congressional Disgave proper recognition of his outstanding ability by sending him back to Congress for a second term.

The fame of your great Governor has spread far beyond the borders of Maryland and has made him an outstanding national

Maryland is so fortunate to have the lead-ership of Theodore Roosevelt McKeldin. His statesmanship is in the historic pattern of Maryland's greatness. His stanch Republi-canism is in line with the highest standards

of political integrity.

I congratulate the people of Maryland on retaining Governor McKeldin in office for a second term.

Your Republican Senators and Representatives and your Governor believe in freedom of the individual, freedom of enterprise, and freedom of opportunity.

These are American principles. They are the principles of the Republican Party.

were the principles of Abraham Lincoln.
In commemorating the birthday anniversary of the Great Emancipator we recall his steadfast courage, his inexhaustible pa-tience, his lofty spirit of tolerance, his deep humility, his enduring devotion to the ideals of our Republic, and his faith in God,

It is therefore fitting on this anniversary to reaffirm our allegiance to the heritage passed on to us by the Founding Fathers, preserved for us by Abraham Lincoln, and strengthened by the high principles to which President Eisenhower and the Republican

Party are dedicated.

We honor Lincoln as one of the founders

of the Republican Party.

It was his suggestion that the delegates to the first national convention of the Republican Party unite on the principles of the Declaration of Independence and hostility to the extension of slavery.

Lincoln put it in these memorable words:

"Let us, in building our new party, plant ourselves on the rock of the Declaration of Independence, and the gates of hell shall not be able to prevail against us."

The political wisdom of Abraham Lincoln grows more impressive with the passing of the years.

The Declaration of Independence stands as a firm, immovable rock, symbolizing the Republican Party's dedication to freedom of the individual, human dignity, and human integrity.

Throughout the 100 years of its existence the philosophy of the Republican Party has been based on the sacred principle that "all men are created equal; that they are en-dowed by their Creator with certain un-alienable rights, that among these rights are life, liberty, and the pursuit of happiness."

Let me read to you the first resolution adopted by the first Republican National Convention in Philadelphia in 1856. It is as follows:

"Resolved, That the maintenance of the principles promulgated in the Declaration of Independence and embodied in the Federal Constitution are essential to the preservation of our republican institutions, and that the Federal Constitution, the rights of the States, and the Union of the States, must be preserved."

My fellow Americans, that ringing declaration has been the watchword of the Republican Party ever since. The words are timely and true. They apply to the issues which confront us today.

Lincoln called upon every American to accept a full share of responsibility for the preservation of our liberties.

On February 11, 1861, when he was on his way to Washington to assume the office of President he made a speech at Indianapolis in which he said:

"In all trying positions in which I shall be placed, and doubtless I shall be placed in many such, my reliance will be upon you and the people of the United States. * * * "It is your business to rise up and preserve

the Union and liberty for yourselves-and not for me.

"I appeal to you to constantly bear in mind, that not with politicians, not with Presidents, not with officeseekers, but with you is the question:

'Shall the Union and shall the liberties of this country be preserved to the latest generations?"

Those words of Abraham Lincoln are a challenge to all of us in this present day.

They are a warning that the people alone can save America from the dangers that can

bring us to national disaster.

Our system of government is based on the fundamental principle that people can manage their own affairs better than government can manage for them.

One hundred years ago Abraham Lincoln said:

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all or cannot so well do for themselves—in their separate and individual capacities. In all that people can do as well for themselves government ought not to interfere."

Lincoln recognized that interference by government in the lives of its citizens is a dangerous encroachment upon individual liberty—contrary to the plan of the Founding Fathers.

Only the people can rise up in their might and enforce relief from the evils of big government-high taxes and excessive debt

It is frightening to realize that the public and private debt of the American people has climbed to a point so high that it is a serious threat to the safety and security. of the

Uncontrolled debt, rising higher and higher year after year, places a crushing burden on the economic structure of our country, and points the way to financial collapse.

It should be a matter of deep concern to every one of us that the American people now owe a total of more than \$600 billion, three times as much as the debt of 15 years

In the last 5 years alone the total public and private debt has increased by \$50 billion. Never before in the history of the world

have any people owed so much as we owe At the top of the list is the Pederal debt of \$278 billion-an increase of \$20 billion

since the end of World War II. Twenty-three years ago, when we were fighting the worst depression we ever had, the Federal debt was less than \$20 billion.

The debts of State and local governments have increased 16 percent in 1 year alone, reaching a total of \$38 billion on June 30,

In terms of national income public debt stood at 34 percent in 1929, rose to 102 percent in 1933, declined to 69 percent in 1941, and rose again to 147 percent in 1945. It has since declined to 86 percent, largely because of the rise in income.

There is real cause for alarm in the tragic fact that while the debt burden is increasing by millions every day, the great majority of our people don't seem to be worried about it.

They take the position that we are a strong nation, we are prosperous, our people have a backlog of savings, times are good, the national income is high, why worry? But the danger is all about us.

If for any reason we should be forced into a decline—even a slight decline in business activity, jobs and income, the staggering burden of debt could prove too much for our economy to sustain and could bring us to disaster.

I ask you to remember that the debts, which so many people hold so lightly, are not mere bookkeeping items. They will have to be paid by generations far in the future, out of the earnings of Americans who had no part in creating the debts.

The question that naturally arises is: Are we going to drift into bigger debt, or are we going to begin thinking about reducing it.

I bring this serious situation to your attention because I believe we Republicans should be concerned with the problem of government grown too big and too costly.

Yes, my fellow Americans, we have too

much government, and government is involved in too many functions in which it does not properly belong.

The future of our Nation depends upon the course of action we take and the principles for which we fight.

Let us-like Lincoln-call for a new dedication to our country's cause and resolve that this Nation, founded to sustain the God-given freedom of the individual, shall not perish from the earth, but shall live forever, and grow stronger with each passing generation.

United States Assistance to Foreign Nations

EXTENSION OF REMARKS

HON. RUSSELL B. LONG

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. LONG. Mr. President, in the Shreveport Times of Saturday, February 5, 1955, there appeared an editorial regarding the senior Senator from Louisiana [Mr. ELLENDER]. It is with much pleasure and pride that I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

ELLENDER POINTS THE WAY TO ECONOMY

As a result of his inspection tour of overseas American agencies, taken under direction of the Senate Appropriations Commit-tee, Senator ALLEN ELLENDER has submitted to the committee some 3,000 words of recommendations on cutting expenses and improving efficiency of operations by the State and Defense Departments, the United States Information Agency, the Foreign Operations Administration, and other lesser groups.

If the Louisiana Senator's recommendations are carried out, American taxpayers will be saved millions of dollars and many

United States operations overseas will gain in efficiency.

The Louisiana Senator specifically calls for an end to all economic aid to Western Europe, holding that such nations are quite capable now of handling their own economy. He also urges that there be no economic aid to any part of the world where the recipient nation does not meet the United States half way in financing the various aid programs. On this point, Senator Ellender states in his report:

"In Lebanon the United States is carrying the total burden because the Lebanese do not wish to operate their government in the red, hence, our planners have magnanimously saddled the debt-ridden United States Government with the full load.

"No attempt is made to obtain local aid.
"A similar situation obtains in Jordan.

"Examples such as these, few though they may be, should shock the conscience of the responsible Foreign Operations Administration leaders.

"Personnel responsible for the diversion of Indian program funds from their originally understood purposes should be severely chastized by FOA.

The Foreign Operations Administration—FOA—is headed by Harold Stassen.

As an example of the diversion of funds for India, Senator ELLENDER points out that Congress last year appropriated \$89,100,000 to continue existing FOA programs in India, but that the Stassen organization, without even notice to the Appropriations Committee, diverted \$20 million for rebuilding an Indian railroad for which no funds had been authorized or appropriated.

"Such action borders on gross misrepresentation," the Senator's report said.

The report also cited numerous instances of huge construction programs to house American agencies whose programs are temporary, and in some instances should be ended at once. There also is excessive construction of American libraries in countries where American data easily could be placed in local libraries, and also in areas where virtually none of the native people can read. The Senator's report continued:

"I call the committee's attention to the fact that in many areas of the world no effort is being made to terminate special programs, even though their objectives have been accomplished.

"On the contrary, there is a definite tendency to perpetuate jobs, increase programs, and maintain spending, without any regard to the impact their continuance may have on our own economy. The Western European nations offer ample ground for com-

mittee attention in this respect.

"Despite the recommendations of the committee report on the 1955 defense appropriation bill to the effect that the Department of Defense should 'effectuate Senator ELLENDER's recommendations with a view to the accomplishment of substantial economies' in the conduct of its military attaché functions, there not only has apparently been no effort made to do so but, on the contrary, I found every indication that there is a continued emphasis on swelling attaché staffs and maintaining the emoluments that

accompany those positions overseas.

"The waste involved in duplication of staffs, vehicles, office space, housing, etc., which the maintenance of separate, distinct offices for each branch requires, is inconceivable.

"I reaffirm my observation that in many instances the operation of the majority of United States military attaché offices abroad is shockingly extravagant and wasteful."

Senator ELLENDER also criticized administration of the Fulbright scholarship student-exchange program, saying that some countries sent students to this country who were not their natives, but natives of other nations.

The Louisiana Senator hit the United States Information Service hard with accusations of waste and inefficiency. He added:

tions of waste and inefficiency. He added:
"I recommend that USIA bear in mind
the fact that one operation, well planned
and well executed, is much more effective
than several haphazard programs.

"As I warned last year, too many of our planners seem to believe that we are bound to operate a library, a press program, a film program, an exchange program, as well as others, in each and every nation which is host to the agency. This has resulted in much wasted effort.

"The programs maintained in each country should be tailored to local educational levels and needs and should be administered in accord with the fiscal capabilities of our

own country."
Senator ELLENDER's recommendations are thoroughly sound throughout. Also, they testify to the value of his overseas inspection tours and illustrate the type of foreign touring by Members of Congress that really pays off for the American people, particularly taxpayers.

Tribute to Ambassador Henry Cabot Lodge, Jr.

EXTENSION OF REMARKS

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. THYE. Mr. President, there recently appeared in Letters to the Editor department of the Washington Post and Times Herald an excellent and well-deserved appraisal of the work of Ambassador Henry Cabot Lodge, Jr., at the United Nations. It was written by Dr. Charles W. Mayo, one of Minnesota's best known and most distinguished professional men, who himself recently made a significant contribution as an alternate delegate to the United Nations.

I ask unanimous consent that Dr. Mayo's letter paying tribute to our former colleague in the Senate, Ambassador Lodge, be printed in the Appendix of the Record.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of January 24, 1955]

AMBASSADOR LODGE'S ACHIEVEMENTS

In your newspaper on January 9, Mr. Herbert Elliston characterized Henry Cabot Lodge, Jr., our chief representative to the United Nations, as "flatfooted." Again on January 11, Mr. Marquis Childs said that Mr. Lodge is not a happy choice for his job because, for instance, he has "rushed out with statements when, in a delicate situation, silence would be preferable."

Having served as an alternate delegate for the United States in the Eighth General Assembly under Ambassador Lodge and being at present president of the American Association for the United Nations, I have followed closely the events of the United Nations, including those of the Ninth General Assembly last fall. It is my opinion that Mr. Lodge, and those who serve with him, have dealt effectively, factually, and successfully with Communist propaganda and maneuvering and, at the same time, have developed a high degree of cooperation with free world delegations.

As a result, every major United States objective in the United Nations since he has been there has been achieved. In fact, I believe that United States influence in the United Nations has greatly increased in the past 2 years and that Soviet influence there is at an all-time low.

What seemed to Mr. Elliston "flatfooted" was the idea, which he attributes to Mr. Lodge, that Secretary General Hammarsk-jold be given the job of going to Peiping to seek release of the prisoners in Chinese Communist hands. It would surprise me to find that, as Mr. Elliston speculates, Mr. Lodge prodded Mr. Hammarskjold on the subject. It might be a good idea for Mr. Elliston to ask one or both of these gentlemen about it instead of contenting himself with speculation.

Sometimes in the United Nations it is necessary to be flatfooted, blunt, or whatever you wish to call it, and sometimes it is necessary to be delicate. Mr. Lodge has shown that he can be both, as the occasion requires. When it comes to educating world opinion on Communist atrocities and the behavior of the Chinese Communists, he has not hesitated to speak unpleasant truths. When it comes to diplomacy, he can be as delicate as the next man. The success of these tactics is reflected in many votes in the General Assembly on important matters that he has handled personally.

In December 1953: 42 to 5 in condemnation of Chinese Communist atrocities in Korea, the Soviet bloc alone voting against it.

In November 1954: 60 to 0 for the Eisenhower atoms-for-peace program, for which even Soviet Union felt compelled to vote;

In December 1954: 47 to 5 to condemn Red China's sentencing of the 11 United States airmen and to seek release of all United Nations prisoners still detained, the Soviet bloc alone voting against it:

alone voting against it;
Since January 1953: 24 separate votes against admitting Red China to various United Nations bodies, or against even considering the question.

You do not get results like these without diplomacy, and not without bluntness either, when that is called for.

Mr. Childs' observation about Mr. Lodge's "rushing out" with statements at the wrong time seems strange, coming shortly after Mr. Lodge's appearance on a national television program on December 19. He was asked repeatedly about the matter of the filers imprisoned in China and he declined to make any comments that might complicate things. He said, "What we are all thinking about now is what is good for those filers. We ought to try to avoid doing or saying anything which will act adversely on the negotiations to get those filers out."

One of Mr. Lodge's assignments, he has told me, was to do what he could to bring back American confidence in the United Nations, which had been sagging dangerously. In May of 1951 43 percent answered "Yes" in response to the question: "Are you satisfied with the progress of the United Nations?" By January 1954 this percentage had risen to 63 percent, which was the highest point in 7 years of polling on this question. Last October 1954 the percentage of those who wanted to pull out of the United Nations altogether fell to 6 percent, which is the lowest ever recorded. I respectfully suggest that this is not an unhappy record.

All these accomplishments may explain what Harvard University had in mind when, in giving Mr. Lodge the honorary degree of doctor of laws last June, it called him "an eloquent defender in the United Nations of the truth that freemen cherish."

There certainly is nothing wrong with being politically ambitious, a state of mind which Mr. Childs attributes to Mr. Lodge. But my impression is that this is not an accurate characterization and that he is totally absorbed and satisfied by the work

he is doing at the United Nations. I have never seen a man give a greater impression of being happy in his work. CHARLES W. MAYO, M. D.,

CHARLES W. MATO, M. D.,
President, American Association for
the United Nations.
New York.

Criticism by Walter Reuther of President Eisenhower's Economic Report to Congress

EXTENSION OF REMARKS

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an impressive article, appearing on the first page of the Baltimore Sun of today, entitled "Reuther Raps Ike Economy—CIO President Assails Recent Report to Congress."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REUTHER RAPS IKE ECONOMY—CIO PRESIDENT ASSAILS RECENT REPORT TO CONGRESS

Washington, February 10.—In the most scathing attack yet made on President Elsenhower's recent economic report to Congress, Walter P. Reuther, CIO president, today charged that the administration is selling the American people short by falling to fulfill its obligations under the Employment Act of 1946.

Reuther charged that the President had shown complacency over unemployment, failed to mention both the decline in farm income and the relatively deteriorating position of small business and avoided a discussion of automation and its implications for economic expansion, production, consumption, and employment.

He told the Congressional Economic Committee that the administration had offered only petty, half-hearted economic programs based on a hypnotic preoccupation with statistical indexes of the long-run past.

CHALLENGES CONTENTION

Reuther also challenged the administration contention that the outlook for 1955 is bright. He said his observations lead him to believe that well may be a leveling off or decline of economic activity in the later part of 1955.

Reuther in a 6,000-word statement lashed the administration for avoiding any mention of the tremendous potential for rapid economic growth and improved living conditions which new technologies offer.

Nor has the President, said the CIO head, given Congress or the people any guidance or preparation for the new technology—including atomic power—which hold limitless possibilities for growth and improved living standards.

The Economic Committee also heard a plea by the National Farmers' Union for some solution for the rapidly deteriorating farm situation.

A statement prepared by James G. Patton, head of the Farmers Union, and read to the committee by John A. Baker, his assistant, said that the President's economic report concealed many of the true facts about the economic situation.

Patton charged that the President ignored the requirements of the Employment Act of 1946 to lay before Congress concrete recommendations for dealing with the economic steps needed to produce full employment, The Farmers' Union spokesman also as-

The Farmers' Union spokesman also asserted that the administration is deliberately trying to minimize the true facts about unemployment by labeling a 538,000 rise of the jobless in January as "seasonal."

jobless in January as "seasonal."
"If we were in a great upsurge of business," Patton declared, "it would overcome the seasonal factors and bring about a drop in the pathologically high unemployment."

Concerning the farm situation, Patton told the committee that between 1952 and 1954 the income of the average farm family had dropped from about \$200 a month to \$150 a month, and that in his estimation it will drop further to \$100 a month "under the Eisenhower sliding scale farm program."

The Fund for the Republic

EXTENSION OF REMARKS

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES
Wednesday, February 9, 1955

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the incisive and thought-provoking address recently delivered before the National Press Club in Washington by Mr. Robert M. Hutchins, president of the Fund for the Republic. This speech runs a little over two pages, and the Printing Office estimates the cost at \$187.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Address of Robert M. Hutchins, President of the Fund for the Republic, Before the National Press Club, Washington, D. C., January 26, 1955

I speak only for myself, not for the Fund for the Republic, the directors of which I have not consulted; not for the Ford Foundation, of which the Fund for the Republic is completely independent; not for other foundations. They have been doing a good deal of talking lately. In fact they have been uncommonly vocal.

They have been uncommonly unanimous. I have been dealing with the foundations in one way or another for more than 30 years. They have always been distinguished by their lack of fellow feeling. They have scorned a project if it required the cooperation of another foundation. One of the more absurd charges made by the Reece committee was that the foundations were an intellectual cartel. The Reece committee forced them to huddle together in self-defense. One more investigation and they might become a cartel.

The conduct of the majority, if it was the majority, of the Reece committee was so scandalous that it outraged almost all the press and apparently even one of its own members. At any rate, Angier L. Goodwin, of Massachusetts, wrote a new kind of concurring opinion, one that disagreed with all the conclusions of the opinion with which it purported to concur. In the conduct of the hearings Mr. Reece added some new wrinkles to the distortions that we have become accustomed to in congressional investigations.

The foundations were elaborately attacked by the staff and by some witnesses of dubious standing. Then, pleading that Mr. Hays of Ohio would not let him conduct the hearings as they should be conducted, Mr. REECE adjourned them and informed the foundations that they could file written statements. Perhaps the most depressing fact about the report of the so-called majority of the Reece committee is that Mr. REECE takes credit for relieving the foundations of what he calls the embarrassment of cross-examination. You might as well execute an innocent man without the embarrassment of a hearing—but if you did, nobody would claim that you had conformed to the principles of Anglo-American jurisprudence.

The most entertaining of the new wrinkles was that the majority took a philosophical position. The Cambridge ladies, E. E. Cummings said, lived in furnished souls; so Mr. REECE and Mr. WOLCOTT came bustling out in secondhand suits of antiempiricism, supplied them by the sages of the staff. Mr. REECE and Mr. WOLCOTT were much against empiricism, which they associated with moral relativism, irreligion, the cultural lag, and ultimately with subversion.

The Congressmen could not be bothered with history. They overlooked the fact that some of the most empirical empiricists in history, like Hume and Montaigne, were thoroughgoing Tories. The Congressmen could not be bothered with consistency; for example, they went after the teachers' colleges for sponsoring empiricism and then after the Fund for the Advancement of Education for not sponsoring the teachers' colleges.

If a committee may charge a foundation with empiricism, why not charge a college with it; and if with empiricism, why not with Presbyterlanism or Catholicism or any other philosophy, religion, or dogma that the committee does not care for? The grant of tax exemption may carry with it certain obligations and those who accept it may by implication agree that they must perform certain services. But it has never been supposed that by taking tax exemption a college, university, church, or foundation, otherwise within the law, was liable to condemnation because of the philosophy that it held. If there is such reliability, the way is open to the most flagrant violation of religious freedom and of freedom of speech and teaching.

The lesson the majority, if it is a majority, of the Reece committee wants to teach the foundations is stated in words of crystalline clarity: "They should be very chary of promoting ideas, concepts, and opinion-forming material which run counter to what the public currently wishes, approves, and likes."

Here the committee throws overboard the principle accepted by the Cox committee that the justification of the foundations is that they supply risk or venture capital in the field of philanthropy. That is what they are for—to take chances—the Cox committee said. The Reece committee would confine them to what a public-relations man, presumably by a series of careful polls, found that the public currently wished, approved, and liked. The way to be safe would be to attract no attention, arouse no discussion, and create no controversy.

Even this would not be enough. All the things of which the committee now complains were currently wished, approved, and liked at the time the foundations did them. To meet the test laid down by the committee, therefore, a foundation would have to be able to foresee what would become unpopular by the time of an investigation.

But even this is not enough. The issue is not what the public will wish, approve, and like. There is no evidence, for example, that the American public dislikes empiricism. Quite the contrary. The public does not dislike empiricism: The Reece committee does, or rather two members of it do, or perhaps just the staff of the Reece committee does. Running a foundation on these terms be-

comes an extrahazardous occupation fraught with dangers that test pilots and submarine explorers and others who are up against nothing worse than the laws of nature do not encounter

The Reece committee achieves some of its gaudiest effects by the simple process of giving old words new definitions and then pinning the old words on the foundations. the way that empiricism becomes This is subversive. Subversion now means, the committee says, a promotion of tendencies that may lead to results that the committee will not like. Hence support of the New Deal Social engineering, could be subversion. planning, world government, the United Na-tions, William James, John Dewey, the American Friends Service Committee, Dr. Kinsey, and reform are all subversive in the bright new lexicon of the Reece committee. And of course all these things are socialistic, if not communistic, too,

At times one feels when reading the report that old scurrilous words will be redefined and applied to any expression of decent human feeling. So it was that a staff member found himself identifying the papal

encyclicals as communistic.

But the Reece report is said to be a majority report, and it will be referred to in the future as a majority report. Its anpendix will be quoted as an authoritative collection of dangerous names. The only reason for the appendix is to enable some committee in the future to say of somebody that he was listed by the Reece committee. This fact will then be greeted with hushed and incredulous awe by those to whom it is communicated.

All you have to do to qualify for the appendix is to favor world government or Worker. get mentioned by the Daily principal charge against one distinguished professor is that he is quoted, apparently with approval, in a dissenting opinion in the circuit court of appeals. A low of some sort is reached with the mention in the appendix of the name of George F. Kennan. He is accused of the following-and this is the total record: A book of his was reviewed (we are not told whether favorably or unfavorably) in the Daily People's World and the New World Review; on May 9, 1950, the New York Times reported that he spoke on Communist China (what he said does not appear); and on May 28, 1950, the New York Times reported that he "attacked witch-hunting of Communists." On the basis of such information Mr. Kennan will in the future be refered to as "cited by the Reece

The appendix of the Reece committee's socalled majority report is an endless carnival of good clean fun-it is almost 200 pages long; but I must pass on. I cannot regard the Reece committee as having more than symbolic or symptomatic importance. Its wild and squalid presentation affords a picture of the state of our culture that is most depressing. Its aims and methods are another example of the exploitation of public concern about communism and subversion to further political ambition and to work off political grudges.

We may as well state it plainly: the Reece investigation in its inception and execution was a fraud. Nobody in his right mind could suppose that the great accumulations of wealth left by our richest men were being intentionally used by their trustees to overthrow the institutions of this country. Hence the Reece committee had to take another tack: the trustees were said to be so busy that they had to leave the foundations to officers who were often quite disreputable. Though this relieved the men of wealth and staning of the charge of being knaves, it did so only at the expense of charging them with being fools. Only fools could be so careless as to allow enormous sums entrusted to them for charitable purpose to be stolen

away and lavished on the subversion of their

Congress may properly investigate the foundations and seek to arrive at general legislative policy concerning them. But the most important question to ask about any given foundation is whether it is one. Is actually using its money for religious, charitable, educational, or scientific purposes? The first amendment suggests that tax exemption should not be denied or revoked because the particular views of religion, education, or science held or promoted by the foundation are unpopular.

On the other hand, nothing in the Constitution requires that tax exemption must be accorded an organization, which though in outward form a foundation, is actually a tax dodge, or a public relations device, or a scheme to promote the personal interests of the donor. The test is public versus properly nurnoses. The Government may properly inquire into this question, since the exemption is granted with a promise of performance. The appropriate forum for the determination of the question of performance would seem to be a court.

As Dr. Johnson used to say, we must clear our minds of cant. When we do, we see that, in general, the foundations have for many years been following the prescription laid down for them by the majority of the Reece committee. This prescription is to try to avoid doing what is or may become unpopular. The failure of the foundations to be universally popular at all times is seldom caused by a spirit of reckless abandon or eager pioneering on their part. It is caused rather by the difficulties of predicting

what will be popular or unpopular.

Who could have imagined that helping prospective teachers in Arkansas to get an education would have ever been regarded by anybody as exhibiting dangerous tendencies of mind? But when a foundation did this, it was criticized by teachers, businessmen, and newspapers in that State and was, of course, complained of by the Reece committee. What would the foundation have done in Arkansas if it had been possible to foresee the reactions that, in fact, occurred? I do not say that the grant would not have been made, but I would not bet on it; for the foundations have in varying degrees suppressed their ambition to provide risk capital in favor of a desire to have what are called good public relations, that is, to avoid unpopularity.

We know that the Attorney General's list is an ex parte finding of guilt with no probative standing in law. But how many foundations would give money to an organization or even to an individual in an organization on the Attorney General's list, no matter how meritorious the project? Would we support organizations that allowed groups listed by the Attorney General to meet in halls owned by them? If not, for meet in halls owned by them? an irrelevant reason, one that has nothing to do with the quality of the proposal, but that has a great deal to do with our popularity, we have made our peace with REECE.

We know that the most dreadful aspect of the current situation is the atmosphere of suspicion and of guilt by association in which we live. We ought to say that until a man or an organization has been condemned by due process of law he, or it, must be presumed innocent, and therefore, individuals and organizations are not to be automatically denied support solely on the ground that they are associated with unpopular people. Yet, how many foundations would give money for a good purpose to be well carried out by an organization which, though not on the Attorney General's list, was supposed to have some Communist members or was vaguely reported to be dominated by Communists?

We have come a long way since Lord Ma-caulay, who said, "To punish a man because

we infer from some doctrine he holds or from the conduct of others who hold the same doctrine with him that he will commit a crime is persecution and is in any case foolish and wicked."

Congressman Reece was scoffed at. It was agreed that his investigation was a farce. think he had good reason to be satisfied with himself. I think he won. Without firing a single serious shot, without saying a single intelligent word, he accomplished his purpose, which was to harass the foundations and to subdue such stirrings of courage, or even of imagination, as could be found in them. As I have said, there were not many there when he came on the scene. Congressman Cox had been there before him. And even before Congressman Cox the foundations were coming to limit their venturesome risk capital supplying to the natural sciences, medicine, technology, and longterm research. These fields are of great public benefit. They are also not controversial. If there ever was a foundation that was willing to be controversial, that was willing to take risks and to venture capital in areas about which people have strong prejudices, it learned its lesson by the time Cox and REECE got through. Who will venture now?

The pressures of our time produce strange contradictions, as in the case of the man who said that there were two things he hated, intolerance and Jews. Even those who understand what they are talking about are sometimes afflicted with a disease that often attacks intelligent people, a disease that gives them such satisfaction in what they say that they are blinded to the fact that

it makes no difference. The Houston Post did a wonderful job on the situation in the schools of that city, but the deputy superintendent, who was fired, has not been reinstated. We all smiled at the decision of the commandants not to permit West Point and Annapolis to debate the entry of Communist China into the U. N. and applauded Mr. Eisenhower's sensible We went away feeling very observations. good, forgetting that West Point and Annapolis are not to be permitted to debate the entry of Communist China into the U. N. The Illinois Department of the American Legion has repented, I hear, of its brutality to the Girl Scouts; but the Girl Scouts revised their manual as the Legion manded. We were pleased to notice that Bishop Oxnam was cleared by the House Un-American Activities Committee; but he is not allowed to speak at the Philharmonic Auditorium in Los Angeles. We assert that the fifth amendment is one of the brightest stars in the crown of our liberties and proclaim the inalienable freedom of every man not to testify against himself, conveniently overlooking the fact that almost everybody who has declined to do so is now unemployed. We say that a security system that deprives us of the services of some of our ablest people is scarcely helping us to be secure; we regard this as a pungent remark. But Davies and Oppenheimer are not working for the Government; Ladejinsky is not working for the Department of Agriculture. And what about Edward U. Condon, retiring president of the American Association for the Advancement of Science, who has been repeatedly cleared. but who, at the prospect of his 10th or 11th investigation, pronounced himself investigated out of public service? And now, after Reece, how many foundations do you suppose would be prepared to assist such a man? The temper of the times appears to be

such that the real victories go to those who are nominally defeated. The rather messy anti-Communist legislation adopted at the close of the last session of Congress and the plous resolution passed by the Senate at the opening of this one must be regarded as real victories for a Senator who was formally condemned by his colleagues 2 months ago. So must the requirement imposed on every

public speaker these days that he must disavow any connection with communism and attack the vicious conspirators in the Kremlin.

The newer orthodoxy is an odd thing. For example, it requires us to be against Mc-CARTHY, but not too soon or too much, not in such a way as to arouse too much ani-mosity in too many of those who might have a different opinion. If, for example, we say that rumor and gossip are an inadequate basis on which to condemn a man or a group, we are told that of course we are right, but that in this case the rumor and gossip are so widely believed that people would think bad thoughts of us if we insisted on proof. So it comes to this: We must ourselves adopt an un-American attitude because if we don't we may be regarded as un-American by those who have an admittedly un-American atti-tude. We are all dedicated to the great American tradition, but the battlecry of the Republic is, what will people say?

The motto of the Fund for the Republic is, feel free. At least that is what the officers tell one another it ought to be. This is, I believe, the essence of Americanism. Our ancestors came to this country because they wanted to feel free. They developed laws and institutions under which they and we could feel free. The Declaration of Independence, the Constitution, the Bill of Rights, the amendments extending the suffrage—these are expressions of the American conviction that everybody should feel free. The limits of this feeling or this freedom are not to be found in a formless fear of public opinion. On the contrary, public opinion is to grow and change through the free discussion of all points of view.

These ideas seemed so important to a new and inexperienced foundation, the Ford Foundation, that something more than 2 years ago it established the Fund for the Republic. The foundation gave the fund \$15 million and turned it loose as an independent corporation, a wholly disowned subsidiary, with a self-perpetuating board of directors of its own. Its mandate from the foundation was to try to strengthen the basic rights guaranteed by the Constitution and to support activities directed toward the elimination of restrictions on freedom of thought, inquiry, and expression in the United States, and the development of policies and procedures best adapted to protect those rights in the face of persistent international tension. Those were the happy, carefree, pre-Reece days.

Somewhat later, after the organization of the fund, its chairman, Paul G. Hoffman, said: "We propose to help restore respectability to individual freedom. * * * Out of our discussions has come a preliminary conclusion that the attention of the fund should at this time be concentrated in the following five areas, not necessarily in order of priority: 1. Restrictions and assaults upon academic freedom; 2. Due process and equal protection of the laws; 3. The protection of the rights of minorities; 4. Censorship, boycotting, and blacklisting activities by private groups; 5. Guilt by association."

By restoring respectability to individual freedom the board means that it hopes to help Americans feel comfortable about feeling free. A board letter calculated to bring about this result would be difficult to find; for the members are all comparatively respectable, comparatively free, and comparatively interested in helping other people to feel so. The mere existence of this board should take the fund some distance on the way toward the restoration of respectability to individual freedom. You cannot belong to this board without believing in conscientious nonconformity as necessary to the growth and progress of individuals and States. The mere existence of this board serves as a reminder that intelligent, even important, people can and do believe this even yet.

The fund has no other ax to grind than support of the traditional liberties of the American people. It does not seek to support them by trying to influence legislation. attempts instead to disentangle the issues, and to promote rational discussion of them. It helped the American Bar Association to make up its mind on congressional investigations by financing the association's committee on national security and individual rights. It assisted the League of Women Voters to stir up discussion of civil liberties among its members and among the members of other organizations. It aided Columbia University in the presentation of the theme of its bicentennial and supported the efforts of the National Citizens' Commission on the Public Schools to promote debate about the condition of public education, with special reference to academic freedom and racial discrimination.

If you are going to disentangle the issues that affect the traditional liberties of Americans, one of the first big ones that you have to try to get clear is communism in the United States. Not a day passes without the most positive statements being made on this subject. Many of them disclose a total lack of authentic information, but they are nonetheless positive for all that. The Fund for the Republic has made the Communist rec-The Fund for ord in this country available through the work done by Professor Sutherland of the Harvard Law School. Professor Stouffer, of Harvard, will shortly publish a book called Communism, Conformity, and Civil Liberties, representing the results of a study financed by the fund of the attitudes of Americans on these subjects. Professor Rossiter, of Cornell. with a considerable staff, is now embarking on a comprehensive investigation of what Communist Party has amounted to in the United States and what it amounts to now. These three jobs together should help the American people to decide on the relative importance of communism in this country and on the successes and failures of the methods that have been employed to deal with it.

One of the methods that has been employed to deal with it that has been severely criticized is the security-loyalty program of the Government. Many suggestions have been put forward calling for a study by distinguished and disinterested persons. The Association of the Bar of the City of New York has undertaken to organize such a study, which will be financed by the fund.

Since we do not want subversive influences to reach our children, we have instituted methods of assaying the patriotism of teachers. It is widely believed that they are ineffective and that they interfere with education by frightening the teachers off the discussion of some subjects. Professor Lazarsfeld, of Columbia, has undertaken to find out for the fund whether or not these conditions do actually exist in the high schools, colleges, and universities of the country.

It is charged that in the effort to eliminate subversive influences in motion pictures, radio, and television we have allowed irrelevant and unsupported attacks, or attacks of little value, to deprive men and women of their livelihood. Unauthorized private persons are alleged to determine by obscure means the fate of those on whom these attacks are made. John Cogley, a former editor of the Commonweal, is conducting an investigation of blacklisting in the entertainment industry for the fund for the Republic.

Through the American Friends Service Committee, the Catholic Interracial Council of Chicago, the National Council of Churches, and the Southern Regional Council the fund has been trying to do something about the rights of minorities. The fund re-

gards Negro housing as the next big issue in race relations and will shortly announce its plans with regard to it.

The Fund for the Republic is a kind of antiabsurdity fund, a fund for the law of contradiction, a fund to remind us that we can't have things both ways. We can't brag about the Bill of Rights and talk about fifthamendment Communists. We can't say that every man has the right to face his accusers and go on using what the Denver Post has called faceless informers. We can't proclaim our devotion to due process of law and then deny it to people we don't like.

The Fund for the Republic is a sort of fund for the American dream. I do not think the fund can make the American dream come true; but perhaps it can help keep it alive and clear. Perhaps it can show where we are forgetting the dream as it once was dreamt and can point out those places, and they are numerous, where the progress toward the realization of the dream has surpassed our most expansive expectations. Who knows? Perhaps some day "what will people say?" will be replaced as the battle cry of the Republic by "feel free."

A Defense of Admiral Radford

EXTENSION OF REMARKS

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES
Friday, February 11, 1955

Mr. HICKENLOOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "A Defense of Radford—Joint Chiefs' Chairman Is Main Target for Campaign of Smears, Half-Truths." The article was written by Constantine Brown, and was published in the Washington Evening Star of Thursday 3, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A DEFENSE OF RADFORD—JOINT CHIEFS' CHAIRMAN IS MAIN TARGET FOR CAMPAIGN OF SMEARS, HALF-TRUTHS

(By Constantine Brown)

FBI Director John Edgar Hoover has a permanent list of the most wanted criminals at large in the United States.

Similarly the Communists, the phony liberals and neoprogressives in this country are also setting up a list of the most dangerous people to American liberties or American peace.

Their agents do not have the power of arrest, it is true. But they have a sometimes more deadly power; that of a smear campaign intended to discredit the "wanted" individual and get him out of public life. Half-truths, innuendoes, sometimes actual fabrications are the weapons of the pressure groups which, while claiming to be in favor of freedom and peace and democracy, are serving wittingly or unwittingly the cause of the enemies of our country.

the enemies of our country.

JOE MCCARTHY and his methods, the "Senator from Formosa," WILLIAM KNOWLAND, the late Pat McCarran, and other such "reactionaries," have been and some still are on the "most wanted men" roster. So was Gen. Douglas MacArthur before he was dismissed from his command. A new name has been added recently, that of Adm. Arthur W. Radford, who has become fair game for them principally because the Chairman of the Joint Chiefs of Staff is credited with

advocating a strong national policy toward the Communists' imperialistic policies in Asia

Admiral Radford is regarded by all those who are in close contact with him, from President Eisenhower to officials of the State Department and Members of Congress, as one of the most lucid and competent men in our Armed Forces. He was discovered by Mr. Eisenhower when he went on his fact finding trip to Korea, soon after his election. The victor over the Germans and Italians in the European theater recognized in this naval officer the highest qualities of military concept and chose him as his principal military adviser.

Admiral Radford does not have the knack of endearing himself to the members of the fourth estate or to politicians. He has a cold, retiring nature and is an extremely poor backslapper. Neither does he see any need to sell himself to the public through press agents, public-relations officials, radio and television appearances. Unlike his colleagues among the Joints Chiefs of Staff, he does not have to go to Congress to fight for appropriations for any particular branch of the service. His job is strictly one of correlating the strategic views of the top defense hierarchy and presenting them to the President, the National Security Council and, whenever requested by the civilian superiors, to the Members of Congress. His functions require him to express his own military con-victions based on facts, which frequently cannot be revealed to the public lest they injure the national security. These are argued out behind closed doors with the civilian policymakers. But at no time does he have the power-or for that matter the intention-of imposing his judgment over that of the real policymakers in the Government.

Admiral Radford considers anoymity an essential portion of his job. Newspapermen who used to be in close and friendly contact with him while he held less responsible positions in the past have received hints not to press their former friendship in an effort to wrench from him statements or "leaks" which might be useful for a good story. He seldom sees them privately and, when he does, only in the presence of one of his subordinate officers. The conversation generally covers the vaguest generalities and results in a waste of time for the admiral and the newspaperman alike.

Yet he is an easy target for those who need a whipping boy to show Mr. Eisenhower as putty in the hands of the "pro-Chiang schemes." Admiral Radford is not in a position to contradict the stories, rumors, and innuendos spread in print or by word of mouth about his impressive influence over the President, the Secretary of State, and a number of congressional leaders. This much is true: His unquestionable honesty, his cold and brilliant analysis of situations whenever he makes a presentation do have an impact on the thinking of the Nation's policymakers. But when decisions are made, they are based on the political consequences more than on the military merits of the case.

Because, in 1949, Admiral Radford had fought with the rest of the admirals for the construction of the Forrestal-type supercarrier-and subsequent events have proved their contention correct-he was then and still is described by his detractors as one of the top villains of the Navy. Admiral Radford was, however, soon forgotten as a villainous public figure. Domestic matters followed by the Communist aggression against Korea provided other targets. It has been particularly since last summer, when, in response to queries from the civilian policymakers, he urged action in southeast that the attention of the so-called liberal ideologists became focused once more on the chairman of the Joint Chiefs of Staff. Armchair strategists in Congress, in the press

and on the radio question the soundness of his military views and for good measure, lest their arguments be not sufficiently impressive with the general public, occasionally add a little smudge to his character and integrity.

President Eisenhower's School Aid Program

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very thoughtful column by the distinguished author and columnist, Miss Doris Flee-son, on the subject of President Eisenhower's school-aid program, which appeared recently in the New York Post.

This column, entitled, "The Worthy Poor" discusses the inadequacy of the President's program for school aid and stresses the need of very substantial Federal grants if we are to make any impact on the ever increasing growth in student population and the lack of sufficient classrooms. I believe this article will be very useful to Members of the Senate and the public generally in the consideration of what I consider one of the most important issues now before the American people—aid to education.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

THE WORTHY POOR (By Doris Fleeson)

Washington .- President Eisenhower's school-aid program does not represent a serious attempt to deal with the national emergency in education.

It is little more than a letter of condolence to the localities and school authorities which are struggling against an enormous and growing shortage of classrooms.

The President's Commissioner of Education, Samuel Brownell, has placed the current need at 370,000 classrooms. Federal cost estimates indicate that the job, well done, would cost more than \$12 billion.

The President has suggested only \$200 million in direct aid over 3 years, which is about \$65 million a year. Even if all went well and exactly as planned, it would build only a few thousand of the missing class-

School authorities are equally skeptical about the proposed plans to help school dis-tricts and States. Twenty States are said to have constitutional debt limits which will prevent any new borrowing. In both Maine and Wisconsin, the courts have declared school-construction authorities unconstitutional.

The school experts say also that it would be at least a year before any results would show from the Eisenhower plan. Meanwhile, school enrollment is going up at a rate of more than 1 million a year. This year is it 30,800,000-an increase of 22 percent since 1950.

The President's philosophical approach provokes as much gloom in school circles as his practical suggestions. As they see it he has dealt with what they regard as the gravest internal crisis in this democracy in the spirit of a lady bountiful who restricts her gifts to the worthy poor.

The reference is to the President's restriction of outright grants to communities too poor to build their own schools. There will be no States and few communities willing to take the pauper's oath on this or any other proposition. Actually many of the wealthiest States which spend proportionately the largest share of their revenues on education are among the most hard-pressed.

The idea that some portions of this country should publicly admit to their poverty and throw themselves on the mercy of richer States or the Federal Government seems to have appeal in many quarters. It emerges regularly at the annual Governors' conferences and just as regularly the overwhelming majority of the governors turn the cold shoulder.

This quarrel is basic. The original architects of the welfare state-much of which the President has accepted, at least in theorybelieve in prompt and ample federal action to meet national emergencies like that confronting the schools. From their point of view the President's approach in the new message looks back-way back.

Perhaps one trouble with the present special school problem is that Washington draws to it for the most part the successful, the well-to-do, and the more mature citizens. Their children are not victims of the present cruel classroom shortage, and, as a French philosopher said, one bears with equanimity the misfortunes of others.

The Dixon-Yates Contract a Partisan Battle at Its Very Worst

EXTENSION OF REMARKS OF

HON. BOURKE B. HICKENLOOPER OF IOWA

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. HICKENLOOPER. Mr. President, there appears in this morning's New York Times a most interesting and informative article by Arthur Krock. The article is in connection with the Dixon-Yates matter, and is entitled "Partisan Battle at Its Very Worst." I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> IN THE NATION (By Arthur Krock)

PARTISAN BATTLE AT ITS VERY WORST

WASHINGTON, February 10 .- The most unattractive exhibition of partisan politics the Capital has witnessed for years is the row over the Dixon-Yates contract. The attack on this contract by some Democratic legislators and by the National Committee has been adopted as a party line. It extends even into the Federal Commissions directly concerned with the issue. Bets have been made and won that the appointees of President Truman would vote against the appointees of President Eisenhower on the technical as well as the general aspects of the contract.

The partisan spectacle descended today in the Joint Congressional Committee Atomic Energy to a spat over the method employed by Chairman Strauss of the Atomic Energy Commission to support his contention that the AEC was doing business as usual. Senator Anderson, the committee chairman, whose previous conduct in political battle has been an example to his colleagues, objected to Strauss' way of trying to disprove a charge that the Commission was spending an inordinate amount of time over the contract at the expense of the weapons program. Strauss produced four large boxes of documents on other subjects, as contrasted with a small pile of envelopes touching the contract, to refute the charge. This ef-fective, because graphic, demonstration seemed to irritate the usually bland ANDERSON.

(The point was later raised with an apparently agreeing Anderson that Strauss recklessly exposed top-secret papers. These, however, were moved under the rigid regulations invariably imposed.)

That incident and others support an opinion here, which may be increasingly shared in the country, that the Democrats are discomfited by the disclosure of weaknesses in their partisan line against Dixon-Yates, Certainly, from the time former Democratic National Chairman Mitchell suggested that the President may have ordered the contract made to favor the finances of a golfing friend to the committee scene of today. the partisan technique has been far from

AN ARGUMENT BACKWARDS

Those Democrats who have fought the contract principally because they think votes are to be gained by doing so are under an obvious handicap. They cannot admit their purely political animation. Hence they have been obliged to assert and defend this preposterous proposition:

The Dixon-Yates contract has provided a bitter controversy in a Federal agency on whose effectiveness the whole security of the West may well depend. Clearly a commission rent by such controversy, which has new produced personal ill feeling among its members, cannot perform its intensely vital function as well as it could in an atmosphere of harmony. Therefore the President should abandon the contract.

The weakness in this is that these Democrats themselves have made the controversy bitter. And they have augmented its heat and scope by forcing into the area of par-tisan politics what should be a sober, nonpolitical issue of engineering and administrative procedure. In pursuance of this course they have put Chairman Strauss' integrity to the question on the flimsiest of pretexts. And they have encouraged their fellow-Democrat, AEC Commissioner Mur-ray, to engage in a vendetta with Strauss.

Many other Democrats sincerely dislike the Dixon-Yates contract for reasons that are only incidentally partisan. Some honestly and openly want the Tennessee Valley Au-thority to expand without limit. Some think the proposed site of the Dixon-Yates plant (behind the Mississippi's main levee at West Memphis, Ark.) is precarious. Some are for public power over private power in any competitive field. Some are constructive critics of the President's procedure in ordering the AEC to make the contract with Dixon-Yates to supply the TVA with power for the waiting market in the Memphis

In this view the President erred administratively (1) when he brought the AEC directly into the situation instead of making the TVA and Dixon-Yates the contracting principals. And they hold (2) that the President should have involved neither his high office nor the Budget Bureau in the Though the TVA already power from private utilities by contract, the Dixon-Yates episode marks the first time use was made of these procedures.

But Democrats whose minds are concentrated on getting the partisan advantage they think they see have obscured these legitimate objections. The results are distasteful public spectacles, an unhappy atmosphere in the AEC, and its chairman daily badgered for carrying out the President's order—which under the law he was obli-gated to do. Among their more remarkable byproducts were Senator Anderson's outburst today of a temper that seemed evoked by partisan frustration; and MURRAY's explanation that he once voted for Dixon-Yates to get it out of the way, but, now that it is still in the way, he actively opposes

The President, who is one of the real political objectives in the battle (the other is unchecked expansion of public power with the tax favoritism enjoyed by the TVA), is standing firm. If he continues to do so the West Memphis steam plant will be built and its power distributed according to his order.

The Importance of Women in the Public Life of the Nation

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. NEUBERGER. Mr. President, I think the presence of women in the public life of our country has contributed greatly toward the humanitarian legislation passed both by the Congress and by the State legislatures in recent years. My State is proud of the fact that recently it has sent to the Congress a most outstanding woman Member of the House of Representatives, Mrs. Edith S. GREEN, a Member of the House from the Third District of Oregon.

Oregon also is proud of the fact that, in the house of representatives of our State legislature, are four notable women members-Mrs. Jean Lewis, Mrs. Kay Meriwether, Mrs. Katherine Musa, and Mrs. Maurine B. Neuberger.

I ask unanimous consent that a very informative and able article about these four women legislators written by Mrs. Ann Sullivan and published in the Oregonian of February 6, 1955, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOUR INTERESTING WOMEN GIVE COLOR TO OREGON'S LEGISLATURE

(By Ann Sullivan)

The four conscientious woman legislators in Oregon's 48th Assembly are quite lively individualists in their own balliwicks.

All of them-Maurine Neuberger, Jean Lewis, Kay Meriwether, and Katherine Musa—are in their forties. All are married. The first three are from Portland, the fourth from The Dalles. All are Democrats.

One is a youthful grandmother.

One is an attorney and on occasion a fill-in on the circuit court domestic relations bench.

One flies an airplane.

COLOR GIVEN MARGARINE

One is famed in her own right as the legislator who got color into Oregon margarine, and also for her spouse, a United States

One is executive secretary of the National Hells Canyon Association.

One gets lots of letters about her cat.

One is always leaving her purse behind her. One likes to ski and fish and can even stand on her head-if she's among friends and they laughingly tease her to prove it. One only made two speeches before she

was elected, and those on the radio.

ALL BUTTERMILK DRINKERS

All of them drink buttermilk and frequently order it in the house lounge. Better not call them the buttermilk babes though—they'll cringe. Besides, they drink other beverages, too, like coffee, and their like or dislike for buttermilk has absolutely nothing to do with their legislative leanings.

All four are emphatically serious about why they wanted to go to Salem. To a woman, they feel that thinking, conscientious people can do more for their State and country if they actively participate in the run-ning of them than by just staying home and complaining.

They are intelligent, quick-witted gals and are working hard.

Jean Lagerquist Lewis, Mrs. H. W. (Hank)

Lewis, 7700 S. W. 27th Avenue, is the attornev.

She has served as a pro tem judge in the court of domestic relations in Multnomah County. She is a member of the American Bar Association the American Judicature Society, and the Oregon State Bar and was for 2 years secretary-treasurer to the Multnomah County bar.

She is a wiry, amusing, outspoken gal, with curly, shortcropped graying hair and blue eyes. She likes to ski with her daughter and veteran mountaineer-husband, who is a sales engineer for the Pioneer-Flinkote Roofing Co.

Daughter Judy, 6, dictates frequent fishing and beachcombing trips to the coast or the mountains, and mama enjoys obliging, even if it means ironing or housecleaning sometimes at I a. m. in the morning.

FISHING LACKS APPEAL

"If you can't do a good job with your own family," she says, "you'd better not be in public office or in business of your own."

Jean was born in Portland July 17, 1914, attending Couch and Chapman Schools and graduating from Lincoln High School in 1932. She was graduated from Northwestern Col-

lege of Law in 1938. Her father, in the shoe business, died when she was a child.

She has one sister, Mrs. Helen Maring. She married Hank June 14, 1944, "after 10 years of arguing about it."

RED TECHNIQUE PEARED

She said she was disturbed by what she felt was tendency to deplete national re-sources for the benefit of a few and dis-turbed by a bill introduced in the senate to investigate communism for the House and Senate. She said.

"We cannot adopt the very techniques of communism. We would be destroying the thing that makes us great."

A conservative dresser, addicted to sports clothes, comfortable shoes, and jackets with pockets (purses are a nuisance), she lives in a small apartment in Salem, goes home weekends to her household. It includes, besides Judy and Hank, a gangly Labrador retriever puppy called Sparkplug; a cat named Mr. Tuxedo; 2 turtles, Chipper and Flipper; 3 goldfish, Winken, Blinken, and Nod; and a

budgie, Pretty Boy.

Her mother, Mrs. Estelle Lagerquist, 2650
Southwest Custer Street, who lives a block
away, takes care of Judy while Jean is in

GRANDMOTHER STILL YOUNG

Kay Meriwether, wife of Maurice Meriwether, is the youthful-looking grandmother. Her 19-year-old daughter, Kathy, Mrs., Jack Metzger, has 2 children, Brandon 2, and

Deborah, 9 months. One son, Michael, 20, is a senior at Reed College, and the other, Bill, 17, is a freshman at the University of California.

Kay was born at Oregon City, April 12, 1912, attending Richmond School in Portland and graduating from Franklin High School in 1929.

Her father, W. E. Kimsey, was State labor commissioner 12 years, so she is not exactly a stranger to Oregon government.

She went to business college, then took a job with the State industrial accident commission in Salem, then went to San Francisco as secretary to an executive in a now-defunct furniture store. She married Maurice in Oakland February 23, 1932.

Son Michael was born in Portland in

Son Michael was born in Fortland in 1934, and the family lived variously in Portland, San Francisco, and Seattle. They live now in a pleasant Eastmoreland house at 3417 Southeast Carleton Street.

Most of the time she has been busy bringing up a family, but she has had time to be active in the parent-teacher association, the League of Women Voters, the Urban League, and the National Association for the Advancement of Colored People. She is also on the board of the Jane Jefferson Democratic Women's Club.

Since July 1, 1953, she has been executive secretary of the National Hells Canyon Association.

NAVY BLUE FAVORED

She's little (5 feet 3) and trim (120 pounds) with blue eyes, a rather pallid face and dark brown hair she wears in a bun.

Another conservative dresser, she prefers navy blue, likes dresses with plain lines, usually wears high-heeled pumps.

Mike and his father batch while Kay is at the legislature, but she manages to be home Friday night, Saturday, and Sunday. Fibe ran for the 1953 session of the legis-

She ran for the 1953 session of the legislature but was defeated, "so I came down to see what I missed and became secretary to Monroe Sweetland in the house."

POWER HOLDS INTEREST

Her legislative interests emphasized the power situation and labor, "and I attend that tax school every morning. I'm bound and determined to know what they're talking about."

She ran for office because she felt persons who care "can really accomplish more by being active in politics."

"I think our party in Oregon has had a particularly hard time in persuading qualified people to run. So you get to feeling you can be a help if you do."

Katherine (Kitty) Musa, of The Dalles, the only one of the four not from Portland, is the one who likes to fly.

MEMBER SHY, SERIOUS

She has graying short-curied brown hair which used to have an auburn cast and is an almost plump 5 feet 4½ inches.

In The Dalles she lives in an old frame

In The Dalles she lives in an old frame house at 512 West Sixth Street, with some modern furniture, some of other vintage.

Kitty Musa is most proud of her family, which includes two sons: Byron, 23, student at the University of Oregon medical school, and Milton, 20, now in the Air Force, and her husband, Ben, a certified public accountant who moved his family to The Dalles because they liked the climate and people there. The household also includes a blond cocker spaniel, Robin.

IDAHO NATIVE STATE

One of ten children (four boys and two girls were older and one boy and two girls younger), Kitty, called Katy by her mother, Mrs. F. V. Moore, 223 S. E. 81st Avenue, Portland, was born in Middleton, Idaho, May 21, 1906.

In 1911 the family moved to Oklahoma, Kitty attended business college in Tulsa and then came to Portland in 1927. She worked for a short while in the office of the Rudie Wilhelm Warehouse Co., then married Ben May 9, 1930, at Grace Memorial Episcopal Church in Porland, They moved to The Dalles in 1942, spent 1 year in Bend. She enjoys sports of all kinds, even played

She enjoys sports of all kinds, even played basketball. She walks a lot, prefers mediumheeled sandals as shoes. She took up flying so she could take her husband on business trips. He used to be deputy collector of internal revenue in Portland. It's still her main hobby. She's had her license since 1947.

She is no stranger to the legislature, because her husband served in the senate in the 1949 and 1951 sessions, and she was his secretary.

Bccause the press of his business is highest at this time of year (income tax stuff), he felt he couldn't neglect his business again this sesion. Only 5 minutes before the filing deadline Kitty was convinced she should run on the Democratic ticket, because no other person would do it. She made only two speeches during the campaign and these on radio.

TAX MEASURES INTEREST

Kitty has a particular legislative interest in tax measures and was the first representative to drop bills (Nos. 2, 5, and 4) into the house hopper. No. 1 is traditionally the appropriations for the business of the house. All three were tax bills. She is particularly interested also in programs of recreation for young people, especially in small towns.

She has sublet a small apartment in Salem, but drives the family car (it's blue, because that's what she likes best) home on weekends.

It is she who every once in a while leaves her purse behind her.

MAURINE VOTE GETTER

Best known of the four feminine legislators is Maurine Neuberger, whose husband, Richard L., became Oregon Senator after last November's whirlwind upset election.

She twice has obtained more votes than any other representative from Multnomah County, once ran second. This is her third term at Salem.

"I really miss Drck, because we used to share our experiences and thinking on legislation by talking things over. We were able to handle a lot of work by doing it."

The tall (5-7), dark-haired representative is thinner now than she used to be, and her blue eyes look a little tired, but she's still almost always the first one to appear at her desk in the mornings.

She maintains a busy, talkative pace, consulting, reading, studying, and listening to constituents. Her mail is very heavy, not only about Salem matters but from people who now think she must be a pipeline to the United States Senate. In first 4 weeks of the session, she hasn't even been downtown.

Maurine was born at Cloverdale in Tillamook County January 9, 1907. Her father, Dr. Walter Brown, was a doctor. Her mother now lives with her brother, Robert, on a dairy farm out of Vancouver.

PHYSICAL EDUCATION TAUGHT

She attended high school at Bethel, then went to teachers' college at Monmouth, graduating in physical education from the University of Oregon in 1929. She took graduate work at UCLA.

She used to do a lot of recreation work in the summer and is an accomplished swimmer. She taught physical education in Portland schools for 5 years at Milton-Freewater, then English at Lincoln High School in Portland for 10 years.

She was an exchange teacher in Rhode Island I year and has made trips to Europe and Japan. She met Dick Neuberger at a party about 1939, didn't marry him until December 20, 1945, when he came down from

Army service in Alaska and asked her to meet him in Missoula, Mont.

Like the others she dresses conservatively, quite often appearing in a skirt and inexpensive but interesting blouse.

She expects she'll have to do quite a bit of entertaining in Washington, and hopes to take up again classes in modern dance and French.

Maurine, who drinks buttermilk every noon (the other gals like it, too), is back on the committees in which she has the biggest interest: education, State and Federal affairs, and food and dairy. She keeps an eye on milk legislation, is interested in progressive and retarded children, and has keen interest in the power squabble.

The League of Women Voters and their study groups aroused her first interest in lawmaking, and then when her husband went to Salem, she found that because she wasn't tied down with a family, it would be fairly easy for her to go and do her share for the State, too.

Oh yes, the cat, Muffet, which went to Washington, has caused the Neubergers to get no end of letters from cat lovers. One even came addressed to Muffet from some Midwestern cat.

Financing for Dixon-Yates Project

EXTENSION OF REMARKS

HON, WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Friday, February 11, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Recorp a letter written by one of the best and most fearless and upright insurance commissioners in the United States, Mr. John J. Holmes, of the State of Montana. He has held that office, in combination with the office of State auditor, for a great many years. He was writing, apparently, to the various insurance commissioners all over the country calling their attention to the fact that the Metropolitan Life Insurance Co. and the New York Life Insurance Co. are to finance the Dixon-Yates project, if it is ever built. He wonders whether the insurance commissioners should not investigate the situation in order to find out how insurance companies can take about \$75 million of socalled people's money and invest it in a project such as the Dixon-Yates project at West Memphis, Ark.

It would be profitable for every Schator to read the letter written by this distinguished commissioner of insurance.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF MONTANA,

Helena, Mont., February 2, 1955.

Re life-insurance companies, investment
of funds, Dixon-Yates contract.

Hon. W. A. SULLIVAN,

Insurance Commissioner,
Chairman Zone 6, NAIC,
Olympia, Wash.
Dear Commissioner Sullivan: According

DEAR COMMISSIONER SULLIVAN: According to a recent article published in the February 1955 issue of Fortune magazine relating, in general; to the vast sums invested by life-insurance companies in corporate enterprises, it was noted that Metropolitan Life, and

the New York Life, are contemplating loaning \$77 million in connection with the Dixon and Yates combination if, however, the contract is finally approved by Congress.

The Dixon-Yates combination, as you undoubtedly are aware, has been and, in my humble opinion, will continue to be a heated controversial issue. I am utterly opposed to any investment of funds by insurance com-panies where policyholders' money is placed at risk in such a venture as proposed.

May I suggest that the matter of the contemplated \$77 million investment in the controversial Dixon-Yates combine, by the Metropolitan and New York Life, be included on the agenda of the March 9-10 meeting of insurance commissioners. zone (6)

Your kind and favorable consideration of this suggestion will be greatly appreciated.

With kindest personal regards, I am Very truly yours,

JOHN J. HOLMES, State Auditor and Ex-Officio Commissioner of Insurance.

Ratification of Southeast Asia Defense Treaty

EXTENSION OF REMARKS

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Maybe It's Time We stop Pushing Our Weight Around in the World," published in the Fort Lauderdale (Fla.) Daily News of February 3, 1955. In my opinion, the editor, a man by the name of Mr. Jack W. Gore, whom I do not know personally, ought to receive the Pulitzer prize for writing the best editorial published this year.

This editor gives great hope to a Senator who sometimes votes alone, contrary to the way every other Senator votes, when he compliments the Senator

who does so.

I may add that in this very fine editorial the editor mentions my name many times, which pleases me very much, in connection with the vote of 82 to 1, in which I voted against the Asiatic Treaty.

I recommend this editorial for reading by all Senators. Every line, every single paragraph of the editorial is outstanding. I do not know what the procedure is to bring editorials to the attention of the committee which awards the Pulitzer prize, but I hope an effort will be made to get in touch with whatever committee selects the editor who writes the best editorial of the year, and call this editorial to the attention of that committee. Mr. Gore certainly is to be congratulated for his splendid, fearless daring to go against the crowd.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

MAYBE IT'S TIME WE STOP PUSHING OUR WEIGHT AROUND IN THE WORLD

In the somewhat frantic efforts that are now being made on various fronts to extricate this Nation from the difficulties that have been created from past mistakes, it is refreshing now and then to note that there are still a few people around Washington who refuse to be stampeded into following the rest of the herd along a course they can't stomach and which they believe can only lead to disaster.

One of these rare individuals happens to be Senator "WILD BILL" LANGER, of North Dakota, who this week gained the dubious distinction of being the only 1 of 83 Senators to cast a vote against ratification of the 8-nation Southeast Asia Defense Treaty.

While all of the other Senators hurriedly voiced their approval of a document which now commits the United States to go rushing in to help block any external aggression or internal subversion over a wide stretch of territory in southeast Asia, Senator LANGER

refused to cast his vote for the treaty.

He declared he thinks this country "ought to mind its own business and keep out of foreign entanglements all over Europe and Asia."

Senator Langer unquestionably realized that it is probably far too late now for this country to pull back its extended horns without inviting the disaster we have been seeking to prevent, yet this didn't stop him from raising his voice against what he firmly believes is an extension of our policy of unwise meddling in the affairs of other nations.

When one considers how far this meddling process has already gone under the guise of protecting our own shores it is no great wonder that we have been caught up in one crisis after another. It is also no great wonder how, under these circumstances, a considerable segment of the populations of Europe and Asia has been led to believe we are just as aggressive-minded as the Communist nations we are arrayed against.

THE RIGHT TO PROTECT

In fact, there is one big inconsistency in our policy that certain foreign nations never will be able to comprehend. Ever since the Monroe Doctrine was first promulgated the United States has taken the position that it would violently resist any attempt by a foreign power to move in on what we term our own hemisphere. Yet while proclaiming the right to define and protect our own sphere of influence we have consistently refused to admit that other nations may hold the same right as far as their own spheres of influence are concerned. And so, while we tell the nations of Europe and Asia to stay in their own backyard, we still go out and continually play around in their backyards and then wonder why they are so suspicious of our intentions.

Let's look at the current Formosa crisis in that light. Formosa happens to be located only about 200 miles from the mainland of China. In that location and under the control of a power inimical to Red China's interests it is only natural that the leader of Red China consider the island as a threat to their own survival.

For argument's sake let's compare Red China's situation with our own situation should some enemy power seize control of an island in the Bahamas just 200 miles from our own shoreline. In that event there would be no doubt, whatsoever, what our re-We would immediately action would be. claim that control of the island by an enemy power was an immediate threat to our own security and we would lose no time in re-moving that threat with all the force at our command.

But in the Formosa case we say Red China isn't justified in holding firm to a similar policy and we are now committed to going to war to keep Red China from seizing Formosa. That island is thousands of miles removed from our own shores. It is only 200 miles from Red China's. Yet we say it is essential to our own security, while denying Red China's argument on the same line.

Why is Formosa so essential to our own security? Only because it happens to be a gateway and a stepping stone to other farflung defensive outposts we are now maintaining. If Red China should seize Formosa, then Okinawa and the Philippines would be within easy reach of Red bombers. And since from a security angle our leaders say we can't very well stand still and permit Red bombers to get any closer than they now are to our defensive bases, we've adopted the policy of defending Formosa at all costs.

Inasmuch as we have now, in effect, stretched the principle of the Monroe Doctripe to cover not only our own hemisphere but other hemispheres as well, it should be no surprise to find other nations questioning our ultimate intentions. If eventually we are to become so thoroughly involved in foreign entanglements that to many nations we appear as a Frankenstein instead of a hero. then maybe Senator Langer had the right idea in saying we ought to go back to mindown business and keep out of ing our any further foreign entanglements all over Europe and Asia.

It is true that Senator Langer was only one lonesome voice crying out in a wilderness this week, but his views as to where we are heading by not sticking more closely to our own knitting have more public support in this Nation than some of our other Senators realize. If we would stop pushing our weight around in the world, we might be a whole lot better off, and some of our present enemies might even drop the idea that it's us and not them who are trying to start another war.

Proposed Increase in National Minimum Wage Rate

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. LEHMAN. Mr. President, some days ago I placed in the Congressional RECORD a telegram which I received from the Greater Clothing Contractors Association, Inc., of New York, urging the enactment of a bill which I introduced providing for a \$1.25 national minimum wage. A few days ago I received another telegram from the New York Clothing Manufacturers Exchange, Inc., also strongly endorsing my bill to raise the national minimum wage rate to \$1.25.

I ask unanimous consent to have this telegram inserted in the Appendix of the

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

New York, N. Y., January 26, 1955. Hon. HERBERT H. LEHMAN,

Senate Office Building, Washington, D. C .:

The New York Clothing Manufacturers Exchange, Inc., is a trade association organized in 1924. Its membership includes 336 manu-facturers of men's and boys' clothing, who employ approximately 40,000 workers in the New York and metropolitan area. As president and executive secretary of the association representing the membership, we urge you to support the adoption of a \$1.25 national minimum wage. This minimum would protect New York industries against the unfair competition of low-wage areas, would deter movement of industry out of the State, and would improve business by increasing consumer purchasing power.

ISIDORE GROSSMAN, President. ARTHUR J. WHITE, Executive Secretary.

MA

Freedom of Information

EXTENSION OF REMARKS

HON. PRICE DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES Friday, February 11, 1955

Mr. DANIEL. Mr. President, from time to time since becoming a Member of the Scnate, I have urged that we do everything within our power to keep the people fully informed about their own business-the Government.

In this business of Government, weserve merely as the representatives of the people of our respective States. It is they who really make the decisions in a Government of, by, and for the people. In order to make intelligent decisions, the people must have full access to the facts about their Government. Except on matters strictly dealing with national security, secrecy and censorship have no place in a democracy.

Mr. President, I ask unanimous consent that an editorial on this subject, appearing on February 1, 1955, in the Big Spring Herald, of Big Spring, Tex., be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOVERNMENT IN THE OPEN

Government in the open is a requisite of freedom and of sustained efficiency in the public interest.

In recent years the tempo of the fight against arbitrary censorship by bureaus and departments of the federal government has been increased. Those entrusted with the perpetuation of the free press had sensed, from having seen what this cancerous prac-tice produced under totalitarian regimes, good cause to start fighting the practice of withholding or regulating news.

More progress might have been made except for the nebulous line which lies between news in the public interest and that which conceivably might jeopardize the national security. The overwhelming majority of re-porters lean over backward not to infringe on security, and in many cases refuge has been taken unfairly by agents of government

behind the line of security.

Yet not all the battles are confined to Washington or even to Austin, where there has been a disturbing inclination to hide the facts. The fundamental cry for vigilance is in the community. About us we have examples of officials and boards who have attempted to tell the press what it can and cannot print, what would be good for the public to know or what would not. We have seen too many times when members of officials boards sit placidly through regular meetings and then clandestinely conducted business over coffee cups. All of this disturbs us no little, and it ought to disturb every citizen to the point that he demand of his officials and representatives that the public's business be discussed and conducted in public. Most of those in public life would say amen to that.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congressional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44. SECTION 182b. SAME: ILLUS-TRATIONS, MAPS, DIAGRAMS .- No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the Congressional Record, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the Record shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the possible to do so without taking dealy in co-publication of the regular proceedings of Congress. Advance specches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If manuscript or proofs have not been returned in script or proofs have not been the time for publication in the proceedings, the Public Printer will insert the words - addressed the Scnate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.

7. Thirty-day limit.-The Public Printer shall not publish in the Congressional RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Appendix to daily Record .- When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the Congressional Record.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. Official reporters.—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional Record which is in contravention of this paragraph.

12. Illustrations.—Pursuant to section 1825,

title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. Corrections,-The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided jurther, That no Member of Con-gress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.
